HOW TO USE THIS MATERIAL

Searchable Pacific Northwest History provides a huge variety of topics to be studied.

I have chosen to use a chronological format that includes a series on indentions something like an outline so additional material could be easily added and existing material shifted to a new location. This also allows the reader to “copy and paste” material from this document into a new document of their own making using the “document search navigator” on their computer. This access allows anyone to construct an historic document of their own in “outline” form.

The historic material in Book Five is in chronological order by century, decade, year, month, week and on occasion day. Events listed out of sequence in an effort make a point are placed in parenthesis () and non-sequential dates in brackets []. Quotations are in bold print and footnoted.

To construct an historic document of your own requires a two step process.

- 1) Our website: <http://searchablehistory.com> provides a TEMPLATE of the “outline” formatting required for the new document.
 - a. [Download this TEMPLATE](#) and Save it onto your computer.
 - b. OPEN the TEMPLATE.
- 2) [Download the MS Word version of Book Five](#). Information COPIED from *Searchable Pacific Northwest History* and PASTED onto the TEMPLATE will result in a new document being generated in chronological order and “outline” form.

For instance, after generating a formatted TEMPLATE on a computer, someone interested in Indian boarding schools could conduct a search using **Boarding School** in the computer’s search navigator. This would show 38 references beginning with the Synopsis where 1900-1910 would be seen as the starting location. The paragraph “**INDIAN BOARDING SCHOOLS OPERATE IN EASTERN WASHINGTON**” on page 16 tells of the Fort Spokane Indian Boarding School. The paragraph “**NEW BOARDING SCHOOL OPENS ON THE TULALIP RESERVATION**” on page 62 addresses that educational institution in Western Washington. Further examination of the historic document would result in other relevant information being discovered. Adding this material to the “outline” template would produce a document featuring several aspects and stories of Indian Boarding Schools in chronological order.

This “outline” provides the foundation for a report. Other information such as personal accounts, pictures, maps, etc. could be found from additional sources and the internet (used with permission when necessary) to enhance the final document.

WHY DID I UNDERTAKE SEARCHABLE PACIFIC NORTHWEST HISTORY?

Computers have changed the way we can look at history. The study of our past has always been constricted by the space available to present it. The person, topic, or event being studied was confined by the physical limits of books. This constricting of the past is even greater in a history book dedicated to a very broad subject. Each topic must be compressed to fit the space available. These restrictions are no longer necessary with the advent of computers and the internet.

The historic material that I have included has had a direct impact on the inhabitants of the Pacific Northwest. I have tried to focus on topics that people who live here, regardless of decade or century, would discuss with their family and friends. My hope is that because it was a topic of conversation and interest to people residing here at one time it may yet be so today.

History happens chronologically and in context. However, it is not taught that way. Rather, attention is focused on dates, names and selected topics. For instance, the exploration of Captain George Vancouver might be presented without any mention of the discoveries of Spanish explorers although both investigations occurred simultaneously and sometimes mutually. Also, American sea traders were operating in the same waters while Alexander Mackenzie was actively conducting his overland expeditions to find the Pacific Ocean. Events do not occur in isolation.

The topics of missionaries to the Pacific Northwest and Hudson's Bay Company might be presented without acknowledging both entities were dealing with the same Native Americans at the same time. These interactions had a unique impact on the Indians. Or, similarly Northwest Indian wars and Indian treaties are presented without mentioning the treaties came before the wars. Presenting history one topic at a time, while necessary until now, makes historic context almost impossible.

Presenting history one topic at a time also presents a false image of the time necessary to accomplish a task. When students are introduced to the Oregon Trail, attention is perhaps paid to the preparations essential for the journey and the sacrifices necessary. The route West is depicted passing by a series of prominent land features, hardships for the travelers may be indicated, and Oregon is reached three paragraphs or three pages after setting out depending on the detail of the text. There is no feeling for the nine months the journey on foot took to complete. The neglect of the amount of time necessary to accomplish a goal is so frequent in history books that this could, perhaps, account for the instant gratification so often demanded today.

Those of us who enjoy reading history are intrigued with adding new information to what we have previously discovered. Each addition provides an opportunity to gain new insight. We are aware that previous generations faced challenges and mysteries much like our own. Discovering how these demands were met, successfully or unsuccessfully, in the past can guide us as we seek answers to our own personal and collective dilemmas. Most history instructors strive to teach their students *about* history. My goal is to enable students to learn *from* history. As President Harry Truman noted: "The only thing new in the world is the history you don't know."

SYNOPSIS

1900-1909

Gold rushes continued to enrich the nation and bolster the state of Washington. Socialist colonies sprung up in Pierce, Skagit and Island counties. Industrial Workers of the World radicalized the labor movement and women struggled to gain voting rights. Boarding schools deprived native children of their culture and Indian families of their children.

1910-1919

An interurban transportation system linked towns and cities providing passenger and freight service. Prosperity led to political reform: women in Washington regained voting rights; cities attacked local crime; and state voters demanded accountability from political leaders. Europe marched off to war as Germany attempted to expand its empire. The United States joined in the “war to end wars” as ancient European empires collapsed. Boeing built airplanes to supply the war effort. Unions took advantage of wartime needs with strikes to improve wages and working conditions and expand the labor movement. Having supported the victors, America’s economy rapidly expanded.

1920-1929

Communists organized in American to attack the capitalist financial system. In response a “Red Scare” swept the nation. Automobiles replaced the interurban transportation system. Prohibition attempted to diminish crime and social problems. Women’s voting rights were added to the U.S. Constitution. Electricity divided America into urban “haves” and rural “have-nots.” Economic Depression made everyone “have-nots.”

1930-1939

Economic Depression spread poverty, destroyed the nation’s confidence and crushed American values. Drought-stricken mid-westerners driven by poverty fled to the coasts. White males took shelter in “Hooverilles” while women and children faced homelessness, scarcity and fear in families or alone. Europe again erupted in war as Adolf Hitler imposed his will. President Franklin Roosevelt promised Americans a “New Deal.”

1940-1949

Imperial Japan imposed its will on Asia. America faced two wars simultaneously. Washington’s Japanese Americans were gathered in “Camp Harmony” before being shipped to internment

camps. Women temporarily entered the work force to produce war goods in astonishing amounts. Atomic Power, born in part in Washington State, unleashed the threat of total annihilation on an unsuspecting world.

Victory provided America economic prosperity and an opportunity to return to a male-dominated capitalistic society. America rescued Europe as the Marshall Plan provided, food, equipment, money and expertise to a stricken continent.

1950-1959

North Korea with the support of Communist China invaded South Korea destabilizing Asia. America strived to achieve the “American Dream” but minority Americans did not qualify. Communists in the USSR detonated a series of atomic bombs. American children practiced “duck and cover” drills in schools as adults contemplated nuclear annihilation. Washington state and national politicians reignited the “Red Scare.”

1960-1969

Nuclear war was very narrowly avoided by the U.S. and USSR. The Civil Rights Movement expanded from the South across the United States. Washington Indians demanded their treaty fishing rights be honored. Civil Rights marchers demanded minority groups be included in society.

America entered the conflict in Viet Nam to stop the spread of Communism and entered the “Space Race” for the same reason. Boeing engineers made advances in air transportation, but the USSR led in space until American Neil Armstrong walked on the Moon.

1970-1979

America expanded the war in Viet Nam into Cambodia as campus protests across the nation led to college students being killed.

Vice-President Spiro Agnew resigned from office for taking bribes before the Watergate scandal forced President Richard Nixon to resign from office in disgrace.

Economic recession resulted in education funding being cut in Washington. Teachers went on strike in school districts across the state.

1980-1989

Disasters hit Washington’s logging industry when Mt. Saint Helens erupted destroying timber and powdering the state with volcanic ash. When the Northern Spotted Owl was placed on the endangered species list 30,000 timber jobs were lost.

HIV/AIDS devastated America and the world. Crime alarmed the Puget Sound region as serial killer Ted Bundy was captured but the “Hillside Strangler” took his place. White supremacists conducted a statewide crime spree. A criminal syndicate led by the sheriff operated in Pierce County. State political leaders were convicted of corruption. The Green River Killer preyed on young women.

Teacher strikes grew in number as legislative studies and commissions resulted in no additional funding for schools. Washington entrepreneurs achieved unparalleled success as Starbucks, Microsoft, McCaw Cellular and Costco opened for business.

1990-2000+

Teachers in districts across the state went on strike as legislators focused attention on student testing rather than lack of school funding. Washington courts addressed the funding crisis and the state supreme court ruled legislators were in contempt of court for not meeting their paramount duty to fund education.

Local and international events were of concern as The Green River serial killings continued for ten years. The United State entered a series of wars in Iraq and Afghanistan. Trade agreements with Europe and Asia were reached but rioters in Seattle protested the World Trade Organization agreement.

Boeing absorbed its competitors and moved its headquarters out of Seattle. Several billionaires called Washington their home. Sound Transit began to link the cities and towns of King, Pierce and Snohomish counties with a transportation network reminiscent of the Interurban system.

SEARCHABLE PACIFIC NORTHWEST HISTORY

BOOK FIVE: DEVELOPMENT 1900-2000+

1900-1909

FREDERICK WEYERHAEUSER ACQUIRES TIMBER LAND IN WASHINGTON STATE

Frederick Weyerhaeuser and James Jerome Hill signed papers transferring 900,000 acres of timber from the Northern Pacific Railway (NPRY) land grant to Weyerhaeuser

this was one of the largest single land transfers in American history -- January 3, 1900

As part of the agreement, Jim Hill gave Weyerhaeuser eastbound shipping rates for timber that were **“so low that they were unheard of ...”**¹

Commenting on the reason he purchased such an immense amount of timberland,

Weyerhaeuser said, **“This is not for us, or for our children, but for our grandchildren.”**

he also noted, **“There is a great lot of it in every conceivable direction.”**²

no one knew how much timber there was because was so far from a market

many thought the purchase was **“exceedingly speculative”**³

(in fact, the purchase turned out to be exceedingly cheap

twelve years later, it was determined that Weyerhaeuser had paid

only ten cents per 1000 board feet [one board foot is 2 inches by 6 inches by 12 inches])

PROPERTY RIGHTS WERE UNIVERSALLY DEFINED THROUGH USAGE

Before the Twentieth century, land sales transferred primarily the rights to develop the land through farming, mining, or otherwise “improving” the land

Undeveloped private land was considered to be public land⁴

which was accessible to all within reasonable limits of good conduct

Tribal negotiators made sure native hunting, fishing, gathering and traveling rights

were assured to the native people in perpetuity

Without expanded legal rights the development of agriculture or timberland could not succeed

WEYERHAEUSER TIMBER COMPANY BEGINS OPERATIONS

Frederick Weyerhaeuser and other investors formed the Weyerhaeuser Timber Company and opened his new venture for business -- January 18, 1900

Under the management of tall, somber George S. Long

Weyerhaeuser increased his holdings to 1.3 million acres

including land in Washington, Oregon and Idaho

Large timber companies that owned both the sawmill and the land made the biggest profit profit came not only from the sale of lumber but also from increased property values

STONE AND WEBSTER CREATES SEATTLE ELECTRIC COMPANY

Electrical engineering consulting firm Stone & Webster incorporated the Seattle Electric Company all of Stone & Webster's electrical and transportation properties in the Seattle region including the Union Electric Company and Seattle Steam Heat & Power Company were brought under the Seattle Electric Company franchise -- January 19, 1900

BOUNTIFUL SUPPLIES OF TIMBER ATTRACT NATIONAL ATTENTION

Pacific Northwest was the home of the noblest forest in the United States -- and the richest Towering evergreen trees growing in astounding Northwest forests spread across the Rockies then skipped the desert lands of the interior before taking up the march once again in ever-thickening ranks across the Cascades and on to the edge of the Pacific Ocean intertwined mountains of Northern Idaho were home to the largest stand of white pine in America eastern Cascade Mountains with its dry air was the location of ponderosa pine which rose to skyscraper heights that allowed only shafts of sunlight to penetrate to the forest floor moister weather of the west side of the Cascades grew towering Douglas fir, cedar trees and hemlock trees three hundred, almost four hundred feet, high one Douglas fir alone, its vast trunk reaching ninety feet in the air to the first thick branches, provided enough lumber to build four ordinary five-room bungalows these trees grew to become so huge they were beyond the machinery and skills of early settlers except near the water's edge where the first lumber tugs worked to deliver them to sawmills

TIMBER BARONS TURN THEIR ATTENTION TO THE WEST

Reports from "timber cruisers" scouting out trees told of tremendous stands of virgin timber in northern California, Oregon, Washington, Idaho and Montana where the price of land, up to \$6 an acre, was much higher than in the east but the stands of trees were so thick and tall that a healthy profit was assured partnerships like Smith-Powers, Clark-Wilson, Brooks-Scanlon, Shevlin-Hixon and Pope-Talbot went into logging, built sawmills and turned out dressed (finished) lumber Stampede for timber was now on -- timber speculators went wild timber barons such as Frederick Weyerhaeuser, Amos Whitney, Louis (Sol) Simpson, Alex Polson, Delos A. Blodgett, David Clough and Roland Hartley purchased millions of acres of prime timberland and moved west Lumber barons and loggers swarmed in droves through the fir and pine forests of the Northwest in their wake, timber barons and loggers left deserted camps and sawmills in the east they walked away not troubling themselves to remove mattresses from the camp bunks or even to take down the stovepipe machinery was left to rust -- there was better timber out West sawmills went up by the hundreds Washington's annual harvest of lumber soared from one billion feet to four billion feet Lake Coeur d'Alene turned into a monster millpond as booms of logs jostled down the rivers to the whining sawmills on the lake shore

LOGGERS ARE FIERCELY INDEPENDENT MEN

Loggers took pride in the only thing they had: their skills as workers
(lumberjacks existed only east of the Rocky Mountains)
Very few loggers had any family -- fewer still had any family at the logging camp
most did not have any particular ties to one place or area
they frequently moved on whenever it suited them
after a long day in the forest they would sit around the bunkhouse
and discuss a wide variety of topics, from the day's work, to their next trip to town,
to abstract points of economic theory
their transient lifestyle made most loggers unable to vote
with few ties so society and an insecure economic future, these men had little to lose
this motivated many of toward unions or other forms of protest

LOGGING WAS WASTEFUL AND DANGEROUS

Logging was notoriously wasteful
to get above the pitch-filled base of the tree loggers stood on springboards
driven into notches cut in the tree
double-bitted axes were used to cut into the trunk to create a hinge to direct the tree's fall
two-man bucksaw, known locally as a "misery whip," was used to saw from behind the notch
to help with cutting the saw was kept well lubricated with oil from bottles hung on the tree
Steam donkey engines added to the abuse of the resource
steam donkeys in general were useful only on cleared terrain
and then only high-quality timber was removed and the remainder was left to rot
Loggers were a large immigrant labor force
management felt little responsibility for the welfare of their migrant workers
pay was low and the hours long -- working conditions were deplorable
camp conditions were even worse

One typical day in the life of a logger in the woods was described in a letter:

"At 4 in the morning the iron-headed old boss sticks his mug in the bunkhouse door and yells, 'Daylight in the swamp' and the truth of it is it will be two hours till daylight but the boss isn't to be argued with and we all roll out and get on our frozen boots and mukluks. We gang into the grub house and at 6 o'clock that same boss yells, 'All out for the woods.'

"By daylight we arrive at our picnic ground and log cedar out of the swamp. Along about noon the cook and his crew show up. We brush snow off a flat log and sit down to eat in weather which is mostly around zero....

"At 4 o'clock, which is about dark in the winter, the boss yells, 'All in.' We go back to camp about 5 o'clock, as we walk two or three miles, wash up and get into the grub house. That coffee sure goes good. It is so black you could paint a boiler with it. After grub we go back to the bunkhouse and thaw out our boots and take off our shirts and some of us, after lighting up our old corncobs or taking a fresh chew of plug, play cards, some play checkers, some swap lies....

"At 9 o'clock the geezer of a boss comes in and yells, 'Lights out,' and then someone blows out the lights of the two smoked-up lantern and we all hit the hay to be ready to begin a bigger day tomorrow."⁵

⁵ Rick Steber. *Loggers, Volume 7*. Bonanza Publishing, Prineville, Oregon, 1989. P. 11.

DEATH OF A LOGGER

Ed Tice was a logger when the forests resounded to the sharp crack of swing axes
accompanied by the muted swish of misery whips
and earth-shattering thunder as 300-foot plus fir trees crashed to the ground
Ed finished bucking a log into 32-foot lengths when he took a breather
he watched a team of fallers work to drop yet another tree
they threw coal oil on the two-man bucksaw and made music with the misery whip
they stopped to tap in wedges, keeping the kerf (groove) open so the saw did not bind
suddenly the kerf began to open on its own as the wood hinge creaked and groaned
“Timber!” the fallers hollered as they ran
Ed watched the tree top wiggle and start slowly on the long arc that would bring it to the ground
he was beyond the reach of the tree, safe and out of danger
Fallers watched as the big tree picked up speed
before it slammed into the underbrush amid a shower of snapping branches
ground shook like an earthquake as a cloud of dust was kicked up
Then there was a second crash as the falling tree had caused a nearby snag to give way
it fell striking Ed where he sat -- that afternoon the logging crew buried Ed there⁶

STONE & WEBSTER TAKES CONTROL OF SEATTLE’S STREET RAILWAYS

Seattle City Council passed a city ordinance -- March 9, 1900
which granted Jacob Furth and James D. Lowman,
who served as agents for electrical engineering consulting firm Stone & Webster,
a franchise to construct, maintain and operate Seattle street railways in Seattle
loud protests of advocates for municipal ownership of the transportation system succeeded only
in having the franchise term reduced from the requested forty years to thirty-five years

SKAGIT COUNTY’S EQUALITY COLONY SHOWS GREAT PROGRESS

Equality was a prosperous settlement⁷ -- 1900
about 100 acres were under cultivation -- crops were abundant and prices were good
there were fifty head of cattle, twelve horses, several hogs and chickens too numerous to mention
shingles sold out quickly and orders for lumber were received
faster boards could be manufactured
Equality’s social life was equally successful
there was entertainment and dancing, a fairly good library and comfortable reading room
Equality had a fourth-class post office and one member served as postmaster and storekeeper
the store was well-stocked and everything was sold at cost
Equality’s school was limited -- neither music nor more challenging subjects were taught
but still education in the colony was a little ahead of the ordinary country school

⁶ Rick Steber. *Loggers, Volume 7*. Bonanza Publishing, Prineville, Oregon, 1989. P. 14.

⁷ H.W. Halladay, “Equality Colony: A Brief History Showing Our Objects and Present Condition -- Cooperative Colonies Are Not All Failures” Published in *Industrial Freedom* [Equality, WA], New Series no. 9, Nov. 1, 1901, P. 1,4.

Equality's government was a democratically elected executive council -- "seven wise men"
which met monthly every first and third Friday
if the council could not reach a consensus,
unresolved questions were referred to the general assembly
One difficulty which hampered the colony's progress was the need for a good road
from Equality to the main county road (today's Chuckanut Drive)
after a great deal of trouble, the Skagit County commissioners finally had a road surveyed
members of the colony build and paid for an excellent link to the county road
(this is today's Colony Road)
transportation for the colony was expected to improve again when the Great Northern Railway
completed its route that passed near the colony on the way to Whatcom (Bellingham)
fifteen miles away
until the construction was finished the nearest railroad point to the colony
was Belfast, Washington six miles away over a poor road

NOME, ALASKA BOOM CONTINUES

Tens of thousands of gold-seekers and accompanying riff-raff raced to the Nome gold fields
as soon as steamships from Seattle and San Francisco carrying supplies and naive gold-seekers
could reach the northern city through the pack ice -- spring 1900
Seattle, as the primary demarcation center and supply station,
experienced yet another financial boom
Tents filled an isolated stretch of tundra to the water's edge
most of the thirty miles between Cape Rodney and Cape Nome
was transformed into a tent-and-log cabin city of 20,000 prospectors, gamblers,
claim jumpers, saloon keepers and prostitutes

SEATTLE CONTINUES TO BENEFIT FROM YUKON AND ALASKA GOLD

Most supplies bound for the Yukon and Alaska were shipped by the all-water route
from Seattle to St. Michael, Alaska
More than 137 stern wheelers, tugs, barges and launches
transported supplies and people up the Yukon River to Dawson City -- between [1897] and 1900
this required an additional journey of 1,800 miles that took from six weeks to two months
on this leg supplies were shipped at a freight rate of \$85 per ton
passengers paid \$125 to \$220 to travel by steamboat from St. Michael to Dawson City

WA CHONG COMPANY REMAINS IN BUSINESS FOR ALMOST 100 YEARS

Chun Ching Hock and Chin Gee Hee, both once owned the Wa Chong Company, became wealthy
Chun Ching Hock returned to live permanently in Canton (Guangzhou), China -- 1900
he remained an owner of the Wa Chong Company
which was managed in Seattle by Woo Gen
while living in Canton, Chun occasionally visited Seattle
where he continued to own a large amount of real estate
Chun also expanded the Wa Chong Company's operations to Asia
through the company he began logging operations in Shanghai and Hong Kong

Chin Gee Hee, Chun Ching Hock's partner at one time, also found opportunities in China turning Seattle management of the Quong Tuck Company over to his son Chin Lem he returned to China around [1904]
through the company, Chin Gee Hee built the Sun Ning Railway in southern China raising money from Chinese contributors and using American materials for construction Sun Ning Railway was the first major railway in China's Pearl River Delta area it was destroyed during the Second Sino-Japanese War and dismantled [1938] despite the threat of boycotts, Chun Ching Hock and Chin Gee Hee worked for open trade between China and the Puget Sound region
(Wa Chong Company remained in Seattle until [1953]
final location of the Wa Chong Company store, the East Kong Yick Building, was at 719 S King Street which housed both the Chun Ching Hock's Wa Chong Company and Chin Gee Hee's Quong Tuck Company
this location became the home of the Wing Luke Museum in [2008])

SEATTLE'S STREET RAIL SYSTEM SEES IMPROVEMENTS

Fred Sander had previously constructed his Yesler Way cable car line [1888]
his second line, the Grant Street Electric Railway, added six miles the interurban track running from Seattle toward Tacoma -- 1900
Sander was also looking to the north for opportunity in the undeveloped territory between Seattle and Everett
he founded the Everett and Interurban Railway Company but this effort proved more daunting he began work on this system -- 1900
but it took him six years to cover six miles from Ballard to Hall's Lake
(later the company reorganized as the Seattle-Everett Interurban Railway Company
Seattle was added to the company's name to attract investments)

TRANSPORTATION LINKS AMONG SEATTLE, TACOMA AND EVERETT ARE PROPOSED

Management firm of Stone & Webster and its backers wielded enormous control of the local industry
Boston engineering company incorporated the Seattle Electric Company
power company holdings in Seattle and the Puget Sound region were consolidated -- 1900
through an array of interlocking holding and operating companies
rights to small privately-owned Seattle transportation and utility businesses were acquired
Puget Sound Traction, Light & Power Company succeeded Seattle Electric Company
(later this company evolved into Puget Power and today's Washington Energy)
Puget Sound Traction, Light & Power Company was the primary local corporate instrument used to acquire various interurban rail lines including the Madison Street Cable Railway, Union Trunk Line, and the Third Street & Suburban Railway
transportation took a giant leap forward in Seattle

TACOMA EXPANDS ITS INTERURBAN LINK TO THE SUBURBS

Small, passenger trolley companies sprung up in Tacoma -- 1900
Tacoma Rail and Power included many stops in Lakewood just south of Tacoma
a station was located near what is now Park Lodge School in Lakewood

tracks continued to the Lakewood Colonial Center
other company's tracks shuttled residents around Tacoma and the outlying areas
one route traveled from Tacoma along South Tacoma Way
yet another track darted across the prairie to what is now Mountain View Cemetery
business viability of so many companies operating was short lived
many companies shut down or merged shortly after they opened

WASHINGTON STATE SEES ITS FIRST CARS

First automobile arrived in Seattle -- 1900
it traveled down the street at twelve miles per hour attracting a curious crowd
This same year another car created a similar sensation in Spokane

WEALTHY BUSINESSMAN SAMUEL (SAM) HILL MOVES TO SEATTLE

Sam Hill became a wealthy and accomplished railroad executive, financial manager and investor
there he was active in a wide range of civic groups and fraternal organizations
he was noted for his tireless ambition and energy and for his integrity
Both Sam Hill and his father-in-law James Jerome Hill had a falling out -- about 1900
Sam Hill began to sever his ties with the Great Northern and with Jim Hill's other companies
but their business correspondence continued

UNION MOVEMENT EXPANDS ITS ORGANIZATION OF WORKERS

Waitresses and retail clerks had their own unions -- 1900
American Federation of Labor (AFL) brought together waitresses, clerks
and several other small unions under one umbrella organization across the nation
Seattle displayed a grand organizational effort as union roles showed a total of 8,600 union workers
Lumber workers: 4,000; Iron workers: 650; Brick and Tile workers: 400;
Printing and Publishing: 400; Ship carpenters and caulkers 360; Packers and canners: 300;
Furniture workers: 300; Candle and cracker workers: 250; Brewery workers: 250;
Electric plant workers: 200; Tailors: 200; Evaporating plant workers: 150;
Tent and Awning workers: 150; Power plant operators: 100 Flour mill workers: 100;
Tin and cornice, etc. workers: 100
in addition, several industries employed fewer than 100 union members:
Cigar makers: 75; Shoe and boot makers: 60; Vinegar bottlers and pickle packers, Painters,
Saw sharpeners and Soda water bottlers: 50 each occupation; Jewelry workers: 40;
Spice, baking powder, etc. workers, Hat and cap makers, Gas workers: 30 members each;
Bicycle shops, Cloak and suit tailors, Coopers, Drug stores, Paper box makers: 25 each

STREETCAR ACCIDENT OCCURS IN TACOMA

Tacoma Railway & Motor Company suffered a streetcar crash -- July 4, 1900
when a trolley loaded with passengers roared down the Delin Street Hill
when the motorman failed to dump sand on the tracks as he braked
streetcar fell off the trestle and plunged into a 120-foot deep gulch (now Interstate-5)
forty-three people were killed and fifty-nine others were seriously injured
also killed in the crash was the motorman depriving him of any chance to defend himself

KEYPORT, WASHINGTON GETS ITS NAME

Little village on Dogfish Bay (so named because settlers could harvest the salmon with rakes)
received enough homesteaders to warrant a name -- 1900

Keypoint was selected because its location was the key to the bay (now named Liberty Bay)
Keypoint area continued attracting homesteaders throughout the early part of the century⁸

ALASKA'S WHITE PASS RAILROAD REACHES WHITEHORSE, YUKON TERRITORY CANADA

While White Pass and Yukon Railroad (WP&YP) construction crews battled their way north
another WP&YP crew came from the north heading south
thirty-five thousand men had worked on the construction of the railroad
some for a day, others for a longer period -- but all shared in the dream and the hardship
\$10 million project was the product of British financing, American engineering
and Canadian contracting

Last spike of the narrow-gauge railroad from Skagway, Alaska Territory to Whitehorse
was driven at Carcross by Samuel H. Graves, the president of the railroad -- July 29, 1900
this "golden" spike was actually a regular iron spike
in fact, a spike of gold was on hand to be used for the ceremony
but the gold was too soft -- instead of being driven it was just hammered out of shape

Railroad service between Skagway and Whitehorse started -- August 1, 1900

this train brought in heavy mining equipment
and hydraulic cannons to wash away tons of gravel a day
however, by then much of the Gold Rush fever had died down

(White Pass and Yukon Railroad is still running on its original narrow-gauge track today
it ferries tourists instead of gold seekers along 67.5 miles of the route
carrying 450,000 passengers from [May] through [September])

Skagway to Whitehorse line was completed -- [August 1, 1900]

this became the primary route to the interior of the Yukon
harsh weather and challenging geography made this railroad an engineering marvel
WP&YP ended service [October 7, 1982]

but the route between Skagway and White reopened as a tourist heritage route [1988])

NOME REMAINS THE LAND OF GOLDEN OPPORTUNITY

Nome was the largest city in Alaska -- August 1900
its population estimate leaped to 20,000 -- (but the U.S. Census of 1900 counted 12,488)
still, that was one-third of all non-Indians recorded in Alaska

St. Michael was replaced as the commercial and population center of northwest Alaska
however, Nome did not replace St. Michael as the transshipment point for the Yukon
shallow-draft steamboats calling at Nome had to make a dangerous run
from the river's mouth along a coast exposed to the open Bering Sea

In Nome, Alexander Pantages found what he was after -- a theater in financial trouble
although the cost of operation was fantastic (a new violin string cost forty dollars)

⁸ Lisa Poole with Dianne Robinson, *Torpedo Town U.S.A.*, P.14.

Pantages was sure the reason for the failure was bad management
he talked some entertainers into staking him and took over management of the enterprise
(Nome, the oldest first-class city in Alaska, was incorporated [1901])
there are still forty-four gold dredges in the Nome area and gold mining continues today)

INDIAN BOARDING SCHOOLS OPERATE IN EASTERN WASHINGTON

U.S. military fort near Spokane was transformed into a boarding school
for Indians of the Spokane, Colville and Coeur D'Alene tribes
Fort Spokane Indian Boarding School was designed to educate up to 600 students at a time
it opened with an enrollment of eighty-three pupils -- 1900
(and grew to 200 [by 1902])

Like other boarding schools Fort Spokane Indian Boarding School was governed by strict discipline
Florence and Lula O'Hara of the Spokane Tribe remembered meal times: **"In the dining hall, they always used white tablecloths and napkins on the tables for the children. The dishes were of white granite with a blue edge. The cups were always stacked in a pyramid shape down at one end of the table, and the plates were placed upside down on the table when the tables were set. There were ten seated at each table. The children sat on stools along the sides and an older girl sat in the chair at each end of the table. Everyone stood behind his place until a bell was rung for them to sit down. There was also a bell for grace and a bell for everyone to turn his plate over at the same time. If anyone misbehaved, at a table, they had to sit all by themselves at a small table at the end of the room for all to see. This was not pleasant, so it worked very well for punishment."**⁹

At the Fort Spokane Indian Boarding School punishment was administered for any number of reasons
speaking your native language rather than English, practicing your native spiritual rights
or disobeying a teacher

Spokane Indian Francis LeBret, a former student at the Fort Spokane Indian Boarding School
remembered **"...punishment often being administered with a large handful of switches
laid by the strong arm of our School Superintendent onto bare backs..."**¹⁰

students occasionally would attempt to leave the school without permission to return home
most would be caught before they were able to get far
some would make it back to the reservation before being returned to the school
but for all unexcused absences, the punishment was the same
several days and nights locked in the solitary confinement cell, sleeping on the cold floor,
in the same guardhouse that housed military prisoners

However, children were still children and there was still room for fun and mischief
during their free time, the children would laugh, sing, play games and tell stories
(in their native language if teachers were not around)
children played baseball, the pocket-knife game of "mumbly peg," ran in races, played marbles
and had a number of toys to share like spinning tops and dolls
in the winter, children were treated to sleigh rides around the parade ground
some more adventuresome students tied long lines of smaller sleds to horses
and rode around the parade ground like trains

⁹ National Park Service U.S. Department of the Interior, "Fort Spokane Educator's Guide," December 2012, P. 66-67.

¹⁰ National Park Service U.S. Department of the Interior, "Fort Spokane Educator's Guide," December 2012, P. 67.

dramatic programs were given during the holidays
the largest productions were reserved for Thanksgiving, Christmas and Easter
even though many of the students did not understand the religious reasons for the holidays,
they were special and relaxing times for the student body to forget about their troubles
and their homesickness
girls used their sewing skills to make elaborate costumes for these productions
everyone pitched in to decorate the auditorium
several talented students would act in the productions

IMPROVEMENTS IN FARM MACHINERY

Many new farm tools and equipment made their appearance -- 1900
improved discs, spring-toothed harrows, corrugators, press drills, mowers, binders,
improved hay stackers and elevators, and threshers
are only a few improvements which opened the West to large-scale farming
Joseph F. Glidden's discovery of a high-speed method to manufacture barbed wire
made great quantities available at low cost
barbed wire transformed the open range from grazing lands into wheat fields
Scientific research in agricultural methods and soil analysis contributed to widening
and in some places intensifying farming

DRY FARMING IS USED SUCCESSFULLY FOR DECADES

Promotional literature did much to advertise the "dry farming" method of agricultural
semi-arid soil was plowed in the summer to a depth of twelve inches
followed by pulverizing the soil
but from one-third to one-half of the plowed fields were allowed to lie fallow
Summer fallowing of the soil (leaving the ground unplanted) was necessary to build up moisture
seeded fields were regularly alternated with fields left fallow
In the late summer grain (usually wheat) was seeded
to receive sufficient moisture during the autumn and winter rains

IRRIGATION SHOWS GREAT SUCCESS

Small irrigation companies dating from [1867] trenched ditches
in an effort to bring water to very limited acreage in Yakima County
these private efforts ended in failure
(Sunnyside Canal project, the largest of these efforts, had collapsed [1893])
it was reorganized as the Washington Irrigation Company -- 1900
Sunnyside Canal was extended from Sunnyside to Prosser
Proper preparation of desert soil for irrigation called
first for clearing the land of rocks, sagebrush, junipers, and other desert growth
next the land had to be properly surveyed, leveled, plowed, and planted
types of soils, length of growing season, temperature, humidity, use of fertilizers
and other factors had to be considered in determining water requirements
different methods of applying water to the land were used in various regions
wild flooding, strip border flooding, furrows, corrugated ditches and later piping

Spokane Valley Water Company was organized by Cyrus Happy and his partner W.L. Benham when a four-mile ditch from Liberty Lake brought water to 600 acres -- 1900 (later the ditch was lengthened to twenty-two miles and 10,000 acres were served and a supplementary system was built around the Fish Lake Canal putting 5,000 more acres under irrigation)

Walla Walla County was the home of several projects as the Columbia and Snake rivers were tapped Pasco Reclamation Company brought water from the Snake River by means of turbine pumps to irrigate several thousand acres in Franklin County

Clarkston, Washington developers in Asotin County put water on hopelessly parched lands and transformed them into thriving tracts of rich farmland

Irrigation also was begun in the Richland and Prosser areas

No improvements in farming were more breathtaking than the introduction of irrigation into arid and semi-arid areas of the West -- 1900

irrigation more than doubled the per-acre cost of farming and demanded refinancing on a much larger scale

which, in turn, required more aggressive methods of marketing

POPULATION OF WASHINGTON STATE SHIFTS FROM RURAL TO URBAN

By the turn of the century the newest mass migration rivaled the era of the covered wagons however, this movement which lasted three decades, was from rural areas to the cities -- 1900-[1930]

Improvements in farming methods allowed farmers to care for more land and grow more produce cities were more convenient and comfortable

Spokane's 36,848 inhabitants represented a hundred-fold leap in growth over twenty years; Seattle with 80,671 residents was twice the size of her neighboring rival, Tacoma

growth of industry in the cities demanded more labor

almost one-half of the people coming to Washington state moved to Seattle, Spokane, or Tacoma such growth demanded a more conservative approach in the cities

cautious financing, cultural refinements, churches, and ordered homes became the standard

Everett city leaders struggled with continuing economic crisis -- 1900

they decided to concentrate on developing the local resources -- namely the forest

they re-planned their city, mapped residential areas, widened main streets,

improved their docks and made deep-water frontage more inviting to industries

Additional coal mines were opened in King County at Lawson and Ravensdale --1900

mining centers were no longer classified as towns

cities, especially inland cities, depended on mining rushes to Boom their populations

yet these towns inevitably fostered recklessness and irresponsibility

however, not all mining efforts were successful

Roslyn began a slow two-decade decline as individuals continued to move into the area

while a larger number of new arrivals moved into the Yakima Valley

as well as the rapidly expanding urban areas of Seattle, Spokane, and Tacoma

RAILROAD TRANSPORTATION EXPANDS WITH NEW FREIGHT OPPORTUNITIES

Radically transformed farming industry in the Inland Empire -- 1900

opened more and more rangeland that had been used solely for grazing
these became giant checkerboards of alternating fields of golden grain and black fallow soil
most especially in the Washington wheat areas of:

- 1) the Palouse, Spokane and Whitman counties; Columbia and Garfield counties;
east Adams and north Walla Walla counties
- 2) the Big Bend west and southeast of the Columbia River in Lincoln County
and north Adams County; Grant and Douglas counties

Tiny villages that formerly lay across cattle trails now became the basis for dry-farming operations
new wheat town arose in many places along the railroad tracks

TUGBOATS COME INTO THEIR OWN

Demand for more lumber saw an increase in the great windjammer cargo ships
which found their way to Puget Sound to obtain cargoes of green lumber
Large mill companies began operating fleets of big tugboats -- 1900
sawmills had to keep tugs available at all times at Cape Flattery
to tow millions of board feet of logs to the mills
and to bring in lumber ships in from the Cape

FISHING INDUSTRY BOOMS

After the turn of the century the fishing industry expanded rapidly
fish canneries ringed Puget Sound and found their way to nearly all of the rivers on the coast
Seattle had the largest fishing base and enormous storage warehouses
Fisherman's Terminal at Salmon Bay was the home of the fishing fleet
it braggled of eighty-four acres of moorage facilities for up to 1,000 vessels
trawlers, trollers, gill netters, and purse seiners tied up during the winter
making repairs, installing new fittings, mending nets getting ready for the new season
Aberdeen, Bellingham and Anacortes also each had expansive fishing interests
Type of fish being caught and their location caused distinctions in fishing methods
which varied in complexity, but all were very expensive
nets cost thousands of dollars as did the heavy equipment needed to lift and set the nets
it was necessary to bring in the nets for expensive repairs at the end of the season
fishing boat itself could range in price from a few thousand dollars to hundreds of thousands

VARIETIES OF SALMON INITIATED THE MOST VALUABLE FISHERY

Least complex method of fishing is trolling with a hook and line
all salmon except sockeye, which will not bite on a hook, may be caught this way
Chinook (King, Tyee, Spring) salmon is the largest
ranges from twenty pounds to 100 pounds -- average about 20 pounds
Chum (dog) salmon runs about ten pounds
Silver (Coho) salmon generally reaches about eight pounds
Sockeye (blueback, red) salmon grows to around five pounds
Humpback (pink) also reaches about five pounds

EQUALITY COLONY NEAR EDISON SUFFERS DECLINE

Over time the members of Equality Colony on Samish Bay in Skagit County had purchased different kinds of machinery they could deliver rough or finished lumber, shingles, cereal, coffee, bread, graham flour, and many other items

However, the first two years of life in the colony was marked by hardship and privation but most of the Socialists endured as cheerfully as possible there were no epidemics but several deaths from natural causes claimed members' lives in addition, five able bodied men met death by accident: two in the mill, one by a falling tree, one by a fall from a porch on the apartment house, and one was thrown from a wagon two children were burned to death

Many Equality colonists became discouraged and left, leaving about 125 men, women and children to carry on the work that had been begun by so many -- 1900

Equality was not close enough to any markets to create a thriving industry thus insufficient income was produced it was also hampered by too many unproductive members number of colonists continued to fall due mainly to poor economic conditions in the colony and greatly improved economic conditions outside with promises of higher income elsewhere luring workers away

NEW COLONY OF FREELAND IS ESTABLISHED

When a spin-off group of disgruntled anarchist Equality homesteaders failed in their effort to transform the colony from a centrally controlled organization to a collection of small independent voluntary groups these anarchists established the Utopian colony of Freeland on Whidbey Island -- 1900 they were committed to the concepts of mutual aid and free community cooperation

Freeland received its name based on its origins as a commune socialist founders believed the land of the town should be free for all people this colony was best known for its local land development

Freeland soon had sixty members who shared in a community store and a small steamboat Some of the first settlers were veterans of a prior experiment in socialism at nearby Equality Colony this provided to be less structured living than in Equality

Records showed that two groups existed within the colony followers of Theodor Hertzka, who was a Hungarian-Austrian economist and journalist, espoused the same principals as Edward Bellamy in his futuristic novel, *Looking Backward* they emphasize cooperative ownership of property as they believed private ownership was a source of social inequality and injustice another faction called themselves the "Freeland Body" they emphasized personal autonomy and the rational nature of human beings

Attempts were made to appease both factions each was granted some kind of quasi-independence (Over time Freeland shed most of its socialist orientation and evolved into an ordinary suburban community)

REPUBLICANS REESTABLISH POLITICAL CONTROL IN THE NATION AND WASHINGTON

Nationally, Progressive Republican New York Governor Theodore Roosevelt had exposed corrupt New York public officials
he forced passage of New York Civil Service legislation
New York Republican Party bosses wanted to get rid of Teddy Roosevelt
when conservative President William McKinley ran for a second term -- November 6, 1900
they nominated Roosevelt to replace Vice President Garret A. Hobart
Conservative Republicans were in firm control of national politics
President McKinley won reelection and carried Theodore Roosevelt with him
away from the New York governorship
Washington politics showed that Progressive Republicans were elected to every state-wide office
with the exception of Fusionist Governor John R. Rogers
level-headed, able, budget-conscious, personable, he was an honest administrator
conservative Republicans were sure Populists like Governor Rogers
were planning to overthrow the state government
Progressive efforts to pass second referendum calling for women's suffrage
was defeated by the voters
Populist leader and State Treasurer C.W. Young vanished from the political landscape
in the State Senate Democrats picked up one seat giving them a total of nine senators
while Republicans gained fourteen seats collecting a total of twenty-six senators
State House of Representatives saw Democrats go from zero to twenty-one members
while Republicans dropped from sixty-eight seats to fifty-nine
but this still gave Republicans almost three-quarters of House seats

JIM HILL SEES NEW OPPORTUNITIES

Washington timber industry boomed along with Jim Hill's Great Northern Railway
now Hill had empty cars coming from the east to haul logs
Jim Hill proposed that American cotton and steel could be sold to China and Japan
to be shipped across the continent on railcars previously filled with lumber
Empire Builder Jim Hill formed the Great Northern Steamship Company -- 1900
two steamships, *Minnesota* and *Dakota*, were ordered from the Eastern Shipbuilding Company
at New London, Connecticut

LIFE IS NOT EASY FOR SEATTLE ENTREPRENEUR JOHN CONSIDINE

As the gold rush era began to wane, the "open town" atmosphere of Seattle
once again became a matter of controversy -- 1900
John Considine's former employee, William L. Meredith, had gone with Considine to Spokane
now Meredith returned to Seattle and took up to his former profession as a policeman
Meredith and Considine had slowly become enemies
Meredith became the Seattle police chief and began an anti-vice campaign
which was actually more of an anti-Considine campaign
Seattle Post-Intelligencer lashed out at Meredith for not coming down hard enough on vice
John Wilson, an ambitious politician, started what he called the Law and Order League
he charged Police Chief Meredith and Mayor Thomas D. Humes with a variety of offenses
Seattle Times took up the defense of Meredith and Hume

but the real duel was between Meredith and Considine
when Considine brought forth evidence that Meredith was corrupt,
the *P-I*, in its ongoing effort to add readers, touted the charge for all it was worth
Considine-Meredith feud escalated -- 1900
Meredith started to enforce laws against Considine's business
Meredith made accusations of Considine having an affair with Mamie Jenkins
a 17-year-old contortionist who performed at his theater
charges of pregnancy and abortion, almost certainly a slander, overheated the accusations
by this time People's Theater did not even have any closed boxes
but Meredith tried to shut it down under an anti-box-house ordinance
while letting actual box houses continue to operate
Eventually the city council decided to believe reports that Police Chief Meredith was corrupt
his resignation was forced and he turned in his badge

GREAT NORTHERN RAILWAY STEVENS PASS TUNNEL IS COMPLETED

It was constructed slightly north of Stevens Pass to avoid problems caused by heavy winter snowfalls
on the original line which had eight switchbacks
Jim Hill's Chief surveying engineer John F. Stevens opened the 2.63-mile tunnel under Stevens Pass
approximately sixty-five miles east of Everett, Washington -- December 20, 1900
six to eight hundred men had been employed during the three-year effort
in spite of good boardinghouses at each end of the bore,
labor turn-over was high in this isolated location
at a cost of \$2,532,118 this project ended problems caused by heavy snowfalls
on the original line that featured eight Zig Zags (switchbacks) west of the tunnel site
Great Northern Railway's Cascade Tunnel lowered the elevation of the track
from 4,059 feet to 3,382 feet and saved 8.54 miles of track
maximum grade was lowered from 4.7% to 2.2%
in spite of the lack of technology, the east and west end of the tunnels met within half an inch
However, this route was plagued with delays due to heavy snow in the winters

U.S. ASSAY OFFICE IN SEATTLE PROCESSES NORTHERN TERRITORY GOLD

More than \$18 million in Klondike gold was assayed -- 1900
however, most miners made only a bare living
Canadian Yukon yielded another \$95 million to assay offices in that country
Placer gold mines of Central Idaho on the South Fork of the Salmon River
were exhausted soon after 1900

INFLUX OF GOLD HAD A POSITIVE AFFECT ON STATE GOVERNMENT

Legislators approved purchase of the Thurston County Courthouse in downtown Olympia -- 1901
to be used as the state capitol building
(this proposal had been advocated by Governor John R. Rogers beginning in [1897]
architect W. A. Ritchie had designed the castle of stone and construction was completed [1892])
this Romanesque building was originally 150 feet high
it featured a central octagonal clock tower (now gone)

and twelve smaller conical shaped towers (of which two remain)

Generous state expenditures aided the state's cities

Washington's three major cities each received funding for significant building projects

Spokane -- Monroe Street Bridge made of reinforced concrete 281 feet long was built

Tacoma -- improved port facilities at mouth of Puyallup River were completed

Seattle, in addition to a state grant undertook a major project funded by Yukon gold

this became known as the Denny Regrade -- 1901

NEW COMMUNITIES SURROUND THE MAJOR CITIES

Construction projects reached into the suburbs

sewers and water lines were constructed

electric cable cars and improved streets linked suburbs to cities

Towns and cities build up business by using promotion and advertising

floods of pamphlets, tourist pieces, and information brochures touted

palatial hotels and ten-story office buildings being constructed in the region

School buildings were constructed to meet the needs of a growing population

large numbers of well-educated people arrived from older states -- local teaching staff doubled

high schools became separate and distinct from elementary schools and colleges

most colleges were located in smaller towns

support of the school system was dependent on economic and financial considerations

rather than educational programs and campaigns

EQUALITY COLONY SUFFERS FROM A TRAGEDY

By and large, the first group of Socialist colonists was composed of honest, hardworking people

who sincerely believed in the socialistic way of life and labored to make it bear fruit

but it was not to be

G. E. (Ed) Pelton's leadership of the colony ended when he was accidentally killed by a falling tree

Equality's strongest personality and leader was lost -- February 24, 1901

lacking his stabilizing influence and practical ability the colony began to falter

every member had an idea of how to run the organization

each different from that of the rest

weekly meetings became prolonged squabbles and quarrels

hot debates at the town meetings raged

eventually the disputes became one continuous harangue with meetings every night

Undesirable elements were attracted by the alluringly advertised experiment

some were merely curious and came to see how it worked

some falsely claimed to be socialists and came in penniless

agreeing to work out their membership fees

other proved to have anarchist leanings once they were established in the colony

Progress shifted into reverse -- many reasons have been given for the collapse of the colony

it could have been that their newspaper, *Industrial Freedom*, had been too lavish

in describing the ideal social system and idyllic surroundings of Equality

one group lured west from Ohio took one look at the rude settlement in the stumps and tall timber

they were so shocked that they departed abruptly to settle (in what is now Bellingham)

this provided to be a major blow in already sagging morale
Outsiders grew wary of the “campers” in their midst
freeloaders no doubt contributed heavily to Equality’s downfall
they would stay until they had fattened on the excellent food
then after buying all the cheaply priced goods they could at the colony store,
they would depart between two suns

ANARCHIST COLONY OF HOME ATTRACTS UNWANTED ATTENTION

It is somewhat unclear what exactly the goals of those living at Home colony were
unlike Glennis colony before it that wanted to present a model to change society
founders of Home merely sought to find a place where they could live
according to their own beliefs without any immediate desire
to change the fabric of society
it was obvious that although neighbors assisted one another,
communal life was overshadowed by individualist aspirations
Conflicts among residents regarding communal versus individual living
became a major sticking point
resident Emma Goldman referred to Home as **“the anarchist graveyard”**
she criticized those living there for being **“...more interested in vegetables and chickens
than in propaganda.”**¹¹

James Morton resided in Home and had taken over Oliver A. Verity’s newspaper
Discontent: Mother of Progress -- 1901
Morton wrote a series of articles on the topic of free love in his paper
in fact, publisher James Morton was concerned
only with free love as an expression of women’s rights in sexual relations
postal authorities became concerned about a continual flurry of suspect articles

SHINGLE WEAVERS AGAIN ORGANIZE A UNION OF THEIR OWN

Effort had been made to resurrect the West Coast Shingle Weavers’ Union but to no avail
(West Coast Shingle Weavers’ Union [1890]) had been destroyed by the [Panic of 1893])
however, taking advantage of the good shingle market in 1901
shingle weavers carried on a vigorous agitation for better wages and conditions
Shingle Weavers formed the International Shingle Weavers’ Union of America -- 1901
locals in various shingle mill towns were chartered by the American Federation of Labor (AFL)
but were only loosely associated together through a “grand council”
From the beginnings of the organization the International Shingle Weavers’ Union of America Union
worked and fought hard for their union brother’s welfare and rights
Shingle Weavers won every struggle they encountered
members were organized in large numbers throughout the Pacific Northwest
it became one of the largest, most powerful unions in the Pacific Northwest
and set the standard for the other unions of the day (and into the future)

¹¹ Richard White, *It’s Your Misfortune and None of My Own: A New History of the American West*, P. 434.

STONE & WEBSTER ADDS UTILITY COMPANIES TO ITS SEATTLE ELECTRIC COMPANY

Electrical engineering consulting firm Stone & Webster agents Jacob Furth and James D. Lowman brought nine other utility companies in addition to Union Electric and Seattle Steam companies into the Seattle Electric Company by March 31, 1901

Seattle Traction Company, Green Lake Electric Railway Company,
First Avenue Cable Railway Company, Third Street and Suburban Railway Company,
Union Trunk Line, Grant Street Electric Railway Company,
West Street and North End Railway Company, Madison Street Cable Company
and Burke Block Light Plant

(they still were not done, and over the next six years the Seattle Electric Company also absorbed Seattle City Railway Company [1901], Seattle Central Railway Company [1902], Arcade Electric Company [1903], Electric Department of Seattle Gas & Electric [1905] and West Seattle Municipal Street Railway [1907])¹²

SOCIALIST PARTY OF AMERICA EMERGES

Several socialist splinter groups and the wreckage of the Populist movement converged some former middle-of-the-road Populists remained committed to reform as they sought an alternative progressive agenda in the socialist movement
New Socialist Party of America and the socialist utopias on Puget Sound benefited from the infusion of the Populist spirit
state of Washington eventually emerged as one of the Socialist movement's strongholds

MUTUAL HOME COLONY ASSOCIATION BEGINS A COLONY OF ITS OWN

Home was the most famous of the Socialist Utopian colonies
settlement was platted on Carr Inlet on Southern Puget Sound near Tacoma -- 1901
This colony became home to anarchists, communists, food faddists, freethinkers, nudists and others who did not fit in with mainstream society
radical feminist Lois Waisbrooker was a resident of Home
at the end of her controversial career -- 1901-[1904]
social revolutionary writer, publisher, artist, and philosopher Elbert Hubbard visited
as did anarchist and political activist Emma Goldman
and radical labor organizer and Marxist politician William Z. Foster took up residence
his career included a lengthy stint as General Secretary of the Communist Party, USA
Home was alive with discussions, debates, readings and lectures

BUSINESSMAN SAM HILL IS A GLOBETROTTER

Sam Hill was an inveterate traveler
he visited Japan nine times (between [1897] and [1922]) gathering information on highways
he journeyed across Russia on the then not-quite-completed Trans-Siberian Railway
from Asia to Europe on behalf of French investors -- 1901
(he set up the first chair of the Russian language at the University of Washington)

¹² John Caldbick, "William Grambs, acting for utilities conglomerate Stone & Webster in its push to consolidate Seattle electricity producers and street railways, incorporates Seattle Electric Company on January 19, 1900" HistoryLink.org Essay 1657, March 22, 2016.

(Sam Hill was constantly on the go
he made fifty-one trips across the Atlantic Ocean to Europe and circled the globe seven times
he developed various business interests in mining, banking
and trans-Pacific trade with Russia
among the friends he made in his travels were King Albert I of Belgium,
who made him a Commander of the Crown
and Honorary Belgian Consul for Oregon, Washington and Idaho
and Queen Marie Alexandra Victoria of Romania who was a British Princess by birth
and the Romanian Queen by marriage
for much of her life she corresponded with Sam Hill)

ONLY BATTLESHIP CONSTRUCTED ON PUGET SOUND IS LAUNCHED

USS Nebraska was built by Moran Brothers Shipyard
(Congress had authorized construction [Spring, 1899])
Moran's bid was the lowest received but was still \$100,000 higher than the Navy had authorized
Robert Moran, former Mayor of Seattle, asked the Chamber of Commerce and civic leaders
for a gift to offset the cost overrun
he received \$135,000 within a few days
Moran Brothers Shipyard was awarded the contract by the Navy -- March 1901
this project was good business for all concerned:

- Moran made a good profit;
- skilled workers had money to buy goods;
- local businesses and contractors did very well

(*USS Nebraska* was launched [October 7, 1904])

BRIEF HISTORY OF THE MILWAUKEE ROAD RAILWAY

Milwaukee Road originated as the Milwaukee and Waukesha Railroad Company
under a Charter granted by Wisconsin Territory [February 11, 1847]
with a plan to provide transportation between Milwaukee and the Mississippi River
but the name of the company was soon changed to the Milwaukee and Mississippi Railroad
After three years the train ran on five miles of track from Milwaukee to Wauwatosa, Wisconsin
first train completed the trip [November 20, 1850]
and the first passenger train ran -- [February 25, 1851]
Critical to the development and financing of the railroad was the acquisition of significant land grants
prominent investors in the corporation included William Rockefeller
brother of financier John D. Rockefeller
Milwaukee and Waukesha Railroad extended all of the way to the Mississippi River [1857]
Milwaukee and Waukesha was purchased by a new company
Milwaukee and Prairie du Chien became the corporate owner [1861]
During the [Panic of 1873] the Milwaukee and Prairie du Chien
acquired its own line from Milwaukee to Chicago
and extended its route to Minneapolis and St. Paul, Minnesota
this became known as the Chicago, Milwaukee and St. Paul Railroad [1874]
Chicago, Milwaukee and St. Paul Railroad had lines running through

Wisconsin, Minnesota, Iowa, South Dakota, and the Upper Peninsula of Michigan [1887]
contrary to its name the railroad had its headquarters in Chicago, Illinois
and not in Milwaukee, Wisconsin

CHICAGO, MILWAUKEE AND ST. PAUL RAILROAD FACES A CRISIS

Empire Builder Jim Hill controlled both the Great Northern Railway and Northern Pacific Railroad
these “Hill Lines” jointly purchased the Chicago, Burlington & Quincy Railroad -- 1901
this move effectively neutralized the Milwaukee’s gateway to the Minneapolis-St. Paul area
where much of the Milwaukee’s traffic was located

Milwaukee’s directors were forced to make a decision

either acquiesce to Jim Hill and become another “second-tier” granger railroad,
or take the bold step of building to the West Coast

Milwaukee’s directors felt they had to extend the railroad to the Pacific

in an effort to remain competitive with the Great Northern and Northern Pacific railroads

Board Chairman Roswell Miller wrote a letter

to Corporate President Albert J. Earling -- March 29, 1901

Miller expressed his dissatisfaction with E.H. Harriman of the Union Pacific Railroad

who was giving favorable treatment to the Northern Pacific Railroad -- his competitor

President Earling suggested a major construction effort to be undertaken by the Milwaukee Railroad

a survey was conducted that estimated cost to build to the Pacific Northwest

at \$45 million -- 1901

Chairman Miller, in a conversation with Harriman, expressed the Milwaukee’s discontent

he informed Harriman the Milwaukee would be compelled to build to the Pacific coast

Harriman arrogantly replied they could begin the next day if they liked

Financial combine of Jim Hill and J.P. Morgan showed an interest in the Milwaukee Road

as they needed a connection to Chicago for their Great Northern Railway

Chairman Miller wrote a concerned letter to Corporate President Earling: **“...if we do not make it [the extension to the Coast] we will be bottled up by a combination between the Union Pacific, the Great Northern, and the Northern Pacific.”**¹³

SEATTLE NEWSPAPER *THE REPUBLICAN* LOSES POPULARITY

Black journalist and editor Horace Cayton was twice arrested in Seattle for libel -- 1901

in the more notorious of the two cases

he had mocked Police Chief William L. Meredith and accused him of graft

Cayton was arrested at home, carried off to jail and locked in a cell with a hobo

Cayton was refused bail and denied communication with his lawyer and friends

community uproar surrounding Cayton’s mistreatment was considerable

Seattle *Post Intelligencer* noted: **“...no case has attracted more attention from the public than this.”**

Horace Cayton’s trial ended in a hung jury

however, *The Republican* began to lose advertisers

this exodus increased after a series of ant-Ku Klux Klan editorials

¹³ Oscar Osburn Winther, *The Great Northwest*. P. 277.

after which revenues dried up completely

UNIONS GROW IN WASHINGTON STATE

Many Seattle and Tacoma unions and locals (affiliates) from other city labor councils joined together united they formed the Washington State Federation of Labor -- 1901
to lobby for state safety and protective legislation
(Washington State Federation of Labor became part of the American Federation of Labor [AFL])

UTILITIES AND TRANSPORTATION EXPAND IN SEATTLE

Stone and Webster, parent of Seattle Electric Company,
completed their first privately owned hydroelectric power-plant development
new dam and plant were completed on the Puyallup River -- 1901
Stone and Webster acquired the West End & North End Railway and the Seattle Railway -- 1901
very quickly the owned Seattle's twenty-two streetcar lines
Seattle Electric Company assumed responsibility for financing and construction -- 1901
of the Seattle-Tacoma Interurban Railway
a subsidiary, Puget Sound Electric Railway, was formed to control and operate
both the interurban and street railway interests in Seattle

WILLIAM L. MEREDITH- JOHN CONSIDINE FUED TURNS DEADLY

Considine consulted with his lawyers about further action against Meredith for his slanderous assault
Meredith acquired a double-barreled 12-gauge shotgun
Considine dropped by Meredith's lawyer's office -- Tuesday morning June 25, 1901
to inform him that if Meredith would not retract the claim about the 17-year-old contortionist
he was ready to sue for libel
John and his brother Tom walked down from their (and the lawyer's) First Hill neighborhood
John stopped by the courthouse hoping to sort out his business's legal problems
at the courthouse, a friend warned that Meredith was after him,
and advised him to arm himself
John Considine went about his day
he shot some pool with his brother and dropped by his office to read his mail
he decided to leave his office early because of a sore throat
forewarned, he picked up a .38 revolver that usually remained at work
Meredith, in the meantime, had expanded his arsenal
besides the shotgun (which he carried wrapped in butcher paper)
he was carrying a .32 Colt in a .45 frame and a .38-caliber short-barreled revolver
he had also placed silver dollars strategically around his vest presumably for armor
he spoke openly of the town "not being big enough" to hold both he and Considine
Meredith waited at the corner of Yesler and Occidental
where he expected the Considines would go to catch the streetcar back up First Hill
he spotted the Considines headed into G.O. Guy's drugstore a block to the east
John had decided to pick up something for his throat
both brothers stood just outside of the store talking with Patrolman Merford
whom Meredith had suspended (according to legend)

“for pocketing part of a protection payment earmarked”¹⁴

for the former police chief himself

Meredith caught up to them took point-blank aim at John Considine with his shotgun, and missed dazed, Considine staggered into the store

Tom Considine and Merford, were so taken back that they hardly reacted at first

Meredith entered the store pursuing John Considine

Meredith's next shotgun blast hit Considine in the back of the neck

this shot also wounded the arm of a messenger boy drinking a sarsaparilla at the soda fountain nearly hit, Dr. Guy dived for the floor

Meredith dropped the shotgun and went for the revolver

Considine managed to grab Meredith in a bear hug and drag him toward the entrance

Considine yelling out for help from his brother, who finally realized what was happening

Tom grabbed Meredith's gun and smashed it into the attacker's skull

More police arrived, including Sheriff Edward Cudihee

Tom grabbed one of their guns and drew down on the police to keep them at bay

Meanwhile, John Considine drew his .38 revolver on Meredith, who was clearly already wounded

but the former police chief was still moving and was possibly reaching for another weapon

Considine shot Meredith three times in the chest and neck, killing him

he then handed his gun to Sheriff Cudihee and surrendered

JOHN CONSIDINE GOES ON TRIAL

Police Chief William L. Meredith had always been part of the “open town” crowd

but his death made him a martyr for the “closed town” faction

At the trial the prosecution tried to make the case that the Considines had started the gunfight

however, Meredith's outspoken statements in the twenty-four hours before the fight

helped to clarify any confusion as to who was the instigator

as did the testimony of the best-situated eyewitnesses

Members of the jury took only three hours to reach an acquittal

CARNATION EVAPORATED MILK COMPANY COMES INTO EXISTENCE

Thomas E. Yerxa sold out his share of the Pacific Coast Condensed Milk Company

leaving E.A. Stuart \$105,000 in debt

As sales gradually grew, Stuart looked for a new brand name his company

while passing a tobacco shop window in downtown Seattle,

Stuart saw a display of cigars that circled a sign with the name “Carnation”

he renamed his business “Carnation Evaporated Milk Company”

E.A (Eldridge Amos) Stuart's and Thomas E. Yerxa's Pacific Coast Condensed Milk Company

became the Carnation Evaporated Milk Company -- 1901

MAY ARKWRIGHT HUTTON -- BEST-KNOWN WOMAN IN SPOKANE HISTORY

May grew up in Ohio where she was technically not an orphan but was probably illegitimate

her mother either died or disappeared when May was very young

¹⁴ Murray Morgan, *Skid Road*, P. 137-138.

in adulthood, she had no memory of either of her parents
her father sent her to keep house for her aged and blind paternal grandfather until she was age ten
she cooked his meals and took him to the political meetings that he enjoyed
she absorbed a great deal that was to shape her adult priorities
on one such occasion, she met a young lawyer and future president, William McKinley
who expounded his view that women be granted equal economic and political rights
after the meeting, May and her grandfather stayed the night with him
May would later credit her Grandfather Arkwright with encouraging her
not to place any limits on her aspirations

After two very brief marriages in Ohio of which little is known

May Arkwright, a big-bone, large-scale woman as plain as she was confident and plainspoken,
joined a group of some forty former coal mining families in an [1883] migration to Idaho
she first worked long hours as a saloon cook in the mining gulches of the Idaho Panhandle
where she became known as the best cook in the Coeur d'Alenes
she opened her own boarding house at Wardner Junction (later Kellogg)

May married one of the regular diners

locomotive engineer Levi (Al) W. Hutton whom she met [1887]
they moved to a tiny apartment in Wallace, Idaho

May managed the restaurant of the Wallace Hotel

With their combined earnings, they were able to buy a stake in the unproductive Hercules Mine

Al worked in the mine during spare hours while May kept her job at the Wallace Hotel

Huttons were pro-union and champions of the underdog
in struggles between miners and mine owners

May was a more outspoken union activist than was her quiet, genial husband
when the labor unrest became violent [1899],

masked strikers commandeered Al Hutton and his train at gunpoint to haul dynamite
for blowing up some mining equipment

owned by the non-union Bunker Hill and Sullivan Mine

under the martial law that followed, Al was swept up with perpetrators of the sabotage

all were confined in a stockade known as the "bull pen"

May relentlessly badgered the guards and the Idaho governor's on-site representative
finally she was able to secure her husband's release

Al Hutton was never convicted of any crime,

but he lost his job with the Northern Pacific Railroad

May wrote a novel describing the incident [1900]:

The Coeur d'Alenes: Or, a Tale of the Modern Inquisition in Idaho

she later suppressed it by buying up the remaining copies

Al's partner in the Hercules Mine, August Paulsen, discovered a rich vein of silver and lead
this find resulted in almost two million dollars for the owners -- 1901

Al and May Hutton were able to move into a much larger house in Wallace, Idaho

MORE LUMBER BARONS ARRIVE IN WASHINGTON STATE

John H. Bloedel and J.J. Donovan formed a partnership -- 1901

enormous Bloedel-Donovan Lumber Mill processed timber along the shores of Lake Whatcom

together they set up one the state's largest industrial complex on Bellingham Bay
four shingle mills, four sawmills, a sash-and-door factory and a box factory
Mark Reed was one of the most important personalities in Northwest timber industry history
Reed was hired as a foreman of one of Sol Simpson's logging camps
Simpson Logging Company put Mason County on a solid economic footing
Simpson Logging was cutting up to 300,000 board feet of timber daily
and had 300 employees
however, the company still relied on the Port Blakley Mill Company
for an overwhelming portion of its business
Mark Reed gained Sol Simpson's personal and professional trust
when Mark Reed married Sol's elder daughter, Irene --1901
their successful relationship and the future of Simpson Logging Company was assured
Work force in the timber industry grew to some thirty-five thousand men
who produced four billion board-feet of green lumber a year

TIMBER BARONS RULE IN THE FORESTS OF THE PACIFIC NORTHWEST

Northwest Timber Barons were the elite of the forest industry
Timber Barons were aggressive -- as were the loggers who worked for them
Timber Barons were vitally concerned about profits
pay and working conditions in the forests, logging camps, sawmills and shingle mills
cut into profits and were to be controlled at all costs
when prices for wood products rose, cost were held to a minimum to increase profits
when prices for wood products fell, Timber Barons "settled the score"
for any increase in costs that had been awarded to their employees during good times

PRESIDENT WILLIAM McKINLEY IS SHOT

President McKinley was greeting guests at the American-Pacific Exposition in Buffalo, New York
self-proclaimed archaist Leon Frank Czolgosz stepped forward to face the 25th president
McKinley reached out to take Czolgosz's "bandaged" hand but before he could shake it
Czolgosz pulled the trigger twice -- 4:07 p.m. September 6, 1901
one bullet deflected off the president's ribs, making only a superficial wound
second bullet hit McKinley in the abdomen, passed completely through his stomach,
hit his kidney, damaged his pancreas, and lodged in the muscles of his back
doctors, unable to find the bullet, left it in his body and closed up the wound
Czolgosz stated he was inspired by anarchist agitators
anarchy and hatred were very much alive in America

PRESIDENT McKINLEY'S ASSASSINATION RESULTS IN MASSIVE ATTACKS ON RADICALS

It was the assassination of President William McKinley by Polish anarchist Leon Frank Czolgosz
that permeated the press and whipped public opinion into a frenzy¹⁵
Newspaper and magazine writers dealt with the issues raised by the assassination
by deliberately misrepresenting the political ideas of anarchism

¹⁵ Kenneth O. Ghormley M.D., "Home Colony, Its Philosophy & Beginnings," The Fortnightly Club of Redlands, California, January 21, 1999.

Tacoma's newspapers screamed: **"Freedom of Speech has run mad,"**

"Each anarchist should be killed as a wild beast, a mad dog. ...eliminated, tooth and branch."

Tacoma Daily Ledger urged **"Exterminate the Anarchist."**

and reported that an anarchist was **"a type of pervert. He has degenerated to a point at which conscience, the perception of right and wrong has vanished. He is alien, supremely selfish, unspeakably brutal; apart from the decency around him. He is sullen and vicious. He has no faculty of reason. His course is directly the evil prompting of a nature foul and cruel. He has his own literature, such as it is, his own speakers, such as they are."** -- September 7, 1901

Tacoma's religious readers joined in the fury:

a Presbyterian minister berated **"filthy dreamers of every land [who] flocked to our shores"**

a Catholic priest declared:

"religion must work with the law makers of the nation to wipe out anarchism."

HOME COLONY BECOMES A TARGET OF THE PRESS¹⁶

Tacoma Evening News called attention to Home colony with the headline:

"Shall Anarchy and Free Love Live in Pierce County?"

and warned readers of the dangers in harboring an anarchist colony

with an article, **"Shall Anarchy and Free Love Live in Pierce County?"**

James Morton, editor of *Discontent: Mother of Progress*,

the Mutual Home Association newspaper, returned these volleys

with a battery of articles in defense of free speech

arousing the people of Pierce County

"almost to a pitch of desperation"

PRESIDENT WILLIAM McKINLEY DIES

President William McKinley initially appeared to be recovering but took a turn for the worse

brought down by infection and gangrene, he died -- 2:15 a.m., September 14, 1901

"A man of noble character had been ruthlessly taken from his home and loved ones and from the people of his country, who so much needed his wise counsel -- his life was wiped out by the hand of a traitor to our government, an anarchist."¹⁷

Tacoma Ledger's black bordered edition editorialized that day: **"Close to Tacoma is the settlement of Home....whose residents are a collection of outlaws.... who defied the decencies of life, flouted virtue, railed at government, and sympathized with the assassin. ...Is this a nest of vipers, this unclean den of infamy, to remain undisturbed."**

VICE PRESIDENT THEODORE ROOSEVELT IS SWORN INTO OFFICE

Roosevelt was climbing Mount Marcy, the highest point in New York State

he received a telegram from Secretary of War Elihu Root stating the president was dying

he immediately began the return trip to his home

Learning of the death of the President McKinley, Roosevelt stopped to take the oath of office

¹⁶ Kenneth O. Ghormley M.D., "Home Colony, Its Philosophy & Beginnings," The Fortnightly Club of Redlands, California, January 21, 1999.

¹⁷ Laura Belle Downey-Bartlett, *Student's History of the Northwest and the State of Washington*. P. 185.

at the home of Ansley Wilcox House in Buffalo New York -- 3:30 p.m. September 14, 1901
six weeks before his 43rd birthday -- the youngest ever to hold the office of President
Theodore Roosevelt did not use a Bible during his swearing-in
(there is also no record of a Bible being used for this purpose
from the time of George Washington's second inauguration
through to the inauguration of John Quincy Adams
nor was there a record of a Bible being used in John Tyler's swearing in
Franklin Pierce may have affirmed his oath of office on a law book)

ANARCHIST COLONY OF HOME NEWSPAPER EDITOR ANTICIPATES TROUBLE

Washington State residents were not isolated from anti-Anarchist attacks

(before the assassination anarchists living at Home colony

had been able to reside in isolation from society

they were met with little attention from their neighbors or the nearby city of Tacoma)

James Morton expressed his unsympathetic feelings toward assassin Czolgosz's act of murder
in his newspaper *Discontent: Mother of Progress*

he further explained in his paper that **"It is a pitiable fact that the unthinking many well
look on this deed as a logical outcome of Anarchist teaching and will inaugurate an era of
persecution against all who are unsatisfied with existing conditions."**

his presumption was correct -- the backlash on radicals, and especially Anarchists, was strong

VIGILANTEES PREPARE AN ATTACK HOME COLONY

Tacoma press had whipped up a frenzy directed at the residents of Home Colony

Tacoma Evening News endorsed local vigilante action devoting a large article

to the Civil War veteran's Grand Old Army's decision to form the Loyal League of America
whose stated purpose was to **"stamp out anarchy in Washington state"** [September 14]

Tacoma Evening News ran another pro-vigilante article again [September 17]

the paper enthusiastically reported that the Loyal League's object was

to **"accomplish the utter annihilation of anarchists and anarchist teachings within
the borders of North America."**

Loyal League of America vigilantes vowed to charter a steamboat,

collect firearms and incendiary material and sail, 300 strong, to Home Colony

their object was to invade the colony and "put it to the torch"

murder and mayhem at Home were a distinct possibility

Home Colony was spared when the steamboat owner refused to transport them

REFORMERS POINT OUT SHORTCOMINGS IN AMERICA

Progressives saw their work as a crusade against urban political bosses and "Robber Barons"

beginning the [1890s] those committed to public service

demanding regulations on business

and an expansion of the scope of government

to ensure the welfare and interests of the country

Most notable figures of the time, whether in politics, philosophy, scholarship or literature,
were connected at least in part with the reform movement

articles exposing trusts, high finance, impure foods and abusive railroad practices
appeared in daily newspapers
and in such popular magazines as *McClure's* and *Collier's*
authors, such as journalist Ida M. Tarbell, who crusaded against the Standard Oil Trust
became known as "Muckrakers"
author Upton Sinclair exposed unsanitary conditions in Chicago meat packing houses
and the influence of the nation's in his novel, *The Jungle* [1906]
Progressive Era writers influenced the "Middle Class" to take political action

POLITICAL REFORMERS ARE ENCOURAGED BY PRESIDENT THEODORE ROOSEVELT

Progressives were committed to resolving a variety of social, economic, political, and moral ills
these activists came from a considerable variety of political backgrounds
most were active in the reform wing of the Republican Party
but support was also provided by some Democratic officeholders
Washington State's Progressive Party included leaders of both labor and farmer groups
such as the Washington State Grange, the Farmers' Union, and the State Federation of Labor

GROWTH IN THE WENATCHEE APPLE INDUSTRY

Philip Miller shipped the first railcar load of apples from Wenatchee -- autumn 1901
thirteen varieties of apples filled 763 that boxes went to the Gordan and Company of Seattle

EMPIRE BUILDER JIM HILL TAKES OVER THE NORTHERN PACIFIC RAILWAY (NPRY)

Financial manager J.P. Morgan had a great of respect for Jim Hill's management abilities
with the death of Northern Pacific Railway's General Manager Charles H. Coster
Jim Hill took the opportunity to exert his authority
Morgan group relinquished working control of the Northern Pacific Railway to the Hill faction
who immediately implemented the de facto amalgamation of the lines
through personal ownership of stock and company cooperation
Jim Hill completed the merger -- November 12 ,1901
creating a holding company known as Northern Securities, and capitalized at \$400 million

NORTHERN SECURITIES COMPANY IS FORMED

Northern Pacific Railway (NPRY) entered into a fare-war with Edward H. Harriman
who was President of Union Pacific and Southern Pacific Railroads
Bankruptcy meant reorganization of the Northern Pacific Railroad
Edward H. Harriman, James J. Hill, John P. Morgan, John D. Rockefeller, and their associates
met to re-organize competing railroad companies
Northern Pacific Railroad, Great Northern Railway, Chicago, Burlington & Quincy Railroad,
and other associated lines were melted into a holding company:
Northern Securities Company was formed -- November 13, 1901
banker J.P. Morgan was placed in charge
in this frenzied stock manipulation that almost shook Wall Street apart,
Harriman and his bankers just missed seizing control of the Northern Pacific Railroad

WASHINGTON GOVERNOR JOHN R. ROGERS DIES IN OFFICE

During his first term as governor Rogers championed Populist causes
he continued to push for school reform and advocated for a strong central government
he was re-elected to a second term 1900] bucking a strong statewide Republican electoral tide
he served less than a year before dying in office on December 26, 1901
after a short bout with lobar pneumonia

Governor Rogers died in office
after suffering a week-long bout with pneumonia -- December 26, 1901
leader of the progressive Fusionist Party was gone

In his lifetime John R. Roger published many books and articles -- all with a Populist theme
among these are:

- The Irrepressible Conflict; or An American System of Money* [1892];
this outstanding literary work attracted much attention especially in political circles
- The Rights of Man and The Wrongs of Man* [1893];
- Politics: An Argument in Favor of the Inalienable Rights of Man* [1894];
- Homes for the Homeless* [1895];
- Free Land: The Remedy for Involuntary Poverty . . .* [1897];
- Looking Forward, or The Story of an American Farm* [1898];
- Life* [1899];
- The Inalienable Rights of Man* [1900]

Republican Lieutenant-Governor Henry McBride became the fourth state governor
he gave the citizens of the state an efficient administration
he focused on keeping education from becoming the victim of political debate
he advocated reform within the Republican Party
and made enemies of the conservative wing of the party
(which declined to nominate him for the office of governor [1904])

School children later contributed their pennies to build a statue of Governor Rogers
in Olympia's Sylvester Park -- he is the only Washington governor so honored
engraved at its base is a quote that encapsulates his Populist creed: **"I would make it impossible for the covetous and avaricious to utterly impoverish the poor. The rich can take care of themselves."**

MOTHER JOSEPH LIVED A VERY FULL LIFE

Mother Joseph of the Sacred Heart, Mother Superior of the Sisters of Provident
died of a brain tumor at age 79-- January 19, 1902

this great lady was many things to different people:
intense, resourceful, prayerful, strong willed, artistic, demanding and skillful
but to the orphan children who came under her care
she was an unfailingly tender and protective mother
mostly, she just loved being with the children, praying with them, sharing pancake suppers
and providing little treats -- all while teaching the ways of family, work and church

Chronicles recorded her last words to the Sisters of Providence gathered around her bed: **"My dear sisters, allow me to recommend to you the care of the poor in our houses, as well as those without. Take good care of them; have no fear of them; assist them and receive them. Then, you will have no**

regrets. Do not say: ah! This does not concern me, let others see to them. My sisters, whatever concerns the poor is always our affair.”¹⁸

Under her leadership directing the work of the Sisters of Providence in the Pacific Northwest she had planned and built some of the region's first permanent institutions of humanitarian service eleven hospitals, seven academies, five Indian schools and two orphanages were opened in Washington, Oregon, Idaho, Montana, and southern British Columbia

MOTHER JOSEPH’S LEGACY REMAINS ACTIVE IN THE PACIFIC NORTHWEST

Mother Joseph of the Sacred Heart was a distinctive figure in Northwest history she was a woman of extraordinary compassion and vision blessed with a keen mind and a complex personality, she strove for perfection in all things while embracing the challenges of an all-too-imperfect world

Mother Joseph’s contribution to education, health care, and social services continue to be recognized Providence Health and Services, serving Washington, Oregon, California, Alaska and Montana carry on the caring traditions established by the pioneer nun and her colleagues

(Mother Joseph gained posthumous recognition when the U.S. Senate accepted her statue [1980] this gift from Washington state is included in the National Statuary Hall Collection in the United States Capitol building

joining Washington’s other honored citizen -- Dr. Marcus Whitman an inscription at the base of the statue reads: **“She made monumental contributions to health care, education, and social work throughout the Northwest.”**

Mother Joseph also was inducted into the National Cowgirl Hall of Fame [1981] at the request of a group of Vancouver sixth-grade students the legislature passed a bill ([1999]) declaring her birthday, April 16, as Mother Joseph Day in Washington State)

WASHINGTON IRRIGATION COMPANY EXPANDS THE AREA UNDER IRRIGATION

Old Sunnyside Canal project was composed of seven hundred miles of main ditch and laterals that watered thirty-six thousand acres -- 1902

Other privately owned irrigation companies expanded with equal fervor until the fertile Yakima Valley claimed that four-fifths of all the irrigated acres in the state were located here

JOHN CONSIDINE GOES LEGITIMATE

Theater owner John Considine reinvented himself as a respectable theatrical producer as he sponsored productions north of the Yesler Way “Deadline” he became a partner in Edison's Unique Theater (established in [1897]) Seattle's first well-appointed movie theater when he joined with the local distributor of Edison phonograph records -- 1902 this was Seattle's first establishment to combine variety entertainment with movies and was Considine’s first “dry” (no liquor) establishment

To lure customers away from his rivals, Considine promoted fancier and fancier entertainment he charged a basic ten-cent admission fee and made up the difference with his bar

¹⁸ Providence Archives, Seattle, Washington.

Difficulty in obtaining first-rate acts to play a city so distant from the major American population led Considine to establish one of the first vaudeville circuits (quite possibly the very first) with theaters in Victoria, Vancouver, Portland, Bellingham, Everett, Yakima, and Spokane this was the world's first popularly priced vaudeville chain featuring ten- and twenty-cent admissions Considine drew such artists as Sarah Bernhard, Ethel Barrymore, Mary Garder, Nellie Melba, John Drew, and Mark Twain

ALEXANDER PANTAGES MOVES TO SEATTLE

Pantages left Dawson City and moved to Seattle where he opened the Crystal Theater -- 1902 this was an 18-foot by 75-foot storefront fitted-out with hard benches on Second Street he immediately became a rival of Seattle entertainment entrepreneur John Considine Pantages served as his own manager, booking agent, ticket taker and janitor he bought a movie projector and some film, and hired a vaudeville act he charged a ten-cents admission Variety and vaudeville acts had become popular well-established forms of commercial entertainment travelling entertainers played established theatres usually connected with saloons Crystal Theater enjoyed considerable success, and the "King Greek" became an important figure in Seattle's vaudeville scene Alexander Pantages married a musician, Lois Mendenhall his former girlfriend, Klondike Kate, filed a breach-of-promise-to-marry lawsuit against him (which was later settled out of court) she also wrote to newspapers stating that he stole money from her to purchase the Crystal Theater Throughout their competitive struggle Alexander Pantages and John Considine remained amiable (some years after Pantages had driven his rival to the brink of financial disaster his daughter Carmen, who was born in Seattle, married John Considine, Jr. in Los Angeles)

NORTHWESTERN IMPROVEMENT COMPANY EXPANDS RAILROAD OPERATIONS

This corporation was a subsidiary of the Northern Pacific Railroad which carried out businesses in coal mines, irrigation works and investments in land Northwestern Improvement Company purchased the remains of a Union Pacific Railroad effort to lay track north from Portland to Vancouver and on to Puget Sound(begun in the [1890's] included sections of graded right of way and a stone pier in the middle of the Columbia River that had been constructed as the foundation for a bridge

FUTILE EFFORT TO COMPETE WITH THE NORTHERN IMPROVEMENT COMPANY

Rival Portland & Puget Sound Railroad began construction of another line from Vancouver to Kalama this company was taken over by the Washington & Oregon Railway Company line was completed via the Washington Side and then was taken over by the Washington Railway & Navigation Company which was, in turn, sold to the Northern Pacific to become a non-operating subsidiary of the Northern Pacific

TRANSPORTATION AND UTILITY COMPANIES EXPAND IN WASHINGTON STATE

Stone & Webster added Seattle Central Railway to their privately owned transportation and utility holdings in Seattle -- 1902

Stone & Webster subsidiary, Whatcom County Railway & Light Company,

dominated public transportation and power systems in the City of Bellingham -- 1902

Whatcom-Fairhaven Gas and Northern Railway & Improvement Companies were also acquired

These companies were comprised of earlier consolidations of local rail and utility services:

- Fairhaven Street Railway Company, Lake Whatcom Electric Street Railway Company;
- Fairhaven & New Whatcom Railway Company, Bellingham Bay Electric Street Railway;
- Fairhaven Electric Light, Power & Motor Company, and Bellingham Bay Gas Company

REFORMERS TAKE AIM AT THE INTERURBAN SYSTEM

Concentration of so much in private control of the vital urban transportation system

in the hand of Stone & Webster alarmed local reformers and progressives -- 1902

they forced approval of a restrictive streetcar franchise including nickel fares

Seattle voters approved bonds allowing construction of a municipal hydroelectric plant -- 1902

power generation on the Cedar River led to creation of Seattle City Light

and a long power struggle between public and private utilities

ADDITIONAL TIMBER BARONS ARRIVE IN THE PACIFIC NORTHWEST

Frederick Weyerhaeuser bought his first mill in the Northwest

an old sawmill on the Everett waterfront --1902

Roland H. Hartley, one of the most successful lumbermen in the state,

founded the Hartley-Lovejoy Lumber Company in Everett -- 1902

this company developed an enormous capacity for producing wooden shingles and siding

R.A. Long was the President of Long-Bell Lumber Company

was active in Kelso, Washington and in California, Arkansas, Louisiana, and Oregon -- 1902

TACOMA LABOR UNIONS AWAKEN FROM A DEPRESSION-INDUCED SLUMBER

Returning prosperity revived the dead construction industry in Tacoma

consumer prices had increased rapidly making higher wages possible

unions of journeymen (trained workers) were again becoming active

defunct labor unions reorganized and received International Charters

shorter work days continued to be a major goal for union members

Tacoma Grain Handlers Union struck for recognition -- 1902

600 railroad cars waited to unload of their wheat

fifteen grain ships also waited in Tacoma's Commencement Bay to receive the wheat

after their strike ended successfully, Grain Handlers Union gained recognition

and preference in hiring union members to load and unload grain

Tacoma Garment Workers Local 201

sent the first female delegate to a Trades Council meeting -- 1902

LABOR UNIONS DEMONSTRATE THEIR STRENGTH

King County Labor Council (organized in 1888 as the Western Central Labor Council)

affiliated with the National American Federation of Labor (AFL)
Construction Carpenters Union gained an eight-hour day -- 1902
wages increased from \$1.20 to \$2.50 per day
Construction Carpenters Union was successful in implementing a union shop agreement
builders could hire only union members to work on construction projects
International Association of Machinists called a nationwide strike -- May 1902
Machinists demanded only ten hours' work for ten hours of pay
over 400 union men in Seattle machine shops were involved in the strike
many strikers were put to work on refurbishing the basement of the labor building
they were paid partly in cash and partly in Labor Temple stock
These strikes were intended not to change the world but only to change conditions at a given plant
strikes were violent and demonstrated the deep bitterness present on both sides

ABERDEEN WAS A NOTORIOUS PORT

It was not just a sailor's occupation that was dangerous
the attraction of unattached, or at least unconstrained, men of all ages
walking off their ships with a weeks or months of pay in their pocket was too much of a lure
ne'er-do-wells and criminals of all types drifted into port cities to assist in the spending
Aberdeen was one of the most notorious port cities on the Pacific coast and Billy Gohl was why
born in Germany, Gohl stayed for a while in Alaska during the [1897] gold rush
but fled when he was accused of murdering his partner
San Francisco was his next stop -- there he joined the Sailor's Union of the Pacific
he became a recruiter for the union
and was known to use dishonest methods to gain members
on one occasion he kidnapped a whole crew and marched them to headquarters to sign up
Aberdeen's 12,000 people seemed ripe for his services and Billy moved there -- 1902
he opened a cigar store at 313½ South F Street -- the location was perfect for his needs
behind the store a short wharf hung over the Wishkah River
all around him were business that opened only during the day
except for a nicely placed saloon
Billy became a "crimp" (a thug who shanghai'd [kidnapped] men for captains short on crewmen)
Billy would visit a saloon (there were many to choose from) slip a "mickey" (drug) into a drink
and help the victim back to his ship -- or at least some ship that was departing immediately
after relieving the sailor of his cash
Billy also received a nice bonus for his service from the appreciative captain
when the sailor awoke, he was on his way to Shanghai or some other destination

FORT WORDEN IS THE THIRD LEG OF THE TRIANGLE OF FIRE

Fort Worden was the last of three forts which made up the Triangle of Fire
it joined in the defense of Puget Sound with Fort Flagler
Fort Worden served as the command post for the three posts when it was activated -- May 1902
it was composed of 433 acres with lovely parade grounds and extensive Victorian-era structures
Six-gun emplacements occupied the post
Battery Brannan located on Artillery Hill had two plotting rooms for eight 12" Mortars

Battery Powell located next to Battery Brannan contained eight 12” Mortars
Battery Ash located on Artillery Hill contained two 12” barbette guns
Battery Quarles located on Artillery Hill contained three 10” barbette guns
Battery Randol located on Artillery Hill contained two 10” barbette guns
Battery Vicars [1902–1917], located on Point Wilson contained two 5” guns
First detachment consisted of eighty-seven soldiers of the 126th Coast Artillery Company
under the command of Captain Manus McCloskey

SAM HILL BECOMES ESTRANGED FROM HIS FAMILY

Sam Hill settled in Seattle where he had major interests in the Seattle Gas and Electric Company
which was focused mainly in the coal gas business
Sam Hill’s personal life was in marked contrast to his business successes and civic ventures
Hill was at least somewhat bipolar which in part explained his manic approach to business
he moved his wife Mary and two children to his new home in Seattle
but Mrs. Hill took the family back to Minneapolis after six months -- 1902
she never lived in Seattle again
Sam Hill began to sever his ties with his father-in-law Empire Builder Jim Hill
and his Great Northern Railway and other companies
Sam Hill bought his wife homes in Minneapolis, Washington, D.C.
and Stockbridge, Massachusetts
Sam Hill took up residence at the Rainier Club, Seattle’s premier private gentleman’s club

FOREST FIRES ARE THE RESULT OF A MILD WINTER AND ESPECIALLY DRY SPRING

Local spot forest fires began smoldering around the state -- May 1902
(these continued unchecked month after month
as many as eighty fires consumed more than 400,000 acres of timber that summer)
Fire had been considered a friend of the settler
as it easily cleared away the endless forests for growing towns and farms

CAREY ACT FAILS IN ITS EFFORT TO CONTROL WATER RIGHTS IN THE WEST

Carey Act had passed Congress [August 18, 1894] in an attempt to control water rights
however, it resulted in extensive fraud in which the states themselves became involved
(Idaho was one of the act’s few successes
when the Boise, Minidoka and Twin Falls projects were perfected
Wyoming, whose irrigation projects started after World War II, also proved a success)
However, misadventures throughout the West led to insistent demands the federal government
do more than simply give away land to a recipient who could not develop it due to lack of water

NEVADA CONGRESSMAN FRANCIS G. NEWLANDS HELPS WESTERN FARMERS

U.S Representative Newlands became well known for his support of irrigation and land reclamation
Congressman Newlands chaired the National Irrigation Association
as chairman he received numerous proposals for federal support of irrigation projects
which were too large for private companies to attempt on their own
U.S. Representative Francis Newlands framed a bill to reclaim farmland with irrigation

this idea was pushed by conservationists such as President Theodore Roosevelt
who was the nation's first and best known proponent of conservation
Other congressmen, including Wesley L. Jones of Yakima,
met with National Irrigation Association Chairman Francis G. Newlands
together they drafted the Federal Reclamation Act (Newlands Act)
which generated funds from the sale of public lands
to provide the financial means to initiate federal irrigation projects

HARRY TRACY ESCAPES FROM PRISON AGAIN

Tracy had spent six years in the Oregon State Penitentiary at Salem
wearing the Oregon Boot welded to his right foot
Tracy and his brother-in-law David Merrill made their escape -- 7:00 a.m. June 9, 1902
leaving behind them six bodies: three guards and three civilians
This set off the most intense and electrifying manhunt in Pacific Northwest history
Harry Tracy headed north toward Washington but near Gervais, Oregon
just a few miles into their escape, Tracy and Merrill were surrounded by a fifty-man posse
miraculously they escaped to continue their flight from justice
by the time they reached Portland, the Oregon governor had called out 250 militiamen
this time the two desperadoes escaped by forcing a local boatman
to take them across the Columbia River

HARRY TRACY REACHES WASHINGTON

Lewis County Sheriff John Marsh had been alerted and had formed a posse of over sixty men
Deputy Bert Biesecker and volunteer Luther Davidson were positioned along Salmon Creek
about seven miles into Washington state
there just after dusk they spotted the two escapees
after an exchange of gunfire Harry Tracy and David Merrill continued their escape

CONSERVATION OR NEWLANDS RECLAMATION ACT PASSES CONGRESS

Federal Reclamation Act (Newland Act) passed Congress [June 3, 1902]
an enthusiastic President Theodore Roosevelt signed the Bill into law -- June 17, 1902
this was the beginning of putting the Federal Government
into the business of water-power development and irrigation
Newland Act provided for the creation of a Reclamation Fund
95% of all money received from the sale of federal public lands in sixteen western states
including Washington, Oregon, and Idaho
would go into a fund to develop desert land for productive use
reclamation fund was to be built up with the money received from sale of these lands
these were to be used for federal surveys, construction and maintenance of irrigation projects
most projects called for the construction of dams and irrigation canals
National Reclamation Act further provided reclaimed lands were to be opened to homesteaders
settlers could qualify for between forty to 160 acres under the Homestead Act
they would make repayments to the Fund of ten annual interest-free payments
for the cost of constructing the necessary irrigation works

settlers were required to abide by the provisions of the act
and to use at least half of their reclaimed land for agriculture
When the principal costs of the project were returned to the federal government
private owners were given management control of their land

FEDERAL RECALMATION SERVICE COMES INTO EXISTENCE

Newlands Act became the parent of the Reclamation Service (since 1923, the Bureau of Reclamation)
in theory, at least, the service was to make its irrigation and power projects financially possible
through the use of long-term charges against the reclaimed lands
Congressman Newlands was given expert technical expertise
from Chief Engineer of the Reclamation Service Frederick H. Newell
Newell established an important training program for Reclamation Service men
they accomplished pioneering work in the field of water resources and conservation

PRIVATE YAKIMA IRRIGATION COMPANIES FEEL THREATENED

Although private enterprise had succeeded remarkably well in his district,
Yakima's U.S. Representative Jones felt the federal government could do still better
Congressman Jones invited the engineers of the Reclamation Service to conduct a survey of his area
this threatened invasion of their domain by a federal agency caused a frantic scramble
among the private Yakima irrigation companies to appropriate every water right in sight
especially those pertaining to the deep, cold, glacial lakes in the Cascades
where small dams could create large reservoirs

FORT CASEY IS THE THIRD LEG OF THE TRIANGLE OF FIRE

Sitting atop Admiralty Head on Whidbey Island, it 487 acres command a superior a view south
south down Admiralty Inlet, west to the Strait of Juan de Fuca
and southwest to the jagged skyline of the Olympic Mountains
Fort Casey joined already manned Fort Flagler as the third leg of the Triangle of Fire
Three-gun batteries provided protection for Puget Sound
Battery Schenck -- eight 12" Mortars
Battery Seymour -- eight 12" Mortars
Battery Worth -- two 10" Disappearing Carriage guns
First garrison was composed of thirty men
under the command of Lieutenant A.D. Putnam-- June 1902

HARRY TRACY KILLS AGAIN

Tracy and his brother-in-law reached Chehalis where the two outlaws argued violently
Tracy learned that years earlier Merrill had sold him out for a lighter prison sentence
both men agreed to a duel and as they stood back to back
they agreed to step off at ten paces, turn and fire
but after two steps Tracy turned, fired and shot David Merrill in the back -- June 28, 1902
After killing his brother-in-law, Harry Tracy commandeered a fishing boat and crew at South Bay
and set out for Seattle
Now alone, stealing as he went and staying with unsuspecting families along the way,

Tracy continued his getaway while skillfully keeping lawmen at arm's length

HARRY TRACY CONTINUES HIS ESCAPE

Tracy arrived in Seattle then move eastward to Kent and Auburn before turning north

Still on the run, Tracy encountered a sheriff's posse near Bothell

he opened fire and killed Detective Charles Raymond and Deputy John Williams -- July 3, 1902

Tracey took a small boat to Bainbridge Island before returning to Seattle by skiff

Tracey next appeared in the home of a Seattle widow living on Phinney Avenue North

she tipped off a butcher's delivery boy to her plight

when Tracey stepped outside he was met by the law

shots were fired: one police officer and a citizen fell

both had been mortally wounded

Tracy fled to a nearby residence where he stopped to take several hostages

encountering lawmen he killed posse members Cornelius Rowley and Enoch Breece

FEDERAL RECLAMATION SERVICE COMES INTO EXISTENCE

This agency under the U.S. Department of the Interior studied potential water development projects in those western states with federal lands

revenue from the sale of federal lands was the initial source of the program's funding

Even in its infancy the Reclamation Service encountered opposition

some of its proposed developments were blocked by exorbitant costs

other plans were undermined by ranchers who owned the best reservoir basins

or by private irrigation companies who claimed the water flowing in the streams

of these controversies, the most bitter was the one that raged up and down the extremely dry

but fertile Yakima Valley in central Washington

(even now arguments are still being heard regarding certain dam sites along the Snake River)

GOLD IS DISCOVERED IN FAIRBANKS, ALASKA

Patient Italian prospector Felix Pedro had spent lonely and isolated years searching for gold

in the creeks and valleys of the Tanana River -- all the while experiencing little to no success

Pedro's serene valley was visited by E.T. Barnette, an ambitious trader with a shady past,

and his wife, Isabelle -- they hoped to locate a trading post far up the Tanana River

instead they were stranded by low water and an obstinate Captain Charles Adams

of the steamer *Lavelle Young* who had turned up a tributary of the Tanana, the Chena River

One night Felix Pedro announced to E.T. Barnette that he had found some good color

Barnette announced he would stay and open a trading post where they were on the Chena River

Pedro hurried back to his diggings where he soon made a big strike -- July 22, 1902

To create a market for his goods, E.T. Barnette sent a runner to Dawson City to announce the find

prospectors looking for new pay-dirt arrived by the hundreds only to be disappointed

rather than an abundance of gold the new arrivals found jobs working for Barnette

prospecting gold for him

Fairbanks became a boomtown none-the-less -- both the city and then Mayor Barnette prospered

Barnette became a banker and made great financial strides

(until gold production declined in Fairbanks and his bank collapsed)

angry depositors blamed Barnette who quickly departed Alaska [1911] never to return)

HARRY TRACY ESCAPES ACROSS THE CASCADE MOUNTAINS

Fleeing on foot toward Spokane, Tracy passed through Coulee City and Ritzville near Creston in Lincoln County Tracy stopped at a ranch owned by brothers Louis and Gene Eddy there he spent three days helping the Eddys shingle their roof “to pay for my board” Tracy’s picture had been all over the newspapers Creston Town Marshall Charles Straub heard stories of Harry Tracy staying in the area he deputized four wheat farmers who agreed to help find the killer Maurice Smith, Joe Morrison, Oscar Lillengreen, and Dr. E.C. Lanter as the posse approached the Eddy farm -- August 5, 1902 Marshall Straub identified himself and called out to Tracy to surrender Instead of surrendering, the outlaw, armed with a revolver, fired a few shots before he dashed into a barn for a 30-30 rifle lay hidden behind a haystack Fleeing the barn, a nearby boulder offered better cover -- Tracey made a dash in a hail of bullets Tracy discovered the sun was in his eyes so he raced to another boulder in this dash, Tracey was hit once and crawled into the wheat field which surrounded the farm the slug shattered his shin bone and severed an artery after applying a tourniquet, Tracey returned fire while lying on his back

HARRY TRACY DIES

During the night Sheriff Gardner arrived he, the four wheat farmers and Marshall Straub surrounded the field where Tracy was hiding In the middle of the night one shot was heard from a handgun next morning Harry Tracey was found dead of a bullet to the head -- August 6, 1902 he had vowed to never be taken alive His claim to infamy was assured by the size and scope of the manhunt and the extensive media coverage that followed his exploits one newspaper noted: **“In all the criminal lore of the country there is no record equal to that of Harry Tracy for cold-blooded nerve, desperation and thirst for crime. Jesse James, compared with Tracy, is a Sunday school teacher.”**¹⁹

FOREST FIRES DESTROY THOUSANDS OF ACRES OF PRIME TIMBERLAND

By the dry, late-summer more than one hundred forest fires burned out of control across the West many in Western Washington and Oregon Dr. Henry Gannett of the U.S. Geological Survey asserted -- 1902 that **“in less than a generation two-fifths of the standing timber has been destroyed in one of the richest timber regions of the continent.... Not less than \$30,000,000 worth has gone up in smoke, a dead loss to the people of the state.”**²⁰ Steadily blowing East winds spread flames across the dry tinder -- September 9, 1902 each fire created its own wind -- dry Douglas fir trees detonated like gunpowder

¹⁹ *Seattle Daily Times*, July 3, 1902.

²⁰ W. Storrs Lee, *Washington State*, P. 398.

sounds of explosions could be heard for miles

LARGEST OF THE FOREST FIRES BECOMES KNOWN AS THE YACOLT BURN

Largest forest fire in recorded Washington state history devastated forests -- September 11-13, 1902
no organized effort tried to stop the conflagration that destroyed 238,920 acres (370 square miles)
valued at \$30 million

an additional twelve billion board feet of trees were killed but not destroyed

much of the timber left to the Weyerhaeuser Company was composed of only salvageable trees

Causes of the Yacolt Burn were never firmly established

its origin was variously recorded as the Wind River Valley, the Washougal River Valley,
along the Lewis River, and at Star Mountain

loggers burning logging slash, logging operations, and farmers burning to clear land
were common causes of forest fires

U.S. Forest Service had a policy of letting fires burn themselves out

Horace Wetherall was the only forest ranger employed in the Mount Rainier Forest Reserve

he took no action to battle the blaze when he spotted the fire

he had recently been reprimanded for employing a fire crew to stop a burn

he was reluctant to be disciplined again

because there was no organized system for wildfire fighting residents and loggers just fled

Dry winds from Eastern Washington carried the fire west and north

as the sky darkened steamboats on the Columbia River had to use a searchlight to navigate

local residents feared an eruption of Mount St. Helens or Mount Rainier

smoke reached Seattle and Astoria

Fire was fanned by unusually dry winds from the east that traveled thirty-six miles in thirty-six hours
flames reached the town of Yacolt and then turned north

homes, churches, barns, and livestock were lost -- at least 146 families were left homeless

troops from Vancouver Barracks helped evacuate residents

It was noted in the Bucoda Newspaper: **“This town was inky darkness until noon today, and people were going around with lanterns. No fire is in sight as this is written but there must be great conflagrations somewhere else in the vicinity.”**²¹

Elma Newspaper reported: **“A courier has just arrived from the Star sawmill which he says has been wiped out. Men there made a brave fight but had to flee for their lives. The fire can be heard here in the village and it is like the sound of the sea as it crossed the bar. Ashes are falling like the skirmish before a snow storm. Wagon loads of refugees and their household effects are arriving it town.”**²²

Vancouver weekly *Columbian* declared: **“What a week ago was a beautiful valley of the Lewis River is now a hot and silent valley of death, spotted with the blackened bodies of both man and beast.”**²³

Seattle *Daily Times* noted on September 12, 1902 **“Reports from the fire-stricken districts of Lewis River continue to grow worse. The charred and lifeless bodies of thirty-eight people have**

²¹ James A Crutchfield, *It Happened in Washington*. P. 86.

²² James A Crutchfield, *It Happened in Washington*. P. 86.

²³ James A Crutchfield, *It Happened in Washington*. P. 86.

already been found, and all believe that there will be more to follow. Many settlers and an unknown number of campers from outside points are missing.

“The burned district was settled by perhaps five hundred people, most of whom were prosperous, while many were well-to-do. Nearly all of the farmers had good buildings, their barns filled with hay, and their pastures well stocked with cattle....

“At one place the irons of a burned wagon, the roasted remains of a team of horses and the dead bodies of nine people tell the tale of an unsuccessful attempt of a party of pleasure seekers to escape. While fleeing from the flames, they were stopped by a big log that had fallen across the road. The team was burned on the spot, and so fierce was the fire that none of the nine persons was able to get more than a few steps from the wagon.

“Many people saved their lives by jumping into the Lewis River, the water of which in some places was warm from the intense heat of the surrounding flames. About sixty people who were camping at Trout Lake, near the base of Mount St. Helens, were saved by taking to the water on improvised rafts of poles and logs.”²⁴

“At Portland and Tacoma black clouds of smoke obscured the sun and both cities are in almost total darkness. Olympia is as badly off. In Seattle at high noon the light was little better than that which prevails an hour after sunset. Lights were burned in all stores and in many offices. By four o’clock lights were universally in use throughout the city.

“Mariners on Puget Sound are faring badly. The Sound is overhung with smoke and many of the steamers are forced to run at half speed. Landmarks, by the aid of which the captains guide their vessels, are entirely hidden by the universal smoke....”²⁵

“Tacoma lies under a heavy blanket of smoke, which hangs high in the heavens, giving no odor, but admitting very little light. ...From five o’clock this morning until seven o’clock the entire sky was blood red, with no signs of sunrise. The smoke is so high that many people refuse to believe that the phenomenon results from forest fires and many of them are congregated on street corners predicting dire disaster....”²⁶

“The origin of the fires is unknown in general. A few brush fires were lost control of...campers in some sections let their fires get away. But to describe the situation as expressed by many who escaped with their lives, the fires seemed to start in almost every part of the burned area at about the same time. It is believed by some that an eruption somewhere between Mounts Hood and St. Helens started the big fires. Fires were known to be burning in scattered spots, but were not deemed sufficient even under a high wind to work the resultant damage. The spread has been phenomenal and the rapidity with which the flames spread over the whole country almost surpasses belief....

“In several instances wild beasts, deer, bear and coyotes took common refuge, together with people and domestic animals, apparently oblivious to one another’s presence in their endeavor to seek protection from the terrific clouds of flames that swept everything in their path. On the Little Washogugal wild rabbits ran unharmed among the domestic animals and dogs unmolested, so great was the danger and fright....

“The burned section extends from Etna on the North Fork of Lewis River to the summit of the Cascades on the east, and embraces nearly all the country between there and the Columbia River,

²⁴ W. Storrs Lee, *Washington State*, P. 399.

²⁵ W. Storrs Lee, *Washington State*, P. 400.

²⁶ W. Storrs Lee, *Washington State*, P. 401.

running as far west as Vancouver. But few spots escaped. The great belt of big timber, lying between the North Fork of the Lewis River and the Columbia has been destroyed and its value runs into millions of dollars.... Old timers say the denseness of the smoke at the present time has not been equaled since 1883, when a gloom hung over the country from June to September.”²⁷

(Rain eventually extinguished the Yaacolt Burn
but not before thirty-eight people were killed in Clark, Cowlitz, and Skamania counties)

ADDITIONAL FIRES ATTACK WASHINGTON FORESTS

Fires raged from Bellingham to Eugene as ash fell to a depth of ½-inch -- September 12, 1902
smoke was so thick the sky was dark at noon and people carried lanterns in the streets of towns
this became known as the famous “dark day”
Seattle street lights were lit at midday
chickens roosted both day and night
Eleven picnickers in the Mount St. Helens areas died

SEATTLE AND TACOMA IS LINKED BY AN INTERURBAN SYSTEM

Fred Sander’s effort to complete this transportation link was overtaken by Henry Bucey
privately-owned Puget Sound Traction, Light & Power completed thirty-five miles of track
linking Seattle with Tacoma via Kent and Auburn
it also featured was an additional two-mile branch line to Renton
service began -- October 5, 1902

FORESTS OF WASHINGTON AND OREGON ARE DEVASTATED

In all 700,000 acres of forest were lost in Washington and Oregon
along with the obvious additional damage to soil, wildlife and potential future growth
best estimate of loss of life was set at thirty-eight dead of which thirty-five were identified
nature, with help of man, finally extinguished the blazes
An aroused Weyerhaeuser Timber Company Manager George S. Long
helped devise and push through the shocked Washington legislature
the Northwest’s first effective forest-fire legislation
he persuaded neighboring landowners to establish patrols, pooling men and equipment
and sharing the cost of fire protection on a proportional basis
he turned to Gifford Pinchot’s infant United States Forest Service
for advice in formulating fire prevention and suppression programs

INTERNATIONAL ASSOCIATION OF MACHINISTS GO ON STRIKE

Boiler makers in King County went on strike -- October 1902
after two weeks the strikers were joined by other crafts
who walked out in sympathy -- November 2
this was a joint effort and the agreements made between crafts were mostly verbal
they saw the necessity of joining together for their own protection
During the strike the Western Central Labor Council contributed \$8,000 to the strikers

²⁷ W. Storrs Lee, *Washington State*, 402-402.

and another \$2,000 to \$3,000 was donated from other sources
This successful effort resulted in a 2-cent increase for mechanics and 1-½ cent adjustment for helpers
mechanics' prevailing wage rose to 20-cents an hour and the workday was limited to ten hours
(Other strikes followed for the next several years)

ELECTION OF NEW MEMBERS OF CONGRESS

Levi Ankeny Republican banker from Walla Walla was elected to office -- November 4, 1902
he joined Addison G. Foster in the U.S. Senate

Ankeny replaced Fusionist Senator George Turner -- (he will serve one term [1903-1909])

Washington's three Congressmen were each Republicans:

Wesley L. Jones was an attorney from North Yakima serving his third term in Congress

Francis W. Cushman was a Tacoma attorney also began his third term

William E. Humphrey, Seattle attorney, was elected to his first Congressional term
serving the Third Congressional District

SEATTLE VOTERS SUPPORT CONSTRUCTING A CITY OWNED HYDROELECTRIC PLANT

Seattle was faced with high private company electric power rates like Tacoma had
before Tacoma financed its municipal electric company [1893]

Reformers in Seattle pushed for a publicly owned alternative power source

to compete with the city's many privately owned electricity producing companies

City Engineers George Fletcher Cotterill and Reginald "R.H." Thomson convinced city officials
and voters to provide funds for a municipally owned generation system

Seattle would construct an electric power plant at Cedar Falls

in the city's newly acquired Cedar River Watershed to supply power for street lights
and provide competition for the privately-owned Seattle Electric Light Company

Seattle City Council and the city's voters approved building a hydroelectric dam plant
one-half mile below Cedar Lake (renamed Chester Morse Lake) -- November 1902

(prospect of inexpensive municipal power forced Seattle Electric Light to reduce its rates
from twenty cents a kilowatt-hour to only twelve cents [1905])

TACOMA BUILDING LABORERS' INTERNATIONAL PROTECTIVE UNION IS CHARTERED

Tacoma's laborers organized Local Number 6 -- December 1, 1902

they gained a wage increase of 50¢ a day for common labor

wages for eight hours of work ranged from \$2.50 for common laborers
to \$3.50 per day for hod-carriers (brick carriers)

FEDERAL GOVERNMENT WITHDREW SUPPORT FROM YAKIMA'S IRRIGATION PROJECT

Federal engineers unexpectedly concluded the Yakima region was unsuitable for irrigation

they believed competing water claims were insurmountable

besides the Northern Pacific Railway (NPRY) would be prime beneficiary

United States Government indicated it was no longer interested

in developing projects that had been already started by individuals or companies

they stated the government did not wish to compete with private developers

U.S. Government turned its reclamation attention to Okanogan country

which occupied a large part of Colville Indian Reservation

PUGET SOUND ELECTRIC RAILWAY COMPANY BEGINS OPERATION

Stone & Webster acquired Puget Sound Traction, Light & Power
and the interurban route connecting Seattle with Tacoma
Seattle-Tacoma Interurban Railway passed into new management hands -- late 1902
company name was changed to the Puget Sound Electric Railway Company (PSE)
Tacoma's city system became a subsidiary
Seattle system was already a Stone & Webster property
PSE was one of the best interurban lines built [before 1905] and one of the first third-rail lines
it operated on private right-of-way except in the cities
where it shifted to street running and to overhead trolley power lines
traffic potential in the days before the automobile was very substantial
early earnings reports were extremely favorable
this line never had much modern equipment
passenger equipment was the standard wooden arch-window car, some built by Brill -- 1902
usually run in multiple units were capable of high speed
"limiteds" made the run in seventy minutes
although freight was handled, the line's revenue came primarily from passenger service
(over most of the years, thirty-minute-interval service was provided
newer equipment including open-end observation parlor cars
built by Cincinnati was added [1909]
last extension of the line was a branch into Puyallup [1908])

SHINGLE WEAVERS HOLD A CONVENTION IN EVERETT

International Shingle Weavers' Union of America held a convention in Everett -- January 1903
locals from Everett, Aberdeen, Arlington, Ballard, Castle Rock, Edmonds, Elma,
Fairhaven (now Bellingham), Hartford, Marysville, Olympia, and Sedro-Woolley
were represented
locals from Blaine, Hoquiam, Seattle, Snohomish and Tacoma
and perhaps seven other shingle mill towns did not attend
American Federation of Labor [founded 1890] sent delegates
to the Everett convention-- January 1903
delegates departed from the International Shingle Weavers' Union convention in a united front
with the American Federation of Labor (AFL)
International Shingle Weavers' Union of America printed a newspaper in Ballard
first edition of *The Shingle Weaver* was produced -- January 1903
(it moved to Everett and finally was printed in Seattle during the course of the decade
eventually the newspaper's name was changed to *The Timber Worker* [February 1913])

GREAT CHANGES HAD TAKEN PLACE IN THE NORTHWEST CORNER OF AMERICA

American Journalist and author Ray Stannard Baker wrote for the Muckraking *McClure's* magazine
which dedicated itself to exposing corruption
he described the vast changes that had recently taken place in the Pacific Northwest --1903

“In the Northwest everything seems to have happened within the last ten years; events which would be of epoch-making importance in any country at any time have here crowded one upon another with wanton prodigality.... Think of this march of events! It was barely eight years ago that the gold fields of the Klondike were brought to the knowledge of the world, causing a rush of Americans to the Northwest.... Following the Klondike excitement, came the various Alaska discoveries and Seattle and Tacoma were and are the natural headquarters for most of the supplies shipped northward....

“Hardly had the gold excitement calmed to the paces of a steady business enterprise when the Spanish War broke out, and these Pacific cities were thrown into the turmoil of visiting battleships and of provisioning and transporting the army of the Philippines.

“Then came the opening trade with the new insular possessions in the Pacific, the Chinese War and its call for equipment and its stir of soldiery and transports, followed by the recent commercial expansion of Japan, with its trade demands. And now an element has just entered into the calculations of the coast -- the construction of the Panama Canal -- which will revolutionize whole departments of the world’s trade and exercise a profound influence for good or evil on the cities of the Northwestern coast.

“While these world events were crowding upon one another, the development of the country tributary to the coast, upon which the solid progress of the cities must ultimately rest, was going forward with unprecedented rapidity....”²⁸

STONE & WEBSTER INCREASES IT PRODUCTION OF ELECTRICITY IN SEATTLE

Seattle Electric Company’s electrical engineering consulting firm Stone & Webster’s acquired the Snoqualmie Falls Power Company and its hydroelectric plant at Snoqualmie Falls -- 1903
Stone & Webster also constructed the Electron hydroelectric plant on the Puyallup River near Kapowsin in Pierce County -- 1903

INTERURBAN TRANSPORTATION DEVELOPS IN EASTERN WASHINGTON

Coeur d’Alene and Spokane Railway (C&SRL) was built by Idaho lumberman F.A. Blackwell this interurban line ran from Spokane, Washington to Coeur d’Alene, Idaho twenty-eight miles away -- 1903

C&SRL linked with the Spokane & Montrose Street Railway in Coeur d’Alene which also connected with the Red Collar Line’s steamboat service on Lake Coeur d’Alene

F.A. Blackwell and his affiliates merged the C&SRL with three other local electric rail lines to form the Spokane & Inland Empire Railway (S&IER)

Blackwell’s intention was to increase freight capacity
expand access to additional tourist sites

(Coeur d’Alene & Spokane Railway later expanded to the south into Palouse country)

CAYTONS BECOME THE MOST PROMINENT AFRICAN AMERICAN COUPLE IN SEATTLE

Horace and Suzie Cayton owned a large house near Volunteer Park -- 1903
theirs was the only black household in the affluent Capitol Hill area

²⁸ W. Storrs Lee. *Washington State*. P. 408-409.

where Seattle's grandest mansions were located
they had at least two servants, one Swedish and the other Japanese
they participated in various cultural activities and were members of a number of clubs
However, the Caytons were resented
among some members of Seattle's black community, they were considered to be "putting on airs"
by living in a white section of the city and keeping servants
their neighbors resented their presence, too
(six years after their purchase of the house, a white real estate agent filed a lawsuit
claiming that their presence had reduced property values in the neighborhood [1909]
Horace and Suzie Cayton mounted a successful legal defense,
but had they lost they would have been forced to sell their home)

PACIFIC COAST BASEBALL LEAGUE BEGINS PLAY

Organized baseball got its start on the Pacific Coast when an Oakland, California team
joined three teams from San Francisco to form the California League [1887]
Teams from Fresno/Watsonville, San Francisco, San Jose, Santa Cruz, and Stockton
joined the Oakland Reliance, Sacramento Gilt Edges, San Francisco Athletics
to replace the original league 1898]
California League San Francisco franchise owner Henry Harris visited Portland and Seattle [1902]
to see if he could induce owners of ball clubs in those two cities to join his baseball league
at the time, organized baseball on the west coast consisted of:
•California League with teams in Los Angeles, Oakland, Sacramento, and San Francisco
•Pacific Northwest League with teams in Seattle, Portland, Tacoma, Spokane,
Butte and Helena, Montana
Successful talks were completed and the Pacific Coast League was formed -- 1903
with "A" level minor league status
teams with names such as Los Angeles Angels, Oakland Oaks, Portland Browns,
Sacramento Senators, San Francisco Seals and Seattle Siwashes began play
Competition remained at this level as several teams were formed or dropped from the league
Tacoma Tigers Fresno Raisin Eaters, Portland Beavers, Sacramento Solons
and Vernon, B.C. Tigers competed
(Pacific Coast League was upgraded to "AA" status [1912]
however, the only team representing the Pacific Northwest was the Portland Beavers)

RIVAL TOWNS UNITE TO FORM A NEW CITY

(Three rival villages had sprung up near one another on the shores of Bellingham Bay
town of Whatcom [1852], Fairhaven Village [1853], Bellingham [1853] and Sehome [1854]
Fairhaven land developers bought the tiny settlement of Bellingham [1890]
Whatcom and Sehome were adjacent villages on Bellingham Bay
they merged for form New Whatcom [1890]
efforts to combine Fairhaven and New Whatcom constantly failed
primary dispute centered on an appropriate name as each village insisted on retaining its own
Finally, the name Bellingham was agreed upon as the identity
for the newly combined Fairhaven and New Whatcom, later changed to Whatcom-- 1903

(Whatcom is today's "Old Town" Bellingham)
(Sehome is downtown Bellingham)
(Fairhaven is a commercial district with its own harbor)

WESTERN CENTRAL LABOR COUNCIL EXTENDS ITS REACH

This (forerunner of the King County Labor Council) bought a newspaper: *Union Record* for \$350 which became the official messenger of the Western Central Labor Council -- March 1903 six people were elected to a board of control and Gordon Rice was retained as editor Frank Rust, a union man of noted integrity and conservative business ability, was made general manager of the Western Central Labor Council In an effort to revive the Labor Temple construction project in Seattle Western Central Labor Council held a carnival -- over \$3,000 was added to the building fund

WENATCHEE RECEIVES IRRIGATION WATER AND ELECTRIC POWER

(Local businessmen and landowners W.T. Clark, Marvin Chase and associates had attempted to raise money for Wenatchee Canal Company in addition to the hurdle of raising capital, highly independent landowners had to be convinced to allow passage of the canal through their land and to commit to paying for water work on the Highline Canal to run fourteen miles from Dryden down to Wenatchee began [1901]) (Passage of the Reclamation Act (Newlands Act [1902]) provided organization and funding for irrigation districts using federal government authority to acquire land and issue bonds this made possible the construction of reservoirs and canals) water was brought to the parched land and additional permanent settlers arrived Wenatchee fruit industry experienced dramatic growth Wenatchee Canal Company and the Highline Canal became the Wenatchee Reclamation District Irrigation projects needed electric power for pumps electricity was provided by a number of small power companies that captured the generating potential of the area's swift-running rivers Wenatchee got its first electric lights -- 1903 from a water-powered generator on the Squilchuck River built by druggist and schoolteacher L. V. Wells Wenatchee Canal Company used the flow from the Highline Canal for its source of power Soon there was more demand for power than local rivers and streams could supply (small companies eventually combined under the Puget Sound Power & Light Company which was a subsidiary of the Boston conglomerate Stone & Webster)

FISH CANNING INDUSTRY EXPERIENCES RAPID GROWTH

First motorized fishing boat on Puget Sound arrived -- 1903 gasoline and diesel engines were introduced into fishing boats much wider fishing area opened up it became necessary to preserve the catch aboard the boats on ice Not all salmon canneries were stationary first fish canning plants were small and had little machinery floating canneries brought fish processing close to the fishing grounds

GREAT NORTHERN RAILWAY MAKES ADDITIONAL IMPROVEMENTS TO THEIR ROUTE

Approximately 175 miles of new track was added in Washington and British Columbia
significant changes in the line along the Pacific coast also were completed
In addition to the Stevens Pass Tunnel, Chief Engineer John F. Stevens oversaw other projects
approach to Seattle from the Cascade Mountain tunnel improved service
route between New Westminster and Vancouver, British Columbia was enhanced
John Stevens was a superior engineer and administrator and other offers for his services arrived
he left the Great Northern Railway to become chief engineer, and then a vice-president,
of the Chicago, Rock Island and Pacific Railway Company -- 1903

CATHOLIC MOTHER CABRINI ARRIVES IN SEATTLE

(Francesca Cabrini was one of eleven children born to Agostino Cabrini and Stella Oldini
who were rich cherry tree farmers in Lombardy, Italy [July 15, 1850]
born two months premature she was small and weak as a child
and remained in delicate health throughout her life)
(Francesca Cabrini took her religious vows [1877] and added Xavier to her name
she became the Superior of an orphanage in Italy
where she taught and drew together a small community of women to live a religious life
when the orphanage closed [1880] she and six other Catholic Sisters
founded the Missionary Sisters of the Sacred Heart of Jesus [November 14, 1880]
Sister Francesca Cabrini became Mother Cabrini)

(Mother Cabrini went to the Vatican to seek approval of the Pope to establish missions in China
he instructed her to go to America to help the Italian immigrants flooding into the U.S.
she arrived in New York City with the other six Sisters [March 31, 1889]
she founded an orphanage there -- the first of sixty-seven institutions she established
in New York, Seattle, New Orleans, Los Angeles, Philadelphia,
Chicago and Des Plaines, Illinois; Denver and Golden, Colorado
and in countries throughout South America and Europe)
Mother Cabrini came to Seattle which had a large population of Italian immigrants --1903
she found that many had not attended church in decades
she attempted to remedy the situation by founding Mount Carmel Mission on Beacon Hill
followed by a school which later developed into Our Lady of Mount Virgin school and parish
(while in Seattle Mother Cabrini became a naturalized United States citizen [1909])

UNITED STATES FOREST SERVICE IS NOT VERY EFFECTIVE

Gifford Pinchot's federal agency functioned under the Department of Agriculture
but the forest reserves themselves were administered by the Department of Interior
which had no foresters and was committed to the idea of protecting its timberlands
from everything -- including legitimate use
Pinchot's six clerks and six foresters could do little other than offer advice -- 1903

TACOMA'S BUILDING LAROBERS' INTERNATIONAL PROTECTIVE UNION STRIKES

Building Contractors Association representing management demanded an open-shop agreement

which would allow the hiring of non-union workers on the job
Union members went on strike -- October 1903
Building Contractors Association refused to hire Building Trades Council members for six weeks
in the ensuing struggle the strike was lost
Contractor's Association broke up the Building Trades Council
non-union men were hired
American Federation of Labor- affiliated International Hod Carriers and Building Laborers' Union
was organized to challenge the independent Building Laborers Protective Union

MOUNT RAINIER VS. MOUNT TAKHOMA

Competition between Seattle and Tacoma remained active on several fronts -- 1903
journalist Ray Stannard Baker observed: **“Oftentimes the rivalry has its humorous side. While in Seattle I heard much of Mount Rainier.... The people of Seattle are proud of Mount Rainier; they regard it as a special Seattle attraction and have even named a certain brew of beer after the mountain. When I reached Tacoma one of the first things to which my attention was called was Mount Tacoma, rising gloriously in the southeast. It struck me that it bore a singular resemblance to Mount Rainier, and I said as much. ‘It is sometimes called Mount Rainier,’ said my informant; ‘but if you call it anything but Mount Tacoma over here, you can’t get anything to eat.’ And so the mountain is the dear scenic possession, under separate names, of two cities.”**²⁹

EDMUND AUGUSTINE SMITH DEVELOPS A FISH-BUTCHERING MACHINE

(Edmund A. Smith built his first fish-cleaning machine during the winter [1901-1902]
this device automatically decapitated the fish and removed the tails, fins, and entrails
he filed an application for a patent [May 1902]
his machine was not well-designed but it cleaned fish
Smith and his partners established the Smith Manufacturing Company [1902]
and the inventor continued to make improvements to the equipment
Smith also filed a patent application for a machine
that weighed and sorted cans filled with salmon
Edmund Smith installed his machine known as “Jumbo”
in the United Fish & Packing Company’s factory (in today’s South Bellingham [fall 1903])
Jumbo was a vertical wheel that carried salmon past knives and cleaning attachments
in spite of the doubts of local cannery men on the first day Smith’s machine
cleaned 22,000 fish in nine hours -- about forty fish a minute
Edmund Smith, John Wallace, B.R. Brierly, and F.E. Barlow formed a partnership
they incorporated the Smith Cannery Machines Company -- December 1, 1903
John Wallace was named president of the company
Smith busied himself developing a smaller model of his machine that was rented to six canneries
these were capable of cutting salmon to order -- and could clean 110 fish a minute
each machine replaced fifty-five Chinese who worked at the same rate packing salmon by hand
cost of canning salmon was cut to a fraction of what it once was

²⁹ W. Storrs Lee. *Washington State*. P. 406.

SMELT FISHING PROVIDES YET ANOTHER FISHERY

Columbia River and areas to the north bountifully supplied the small, oily fish
smelt runs came early in the year as rivers and streams were almost choked with the little fish
which are easily caught using dip nets

WASHINGTON STATE LEASES OUT INDIAN LAND TO OYSTERMEN

When the State tried to lease out tidelands allotted to Squaxin tribal members, they went to court
Indians won the right to retain ownership and access to their island -- 1903

AUTOMOBILES PROVIDE A NEW THREAT TO PUBLIC SAFETY

Seattle made the first attempt to control cars -- 1904
which were required to be equipped with a warning device -- bell, whistle, or gong
downgrade speed limit on hills was set at four miles per hour
but up to eight miles per hour were allowed going up hill
(Within two years there were 763 autos in the state [1906])

ALEXANDER PANTAGES OPENS A SECOND THEATER

Alexander Pantages made enough money from the Crystal Theater
to open a second, more pretentious establishment -- the first Pantages Theater
this one was located at Second and Seneca -- 1904
tickets still cost a dime and customers still lined up to wait for the next show

FOSS MARITIME TUG BECOMES AN INDUSTRIAL LEADER ON THE WEST COAST

Foss Tug boasted a shipyard, ten launches, a sixty-passenger oil powered boat,
and a small rescue craft to help disabled vessels --1904
Stoutly-built wooden-hulled tugs outlived several sets of machinery
several were changed from coal burning to oil burning equipment
and then from steam-powered to diesel-powered engines
Wallowa, for instance, changed her seventeen-year-old engines
to new compound engines -- 1904

GRAYS HARBOR RECEIVES INTERURBAN TRANSPORTATION SERVICE

Grays Harbor Railway and Light Company operated a nine-mile line
from Hoquiam to Cosmopolis via Aberdeen operations began -- March 19, 1904
Despite the short length, this line used wooden equipment built to interurban standards
(a few years later the system was upgraded to employ modern two-truck Birney cars)
(This property was acquired in the late 1920s by Cities Service
passenger service was provided [until 1932]
company remained in operation for freight service until [1941])

SEATTLE AND INTERNATIONAL RAILWAY IS REPLACED

Seattle & International Railway (formerly a portion of the Seattle, Lake Shore & Eastern route)
lost a large portion of its traffic between Seattle and Woodinville
Newly completed Lake Washington Belt Line under the control of the Northern Pacific Railway

acquired much of the Seattle & International Railway freight hauling business
when the new line connecting Renton, Kirkland and Woodinville began operation -- 1904
Seattle, Lake Shore & Eastern Railroad eventually ran passenger trains along its North Bend Branch
this new route added ten miles and one-half hour to a Seattle- Issaquah rail ride
although it skipped Fremont and Kenmore

NORTHERN SECURITIES COMPANY NEARLY MONOPOIES SHIPPING IN THE WEST

Northern Securities Company maintained virtual control over railroad services
from the Great Lakes to the Pacific Ocean

However, the holding company came under attack from President Theodore Roosevelt
J.P. Morgan sought an informal out-of-court settlement with the federal government
President Theodore Roosevelt was determined to break the trust

NORTHERN SECURITIES COMPANY IS BROKEN UP BY THE FEDERAL GOVERNMENT

U.S. Supreme Court found J.P. Morgan's Northern Securities holding company composed of
Northern Pacific Railway, Great Northern Railway, Chicago, Burlington and Quincy Railroad,
and other associated lines was sued for violating the Sherman Anti-Trust Act
by illegally restraining competition

Supreme Court ruled five-to-four to dissolve the Northern Securities Company -- March 14, 1904
Edward H. Harriman, James J. Hill, J.P. Morgan, John D. Rockefeller and their associates
were forced to break up their friendly arrangement

this was the first use of courts in Theodore Roosevelt's effort to bring big business under the law

PRESIDENT THEODORE ROOSEVELT BECOMES KNOWN AS THE "TRUSTBUSTER"

In addition to breaking up J.P. Morgan's Northern Securities Company
President Roosevelt took steps to implement corrective changes
to keep order in the American economy:

Actions he undertook include:

- Department of Commerce and Labor was initiated to increase federal control
over interstate business and to monitor labor relations;
- Bureau of Corporations was instituted to discover violations of existing antitrust laws;
- Antitrust lawsuits were launched by Attorney General Philander C. Knox
to break up such giant corporations as, John D. Rockefeller's Standard Oil trust,
and James B. Duke's tobacco trust, DuPont Company and Swift Meat Company
in all forty-four suits were brought during Roosevelt's time as president

PACIFIC NORTHWEST TIMBER INDUSTRY IS BIG BUSINESS

Huge corporations dominated by absentee owners changed the logging industry
new inventions speeded up the work and displaced many workers
as their traditional skills became obsolete
new methods of logging established factories in the woods as strings of cables filled the air
donkey engines, pumps, saws, locomotives, log-cars and chains infested the forest
all of these improvements produced fabulous profits for the owners
however, workers in the logging camps and mill towns shared little of this prosperity

At first no charge was made for room and board in the logging camps
even when the men were inactive due to sickness or bad weather
but workers were forced to pay for board while inactive beginning in 1904
which, of course, effectively reduced wages

NEW TECHNOLOGY SPEEDS THE HARVEST OF TREES

Oscar Wirkkala of Naselle, Washington near the Columbia River
developed “high lead” logging as a method of removing logs from the forest – 1904
“Spar trees” or “spar poles” were created when the limbs and the top was removed from a log
groups of spars were bound with cable at the top and raised to stand on end
they were held in place by a number of “guy wires” attached to the ground and at the top
groups of spars supported the “head block” (pulley)
located at the head end of the operation where a loading platform was located
and the “tail block” located in the forest

High lead logging was so named because huge spools of cable were unwound
and strung overhead as rigging used to move logs
main line of cable or “yarding line” extended out from the head end winch
through the “head block”
a second, usually lighter line called the “haulback” line, extended out
from a second winch through a “tail block” at the logging site
“butt rigging” was installed where the “yarding line and haulback line joined
logs were hooked to the butt rigging with “chokers”
short lengths of cable that reached around a log
and connected it to the butt rigging
when the yarding line was wound up on the head end winch
logs attached to the butt rigging by chockers were pulled overhead from the forest
when the haulback line was wound up on the logging site winch
butt rigging was pulled to the logging site for another load of logs
loggers called this “another turn”
logs were thus lifted off the ground by one end and pulled overhead out of the forest
to loading platforms -- thus avoiding obstructions on the ground
(while not an issue at the time, logs thus lifted as they were transported
were less disruptive to the ground which later became an environmental issue)

High-lead logging replaced skidroads as the method of delivering logs to loading platforms
because neither end of the high lead operation could be seen by the loggers
it was necessary to give a warning when the head end or tail end winch began work
both winches had a whistle which was blasted by a “whistle punk” to give warning
Steam logging trains chugged logs from the loading platforms to large mills
often at great distances from the forest

WESTERN CENTRAL LABOR COUNCIL IS ATTACKED BY SEATTLE CITY GOVERNMENT

Seattle’s Western Central Labor Council was affiliated with the American Federation of Labor (AFL)
Western Central Labor Council was forced to sell its building lot
for the proposed Seattle Labor Temple to house affiliated unions -- 1904

because new city fire codes mandated a brick building must be built at that location
Western Central Labor Council took a major step backward

SEATTLE CONSTRUCTS THE FIRST CITY OWNED ELECTRIC PLANT IN THE U.S.

(After Seattle City Council members and Seattle voters had approved building a hydroelectric plant construction became an immense undertaking
enormous amounts of lumber were needed and timber company bids were very high
Seattle City Engineer R. H. Thomson determined the city could supply its own lumber
by building a sawmill
railroad tracks were extended three miles up the Cedar River Valley
sawmill machinery and equipment were hauled to the site and the mill constructed
about 2,000,000 board feet of lumber cut for the construction project
Thomson hired James "J. D." Ross to oversee
installation of the electrical generating equipment
[Ross would later become the head of Seattle City Light])
Cedar Falls hydroelectric plant began lighting Seattle street lamps
for the first time -- October 14, 1904
this was the first municipally owned plant in the United States

TWO PHILOSOPHIES OF UTILITY COMPANY OPERATIONS CLASH: PROFITS VS. SERVICE

Because electricity had become an essential part of daily life
competing philosophies emerged regarding the electrification of Washington State
some felt privately-owned utility companies provided an excellent opportunity for profit
others felt electricity should not become a financial opportunity for a few
rather it should be regarded as a public service, much like roads, schools, or parks
electric companies should be owned by the public
service should be provided at-cost without making any profit
(this clash is still an issue which raises blood pressure throughout the state)

MAY ARKWRIGHT HUTTON BECOMES A SUFFRGETTE

May Arkwright and her husband Levi (Al) W. Hutton lived in a large house in Wallace, Idaho
they enjoyed the wealth they had acquired when their Hercules Mine made them millionaires
May set about educating herself by reading everything she could lay hands on
she joined the Wallace Shakespeare Club
however, May was not accepted into the society of mine owners' wives
large (far in excess of 200 pounds), outspoken, and often flamboyantly dressed
she did not fit the ideal of Victorian womanhood
her lack of formal education and her working-class origins were apparent
May Hutton was viewed as crude, earthy, unrefined and comical
(Idaho women had gained the vote [1896] and May Hutton voted the that year's election)
while living in Idaho, May met the Oregon suffrage leader Abigail Scott Duniway
as well as Emma Smith DeVoe a professional organizer sent from Illinois
to lead the suffrage efforts first in Idaho and then in Washington
May and Al also hosted such distinguished visitors as famous attorney Clarence Darrow

and national suffrage leader Carrie Chapman Catt in their Wallace, Idaho home

EQUALITY COLONY TRIES A NEW DIRECTION

Socialist colony in Skagit County suffered from lack of leadership after the [1901] death of Ed Pelton although the colony eventually held more than 600 acres of land and raised livestock and crops, they did not serve as the shining example of socialist ideals put into practice as they had intended

Hungarian-born Orthodox Jew Alexander Horr followed the teachings of Hungarian Theodor Hertzka both stressed cooperative ownership of property

socialist Horr led a group of outsiders who believed Equality colony needed to be remade

Horr thought the colony would do better if groups of colonists competed with one another rather than cooperate

Alexander Horr's leadership caused major dissension among the socialist colonists

CHIEF JOSEPH (HINMAHTOYAHLATKEKHT) DIED

Chief Joseph was sitting alone in front of his tepee fire when he passed away

he was buried on the Colville Indian Reservation at Nespelem, Washington (sixteen miles West of Grand Coulee Dam)

during the year following his death a granite monument place at the gravesite: **“He led his people in the Nez Perce War of 1877. Age about 60 years. Died September 21, 1904”**

to the end of his life he continued to appeal to federal officials to return his people to their Wallowa Hills homeland

REFORMERS MAKE GREAT GAINS IN THE 1904 ELECTION

Completing McKinley's term of office, President Theodore Roosevelt was elected in his own right he won by a landslide -- November 8, 1904

on the night he won election he announced he would not run for reelection in four years

this was a rash action he quickly regretted -- but a promise to the American people he kept President Roosevelt set out to further his ambitious agenda

he fought for reforms:

- laws to regulate business were proposed and enacted,
- laws to regulate the food industry strengthened protections for consumer safety

he led the conservation movement:

- he set aside forests in federal reserves which encouraged environmentalists,
- he created National Parks assuring the public access to vast acres of pristine public land,
- Roosevelt visited the Yakima Valley to push the National Irrigation Act

Republican Albert E. Mead was elected governor of Washington state -- November 8, 1904

he began a long-standing trend toward progressive legislation

Governor Mead strengthened the administrative branch of state government:

- office of Insurance Commissioner was added to the state Constitution,
- state Railroad Commission was established to oversee railroad operation and rates,
- Public Highway Department was begun to address concern about the new automobile,
- State Tax Commission was created to implement tax legislation,
- office of State Bank Examiner was appointed to oversee the industry

Governor Mead blocked passage of a law to regulate railroad lines
but he was criticized for being under the control of the powerful railroad lobby anyway
(oddly, it was also later charged the railroad lobby blocked his reelection effort
because he favored railroad regulation)

Only one change takes place in Washington's congressional delegation
Seattle City Attorney Samuel H. Piles, Republican, was elected by Washington State Senators
to replace Republican Addison G. Foster in the United States Senate
he served one term in office [1905-1911] joining U.S. Senator Levi Ankeny
Congressmen Wesley L. Jones, Francis W. Cushman and William E. Humphrey
remained in office

MAY ARKWRIGHT HUTTON RUNS FOR THE IDAHO LEGISLATURE

May Arkwright Hutton decided to run for the Idaho state legislature as a Democrat
she came within eighty votes of her Republican opponent -- November 8, 1904
she attributed her defeat to \$20,000 mine owners had raised in his support
May and her husband Levi (Al) W. Hutton moved to Spokane

MCNEIL ISLAND PENITENTIARY REMAINS A UNITED STATES PRISON

Federal government again offered McNeil Penitentiary to the state -- which once again declined
but this time Washington State offered to sell an additional 61.7 acres to the federal government
if the penitentiary was made a federal prison and adequately maintained
when the deal was struck, McNeil Island was declared an official United States Prison
to house all federal prisoners convicted on the Pacific slope and Alaska -- 1904

GIFFORD PINCHOT IS AN ACTIVE CONSERVATIONIST

Tall, rugged, aristocratic and self-righteous Gifford Pinchot
was a friend and advisor to President Theodore Roosevelt
Pinchot, a dedicated conservationist, served as Chief of U.S. Forest Service from [1898-1910]
he played a considerable role in the protection of forest reserves
he advocated for reduced taxes on timber property and for better protection against forest fires

EDWARD CURTIS BECOME A FAMOUS PHOTOGRAPHER

With an artist's devotion Edward Curtis had undertaken to photograph Native Americans
first he visited the Southwest
from there he traveled the Great Plains and Rocky Mountains
He returned to Seattle with more than one thousand negative plates
depicting Indians life among the Pueblo, Apaches, and Navajos
and many agricultural tribes living along the Colorado River
as well as Sioux, Cheyenne, Blackfeet, Nez Perce, Crow
and other people of the plains and mountains
He held a successful exhibit held in Seattle -- 1904
with his growing renown Curtis was invited to Washington, D.C. to display his work
he was introduced to President Roosevelt who showed great interest in his work
several magazine articles were illustrated with his work

Theodore Roosevelt arranged for Curtis to meet financier J.P. Morgan who assured the artist he would finance publication of his photographs. Curtis traveled the American West for the next twenty-one years photographing native people. Curtis promised his collection of Native American portraits would be "...the handsomest ever published."³⁰ -- this was a promise kept

STATE LEGISLATURE MOVES THE SEAT OF STATE GOVERNMENT

Washington's legislature had purchased the Thurston County Courthouse building in Olympia. Architect W. A. Ritchie's stone castle was converted into the state's capitol building. Money had been appropriated to remodel and add a second wing. Washington's new capitol served as the location of all agencies of the state government. State legislators began meeting in their new surroundings -- January 1905 (this building is now known as the "Old Capitol" became the home to the Office of Superintendent of Public Instruction)

WASHINGTON LEGISLATURE CREATES THE STATE HIGHWAY BOARD

Legislators passed a bill to create the State Highway Board -- 1905. They also appropriated funds to construct, but not maintain, twelve highways in sparsely settled areas of the state. Six of these highways were east-west crossings of the Cascade Mountains (none of these roads were constructed until much later -- if ever). Main highways serving the populated areas remained under county control although sometimes they were built with 50% of the financing coming from the state.

TWO NEW GENERATORS SUPPLY ELECTRICITY TO SEATTLE

(Seattle's voters overwhelmingly approved a \$590,000 bond measure to finance a municipal hydropower plant on the Cedar River [1902]). Two city-owned generators operated at Cedar Falls and Seattle's street-lighting circuits had been transferred from the Seattle Electric Company's lines to those of the city Lighting Department (soon renamed Seattle City Light) -- early 1905.

EMPIRE BUILDER JIM HILL ENTERS THE OCEAN TRANSPORT BUSINESS

Hill had amassed a fortune of over \$50 million with his Great Northern Railway and other combines as a logical extension of his railroad empire. He established the Great Northern Steamship Company linking Seattle with the ports of Hong Kong and Shanghai, China and Yokohama, Japan. Although Hill was a railroad man, not a shipbuilder, he ordered two huge freighters constructed. *Minnesota* was finally launched [April 16, 1903] but spent sixteen months at the fitting-out berth. Her sister ship, *Dakota* launched [1905] but was wrecked [March 1907]. *Minnesota* was for many years the largest merchant ship sailing under the U.S. flag. Her cargo capacity was said to equal that of 100 trains of twenty-five cars each. She delivered Midwest grains to markets in Asia.

³⁰ James Crutchfield, *It Happened in Washington*, P. 86.

and returned to the United States loaded with Chinese silks and other Oriental goods
Minnesota sailed from the Great Northern Railway's Smith Cove dock in Seattle
(directly south of today's Magnolia Bridge)
she was to call at Yokohama, Kobe, Nagasaki, Shanghai, Manila, and Hong Kong
Seattle Post-Intelligencer noted -- January 22, 1905

"...the steamship *Minnesota* sails for Asia with 300 passengers and the largest cargo ever yet to cross the Pacific Ocean. Shipments range from a paper of pins to a hogshead of tobacco to a bale of cotton to the heaviest architectural steel as well as engines and railroad cars."

value of the 28,000 tons of freight was put at \$1,212,641
(In practice, *Minnesota* was too large for the volume of business available
and she was also extremely uneconomical to operate
she made forty round trip voyages between the U.S. West Coast and the Far East
[between January 1905 and October 1915] but government control of freight rates
combined with merchant marines acquiring rights similar to those of factory workers
ended the career of the *Minnesota*)

NEW BOARDING SCHOOL OPENS ON THE TULALIP RESERVATION

One of the problems Tulalip Indian parents faced regarding the education of the children
was the great distances that many pupils traveled to and from their homes each day
especially in inclement weather
boarding schools were established on other reservations, including the Skokomish and Makah,
but the federal government had closed both of these [1896]
Fifty years after the signing of the Point Elliott Treaty, a new and larger school opened
along the shores of Tulalip Bay when Tulalip Indian Boarding School opened -- January 23, 1905
this also served as the regional Indian Agency headquarters
Charles Milton Buchanan served as the superintendent
Tulalip Indian Boarding School was to serve the Indian children west of the Cascade Mountains
and was planned to accommodate a thousand students
in fact, Tulalip Indian Boarding School had only one dormitory
and in reality it could only house seventy-five pupils
in addition to Tulalip, other boarding schools available to pupils in western Washington
were Puyallup School for Indian Education in Tacoma, St. George's Indian School in Tacoma
and Chemawa Indian School near Salem, Oregon

WESTERN CENTRAL LABOR COUNCIL ESTABLISHES ITS HEADQUARTERS

Western Central Labor Council, a part of the American Federation of Labor (AFL),
purchase a building lot in Seattle at Sixth and University -- January 1905
to house the long dreamed for Labor Temple for its affiliated member unions
(this building later became the home of the King County Labor Council)

BLOODY SUNDAY MASSACRE TAKES PLACE IN RUSSIA

Russian people had long been oppressed by the autocratic government of Tsar (or Czar) Nicholas II
workers led by the radical priest Georgy Apollonovich Gapon
marched in the capitol city of the St. Petersburg to the Tsar's St. Petersburg Winter Palace

to present to the Tsar a petition signed by 150,000 people -- January 22, 1905
marchers were gunned down by the Imperial Guard
“Bloody Sunday” triggered a succession of protests
with chaos in the capitol, a council of workers called the St. Petersburg Soviet was created
to advance the cause of the people
(Russia remained in turmoil until [1917])

INDUSTRIAL WORKERS OF THE WORLD (IWW) LEAD THE RADICAL LABOR MOVEMENT

Since the late Nineteenth Century workers many of them immigrants, had been rising up
against American capitalists -- many joined the labor movement
radical unionists wanted to place all workers into “One Big Union”
instead of separating by trades like the American Federation of Labor (AFL)
Industrial Workers of the World (IWW) members
(called “Wobblies” disparagingly at first -- then defiantly)
were the poorest of wage workers who saw themselves as being exploited by industry
for the benefit of wealthy capitalists -- in fact, this exploitation was very real
loggers, miners and seasonal agricultural workers formed the core of the IWW
their sense of indignation and anger at being exploited turned the struggle for relief
into a class struggle

IWW’s organization’s constitution read in part: **“The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class have all the good things of life.**

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system....

Instead of the conservative motto, ‘A fair day’s wage for a fair day’s work,’ we must inscribe on our banner the revolutionary watchword, ‘Abolition of the wage system’.”³¹

Industrial Workers of the World members believed in world revolution
they were at war with society

IWW considered craft unions, even the militant shingle weavers’ union,
to be merely creatures of the employers, nursemaids of reaction, traitors to the working class
employment agencies run by management were identified by the Wobblies as “slave markets”
Wobblies became aggressively involved in the labor movement

only the replacement of the capitalist system would meet their demands
IWW members considered themselves the shock troops of the labor movement
engaged in a battle already joined

nothing less than workers controlling the means of production would do
they were practitioners of brutal force

they were brave, unreasonable, ingenious, cantankerous and violent
they created the physical pressure for reform of wages and working conditions

Wobblies attempted to control national and state politics

however, transient workers did not vote in national, state or local elections

³¹ James A. Crutchfield, *It Happened in Washington*, P. 93.

WORKERS IN THE TIMBER INDUSTRY FACE DANGEROUS WORKING CONDITIONS

During logging's "cut and run" era loggers faced death every day

protection for timber workers was virtually non-existent

loggers worked into the night until they could not see the trees

logging camp conditions were notorious

bedding infested with fleas, ticks and bedbugs

there was no place to bathe or do laundry

maiming was a fact of life for sawmill workers

missing fingers were a badge of shingle weavers

bosses expected workers to tie rags around gaping wounds

and get back to work or lose a day's pay

Industrial Workers of the World (IWW) gained strong support in Snohomish County lumber camps

but in Everett, however, a logger joined the at great peril

IWW members were blacklisted and were thus unable to find work in the mills

PUGET SOUND TIMBER AND SAWMILL WORKERS FORM A UNION OF THEIR OWN

There were a great many unions in the sawmills and timberlands of Western Washington

however most of these were small, unsuccessful and short lived

part of the problem for union organizers was an inability to reach workers

timber camps were dispersed over a vast area

and attracted men from an even wider area when work was available

these men scattered in slack periods

making the maintenance of an organization nearly impossible

that the same men did not always return to the same camp made the problem worse

First viable attempt by the American Federation of Labor (AFL) to organize scattered woodsmen

came when more than 1,300 members were recruited

into the International, Brotherhood of Woodsmen and Sawmill Workers -- 1905

but this represented only skilled workers in the industry

which proved to be an ever-decreasing percentage of the total timber working force

quite probably this was an attempt to increase AFL bargaining power and political clout

an also an effort to stop the Industrial Workers of the World (IWW) as well

AFL was not really interested in organizing timber workers

as the national union leadership emphasized that they wanted to avoid strikes

AFL stressed the benefit of cooperative societies to its potential members in the mills and woods

timber workers referred to their industry under the AFL as the "coffin industry"

because unsafe working conditions and losses of benefits were the norm

LOGGING IS VERY WASTEFUL OF THE RESOURCE

Improved methods of transportation provided motivation for growth of the industry

availability of capital expanded operations

logging and lumber industry enjoyed the benefit of expanded markets

population growth increased demand in timber products

construction of new factories and homes expanded both supply and demand

Debris left in the forest from logging was ready kindling
more timber was destroyed by fire than was removed by logging by 1905
settlers sometimes set woods ablaze to celebrate holidays
(After [1905] Washington State ranked first in lumber production every year except one until [1938])
peak production year [1926] turned out seven billion board feet)

SIMON BENSON IS AN INNOVATOR IN THE LOGGING INDUSTRY

(Simon Benson, an immigrant from Norway, got his start at age sixteen
working as a farmhand in Wisconsin
he saved enough to buy six oxen and became an independent bullwhacker driving his ox team
eventually Benson moved to Washington and operated a logging enterprise
his sharp mind for business and hard work resulted in the development of a logging enterprise
he employed about ninety men in his sawmill, logging railroad and fifteen logging camps
always an innovator, Simon Benson's goal was to produce timber cheaply
to accomplish that result his business was thoroughly systematized
he was the first in the Pacific Northwest to successfully conduct all of his logging operations
using donkey engines
Benson increased his timber holdings
he purchased land from homesteaders at what was considered a fabulous price
he extended his logging railroad
Simon Benson built up an export business to supply trees of specific lengths and sizes
and tried shipping Northwest logs to California in ocean-going vessels
transportation cost ate most of the profits)
Simon Benson was determined to transport logs to California -- 1905
he constructed a cigar-shaped cradle to give the log raft a rigid and streamlined form
then filled the cradle with one and a half million board feet of logs
wrapped in 175 tons of chain
his log raft was pulled 1,100 miles to San Diego in twenty days by a powerful tug
at a savings in freight charges of two dollars a thousand-foot -- without losing a single log
Many more log rafts followed
some up to 1,000 feet in length and carrying six million board feet
rafts provided Benson's sawmill in San Diego with an endless supply of logs³²
(Simon Benson became Portland's wealthiest lumberman [1907]
investing in Portland he constructed the Benson Hotel
he also constructed the Columbia Gorge Hotel for tourists from across the nation
both were known for their high standards of service and were very successful financially
Benson also became the primary promoter, engineer, contractor and financier
of Oregon's highway system along the Columbia River
his humanitarianism and public spirit motivated him to donate to Portland
seven hundred and sixty-eight acres that became known as Benson Park
he contributed one hundred thousand dollars toward the building of Benson Polytechnic School)

³² Rick Steber. *Loggers, Volume 7*. Bonanza Publishing, Prineville, Oregon, 1989. P. 32.

MANAGEMENT OF U.S. FOREST RESERVES IS CHANGED

President Theodore Roosevelt persuaded Congress to transfer the national forest reserves from the Department of Interior's General Land Office to the Department of Agriculture's Bureau of Forestry -- 1905
Transfer Act of 1905 was the first forestry law to be passed
it changed the responsibility to oversee more than 63 million acres of forest reserves which were placed under the direction of Gifford Pinchot

BUREAU OF FORESTRY BECOMES THE UNITED STATES FOREST SERVICE

Bureau of Forestry was re-named the United States Forest Service -- March 1905
Gifford Pinchot was the first Chief Forester of the United States Forest Service responsible for over 500 employees
Pinchot changed the agency's purpose from a recreational role to more scientific endeavors he formed national and state conservation committees to mold public opinion

TACOMA SMELTING AND REFINING COMPANY IS SOLD

Daniel Guggenheim purchased Tacoma Smelting and Refining Company from William Rust while Rust had managed the company, stockholders had received ten per cent profits and an eleven-to-one split on their investment
when the plant was sold for \$5.5 million Tacoma Smelting and Refining Company -- 1905 name was changed to the American Smelters Securities Company

EDMUND A. SMITH'S FISH-BUTCHERING MACHINE ACHIEVES FINANCIAL SUCCESS

(Although Smith's fish-cleaning machines operated successfully, Smith Cannery Machines Company had not earned a dime)
Everett B. Deming's Pacific American Fisheries, Inc. cannery in Bellingham operated with nine canning lines and a large butchering crew who worked continuously to pack 8,600 cases on the best day [in 1901])
Deming bought three of Smith's machines --1905
Deming made his payment with check number 1 of his new canning company
two automatic butchers supplied seven lines of canning machinery
Deming's cannery packed an average of 9,000 to 10,000 cases of sockeye salmon a day
Additional new machines increased productivity to ever-rising heights
devices for making cans, automatic filling, soldering, steam pressure cooking, and labeling were brought on line
each innovation increased the number of fish that could be harvested
mechanization required large amounts of capital which required an increased catch
as canneries worked to increase output overproduction quickly glutted the market
Packing Associations were developed by cannery owners to slow the unmerciful competition
marketing became organized through the use of agents and brokers

CONFUSION REIGNS REGARDING YAKIMA RIVER WATER RIGHTS

Private water companies competed with each other for the right to water from the local rivers in their wild jockeying for water rights private companies grew angry

with the federal government and with each other
far more water had been claimed than the Yakima River and its tributaries
could possibly produce -1905
one group even dynamited a dam another faction had put across the outlet of Lake Cle Elum

STATE RECLAMATION EFFORT IS APPROVED IN THE YAKIMA VALLEY

Senator Wesley Jones prevailed on Reclamation engineers to reconsider the Yakima plan
he also began lining up valley support against the private irrigation companies
Washington legislature passed a new irrigation law -- 1905
which gave the U.S. government the right to acquire lands through condemnation
for canal and reservoir sites
state legislature further granted the right to acquire water rights necessary for any project

PRIVATE IRRIGATION COMPANIES FEEL THREATENED BY THE FEDERAL GOVERNMENT

Northern Pacific Railway (NPRY) and its Washington Irrigation Company became alarmed
they lobbied Washington's legislature to pass a bill to not allow the federal government
to store water in the lakes of the Cascade Mountains -- this effort failed
An even greater defeat for private irrigation companies came
when the state complied with the advice of the Federal Reclamation Service
to set up a commission to adjudicate the conflicting water claims and scale them down
to an amount approximating what the Yakima River system could actually produce

BUSINESSMAN SAM HILL REACHES INTO EASTERN WASHINGTON

While living in Seattle much of Sam Hill's attention was devoted to advocating good roads
in Washington and Oregon
he also advocated the use of convict labor to build roads
Sam Hill began to examine Klickitat County on the Columbia River region
for business opportunities -- 1905
Spokane, Portland & Seattle Railroad was slated to run
along the north bank of the Columbia River
Hill recognized the agricultural potential of the region
Sam Hill bought property on the river near a small town known as "Columbia" or "Columbus"
he renamed his model community Maryhill Ranch
after his wife and daughter both named Mary -- neither ever actually lived there
he built dams and tapped natural springs for irrigation
he acquired a total of eighteen farms and ranches totaling 7,000 acres
his managers planted orchards and vineyards while Sam Hill continued his other businesses
Sam Hill continued his interest in road building
and the lobbying efforts of the Good Roads Association (that he had founded in [1899])
Hill's hard work paid off as Washington legislators organized a state highway department -- 1905
automobile use increased and the Good Roads Movement gained additional adherents

PLYWOOD BECOMES A NEW FOREST PRODUCT

Process of cementing sheets of peeled wood with the grain of successive pieces running crosswise

had been patented by John K. Mayo of New York City [August 18, 1868]
however, he never developed his patent or the successive improvements he implemented
Portland, Oregon was getting ready to host the 1905 World's Fair which opened -- June 1, 1905
as part of the 100th anniversary celebration of the Lewis and Clark Expedition
this World's Fair included exhibitions from twenty-one nations and sixteen states
as well as numerous branches of the U.S. government, and private organizations
(exposition, ran until [October 15, 1905] -- a four-and-a-half-month span)
Several local businesses were asked to prepare exhibits for the event
Portland Manufacturing Company, a small wooden box factory,
partner and plant manager Gustav Carlson decided to laminate wood panels
from a variety of Pacific Northwest softwoods
Douglas fir was peeled into sheets as thin as 1/10th of an inch
using paint brushes as glue spreaders and house jacks as presses
several panels were laid up for display
sheets glued together made an extremely strong and pliable building material
Carlson's new product, called "3-ply veneer work" created considerable interest
among fairgoers, including several door, cabinet and trunk manufacturers who placed orders

"OREGON PONY," FIRST STEEL LOCOMOTIVE IN OREGON TERRITORY, RETURNS HOME

(Narrow-gauge thirteen-foot-long steam engine had been built in San Francisco [early in 1862]
it was placed into service at The Dalles
along the South side of the Columbia Gorge [May 10, 1862]
it was named the *Oregon Pony* because it replaced mules that pulled a cart
along a wooden rail portage around the Cascade Rapids
this became known as the Oregon Portage Railroad -- Oregon's first railroad
Oregon Pony was later shipped from The Dalles for use on the Celilo portage
When it became obsolete, the little engine was sold to David Hewes
he shipped it back to San Francisco where it was used for leveling sand hills
Oregon Pony was badly damaged in a warehouse fire in San Francisco
Colonel Henry Dosch was working there when he discovered the locomotive's "skeleton"
he proposed to the engine's owner, David Hewes, that the remains be returned to Oregon
for display at the Lewis and Clark Exposition
David Hewes not only consented but had the parts which had been destroyed
rebuilt as nearly as possible like the original at a cost of \$2,000
he then donated it, through Colonel Dosch, as the permanent property of the State of Oregon
Oregon Pony was put on display -- on its side is a brass plate read:

OREGON'S FIRST LOCOMOTIVE

Presented to the State of Oregon

by David Hewes,

A pioneer of San Francisco, Cal.

Illustrative of the development of commerce up

the Columbia River by the Oregon Steam

Navigation Company.

(After a brief appearance at the Lewis and Clark Exposition the little engine was put on display

in Portland before again being moved [1970]
to a glass enclosure at its present location in Cascade Locks)

SUNNYSIDE IRRIGATION PROJECT IS DROPPED

Dismayed by lack of cooperation and greed

displayed by the Northern Pacific Railway (NPRY) and its Washington Irrigation Company
Federal Reclamation Service unexpectedly concluded the Sunnyside region
was unsuitable for irrigation

Federal Reclamation Service indicated it was no longer interested

in developing projects that had been already started by private individuals or companies
they stated the government did not wish to compete with private developers

Federal Reclamation Service withdrew from the Sunnyside irrigation project

Reclamation Service believed competing water claims were insurmountable

besides the Northern Pacific Railway would be prime beneficiary
stubble fields dried out as devastated farmers abandoned their homesteads to the gray desert
jack rabbits, rattlesnakes and the dry whisper of wind across the parched land came back

However, this brought about a political dilemma

Reclamation Service's work was financed by the sale of public lands

by law it was required to spend at least fifty-one per cent of these proceeds
in the states where the sales were made

Seeing the trend now favored federal development of the farmland

Yakima merchants raised \$23,000 to buy private irrigation company land

and voluntarily turned over disputed water rights to the federal government

Reclamation Service was legally obligated to spend the money it raised in Washington

proposed construction of the Conconully Reservoir on the Colville Indian reservation

begun in the Okanogan [1887] and any other possible project

were far too expensive to be considered

Yakima's modest irrigation program was Washington's only project available for federal funding

LABOR RADICALS MEET IN CHICAGO

Western Federation of Miners Union members met in Brand's Hall in Chicago, Illinois

to lay down plans for a new revolutionary union of labor advocates -- June 27, 1905

Western Federation of Miners Secretary William D. "Big Bill" Haywood

walked to the front of the gathering, picked up a piece of loose board and hammered on the table
to silence the whispers in the crowded room

in the audience were two hundred delegates from organizations all over the country

representing socialists, anarchists, miners, industrial unionists and rebel workers

organizer "Big Bill" Haywood, a huge one-eyed miner from Salt Lake City,

addressed the assembly: **"Fellow Workers, this is the Continental Congress of the working-class. We are here to confederate the workers of this country into a working-class movement that shall have for its purpose the emancipation of the working-class from the slave bondage of capitalism. The aims and objects of this organization shall be to put the working-class in**

possession of the economic power, the means of life, in control of the machinery of production and distribution, without regard to capitalist masters.”³³

Other speakers at the convention included Eugene Debs, leader of the Socialist Party of America, and organizer for the United Mine Workers of America, “Mother” Mary Jones
workers were told any tactic that worked was good

workers were to **“take possession of the earth and machinery of production and abolish the wage system”³⁴**

questions of **“right”** and **“wrong”** proclaimed Big Bill Haywood **“does not concern us”³⁵**

IWW FACES THE CHALLENGES OF ORGANIZING THE TIMBER INDUSTRY

Working conditions in the timber industry were worse than they had ever been

woodsmen were putting in ten to twelve hours a day and millmen ten hours -- 1905

lumber industry was thus an ideal field for the Industrial Workers of the World (IWW)

to rootless men in the forest camps the IWW offered an outlet for their frustrations

Employers insisted that the slim profits of their industry precluded such nonsense

as safety appliances and showers, toilets and clean bunkhouses in the camps

wages that they offered also reflected their demeaning attitude

moreover, the nature of their workers enabled operators to resist demands for improvement

a logger was hardly considered civilized and was generally called a “timber beast” -- a brute

many of the loggers were Scandinavians who were largely inarticulate

most were depicted as restless, reckless, wasteful and irresponsible

some were neighboring farmers who were working for money to finance a homestead

they cared little for the protection of fellow workers or for the future of the industry

Feeble attempts by the American Federation of Labor (AFL)

demonstrated that the lumber industry was not suited for craft organization

there was a preponderance of unskilled, or at best, semiskilled workers

and even if it been possible to allot each man to a particular craft

organization would have resulted in an impossible litter of separate unions

as the IWW periodical pointed out: **“One set of men fell the trees. Others cut them**

up into logs. One man acts as hook tender; others set the chokers. A fireman keeps up steam in the boiler, and the engineer runs the donkey. Some load the logs on cars and the railroad crew haul them out of the woods. Some act as riggers, and some as cooks and flunkies.”³⁶

this industry, in short, included many different trades, each of which, if organized separately,

would have had only one or possibly two or three members in each camp

Troubling also was the fact that the public was apathetic

in part due to excesses committed by a rowdy minority of workers

who on paydays undertook enormous debaucheries on Seattle’s skidroad

and in Erickson’s Saloon in Portland that bragged of a whopping 684-foot-long bar

or in the plentiful red-light dives of Grays Harbor

³⁵ David Lavender, *Land of Giants*, P. 420.

³⁶ *Textile Manufacturers Journal*, March 18, 1912.

TIMBER BARONS AND MILL OWNERS WERE OUTRAGED BY IWW EFFORTS

Many owners were sincerely convinced the men in the mills
liked taking risks and working long hours
they tried to prevent the Industrial Workers of the World (IWW) from organizing their employees
they locked out IWW workers by refusing to hire the union members
they circulated blacklists of suspected Wobblies
to assure the hiring ban was wide-spread and permanent
they fired members and organizers and sometimes forcibly ran Wobblies out of town
Industrial Worker of the World meeting halls were diligently raided by town police
and by other elements of outraged citizenry that the employers organized and armed

CITIZEN'S ALLIANCE RESURFACES TO ATTACK THE LONGSHOREMEN'S UNION

(Originally founded [1901], the anti-union Citizen's Alliance reconstituted itself [1904])
Citizen's Alliance was organized by business leaders to break the Longshore Union -- 1905
which had gained control of general cargo work and lumber handling in Seattle
Citizen's Alliance engaged in an open shop campaign between 1905 (and again in [1912])
supported by the Seattle Chambers of Commerce

WOMEN'S SUFFRAGE MOVEMENT CONTINUES TO PRESS FOR VOTING RIGHTS

National American Woman Suffrage Association held its national convention
in Portland, Oregon -- [June 28]-July 5, 1905
one of the attendees was large, loud, uncultured wealthy mine owner May Arkwright Hutton
who joined the suffrage movement and became an active member
National American Woman Suffrage Association mounted a campaign in Oregon
but Oregon suffrage leader Abigail Scott Duniway resigned from the state organization
she played no part in the campaign to achieve voting rights for women
instead, she published her second novel, *From the West to the West*
Suffragettes again took up the cause in Washington State
only four states had granted women suffrage by that time
(women had been able to vote in Washington Territory [1883-1888]
when the state constitution was ratified [1889], women lost their franchise)
Mrs. Emma Smith DeVoe, the leading strategist of the movement, arrived in Tacoma
to direct the Women's Suffrage campaign in Washington state -- 1905

CHIEF JOSEPH'S FINAL DEATH FEAST HELD

Yellow Bull, a close personal friend, distributed most of Joseph's property -- July 1905
three rifles, three buffalo robes, blankets, 104 horses
and a dozen watches and ceremonial garments
this was all that remained of his earthly estate -- it hardly represented his legacy

YAKIMA BOOMS WITH THE ARRIVAL OF A FEDERAL IRRIGATION PROJECT

Not too far to the west of the Sunnyside irrigation project in almost identical climatic conditions
Yakima bloomed with cash crops using Federal Reclamation Service provided water

One prominent feature of the Yakima business district was known as “Produce Row” more than a mile long, it was lined with box factories, canneries, refrigerated warehouses, packing houses and dehydrators narrow, paved streets of the “Row” was separated from the shopping district by an impressive number of railroad tracks In the meantime, Ellensburg impatiently waited for water

HISTORY OF THE PANAMA CANAL CONSTRUCTION

After their successful completion of the Suez Canal [1869] the French were inspired to attempt the apparently similar project to connect the Atlantic and Pacific oceans they were confident that this could be carried out with little difficulty an international company was created to undertake the project [1876] two years later the government of Colombia, which then controlled the land, conceded to allow the French to dig a canal across the isthmus actual construction began [January 1, 1882]

Challenges were much greater than had been anticipated digging a sea-level canal over the spine of mountains running the length of Panama was complex huge death toll from disease made it difficult to retain workers French company went bankrupt and work was finally suspended [May 15, 1889] after eight years, the work was about two-fifths completed -- some \$234,795,000 was spent United States formally took control of the French canal property [May 4, 1904] Americans had inherited the small workforce and great quantities of buildings, infrastructure and equipment which had been the victim of fifteen years of neglect in the harsh, humid jungle climate there were virtually no facilities in place for a large workforce and the infrastructure was crumbling

ENGINEER JOHN F. STEVENS TAKES ON YET ANOTHER PROJECT

Great Northern Railway’s chief engineer became chief engineer on the Panama Canal -- 1905-[1907] (for a brief time he was chairman of the Isthmian Canal Commission) he arrived on the isthmus -- July 26, 1905 Stevens soon realized a serious investment in infrastructure was necessary:

- he went to work upgrading the railway roadbed,
- he improved sanitation in the cities of Panama and Colon,
- he remodeled all of the old French buildings and built hundreds of new ones to provide housing

Stevens next recruited a huge labor force for the digging of the canal given the regions unsavory reputation this was a difficult task, recruiting agents were dispatched to the West Indies, to Italy and to Spain and a supply of workers was soon arriving at the isthmus John Stevens found the red tape and political delays imposed by the Colombian government troubling he decided to press ahead and get approval later he improved drilling techniques and dirt removal equipment at the Culebra Cut with great improvements in efficiency as the result he revised the inadequate methods to dispose of vast quantities of soil to be excavated

EQUALITY COLONY IN SKAGIT COUNTY SUFFERS A FATAL BLOW

Alexander Horr's leadership plan of competition among the colonists was not successful
Equality's land was mortgaged and taxes were delinquent
some of the more affluent colonists had purchased tax certificates
in an effort to obtain deeds to the land they were holding
Equality colony was close to final dissolution -- 1905

BLACK PIONEER GEORGE WASHINGTON DIES IN CENTRALIA

George Washington died at his Centralia home at age eight-eight -- August 26, 1905
(he is buried in the cemetery he had donated to the city of Centralia)
All of his property, worth at that time in excess of \$150,000, was left to his second wife
who had deserted him and his son -- but he had never divorced her

WESTERN CENTRAL LABOR COUNCIL CONSTRUCTS ITS HEADQUARTERS IN SEATTLE

New \$50,000 Labor Temple was constructed at Sixth and University in Seattle -- August 1905
ceremonies on Labor Day began with a parade of 3,000 union people
and ended at the new home for labor -- September 4, 1905
after the building was dedicated more than 8,000 people attended the reception and entertainment
held during the afternoon and evening
Employers met the union upsurge with an aggressive open-shop movement
on the part of corporations, trade associations, chambers of commerce
and their political supporters to weaken the organized labor movement
by requiring employees to work in an "open" or nonunion workplace
Seattle unions fought back and held their own

GREAT NORTHERN RAILWAY TUNNELS UNDER SEATTLE

Empire Builder Jim Hill dug a one mile long double tracked railway tunnel under downtown Seattle
this was the highest (twenty-eight feet) and widest (thirty feet) tunnel in the United States
at that time -- 1905
southern end is just north of the King Street Station (near the Seattle stadiums today)
northern portal is near the Pike Street Market
(Today the downtown Seattle Transit Tunnel passes four feet below the Great Northern Tunnel
freight and passenger trains still use the tunnel today:
Amtrak routes to Chicago ["Empire Builder"] and to Vancouver, B.C. ["The Cascades"]
as well as Sound Transit's Seattle-Everett ["Sunder"] commuter train)

PORTLAND AND SEATTLE RAILROAD COMPANY IS FORMED

California-based Southern Pacific Railroad (SPRR) owned by Edward H. Harriman
had a monopoly on shipping at the mouth of the Columbia River
neither the Northern Pacific Railway (NPRY) nor the Great Northern Railway (GNRY)
had access to that region
Northern Pacific Railroad and Great Northern Railway (GNRY) signed a secret agreement
to build a branch line from Spokane to Portland

RAILROAD SHIPPING FARE WAR BEGINS IN THE PACIFIC NORTHWEST

James J. Hill- Edward H. Harriman conducted a freight shipping fare war with little effect
neither Hill's Great Northern Railway nor Harriman's Union Pacific Railroad suffered financially
This fare war brought no joy to the wheat farmers of the Inland Empire
who saw no decline in the cost of shipping wheat by rail

SPOKANE, PORTLAND AND SEATTLE RAILWAY COMPANY COMES INTO EXISTENCE

To conquer the Columbia River Gorge that had impeded travel from earliest times,
Northern Pacific Railway (NPRY) used Oregon Rail & Navigation Railway (OR&NR) tracks
OR&NR was a subsidiary of the Union Pacific Railroad (UP)
Empire Builder Jim Hill wanted to link Pasco, Washington with Portland, Oregon
but he needed to break free of this uncertain dependence on the rival Union Pacific Railroad
James J. Hill negotiated a secret venture
between his Great Northern Railway and the Northern Pacific Railway
Jim Hill created a subsidiary -- the Spokane, Portland & Seattle Railway Company (SPS)

CONSTRUCTION BEGINS ON THE NORTH BANK ROUTE THROUGH THE COLUMBIA GORGE

Empire Builder Jim Hill's Spokane, Portland & Seattle Railway Company (SPS) began laying track
along the Washington side of the Columbia River -- October 1905
North Bank Road ran from Spokane through Pasco to the Columbia River where it followed
down the north bank (Washington side) of the Columbia River
to Vancouver, Washington
this line also was referred to by several names: "The North Bank Road",
"Columbia River Scenic Route", and "The Northwest's Own Railway"
Jim Hill's SPS also began extensive short line construction
in Southwest Washington and in the Inland Empire

UNION PACIFIC RAILROAD IS OPPOSED TO JIM HILL'S EXPANSION EFFORTS

Union Pacific Railroad (UP) President Edward H. Harriman
was opposed, to the construction of Jim Hill's Spokane, Portland, & Seattle Railway
that opposition was sometimes legal and sometimes brutal
but it could not stop Hill's success -- 1905
(in the end Hill won -- but he also had to let the Union Pacific into the Puget Sound region)

CELILO CANAL AND LOCK IS CONSTRUCTED BY THE FEDERAL GOVERNMENT

(Inland Empire wheat farmers had previously formed the Open River Association
in an effort to bring steamboats back to the Columbia and thus force reductions in freight rates)
When railroad shipping rates stayed high during the rate war, the association persuaded t
he federal government to build a canal eight miles long around the rapids at the Dalles
Construction on what was to become known as Celilo Canal began -- 1905
while work was being done the Open River Association
operated boats on the Columbia above the Dalles,
they used a state-financed railroad as a portage around the falls

below the Dalles they hired the steamers of the Regulator Line
which, oddly enough, belonged to James J. Hill
Great Northern Railway President Jim Hill did not mind assisting in the canal project
since it annoyed Southern Pacific President Edward H. Harriman
also he did not believe that water transportation could provide enough competition
to be a serious threat -- he was right

CHICAGO, MILWAUKEE AND ST. PAUL RAILROAD CONSIDERS EXPANSION

Since Empire Builder Jim Hill's Great Northern Railway and the Northern Pacific Railway
controlled the right-of-way into the Minneapolis-St. Paul area
Chicago, Milwaukee and St. Paul Railroad (also known as the "Milwaukee Road")
Board Chairman Roswell Miller advised Milwaukee Road President Albert J. Earling
to proceed with arrangements to begin construction to the Pacific Ocean
Milwaukee Road Board of Directors approved expansion of the railroad
laying of track to Seattle- Tacoma region at an estimated cost of \$60 million
was authorized -- November 28, 1905
since few land grants were available to fund construction, the railroad had to buy most of the land
or acquire smaller railroads
Pacific Railroad Company was incorporated in Montana, Idaho, and South Dakota
to build the extension of track through those states to the Pacific Northwest
Milwaukee Road provided money to aid in the construction costs

FEDERAL RECLAMATION ACT APPROVES IRRIGATION IN THE SALMON CREEK REGION

Reclamation Service completed its survey of Okanogan County's Salmon Creek area
then announced this proposed irrigation project was feasible
Construction of the Okanogan Project was authorized
by the Secretary of the Interior -- December 2, 1905
Okanogan Water Users Association was formed, representing some 10,000 acres
(name of the Association was later changed to Okanogan Irrigation District)
Construction of 1,000-foot-long and sixty-four-foot-high Conconully Dam
was proposed across Salmon Creek two miles from Conconully, Washington
to provide water for the irrigation projects
Salmon Lake, a tributary of the North Fork of Salmon Creek
was a narrow body of water 3½ miles long
Salmon Lake Reservoir behind Conconully Dam was utilized to store water
(first water reached the land three years later [1908]
when the land between Canadian border and the Okanogan Mountains was irrigated)

FEDERAL GOVERNMENT REINSTATES THE SUNNYSIDE IRRIGATION PROJECT

Federal Reclamation Service reversed its earlier policy of ignoring Sunnyside -- December 12, 1905
if water claims were found to be in excess to river's normal flow
farmers must surrender their water claims to the federal government
Washington Irrigation Company suddenly offered to sell to the Reclamation service
its Sunnyside canals, but not its farmland, for \$640,000

ENGINEER JOHN STEVENS DECIDES ON A CANAL ACROSS PANAMA USING LOCKS

President Theodore Roosevelt sent a team of engineers to Panama -- end of 1905
to investigate the prospects of a sea-level canal versus a system of locks to raise and lower ships
by a vote of eight to five the engineers decided in favor of a sea-level canal
but Stevens and the Canal Commission which he chaired opposed this scheme
Stevens' report to Roosevelt convinced the president of the merits of a lock system

CATTLE BARON BEN SNIPES DIES IN SEATTLE

Ben Snipes was busy repeating his pattern of a lifetime when he died at age 71 -- January 12, 1906
he was in the process of making his next fortune
through it all he left a legacy for good for those who choose to follow his example
Ben Snipes was a modest man
he never used tobacco or drank, he didn't sport flashy clothes and he never carried a gun
although he once had millions of dollars in reserve, he lived in a simple cabin
until the time of his retirement
(Northwest Cattle King is buried in the I.O.O.F. Cemetery in The Dalles, Oregon
where there is a large headstone marking the Snipes' graves
Snipes Mountain in the Toppenish National Wildlife Refuge is named in his honor)

EZRA MEEKER MARKS THE OREGON TRAIL

Twenty-one-year-old Ezra Meeker first journeyed West on the Oregon Trail [1852]
accompanied by his wife of one year, Eliza Jane Sumner Meeker, and his newborn son Marian
this year travel on the Oregon Trail peaked at about 20,000 people
Old emigrant trail to Oregon Country (and after [1848] to Oregon Territory) had fallen into disuse
upon completion of the Central and Union Pacific Railroad's transcontinental line [May 10, 1869]
after that time, only emigrants who could not scrape together funds to purchase train tickets
undertook the arduous five-month journey overland
in the intervening forty years weather, plowing, the construction of roads and railroads
and spread of farms and towns near and over the trail made it unrecognizable in many places
Fifty-four years later, after his 76th birthday, Meeker made the first of six round trips
as he frequently stated, **"I longed to go back over the old Oregon Trail and mark it for all
time for the children of the pioneers who blazed it, and for the world."**³⁷
for two years he retraced the route with a covered wagon, team of oxen (Dave and Dandy),
and driver William Mardon -- 1906-[1908]
they left from the door-step of his mansion in Puyallup -- January 29, 1906
and traveled across the continent on a highly publicized West to East journey
Meeker said **"...the ox team was chosen as a typical reminder of pioneer days."**
he also admitted that it was a publicity stunt
**"No more effective instrument could have been chosen to attract attention, arouse
enthusiasm and secure aid in forwarding the work"**³⁸ of preserving the wagon trail
Ezra Meeker traveled East reviving interest in marking the route of the Oregon Trail

³⁷ Ezra Meeker, *Ox-team Days on the Oregon Trail*, P. 162.

³⁸ Ezra Meeker, *The Ox Team of the Old Oregon Trail*. P. 167.

he recorded his effort in *The Ox Team of the Old Oregon Trail*, written by Meeker [1907]
(revised and edited by Howard Droker in [1932]): **“This search for the 'lost trail' grew more and more fascinating as the work progressed. Almost every day brought the joy of some new discovery. Once I remember finding the remnant of the historic highway running under two fences that lined a new road; the rest of the old pioneer trail had been wiped out by the grading and plowing of the farms. Again I discovered in an undisturbed sandy stretch where the trail by actual measurement was fully fifteen feet deep and seventy-five feet wide. Through the sage-covered lands I soon learned to recognize the old trail by its countenance, as one might say. The trampling of the sage and other rough vegetation had made it take on a slightly different color from the rest of the country; the hue was unmistakable when one learned to recognize it. Thus piece by piece the trail of the pioneers was found and charted.”**³⁹

Meeker placed markers at significant points on the Oregon Trail and promoted trail preservation
he arranged for monuments along some 1800 miles from The Dalles, Oregon to Omaha, Nebraska
he painted inscriptions on landmarks along the trail
he photographed important points
he printed these in his book *Personal Experiences on the Oregon Trail*
Ezra Meeker lectured as he went, sold copies of his books and postcards
in an effort to raise money to mark the Oregon Trail
he liked to talk to school children who gave up pennies and nickels to help erect granite markers
many of the historic markers in place today are due to Ezra Meeker’s efforts
in his book he noted: **“I am convinced that this feature of the work is destined to give great results. It is not the financial aid I refer to, but the effect it has upon children’s minds to set them to thinking of his subject of patriotic sentiment that will endure in after life.”**⁴⁰

Meeker reached the end (or from the pioneer perspective, the beginning)
of his retracing effort of the trail in Omaha, Nebraska
officially (according to the National Trail System Act of [2004])
Independence, Missouri was the beginning of the Oregon Trail
but Meeker’s retracing diverged from the trail at Omaha, Nebraska
many pioneers picked up the trail at the point closest to the homes they were leaving
not just from Independence, Missouri

UNITED STATES BUREAU OF RECLAMATION IRRIGATES THE YAKIMA VALLEY

Federal government took over the Sunnyside Irrigation Project
improvements were made and work was begun on two of five proposed reservoirs
this effort greatly stimulated the industrial and commercial growth of Yakima -- early 1906
Yakima planted orchards on irrigated land
90,000 acres were to be irrigated (later this was increased to 450,000 acres to be irrigated)
Other Yakima Valley irrigation projects followed: Kittitas, Tieton, Benton City and Wapato
which assured the rich valley would become productive farmland
these five combined efforts became known as the Yakima Project

EFFORTS TO BRIDGE THE COLUMBIA AND WILLAMETTE RIVERS ARE MADE

³⁹ Ezra Meeker, *The Ox Team of the Old Oregon Trail*. P. 276.

⁴⁰ Ezra Meeker, *Personal Experiences on the Oregon Trail*. P. 66.

Jim Hill's Spokane, Portland & Seattle Railway (SPS) began construction on bridges across both the Willamette and Columbia rivers to connect the Northern Pacific Railway (NPRY) line in Oregon to Vancouver, Washington (this connection was completed at what became known as "Willbridge," short for "Willamette River Bridge," just south of (today's) Linnton, Oregon) Columbia River bridge project required an immense double-track bridge that linked Vancouver, Washington with Portland, Oregon and a connection with the line running north from Vancouver to Seattle crews began framing the caissons for the Columbia River bridge -- February 8, 1906 (construction took approximately twenty-six months to complete [June 1908])

EQUALITY COLONY SUFFERS FROM A DEVASTATING FIRE

At its peak the colony housed about 300 radical settlers -- dissension reduced that number in traditional anarchist style someone set fire to several buildings in the dead of night between \$8,000 and \$10,000 worth of property was destroyed colony's gigantic barn, cows, calves, 105 tons of hay, horses, tools and more were lost leaving the socialist colonists in an extremely distressed condition arsonists never were identified

To maintain control of Equality, its more radical members imposed a "Reign of Terror" more conservative members claimed to be living in fear of their lives

Within a month of the tragic fire, a group of colonists petitioned the Superior Court in Mount Vernon to appoint a receiver for the property of the brotherhood -- February 27, 1906

in their affidavit, they certified: **"That during the year 1905 there came into said association a class of so-called socialists.... [T]hat there is a reign of terror existing in said association, and that the lives of the members are in great danger.... [T]hat certain evil practices have existed so inculcated on the part of some of the members of the association to such an extent as to entirely thwart the purposes and objects of said association."**⁴¹

MUKILTEO LIGHTHOUSE BEGINS OPERATION

Thirty-foot wooden octagonal tower and fog signal building were constructed at Point Elliott its light came on for the first time -- March 1, 1906

Peter Christiansen was the first principal keeper

Mukilteo light serves to assist vessels navigating Saratoga Passage and Possession Sound by marking the entrance to the ports of Mukilteo and Everett at the location of the historical signing of the Mukilteo Treaty ([January 21, 1855])

COMPETITION GROWS IN SEATTLE'S ELECTRICITY PRODUCING BUSINESS

Privately owned Seattle Electric Company provided electric power for the city's street lights Stone & Webster, Seattle Electric Company's electrical engineering consulting firm operated Snoqualmie Falls Power Company's hydroelectric plant at Snoqualmie Falls that powered Seattle's streetcars

In response to the virtual monopoly held over local electrical service and street railways

⁴¹ Charles L. Easton, "Equality as a Cooperative Colony," *Seattle Times*, November 25, 1962

City of Seattle became interested in municipal electric power development
Seattle Water Department took possession of the private Seattle Electric Company's
street lighting system [May 1, 1905]
Seattle voters approved an additional \$600,000 in bonds
to expand the street lighting system -- March 6, 1906
but the plan was delayed by lawsuits filed by private utility interests

SAN FRANCISCO EARTHQUAKE AND FIRE CREATES BUSINESS OPPORTUNITIES

Efforts to rebuild San Francisco after the earthquake and fire -- April 18, 1906
created a surge in demand for Puget Sound lumber
Arthur Anderson, President of the Simpson Logging Company, quickly retired the company's debt
acquired by the purchase of stock from descendents of the Port Blakely Mill investors
Now free of their burden of debt Anderson and company manager Mark Reed invested in expansion

TIMBER INDUSTRY EXPERIENCES EXCEPTIONAL GROWTH

Loggers and sawmill workers enjoyed full employment at good pay
San Francisco earthquake and fire assured an expanding market for lumber
shingle mills were very close to being one hundred percent organized
by the International Shingle Weavers' Union -of America -- they felt unbeatable
Shingle mill owners again formed an association (as they had done in [1893])
Shingle Mill Owners' Association intended to control production and prices, boost profits,
cut wages and stop the advancement of the International Shingle Weavers' Union

INTERNATIONAL SHINGLE WEAVERS' UNION GOES ON STRIKE

International Shingle Weavers' Union strike began at the Ballard mill -- April 1906
as it previously had in [1893]
for three months talks between the union and the Shingle Mill Owners' Association
made little progress

SIMPSON LOGGING COMPANY GETS A NEW PRESIDENT

Sol Simpson lived the last years of his life in Seattle and at the age of 63 he died there -- May 9, 1906
Arthur Anderson, Sol Simpson's partner, officially became president of Simpson Logging Company
however, he was occupied with managing his diverse business interests
Simpson's son-in-law, Mark Reed, managed the timber company's day-to-day operations
Mark Reed opened the company headquarters in Shelton, the Mason County seat -- 1906
there he quickly took steps to assure the family's logging and railroad interests were protected
he paid off debts and borrowed money to buy Simpson Logging Company stock
held by descendants of the original Port Blakely Mill investors
as a reward, Arthur Anderson gave Reed four percent interest in the company
remaining ninety-six percent was divided evenly between the Anderson and Simpson families
Mark Reed guided the Simpson Logging Company and Shelton into wood products manufacturing
unlike most lumbermen who only exploited the resource, Mark Reed made his home in Shelton
he took great pains to build the community

EMPIRE BUILDER JIM HILL MARKS THE END OF HIS TRANSCONTINENTAL RAILROAD

Seattle's King Street Station, designed by the architectural team of Reed and Stem, was a two-year building project -- [1904]-1906
Charles A. Reed and Allen H. Stem, who also designed New York City's Grand Central Station, undertook major projects for Great Northern Railway and Northern Pacific Railway
Inside of the new King Street Station there were interior focal points
areas were grand with decorated ceilings and other highly ornate details in the main waiting room
a balcony and a second level arcade greeted new arrivals
these spaces suggested that passengers and their experiences were important to the railroad
this new station was a distinctive civic portal through which visitors and newcomers passed into a great Western city
King Street Station's 242-foot tower was modeled after Venice, Italy's Campanile di San Marco
at the time of its construction this was the tallest building in Seattle
this tower contained four huge mechanical clocks facing the four cardinal directions
From the expansive driveway fronting King Street, horse drawn carriages (later cars) rushed travelers to local hotels and boarding houses from the time of its opening -- May 10, 1906
South Jackson Street was linked with the west entrance by a grand staircase

MILWAUKEE ROAD PLANS TO EXPAND INTO THE PACIFIC NORTHWEST

Chicago, Milwaukee and St. Paul Railroad (Milwaukee Road) feared it could compete with the powerful Union Pacific Railroad and Great Northern-Northern Pacific Railway combination
decided to expand to the Pacific coast and establish a terminal in Tacoma
Chicago, Milwaukee and St. Paul Railroad (Milwaukee Road)
became the Chicago, Milwaukee, St. Paul and Pacific Railroad
Contract for the westernmost part of the Chicago, Milwaukee, St. Paul and Pacific Railroad expansion to Tacoma region was awarded to Horace Chapin Henry of Seattle
from Chicago to Tacoma the distance was estimated to be 2,305 miles -- 1906
150 miles shorter than the Northern Pacific Railway (NPRY) route
eighty miles shorter than the Great Northern Railway (GNRY) route
two primary mountain ranges, the Rockies and the Cascades, had to be crossed
this required the Milwaukee Road invest in major civil engineering works
and the use of additional locomotive power

GRAYS HARBOR AND PUGET SOUND RAILWAY COMPANY IS CHARTERED

Grays Harbor and Puget Sound Railway Company was incorporated in Washington -- May 31, 1906
it was controlled by the Union Pacific Railroad Company (UP)
Grays Harbor and Puget Sound Railway Company consisted of sections
extending from Centralia to Hoquiam and from North River Junction to Primo
(these sections were subsequently completed and placed in operation
by the successor companies)

MAY ARKWRIGHT HUTTON BECOMES A COMMUNITY LEADER

When May and Levi (Al) Hutton moved to Spokane in 1906, May could no longer vote
with thoughts of the National American Woman Suffrage Association still fresh in her mind

she set out to remedy the situation

When a woman questioned the need for women's suffrage, May pointed out in a letter that working women were the victims of **"taxation without representation"**⁴²

she also asserted: **"Women should vote because they have the intelligence to vote. They should vote because it gives them responsibilities, and responsibilities better fit women for all conditions of life. Equality before the law gives women a fair chance with men in a question of wages for the same work. In other words, the enfranchisement of women means a square deal for all."**⁴³

May and her husband built a mansion in Spokane

there Al quietly ran his business interests

May developed into a local celebrity

but in spite of their wealth she was snubbed by Spokane's society

she was short, well over 200 pounds, middle aged and outspoken

she lavished money on expensive and flamboyant clothes

Nonetheless, May Arkwright Hutton remained dedicated to others in need

she worked for almost any cause that favored the poor and working people

she poured money into hospitals, Spokane Children's Home, a meeting hall for organized labor, and the Florence Crittenden Home for Unwed Mothers

WASHINGTON EQUAL SUFFRAGE ASSOCIATION BECOMES ACTIVE

Washington Equal Suffrage Association elected its officers -- 1906

ladylike and well-dressed Emma Smith DeVoe of Seattle served as its president

rich but unladylike May Arkwright Hutton of Spokane became the first vice-president

Dr. Cora Smith Eaton served as treasurer and was active in the Western Washington campaign relations between the Eastern and Western Washington suffrage efforts were cordial

Mrs. Emma Smith DeVoe set out to reinvigorate the crusade in Washington

she went everywhere traveling, speaking, meeting friends and influencing people

she revitalized interest in the Women's Suffrage Movement

membership leaped from two to two thousand

Emma DeVoe's campaigns were conducted quietly and in good taste

there was no offensive militancy -- noisy suffragettes were not tolerated

Mrs. May Arkwright Hutton, a wealthy Democrat, led the Eastern Washington campaign

she wrote letters, books, pamphlets, newspaper stories, magazine articles

and articulate and persuasive speeches

she exhibited the success of her self-education

she worked among union men to organize support and she buttonholed legislators

INTERNATIONAL SHINGLE WEAVERS' UNION EXPANDS THE BALLARD STRIKE

International Shingle Weavers' Union made the decision to expand the Ballard strike -- July 17, 1906
shingle mills all along Puget Sound were picketed by striking union members

⁴² Dorothy Powers, "A Voice From the Past: May Arkwright Hutton -- In Her Own Words," *The Spokesman-Review Magazine*, March 28, 1976.

⁴³ Dorothy Powers, "A Voice From the Past: May Arkwright Hutton -- In Her Own Words," *The Spokesman-Review Magazine*, March 28, 1976.

but the Shingle Mill Owners' Association was too strong
and too many strikebreakers were available

CONSTRUCTION ROUTE OF THE MILWAUKEE ROAD EXPANSION IS ANNOUNCED

Chicago, Milwaukee, and St. Paul Railroad construction was very well organized
several divisions of the expansion were constructed at one time -- 1906
When construction to the West coast was well under way, the route was publicly announced
Milwaukee Road was to run from the existing railhead at Glenham, South Dakota
in a northwest direction across the Missouri River and the southwest corner of North Dakota
to a junction with the Yellowstone River at Terry, Montana
it was to proceed up the Yellowstone through Three Forks to Butte, Montana
before advancing down Clark's Fork River
to the Montana-Idaho border near Mullan, Idaho
it would then move through Coeur d'Alene to Spokane, Washington
from Spokane the road would arc to the southwest crossing the Cascade Mountains
via Snoqualmie Pass to Tacoma

INTERNATIONAL SHINGLE WEAVERS' UNION CALLS OFF ITS STRIKE

Shingle weavers ended their strike -- August 1906
Ballard mills were being run by scabs
Bellingham and Grays Harbor were close to being lost to the union
through open shop provisions which allow non-union personnel to work alongside union men
International Shingle Weavers' Union of America realized with the loss of the strike
they had to concentrate their forces on organizing more of the industry
if they were ever going to be able to combat the timber barons

BILLY GOHL BECOMES A NOTORIOUS ABERDEEN FIGURE

Billy Gohl was appointed to a leadership position in the Aberdeen Sailor's Union
when the captain of the *Fearless* hired two non-union sailors for his crew
Billy and his thugs rowed out to the ship and demanded the two men be turned over to him
in the ensuing fight one sailor was killed before the captain surrendered the two
Billy returned them to Aberdeen -- much to the delight of the dues-paying union members
Billy controlled the town -- he and his thugs had free reign -- 1906
sailors admired him for his union recruiting boldness
he held their unspent pay in his office safe until they left town
he would defend sailors from the local businessmen who took advantage of them
he especially disliked capitalists and wealthy lumber barons
mill workers feared Billy because at the slightest provocation
he would threaten to burn down the business of anyone who crossed him
occasional fires reinforced the threat
One of Billy Gohl's scams was to place members of his gang aboard ship as skilled sailors
Billy controlled the union's hiring roster so this was easily done
when the crew was asleep or on shore, the gang would sneak around the ship
stealing instruments, money, food or anything of value

FEDERAL GOVERNMENT BEGINS NEW IRRIGATION PROJECTS

At first the U.S. government almost choked on the price asked
by the Washington Irrigation Company just for its canals -- not the farmland: \$640,000
But an agreement was reached opening the way for an elaborate network of canals -- 1906
Federal Reclamation Service purchased the Sunnyside Canal Company
this was the first step toward public financed development of the Yakima Valley
(which today serve nearly half a million acres -- one of the largest projects in the nation)
(more than 700,000 acres of public land was eventually opened for settlement
in Washington, Idaho, Montana)

Across the Columbia River eastward from Yakima lies the enormous region known as the Big Bend
here the river bends boxlike around the land on the north, west and south
from the eastern bank of the river stretched fertile but dry land
from Walla Walla northward through the Palouse Hills to the pine forests near Spokane
then (and now) enormously productive farms were located in the region
immigrants too late to claim the ground of the Palouse Hills region tried the Big Bend
hundreds of thousands of acres of eroded, lava-baked scablands were claimed and fenced
around the villages of Quincy and Ephrata and the shallow water of Moses Lake
at first these farms succeeded because the volcanic soil soaked-up and stored water
(however, after a few seasons of growing wheat the earth was dehydrated
in the Palouse Hills moisture could be restored by letting fields lie fallow for a year or so
but in the Big Bend there was not enough rainfall to replenish the ground
irrigation would be necessary)

North of Yakima at Wenatchee, irrigation systems fostered by Jim Hill's Great Northern Railway
pushed the value of apple lands up toward a thousand dollars an acre

SEATTLE SHOW BUSINESS RIVALRY GOES NATIONWIDE

Alexander Pantages began a serious expansion of his theater operations --1906
he bought a San Francisco six-theater circuit that had lost its principal showplace in the great fire
"Big John" Considine also entered the national entertainment scene --1906
he allied himself with "Big Tim" Sullivan (New York's Tammany Hall political boss)
to form the Sullivan-Considine vaudeville circuit and associated nationwide booking agency
(at its peak, the Sullivan-Considine circuit owned twenty theaters in the Pacific Northwest
and was affiliated with twenty more in California
they also booked numerous theaters in the Midwest)
Considine's rivalry with Seattle-based vaudeville impresario, Alexander Pantages
centered on stealing each other's acts -- or, failing that, literally stealing the acts' equipment
still, they maintained a surprisingly cordial personal relationship

McNEIL ISLAND FEDERAL PENITENTIARY CONTINUES TO SUFFER FROM NEGLECT

Improvements to the federal prison were slow in coming⁴⁴
however a prison hospital was built with a \$5,000 appropriation from Congress

⁴⁴ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

and the help of prison labor -- thirty-one years after the facility had opened -- 1906
U.S. Attorney General also authorized hiring a resident physician for \$128 per month and board

ANOTHER TIMBER BARON ARRIVES -- THIS ONE IN SPOKANE, WASHINGTON

James Patrick McGoldrick moved to Spokane -- 1906

he had acquired the a.m. Fox lumber mill there

and had also relocated Minneapolis-based McGoldrick Lumber Company to Spokane
McGoldrick's sawmill was the most extensive lumber operation in the Spokane area
located immediately south of (today's Gonzaga University) it was the most modern in the region
under McGoldrick's leadership the mill was expanded and its output quadrupled
this was Spokane's largest industrial employer for years

James McGoldrick tirelessly championed the region's economic potential
McGoldrick, a national lumber-industry leader, instituted innovative workplace safety programs
in his milling operations

CHICAGO, MILWAUKEE ST. PAUL RAILROAD CONSTRUCTION RUNS INTO DIFFICULTIES

Problems arose in Montana along the Musselshell River sector of the Milwaukee Road
this 800-mile division linked Glenham, South Dakota railhead with Butte, Montana
expansion there was very difficult

Richard A. Harlow's unprofitable Montana Railroad operated along the proposed route
this line was known locally as the "Jawbone Bone" Railroad

because amount of persuasion necessary to raise needed financing
with Jawbone Railroad owner Richard A. Harlow or detour their route
to make matters worse, James J. Hill owned the mortgage on the Montana Railroad
and was not interested in helping the competing Milwaukee Railroad
reach the Pacific coast

WHATCOM COUNTY UTILITIES ARE CONSOLIDATED

(Whatcom County Railway & Light acquired the former interests
of the Whatcom-Fairhaven Gas and Northern Railway & Improvement Companies [1902])
these companies were earlier consolidations of local rail and utility services:

Fairhaven Street Railway Company,
Lake Whatcom Electric Street Railway Company,
Fairhaven Electric Light, Power & Motor Company,
Fairhaven & New Whatcom Railway Company,
Bellingham Bay Electric Street Railway,
and Bellingham Bay Gas Company)

Whatcom County Railway & Light Company expanded its operation in Bellingham
through acquisition of the city's gas, electricity and lighting services
previously operated by the Columbia Improvement Society -- 1906

Whatcom County Railway & Light Company took control of a forty-year contract
to supply power in the city

NORTHERN PACIFIC RAILWAY LINE FROM VANCOUVER TO KALAMA IS UPGRADED

Northern Pacific Railway improved its Vancouver to Kalama track to main line status when a second track was added -- 1907
construction began on a two-year project to add a second track [completed 1909]

UNION PACIFIC RAILROAD BEGINS A CONSTRUCTION PROJECT OF ITS OWN

Union Pacific Railroad (UP) abandoned its navigation on the Willamette River south of Oregon City -- around 1907

UP adopted a policy of building new railroads by using subsidiary companies possibly to protect the parent company from potential financial disasters

Union Pacific Railroad incorporated the Oregon & Washington Railroad (O&W) company to work on construction of a line from Portland to Seattle

Northern Pacific Railway (NPRY) was operating a line from Vancouver, Washington to Tacoma it was thought the UP could make use of this line for at least part of the way to Puget Sound negotiations with the NPRY to allow the Union Pacific to operate to Seattle were slow final agreement forced the UP/O&W to construct new lines in some places
(Union Pacific Railroad would not reach Seattle until [1910])

THEODORE ROOSEVELTS VISITS PANAMA

(President Roosevelt went on an inspection tour of the canal building project [November 1906] this was the first trip outside the United States by a sitting President)

Even yet, no decision had been made regarding who should carry out the actual digging

Engineer John Stevens favored hiring civilian workers to complete the task

President Roosevelt decided to employ the Army Corps of Engineers to do the work under the direction of John Stevens

Roosevelt's decision had been the last straw -- February 1907

Stevens, already frustrated by the red tape, resigned

he was replaced by Army Corps of Engineers Colonel George W. Goethals

John Stevens returned home

he became vice-president of the New York, New Haven and Hartford Railroad Company

(However, Chief Engineer John Stevens went on to another great task

he was selected to chair a board of prominent U.S. railroad experts sent to Russia to manage a transportation system that was in disarray

among his tasks was on the management of the Trans-Siberian Railway

after the overthrow of the Russian provisional government by Marxist Vladimir Lenin,

work of the board of U.S. railroad experts ended

Stevens, however, remained in Allied-occupied Manchuria

he headed the Inter-Allied Technical Board charged with the administration and operation of the Chinese Eastern and Siberian railways [1919]

he finally left when Allied troops withdrew from China [1923]

when he returned to the United States Stevens continued to work as a consulting engineer

John Stevens ended his career in Baltimore, Maryland [in the early 1930s])

SAM HILL FOCUSES HIS ATTENTION ON ROAD BUILDING

Sam Hilled to convince Washington State to build a highway

along the north bank of the Columbia River
but he did convince Oregon officials to build the scenic Columbia River Highway
which linked coastal Astoria, Oregon and The Dalles, Oregon -- 1907
Road-building technology lagged far behind the need
there were no standards for curves and gradients
and little knowledge of how to even surface roads
Sam Hill persuaded the University of Washington Board of Regents
to establish a department chair of highway engineering, the first in the nation -- 1907
(soon, 200 students were enrolled)

LABOR AND FARMERS TO PROPOSE POLITICAL REFORMS

In Washington State, organized labor and farm groups cooperated with other reformers
to form the Joint Legislative Committee to lobby the legislature and voters
Joint Legislative Committee deluged the legislature with petitions
for statewide Initiative and Recall Amendments to the state's Constitution
Initiatives allow registered voters to sign petitions proposing laws and changes in law
Recall Initiatives specifically demand the removal of a state-wide office holder
(this effort will take four years before success can be achieved [1911])

WASHINGTON LEGISLATURE PASSES THE "DIRECT PRIMARY" ELECTION ACT

Primary Elections are Political Party elections that allow party members to elect *one person*
from a list of potential political party candidates running for a public office
candidate who received the most votes from that party's voters moves on to the General Election
Primary elections usually fall into two types:

- *Closed Primary* -- voters were required to "declare" their party affiliation
when they register to vote
and they must vote on a ballot that lists only the declared party's candidates;
 - *Open Primary* -- voters were required to "declare" their party affiliation
when they receive their ballot
and they must vote on a ballot that lists only the declared party's candidates
- in both types of Primary Elections, the candidate who receives the most votes
in each political party advances as that party's candidate in the General Election

Voters in Washington State did not declare a party affiliation at the time they registered to vote
Washington did not even have voter registration in all areas of the state
nominees for partisan offices (those chosen by political party)
had been chosen either by a *political party convention* or by *petition*

Washington's legislature established a unique third option -- the *Direct Primary* -- March 15, 1907
in which members of a *major political party* nominated their candidates by Primary Election
major political party was defined as a party that received ten percent of the vote
for a statewide office in previous general election
under the new law separate Primary Election ballots were printed for each political party
voters had to "declare" their party affiliation and received their Primary Election ballot
that listed only the declared party's candidates for various elected positions
voters voted for one of their party's candidates for each elected position

winner of each primary election office was placed on the general election ballot
to run against the candidate selected by the other political party
This method of Primary Election was part of a series of Populist reforms
that was to serve as a remedy to perceived abuses by political party machines
minor political parties continued to nominate their candidates at *party conventions*

SAWMILL OWNERS UNITE TO SET PRICES FOR THEIR WOOD PRODUCTS

Sawmill owners were caught in an economic bind between rising prices for raw materials
and declining prices for finished products due to increased production
Pacific Coast Lumber Manufacturers Association was established
by Puget Sound and Grays Harbor Mill owners to control prices
(this later evolved into the West Coast Lumbermen's Association)
Pacific Coast Lumber Manufacturers Association limited lumber output and regulated prices
they also established a standard grading system for finished lumber

INTERNATIONAL SHINGLE WEAVERS' UNION MAKES GAINS FOR ITS MEMBERS

Attempting to recover from the lost [1906] strike
Shingle weavers negotiated an industry-wide pay raise and membership was on the rise -- 1907
(however, a new economic recession fell on the Pacific Northwest -- shingle prices plummeted
wages in most of the timber industry fell -- but shingle weavers held their pay scale

INDUSTRIAL WORKERS OF THE WORLD (IWW) LEADS A SAWMILL STRIKE

Portland, Oregon Industrial Workers of the World (IWW) organized its first sawmill strike
3,000 sawmill workers attempted to force sawmill owners to agree to a nine-hour workday
down from eleven hours
and to increase wages from \$1.75 to \$2.50 a day -- March 16, 1907
All but one large sawmill was forced to close
Portland sawmill owners organized an association and recruited scabs to break the strike
this strike was finally broken when police threw strike leaders in jail
on charges ranging from disorderly conduct to attempted arson

MILWAUKEE ROAD EXPANSION IS SLOWED BY EMPIRE BUILDER JIM HILL

Richard A. Harlow's unprofitable Montana Railroad was financially backed by Jim Hill
Chicago, Milwaukee, and St. Paul Railroad needed a lease along the at the Musselshell River
to carry out its plans to make Seattle its Western terminus
Hill held up expansion of the Chicago, Milwaukee, St. Paul and Pacific Railroad
but an arrangement was reached to allow the Milwaukee Road
to continue construction -- 1907

INDUSTRIAL WORKERS OF THE WORLD (IWW) REACTION TO MANAGEMENT'S EFFORTS

Industrial Workers of the World (IWW) organizational drives were held to unionize
both loggers and sawmill workers -- these efforts were carried out industry-wide
Wobblies were not concerned with craft or skill organization
they advocated rather for "One Big Union"

Wobbly halls opened in all lumber towns -- Portland, Seattle, Tacoma and Spokane
recruiting quickly followed in Hoquiam, Aberdeen and Port Townsend
IWW union leaders changed their focus to the use of force
they became aggressive and militant in the logging camps
they utilized propaganda, wildcat (unauthorized) strikes in isolated camps,
sabotage (work slowdowns or inefficiency)
as they shouted: "a poor day's work for a poor day's pay"
Militant aggressiveness of IWW appealed to loggers -- they preferred violence to arbitration
when inefficiency was used to slow production,
IWW left a symbol to show the effort was intended
"Sab Cat" was a drawing of a spitting black cat sitting in a wooden shoe (sabot)
with bared teeth posed for fighting
this symbol was also referred to as "sab kitty," "sabo-tabby," or simply "the cat"
it was meant to strike terror in the hearts of company executives
wooden shoe and snarling cat became symbols of IWW sabotage
strikes became the standard weapon used by labor
IWW even took a leadership role in other union's strikes

COAL MINERS IN BLACK DIAMOND SIGN A UNION CONTRACT

Working conditions and wages were the issues in dispute
Black Diamond coal miners organized Local 6481 of the United Mine Workers of America
When the Union started meeting near the train depot,
Pacific Coast Coal Company would not allow the union to congregate on company property
workers walked outside of the town limits and one of them jumped on a stump to speak
(this stump served as their meeting location for many years
later it was encased in concrete, and it still exists)
Pacific Coast Coal Company finally signed an agreement with Local 6481 -- 1907

TULALIP BOARDING SCHOOL EXPANDS

Both girls' and boys' dormitories were completed at the Tulalip Indian Boarding School
many of these were recruited from the various reservation day schools
it was not uncommon for day school teachers to recommend students for the boarding school
pupils ranged in age from six to eighteen years and came from many different reservations
as well as some off-reservation communities
Tulalip ended at eighth-grade level while Chemawa near Salem, Oregon offered advanced training
some Tulalip students transferred to Chemawa Indian School for more advanced training
a few students went to Haskell Institute in Kansas and to Carlisle Indian School in Pennsylvania
Bureau of Indian Affairs sought to separate church affiliations from schools on Indian reservations
**"...little agency towns were usually designed according to the new white settlement
patterns, with streets and sometimes a common grazing ground for the horses and cattle. Generally
a schoolhouse was the most prominent feature of the new village because of the treaty provisions
for the education of Indian children. This schoolhouse would generally have dormitories for
children who lived far from the village; on the Tulalip agency, for example, the children of many of
the smaller reservations such as the Lummi and Swinomish came to stay and attend school. Each**

school would have a complete farm as part of its program if at all possible. This farm would include dairy cattle, fruit trees, and numerous smaller sheds and storehouses for supplies and machinery.”⁴⁵

STUDENT LIFE AT TULALIP BOARDING SCHOOL WAS TYPICALLY OPPRESSIVE

Tulalip Indian Boarding School was operated in a military style to suppress the child’s native culture
students experienced brutal treatment

they marched to meals, classes, work assignments and their dormitory

they were punished for speaking their native language and for practicing native customs

many children bore the scars of their boarding school days for the rest of their lives

Genevieve Williams was a student at Tulalip Boarding School

she was interviewed by *Seattle Times* reporter Marsha King regarding her experiences

Genevieve “sees herself as a little girl. Marching everywhere in a line. Scrubbing floors on her hands and knees. Being forced to stand silent for hours in a dark hall. Watching children get strapped for speaking their native language.

“...All things Indian -- dress, language and beliefs -- were forbidden. Affection was rare, punishment often severe. Some students were raped, many tried to run away and unknown numbers died.

“...Lost parenting skills are believed to be a key factor in why the damage endures...”

(The Seattle Times, [February 3, 2008])

STONE & WEBSTER EXPANDS SEATTLE ELECTRICAL SERVICE

Electrical engineering consulting firm Stone & Webster

owned Seattle’s twenty-two streetcar lines which were consolidated into a single enterprise

called the Puget Sound International Railway & Power Company -- 1907

Stone & Webster’s Puget Sound International Railway & Power Company name

expressed the financiers’ vision of an interurban transportation and utility system

extending from Olympia, Washington, to Vancouver, British Columbia

However, Stone & Webster's attempt to monopolize electrical generation was less successful⁴⁶

EQUALITY SOCIALIST COLONY IS SOLD TO THE HIGHEST BIDDER

E.W. Ferris was appointed receiver of the bankrupt enterprise by the Skagit County Superior Court

some of the colonists gained title to the land on which their homes stood by paying the back taxes

Ferris sold the Equality Colony land and buildings on the steps of the Skagit County Courthouse

to the highest cash bidder

John J. Peth purchased the colony property that was probably worth \$100,000 at one time

for \$12,500 -- June 1, 1907

however, a group of diehard colony members challenged the legality of the sale in court

⁴⁵ Vine Deloria, Jr., *Indians of the Pacific Northwest From the Coming of the White Man to the Present Day*, P. 55-56.

⁴⁶ John Caldbick, “William Grambs, acting for utilities conglomerate Stone & Webster in its push to consolidate Seattle electricity producers and street railways, incorporates Seattle Electric Company on January 19, 1900” HistoryLink.org Essay 1657, March 22, 2016.

ARGUABLY THE WORLD'S FIRST GAS STATION OPENS IN SEATTLE

Motorists typically purchased gasoline for their cars from a general store or a livery stable in wooden boxes containing two five-gallon cans just as they bought kerosene for their lamps because the size of the refillable cans was known

there was no need for a measuring device on the tank

John McLean, head of sales in Washington for Standard Oil Company of California, purchased property at Seattle's East Marginal Way South and Holgate Street

(located adjacent to Standard Oil's main storage depot today)

Engineer Henry Harris constructed a pipe from the main storage tank

to a six-foot-high thirty-gallon galvanized tank

a large clear glass bottle sat atop the tank and a valve with a hose was attached -- 1907

Gasoline was pumped into the bottle

gravity flow carried gas through the hose directly into vehicles

ALEXANDER PANTAGES EXPANDS HIS BUSINESS

Little Greek from Alaska opened a third theater in Seattle -- 1907

he began to expand his circuit southward along the Pacific coast toward San Francisco

"Big John" Considine became aware that Pantages might run him out of business

Competition between Considine and Pantages was intense

each man wanted to break the other, yet when not trying to steal each other's acts and customers they got along reasonably well

each knew the other was an able operator in a difficult field

Considine had the advantage of partnering

with New York's Tammany Hall boss Tim Sullivan's political and financial connections

Pantages had the advantage of business genius

SEATTLEITES DEMAND FRESH FOOD AND HAVE THE MONEY TO PAY FOR IT

Before the arrival of grocery stores [in the 1920s], many Americans purchased their produce directly from farmers in large open-air markets

Rumors of price fixing swept through the city so Seattle's City Council established a public market along a newly constructed four-block boardwalk known as "Pike Place" -- 1907

Opening market day for the market found residents so eager for fresh, fairly priced food

that they swarmed over the first farmer who arrived emptying his wagon of lettuce in minutes

Frank Goodwin, a Pike Place landowner rich with Klondike gold, saw an opportunity

he built the first marketplace building

TEAMSTERS UNION ELECTS A NEW PRESIDENT

Teamsters (horse-team drivers and later equipment drivers) had been helped

in their effort to organize their industry by the American Federation of Labor (AFL)

since Team Drivers' International Union (TDIU) had been organized [1887]

Teamsters in Chicago broke from the TDIU and formed the Teamsters National Union [1901]

Cornelius Shea was elected the union's first president

this new union was more aggressive in advocating higher wages and shorter hours

Teamsters, like most unions within the AFL at the time, was largely decentralized
local unions governed themselves autonomously
they tended to look after only their own interests in their own geographical jurisdiction
Teamsters were vitally important to the labor movement,
because a strike or sympathy strike by the Teamsters could paralyze the movement of goods
and bring the strike into nearly every neighborhood
several major strikes occupied the union in its first three years
Cornelius Shea had promised to retire as the Teamster Union President after serving three terms
when he changed his mind, many union members withdrew their support
Daniel J. Tobin of Boston was elected the second president of the Teamsters' Union -- August 1907
he served as president of the Teamsters from 1907 until [1952]
Teamsters began to expand dramatically and mature organizationally under Dan Tobin

LUMBERING ON BELLINGHAM BAY

An article by Paul Gooding entitled *Lumbering and Manufacturing* was featured
in Honor L. Wilhelm's Magazine *The Coast*, September 1907 which noted: **"Bellingham's prosperity is founded on the lumber and shingle industry.... The largest shingle mill in the world, that of Puget Sound Mill and Timber Company, is in Bellingham. Its annual output is 200,000,000 shingles. The leading sawmill is operated by the Bellingham Bay Lumber Company. Its ten-hour capacity is 375,000 feet and it is one of the very largest mills in the world.... Whatcom County has 115 shingle mills, many of which are in Bellingham.**

With an annual lumber cut in Whatcom County a plank road 16 feet wide and two inches thick, and reaching from Bellingham to New York, could be built.... With the 2,000,000,000 shingles manufactured in this county in one year, a regulation roof could be built large enough to give standing room to all the 60 million subjects of the German Empire. More than 200,000 gigantic trees are required to feed the saw and shingle mills annually. As the bulk of the lumber is shipped by water, a great fleet of steam and sailing vessels is always in Bellingham Bay, at many times as many as 15 or 20 carriers. Altogether more than 5,000 men are employed by mills and logging camps."

EZRA MEEKER VISITS WASHINGTON, D.C.

After arriving at Omaha, Nebraska, where Ezra Meeker had begun
his first crossing of the nation [in 1852], Meeker continued eastward
He took his wagon and ox-team over the Brooklyn Bridge and into Manhattan -- 1907
where he was greeted by throngs of New Yorkers
Meeker continued on to Washington, D.C.
where he parked the rig in front of the White House -- November 29, 1907
there he met with President Theodore Roosevelt
Ezra Meeker's re-crossing of the Oregon Trail demonstrated that some areas of the emigrant road
were still clearly marked with deep wagon ruts made by hundreds of thousands of wagon wheels
but the passage of time had obscured many other portions
At the end of his journey across the nation Meeker urged Congress
to consider House Bill 11722 to provide funding of \$50,000 for marking the Oregon Trail
although the bill failed, Meeker was sufficiently encouraged to plan for another trip

Ezra Meeker returned to Puyallup where he began to make plans for another effort to mark the trail

EDWARD CURTIS PHOTOGRAPHS NORTH AMERICAN NATIVES

First volume of Curtis' great work was published between 1907 and [1930]

he displayed his life's work of photographs of Native Americans

more than eighty tribes were represented in more than four thousand photos

Twenty-three years later the twentieth and last volume of *North American Indian* came off the presses

full sets were published in a limited edition of five hundred copies

title page accurately represented the effort:

The North American Indian

**Being a Series of Volumes Picturing and Describing the
Indians of the United States and Alaska, written, illustrated
and published by Edward S. Curtis, edited by Frederick
Webb Hodge, foreword by Theodore Roosevelt, field
research conducted under the patronage of J. Pierpont
Morgan, in twenty volumes.**

WASHINGTON STATE IS AN ACTIVE FISHERY -- 1908

Better ways to catch fish were continually devised

power boats and power winches for handling bigger and bigger nets began to ply the river

Edmund A. Smith's remarkable fish-butcher machine processed the catch

in one minute this apparatus could cut the heads, tails, and fins off sixty sockeye salmon

then with rotating knives and brushes disembowel and clean the fish as well

Washington ranked fourth in the nation in the value of fish products -- 1908

Sockeye salmon always follow the same migratory path they had used to reach saltwater

some fishers in Puget Sound erected fish traps to capture fish

other fishers used large seine nets to encircle schools of salmon

a line all along the bottom of net was drawn tight to close the seine like a purse

then the purse seine net was lifted to the surface

using four-foot dip nets the fish were lifted into a mother boat

mechanization demanded ever-increasing capitalization

SHELLFISH INDUSTRY BECOMES A MAJOR BUSINESS IN WASHINGTON

Clams were (and are) found in abundance along the beaches of Puget Sound and Willapa Bay

Butter Clams from Puget Sound are small, sweet clams usually eaten raw

Native Americans used their shells as money

Longneck Clams are found in the colder waters of the Pacific north of San Francisco

these are the easiest to dig and are usually less expensive than other types of clams

Manila Clams were imported from the Orient [around 1900]

this variety of Littleneck Clam is now a dominant species in the Northwest

Razor Clams thrive chiefly on the beaches North of Grays Harbor

these were named for its sharp shell and its resemblance to a straight-edge razor

Razor Clams are considered to have superior flavor

Geoduck (“goeey-duck”) Clams are an odd-looking variety
over eight inches in length and can weigh in excess of five pounds
giant varieties can grow to over one hundred pounds in the deep sea
neck of the geoduck can be several feet long

Dungeness Crab was the first shellfish harvested commercially in the Pacific Northwest
named for the town of Dungeness on the Strait of Juan de Fuca
(they are found in Grays Harbor, Willapa Harbor and most Puget Sound areas
today, Dungeness are still the only commercially important crab in Washington)

Oysters in large varieties populate Washington State
Barron Point oysters grow in the Skookum Inlet of Washington -- these are fruity and juicy
Hamma Hamma Oysters, raised on the river’s delta in the Olympic Peninsula
offer a briny flavor, firm meat and mild finish

Kumamoto Oysters were introduced in to Puget Sound --1908
one hundred carloads of these Japanese oysters were transplanted in Washington
these smaller oysters tend to have a buttery texture
they have a more circular shell with a black outline or frill

Olympia Oysters are a very tiny variety associated with the waters of Puget Sound
their flavor is renowned for being good and strong, with a pleasant aftertaste
one very popular variety for serving raw is the Totten Island Oyster

Shellfish production was second only to salmon in the money brought into the state
(today most oysters raised are of Japanese origin and thrive better here than in Japan
production has maintained at about one million pounds a year)

SHIPPING INDUSTRY REQUIRES MANY EMPLOYEES

Onboard ship workers fell into categories according to skill and ability
“seaman,” short for “able-bodied seaman” is a general-purpose sailor
who works anywhere aboard ship including in the engine room and accompanying spaces
an able-bodied seaman is fully-trained and qualified to work on the decks and superstructure
even during foul weather

less-qualified sailors are restricted to remaining within the ship during times of foul weather
to protect them from being swept overboard by a stormy sea or by high winds

Dockside, a variety of terms were used to describe the work of loading and unloading ships

“stevedore,” “dockworker,” “docker,” “dock laborer” and “longshoreman”

can have various meanings according to location and country

in the United States and Canada longshoreman, derived from “man-along-the-shore,” is used

“longshoremen” referred exclusively to the dockworkers

“stevedores” worked aboard ships moving cargo or operated cranes at the dock

(Dock workers organized themselves into unions to gain unity in dealing with shipping management

first effort to organize began at the Port of New York City

when the Longshoremen’s Union Protective Association [LUPA] formed [in 1864]

longshoremen working the Great Lakes region of the United States

formed the National Longshoremen’s Association of the United States [1877]

they joined with the American Federation of Labor [AFL] [in 1895]

and renamed themselves the International Longshoremen’s Association [ILA])

INTERNATIONAL LONGSHOREMEN'S UNION (ILA) GAINS STRENGTH

As the International Longshoremen's Association (ILA) grew,
power shifted increasingly from the Great Lakes to the Port of New York
where the ILA headquarters was established
Joseph Ryan was a longshore organizer and officer of the ILA's New York District Council
he became of the ILA's Atlantic Coast District leader
Continual growth in membership ports greatly improved ILA Atlantic Coast District's position
at bargaining tables as shippers no longer had the option of diverting freight
from striking ports to non-striking ports along the Atlantic coast
following this model, an intense period of growth resulted in longshore unions of some variety
being established in every port along the Pacific Coast

WILLIAM T. "PADDY" MORRIS BECOMES ACTIVE IN THE UNION MOVEMENT

Irishman Paddy Morris was an early victim of hiring discrimination employed by management
short in height but strong of body, Paddy was blessed (or cursed) with a quick tongue
his strong support for the union movement soon got him "blacklisted" (banned) from hiring
(Paddy Morris went on to become the West Coast International Longshoremen's Association [ILA]
most successful organizer ever)

SPOKANE, PORTLAND & SEATTLE RAILROAD COMPLETES THE NORTH BANK ROAD

Empire Builder Jim Hill's Spokane, Portland & Seattle Railway (SPS) track laying
between Pasco, Washington and Portland, Oregon was completed -- February 1908
after almost two years of construction along the North Bank (Washington side)
of the Columbia River
construction of the North Bank Road had cost Jim Hill thirty-five million dollars

WASHINGTON LEGISLATURE FUNDS CONSTRUCTION OF AN EXECUTIVE MANSION

Washington state expected its governors to bring their families to Olympia and to reside there
but Washington's legislature did not provide much in the way of rental assistance
Governor Albert Edward Mead entered his third year as Washington's fifth state governor -- 1908
he and his wife, Mina Jane Hosmer Pifer Mead, were raising five children
in a rented house in Olympia that featured a garden, pets, a cow and chickens
(only nineteen of forty-five states provided residences for their governors at the time)
Governor Mead and legislators agreed that Washington needed an official governor's residence
both to house its first families and to provide an appropriate setting
to carry out the hospitality expected of the state's chief executive
Members of the Washington State legislature passed legislation to provide the paltry amount
of \$35,000 to purchase the site for, construct and furnish an Executive Mansion -- 1908

CELEBRATION IS HELD IN HONOR OF THE OPNING OF THE NORTH BANK ROUTE

Sheridan Point (west of today's Bridge of the Gods) was the scene of a celebration

as noted on a sign placed in commemoration of the event: **“In a driving rain on March 11, 1908, delighted locals joined dignitaries here at Sheridan’s Point to celebrate completion of the Spokane, Portland & Seattle Railway between Pasco and Vancouver.”**

Jim Hill’s newest route immediately expanded and continued to grow
Astoria and Columbia River Railroad had been acquired [1907];
line between Lyle, Washington on the Columbia River and Goldendale was purchased -- 1908
and became known as the Columbia River & Northern Railway
(Tracks from Pasco to Spokane were completed the first of the following year [1909]
SPS was the most scientifically engineered and expensively built railroad in the United States
all curves and grades were reduced to a minimum)
Jim Hill later acquired controlling interest in the Oregon Electric Company [1910])

STONE AND WEBSTER EXPAND THEIR INTERURBAN TRANSPORTATION SYSTEM

(Entrepreneur Fred Sander had spent six years (beginning in [1900])
in an effort to cover the six miles from Ballard to Hall’s Lake in north Seattle)
Stone & Webster company purchased the remains of Fred Sander’s transportation system
running north of Seattle -- 1908
this was renamed the “Seattle-Everett Traction Company”
Quickly the line was extended north fourteen miles through large stands of old growth timber
at the same time the south end of the line was moved from Ballard east to Greenwood Avenue
then along Phinney Avenue to 47th Street before it jogged to Fremont Avenue
route continued downhill and across the Fremont Bridge over the ship canal
downtown Seattle was reached via Westlake Avenue to 5th Avenue
Shirley Hotel, located between Pike and Pine streets, served as the first depot

INTERURBAN SERVICE MEETS TRANSPORTATION NEEDS

Self-propelled railcars were larger and more powerful versions
of the electric street trolleys or streetcars already hard at work in Seattle and other cities
Strong but economical motors powered by electricity from overhead lines allowed the interurbans
to climb steep hills and reach speeds of seventy-miles-an-hour on the flat
larger cars seated forty passengers comfortably
As described in a [May1, 1908] newspaper article written by Allan May, *The Herald* of Everett noted:
“The cars were ornate and luxurious with inlaid mahogany interiors, leaded windows with colored glass, black leather seats and brass fixtures.”
(At their height of popularity in Washington, interurbans linked Tacoma and Seattle,
Everett and Seattle, Everett and Snohomish, Mt. Vernon and Bellingham,
Walla Walla and Yakima
they also provided service around Spokane)

EQUALITY SOCIALIST COLONY VANISHES INTO HISTORY

Eventually the legal issues surrounding the colony’s bankruptcy was cleared up
Skagit County Superior Court after many delays ruled in favor of John J. Peth -- June 28, 1908
this ruling was appealed to the State Supreme Court
which upheld the decision of the lower court [July 29, 1911]

(There is little left to mark the spot where Equality Socialist colony so bravely started
Colony Creek still gurgles its way to the sea, unperturbed but silent regarding the historic drama
enacted along its banks
none of the original buildings still stand
there remains only a pathetic little cemetery on the hillside enclosed by a wire fence
no markers remain legible enough to prove who was buried there)

EZRA MEEKER RETURNS TO HIS PUYALLUP HOME

Ezra Meeker returned to his Puyallup home after his second epic journey across America -- July 1908
this one had begun at the doorstep of his mansion and ended in Washington, D.C.
once he had settle-in he ran a restaurant

Meeker described his frustration trying to follow the Oregon Trail's exact path [1906-1907]

he wrote: *Story of the Lost Trail To Oregon*, **“We could find traces of it here and there, and then lose it. Part had been fenced up, the fields plowed, and all visible signs gone. In other places nature had been at work. The storms of half a century have changed the face of the country, the river crossings and other landmarks, by growth and vegetation and otherwise. Then again, cities have been built over it, great irrigation ditches have been dug, and so it became evident that it would be impossible to recover the whole of the old track without more ample means.”**⁴⁷

Meeker began preparations for yet another trip to locate and mark parts of the trail
he had failed to identify on his previous expedition

INDUSTRIAL WORKERS OF THE WORLD (IWW) TARGET SPOKANE

Stevens Street in Spokane was lined with employment agencies that charged a dollar each
to the many transient workers who were looking for mining, logging or construction jobs
Employers kept the worker for a day or two and then fired him
forcing him to go back to the employment agencies and pay another dollar for another job
this was repeated over and over
one company, Somers Lumber Company, to maintain a workforce of fifty men
hired 3,000 workers -- summer 1908

Industrial Workers of the World (IWW) organizer James H. Walsh arrived in Spokane
to look into the hiring practices used by Spokane's employment agencies

REFORMERS CONTINUE ACTING ON THEIR POLITICAL AGENDA

Concerned about fair treatment for everyone, not just women,
wealthy reformer May Arkwright Hutton entered the campaign to provide the vote to women
she suggested the Washington Equal Suffrage Association by formed
Hutton wrote a party platform plank for the 1908 Democratic Party convention in Denver
that would enfranchise every voter regardless of gender, race or color
delegate May Hutton was unsuccessful in her effort to provide equal rights to all citizens
she returned home to organize Democratic women
in support of William Jennings Bryan's third try at the presidency
Washington Equal Suffrage Association leaders May Arkwright Hutton and Emma Smith DeVoe

⁴⁷ Ezra Meeker, *Story of the Lost Trail To Oregon*. P. 28.

became increasingly estranged as Hutton herself and her Eastern Washington colleagues advocated a course far more antagonistic than their Western Washington counterparts Hutton and her followers were increasingly strident in their efforts to force voting rights on men

ELIZABETH GURLEY FLYNN STRIVES FOR SOCIAL CHANGE

Elizabeth Gurley Flynn's parents introduced her to socialism
she made her first public speech at the age of sixteen to the Harlem Socialist Club
she titled her talk: *What Socialism Will Do for Women* [1906]
She began making speeches for the Industrial Workers of the World (IWW) [1907]
small and feminine with auburn hair, she was a very striking seventeen-year-old
Elizabeth Gurley Flynn was known as "Gurley"
(most of her followers naturally thought it was "Girlie")
she was arrested for blocking traffic during one of her oratories
she was expelled from high school for her political activities
Elizabeth Gurley Flynn became a full-time organizer for the IWW

CORNERSTONE IS LAID FOR THE WASHINGTON STATE EXECUTIVE MANSION

Washington Governor's Mansion is the official residence of the governor of Washington
Washington's mansion was designed by the Tacoma architectural firm of Russell and Babcock
its Georgian design featured an entrance in the middle of the north-facing facade,
two small rooms on each side of an entry vestibule,
two large rooms on each side of a large entry hall,
a grand staircase ascending to the second floor,
kitchen, service facilities and stairs to the basement were in the rear
mansion's exterior was finished in red brick, trimmed in white Alaskan marble
and sandstone copings (caps)
mansion's full cement basement provided space for the usual heating, plumbing
and laundry facilities, and also had "**a commodious vault for storing plate
and other valuables belonging to the mansion,**" a wine cellar and vegetable storage
(*The Pacific Builder and Engineer*).

this nineteen-room Georgian-style mansion was built at a cost of \$35,000
it is located on the grounds of the State Capitol campus in the state capital city Olympia
on the crest of Capitol Point with a view of mountains, ocean and the city

Washington State Executive Mansion's cornerstone was laid -- August 1, 1908

Seattle Post-Intelligencer reported: "The event was treated as a half holiday in Olympia"

[August 3, 1908, p. 3]

during the ceremony Governor Albert Edward Mead put the project in context: "**The elegant modern building which is being reared upon this foundation to house the future governors of the state in a style befitting the dignity of the position occupied by the chief official of our wonderful young commonwealth typifies the transition from the primeval conditions that were here 55 years ago when the first Territorial Governor made his precarious way across the continent to the advantages of the great material advancement that has taken place.**"⁴⁸

⁴⁸ (Notes, Box 1 (1966-1972), Accession No. 99-A-155, Washington State Archives, Olympia)

CONSTRUCTION OF THE MILWAUKEE ROAD PICKS UP SPEED

After negotiations of a lease with Jim Hill provided a route along the Musselshell River construction on the Chicago, Milwaukee, and St. Paul Railroad was rapid track from Glenham, South Dakota to Butte, Montana opened -- August 1908 However, Richard A. Harlow's Montana Railroad (Jawbone Railroad) continued to be a problem if Harlow defaulted on his mortgage, Jim Hill would foreclose on the Milwaukee Road's route

INDUSTRIAL WORKERS OF THE WORLD (IWW) HOLD THEIR FOURTH CONVENTION

Industrial Workers of the world (IWW) Fourth National Convention was held in Chicago to advocate for "One Big Union" -- late September 1908 Delegates split over the purpose and approach to be taken in advancing the union's goals Washington State's large convention delegation was active in the fight for control IWW changed the direction of their movement's attention to focus on the plight of unorganized labor such as itinerate loggers in the Pacific Northwest because transient laborers were seldom in one place long enough to vote it was decided to change the tactics of the national union from political action to the use of force a rapid transition to violence began to take shape

AUTOMOBILES REACH THE PACIFIC NORTHWEST

Of all the technological innovations, certainly none had a greater impact than the automobile automobiles were expensive and virtually inoperable in bad weather most people regarded them as little more than rich men's toys then in a historic Henry Ford introduced his Model T

HENRY FORD PRODUCES HIS MODEL T FORD

Ford Motor Company introduced its two-door Model-T (Touring) car -- October 1, 1908 Henry Ford's Model T was affordable at \$850 in a matter of days after the release, 15,000 orders were placed Ford wrote in his [1909] autobiography that: **"Any customer can have a car painted any color that he wants so long as it is black"**⁴⁹ Ford's Model T was powered by a twenty horsepower, inline four-cylinder engine that could run on gasoline, kerosene, or ethanol it generated a top speed of forty to forty-five miles per hour and delivered thirteen to twenty-one miles per gallon Motel Ts weighed 1, 200 pounds and had a two-speed transmission its ten-gallon fuel tank was mounted to the frame beneath the front seat because gravity fed the fuel to the engine it was often necessary to reverse up steep hills throttle (gas pedal) was controlled with a hand lever on the steering wheel Motel Ts were started using a hand crank

⁴⁹ Henry Ford, *My Life and Work*, P. 163.

which involved setting the “spark” to an upright position
and moving the lever down when the engine fired
because the car might “kick back” the crank handle was not held between the thumb and the palm
rather the handle was cupped in the palm so that if the engine did kick back
the rapid reverse motion of the crank would throw the handle away from the hand
rather than violently twisting the wrist or breaking the thumb
Henry Ford’s Model T was also affectionately known as the “Tin Lizzie,” “T Model Ford,”
“Model T,” “Leaping Lena,” “flivver,” or simply “T”
(Model Ts are generally regarded as the first affordable automobile
and the car that opened travel to the middle-class Americans
production ended [May 26, 1927] -- 10,666 Model Ts were produced)

SAM HILL BUILDS A MANSION IN SEATTLE

Despite Sam Hill’s estrangement from his wife and daughter, they lived in Minneapolis,
he began construction on a palatial mansion in Seattle
on East Highland Drive near Volunteer Park-- 1908
Hill became active in local civic issues
(he helped to prepare for the upcoming Alaska-Yukon-Pacific Exposition [1909]
and to promote Seattle as a gateway to Russia and Asia)

REPUBLICAN PARTY MAINTAINS CONTROL OVER NATION AND WASHINGTON STATE

Theodore Roosevelt, who had hand-picked his good friend William Howard Taft as his successor,
blurred the distinctions between the two parties
even though Taft was more conservative than Teddy Roosevelt
fifty-one-year-old 300-pound, Republican Taft was more conservative than Roosevelt
Taft undercut William Jennings Bryan’s liberal support by accepting some of his reformist ideas
Taft won election by a comfortable margin -- November 10, 1908
giving Bryan his worst defeat in three presidential campaigns
Republican Party also maintained control over Washington State’s politics
state Republican officials were kept informed of philosophical changes within the national party
Republican Samuel G. Cosgrove was a U.S. Civil War veteran and educator
who served as school board president and mayor of Pomeroy, Washington
he was an unsuccessful candidate at several state political conventions
in bids for the Republican gubernatorial nomination
after adoption of the state’s direct primary law he filed for governor in the first primary
no candidate won a majority of votes so votes for second-choice candidates were added
Samuel Cosgrove won the nomination on the second round of ballot counting
shortly after his election he suffered a heart attack but recovered
Congressman Wesley L. Jones, Republican of Yakima, resigned his “at-large” seat in Congress
he was selected by Washington State senators to serve as one of Washington’s U.S. Senators
U.S. Senator Jones replaced Republican Senator Levi Ankeny who was not re-nominated
Republican Senator Jones served with Republican U.S. Senator Samuel Henry Piles
Jones supported President Taft’s drift toward conservatism
(Jones will serve in the U.S. Senate for twenty-three years before his death [1932])

Washington State's Congressmen for the first time were elected by Congressional District
Congressman Republican William Ewart Humphrey: 1st Congressional District
had represented Washington at large for three successive terms
Congressman Republican Francis W. Cushman was re-elected to a second term in office
this time the Tacoma attorney served the 2nd Congressional District
Spokane Superior Court Judge Miles Poindexter represented the 3rd Congressional District
Republican attorney from Walla Walla and Spokane Superior Court
Congressman Poindexter was closely associated with the Progressive Movement
he worked closely with business interests and reformers to remedy social ills
once in Congress he distinguished himself as a rebellious Republican
as he believed President William Howard Taft was not fully committed
to the conservation of natural resources
Poindexter voted against high tariff, Taft, and national party leadership
and became a leading national Progressive Republican

PEOPLE OF TACOMA ADOPT PUBLIC ELECTRIC POWER

Tacoma leaders decided to build a municipally-owned hydroelectric plant on the Nisqually River
this idea met a bitter campaign of opposition from private power companies
Tacoma's voters disregarded the "expert advice" offered by the private companies
they passed bonds worth \$2 million for construction of a 32,000-horsepower hydroelectric plant
on the Nisqually River

COLUMBIA RIVER BRIDGE AT VANCOUVER, WASHINGTON OPENS

Spokane, Portland & Seattle Railway (SP&S) bridge opened to traffic -- November 17, 1908
a drawspan was added to the original design of the bridge
to allow for increasing freight traffic on the river
construction of the Columbia River bridge and the Willamette River bridge (at Willbridge)
completed the SP&S route between Portland and Pasco

COLUMBIA RIVER FISHERY IS DECIMATED

(Washington and Oregon independently imposed regulations on the fishing industry for several years
but the laws were haphazard -- lack of restrictions on fishing nearly devastated the industry
however, even as efforts at cooperation increased and regulations become more stringent
the annual take of salmon continued to decline

today the Columbia River produces one-third of the fish it once provided)

President Theodore Roosevelt felt obligated to propose federal legislation to do what the state
could not (or would not) do

in his State of the Union Address to Congress -- December 8, 1908

Roosevelt said: **"The salmon fisheries of the Columbia River are now but a fraction of what they were 25 years ago, and what they would be now if the United States Government had taken complete charge of them by intervening between Oregon and Washington. During these 25 years, the fishermen of each state have naturally tried to take all they could get, and the two legislatures have never been able to agree on joint action of any kind adequate in degree for the protection of the fisheries."**

COLUMBIA RIVER SALMON HARVEST COMES UNDER NEW REGULATIONS

Heeding the threat of federal regulation

delivered in President Theodore Roosevelt's [1908] State of the Union Address

legislatures of Washington and Oregon began working on uniform fishing regulations

this task was quickly completed -- January 1909

(these laws will remain in force until [1918] when Congress approved

the Columbia River Interstate Compact to permanently regulate the harvest on the lower river

EVERETT REMAINS AN ACTIVE UNION TOWN

Everett was an industrial city that was heavily funded by East Coast investors

its first industries were a paper mill, nail factory, barge building shipyard, smelter, iron works

and numerous lumber mills and shingle mills

Everett was the home of tough businessmen like David Clough, Roland Hartley and Fred Baker

who along with timber boss Joe Irving and banker William Butler all held enormous power

along with a group of businessmen called the Commercial Club

from its early years, Everett was a union town

American Federation of Labor (AFL) trade (craft) unions formed as soon as the city began

most of these suffered during the Panic of [1893] and the depression years that followed)

With the arrival of a large immigrant population during the first decade of the Twentieth Century,

some of whom advocated socialism, communism and/or anarchism,

union membership in Everett grew

Everett became one of the strongest union towns in the Pacific Northwest

Ernest Marsh was the executive secretary of the Everett Shingle Weavers Union,

president of the Everett Trades Council and editor of the *Labor Journal* newspaper

he uncomfortable with the Socialists and the Industrial Workers of the World (IWW)

who did not like trade unions but demanded one big union for all workers,

Marsh used the pages of his newspaper to argue

for American Federation of Labor (AFL) trade unions -- January 1909

REPUBLICAN SAMUEL COSGROVE IS INAGURATED AS WASHINGTON'S GOVERNOR

Governor-elect Samuel Cosgrove suffered from the after-effects of a heart attack

that had occurred only a few weeks before

Cosgrove was too weak to complete his address during his inaugural ceremony -- January 27, 1909

he informed the legislature he wanted a leave of absence to recover from his poor health

this was granted and after serving one day as governor he left for California

PROGRESSIVE STATE OFFICIALS ADVANCE A REFORM AGENDA

Progressive Movement captured the attention of Washington's political leaders -- 1909

a flood of progressive proposals was enacted by the state legislature:

- regulation of life insurance companies,
- diking and drainage district laws were passed,
- fireman's relief and pension funds were passed,
- registration and regulation of nurses was implemented,

- state's first criminal code was enacted

SUFFRAGE MOVEMENT IN-FIGHTING SURFACES IN WASHINGTON STATE

Amending the state constitution, including the addition of Women's Suffrage, is a two-step process
first the legislature must approve the measure by a two-thirds affirmative vote of both chambers
second the approved proposal is placed on the next state general election ballot
the proposed amendment must be approved by a majority of the voters
both steps must be accomplished for the proposed amendment to be adopted
Washington Equal Suffrage Association President Emma Smith DeVoe was a professional organizer
she teamed with Washington Equal Suffrage Association Treasurer Dr. Cora Smith Eaton
to continue organized non-confrontational efforts to win women's suffrage
in the Washington State legislature
Eastern Washington branch of the movement led by led by Washington Equal Suffrage Association
Vice-President, May Arkwright Hutton was intent on getting a woman's suffrage
state constitution amendment passed by the legislature during this legislative session
Hutton was prepared to use aggressive tactics when or where necessary
President DeVoe and Vice-President Hutton clashed during the legislative session in Olympia,
primarily over how quickly and forcefully the suffrage lobbyists should push legislators
to pass a woman suffrage state constitution amendment by February 1909
in order that it could be submitted to the voters for ratification
on the next general election ballot scheduled [November 1910
May Arkwright Hutton's aggressive efforts lobbying the state legislature
were either crucial in getting the Suffrage bill passed -- or obstructionist
depending on the perspective of the observer

CONGRESS PASSES THE ENLARGED HOMESTEAD ACT

Congress made available to the public, under the provisions of the Enlarged Homestead Act
668,000 acres of federal land located on three Indian reservations:
Coeur d'Alene Reservation in Idaho,
Flathead Reservation in Montana,
Spokane Reservation in Washington
this act doubled the size of claims that could be taken for more marginal lands
from 160 acres to 320 acres -- February 19, 1909
(massive invasion of new farmers eventually led to colossal land erosion problems)
U. S. Treasury Department's General Land Office designated the courthouse in Coeur d'Alene
as the headquarters for the lottery
Judge James W. Witten was designated Superintendent of Opening

WASHINGTON LEGISLATURE REFERS WOMEN'S SUFFRAGE TO THE VOTERS

Amending the Washington State constitution to grant women's suffrage is considered by legislators
this proposed amendment passed the State House of Representatives
by a two-thirds affirmative vote with three votes to spare
attempts were made to postpone the vote in the State Senate but women's suffrage
eventually passed by a vote of thirty to nine with three absent -- February 23, 1909

Washington's legislature had agreed to put a constitutional amendment granting women the vote before the male voters of the state on the [November 1910] ballot
Leaders of the women's suffrage movement began to work with fierce determined fervor to enlist the state's male electorate to ratify this amendment
and make Washington the state the fifth in the nation to grant women full voting rights
suffragists had only twenty months to educate male voters and build support before the election
using the slogan "It's a matter of justice," suffragists assembled a statewide organization
and developed partnerships with key voter groups

NATIONAL AMERICAN WOMAN SUFFRAGE ASSOCIATION FOCUSES ON WASHINGTON

National American Woman Suffrage Association organization saw success in Washington State as key to an eventual national suffrage amendment to the United States Constitution
Seattle was selected as the location of the
National American Woman Suffrage Association Convention to be held [July 1-7, 1909]
Emma Smith DeVoe was paid a monthly salary as compensation
for her organizing efforts in Washington
however, several younger Seattle suffragists felt that DeVoe had too much power
they sought a more equitable distribution of decision-making within the organization

MOUNT OLYMPUS NATIONAL MONUMENT IS CREATED

Just forty-eight hours before he left office
Theodore Roosevelt set aside 615,000 acres of Olympic Peninsula wilderness -- March 2, 1909
which was carved out of 1.5-million-acre Olympic National Forest
this became known as Mount Olympus National Monument
centerpiece of the region was Mount Olympus (8,932 feet)
which served as a preserve for Roosevelt Elk -- named in honor of the president

REPUBLICAN WILLIAM HOWARD TAFT BECOMES THE TWENTY-SEVENTH PRESIDENT

(Theodore Roosevelt and his reform-minded Republican Party loyalists
had been swept into office across the nation four years earlier [1904]
Roosevelt had declined to run for reelection and named as his hand-picked successor)
Republican William Howard Taft (who once got himself stuck in the White House bathtub)
was inaugurated -- March 4, 1909
Taft tried to continue Roosevelt's policies of social justice and increased protection under the law
but after Taft's election the Republican Party developed a vocal conservative wing
which challenged each reform President Roosevelt had undertaken
Republican bosses mounted increasing political pressure on in-coming President Taft
who, lacking in political background, could not hold them at bay
President Taft began to listen to the conservative element of the Republican Party
he worked, for instance, to raise the national tariff
(Theodore Roosevelt eventually contested with Taft for control of the Republican Party)

PRESIDENT THEODORE ROOSEVELT LEAVES A PHENOMENAL LEGACY

Roosevelt preserved land by imposing federal ownership using a variety of approaches to designate:

- fifty-one Federal Bird Reservations,
- five National Parks,
- eighteen National Monuments,
- four National Game Preserves,
- twenty-one Reclamation Projects,
- he also added 148,000,000 acres to the swelling national forests altogether, in the seven-and-one-half years he was in office,
- he provided federal protection for almost 230 million acres,
- equivalent in size to that of all the East coast states from Maine to Florida

In addition to his conservation efforts:

- he “busted” trusts which brought large corporations under the control of the people,
- he began the Panama Canal construction effort,
- he established the Department of Commerce and Labor,
- he negotiated an end to the Russo-Japanese War and won the Nobel Peace Prize for his efforts,
- he preached a “Square Deal” for all Americans enabling millions to earn a living wage,
- he built up the Navy as the “Big Stick,” thus establishing America as a major world power,
- he reduced the National debt by over \$90,000,000,
- he secured the passage of regulations on industries:
 - Elkins Act and the Hepburn Act regulated railroads,
 - Meat Inspection act and the Pure Food and Drug Act protected consumers,
 - Federal Employers’ Liability Act protects and compensates railroad workers injured at work

U.S. FOREST SERVICE COMEST UNDER ATTACK

Chief Forester of the United States Forest Service Gifford Pinchot requested higher appropriations to run his expanded domain

There was a furious outcry of protest from business owners and developers who wanted the land during the debates over the Forest Service budget

Idaho Senator Weldon Hayburn, Montana’s Senator Thomas Carter and Wyoming’s Senator Frank Mondell attacked Pinchot’s requests for more money
 Senator Hayburn made a classic pronouncement:

“fires were Providence’s way of clearing the land for homesteaders”⁵⁰

Pinchot got the appropriations he wanted in spite of the opposition

SPOKANE AND INLAND EMPIRE RAILROAD EXPANDS

Spokane & Inland Empire Railway was an alliance of small, local interurban railroads --1909 linking Spokane and surrounding communities with Lake Coeur d’Alene which was a popular resort and recreational area

Empire Builder James J. Hill was a major stockholder in the Spokane & Inland Empire Railway he pushed the interurban lines to the south of Spokane into the Palouse region eventually reaching Colfax, Washington and Moscow, Idaho

Spokane & Inland Empire Railway constructed Nine Mile Falls Dam on the Spokane River to provide electricity for the interurban line -- 1909

⁵⁰ David Lavender, Land of Giants, P. 417.

(Spokane & Inland Empire was folded into the Great Northern Railway [1929])

MULTIPLE INTRURBAN CARS COULD BE CONNECTED TO FORM A TRAIN

Electric interurban railroads often had three or more cars coupled together in a train

cars had platforms in the front and rear with seating in the center section

platforms were standing room only

Although a car might have a seating capacity of fifty or sixty passengers

it could carry at least twice that many when passengers stood in the aisle and on the platforms

open streetcars carried even more when passengers hung onto the outside of the car

UNION PACIFIC (UP) RAILROAD ARRIVES IN GRAYS HARBOR

Ocosta, Washington had withered because of Northern Pacific Railway (NPRY) financial difficulties

Oregon and Washington Railroad & Navigation Company (O-WR&N)

was owned by the Union Pacific Railroad (UP)

O-WR&N track was laid along the south side of the Chehalis River Valley

roughly parallel to the NPRY line on the north side of the Chehalis valley

O-WR&N arrived at Grays Harbor -- 1909

UP, however, learned a lesson from the NPRY blunder in Ocosta, Washington

Union Pacific Railroad ran its O-WR&N track directly to Aberdeen rather than Ocosta

Aberdeen and Grays Harbor now had access to three transcontinental railroads

Union Pacific Railroad, Northern Pacific Railway and Great Northern Railway

O-WR&N and Union Pacific Railroad and established joint facilities

in both Aberdeen and Hoquiam with a small engine-servicing facility in Hoquiam

Construction continued through Hoquiam toward the Pacific Ocean

this line had previously terminated in Moclips, Washington [1905]

Moclips, a small beach resort, became a successful summer vacation spot

for people in the larger cities on Puget Sound

in addition to the tourist traffic, O-WR&N 's 27.8-mile extension

carried logs to Grays Harbor mills from areas which could not be reached by rivers

WASHINGTON'S GOVERNOR SAMUEL COSGROVE PASSES AWAY

While on a leave-of-absence from the state

Governor Samuel Cosgrove died of a kidney ailment in Southern California -- late March 1909

he became known as the "one day Governor"

Republican Lieutenant-Governor Marion E. Hay served for the remainder of the term in office

GOVERNOR MARION HAY AND HIS FAMILY MOVE INTO THE EXECUTIVE MANSION

Governor Marion Hay, his wife Lizzy and their five children moved into the new-constructed

Washington State Executive Mansion -- spring 1909

Lizzy Hay purchased \$15,000 worth of furnishings from Frederick and Nelson

many of these original selections remain, including a mahogany buffet, table, consoles,

eighteen chairs in the State Dining Room and the grandfather clock on the staircase landing

Lizzy Hay gave birth to the first baby born in the mansion -- a daughter, Margaret E. [1910]

NATIONAL WOMEN’S SUFFRAGE CONVENTION IN SEATTLE IS WELL PUBLICIZED

National American Woman Suffrage Association ‘s April edition of its publication *Progress* was devoted to information about its upcoming national convention in Seattle:

•**Train arrangements:** “It is arranged that the friends and delegates attending the Convention in Seattle, Washington, July 1 to 7 inclusive, shall start from Chicago Friday, June 25 at 9:20 a.m. via the Burlington Route.”

•**Seattle:** “The Convention will be held in Seattle, that marvelous city of the Pacific coast which in twenty years has multiplied its population twenty times.”

•**The Convention Hall:** “The convention will hold its sessions in Plymouth Congregational church, an imposing edifice over-grown with English ivy, the one church that has thus far withstood the march of commercial invasion and still stands in the heart of the city.”

•**National Headquarters:** “National Headquarters will be at the Lincoln Hotel (rooms \$1.50 and up to \$5.00 per day, meals a la carte or \$2.00 per day American plan) only four short blocks from the Convention Hall. The Lincoln Hotel is famous for its exquisite parlors, its tea room, its court, with window gardens and hanging baskets of ferns and vines, and especially for its roof garden” (“Seattle Convention”).

Possible side trips including a boat trip to Anacortes and Bellingham and the chance to ascend Mount Rainier on the annual Mountaineers club expedition were also detailed. The train which bore the suffragists the remainder of their way west once they had reached Spokane was known as the Suffrage Special.

The Alaska-Yukon-Pacific Exposition was presented as a powerful enticement: “On June 1 next Seattle will open to the world not the largest, but the most beautiful world’s fair ever given, anywhere at any time” (“Seattle Convention”)⁵¹

SUFFRAGE MOVEMENT IN-FIGHTING CONTINUES IN WASHINGTON STATE

West of the Cascades Emma Smith DeVoe and Dr. Cora Eaton conducted a low-key strategy during their 1909-[1910] campaign to persuade male voters

to pass a Women’s Suffrage state constitutional amendment

they concentrated on contacts with women’s groups and legislators

they wrote notes and held teas

emphasis was not generally on public rallies but the personal, intensive work of wives,

mothers and sisters to influence the men who went to vote at the polls

suffragists appeared at local fairs and gatherings, spoke personally to the electorate,

and formed suffrage clubs to work within communities across the state

DeVoe’s supporters constructed polling lists, canvassed voters and distributed literature

they formed coalitions with the Washington State Grange, labor unions,

the Farmer’s Union and other groups who supported ratification

EASTERN WASHINGTON SAW A MORE AGGRESSIVE WOMEN’S SUFFRAGE CAMPAIGN

Unlike the feminine, well-educated Republican Emma Smith DeVoe

May Arkwright Hutton was an earthy Democrat who had risen from the working class of society part of her crusade for women’s suffrage was to benefit working women

⁵¹ Paula Becker, “Alaska-Yukon-Pacific Exposition (1909): Woman Suffrage,” Essay 8587, HistoryLink.org

Hutton was mystified by the opposition to her efforts
displayed by some privileged, educated women
May Arkwright Hutton's campaign reached a fever pitch
using an organizational tactic a modern presidential campaign would admire
suffragists developed exhaustive lists of voters they called "poll lists"
these allowed organizers to measure support in every precinct
Hutton's suffragist displayed their message was on a float in the (Labor Day Parade) in Spokane
women playing the roles of nurse, businesswoman, homemaker, salesgirl and taxpayer
were all "chained" to two men
one was a stripe-clad convict and the other the town "idiot"
atop the float, was a banner stating: "Idiots, Criminals and Women Cannot Vote"

CONFLICT IN THE WOMEN'S SUFFRAGE MOVEMENT ESCALATES

Emma Smith DeVoe's and May Arkwright Hutton's divergent personalities
eliminated the possibility of compromise
education, class, appearance, demeanor and political affiliation added to the antagonism
DeVoe, infuriated, faulted Hutton for her aggressiveness and cast aspersions on her morality
relation between the Western Washington faction led by Emma Smith DeVoe
and their Eastern Washington counterparts led by May Arkwright Hutton deteriorated

MAY ARKWRIGHT HUTTON HITS ON A PLAN

In an effort to pack the upcoming Washington Equal Suffrage Association Convention
with Eastern Washington delegates
May Hutton offered a free trip to the Alaska-Yukon-Pacific Exposition
to anyone selling fifty Washington Equal Suffrage Association memberships
this effort quickly made May Arkwright Hutton's club membership the largest in the state
this huge increase in the Eastern Washington membership led by May Arkwright Hutton
was a challenge to the Washington chapter leadership of Emma Smith DeVoe
May Arkwright Hutton did not turn over to the names of her new members or their dues
to Washington Equal Suffrage Association Treasurer Dr. Cora Eaton
until two days before the state convention [May 29]
May Hutton's flamboyant behavior infuriated
Washington Equal Suffrage Association President Emma DeVoe and Treasurer Dr. Cora Eaton
who were concentrated on passing a women's suffrage amendment to the state constitution
by maintaining contacts with women's groups and legislators,
writing notes and holding teas
President DeVoe and Treasurer Eaton reprimanded Hutton for her aggressiveness
and her peculiar methods

MILWAUKEE ROAD REMOVES AN OBSTACLE TO WESTWARD EXPANSION

Fortunately for the Chicago, Milwaukee, and St. Paul Railroad Jim Hill went to England -- 1909
Richard A. Harlow, owner of the Montana Railroad (Jawbone Railroad),
was advanced enough money by the Milwaukee Road for him to pay off his mortgage
owed to Empire Builder James J. Hill

Chicago, Milwaukee, and St. Paul Railroad then bought the Montana Railroad -- May 19, 1909
Chicago, Milwaukee, St. Paul and Pacific Railroad's 2,227 miles of track was completed
(Milwaukee Road was the last American transcontinental railroad to reach the Pacific Northwest
later electric locomotives were used over long sections of this line
including the link from Tacoma to Othello in Washington)

FOUR TRANSCONTINENTAL RAILROADS PROVIDE THE U.S. WITH WORLD TRADE

Four transcontinental railroads connected with steamship companies which conducted world trade:

- Union Pacific Railroad reached Portland over independent company tracks belonging to Oregon Short Line (OSL), Oregon Railway & Navigation Company (OR&N) and Oregon-Washington Railroad & Navigation OWR&N [1893];
 - Northern Pacific Railway's terminal had been built in Tacoma [1893];
 - Great Northern Railway's King Street Station had opened in Seattle [1906];
 - Chicago, Milwaukee and St. Paul Railroad moved its terminal from Tacoma to Seattle -- 1909
- Washington's port cities did an expanding business in shipping lumber and fish
Seattle soon outpaced Tacoma in shipping and receiving overseas trade

MILWAUKEE ROAD BEGINS HAULING FREIGHT

Chicago, Milwaukee, St. Paul and Pacific Railroad began to haul freight -- May 26, 1909
it was lumber, as well as an outlet to the Orient that had persuaded the Milwaukee Road
to stretch its tracks across the mountains to Tacoma
bringing to the Pacific Northwest a fourth transcontinental line that was not needed
(passenger traffic was opened the next year [1910])

Subsidiary railroads in Montana, Idaho and South Dakota
were all consolidated under a new company incorporated in Washington state
this new corporation was given the name
Chicago, Milwaukee, and Puget Sound Railway Company
(this was folded into the Chicago, Milwaukee, St. Paul and Pacific Railroad [1912])

CARS BECOME MORE NUMEROUS IN THE STATE

First auto license was granted -- 1909
There was one car for every twenty-six inhabitants in Yakima
because of traffic congestion the speed limit raised from six m.p.h. to twelve m.p.h.
a few cars struggled over Snoqualmie Pass to the Alaska-Pacific Exposition
Horse-drawn cabs gave way to motor taxi which in turn gave way to the "jitney" bus
this was a private car that charged 5¢ a passenger
(jitney bus fare later increased to 10¢; then to 25¢)

EDMUND AUGUSTINE SMITH IS KILLED IN AN AUTOMOBILE ACCIDENT

Inventor of the fish-butcher machine was killed -- May 31, 1909
he was driving his sister, Mrs. J. Sutcliffe, to the Alaska-Yukon Exhibition
to show her his invention
According to a *Seattle Times* article, on the way there they drove down a blind alley
while backing out, the automobile ran into a rut and rocks poked the rear gas tank

causing it to explode as burning gasoline drenched the occupants of the car although pinned beneath the steering gear and blinded by flames,
Smith managed to shove his sister over the side of the car to the ground rescuers arrived, removed Smith from the car, and rushed the two to the hospital but Edmund Smith perished at the age of thirty-one

ALASKA-YUKON PACIFIC EXPOSITION OPENS IN SEATTLE

University of Washington campus dedicated 250 acres for the exposition site
twenty buildings were left for use at the university
after the Alaska-Yukon-Pacific Exposition (A-Y-P) closed
permanent structures were later converted to an auditorium, library, laboratories
and classrooms -- at least six of these structures are still in use
beauty was provided through the use of obelisks, arches, flying buttresses, colonnades, cascades,
fountains and formal gardens -- all graced the exposition site
Godfrey Chealander, a Yukon gold prospector and Seattle merchant,
was the first to suggest that Seattle hold the Alaska-Yukon-Pacific Exposition
he conceived of the idea while gathering objects for an exhibit about Alaska
at the Lewis and Clark Exposition in Portland [1905]
Seattle's A-Y-P Exposition was opened by Godfrey Chealander -- June 1, 1909
sixteen-gun salute was fired shortly after noon
ironically, the slogan of the exposition was: "The Truth Is Good Enough"
in obvious contrast to the Klondike gold advertising salesmanship of Erastus Brainerd
and the Seattle Bureau of Information
President Taft punched a telegraph key set with Klondike gold nuggets
to the thrill of the crowd an electrical impulse rang a gong on the fairgrounds
Alaska-Yukon-Pacific Exposition cost \$10 million and lasted 107 days [closing October 16, 1909]
visitors numbering 3,740,551 came from around the state, the nation and the world
to see hundreds of educational exhibits, stroll the lushly manicured grounds
and be entertained on the Pay Streak midway as Seattle promoted itself
as a gateway to the rich resources of Alaska, Yukon and Asia
Each day of the A-Y-P was designated as a Special Day for one or more groups
Special Days drew people involved in the featured organizations
who provided programs, lectures, ceremonies, parades and athletic competitions
this provided nation-wide publicity to the Puget Sound region
and gave local people a reason to visit again and again
Ezra Meeker displayed his ox-team (Dave and Dandy) and the wagon he used
during his two-year expedition [1906-1907] across America
other Oregon Trail memorabilia was also included in the display
he also published an autobiography, *Ventures and Adventures of Ezra Meeker* [January 1909]

SAM HILL IS MANIC IN HIS PROMOTION ACTIVITIES

As part of the 1909 Alaska-Yukon-Pacific Exposition
Sam Hill helped organize the first American Congress of Road Builders
University of Washington's "Good Roads Building"

built for the Alaska-Yukon-Pacific Exposition became the highway engineering building
At Maryhill along the Columbia River he tried to market land to Quaker farmers
he planned to develop a community of Quaker farmers, but none accepted his offers -- 1909
he expanded his advertising campaign and even offered leases to potential farmers
only a few families took up land where the rainfall averaged eleven inches a year
and the wind blew unimpeded down the Columbia Gorge
he was the only Quaker to ever reside there

However, this land proved useful for his transportation advocacy

Sam Hill built a demonstration road

the first macadam asphalt-paved road in the Pacific Northwest

to expedite shipment of goods between the Columbia River

and Goldendale, Washington located on a plateau 2,000 feet above the river

Sam Hill used seven different road-building techniques -- between 1909 and [1913]

he spent more than \$100,000 of his own money on a demonstration road

(at a cost much cheaper than the \$28,000 per mile cost near Seattle)

one benefit of the experiment was to identify road surfaces that did not work

(this is now called the "Maryhill Loops Road")

part of this road is now open to pedestrians and bicyclists)

MAY ARKWRIGHT HUTTON IS EXPELLED FROM THE WOMEN'S SUFFRAGE MOVEMENT

Washington Equal Suffrage Association Convention President Emma Smith DeVoe's supporters

searched May Arkwright Hutton's colorful past in an effort to expel her from the organization

state association Treasurer Dr. Cora Smith Eaton wrote to Hutton returning her yearly dues

and informing her that she was ineligible for membership because of **"your habitual use of profane and obscene language and of your record in Idaho as shown by pictures and other evidence [of] ... your former life and reputation"**⁵² -- June 17, 1909

DELEGATES TO THE NATIONAL WOMEN'S SUFFRAGE CONVENTION ARRIVE IN SPOKANE

National American Woman Suffrage Association Convention was to be held in Seattle [July 1, 1909]

National leaders of the women's movement saw success in Washington as a key step

to breaking the gridlock in the national woman suffrage crusade

Delegates to National American Women's Suffrage Convention

traveled from across the United States by special train: the "Suffrage Special" -- June 1909

when the train stopped in Spokane they were greeted by the city's Chamber of Commerce

convention delegates were given an automobile tour

and were entertained at an elaborate banquet hosted by May Arkwright Hutton

in the spectacular Hall of the Doges above the Davenport Restaurant

SUFFRAGE SPECIAL TRAIN TRAVES TO SEATTLE

Suffrage Special riders, their numbers enlarged by the addition of two cars of Spokane suffragists,

made their way across the state with stops in Pasco, North Yakima (now Yakima) and Ellensburg

at each town suffrage leaders delivered ardent speeches from the train's rear platform

⁵² Patricia Voeller Horner, "May Arkwright Hutton: Suffragist and Politician" in *Women in Pacific Northwest History*. P. 25-42.

to responsive crowds
in Tacoma the suffragists detoured and toured the city and dined at Point Defiance Park
leaders addressed the public at an evening meeting at the Tacoma Commercial Club
each speech drove home the message that the time had come for Washington's male voters
to grant their women the voting franchise

DELEGATES TO THE WOMEN'S SUFFRAGE CONVENTIONS ARRIVE IN SEATTLE

When the Suffrage Special train reached Seattle's King Street Station at 11:30 p.m. June 29, 1909,
it carried more than 250 suffragists

including delegates to the National American Woman Suffrage Association Convention
and two train cars of delegates to the Washington States Women's Suffrage Convention
led by May Arkwright Hutton

Visitors were taken to their hotels or to private homes where they would stay during the convention
Hotel Lincoln, located on the northwest corner of 4th Avenue and Madison Street,
was the National Headquarters

for the Forty-First Annual National American Woman Suffrage Convention

Suffragists and their appearances in area clubs and churches received copious newspaper coverage
and captured the attention of thousands of attendees to the Alaska-Yukon-Pacific Exposition

Among the many national suffrage leaders who traveled to Seattle for the convention were:

- Frances "Fanny" Garrison Villard [1844-1928], widow of Henry Villard
and daughter of William Lloyd Garrison;
- Harriet Taylor Upton, prolific author, leader of Ohio Woman's Suffrage Association,
treasurer of National Women's Suffrage Association
and first woman member of the Republican National Committee;
- Henry Blackwell, abolitionist and women's rights advocate
- Lucy Stone Blackwell prominent American orator, abolitionist, and suffragist and wife of Henry;
- Alice Stone Blackwell, translator, editor and writer and daughter of Henry and Lucy Blackwell;
- Florence Kelley lawyer, social reformer, leading member of the settlement house movement,
and advocate for rights of workers and children;
- Lucy Anthony the niece of the late Susan B. Anthony;
- Pauline Perlmutter Steinem, the first woman elected to public office in Toledo, Ohio
and president of the Ohio Women's Suffrage Association from 1908 to 1911
(grandmother of writer, lecturer, political activist and feminist organizer Gloria Steinem)
- Charlotte Perkins Gilman, author of the classic short story "The Yellow Wallpaper"
as well as poems, many articles, and more than a dozen books regarding social reform⁵³

WASHINGTON'S EQUAL SUFFRAGE ASSOCIATION CONVENTION MEETS IN SEATTLE

Washington Equal Suffrage Association convention met

in Seattle's Plymouth Congregational Church at Third Avenue and Union Street
four blocks south of the Lincoln Hotel

Plymouth was the second oldest congregation in Seattle and the pastor, Reverend F. J. Van Horn,
and board of trustees supported the woman suffrage movement

⁵³ Paula Becker, "Alaska-Yukon-Pacific Exposition (1909): Woman Suffrage," Essay 8587, HistoryLink.org

When the Washington Equal Suffrage Association Convention was called to order -- June 30, 1909
of the 250 conference attendees, the State organization refused to seat
100 Spokane delegates who had not been credentialed
with the exclusion of the Eastern Washington delegates,

Emma Smith DeVoe was again elected president
of the Washington States Women's Suffrage Convention and the state movement
During day-long proceedings of the state convention the highly publicized rift
between convention President Emma Smith DeVoe
and Vice President May Arkwright Hutton and her Eastern Washington contingent
remained unresolved

Word of the conflict reached local newspapers and was widely reported
embarrassing Washington suffragists and national suffrage leaders
who were about to launch the Forty-First Annual Convention
of the National American Woman Suffrage Association Convention
the timing was designed to take place during Washington's first world's fair
the Alaska-Yukon-Pacific Exposition (A-Y-P)
held on the University of Washington campus

In spite of the split during the state convention
Washington Equal Suffrage Association President Emma Smith DeVoe hosted a reception
for the National Association's officers, delegates, and friends
prominent Seattle women made up the receiving line
demonstrating their approval of the event and their support of the woman suffrage cause

NATIONAL AMERICAN WOMAN SUFFRAGE CONVENTION MEETS IN SEATTLE

National American Woman Suffrage Association Convention President Anna Howard Shaw
called the national delegates together at Plymouth Congregational Church -- July 1, 1909
located four blocks north of the Lincoln Hotel in downtown Seattle
gavel with which President Shaw called proceedings to order had been given to her
by Spokane Mayor N. S Pratt during the suffragists' dinner in Spokane
Spokane's *Spokesman-Review* described the gavel as **“gold-bedecked ... made from the
wood grown in the four states which now have equal suffrage, namely Wyoming, Colorado, Utah,
and Idaho”**⁵⁴

most likely the gavel was banded with silver
possibly from May Arkwright Hutton's Idaho silver mine
Considerable private and public work was undertaken by the board members and delegates
but president Anna Howard Smith also had to handle these two warring factions
led by Washington's Emma Smith DeVoe and May Arkwright Hutton

NATIONAL AMERICAN WOMAN SUFFRAGE CONVENTION ATTEMPTS A RESOLUTION

National American Woman Suffrage Association Executive Board members
heard from both the DeVoe and the Hutton contingents
question of which, if either, contingent should be seated at the convention

⁵⁴ Paula Becker, “Alaska-Yukon-Pacific Exposition (1909): Woman Suffrage,” Essay 8587, HistoryLink.org

was put to a vote of all the delegates
they returned a verdict that both groups could attend but neither could vote -- July 2, 1909
it was hoped this would appease the press and allow public focus
to return to the push for suffrage rather than fractious infighting

Sadly, that was not to be the case

National American Woman Suffrage Association monthly publication of *Progress* recounted:
“The Convention of the Washington E.S.A. was held June 30, and a contest for representation by the Spokane branch engaged the newspaper space to the exclusion of any other news of the meeting. Following this cue the papers continued to exploit the contest as the chief feature of their Convention reports. Reading these stories one almost would be led to suppose that the only business of the National Convention was to deal with the Washington difficulty.” [August 1909]

(Washington Equal Suffrage Association Emma Smith DeVoe was later stripped of her salary)

MAY ARKWRIGHT HUTTON RETURNS TO SPOKANE

After rejection of her Eastern Washington contingent at the state convention

May Arkwright Hutton returned to Spokane where she began a new suffrage organization:

“Washington State Suffrage Worker’s Association”

she intended that her new organization would be persuasive rather than militant

her new campaign was an appeal -- not a fight

FOCUS OF THE NATIONAL AMERICAN WOMAN SUFFRAGE CONVENTION IS EDUCATION⁵⁵

Morning sessions were reserved for reports and general business

Afternoon sessions were open to the public

discussions on educational or morale-building topics relevant to the suffrage cause were featured

topics included:

- “Conditions which create Suffragette Methods,”
- “The American Situation vs. The English Situation”
- “Report of the Committee on Industrial Problems,”
- “Wage Earning Women and The Ballot”
- “Disfranchisement of Women and Wage-Earning Children”

late afternoon automobile trip through Seattle was also promised

Evening sessions were used as educational opportunities for the general public

these were held in the sanctuary of Plymouth Congregational Church

they always opened with a prayer given by a local minister

and included musical selections -- a collection plate was passed nightly

evening sessions were well attended

REPUBLICAN CONGRESSMAN FRANCIS W. CUSHMAN PASSES AWAY

Tacoma attorney had served Washington’s Second Congressional District

before he died at age of forty-two -- July 6, 1909

he had been instrumental in getting title to the land for Point Defiance Park

conveyed to the City of Tacoma

⁵⁵ Paula Becker, “Alaska-Yukon-Pacific Exposition (1909): Woman Suffrage,” Essay 8587, HistoryLink.org

Congressman Cushman was replaced by appointed Republican Congressman William W. McCredie who was a former Clark County prosecuting attorney and superior court judge (after serving one term he was unsuccessful in his bid for re-election)

NATIONAL AMERICAN WOMAN SUFFRAGE ASSOCIATION CONVENTION CLOSES

National American Woman Suffrage Association President Anna Howard Shaw gave the closing talk to the convention delegates at the Alaska-Yukon-Pacific Exposition Auditorium she was also a physician and one of the first ordained female Methodist ministers in the U.S. under her leadership the National American Woman Suffrage Association continued to lobby for an amendment to the United States Constitution granting women the right to vote and serve on juries

Alaska-Yukon-Pacific Exposition celebrated Suffrage Day -- July 7, 1909

festivities were planned as both a celebration to mark the end of the convention and an enormous public relations bonanza

fairgoers, including some 600 suffragists who had participated in the convention, entered the Exposition grounds under enormous banners bearing the slogan:

“Votes For Women”

this display of public support for suffrage in Washington was heartening it was noted as **“the always-to-be-remembered feature of the week”**⁵⁶ suffragists pinned buttons with their message to nearly everyone who entered the exposition every toy balloon sold at the fair that day was imprinted with the slogan a free morning public meeting in the Exposition Auditorium drew a large crowd of fairgoers to hear Reverend Anna Howard Shaw, Alice Stone Blackwell, Florence Kelley, Kate M. Gordon, Ella Seass Stewart, Charlotte Perkins Gilman, and Laura Clay speak out for suffrage

Exposition president J. E. Chilberg welcomed the convention delegates to the fair During the closing toasts at the suffragists’ final dinner

at The Firs restaurant in the Y.W.C.A Building on the Exposition grounds, Harriet Taylor Upton summed up her Seattle experience: **“There was only one dark spot for me in this convention, and that was between 2:30 and 7:30 a.m.”**⁵⁷

CAMPAIGN FOR WOMEN’S SUFFRAGE CONTINUES IN WASHINGTON STATE

In spite of the internal conflict Washington suffragists continued their campaign to regain the vote Washington’s campaign was planned to convince the male electorate without antagonizing them suffragists spoke personally to the electorate, they formed suffrage clubs to work within communities across the state, homemakers canvassed neighbors and shops distributing leaflets which were titled *Why Washington Women Want the Ballot*, newspapers, unions and churches were approached for support, for the most part they avoided holding large public rallies, meetings, or demonstrations, they avoided the publicity aroused by the more militant methods of British suffragettes whose frequent arrests, public demonstrations, and prison hunger strikes

⁵⁶ Ida Husted Harper *The History of Woman Suffrage*, Vol. 5, P. 264.

⁵⁷ Ida Husted Harper *The History of Woman Suffrage*, Vol. 6, P. 677-678.

kept them on the front pages of newspapers around the world

WASHINGTON SUFFRAGIST PUBLISH A COOKBOOK

Washington Equal Suffrage Association published 3,000 copies
of the *Washington Women's Cook Book* edited by Linda Jennings of La Conner -- 1909
this book collected traditional recipes for meat, breads, deserts and the like
donated by suffragists from around the state
and novel recipes for sailors (sea birds, porpoise, salt water bread) and camp recipes
it also included household tips and beauty aids
this was both a fundraiser and a way to non-aggressively plant the woman suffrage message
in Washington homes -- pro-suffrage information was interspersed with the recipes
quotations supporting women's voting rights were liberally sprinkled throughout
it also contained a chronology entitled: *How Washington Women Lost the Ballot*
this cookbook was sold throughout the 1909-[1910] suffrage campaign
including at the Alaska-Yukon-Pacific Exposition

WASHINGTON STATE SUFFRAGISTS CONDUCT AN EFFECTIVE CAMPAIGN

Wise to the power of media, suffragists launched a monthly newspaper, *Votes for Women*
in its inaugural issue, the paper stated: **“Our business is to work, to surmount difficulties, to endure hardships, to solve problems to overcome the inertia of our natures, our training and environment.”**

it informed readers of suffragist activities around the nation and the world
this paper reported on campaign progress, recognized volunteers
and proclaimed the rightness of their cause
Their campaign was as subtle as it was aggressive
rather than staging public rallies or marching down main street
they focused on individual communications and influential voters
they formed groups known as “coalitions” to lobby labor groups, men's organizations,
trade associations, churches, labor unions, Farmer's Union
and the Washington State Grange which became very active in the effort
leaders hunted for support one vote at a time
they talked to legislators and other supporters one on one
at home women worked to persuade the only people who could vote: husband, father, brothers
Keeping suffrage at the top of people's minds was critical to success
hanging posters was perhaps the most visible campaign tactic
volunteers hung thousands of posters on telegraph poles, on buildings
and in every shop or business window possible;
distributing suffrage literature alongside displays of women's sewing, handwork, baked goods
and other emblems of homey domesticity attracted attention
suffragists distributed one million pieces of literature;
Washington Equal Suffrage Association maintained a permanent suffrage exhibit
on the Alaska-Yukon-Pacific grounds during the entire run of the exposition;
suffrage organizers held “Women's Days” at county fairs;
Chautauquas, stage shows that combined education and entertainment,

were canvassed for support

GREAT NORTHERN RAILWAY'S CASCADE TUNNEL IS ELECTRIFIED

Empire Builder Jim Hill's Cascade Tunnel at Stevens Pass had two problems

it was too steep

smoke accumulated in the 2.63-mile-long single track tunnel

To solve both of these issues, the Great Northern Railway electrified the tunnel

a hydroelectric plant was installed on the Wenatchee River just west of Leavenworth

to provide electricity -- this project was completed -- July 10, 1909

four Great Northern Railway boxcab locomotives that were powerful to overcome the steep grade were supplied by the American Locomotive Company

three locomotives were coupled together could hauled trains at a constant speed of 15.7 mph,

but when larger trains required four locomotives the motors were linked in a series

so that the speed was halved to 7.8 mph to avoid overloading the power supply

However, the tunnel was still plagued by snow slides in the area

LAND RUSH BEGINS IN EASTERN WASHINGTON, IDAHO AND MONTANA

Opening of the land of the Enlarged Homestead Act for claiming began -- midnight July 15, 1909

(it would continue [midnight August 5, 1909])

eligible homesteaders had twenty-two days to register in Spokane, Coeur d'Alene, and Missoula

also, a notarized application card had to be submitted by mail in a special blue envelope

for a chance to file a claim for a homestead

when this paperwork was completed the hopeful claimant was entered in a lottery for land

central land office in Coeur d'Alene received 286,848 applications for 4,160 available claims,

this number exceeded the number of applicants in the famous Oklahoma land rush [1889]

During the registration period crowds became so large that the Spokane & Inland Empire Railroad

operated special interurban trains on open schedules, running every fifteen to twenty minutes

no restrictions were placed on the number of passengers allowed on board the cars

people occupied every available space: window sills, coach roofs, cowcatchers

and atop the running gear

Spokane & Inland Empire Railroad Company daily transported 6,000 to 10,000 passengers

and on one day counted 14,000 fares

Great Northern Railway and Northern Pacific Railroad also ran several extra trains per day

SUFFRAGISTS CLIMB MOUNT RAINIER

Washington Equal Suffrage Association Treasurer Dr. Cora Smith Eaton

joined photographer Asahel Curtis, Major E. S. Ingraham,

and other members of The Mountaineers 1909 expedition to Mount Rainier -- July 30, 1909

they planted a large Alaska-Yukon-Pacific Exposition flag with a smaller pennant

bearing the motto "Votes For Women" attached to its staff

at the summit of Columbia Crest, the highest of three peaks on Mount Rainier

after only fifteen minutes, high winds snapped the staff,

so the climbers placed the flag inside the crater and left it there for posterity

CATASTROPHE STRIKES THE INTERURBAN SPOKANE & INDLAND EMPIRE RAILROAD

Special train No. 5, westbound to Spokane with three cars at about 4:35 p.m. Saturday, July 31, 1909 crashed head-on with regular train No. 20, eastbound with four cars at the La Crosse siding (now Gibbs, Idaho) about two miles northwest of Coeur d'Alene two interurban trains were carrying an estimated 600 passengers between them Motormen, James Delaney in No 20 and Edgar E. Campbell in No 5 saw each other when the trains were 800 feet apart -- too late to prevent a collision Train No. 20 came to a complete stop in 200 feet people in the lead car began jumping for their lives Train No. 5 attempted to stop as well, but the air brakes on the overloaded train failed it plowed into the regular train at about twenty miles per hour impact of the crash telescoped the two lead cars into each other immediately killing twelve passengers riding on the front platform of train No. 5 more than 100 other people were severely injured and maimed

HELP FROM COEUR D' ALENE WAS QUICK TO ARRIVE AT THE ACCIDENT SCENE

As doctors from Coeur d' Alene treated the severely injured, workers from the nearby Stack-Gibbs lumber mill were kept busy with jackscrews, axes, and wrecking bars, clearing out debris and rescuing the trapped Spokane & Inland Empire Railroad Company dispatched a special train from Spokane with doctors, nurses, and medical supplies to care for and transport casualties Most of the critically injured were rushed to hospitals in Spokane and Coeur d'Alene others were cared for in nearby homes twelve bodies were taken to local funeral parlors to await identification four additional victims died a few days later in the Coeur d'Alene Hospital (In a subsequent investigation, both Spokane & Inland Empire Railroad's policy and the airbrakes were found to have contributed to the accident) (Huge profits accumulated during the 1909 land rush but most of it was lost to damage settlements however, the Spokane & Inland Empire Railroad Company survived the 1909 disaster and continued doing business until it went into receivership [January 9, 1919])

INDUSTRIAL WORKERS OF THE WORLD MEMBERS GATHER IN MISSOULA, MONTANA

Missoula was the hiring center for migratory workers seeking work in the nearby mines Industrial Workers of the World sent a handful of Wobblies to Missoula -- September 22, 1909 to recruit laborers for membership in the organization's effort to topple capitalism among the IWW organizers were Jack Jones and his striking, auburn-haired, nineteen-year-old pregnant wife Elizabeth Gurley Flynn they were joined by rabid IWW agitator Frank Little

MISSOULA, MONTANA IS THE SITE OF IWW DISRUPTIONS

Elizabeth Gurley Flynn led the effort to recruit members into the Industrial Workers of World Union clad in a broad sombrero and red neckerchief she began to talk to passers-by at the corner of Higgins Avenue and West Front Street -- September 29, 1909 when she spoke, she lambasted employment agencies "sharks" who worked with employers

this arrangement system was described: **“As soon as a man had worked long enough to pay the shark’s fee, the hospital dollar, poll tax and a few other grafts, he was discharged to make room for more slaves, so that the fleecing process could continue.”**⁵⁸

Elizabeth Gurley Flynn, already a seasoned agitator and fiery orator, launched a free speech fight that spread throughout the West -- September 29, 1909

Flynn’s voice accounted for only part of her impact on rough-hewn itinerants passing through town searching, often desperately, for jobs her passionate gestures and succinct messages mesmerized her audiences

Flynn invited IWW agitator Frank Little to join her in speaking on the street corner after announcing the title of his speech, “On Temperance,” he was arrested and hauled to jail next Flynn’s husband, Jack Jones, attempted to speak and was also arrested a young logger started to read the Declaration of Independence -- he was dragged off in handcuffs Herman Tucker, a civil engineer for the U.S. Forest Service,

saw what was happening from his Forest Service office above he rushed down, joined the effort and was arrested as well

Of course, Flynn and her companion agitators came under attack by agency owners and employers who insisted, along with other downtown merchants, that police aggressively enforce

Missoula’s ten-year-old ordinance that prohibited street speaking

Industrial Workers of the World described their recruiting effort as the first “free speech” fight

EXPLOSION AT THE ROSLYN NUMBER FOUR MINE

Northwestern Improvement Company’s mine (or the mine’s shaft)

exploded killing ten men -- about 12:45 p.m., Sunday, October 3, 1909

Flames burst out of the No. 4 shaft right located behind the town’s library

blaze reached a height estimated to be from 150 feet to 400 feet

fire reached the head frame (winding tower located above ground),

tipple (coal screening and loading area), snow sheds and power house near the shaft were all destroyed

numerous buildings scattered about the town also were set afire

further loss of surface property was prevented only through the valiant efforts of the townspeople

Fortunately no flame or smoke issued from the mine’s return airways

fans stopped running but were not damaged

because the strong draft up the shaft caused by the first rush of flames

which set the shaft timbers afire thus caused the ventilation to work against the fans

fans were almost immediately reversed with the idea that this would assist

getting the fire in the shaft under control and prevent it from working down into the mine

At the time of the explosion there were five men working on the tipple and near the head frame

all five lost their lives -- the bodies of two of the men were never recovered

remaining three were thrown a considerable distance

clothes were burned completely off two of them -- they were identified with difficulty

There were also five men in the mine who were killed

⁵⁸ Clemens P. Work, *Darkest Before Dawn: Sedition and Free Speech in the American West*. P. 11.

EARLY EFFORTS AT A RESCUE PROVE FUTILE

Members of a rescue party entered the Number One shaft in an attempt to reach the bottom
they found the slope blocked by a cave-in -- October 3, 1909
Resurfacing, the rescue party entered shaft Number Two
when they reached the 3,000-foot level
two of the rescuers were overcome by an explosive mixture of toxic gasses
re-enforcements were required to bring them safely to the surface

RESCUE EFFORTS CONTINUE

Safety helmets arrived from the Alaska-Yukon-Pacific Exposition in Seattle
but since the men who brought them had never used them in coal mines,
management would not permit their use -- Monday evening, October 4, 1909
Numerous other attempts were made to gain entry into the Number Four mine
a temporary wood and canvas shaft was completed at the fifth east level of slope Number One
to provide ventilation which was good enough to allow further exploration
this effort ended in failure
a second attempt resulted in a rescue party being temporarily trapped when the roof collapsed

EFFORTS AT THE ROSLYN MINE BECOME A RECOVERY OPERATION

State mine inspectors arrived at Roslyn and brought three air-packs with them
two of these were single oxygen cylinders good for one hour each
Recovery team using Wolfe safety lamps for illumination
entered Slope Number 1 -- Thursday evening, October 6, 1909
Mine inspectors joined a party of miners working on drawing ventilation into the mine
following the air down the slope the combined rescue party found the body of J.E. Jones
In still another effort a combined party of seven mine inspectors and miners
entered the Number 1 shaft
bad air was encountered but they pressed on
bodies of Phillip Posovich and Dominick Pomotich were discovered
where they had been working
Further efforts that evening resulted in failure
(last two bodies were not recovered until the following [April])
while not as destructive as the [1892] Roslyn explosion which killed forty-five miners
who left behind twenty-one widows and ninety-five fatherless children
nevertheless the human misery experienced was epic:
nine widows and twenty-one children without fathers
Severe damage to the mine prevented drawing any convincing conclusion
regarding the cause of the explosion

MISSOULA, MONTANA SPEECH RALLY ENDS IN ARRESTS

More and more Industrial Workers of the World (IWW) free speech activists had themselves arrested
for disturbing the peace and creating loud noises
they were jailed in such huge numbers that civic machinery broke down
local jails could neither house nor feed all of the inmates

courts became so clogged they could handle little else but free speech cases
Missoula's free speech fight became a duel of endurance
between the lungs and imaginations of the Wobblies and the stamina of the city police
union members spoke in the afternoon so they would be in jail in time for dinner
many were offered their freedom before breakfast
but they refused to leave their cells without jury trials
Continuing antics of the Wobblies tried the town's patience
Wobblies forced Missoula's hand as the town ran out of room and money
Missoula began to feel self-conscious about the furor
Elizabeth Gurley Flynn's leadership brought the city to its knees
IWW members won their free speech fight with Missoula and Missoula gave up -- October 8, 1909
all charges were dropped and the jails were cleared of the Wobbly mob
city councilmen decided to let the union members speak anywhere in the community
so long as they did not impede traffic

ELIZA JANE MEEKER PASSES AWAY

After visiting the Alaska-Yukon-Pacific Exposition Ezra Meeker traveled to California
to conduct research in preparation for his third journey over the Oregon Trail
in California he received word that Eliza, his wife of 58 years, had died
in the Sound View Sanitarium in Seattle -- October 15, 1909
Eliza, to whom Meeker always gave credit for the success of their [1852] journey across the trail,
had been an invalid for some years prior to her death and had lived from at least [1906]
mainly at the Seattle home of their daughter Carrie Meeker Osborne
Meeker returned to Seattle by train to lay Eliza to rest in Puyallup's Woodbine Cemetery
(Traveling to California, Meeker drove his wagon in the Rose Bowl Parade
in Pasadena, California [January 1, 1910])
Meeker had made the commitment before Eliza's death
skilled in public relations he was well aware that his wiry frame, flowing white hair and beard
would draw attention to the cause of trail preservation
as he perched on the ox-drawn wagon
he sought a place in the spotlight whenever possible

INDUSTRIAL WORKERS OF THE WORLD (IWW) MISSOULA EFFORT MOVES TO SPOKANE

Industrial Workers of the World organizer James H. Walsh reported the abuse
used by Spokane's employment agencies to hire transient workers
to the leadership of the IWW's leadership
"job sharks" there were closely tied to the crew bosses on many job sites
Spokesman-Review newspaper reported [January 18, 1909] often there would be
"one gang coming, one gang working and one gang going"
the faster the turnover, the greater the number of fees that could be generated
Celebrating their victory in Missoula, Montana, radical Wobblies joyously traveled by boxcar
to Spokane which was the hiring center for migratory workers in search of a job
in nearby mines, pine forest lumber camps, sawmills, farms, orchards and agricultural fields

INDUSTRIAL WORKERS OF THE WORLD FREE SPEECH ADVOCATES ARRIVE IN SPOKANE

At first the Wobblies tried to work with the Spokane city government

but the City Council refused to revoke the licenses of nineteen employment agencies

IWW's newspaper, the *Industrial Worker*, published an advertisement -- October 28, 1909

“Wanted—Men to Fill the Jails of Spokane”

Industrial Workers of the World members began a free speech campaign

to inform the public of the hiring abuses

Wobblies organizers stood on streets near the hiring halls in downtown Spokane

they made speeches, sang labor songs and told passersby about their union

Industrial Workers of the World sent out a notice to all of its union halls of an event in Spokane

planned for [November 2, 1909]: **“FREE SPEECH DAY—IWW locals will be notified by wire how many men to send if any... Meetings will be orderly and no irregularities of any kind will be tolerated.”**

SPOKANE BECOMES THE TARGET OF INDUSTRIAL WORKERS OF THE WORLD ATTENTION

IWW relied on free speech rights guaranteed by the U.S. Constitution's First Amendment

to enable them to communicate the concept of “One Big Union” to listeners

Wobblies from all over the West arrived in Spokane -- November 2, 1909

one of the arriving Wobblies overturned a crate on the Spokane sidewalk

stepping onto the “soapbox” he spoke against employment agency abuses

Industrial Workers of the World made its first impression on the nation

with an extensive “free speech” campaign in Spokane aimed at employment agencies

skilled in the art of swindling men who applied for jobs

Wobblies used the slogan “Don't Buy Jobs”

FREE SPEECH BECOMES A WEAPON FOR CHANGE FOR THE IWW

Angry Spokane leaders passed an ordinance banning public speaking on the streets

Wobblies claimed their constitutional right to free speech was being violated

IWW members continued their public discourses

but cooperated with Spokane police -- meetings were moved indoors

City Council, in a poorly thought out power play, passed an exception to the public speaking ban

allowing the Salvation Army to speak on the streets

Wobblies objected and sent out a call for more supporters to come to Spokane

Wobblies who spoke were arrested along with their audiences

for defying the local ordinances against street gatherings and demonstrations

when one was jailed, another Wobbler would rise to take his place on the soapbox

followed by another and another

SPOKANE COMES UNDER SIEGE

Wobbler sympathizers poured into Spokane from Seattle and Portland and northern Idaho

IWW organizer Elizabeth Gurley Flynn, a woman of extraordinary speaking skills,

arrived in Spokane to join the fight for social justice

since she was pregnant Wobbler organizers allowed her to speak only indoors

when the IWW union office was raided and everyone arrested

Flynn took over as publisher of the local worker's newspaper, *The Industrial Worker*
One evening rocks and chunks of ice were thrown
through the windows of the Red Cross Employment Agency at 224 Stevens Street
several members of the noisy mob estimated to be between 2,000 and 3,000 idle men
were about to attempt to wreck the place -- December 1909
IWW organizer James H. Walsh mounted a chair and pacified the violent crowd
his efforts surely stopped a riot
IWW reinforcements arrived in Spokane from surrounding regions simply to get thrown into jail
Elizabeth Gurley Flynn was quoted (Kim Briggeman of the *Missoulian*, [2009])
as saying reinforcements arrived: **“on top of the trains and beneath the trains, and on the
sides, in the box cars and every way that you didn't have to pay fare.”**
many protestors read from the United States Constitution or the Bill of Rights
There were so many arrests that Spokane could not afford to feed the men in jail
so men would be arrested in the evening, held overnight and were released before breakfast
so that they did not have to be fed
next day after a hearty meal provided by union organizers they got back on the soapbox
where they were again arrested

ARREST OF ELIZABETH GURELY FLYNN MAKES THE NEWS

Elizabeth Gurley Flynn continued to speak in Spokane at rallies and indoors
she spurred on the burly loggers and itinerant workers around her
she taunted city and company officials with her fine oratory, fiery wit and great energy
howling, jeering mobs led by Flynn turned the streets into an uproar
until she was arrested as she walked to the meeting hall -- December 5, 1909
she was charged with “conspiracy to incite men to violate the law”
At the time *The Spokesman-Review* described her as a **“...frail, slender girl, pretty and graceful,
with a resonant voice and a fiery eloquence that attracted huge crowds.”**
Her arrest made headlines throughout the nation
Flynn was held in jail overnight and then released

SPOKANE IS HARD-PRESSED TO DEAL WITH ITS PRISONERS

Eight editors in succession published a copy of the *Industrial Worker*
and then took their turn “soapboxing” and went to jail
In one day 150 Wobblies were arrested and crowded into jails that could hardly accommodate them
Elizabeth Gurley Flynn delayed her arrest by chaining herself to a lamppost
About 1,200 Wobblies had been arrested -- demonstrators filled the city jail, county jail
War Department's Fort Wright was made available for more
Spokane City Council arranged for rock-pile work for the prisoners
Spokesmen-Review reporter wrote that men were confined
twenty-eight to a seven foot by eight-foot cell
they were packed so tightly that **“It took four cops to close the cell door. This was called
the ‘sweat box’. The steam was turned on until the men nearly suffocated and were overcome with
exhaustion. Then they were placed in ice cold cells and ‘third degreed’ in this weakened state.**

When the jail became overcrowded an abandoned unheated schoolhouse, Franklin School, was used as a jail.”

prisoner, James Stark kept a diary in which he described how the men were covered with blood
with teeth knocked out, eyes blackened, bones broken and clothes torn
three prisoners died

ELIZABETH GURLY FLYNN GATHERS NATIONAL ATTENTION

Upon her release from jail she wrote of the police brutality she witnessed
she charged that police were using the women’s section of the jail as a brothel
with the police soliciting customers
when that story was printed in the *Industrial Worker* -- December 10, 1909
city police went door to door and confiscated as many copies of the paper as they could
but it was too late -- word had gotten out and the news went national
Elizabeth Gurley Flynn quickly became one of the best known Wobblie leaders

PUBLIC SYMPATHY SHIFTS TO THE INDUSTRIAL WORKERS OF THE WORLD

As guards marched Industrial Workers of the World prisoners through the streets to bathing facilities,
crowds would shower the men with apples, oranges and Bull Durham tobacco
Incarcerated Wobblies went on a hunger strike -- Spokane let them starve
they refused to cut wood for their stoves although it was winter -- Spokane let them shiver
Wobblies complained about the cold, about crowded conditions in sweaty cells
about beatings by guards, cold showers, water hosing, and general filth
wild charges of inhumanity were initiated: **“Four hundred men and women of the ranks of
labor...on the bare floors of a jail, slowly starving...thirty days of torture”**⁵⁹
“barbarous Spokane” became known across the nation
Even after the speaking ban was declared unconstitutional the arrests continued
but now only the speakers were arrested for disorderly conduct
Spokane taxpayers began to resent the cost of feeding, housing, and policing IWW prisoners

⁵⁹ David Lavender, *Land of Giants*, P. 421.

1910-1919

WASHINGTON STATE POPULATION IS REPORTED IN THE 1910 CENSUS

Population of the state increased from 518,000 to 1,142,000

more than double from 1900 to 1910

it was found state was 47% remained rural -- 1910

53% of people were considered to be living in an urban environment

Population of the state was broken down into several classes:

- urban and rural residents,
- workers and employers,
- farmers and industrialists

FARMING IN WASHINGTON STATE

One in four persons were employed in agriculture or animal husbandry from [1900] to 1910

twice as many as logging, fishing and mining combined

Farm value increased 300% from [1900] to 1910

day of cheap land was over

scientific and technological advances improved production

Eastern Washington grew both spring and winter wheat

with each crop a wheat rancher could earn the value of his farm in one year

Cattle ranching benefited from the growing local market

open range was gone -- ranchers needed to use public land for grazing

Dairy farming enjoyed great success

fresh milk, cream and butter were sold to nearby cities

condensed milk and cheese was shipped throughout the nation

Railroad opened new markets for fruit growing

orchardists planted thousands of fruit trees -- price of orchard land rose

this became the most expensive property a farmer could own

storage facilities were as important to fruit growers was as cheap transportation

Vegetables and berries were grown for market and for seed

amazing productivity was achieved -- enough was grown to feed neighboring cities

Puyallup was known for blackberries and raspberries

fine mansions in La Conner were paid for with money from cabbage seed

Flower bulb production demonstrated how specialty crops

made their way to the Pacific Northwest

George Gibbs, a native of England and then a resident of Whatcom County

challenged the Dutch monopoly of the bulb industry

by producing bulbs commercially

it was found the sandy loam of the Puyallup Valley, Bellingham Bay

and Fargo Lake areas also were suitable for narcissus and tulip bulbs

LUMBERING BRINGS PROSPERITY TO BELLINGHAM BAY

As described in *The Coast Magazine* [1910]: **“Bellingham’s prosperity is founded on the lumber and shingle industry.... The largest shingle mill in the world, that of Puget Sound Mill and Timber Company, is in Bellingham. Its annual output is 200,000,000 shingles. The leading sawmill is operated by the Bellingham Bay Lumber Company. Its ten-hour capacity is 375,000 feet and it is one of the very largest mills in the world.... [Besides other large lumber mills] Whatcom County has 115 shingle mills, many of which are in Bellingham.**

“With an annual lumber cut in Whatcom County a plank road 16 feet wide and two inches thick, and reaching from Bellingham to New York, could be built.... With the 2,000,000,000 shingles manufactured in this county in one year, a regulation roof could be built large enough to give standing room to all the 60 million subjects of the German Empire. More than 200,000 gigantic trees are required to feed the saw and shingle mills annually. As the bulk of the lumber is shipped by water, a great fleet of steam and sailing vessels is always in Bellingham Bay, at many times as many as 15 or 20 carriers. Altogether more than 5,000 men are employed by mills and logging camps.”

GIFFORD PINCHOT BECOMES THE CENTER OF CONTROVERSY

U.S. Forest Service Chief Gifford Pinchot

was known for reforming the management and development of U.S. forests
and for advocating the conservation of the nation’s reserves
through planned use and renewal

Pinchot coined the term “conservation ethic” as applied to natural resources

U.S. Forest Service Chief Gifford Pinchot was against U.S. Secretary of the Interior
Richard Achilles Ballinger

Pinchot–Ballinger controversy, also known as the “Ballinger Affair”

Former Seattle Mayor Richard Ballinger was appointed by President William Howard Taft
to replace President Theodore Roosevelt’s U.S. Secretary of the Interior
James Rudolph Garfield

Ballinger’s appointment disappointed conservationists who interpreted the shift
as a break with Roosevelt administration’s conservation policies
within weeks of taking office, Ballinger reversed some of Garfield’s policies
beginning with restoring three million acres to private use

Gifford Pinchot became convinced that Ballinger
intended to “stop the conservation movement”

Pinchot sent an open letter to Senator Jonathan P. Dolliver
who read it into the Congressional Record -- January 1910

Pinchot openly rebuked President Taft and asked for Congressional hearings
into the propriety of Ballinger’s dealings as Secretary of the Interior

Pinchot was promptly fired as U.S. Forest Service Chief but from January (to May),
the United States House of Representatives held hearings on Ballinger
he was cleared of any wrongdoing, but criticized by some for favoring private enterprise
and exploiting natural resources rather than implementing conservation

Political consequences followed the firing of Gifford Pinchot,
who was a close friend of former-President Teddy Roosevelt
Republican progressives drove a wedge between Taft and Roosevelt

which led to a split of the Republican Party (in the [1912] presidential election)

PROGRESSIVE MOVEMENT REMAINS ALIVE IN WASHINGTON STATE

Progressives in Washington State worked to implement change
in the state government -- January 1911

Leaders of the Farmers Grange and Federation of Labor

formed a Joint Legislative Committee to lobby legislators to provide voters
with methods to directly pass legislation without a vote of the state legislature
this proposal required the state constitution be amended

Progressives proposed Amendment 7 to the state constitution
that voters be able to directly initiate proposed laws by petition:

- *Initiatives to the people* would go directly to the next general election ballot
if enough signatures are gathered
- *Initiatives to the legislature* would force legislators to;
 - Adopt the initiative as proposed,
in which case it becomes law with no vote of the people;
 - Reject it or refuse to act
in either case the initiative must be placed on the next general election ballot;
 - Approve an amended version in which case both the original initiative
and the amended version must be placed on the next general election ballot

Progressives also proposed in Amendment 7 that legislators

could refer proposed or enacted legislation to the voters for their approval or rejection:

- one type of *Referendum* allowed legislators pass the legislation
and refer the law to the voters for their approval or rejection
this process bypassed the Governor denying an opportunity to sign or veto the bill
most often these bills asked voter approval for new projects
that would cost more money than the state had budgeted (that is, raises taxes)
or the bill could be a “hot” political subject that legislators wish to avoid;
- another type of referendum was aimed at a law that had recently passed
that voters petition to keep from being enacted

Progressives also proposed Amendment 8 to the state constitution to enable voters

to petition to *Recall* (remove from office) any elected official except judges
for malfeasance (an intentional act that is wrongful or unlawful)
or misfeasance (an act that is legal but performed improperly -- an abuse of power)
or for violating an official’s oath of office

RAILROADS CONTINUE THEIR CONSTRUCTION AND COMPETITION

Empire Builder James J. Hill in an effort to further his grip on the Midwest lumber markets
enlisted financier J.P. Morgan’s help in acquiring control of middle America’s
most prolific railroad: Chicago, Burlington and Quincy (CB&Q) Railroad
CB&Q employed 35,640 people and included 7,545 miles of track
mainly in Illinois, Iowa, Nebraska, Colorado, Missouri, Wisconsin, Minnesota,
Wyoming, Montana, North and South Dakota
in addition to its railroad operations, this mammoth “Burlington System”

was responsible for encouraging emigration and town development
and for stimulating local economies along its routes
Jim Hill's expansion efforts aroused the head of the Union Pacific Railroad, E.H. Harriman,
who had also wanted the Burlington -- and triggered the last of the great railroad wars

UNION PACIFIC RAILROAD EXPANDS TO SEATTLE

Union Pacific Railroad (UP) trains were operating to Seattle by January 1910
over portions of track owned by the Northern Pacific Railroad
and the Union Pacific subsidiary, the Oregon & Washington Railroad (O&W)
O&W came to be known as the Oregon-Washington Railroad & Navigation Company
within the year Oregon-Washington Railroad & Navigation company acquired
all of the assets, liabilities, and operations of the Union Pacific's smaller companies,
except two of the smallest companies were kept by the UP

TRACKS FROM KALAMA NORTH TO TACOMA NEED TO BE UPGRADED

Northern Pacific Railway (NPRY) single track from Kalama to Tacoma and on to Seattle
also carried Great Northern Railway and Union Pacific Railroad traffic
in addition to its own trains

twenty-two passenger trains and eighteen freight trains used the rails by 1910

It became obvious the line north from Kalama needed to expand its capacity
(over the next years:

- track grades were reduced
although the total track distance would increase
these grade reductions were thought to be worth the expense,
- double tracks were laid along the route,
- a tunnel was dug at Point Defiance in Tacoma to eliminate need to back trains
over a drawbridge to get in and out of the Tacoma station

EUROPEAN IMMIGRANTS ARRIVE IN AMERICA LOOKING FOR A BETTER LIFE

Advertisements of high wages and cheap land brought floods of European immigrants
millions of newly arrived Western and Southern European immigrants
provided cheap industrial labor across the cities of the nation
however, rural Americans discriminated against all of these immigrants
as they fervently hoped never to meet any of these huddled masses from Europe
immigrants arriving in the Pacific Northwest found jobs difficult to come by

“BOXCAR SETTLERS” BEGIN TO ARRIVE IN WASHINGTON STATE

Empire Builder Jim Hill believed land without people was a wilderness
when people moved in property values increased as did business
Hill decided to fill the wilderness with people
principally immigrants flooding into New York City from Europe
If new arrivals would settle along the Great Northern Railway (GNRY) right-of-way
he would transport them West for \$10 each
for a few dollars more, they could get their own boxcar to carry possessions and animals

thousands of new settlers took the offer
GNRY promoted land development and irrigation projects
Hill pocketed \$5.4 million to use in expanding his railroad

GREAT NORTHERN RAILWAY LINKS EASTERN AND WESTERN WASHINGTON

Great Northern Railway's seven car passenger train Number 25
followed by four-car fast-mail train Number 27
left Spokane westbound -- February 22, 1910
Stevens Pass in the Cascade Mountains was being hit by a blizzard of epic proportion
winters in the mountains usually consisted of great storms
rolling in from the Pacific Ocean
with each storm cell separated from the next by a period of calm
during these breaks snowplows could clear the tracks in preparation for the next front
Winter of 1910 was an exception as a mid-February blast from the ocean
was one continual storm
no break was seen for more than two weeks
as much as a foot of snow fell every hour, and on the worst day, eleven feet fell
Great Northern Railway snowplows worked day and night to keep the tracks clear
snowplows left Skykomish heading east blasting through snow drifts
other snowplows pushed west from Leavenworth with the same goal
plows passed each other and continued on before turning for the return challenge
railroad men of the Cascade Division little opportunity for rest for days and nights

GREAT NORTHERN RAILWAY'S TRAINS ARE STOPPED AT LEAVENWORTH

Both passenger train Number 25 and fast-mail train Number 27 were stopped at Leavenworth
to wait for trains ahead of them on the mountain pass
to be escorted across by a snowplow
There were five or six steam and electric engines, fifteen boxcars, passenger cars
and sleeper cars carrying a total of 119 passengers and crewmen en route to Seattle

GREAT NORTHERN TRAINS LEAVE LEAVENWORTH

After a snow caused delay Spokane Local passenger train Number 25
and Fast Mail train Number 27 set out from Leavenworth -- February 23, 1910
Both reached Cascade Station at the eastern mouth of the Stevens Pass Tunnel
(near today's Alpental Ski Resort)
Heavy snow and avalanches stymied mechanical plows and men with shovels
both trains were ordered stopped to wait for the arrival of an incoming snowplow
to escort them through the blizzard
Snow plows were present at Wellington a Great Northern Railway stop high in the Cascades
on the west side of the Cascade Tunnel under Stevens Pass
but they could not penetrate the snow accumulations and repeated avalanches
along the stretch of track between Scenic and Leavenworth
Other plows at Everett and Leavenworth were called upon to assist in the effort
both towns dispatched relief trains eastward but they could not get through

CONDITIONS WORSEN ON STEVENS PASS

Passenger train Number 25 at Cascade Station was met by an eastbound snowplow after turning around the plow escorted the passenger train through the tunnel and on to Wellington

Wellington (no longer in existence) was a small town in King County populated almost entirely with Great Northern Railway employees train Number 25 passed Wellington depot at 7:35 P.M., February 24, 1910

At about this time a large snow slide hit snowshed 3.3 burying the track thirty to thirty-five deep for 1000 feet

Train Number 25 was held at Wellington under the peak of Windy Mountain looming above Tye Creek

Fast mail Train Number 27, already running two days behind schedule, also arrived at the Wellington railyard and was held up

LARGE SNOW SLIDE CRASHES INTO CASCADE STATION

Behind Passenger Train Number 25 and Fast Mail Train Number 27

Cascade Station cookhouse was hit by a large slide killing two crewmen -- 3:30 A.M. deep snow on track covered the track to Leavenworth at least temporarily blocking any possibility of returning eastward

TRAIN PASSENGERS AND CREW HIKE TO WELLINGTON FOR FOOD

Passengers and crew of train Number 25 slept in the cars they trudged out along a half-mile long path to the town of Wellington for meals before trudging back to the train for the night

Crew of train Number 27 slept on the mail train and were joined by some the snow removal crewmen

Telegraph lines went down due to continuing avalanches -- February 26, 1910 when communication to the east was lost

it indicated avalanche conditions in the remote Tumwater Valley loss of communication to the west also indicated avalanche problems on that portion of the line

WEATHER IN STEVENS PASS CHANGES

Snowfall stopped and was replaced by rain and a warm wind lightning storms flashed above the trapped trains as thunder shook the snow-laden Cascade Mountains and set off avalanches

Avalanche conditions had been worsened creating an ideal environment for slides clear cutting of timber above the tracks the previous fall and forest fires caused by steam locomotive sparks left little to stop the progress of avalanches

In spite of the danger looming high in the surrounding hills and mountains railway workers resisted backing the train into the tunnel as they feared a slide would block off the entrance also heat from locomotives was needed to warm coaches

and smoke would suffocate passengers in the tunnel
Some passengers began to climb over the snow slide to the West
they braved shoulder-high snow and hiked four miles to the West to Scenic Hot Springs
a few made it and remained there while others returned to the train

TRAGEDY IN THE CASCADES

Forty-three passengers and seventy-three railway workers slept on the two trains
after working around-the-clock, three workmen rested in nearby cabins
In the middle of a violent thunderstorm a slab of snow broke loose
from the side of Windy Mountain -- just after 1 A.M. March 1, 1910
resulting in a ten-foot wall of snow half a mile long and a quarter of a mile wide
with few trees on the slopes above Wellington
very little was left to impede the avalanche
great rocks crashed down the mountains

Most of the passengers and crew were asleep aboard their trains
impact of the avalanche engulfed two locomotives and a dozen coaches
pushing them 150 feet downhill and into the valley along Tye Creek
ninety -six men, women, and children were carried to bottom of the canyon
thirty-five passengers and fifty-eight Great Northern employees on the trains
three additional railroad employees were killed in the nearby cabins
this was one of the worst train disasters in United States history
and the greatest number of fatalities during a natural disaster in Washington State
Charles Andrews, a railroad employee, was walking to one of the Wellington's bunkhouses
when he heard a rumble and turned toward the sound

he described what he witnessed (in a [1960] interview): **“White Death moving down the mountainside above the trains. Relentlessly it advanced, exploding, roaring, rumbling, grinding, snapping -- a crescendo of sound that might have been the crashing of ten thousand freight trains. It descended to the ledge where the side tracks lay, picked up cars and equipment as though they were so many snow-draped toys, and swallowing them up, disappeared like a white, broad monster into the ravine below.”**⁶⁰

In Wellington the avalanche missed the Bailets Hotel
(it also housed the general store and post office) but hit the railroad depot

VALIANT RESCUE EFFORTS SAVE SOME OF THE VICTIMS

Charles Andrews along with other railroad employees and Wellington residents
immediately rushed from the hotel and other buildings where they had been staying
to the crushed trains that laid 150 feet below the railroad tracks
During the next few hours they dug out twenty-three survivors, many with injuries
four had been thrown clear of the wreckage
six others quickly dug themselves out
thirteen more were trapped in parts of the train which were not crushed
one of the train's conductors had been asleep in one of the mail train cars

⁶⁰ JoAnn Roe, *Stevens Pass: The Story of Railroading and Recreation in the North Cascades*. P. 88.

when he was thrown from the roof to the floor of the car several times
as the train rolled down the slope
before it disintegrated as the train slammed against a large tree
another of the survivors interviewed three days after the disaster stated: **“There was an electric storm raging at the time of the avalanche. Lighting flashes were vivid and a tearing wind was howling down the canyon. Suddenly there was a dull roar, and the sleeping men and women felt the passenger coaches lifted and borne along. When the coaches reached the steep declivity they were rolled nearly 1,000 feet and buried under 40 feet of snow.”**⁶¹

Injured victims were sent to Wenatchee
bodies of the dead were transported on toboggans down the west side of the Cascades
to trains that carried them to Everett and Seattle

AFTERMATH OF THE STEVENS PASS DISASTER

Rescue effort was soon abandoned as hope was lost
(it was not possible to retrieve the last of the bodies until twenty-one weeks later
[late July])
(Because the name Wellington became associated with the disaster
this little town was quietly renamed Tye [October 1910]
Great Northern Railway began construction of concrete snow sheds
over the nine miles of tracks between Scenic and Tye
to shelter the nearby tracks [October]
and to protect trains from snow slides [these were completed 1913]
Great Northern Railway decided to relocate forty miles of track
as it was proposed to dig a new Cascade Tunnel from Borne to Scenic
requiring the longest tunnel in the Western Hemisphere [opened 1929]
(Wellington depot was closed when the second Cascade Tunnel came into use
Wellington was abandoned and eventually burned, however the old track and snow sheds
are still there today and have been preserved in the Iron Goat Trail park
which is easily accessible from Highway 2 at Stevens Pass
from Scenic east of Everett)

MUTUAL HOME COLONY ASSOCIATION CONTINUES TO ATTRACT RADICALS

Simple life that was desired by the original settlers was lost
publicity brought all kinds of cultists into the community
Home colony still operated a store and an auditorium
where speakers could present any cause for discussion
Name of their newspaper was changed from *Discontent* to *Agitator*
leader of colony, Jay Fox, defended the right to swim in the buff
editor and several other colonists were arrested for indecent exposure
while nude bathing -- 1910
Jay Fox was put on trial for writing an editorial “Nudes and Prudes”
Postal authorities declared colony’s publications obscene and closed the post office at Home

⁶¹ JoAnn Roe, *Stevens Pass: The Story of Railroading and Recreation in the North Cascades*. P. 87.

even so, some colonists lived in their homes until they died -- [1950s and 1960s]

INDUSTRIAL WORKERS OF THE WORLD (IWW) WIN A VICTORY

Western Federation of Miners Union took an active role
in the Spokane "Free Speech" dispute
Union President Vincent Saint John appealed to all Wobblies to come to Spokane
to renew the struggle with city officials
and the union declared a boycott of all goods coming from Spokane
After three months Spokane got tired of the Wobblies' performances
arrests were costing the city \$1,000 a week and a lot of bad publicity
Industrial Workers of the World (IWW) won a victory -- March 4, 1910
when the licenses of nineteen employment agencies were revoked
local IWW affiliate was granted the right of assembly and distribution of union literature
all charges were dropped and the prisoners were released after promising to leave town
Elizabeth Gurley Flynn and the IWW went on to wage free speech fights in other cities
(she later became one of the founding members of the American Civil Liberties Union
and a visible proponent of women's suffrage, women's rights and birth control
later still she became chairwoman of the American Communist Party)

SEATTLE IS A WIDE-OPEN TOWN

In the first decade of the twentieth century,
Seattle politics was divided between "open town" and "closed town" factions
Prosperity followed the [1897] Klondike gold rush
expansion of Pacific trade following the [1898] Spanish American War
caused vice to flourish
despite laws to the contrary gambling and prostitution thrived
Supporters of the open town, including *Seattle Times* publisher Alden J. Blethen,
believed that such conduct was normal
it should be tolerated as long as it was restricted and regulated
Seattle relied on the municipal government, and particularly on the police,
to keep the gambling dens, brothels, and saloons within an area south of Yesler Way

HIRAM C. GILL IS ELECTED MAYOR OF SEATTLE

Gill, a staunch Republican, had served as a Seattle City Councilman for twelve years
he supported an "open-town" and believed vice should be confined to its own district
where unsuppressed vice in brothels, gambling parlors and saloons ruled
rather than be allowed to spread across the city
Those opposed to vice on moral grounds and to the associated graft and corruption
included church groups, progressives, prohibitionists, and woman suffragists
Hiram Gill ran for mayor and bested his progressive opponent in the Primary Election
in the largest city voter turnout to that time Gill won the mayor's office
and Republicans swept the rest of the open seats -- March 8, 1910
Gill was accused of importing hundreds of jobless men
and lodging them in vacant houses and apartments to vote Republican

Regarding other issues he opposed taxes for city projects, labor unions and municipal ownership of utilities such as transit, waterworks, and electricity

SEATTLE MAYOR HIRAM GILL HEADS A CORRUPT EMPIRE

Mayor Hiram Gill appointed Charles “Wappy” Wappenstein as chief of police although he had previously been dismissed for corruption

Wappenstein arranged to be paid \$10 a month

for each of the approximately 500 prostitutes in Seattle

police kept close watch on the women to ensure that the appropriate fees were paid

Gambling houses along with several brothels ran around the clock and continued to operate even “uptown” north of Yesler Way

It was reported that **“cigar stores and barbershops did a lively business in crap-shooting and race-track gambling, drawing their patronage largely from school boys and department-store girls ... All over the city ‘flat-joints,’ pay-off stations, and dart-shooting galleries were reaping a rapid harvest ... in the thirty or forty gambling-places opened under the administration of Hi Gill”**⁶²

Mayor Gill went out of town and the acting mayor fired Police Chief Wappenstein,

but the mayor returned and reappointed the corrupt chief

Hiram Gill was also accused of collusion with the Seattle Electric Company

which was owned by Jacob Furth and the Boston firm of Stone and Webster

Seattle Electric had to lower its electric rates because of competition from Seattle City Light

Gill appointed former Seattle Electric official Richard Arms

as Superintendent of City Light

Gill’s new superintended extended City Light service

into an expensive and hard to serve area,

and he passed up profitable contracts -- all to the detriment of the city utility

an investigation confirmed misfeasance by Superintendent Arms

OPPOSITION OF SEATTLE MAYOR HIRAM GILL ORGANIZES

Gill’s suspect election and corrupt administration stimulated non-partisan reform forces

Public Welfare League, the Clean City Organization, the Municipal League

and the Ministerial Federation combined to support a broad spectrum of reform issues

EZRA MEEKER SETS OUT ON HIS THIRD CROSSING OF THE CONTINENT

Meeker shipped his oxen, Dave and Dandy, to The Dalles for shoeing

in preparation for the journey

Seventy-nine-year-old Ezra Meeker left from The Dalles, Oregon -- March 16, 1910

for a second time to retrace from West to East the old overland emigrant trail to Oregon

He planned to map the Oregon Trail in an effort to encourage federal funding

for permanent trail preservation

and to promote construction of a transcontinental national highway for automobile traffic

Using government land surveys, advice from other settlers and Indians,

and his own powers of observation Meeker tried to pinpoint the route of the historic trail

⁶² Richard C. Berner, *Seattle 1900-1921: From Boomtown, Urban Turbulence, to Restoration*. P. 119.

This second trip took two and a half years

it involved many meetings with local history experts along the way
tracing and retracing of the general area was necessary
to locate lost portions of the trail

Ezra Meeker finally returned to Puyallup [August 26, 1912]

he counted this journey a success: the Oregon Trail was mapped
summing up the trip in *Ox Team Days*, he wrote: **“All in all this was a more strenuous trip than the previous drive to the national capital, and from a historical point of view it was more prolific in results. At the end of the journey, during which I passed my eightieth birthday, I had plotted sixteen hundred miles of the historic highway. A map of it nearly forty feet long has been made with painstaking care.”**⁶³

TOLT, WASHINGTON BECOMES THE HOME OF CARNATION FARM

(Confluence of the Tolt and Snoqualmie rivers for thousands of years

has been the main village site for the Snoqualmie tribe

Chief Patkanim ceded the valley and tribal sites to the United States

opening the way for many homesteaders [1855]

first white settler, James Entwistle, had deserted the Union Army at Fort Steilacoom

settlers named the hamlet that arose Tolt after “Tolthue”

to honor the Snoqualmie tribe’s name which meant “river of swift waters”⁶⁴

enough families were living in what was named Tolt

to necessitate the construction of a school [1879])

Growing up on his father’s dairy, E.A. Stuart knew that quality milk

had to come from healthy cows to produce the best quality milk

he distributed purebred bulls to the farmers who were suppliers for his factory

offspring from these bulls were better milk producers

than the cows of the previous generation

E.A. Stuart purchased a thirty-six-acre farm near the hamlet of Tolt in the Snoqualmie Valley

there he established his own breeding farm: Carnation Farm -- 1910

he brought in a purebred bull and eighty-six registered Holstein cows

to form a research herd

(he added to the holding over the years until he had 1,600 acres)

he developed a world-famous dairy farm

where a herd of 600 registered Holstein cattle grazed

selective breeding resulted in the continually improved productivity of the herd

Carnation cows held the world milk production record

for thirty-two consecutive years

(one cow, Segis Pietertje Prospect, nicknamed “Possum Sweetheart,”

produced more than 37,000 pounds of milk in one year [1920]

a statue of the cow was erected on the farm to honor this record)

⁶³ Ezra Meeker, *Ox Team Days or The Old Oregon*. P. 277.

⁶⁴ Alan J. Stein, *Carnation/Tolt — Thumbnail History*, HistoryLink.org Essay 391, November 27, 1998.

Stuart also developed the slogan associated with the Carnation Evaporated Milk Company
its milk came from “contented cows”

(Tolt, Washington was incorporated [New Years’ Eve, 1912]

Tolt changed its name to Carnation, in honor of the farms,
this did not sit well with the Indians and early settlers as the Snoqualmie name
“Tolthue” [river of swift waters] had been in use for more than 10,000 years
controversy over the name change continued
and the town decided to change the name back to Tolt [1928]
however, the train depot and the post office names remained Carnation
for the next two decades, confusion reigned
some maps showed the town as Tolt, some as Carnation
some maps showed both
finally, the city changed its name back to Carnation [1951])

FIRE SEASON THREATENS THE NORTHWEST

Drought of 1910 was to blame for one of the worst fire seasons on record
little snow had fallen the previous winter in the Pacific Northwest
especially in the interior portions east of the Cascade Mountains
Spring rains did not come and the region became uncommonly dry
temperatures in April and May 1910 set records in Idaho and Montana
climbing into the 90s

SNOHOMISH COUNTY INTERURBAN LINKS EVERETT WITH SEATTLE

Everett’s route began at the corner of Pacific and Colby avenues
(dispatcher's window, now painted blue, still is visible on that building today)
trolley cars produced by Niles Carbody Works were a classy ride
sporting leather seats, stained glass and mahogany-lined walls
trolley became a practical ride for students and workers
passengers rode the trolley around town from Colby to 41st Street
continued down Broadway returned back on Hewitt Avenue
there also was a spur line that carried passengers to Snohomish
(today the Everett line’s only known remaining trolley
was restored after serving as a diner and later falling into disrepair
it is now on display at Heritage Park in Lynnwood)
Everett-Seattle interurban service was inaugurated
by Stone & Webster Company -- April 30, 1910
this line also went out of town southbound
(along what's now the paved interurban trail near I-5)
when it reached north Seattle it headed through the Phinney
and Greenwood neighborhoods
traveled along Fremont Avenue to Westlake Avenue
(ending at today’s Westlake Center)
opening of operation was described in an *Everett Daily Herald* story -- May 2, 1910
a reporter described the ride to Seattle as “...**thoroughly clean and comfortable.**”

developers took out full-page ads in the newspaper
encouraging people to buy land near the line to build their new homes.
“**Now is the time to buy real estate in Everett or vicinity**” one ad touted
and offered tracts from \$240 each, payable in terms of \$25 or \$10 per month

BILLY GOHL’S ONE MAN CRIME WAVE SWEEPS OVER ABERDEEN

Aberdeen became known as the “port of missing persons”
people said it had a “floater fleet”
most of the victims were sailors and loggers
Those like Billy who live by inflicting terror on others also develop fears of their own
Billy became suspicious of his gang lieutenants
he and two of his thugs rowed down the Wishkah River to the cabin of a third outlaw
returning to Aberdeen the next day, Billy ordered one of his men to shoot the other
then the victim’s body was thrown overboard attached to a fifty-pound anchor
along with three guns, a tool case and a suitcase full of clothes
When the body of Gohl’s henchman was found an investigation followed
eventually the killer confessed and implicated Billy
Billy Gohl stood trial -- May 2, 1910
soon some of the details of the crime wave were made public
Billy was convicted of aiding abetting murder and sentenced to life in prison
While the number of Billy’s murder victims varies according to the source quoted
when only the bodies found floating in the river are counted the total is 124
some estimates run in excess of 200 people killed
(After a few years in the Walla Walla state prison, Billy was found to be insane
he was transferred to Eastern State Hospital at Medical Lake
where he died [March 3, 1927])

CONSTRUCTION BEGINS ON THE SKAGIT-WHATCOM INTERURBAN

(First steps in establishing an interurban link between the two counties
were undertaken towards at an organizational meeting
of the Whatcom-Skagit Interurban Company [October 14, 1903]
when the company amassed \$3 million in capital stock
construction was delayed for more than a decade
awaiting the leadership of Stone & Webster)
Bellingham and Skagit Interurban Railway [B&SI]
which was to link Whatcom County with Mt. Vernon
was incorporated by Stone & Webster Company -- May 18, 1910
tracks were planned from Bellingham along Chuckanut Drive to Burlington
where the route diverged to reach Mt. Vernon, Sedro-Woolley, Anacortes
and other points

OTHER INTERURBAN COMPANIES COME INTO EXISTENCE

Vancouver (Washington) Traction Company operated a seven-mile interurban
to Orchards and Sifton completed in 1910 (and abandoned in [1925])

Twin City Railroad was a small interurban company
and subsidiary of Puget Sound Power and Light
(thus it was a Stone & Webster property)
track was built between the cities of Chehalis and Centralia -- 1910
under the name of Twin City Light and Traction Company
passengers were carried in small city cars
(passenger service was discontinued in [1929],
but the track was retained for freight service until [1932]
even then four miles remained for freight switching [until 1936])

U.S. NAVY WANTS TO BUILD A TORPEDO STATION

U.S. Navy sent a special task force of officers to the west coast of the United States⁶⁵
to scout for a clear water site, not over ten fathoms deep and not under five
with a sandy bottom and virtually no current
this body of water, they were told, must have little tide and must not be too cold
Congress appropriated \$145,000 to purchase land for a proposed torpedo station -- June 1910
Keyport, Washington was the only site with those special qualities
this news came as a big disappointment to the cities of Tacoma and Bellingham
and Los Angeles, California
all of which had lobbied vigorously for the torpedo station
U.S. Navy officials established an amount they were willing to pay
which was considerably below the official suggested assessment
none of the residents of Keyport were not willing to sell -- not for any price

FREE SPEECH RALLIES ARE HELD THROUGHOUT THE WEST

For the rest of the 1910 summer, Industrial Workers of World (IWW) held street meetings
that brought more and more recruits into the IWW
Wobblies swarmed into whatever towns the union leaders decided
could provide new union members
Kansas City, Aberdeen, Washington, Fresno and San Diego were visited
in all twenty-six cities across the nation were invaded
in defiance of local ordinances against street gatherings and demonstrations
soapbox talks were held at street corners
In cities where the development of unions was frowned upon
“soapboxing” was frequently restricted by ordinance or by police harassment
IWW flooded these towns with activists who challenged authorities
by flouting the ordinance
and intentionally getting arrested in great numbers filling the jails
what seemed an endless stream of union activists
continued to arrive by boxcar and highway
authorities usually backed down when the cost of feeding prisoners
began to damage the city budget

⁶⁵ Lisa Poole with Dianne Robinson, *Torpedo Town U.S.A.*, P.13.

Industrial Workers of the World's message

was particularly unpopular with the business community

IWW members believed the capitalist system was corrupt and could not be reformed

it could only be resisted until a better society could be built for all working people

street corner speeches were frequently disrupted

particularly by the local Volunteers of America and Salvation Army Bands

From time to time the men would ignore the IWW leaders to seek their own revenge

after an employment shark took someone's last dollar for a job that did not exist

SUMMER IN THE PACIFIC NORTHWEST MOUNTAINS REMAINS VERY DRY

Summer of 1910 was the driest year anyone could remember

deep forests of ponderosa pine, spruce, fir, and other big trees that carpeted the region

were bone-dry (an inch of rain fell in June) -- not one drop fell in July

nearly every day that summer dark storm clouds rolled over the horizon

instead of spilling raindrops, clouds hurled thunderbolts into the parched woods

Forest fires caused by lightning, runaway cook fires, cinders pouring from steam engines,

sparks kicked up from saw blades and the steel wheels of railroad cars flared up

Hundreds if not thousands of forest fires were ignited-- night of July 15

fire after fire burst out:

nearly a hundred major infernos were going strong -- by the end of July

along with thousands of smaller blazes that burned out of control

in the Pacific Northwest

loggers and Forest Rangers from the fledgling U.S. Forest Service

could not stop the inferno

FOREST FIRES CONTINUE THEIR DEVASTATION IN THE PACIFIC NORTHWEST

Normally swift-running rivers had slowed to a crawl

many streams simply disappeared into bedrock -- by August 1910

Forest fires roughly estimated at between 1,736 and 3,000

burned across Idaho and western Montana

Forest Service crews had fewer than 3,000 men on the fire line and equipment was scarce

Every able-bodied man in the region fought the fire

most were Idaho loggers, miners from Butte, Montana,

and skid row bums brought in on trains from Spokane

pay was 25 cents an hour, plus a bedroll, sourdough pancakes, coffee

and canned tomatoes

Governors of Idaho and Montana called out National Guard troops

President Taft ordered ten companies of soldiers into the woods to fight fires

including members of Company G, 25th Infantry

an all-black regiment of "Buffalo Soldiers" that fought the fire near Avery, Idaho

their hard work paid off as many of the bigger fires were contained

smaller ones were allowed to burn themselves out -- [second week of August, 1910]

the worst seemed to be over

FOREST FIRES DEVASTATE THE NORTHWEST

Winds from the Pacific Ocean blew in modestly enough at first
but they built into a howling force racing across mountains at more than 75 miles an hour
Then disaster swept through the mountains -- Saturday afternoon, August 20, 1910
hurricane-force winds, unlike anything seen since,
acted like a massive bellows for the fires below
it roared across the rolling Palouse region of eastern Washington
and on into Idaho and Montana whose forests were so dry they crackled underfoot
in a matter of hours, fires became firestorms, and trees by the millions
became exploding candles
millions more, sucked from the ground, roots and all, became flying blowtorches
entire mountainsides ignited in an instant

This was the largest forest fire in American history and, perhaps, the largest ever
one Forest Ranger described the scene: **“If you could see a little black bear clinging high in a blazing tree and crying like a frightened child, you could perceive on a very small scale what happened to the forest and its creatures.”**⁶⁶

Men caught in crown fires ran side by side with animals fleeing the holocaust
one crown fire stretched ten miles wide and 160 feet tall
it was so vast and engulfing that those who saw compared it to the fires of hell
many men survived by laying in creeks with water-soaked blankets pulled over them
others escaped to mining tunnels or burrowed into rock slides
experienced woodsmen, for the most part, kept their heads
but some of the temporary fire fighters who had been drafted
from bars and back alleys perished as they tried to out-run the fireball
one man jumped from a burning train
another shot himself rather than be burned to death
two firefighters fled into flames as horrified chums huddled in a nearby stream
It was dark by four o'clock in the afternoon August 20, 1910
except for wind-powered fireballs that rolled from ridgetop to ridgetop
at seventy miles an hour
they leaped canyons a half-mile wide in one fluid motion

DEVASTATION OF THE FOREST FIRES CONTINUES

For two terrifying days and nights the fire raged across three million acres of timberland
in northern Idaho and western Montana -- August 20-21, 1910
Most of what was destroyed fell to hurricane-force winds that turned the fire into a blowtorch
in some canyons you could not tell where one blaze ended and the next one began
names of the fires identified the locations of the dead:
Big Creek, Setzer Creek, Stevens Peak, Bullion Mine, Cedar Ridge
and Little North Fork
twenty-nine firefighters died in the Storm Creek Fire which surrounded the fire crew

⁶⁶ Jim Petersen, *EverGreen Magazine*, Winter Edition 1994-1995, Schaumburg, Illinois.

Buffalo Soldiers of Company G, 25th Infantry contained the fire
then buried the dead

One great cloud of smoke covered the region from the Pacific Ocean to the Great Plains
when the cloud hit Denver, Colorado the temperature dropped nineteen degrees
in ten minutes
in Cheyenne, Wyoming it was dark as night in the middle of the day
temperature skidded to thirty-eight degrees
daylight was dark as far north as Saskatoon, Saskatchewan
and as far east as Watertown, New York -- by noon August 21
to the west the sky was so full of smoke
that ships 500 miles at sea could not navigate by the stars

FIRE SEASON COMES TO AN END

Gale-force winds died down and rain began to fall -- August 23, 1910
but before it was over, 10,000 men had fought on fire lines
that stretched from eastern Washington across the Idaho panhandle
well into western Montana
Fire burned over three million acres
killing enough timber to fill a freight train 2,400 miles long
eighty-five people perished -- most had been burned beyond recognition

TACOMA CENTRAL LABOR COUNCIL PUBLISHES A NEWSPAPER

Tacoma Central Council purchased a newspaper: *Labor Advocate* -- 1910
this paper proclaimed labor's viewpoint to the community for the next sixty-seven years
Union members supported labor candidates for school board, city council, county elections,
legislative seats, state offices and national positions
Union membership spanned the ideological spectrum
many union members were active in the Pierce County Socialist Party
Women unionists marched in Labor Day Parades
and were joined by Suffragettes advocating national suffrage

VIOLENT LABOR UNREST SPREADS TO THE WEST

Controversy erupted down the Pacific coast beginning in Los Angeles
where major labor disturbances took place in the conservative, open shop city
In one instance, Harrison Gray Otis, ultra-conservative publisher of the *Los Angeles Times*,
locked out the newspaper's striking printers
tensions were high, and the dispute culminated in the blowing up of the *Times'*
printing plant killing twenty-one people
this event had a devastating effect on organized labor
eventually Joseph McNamara and his brother John, both AFL union organizers,
confessed to the crime

MUTUAL HOME COLONY CONTINUES TO CREATE CONTROVERSY

Home still operated a store and an auditorium

where speakers could present any cause for discussion
however, the simple life desired by the original settlers was lost
publicity brought all kinds of cultists into the community
Jay Fox, a widely known anarchist, made his home in the colony
he took over the local newspaper and changed the name
from James Morton's *Discontent* to *The Agitator*
Fox became even more revolutionary in his approach to anarchism
in his effort to **"stand for freedom, first, last and all the time"**
he published an article on the topic of free love *The Agitator*
in fact, Fox was concerned with free love
only as an expression of women's rights in sexual relations
through his paper he promoted the industrial unionism efforts of the IWW
he advocated the goal of striving to **"help create that unity of effort and solidarity among
the workers necessary to their own emancipation"**⁶⁷
Home was again affected by "outside" disturbances
as the William J. Burns Detective Agency made continual visits
in search of accomplices in the Los Angeles bombing
eventually they found Joseph and John McNamara
by inducing an occasional Home resident, Donald Vose, to disclose the two men

PUYALLUP SCHOOL FOR INDIAN EDUCATION BECOMES CUSHMAN SCHOOL

Puyallup School for Indian Education in Tacoma was situated on the Puyallup Reservation
but its proximity to the Port of Tacoma and the industrial part of town
created an educational atmosphere badly suited for agricultural training
Puyallup School for Indian Education became an industrial training boarding school -- 1910
its name was changed to Cushman School
Cushman School was well equipped for industrial training
and featured a modern machine shop
enrollment at Cushman School in Tacoma increased to over 350 students
from around the Northwest and Alaska
(Cushman remained one of the largest reservation boarding schools in the region
until it closed [1920] when it became an Indian tuberculosis hospital)

WILLIAM E. BOEING DISPLAYS AN INTEREST IN FLYING MACHINES

Born in Detroit, Michigan [October 1, 1881] into a wealthy German mining family
William Boeing left Yale University to go into the lumber side of the business ([in 1903]
he bought extensive timberlands around Grays Harbor on the Olympic Peninsula
Bill Boeing, now president of Greenwood Logging Company, displayed a variety of interests
he experimented with boat design
he traveled from Grays Harbor to Seattle
during the [1909] Alaska-Yukon Pacific Exposition
there he saw a manned flying machine for the first time

⁶⁷ Jay Fox, "Greetings to You All," *The Agitator*, newspaper, November 15, 1910.

and became fascinated with aircraft
Bill Boeing was accepted by other owners to become a resident of The Highlands
an exclusive enclave three miles north of Seattle on Puget Sound
limited to 100 families [1909]
Brookline, Massachusetts, landscape architecture firm of the Olmsted Brothers
designed the streets and parks
Boeing bought sixteen acres on Boeing Creek (where he built a mansion [1913])
Boeing met twenty-eight-year-old Yale graduate Tim Berman
who also entered the lumber business
when Berman arrived home in Seattle from Los Angeles
where he had witnessed the first ever air show -- 1910
Berman watched American aviators compete with French pilots
together Boeing's and Berman's interest grew
first to excitement and then to a calling

MAYOR HIRAM GILL IS THE SUBJECT OF A RECALL EFFORT

When two "vice-lords" built a 500-room brothel on Beacon Hill
with a 15-year lease from the city,
Public Welfare League began to circulate a recall petition
targeting Gill -- October 8, 1910
sufficient number of signatures were gathered to force an election
were turned in [December 20]

WASHINGTON STATE CONSTITUTION IS AMENDED TO GRANT WOMEN THE VOTE

As the election approached most major newspapers
had endorsed the amendment to the state constitution granting women the vote
and the right to hold elected office -
although the right to sit on juries was not addressed in the proposed amendment
Prospects looked promising, but the women took nothing for granted
at each polling place on the rainy election day -- November 8, 1910
organizers posted two women and one man
women handed out cards asking for a YES vote while the man collected the vote count
Male voters approved Amendment 5 of the state constitution -- November 8, 1910
by a vote of 52,299 in favor of suffrage versus 29,676 against
this was a stunning margin of almost two-to-one
every county approved the amendment -- with the greatest support west of the Cascades
the last sentence states:

"There shall be no denial of the legislative franchise at any election on account of sex."

women were assured of their rights to vote and to hold public office
Washington became the fifth state (after Wyoming, Utah, Idaho and Colorado)
and the first state in the Twentieth Century to pass women's suffrage
Even so the women of Washington State did not receive full citizenship rights:

- the law allowed only those who could read and speak English to vote;
- many women, including immigrant Asians who were subject to other restrictive laws,

continued to be denied the right to vote
specifically, the Fifth Amendment stated:

“Indians not taxed shall never be allowed the elective franchise.”

- Amendment 5 did not by itself resolve the issue of women on juries in Washington since jury service had been unlinked from the right to vote by the Territorial Supreme Court [1888]
- U.S. Constitution did not guarantee that right until the 19th Amendment was enacted in [1920]

FIGHT FOR WOMEN’S SUFFRAGE IS NOT OVER

Washington women’s success in 1910 helped inspire the national campaign that culminated in passage of the 19th Amendment to the U.S. Constitution (it would be ten years before the rest of the country’s women achieved that right [August 26, 1920])

Washington’s suffrage campaign’s success

relied on convincing women that women’s voting rights were necessary although some preferred to focus on their role at home women from every corner of the state and social status had been recruited into women’s clubs these clubs, many of which were book or garden clubs, became centers of political activity ratification campaign cost \$17,000 with the largest single contribution of \$500 came from Carrie Chapman Catt, a former Washingtonian

who was then serving as president of the International Woman Suffrage Association

Dr. Cora Smith Eaton, a Seattle suffragist, described how the money was raised, **“Cake sales, apron showers, sewing bees, and nickels and dimes saved out of the grocery and millinery bills of a thousand women -- that’s how the money came.”**⁶⁸

thousands of housewives, farmer’s wives, shopkeepers, secretaries and teachers volunteered, canvassed their towns or donated money

May Arkwright Hutton claimed to have been the first Spokane woman to register to vote she and Mrs. F. A. Fassett were the first two women to serve on a Spokane County jury May Arkwright Hutton also lobbied in Olympia for an eight-hour workday for women

EMPIRE BUILDER JAMES JEROME HILL EXPANDS HIS EMPIRE ONCE AGAIN

Express trans-Pacific ships brought great bales of cream-colored raw silk from Japan and China to Seattle’s Pier 91 steamer *Korea* carried \$18 million in raw silk cargoes averages \$10 million in value

Seattle became a major silk transshipping port receiving the product from Japan where it was off-loaded and placed on Jim Hill’s Great Northern Railway trains to be shipped east first Great Northern silk train on record left Seattle -- December 2, 1910 carrying 1,656 bales of raw silk and fifty-nine packages of silk goods

⁶⁸ David Jepsen, “A Matter of Justice: How Women Won the Vote,” League of Women Voters, *Seattle Voter*, Vol. 52, No. 2, September 2010.

this train covered the 1,815 miles to the easternmost GN terminus in St. Paul
in fifty-seven hours forty-five minutes
before it was switched to other rail lines to continue on its way east

WASHINGTON LEGISLATORS AGAIN ATTEMPT TO CONSTRUCT A NEW CAPITOL

State Capitol Commission was reformed and convened -- 1911

Washington's requirements and ideas about statehouse architecture had changed dramatically
since architect Ernest Flagg had submitted his first design [1893]

Flagg returned to Olympia to enter the debate over what was proper in capitol architecture
he learned the building was expected to offer more space,

but the Capitol Commission insisted that the earlier foundation must be used

Flagg proposed a complex of buildings

with the principal structure placed on the existing foundation

State Capitol Commissioners agreed with the proposal

other buildings could be added as they were needed

however, the commission did not agree that Flagg was the proper designer for the job

NAVY LIEUTENANT G. CONRAD WESTERVELT ARRIVES IN SEATTLE

George Conrad Westervelt [1880-1956] graduated from the U.S. Naval Academy

there, because of his ability to argue any subject, he earned the nickname "Scrappy"

After studying naval engineering at Massachusetts Institute of Technology,

Westervelt served as official Navy observer at one of America's first air gatherings
in New York

he, unlike many of his Navy colleagues, was impressed with the new technology.

Lieutenant Westervelt was sent to Seattle by the Navy

to inspect submarines being built at the Moran Brothers shipyard
on the Duwamish River -- 1911

Westervelt joined the prestigious Rainier Club and the University Club

where he met lumberman William Boeing

these two bachelors became friends as they shared an enthusiasm for flying

SEATTLE MAYOR HIRAM GILL IS RECALLED

Seattle Mayor Hiram Gill was the first mayor in the United States

to undergo a recall election

when 20,000 of 23,000 registered women voters cast their ballots -- February 7, 1911

history reported the first woman at the polls was 80-year-old Rebecca Hall
who cast her vote for Gill

Real estate agent George W. Dilling won by 6,000 votes and Gill was turned out of office

this recall effort was based on Gill's permissive attitude toward gambling and prostitution

GRAND JURY IN SEATTLE IS QUICK TO INDITE THE POLICE CHIEF

An investigation of vice in the city under Mayor Horace Gill

by a grand jury -- February 25, 1911

listened to the testimony of gamblers and madams

Police Chief Charles “Wappy” Wappenstein, Clarence Gerald and Gideon Tupper were indicted
surprisingly also included in the indictment was Colonel Alden J. Blethen, *Seattle Times* publisher who and editorially assailed the reformers
Blethen beat the rap but Wappy went to the state penitentiary at Walla Walla (just before Christmas 1913, Wappy was granted a conditional pardon by Governor Ernest Lister)

CONGRESS PROVIDES MONEY FOR FOREST FIRE PROTECTION

Devastating fire season [of 1910] raised havoc across the western United States especially in the state of Idaho where fires killed eighty-five people (seventy-two firefighters)
more than three million acres burned
destroying an estimated 8,000,000,000 board feet of timber
and put the United States Forest Service 1.1 million dollars in debt
Week’s Act, named for New Hampshire Congressman John W. Weeks, was put into law -- March 1, 1911
it proved a modest amount of matching money to cooperating states
Montana and Idaho received \$10,500 each, Oregon and Washington \$10,000 (that same year Washington’s fire budget was raised to \$75,000)

WASHINGTON’S CONGRESSIONAL DELEGATION IS SWORN INTO OFFICE

Progressive Republican Congressman Miles Poindexter was elected by the state senate to the position of U.S. Senator (senators were elected by the state senate at that time) after finishing his term as congressman he took up his new position -- March 4, 1911
As an admirer of Theodore Roosevelt Senator Poindexter opposed Republican leaders he also worked to enact progressive laws such as:

- popular election of U.S. Senators
- woman’s suffrage;
- workers’ compensation;
- low tariff on imported goods;
- anti-trust laws;
- graduated income tax laws;
- establishment of the Federal Trade Commission

(he left the Republican Party briefly to join the Progressive Party but after two years he returned to the Republicans
he continued as U.S. Senator until he was rejected by the state senate [1922])

Two new Congressional Representatives from Washington also were elected:

- Congressman William L. LaFollette, Republican, of Pullman will serve four terms -- [1911-1919]
- Congressman Stanton Warburton, Republican, from Tacoma will serve one term -- [1911-1913]

SEATTLE CITY GOVERNMENT TAKES OVER AN INTERURBAN LINE

Public grievances with Stone & Webster's aging streetcars and increasingly erratic service boiled over -- March 7, 1911

Voters approved municipal purchase of the existing Rainier Avenue interurban line to Renton

when Stone & Webster reneged on the original sales price

Seattle ended up spending the bonds to build a new streetcar line to Ballard

INTERURBAN SERVICE EXPANDS IN SKAGIT COUNTY

Sedro-Woolley was firmly connected to the western part of the county

by the electrified Interurban trolley that ran on a track right-of-way

(nearly identical to what is now Highway 20 west from Burlington

portion located inside the Burlington city limits is today partially covered

by a narrow park-like lawn

interurban line entered Sedro-Woolley on Woodworth Street and continued east

to where an electric substation is now located on the south side of Ferry Street

interurban depot was located just east of the St. Charles Hotel

and is now at the crossroads of Highway 20 and the Cook Road)

PROGRESSIVE AGENDA ADVANCES IN THE WASHINGTON STATE LEGISLATURE

Nationally, a Worker's Compensation plan was drafted by American Federation of Labor

Washington established a model workmen's compensation program run by the state

pension was provided to dependents of workers injured or killed on the job

in addition to women receiving in Washington State

nationally women received the benefit of an eight-hour day -- 1911

Washington State Grange led a Joint Legislative Committee

in the fight to implement direct democracy

Initiatives that allowed voters a method to pass laws the legislature would not;

Referendums to allow voters to approve or block laws passed by legislators

Recall by voters of most elected officials for malfeasance or misfeasance

these reforms were each condemned by conservative Republicans as Socialism

WASHINGTON WOMEN BECOME THE FIRST TO SERVE ON JURIES BY LAW

Washington State's Constitutional Amendment 5 provided women voting rights

and right to hold public office

however, the right for women to serve on juries was not included in the amendment

Washington State legislature revised the jury statute

to provide that all electors, including women, would be placed

on the list of eligible jurors -- this became law -- March 13, 1911

Washington became the first state in the nation to authorize female jurors by statute

(Wyoming Territory had experimented with women on juries in [1870-1871]

but had abandoned the practice before statehood)

Washington State was far ahead of the nation in assuring civil participating by women

but even Washington did not guarantee men and women would serve equally as jurors

any woman still could “opt-out” of jury duty by signing that she wanted to be excused
the person serving the jury summons was required to tell potential women jurors
that a sex-based exemption was available to her

“Automatic exemption of women from jury duty was not an unusual arrangement for most of the 20th century. The prevailing notion that a woman’s place was in the home meant that it would be ungentlemanly for the state to force her from the domestic sphere against her will — not to mention burdensome to her domestically helpless husband and children, who would have to cook their own dinners.”⁶⁹

WASHINGTON PASSES THE FIRST COMPULSORY WORKERS’ COMPENSATION LAW

Hazardous working conditions caused many serious workplace injuries, illnesses and deaths
these resulted in the worker and his family being left destitute
questions of fault and negligence settled in court
were a burden on victims and their employers
public pressure resulted in Governor Marion E. Hay naming a commission
to investigate solutions

House Bill 14, The Workmen’s Compensation Act,
passed with bipartisan support -- March 14, 1911

this was the first constitutionally mandated state workers’ compensation law in the nation
as a result of this legislation thousands of families of Washington workers
who were injured or became ill from workplace causes
received medical, disability, rehabilitation or survivor benefits
thousands of Washington businesses had been relieved of negligence-based law suits

SHINGLE WEAVERS’ UNION MEMBERS VOTE TO EXPAND THEIR MEMBERSHIP

International Shingle Weavers’ Union of America voted at their 1911 convention
to include all unskilled and semi-skilled workers of the mills and woods
into its union -- 1911

Shingle Weavers knew that they would not have an easy time
organizing the timber industry as the American Federation of Labor (AFL)
frowned on organizing unskilled labor

Although not happy with the prospect, the AFL granted its approval
AFL recognized the character and state of mind of the average timber worker
and feared the Industrial Workers of the World (IWW) would find a warm welcome
in the sawmills and logging camps
thus all of the workers in the timber industry who formerly were members
of the Sawmill and Timber Workers Union became members
of the International Shingle Weavers’ Union of America

WEST COAST LUMBERMAN’S ASSOCIATION COMES INTO EXISTENCE

West Coast Lumberman’s Association was formed by lumber company owners -- 1911
it established uniform grades of lumber

⁶⁹ Linda K. Kerber, *No Constitutional Rights to Be Ladies: Women and the Obligations of Citizenship*, P 217-218.

they also agreed to curtail production when the market for finished lumber was poor to inhibit competition owners published agreed-upon prices for wood products most significantly the Lumberman's Association collectively battled labor unions

WEYERHAEUSER'S GEORGE LONG INTRODUCES THE IDEA OF TREE FARMS

Timber company Superintendent George Long urged people living in the Chehalis Valley to reseed cutover land in order to maintain their economy -- 1911

Two obstacles stopped the idea cold:

- first, fire might destroy the work of years overnight;
- second the tax situation did not favor the slow process of growing trees counties that needed revenue assessed timberland on the value of the trees not on the value of the land -- which seemed unfair to Timber Barons farmers were not taxed on their crop so why should lumbermen unable to harvest be taxed year after year when the trees could only be harvested once

Predictably marginal land owners logged off their timber in a hurry

then let the cutover land revert back to the county government

rather than pay delinquent tax bills

also, men who held on to their land were unwilling to increase their tax bills by planting trees

(Development of tree farms was delayed for the next three decades)

MCNEIL ISLAND FEDERAL PENITENTIARY SEES SOME IMPROVEMENTS

Cell house No. 2 containing sixty-six double cells was opened to house convicts -- 1911

An electrical generating power plant was constructed

electric lights were installed in the prison's buildings and cells -- 1911

Federal prison system paid for a shipyard and Captain Neil Henly went to work

on construction of the prison's first powerboat: the *John G. Sargent* with convict help

this a forty-six-foot launch made the trip to Steilacoom much safer

John G. Sargent served the institution for fifty years⁷⁰

HOME COLONY AGAIN COMES UNDER ATTACK

Home Colony and *The Agitator* editor Jay Fox and went through yet another disturbance

authorities received complaints, originally thought to originate from neighboring farmers,

that some members of the colony were bathing nude in the bay

four residents of Home, three of them women, were arrested

(during the trial it came out

“the complaints had actually been made by members of Home Colony”)

Jay Fox attempted to address these issues in an article appearing in *The Agitator*

entitled *The Nudes and the Prudes* -- July 11, 1911

Fox advocated boycotting members of the Home community who were “prudish”

and were offended by those who chose to bathe naked in Puget Sound

he also strongly “...defended the right of persons to be or to swim in the nude.”

⁷⁰ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

his effort to defend the practice resulted in his arrest based on a law making it a misdemeanor to “...encourage or advocate disrespect for law or for any court or courts of justice.”

Despite his arguments for free speech and his remark that “**It is only by agitation that the laws of the land are made better**” he was found guilty and sentenced to two months in jail

RADICALS AND ANARCHISTS FACE A GROWING BACKLASH OF HATRED

Tacoma’s *Evening News* escalated public concern when it vocalized the national fear of anarchism a front page headline demanded: “**Shall Anarchy and Free Love Live in Pierce County?**”

Tacomans formed a vigilante group

Grand Army of the Republic (presumably a nationalist club)

to “**clean out the nest of anarchy on the Sound**” and “**put it to the torch**” they threatened to eradicate “**...anarchy in all of its various forms, by legal means, if possible, and if not by other means which will be equally as effective by banishment or burial.**”⁷¹

Their obvious target was Home Colony

quickly a Tacoma steamboat was chartered to carry a mob to burn down the town

fortunately somewhat calmer heads prevailed

as the steamboat captain refused to provide passage

and the mob was talked out of such action by a local minister

Colony leaders Jay Fox, Charles Govan, James Adams, and James Larkin were arrested

for distributing “obscene” literature advocating “free love”

through the United States mail

(after two months in jail the men were acquitted)

Postal authorities became concerned about a continual flurry of articles

Home’s post office was moved two miles to the smaller town of Lakebay

people of Home could not entirely remove themselves from the society they despised

(post office was moved back to Home [1958] but postal officials kept the Lakebay name

residents of Home still have a Lakebay addresses

unless they pay a fee for a special listing)

IN THE FACE OF ATTACKS HOME COLONY DECLINES

Home Colony continued for several years although it increasingly declined

At one point J.C. Harrison, in the IWW publication *Solidarity*, ridiculed Home

“**...as a dilapidated community...**” where residents had “**...constant quarrels and bickerings...**” Many of these arguments often ended up in court which led to further contempt from anarchist such as Harrison. He further revealed that the “**...professed anarchists...**” at Home “**...denounced courts and the law but used them to their own advantage...**”

Outside influence on life at Home had obvious effects on its residents

in their attempt to construct an isolated society

⁷¹ LaWarne, Charles P. “The Anarchist Colony of Home, Washington 1901-1902. *Journal of the Southwest*, 1987-2006.

they discovered that external forces still had a consequence on their lives

LIFE IN AN INDIAN BOARDING SHOOOL IS DIFFICULT⁷²

Harriette (Hiahl-tsa) Shelton was born on the Tulalip Reservation near Marysville [1904]

to Guemes Island's Ruth (Siastenu) Sehome of the Klallam and Samish tribes

and Tulalip storyteller, wood-carver and cultural leader

Chief William (Wha-cah-dub) Shelton

who was of Snohomish, Skay-whah-mish, Puyallup and Wenatchee ancestry

As a child she spoke primarily the Snohomish dialect of the Coast Salish language

she hauled water from the well and collected firewood for her extended family

she earned to smoke salmon, pick wild berries, drink fresh stream water

using a cup made from a Skunk Cabbage leaf

she was taught to respect all tribal elders and learned native morals and ethics

through the oral transmission of various Indian legends

at about age five, Harriette's grandmother, Hat's Kol Litsa, made an effort to teach her

the ancient Indian ways to connect with nature's spirits

had this been made public her grandmother could have faced jail

Harriette was ready to attend school at age seven -- September 1911

her father detested the reservation's Catholic Mission School

because as a child he was mistreated when he attended classes there for two years

public schools did not accept Indian children at that time

only the Tulalip Boarding School remained as an option

Harriette was among the approximately 225 boys and girls

who left home to live at the school

each was assigned an ID number (Harriette's was No. 33)

within those walls pupils faced a nightmarish existence and a grueling daily schedule

which began with a loud bell awakening them at 5:30 a.m. for a military-style roll call

an exercise program began at 6:00 a.m. that included marching drills

students' entire day were regimented until the lights-out bell rang at 9:00 p.m.

Boarding school resembled a prison camp in additional ways as Harriette noted: **“Saturday was always inspection. We wore those uniforms. Navy blue serge... stiff and scratchy. That was a killer. The sun was shining. We were lined up outside. And we were lined up there for maybe an hour, you know. Out in the sun. Employees would walk up and down the line and see how your hair and everything is.”** (Tulalip Oral Biography Project P. 9)

Department of Interior's Bureau of Indian Affairs, as Harriette described it, was **“just absolutely insane ... you know: with the power to civilize us.”**

(Tulalip Oral Biography Project P. 9)

as on American Indian reservations elsewhere, **“We were punished for speaking our language in that boarding school. It was strictly against their regulations. Everybody said that is against the law to be speaking the language.”** (Tulalip Oral Biography Project P. 9)

yet the young students enjoyed occasional conversations in their native tongue

one day a snitch informed the school's fearsome matron who laid down the law

⁷² Peter Blecha, HistoryLink.org, Essay 9079, July 27, 2009.

as Harriette recalled: **“I was nine years old. We were all about the same age ... we were talking Indian. ... Somebody went and told on us because a matron ... came where we were down in the playroom, and each of us got a strapping. ... We were nine years old, and we were speaking our language. I will always remember that strapping. That really hurt. She hit us as hard as she could.... She strapped us from the back of the neck all the way to our ankles. That burned. But, you know, the physical hurt was not as bad as how I felt for in my own mind.... Being strapped: I never got over that for a long, long time. In fact, I am not over it yet.”** (Tulalip Oral Biography Project P. 9)

(Harriette’s sister, Ruth, was one of about thirty Indian kids who fell ill [February 1917]

Tulalip Reservation’s superintendent allowed her to return home to heal [March]

when Harriette also showed signs of sickness, she too was sent home

Ruth died of tuberculosis [May 1917] **“There were many families who all the children died.... There was never a week went by on our reservation but what we had a funeral. Every week. Sometimes we would have two funerals a week.... Sometimes it was for children. But it took ... quite a while to get over that one about my sister because I missed her.”**

[Tulalip Oral Biography Project P. 3])

(Tulalip boarding school officially closed [1932] its principal buildings were torn down

Indian students were absorbed into the Marysville school system)

UNION PACIFIC RAILROAD IS AGAIN CHALLENGED BY JIM HILL

E.H. Harriman once again became annoyed when the Northern Pacific Railway

decided to build up the Deschutes River east of the Cascades Mountains

to thus sneak into California the back way

This route was the preserve of another Harriman road, the Southern Pacific Railroad

Harriman’s response was instant

neck and neck the competing crews raced along opposite sides of the Deschutes River

they harassed each other with dynamite blasts, mysteriously rolling boulders,

and faked telegrams

farmers with strategic homesteads found their holding worth more

than even wild dreams could have predicted

long wagon trains dragged supplies through the deserts

and down the canyon’s rocky sides

finally Harriman captured the key location

he brought Jim Hill to a stop at the village of Bend, Oregon

(Not for twenty more years would the Great Northern Railway make connection

with the Western Pacific in California and so gain entry into San Francisco)

Union Pacific Railroad track made Bend another lumber center

its population jumped from five hundred to five thousand in a decade

PACIFIC NORTHWEST TRACTION, LIGHT & POWER COMPANY IS FORMED

Electrical engineering consulting firm Stone & Webster in Seattle

expanded beyond King County

now the name “Seattle Electric Company” was thought to be too provincial

the utility reincorporated as the Puget Sound Traction, Light & Power Company -- 1912

PUGET SOUND TRACTION, LIGHT AND POWER COMPANY EXPANDS

Boston financiers Stone & Webster bet on an improving national and local economy
Until 1912, settlers along the upper Skagit River, unlike their Puget Sound contemporaries,
were dependent on the west-to-east Seattle & Northern Railroad, canoes, steamboats
or stagecoaches bumping along rough roads for the all-day trip to Mount Vernon
opening of interurban service on Stone & Webster's
Pacific Northwest Traction, Light & Power Northern Division coincided with
a tremendous upswing in the economy of northwest Washington
Whatcom County Railway & Light Company reorganized
becoming the Bellingham Division of Puget Sound Traction, Light & Power Company
Both the Bellingham-Skagit Railway and the Seattle-Everett Interurban lines merged
under the new Pacific Northwest Traction, Light & Power Company -- January 1912
Bellingham was responsible for the building of the Whatcom-Skagit Interurban line
people of Bellingham put up \$400,000 for bonds
balance of the money was raised by Stone & Webster Corporation of Boston
who built the road
Pacific Northwest Traction, Light & Power Company became responsible
for the operation of several Puget Sound interurban railway lines
in addition to their passenger lines the company provided freight services
to regional businesses and industries such as the Renton coal mines
owned by Puget Sound Electric Railway

SHINGLE WEAVERS INCLUDE ALL TIMBER WORKERS INTO THEIR UNION

With the addition of the Sawmill and Timber Workers Union to their union -- 1912
the International Shingle Weavers' Union
petitioned the American Federation of Labor (AFL)
to change its name to (IUSWSWW)
"International Union of Shingle Weavers, Sawmill Workers, and Woodsmen"
IUSWSWW was chartered by the American Federation of Labor (AFL)
but because the former Sawmill and Timber Workers Union were "unskilled" workers
they held only "federated" (nonvoting) status
(International Union of Shingle Weavers, Sawmill Workers, and Woodsmen (IUSWSWW)
was far too cumbersome
this union's name was changed to the International Union of Timber Workers [1912])

IWW LEADER "BIG BILL" HAYWOOD BECOMES RADICAL

In addition to being a Wobblie leader, William "Big Bill" Haywood
was an active member of the Socialist Party
He was elected to the Socialist Party of America National Executive Committee -- 1912
however the aggressive tactics of Bill Haywood and the Industrial Workers of the World
along with their call for abolition of the wage system and the overthrow of capitalism
created tension with more moderate members of the Socialist Party
Haywood was less concerned with political tactics

he focused on direct action and strikes which often led to violence
Socialist Party was opposed to violence
but Bill Haywood openly advised socialists and workers to practice sabotage
and risk imprisonment to foster revolution
this conflict of interest eventually led to Big Bill's recall
from the Socialist Party of America National Executive Committee
thousands of Industrial Workers of the World members left the Socialist Party with him

HIRAM C. GILL RUNS FOR A SECOND TERM AS SEATTLE MAYOR

Seemingly unaffected by being the first mayor of a major city in the nation to be recalled
Hiram Gill once again threw his hat in the ring for Seattle mayor
he was supported by those who wanted a tolerant policy toward "vice" in Seattle
Oxford, England born Progressive George Fletcher Cotterill wanted progressive reforms
George Cotterill was swept into the mayor's office -- March 1912
Cotterill was an advocate of women's suffrage and prohibition of the sale of alcohol
he was also concerned with development of public parks
he pushed for public ownership of port and harbor facilities
and for public ownership of water and power utilities
Hiram Gill returned to his law practice

PACIFIC COAST INTERNATIONAL LONGSHOREMEN'S ASSOCIATION MEETS

Pacific Coast District ILA Convention meeting is held in Seattle -- March 1912
Northwest District President John Kean presided
Kean asked the convention to declare the Grays Harbor Stevedoring Company unfair
he requested authorization from the delegates to conduct a nationwide financial appeal
on behalf of the Aberdeen Local 24 and Hoquiam Local 26
During discussion of the resolution, Kean told delegates that he was concerned
many of the West Coast locals would stage impromptu strikes
in support of locals 24 and 26
Kean believed the district was not strong enough to win a coastwide fight
since the San Francisco Riggers and Stevedores' Union
was not a member of the district
Pacific Coast District delegates decided to make an all-out fight for the Grays Harbor men
they passed a resolution levying a penalty of ten cents an hour
for each man working vessels loaded by the Grays Harbor Stevedore Company
if the ship's captain refused to pay the penalty at the first port of call,
the second port was authorized to charge twenty cents a man hour
Convention delegates designated Paddy Morris to notify all thirty-eight locals
when a Grays Harbor vessel loaded by an unfair stevedore company
had cleared the harbor
seven unions, including Tacoma locals 38-30 and 38-55 carried out the penalty policy
fines that were collected
were turned over to the striking members of the Grays Harbor unions

LONGSHORE MEMBERS IN ABERDEEN AND HOQUIAM GO ON STRIKE

Wobblies and International Shingle Weavers of America
were on strike at the Grays Harbor sawmills
Grays Harbor International Longshoremen's Association (ILA)
demanded better working conditions from the Grays Harbor Stevedoring Company
manager W. R. Jones refused to discuss the men's grievances
Jones hired members of the IWW's Marine Transport Workers to replace the ILA men
one week later the Wobblies walked out -- March 21, 1912
Pacific Coast District Organizer Paddy Morris
was sent to assist the Aberdeen and Hoquiam locals in an effort to resolve the dispute
with the Grays Harbor Stevedoring Company
Morris became involved with the striking Industrial Workers of the World (IWW)
pressure on company managers was increased
Longshore union members tried to get Jones to bargain,
but he "absolutely refused" to discuss a settlement
Longshoremen walked off the job
Seattle, Tacoma, and Astoria unions provided jobs for Grays Harbor for the union men

STIMSON MILL COMPANY MOVES TO HOOD CANAL

Charles Willard (C.W.) Stimson sold the Ballard mill -- 1912
he moved his family business to Hood Canal
to log timber his father had purchased years earlier
C.W. Stimson was a tough competitor and successful negotiator
Stimson Mill Company became known for employing hard-working men
who were provided access to modern logging equipment

REPUBLICAN PARTY SPLITS INTO COMPETING FACTONS

Progressive Theodore Roosevelt watched as the successor he had chosen,
Conservative President William Howard Taft, dismantled Roosevelt's reform efforts
Roosevelt ran for re-election to the presidency -- June 18 to 22, 1912
Progressive (Bull Moose) Party was composed of Populists, Progressives
and moderate Republicans
Progressive Party's platform called for:
•outlawing child labor,
•demanded minimum wage legislation,
•pushed for worker's compensation for those injured on the job,
•direct election of National Senators (to replace state senates electing the position)
This was the first year the Republican Party held Primary elections
Roosevelt won nine of twelve state (eight by landslide margins of 60% or more)
Taft won only Massachusetts (and that by a small margin)
and even lost his home state of Ohio
Wisconsin Senator Robert M. LaFollette, a reformer, won two states
however, thirty-eight states did not hold primary elections
Washington State Republican Convention held in Aberdeen split

two delegations were sent to the National Republican Convention in Chicago
where conservative Taft forces controlled the convention
they refused to seat Roosevelt's Progressive Delegates on the floor
Taft controlled the Republican National Committee
which had the power to make decisions on contested delegates
they awarded 235 of the contested delegates to Taft and nineteen to Roosevelt
William Howard Taft was selected for a second term
James S. Sherman of New York was chosen for re-election as Vice President
These party manipulations enraged former President Roosevelt
he and his followers stormed out of the convention and bolted from the Republican Party

MAY ARKWRIGHT HUTTON CONTINUES HER POLITICAL ACTIVITIES

May Arkwright Hutton, along with three other women, were among the delegates
to the State Democratic Convention in Walla Walla
She continued on as a Washington State delegate
to the Democratic National Convention in Baltimore
where she attracted considerable press coverage

DEMOCRATIC PARTY NATIONAL CONVENTION

Democrat's nominating convention -- June 25 to July 2, 1912
required a two-thirds majority vote to secure the presidential nomination
After a long deadlock former Democratic presidential candidate William Jennings Bryan
threw his support to candidate Woodrow Wilson of New Jersey
giving him the nomination on the forty-sixth ballot
Indiana Governor Thomas R. Marshall was the Vice-Presidential nominee
After the close of the convention and despite declining health,
May Arkwright Hutton stopped in Ohio on the way home
to give speeches bolstering that state's woman suffrage efforts

THEODORE ROOSEVELT HOLDS HIS OWN POLITICAL CONVENTION

Roosevelt and his Progressive followers met in convention in Chicago -- August 5-7, 1912
Progressive Party members were chiefly Protestant Middle-class Republicans
often they were professionals in occupation who idolized Roosevelt
most of them had little in common with Populists
except that both refused to accept the status quo
California Governor Hiram Johnson joined the ticket as Roosevelt's running mate
Women played a large role in the convention
everyone observed the prominence of women, women delegates and women leaders
suffrage leader Jane Addams seconded Roosevelt's nomination
Roosevelt electrified the convention with a dramatic speech during which he announced
that he would "stand at Armageddon and battle for the Lord"
and declared that he felt "as strong as a Bull Moose,"
thus giving the new party its popular name
Although Theodore Roosevelt's Progressive Party platform

appeared bold and innovative in some parts of the United States,
in the Pacific Northwest its proposals for abolition of child labor and for woman suffrage
had already become law

SKAGIT-WHATCOM INTERURBAN SERVICE BEGINS

An Interurban bridge was built over the Skagit River
between the Pacific Highway (later Highway 99) auto bridge
and the Great Northern Railway bridge
just one day before the construction contract deadline
First electric-powered Pacific Northwest Traction, Light & Power Company
Interurban trains connected Bellingham with Mount Vernon and Sedro-Woolley
service began with a great celebration -- 10 a.m. August 31, 1912
when a special train left Bellingham carrying practically all of the officials
of Bellingham, Burlington, Mount Vernon and Sedro-Woolley
together with the officials of Whatcom and Skagit counties,
members of various commercial organizations,
and a large representation from the Stone & Webster Club of Washington
each town along the line received the initial train with festivities, banquets and speeches
even an unfortunate summer rain failed to dampen participant's enthusiasm
Leslie R. Coffin managed the interurban line from his office in Bellingham
three new interurban passenger cars operated on the Bellingham-Mount Vernon line
at ninety-minute intervals
first car left Bellingham daily at 5:30 a.m. and arrived at Mount Vernon at 6:45 a.m.
before beginning the return trip back to Bellingham at 7:00 a.m.
last round-trip car left Bellingham at 11:00 p.m.; it began the return trip at 12:30 p.m.
arriving back in Bellingham at 1:45 a.m.
fourth interurban car operated every ninety minutes
on the Burlington-Sedro-Woolley line running from 6:15 a.m. to 12:45 a.m.
after the last run of the day, all of the cars returned to the Kentucky Street car barns
in Bellingham where a night crew performed cleaning and necessary maintenance

ROUTE OF THE BELLINGHAM-MOUNT VERNON -- SOUTH INTERURBAN SERVICE

Pacific Northwest Traction, Light & Power Company Interurban car
was boarded at the northern depot in Bellingham
located at Elk (now State) and Holly streets
(near where the Greyhound Bus terminal was later constructed)
six interurban cars operated daily on the Mount Vernon-Bellingham line
providing twelve trips a day between the two towns
Fairhaven, the southern city limits, was reached five minutes later and 2.5 miles
route continued on for more than four miles around Chuckanut Mountain
at an average height of 200 feet above sea level
stops were made at Happy Valley (3.5 miles from Bellingham) and Hibridge (4.28 miles)
there was a seven-hundred-foot-long trestle, built of 12"x12" timbers
130 feet above Chuckanut Creek -- one of the highest trestles in the west

From Hibridge the route continued to Wildcat Cove (7.76 miles);
and Clayton Bay (9.2 miles where a trestle crossed over the bay);
Run from Clayton Bay along the edge of Samish Bay
was a white-knuckle but beautiful stretch beside the Great Northern Railway track
with stops at: Grandview (5.36 miles); Chuckanut (6.8 miles); Seawood (11.15 miles)
and Samish (12.32 miles)
to reach Samish the Samish Trestle made of over 5,000 cedar pilings
and three million feet of lumber had to be braved)
Entering Skagit Valley the interurban car crossed the Skagit Flats
stops were made at Blanchard (13.64 miles);
and East Edison (15.68 miles before plunging into a mile of timberland);
emerging from the forest the car entered Olympia Marsh Country
and stopped at Sunset (17.3 miles);
six miles of cultivated farmland greeted the passenger as the interurban stopped
at Field (18.53 miles) Roray (then the name for town of Allen 21.20 miles);
and Maiben (22.5 miles)
Finally Burlington depot on Virginia Street near the north-south railroad track
was reached (23.25 miles from Bellingham)
Interurban car continued south from Burlington to Varney (24 miles from Bellingham)
to Riverside (25.55 miles where the Skagit River was crossed
on a new steel bridge 800 feet long with a draw span of 240 feet)
and Clear Lake Road (now College Way 26.05 miles)
Mount Vernon Depot at the northwest corner of Kincaid and Main streets
was the southern terminus (27.5 miles from Bellingham)
here the car turned around on a curving trestle over the Skagit River
this was located outside of the dike (near the Moose Hall today)
when the river was high the turn-around was frightening
as muddy river water swirled and churned underneath

ROUTE OF THE EAST INTERURBAN SERVICE

Burlington Depot was the beginning of the East Skagit Valley
Pacific Northwest Traction, Light & Power Company Interurban route
When the north bound interurban car arrived in Burlington from Mt. Vernon
it would follow the route of (today's Highway 20)
(inside the Burlington city limits a grassy strip of land marks the route)
stops were made at Miller (.75 miles from Burlington); Dempsey (2.13 miles);
Sterling (2.7 miles); Kimsey (2.75 miles) and Austin (4.08 miles)
Sedro Woolley Depot on Ferry Street half a block from the Northern Pacific Railway Depot
was the end of the line (4.7 miles from Burlington)
from Sedro-Woolley the car returned to Burlington before continuing on to Bellingham
Four additional cars served the Burlington-Sedro Woolley line exclusively
ten runs a day linked Burlington with Sedro-Woolley

BELLINGHAM-MT. VERNON-BURLINGTON-SEDRO-WOOLLEY ROUTE EQUIPMENT

Pacific Northwest Traction, Light & Power Company Interurban powered its cars with electricity transmitted from Bellingham over aluminum cable to substations at Clayton Bay and Burlington where it was transformed into direct current and fed into copper cable

Equipment consisted of four combination express and passenger cars
fifty-seven-foot long light, clean and comfortable cars
each powered by a 300-horsepower motor

fifty-eight people sat as the interurban sped along at fifty-miles-per-hour

Freight service, principally farm produce, milk, wholesale groceries and lumber products, was handled by Pacific Northwest Traction, Light & Power Company at night after the last passenger cars had returned to Bellingham

Whatcom County Railway and Light constructed twenty flatcars and four boxcars [1911]

Harvest of 1912 was one of the largest in local history

all through the following winter Bellingham and towns of the Skagit Valley were a flurry of activity carried on by prosperous farmers

real estate values began to climb and the number of building permit soared in anticipation of the opening of the Panama Canal, Whatcom Creek Waterway was dredged to allow ocean-going vessels to dock in the heart of Bellingham

Stone & Webster formed a branch of Pacific Northwest Traction, Light & Power Company which began construction of the missing link between Everett and Mount Vernon (this was never completed)

WILLAPA ELECTRIC COMPANY OPERATES AN INTERURBAN LINE

Willapa Electric Company was affiliated with the Grays Harbor Railway and Light Company
Willapa Electric operated a six-mile line from South Bend to Raymond which opened as the Willapa Harbor Railway Company -- 1912 (it was abandoned in [1930])

LONGSHORE UNION REACHES AN AGREEMENT AT GRAYS HARBOR

New Grays Harbor stevedore boss, H. M. Delanty, suddenly agreed to give pay preference to International Longshoremen's Association (ILA) locals Aberdeen Local 38-24 and Hoquiam's Local 38-26
ninety Aberdeen and Hoquiam union longshoremen would receive fifty cents an hour

ELECTION RESULTS IN 1912

Although there were five candidates for the office of president -- November 5, 1912 this was in fact a three-way race:

- Socialist candidate Eugene V. Debs received only 900,369 popular votes (0 electoral votes)
 - Prohibition Party's Eugene W. Chafin 207,972 popular votes (0 electoral votes)
 - Democrat's Wilson/Marshall collected 6,293,152 popular votes (435 electoral votes)
 - Progressive's Roosevelt/Johnson received 4,119,207 popular votes (88 electoral votes)
- Theodore Roosevelt carried Washington

- Republican's incumbent president Taft/ Nicholas M. Butler
(who replaced James S. Sherman who had died just before the election)
gathered 3,486,333 popular votes (435 electoral votes)

Voters in Washington State bucked the national trend

Roosevelt and his Progressive Party (Bull Moosers) carried Washington
with 113,000 popular votes

Woodrow Wilson garnered 86,000 popular votes

William Howard Taft received 70,000 popular votes

Eugene V. Debs secured 12% of the total Washington vote cast
40,000 votes for President

a percentage larger than in any other state except Oklahoma

Compared to the strength of the Democratic and Republican parties,

Socialist electoral clout was seldom impressive even in Washington

however, voters elected moderate socialists to several local positions:

city commissioner in Spokane;

mayors in Pasco and Edmonds,

one member each in the Washington legislature Senate and House of Representatives

In the election for state officials Democrat Ernest Lister, a fiscal conservative,
was elected Governor

he was the first Democrat governor of the state since John R. Rogers [1901]

he carried on a continual feud with the reform-minded legislature

saving state money was his greatest concern

his opponents noted he had a "passion for saving"

as he deprived the state of improvements in highways and education

Conservative Republicans did much better in the state than Taft had done nationally

control of the Washington Senate belonged to the Conservative Republicans

Republicans: 25; Progressives: 8; Democrats: 8; Socialists: 1

state House of Representatives was split

Republicans: 48 (two short of a majority); Progressives: 30; Democrats: 18
and 1 Socialist

Washington's National Senator, Miles Poindexter, supported Theodore Roosevelt

he served as Bull Moose' only member of the U.S. Senate

in addition to Roosevelt's progressive reforms he advocated for anti-trust laws

and a graduated income tax (with higher rates for those with higher incomes)

Republican Party controlled the state's newly-elected Congressional Delegation

Progressive Republican Congressman Jacob A. Falconer from Everett

served one term for the First Congressional District-- [1913-1915]

Republican Albert Johnson, Hoquiam newspaper publisher,

was elected in the Second District

he was strongly opposed to the Industrial Workers of the World (IWW)

and distrusted aliens and radicals generally

Congressman Johnson became chair of House Immigration Committee

he steered through Congress laws which set quotas on the numbers of aliens

who were allowed to enter the United States each year

Republican William Leroy La Follette was re-elected in the Third District
he was popular and well known -- he played his violin and sang songs on the stump
he was often accompanied by his wife, Helen, on the piano
his daughters, Mimi and Mary Lee, performed Scottish dances
as he played and sang
two new Congressmen will be elected “at-large” (state-wide)
Progressive Republican James W. Bryan of Seattle served one term [1913-1915]
Progressive Republican Jacob Falconer from Everett served one term

WASHINGTON’S FIRST WOMEN LEGISLATORS WERE ELECTED

First women were elected to the state legislature -- November 5, 1912
to take office [January 13, 1913]
Republican Frances Axtell representing Bellingham
after earning a Ph.D. from DePaul University she moved to Bellingham
she advocated for a minimum-wage, banning child labor, workers’ compensation,
and pensions for the elderly, disabled, and widows
she also helped change sections of criminal law
especially those dealing with violent assault
Progressive Nena Jolidon Croake was a doctor of osteopathy (treatment of skeletal problems)
elected from Tacoma she was a staunch advocate of minimum wage
as well as pensions for abandoned mothers

JOSEPHINE CORLISS PRESTON IS SUPERINTENDENT OF PUBLIC INSTRUCTION

(Growing up in Fergus Falls, Minnesota Josephine Corliss
saw the struggles facing immigrants
some of her classmates could speak no English
Josephine Preston was only fourteen when she began teaching
at age nineteen she traveled to Waitsburg, Washington
to continue her teaching career [1892]
she married Albert Preston [1893] and moved to Walla Walla
there she was named Assistant County Superintendent
she was elected Walla Walla County School Superintendent three times)
Josephine Preston was elected Superintendent of Public Instruction -- November 5, 1912
she held the position for sixteen years
throughout her career she advocated for immigrants
and for rural educators forced to board with strangers in order to teach in small towns
perhaps she was best known for inspiring teacher “cottages”
district-funded living quarters for rural teachers

WASHINGTON VOTERS PASS STATE CONSTITUTION REFORM AMENDMENTS

Two progressive proposals to amend the State Constitution were passed -- November 5, 1912
Amendment 7 gave voters the right to pass an *Initiative* to implement new law
without passing the legislature or acquiring the governor’s signature
Amendment 7 also gave the legislature the right to *Refer* a proposed Bill or law

to the voters for their approval or rejection
Amendment 8 gave voters the right to *Recall*
remove from office elected officials except judges
who intentionally or unintentionally abused his or her office
or violated their oath of office
Amendment 7 passed with a 71.49% “YES” vote
Amendment 8 passed with a 70.78% “YES” vote

ABIGAIL SCOTT DUNIWAY ACHIEVES SUCCESS IN OREGON

Abigail Scott Duniway’ persistence paid off
when Oregon became the seventh state in the U.S.
to pass a women's suffrage amendment -- November 5, 1912
Oregon Governor Oswald West asked her to write and sign the equal suffrage proclamation
she was the first woman to register to vote in Multnomah County
(but she did not live to see the Nineteenth Amendment to the United States Constitution
grant suffrage to all women [1920]
Abigail Scott Duniway died in a Portland hospital
a few days before her eighty-first birthday [October 11, 1915])

PROGRESSIVE REPUBLICANS REGRET THEIR STAND AGAINST THE PARTY

Primary accomplishments of the Bull Moose insurgency of 1912:
•split the Republican Party and placed Woodrow Wilson in the White House;
•drew numerous reformers outside the Republican Party
into an ill-conceived protest vehicle that had no future
Progressive Republicans had abandoned the Republican Party to conservatives
who would soon seek to undo past reforms
even Roosevelt’s effort to return to the Republican ranks
failed to change the party’s direction

MILWAUKEE ROAD EXPANDS

Chicago, Milwaukee, and Puget Sound Railway Company, incorporated in Washington,
was absorbed by the Chicago, Milwaukee and St. Paul Railroad -- January 1, 1913
However, the heavy burden of construction costs caused severe financial problems
also the company’s failure to make a distinction between construction costs
and operational costs led the company into a dispute
with the Interstate Commerce Commission
Rumors indicated the Milwaukee Road was planning to electrify 450 miles of its lines
through the mountains of Montana and Idaho -- early 1913
new technology meant more speed could be achieved on ascending grades
than steam provided
on descending grades electric motors would act as generators
returning current to the electric cable
this eliminated the usual braking problems while controlling the speed of trains
electricity also increased comfort to passengers

by reducing coal and stops to take on boiler water and eliminating smoke

LONGSHOREMEN'S EFFORT AT GRAYS HARBOR ATTRACTS INTEREST

Grays Harbor effort proved Pacific Coast longshore locals

could work together to achieve a common goal

This solidarity attracted the interest of the San Francisco Riggers and Stevedores

who issued an invitation to the International Longshoremen's Association locals

to join a new coastwide organization espousing IWW principles -- January 17, 1913

not one ILA local applied for a charter

from the Pacific Coast Waterfront Workers' Federation

International Longshoremen's Association locals ILA District President Kean

believed the system of fining an unfair business had endless possibilities

in solving disputes and could even replace strikes

CONSTITUTIONAL AMENDMENT SIXTEEN AUTHORIZES A FEDERAL INCOME TAX

Amendment XVI to the Federal Constitution was passed by Congress

and approved by the required three-quarters of the states -- February 3, 1913

“Congress shall have power to lay and collect taxes on incomes, from whatever source derived, without apportionment among the several States, and without regard to any census or enumeration.”

this Amendment modified Article I, Section 9, of the U.S. Constitution

SIXTEENTH AMENDMENT IS ADDED TO THE U.S. CONSTITUTION

Secretary of State Philander Knox proclaimed the amendment ratified

by the necessary three-fourths of the states -- February 25, 1913

thus the amendment which provides the legal basis for a graduated income tax

and allowed Congress to lay and collect taxes on income

become part of the U.S. Constitution

PRESIDENT WOODROW WILSON IS INAUGURATED

Former president of Princeton University and New Jersey governor

was sworn into office as the twenty-eighth president -- March 4, 1913

he was the first Democrat to be President

since Grover Cleveland's second term ended [1897]

Wilson was a Reformer who enjoyed the solid support

of a Democratic National House of Representatives to carry out his reform efforts

DEPARTMENT OF LABOR AND COMMERCE IS DIVIDED INTO TWO CABINET SEATS

This federal department was concerned with business, industry, and labor

secretary of the department served in the president's cabinet

after being in existence for a decade, the department was divided in two:

- Department of Commerce was created

to deal with business and industry -- March 4, 1913

- Department of Labor was signed into existence by President Woodrow Wilson

to promote jobs and improve the standard of living for all Americans
by promoting economic growth and technological competitiveness -- March 4
secretaries of both departments served in the president's cabinet

U.S.-MEXICAN RELATIONS ARE DIFFICULT TO MAINTAIN

(Mexico's revolution was brought on by tremendous disagreement
among the Mexican people over the dictatorship of long-serving President Porfirio Diaz
young leaders arose who wanted to participate in the political life of their country
but they were denied the opportunity by the officials already entrenched in power
Francisco Madero, for one, led a faction who believed President Diaz
should not seek re-election
Francisco "Pancho" Villa was the military leader
of the Northern Mexican state of Chihuahua
due to its size, mineral wealth, and proximity to the United States
this position provided him with extensive resources
Francisco "Pancho" Villa assumed the role of Robin Hood in his Mexican state
he and supporters seized privately owned land for redistribution to peasants and soldiers
he robbed and commandeered trains
like other revolutionary generals he printed local money to pay for his cause
After years of public support for Villa's fight, the United States shifted its political position
following the diplomatic policies of newly-elected President Woodrow Wilson
American support moved to then Mexican President Venustiano Carranza
in an effort to establish a stable government for Mexico
arms and support for Francisco "Pancho" Villa were withdrawn
President Carranza's troops were allowed to be relocated over U.S. railroads
Villa felt betrayed by the Americans

CONSTITUTIONAL AMENDMENT TO ESTABLISHES ELECTION OF U.S. SENATORS

Prior to adoption of Amendment XVII to the Federal Constitution
United States Senators were elected by the members of each state's senate
each state was represented by two U.S. Senators
Amendment XVII to the Federal Constitution was passed by Congress
and approved by the required three-quarters of the states -- April 8, 1913
This Amendment modified Article I, Section 3, of the U.S. Constitution
"chosen by the Legislature thereof" became **"elected by the people thereof"**
this weakened state legislatures and strengthened popular control of the federal Senate
Second clause of Amendment XVII dealt with filling vacancies
when and how popular elections of replacement senators are held
is up to state legislatures
any replacement senator who was appointed by the governor
would serve until an election specified by the legislature was held (if one is held)
or until the end of the term being filled

SHINGLE WEAVERS AGAIN CALL FOR A STRIKE IN BALLARD

International Shingle Weavers' Union of America struck the Seattle Cedar Shingle Company demanding an increase in the minimum wage -- April 10, 1913

Ballard shingle mills owners employed underage and unskilled workers during the strike in defiance of state law

“There was no way to know how many of these people had been hurt but, during the first two weeks of the strike... (at least six men were reported seriously injured) It was well known that the employers were secretly and quietly transporting injured scab workers out of the mills when management determined that the workers were not hurt bad enough to need an ambulance. The situation deteriorated to the point that the Seattle Methodist Preachers, after touring the two mills still in operation, came out publicly for the Shingle Weavers' in a ten point open report to the mill owners and the public in the newspapers. Public sentiment was strongly on the side of the union throughout the strike.”⁷³

International Shingle Weavers' Union, however, lost the strike [July 30, 1913]
shingle mill owners replaced most of the strikers

With the loss of the strike in Ballard the International Shingle Weavers' Union of America was disbanded by the American Federation of Labor (AFL)

its former members were absorbed by the Sawmill and Timber Workers Union which had been absorbed into the shingle weaver's union

IMPROVEMENTS IN THE FISHING INDUSTRY

Life cycle of the Fraser River sockeye salmon is four years

fishermen had noted that the Fraser sockeye had mysteriously established

what is called a “quadrennial dominance” -- for three years the runs would be normal

then on each fourth years an extra surge of productivity took place

the return of these fourth-year fish resulted in a catch

greater than the harvests of the three preceding years combined

Hudson's Bay Company records reaching back to [1822]

showed this cycle had prevailed for almost a century

1913 was a year when the surge of fish was anticipated

fishermen that year expected, and reaped, a bountiful crop

2,392,815 cases of choice sockeye

compared to a normal-year average of about 500,000 cases

Trolling developed with a single boat setting out as many as twelve lines and thirty hooks

controlled by powered reels --spring 1913

Canadian fishermen, angered by the change in technology,

clamored for control of the fishery

Washington fishermen retorted that the real danger to the industry

was the Canadian custom of fishing the river too close to the spawning ground

international quarreling stopped when a disaster hit the industry -- spring 1913

even as they hauled in huge quantities of fish they heard of a terrifying circumstance

which made them fear the riches could never be repeated

⁷³ Philip C. Emerson, “Strike” Pacific Northwest labor & Civil Rights Projects, university of Washington.

DISASTER HITS THE CANADIAN FISHERY

Floods poured down the narrows called Hell's Gate north of Hope, British Columbia
great boulders were dynamited into the Fraser River
by workers building the Canadian Pacific Railroad
just as the salmon began to reach this obstruction on their spawning run
Hell's Gate became a turbulent, violent whirlpool
salmon in a seething mass jammed up for ten miles below the Gate
hurling themselves in vain to leap the barrier
they were battered to death or were so bruised they gave up and drifted downstream
to whatever quiet water they could find and there died without spawning
Canadian and American fishermen braced themselves for a major shrinkage of the resource
(their fear was justified -- within eight years the great quadrennial pack had dropped
from more than 2,000,000 cases to a puny 143,000 cases
other runs were shrinking as well)
Almost immediately after the 1913 disaster
demands arose for international control of the Fraser River and its tributaries
but unfortunately the fishermen of the two nations could not agree on methods
(last of the Hell's Gate obstruction was removed [1915]
normal runs should have continued their average of 500,000 or more cases
but by [1929] the normal-year take had dwindled to a miserable 90,000 cases
loss to the fishing industry of Canada and the United States has been estimated
at more than one billion dollars)

WEYERHAEUSER COMPANY EXPANDS IN WASHINGTON STATE

(Weyerhaeuser Company continued to purchase timberland in Washington
by [1903] the company's holdings had increased by 67 percent to 1,500,000 acres
although the company established a sawmill in Everett [1903],
manufacturing lumber was a secondary activity until [1915]
from [1900 to 1915] the firm managed its holdings, sold timber to other sawmills
and purchased more timberland)
Frederick Weyerhaeuser continued to live in St. Paul, Minnesota
day-to-day management of the company in placed the hands of George S. Long
(who held the position of general manager for thirty years)
Frederick Weyerhaeuser shunned publicity and was reportedly greatly displeased
to be dubbed "the Timber King" in a 1913 profile published by *The New York Times*

SEATTLE GETS A NEW BASEBALL STADIUM⁷⁴

Dugdale Park was named after former major league baseball catcher,
Seattle real estate developer and Seattle baseball manager Daniel E. Dugdale
Dugdale Park opened -- September 9, 1913
featuring a double-deck grandstand, it was considered to be
one of the finest ball fields on the West Coast

⁷⁴ Alan J. Stein, HistoryLink.org, Essay 1501, July 15, 1999.

(Seattle's team won pennants in [1915] and [1918]
they rejoined the Pacific Coast League (PCL) as the Seattle Rainiers [1919]
renamed the Seattle Indians [1922],
they won the city's first PCL championship [1924])
(Exhibition games also were very popular
Babe Ruth was featured in an all-star game of local players
sponsored by the *Seattle Post-Intelligencer* [1924]
Ruth had nine at-bat and delivered three home runs out of the park)
(An arson fire swept through the ballpark and burned it to the ground [July 4, 1932])

PLANS FOR THE NEW CAPITOL BUILDING ARE APPROVED

State Capitol Commissioners conducted a competition
to find an architect for a new capitol building
thirty-seven entries were judged
former capitol architect Ernest Flagg's newest plan was rejected early in the process
virtually unknown New York architects Walter Wilder and Harry White
of Stanford White's firm were selected for the project
the Olympia job was their first major commission
Walter Wilder and Harry White depicted a rather different Legislative Building
than the one we see today -- 1913
they proposed a taller dome, sculptures placed on either side of the north entrance stairs,
Grecian figures carved into the classical entry, and another huge sculpture above that
(perhaps of a horse-drawn chariot)
their grandiose plan proposed an arrangement of stairs and landings
descending from the Temple of Justice to what's now Capitol Lake
as well as a grand promenade stretching into town
anchored at the capitol campus end by an imitation Arc de Triomphe
and downtown by a new railroad station
their new Legislative Building was to be surrounded by five office structures
Governor's Mansion would be demolished to make room
Budget limitations eventually eliminated the promenade and much interior decoration
while the legislature objected to moving the governor's residence

GOVERNOR ERNEST LISTER EXPRESSES SUPPORT FOR THE NEW CAPITOL

Many state officials and citizens could not see spending millions of dollars
on a new state capitol
What pushed matters forward was the support of Governor Ernest Lister
in fact, the new Democratic governor hoped the building
would immortalize his administration
(Lister remained so enthusiastic that when a large amount of money was finally appropriated
to begin work on the Wilder and White campus [1917] he threw a party
to ceremoniously burn every previous administration's plans for a state capitol)

AN INITIATIVE IS FILED IN WASHINGTON STATE TO IMPLEMENT PROHIBITION

Prohibition prevented the manufacture, sale, or transportation of alcoholic beverages with the aim of obtaining partial or total abstinence through legal means
Grassroots organizations such as the Good Templars
and the Woman's Christian Temperance Union (WCTU)
had been politically influential for several years
Prohibition Party provided the crusade with political clout
several Washington counties were "dry"
six enacted local Prohibition
twenty-eight made it illegal to sell alcoholic beverages outside of cities
People living in larger cities, especially Seattle,
heatedly debated pleasure, corruption, and the economics associated with liquor
Initiative Number 1 (two weeks later re-filed as Number 3) was filed -- January 8, 1914
Emma Wallingford Wood, president of the Western Washington WCTU,
conducted an effective grassroots crusade
during the month before the 1914 election
dynamic Reverend Dr. Mark Matthews of the First Presbyterian Church
held daily revival meetings (in October)
that galvanized support among evangelical Christians
speaking in opposition to Prohibition were formidable opponents such as
The Seattle Times and the Chamber of Commerce
Judge Thomas Burke maintained that Prohibition would cost 8,300 men their jobs
brewery owners waged their own advertising campaign
calling voluntary moderation of drinking habits as an alternative to Prohibition

REFORMERS SUCCESSFULLY ALTER THE U.S. ECONOMY

President Woodrow Wilson's Democratic agenda set out to reorganize banking and currency
Federal Reserve Act of 1913 imposed on existing banking system a new organization
that divided the country into twelve districts with a Federal Reserve Bank in each
all twelve were supervised by a Federal Reserve Board
these banks were to serve as depositories for the cash reserves of those banks in the system
until the Federal Reserve Act, the federal government had left control of its money supply
largely to unregulated private banks
official medium of exchange was gold coins, most loans and payments were made
with bank notes, backed by the promise of redemption in gold
however, banks were tempted to reach beyond their cash reserves, prompting periodic panics
when fearful depositors raced to turn their bank paper into coin
passage of the Federal Reserve Act provided greater flexibility in the money supply
provision was made for issuing federal reserve notes to meet business demands
(creation of the Federal Reserve remains a highly controversial act to this day)
Regulation of Trusts and the investigation of corporate abuses continued
Congress authorized a Federal Trade Commission to prohibit "unfair methods of competition"
by business concerns conducting interstate trade
Clayton Antitrust Act forbade interlocking directorates, price discrimination among purchasers,
use of injunctions in labor disputes

and ownership by a company of stock in a similar business

PACE OF ECONOMIC ACTIVITY SLACKENS

Negative impact on American business imposed by reformers
resulted in a downturn in manufacturing
years of easy expansion were over -- 1914
cities had been living on borrowed money
an energetic youthful nation could not guarantee markets or profits

GREAT TRAIN ROBBERY TAKES PLACE ON THE SKAGIT FLATS

Great Northern Railway's Train Number 59 left Seattle at 4:30 P.M.
bound for Bellingham -- February 20, 1914
Train stopped at Burlington to take on passengers
two men about twenty-five-years-old got on and entered the smoking car
they soon left and walked to the vestibule to tie bandanas over their faces
Both men entered the day coach
one bandit locked the door while the other shouted "Hands up!"
he walked the length of the car waving his pistol and shooting out lights
first bandit, at the rear of the coach, relieved passengers of cash and valuables
Thomas Wadsworth of Vancouver, B.C., a conductor for the Canadian Pacific Railroad,
jumped one of the bandits from the rear and wrestled him to the floor
Wadsworth was joined in the struggle by R.L. Lee from Bremerton
and A.R. Adkinson, a traveling salesman from Vancouver, B.C.
There was little room for fighting in the train car
a shot was fired passing through Wadsworth's shoulder and into his heart
Adkinson took fatal shots in the back and chest
Lee was hit by a bullet in the temple
Gunman calmly resumed his walk up the aisle saying: "Don't be afraid. It's all a joke."
When word of the robbery got to the engineer, he applied the brakes
but the bandits took this opportunity to leap from the slow-moving train
(no arrest was even made)

BUSINESSMAN SAM HILL CONSTRUCTS A MANSION ON THE COLUMBIA RIVER

Hill began construction of a mansion overlooking the Columbia to the south and Oregon -- 1914
work proceeded slowly on the sixty-foot by ninety-three-foot building near Goldendale
he planned eight suites and room enough for 250 dinner guests
outer walls were built of reinforced concrete
Hill became irritated with Washington state officials
for not completing a highway on the north bank of the Columbia
(he abandoned the building project [1917])

FEDERAL GOVERNMENT BEGINS TO CLOSE INDIAN DAY SCHOOLS

"The Twentieth Century brought many changes in the lives of the Indians of the Pacific Northwest, but perhaps the most profound change was the gradual settlement of the region and the

erosion of concern shown by the federal government for the various reservations. While the state was unsettled and large stretches of territory had few residents, there seemed to be a great need for special government schools and services for Indians. But gradually more and more towns and cities grew up, some at the expense of the tribes....

“With the increased settlement in Washington State there was a decrease in the number of services provided by the federal government to the tribes. Perhaps the first tangible indication of the change was the closing of the different reservation day schools. These reservations had each received [a] government school and a teacher, and for nearly a generation they had enjoyed the benefits of an elementary education at their homes. As local educational programs expanded, government officials began to question the great expense of the reservation day schools. They argued, and quite persuasively, that since the Indians and the whites worked together, there was no reason why they should not be educated together.”⁷⁵

“With the closing of the schools came a great reduction in the number of government employees on each reservation. No longer did the government provide a boss farmer to supervise the farming activities of the Indians, and the Indian police, who had been so effective in helping to govern the reservations and protect the people from intruders, were also eliminated, leaving many reservations without any police protection at all.”⁷⁶

FORT SPOKANE BOARDING SCHOOL CLOSES

Fort Spokane Indian Boarding School operated until 1914

then Indian children attended day schools closer to their homes

Several factors contributed to the failure of the Fort Spokane Indian Boarding School:

- Indian parents were understandably resistant to entrusting their children to strangers;
- parents preferred the old day schools that allowed their children to return home after class;
- school was located at Fort Spokane far from most of the settlements on the reservations making family visits difficult

HIRAM GILL AGAIN RUNS FOR MAYOR OF SEATTLE

Once again ignoring the fact he had been re-called by the city’s voters,

Gill was ready for a new run for the mayor's office

but this time as a closed-town advocate -- March 1914

he promised to crack down on vice that he had openly supported during his first term in office

Gill's opponent, then-mayor George F. Cotterill, received the backing of the Employer's Association which alienated organized labor

On a rainy March day organized labor provided enough votes to elect the newly-reformed Hiram Gill to a four-year term by the largest margin anyone had ever won the office

When he took office Mayor Gill led highly publicized police raids on liquor stores, restaurants and the Rainier Club -- causing \$20,000 in damage to two establishments even prohibitionists were offended by the mayor’s actions.

Mayor Gill ran a closed town

⁷⁵ Vine Deloria, Jr., *Indians of the Pacific Northwest From the Coming of the White Man to the Present Day*, P. 111.

⁷⁶ Vine Deloria, Jr., *Indians of the Pacific Northwest From the Coming of the White Man to the Present Day*, P. 112.

he offered the post of chief of police to one of his political foes, Judge Austin E. Griffiths.
who did not want the job but was talked into it
by First Presbyterian Church's Rev. Mark A. Matthews
Griffiths tightened up on police conduct, improved conditions at the city jail,
and got street lighting placed into dark alleys
within a few months there were pictures of Hi Gill smashing kegs of whisky in illegal saloons
and breaking up gaming devices with a sledgehammer
within a year Seattle Times publisher Colonel Alden Blethen was demanding Gill's recall
on the ground that he was too easy on Wobbly agitators

FREDERICK WEYERHAEUSER HAS RISEN FROM RAGS TO RICHES

After the death of his wife Sarah Elizabeth Bloedel Weyerhaeuser [1911]

Frederick Weyerhaeuser, who had immigrated at age eighteen penniless from Germany [1852],
spent the remainder of his days quietly tending to the garden of one of his Pasadena homes
he told two of his children how amused he was when tour busses stopped outside his mansion
and announced that **"Frederick Weyerhaeuser, the richest man in the world, lived
there..."**

"If they had only realized," son Frederick and daughter Louise Weyerhaeuser recounted,
**"that the man spading his poppies, dressed in gardening clothes, topped most of the time with a
rather worn gray sweater, was the man they were trying so hard to meet, they would have been
surprised indeed."**⁷⁷

From humble beginnings Frederick Weyerhaeuser became the richest and most influential
timberman in the world

he eventually became the eighth-richest American of all time
with a net worth of \$85 billion (in 2016 dollars)⁷⁸

Frederick Weyerhaeuser died while on vacation in Pasadena, California -- April 4, 1914
Weyerhaeuser Corporation was under the leadership of John P. Weyerhaeuser

LABOR ACTIVITIES IN WASHINGTON STATE ACHIEVE VARYING RESULTS

On the plus side for unions, most mining companies had contracts with Mine Workers Union -- 1914
under a new contract labor peace was maintained

new electric power plants provided lights and ventilation in the mines
accidents were investigated in detail
rescue training provided

Losses for unions included the Sawmill and Timber Workers Union

that attempted to extend membership to all loggers, Sawmill Workers and Shingle Weavers alike
under an American Federation of Labor Charter

Tacoma shingle weavers struck for an eight-hour day -- May 1914
in response sawmill owners locked out sawmill workers and broke the strike
Sawmill and Timber Workers Union was forced to give up its Charter

⁷⁷ William Bancroft Hill, Frederick Weyerhaeuser, and Louise Bertha Lindeke Weyerhaeuser, *Frederick Weyerhaeuser, Pioneer Lumberman*, Minnesota Historical Society, 1940, P. 49.

⁷⁸ "The All-Time Richest Americans," *Forbs.com*

(Shingle Weavers' Union reorganized the next year [1915])
Tacoma's smelter operated the largest combined copper refinery and smelter in the nation
Slavic workers held an unsuccessful strike to protest wage cuts and increased hours -- 1914
Laundry Workers Union was composed mostly of women
they staged an unsuccessful strike for union recognition -- 1914
Tacoma Labor Council helped them continue to organize even after the loss
American Federation of Labor (AFL) members were disheartened on the political front
when an initiative campaign for an eight-hour day failed
Disheartened by the defeats, union members drifted away, leaving a vacuum
that the Industrial Workers of the World (IWW) rushed in to fill
with a mighty display of violence
IWW opened a Union Hall in Tacoma at 14th and A streets
Wobblies began to agitate and organize loggers in the woods -- 1914

LEVI AND MAY ARKWRIGHT HUTTON LIVE WELL IN SPOKANE

Suffragette May Arkwright Hutton and her husband Levi lived in their elegant apartment
on the fourth (then top) floor of Levi Hutton's downtown Hutton Building
Next they moved to a mansion they had built, with spacious acreage, at 17th Avenue and Crestline
east of the town center [July 1914]
They soon realized they had more land than they needed
they donated a large portion to the city for a park
They maintained their grand style of entertaining
with dinners and gatherings for large numbers of guests

EUROPEAN EVENTS SPIN OUT OF CONTROL

Competing ethnic group struggled to establish nationalistic control of countries and empires
struggles to expand led to vast military build-ups and the beginning of an arms race
national alliances merged and dissolved
until the Austro-Hungarian Empire achieved dominance [1867]
conquering the ethnic-dominated countries of the Balkan Peninsula
(Greeks, Czechs in Bohemia, Yugoslav people in Croatia and Bosnia and the Serbs)
Archduke Francis Ferdinand, Crown Prince of the Austro-Hungarian Empire
was a strong supporter of granting greater autonomy to all ethnic groups in the Empire
and of addressing their grievances
Franz Ferdinand and his wife Sophie, Duchess of Hohenberg
were visiting Sarajevo the capital and largest city of Bosnia
their car was attacked when a grenade was thrown at their car
Ferdinand deflected the grenade and it detonated far behind them
in a second attack in Sarajevo Franz Ferdinand and Sophie were murdered by Gabriel Princip
and other fanatics who wanted to unify of all the Slavic peoples -- 1:15 P.M., June 28, 1914

SMITH TOWER GRACES SEATTLE'S SKYLINE

Hand gun manufacturer and typewriter king Lyman Cornelius Smith of Syracuse, N.Y.
decided to build a fourteen-story building in the remote city of Seattle
His son Burns Lyman Smith had a loftier proposition

build the tallest building West of the Mississippi River
a twenty-one-story building topped with a twenty-one story tower
topped by a pyramid shaped Gothic cap reaching 522 feet into the air
at the time and one of the world's first skyscrapers
this structure would rest on 1,276 pilings buried fifty feet below into bedrock
Little wood was used in construction of the Smith Tower
window frames and sashes were made of bronze
steel doors were hand finished to resemble highly grained mahogany
mosaic tiles, Alaska marble and Mexican Onyx provided a mirrored backdrop
for highly polished brass used as a trim on the elevators and the telegraph and mail chutes
Crown jewel of the Smith Tower is the legendary 35th floor Chinese Room
named for the extensive carved wood and porcelain ceiling
and ornately carved blackwood furniture -- gifts to Mr. Smith from the Empress of China
observatory's furnishings include the famed Wishing Chair produced by a skilled Chinese carver
incorporates a carved dragon and a phoenix, which when combined, portends marriage
thus, according to legend, any wishful unmarried woman who sits in it
would be married within a year
(to validate the claim Smith's daughter was wed
in the observatory a year after her visit to the building's opening ceremony)
L.C. Smith did not live to see his \$1 million tower completed
but his son was there opening day -- July 3, 1914
when some 4,000 Seattle dignitaries and commoners rode to the 35th floor
to gape at the city below from the observatory deck

“CENTRAL POWERS” OF EUROPE UNITE

Nations of Europe had long shared a twisted and tangled history
rulers and their subjects dominated their neighbors in a series of never-ending wars
peace was attempted through alliances with neighboring rulers and marriages
Austria-Hungary Empire had sprung from the Western Roman Empire (Central Europe)
Austria-Hungary was a dual monarchy which began in (976 A.D.)
eventually it was ruled by the House of Lorraine that ruled Hungary [from 1028]
and the House of Habsburg that ruled Austria [from 1218]
this empire consisted of Austria, Hungary, Bohemia, Moravia, Slovakia
and parts of Poland, Romania, Slovenia, Croatia and Italy -- that is Central Europe
Ottoman Empire (Eastern Roman Empire) had been ruled by a sultan from the year [1299]
at the height of its power (in the 16th and 17th centuries) this empire spanned three continents
controlling much of Southeastern Europe, Western Asia and North Africa
along with support from smaller countries
and ethnic groups such as Christian Armenians in the eastern reaches of the empire
after a series of incursions and wars
Istanbul, Turkey was all that remained of the Ottoman Empire
German Empire was created from a portion of the Western Roman Empire
by proclamation of Wilhelm (William I) [January 18, 1871]
this empire consisted of twenty-six kingdoms, grand duchies, duchies, principalities, cities

and the Kingdom of Prussia which composed some sixty percent of the German Empire
German Empire emerged as one of the most powerful industrial economies on earth
Europe's "Central Powers" was formed when the Ottoman Empire joined in an alliance
with the Austria-Hungary Empire and German Empire [1914]

"ALLIED POWERS" OF EUROPE FORMS

British Empire had begun when the kingdoms of England and Scotland united [1496]
this gave rise to the British Navy which allowed colonies around the world to be established
Queen Elizabeth (I) was in power [November 17, 1558-March 24, 1603]
when the eastern portion of North America was added to the empire
at its height, the British Empire was the largest in history
military and economic tensions between Britain and Germany
were major causes of the upcoming war

however, the British Government knew its armed forces were too small
to take on the might of the Central Powers alone

French Empire had begun when colonies were established in North America, the Caribbean and India
(during the 17th Century) and was expanded by Napoleon Bonaparte in the (early 19th Century)
parts of Africa, Indochina and the South Pacific were added [1850s]
at its height, the French Empire was one of the largest in history

Russian Empire was one of the largest empires in world history stretching over three continents
House of Romanov ruled the Russian Empire (from [1721]) until [1762])
its German descendants of the House of Romanov (ruled from [1762-1917])
all of Northern Europe and Alaska was under the Russian Empire's domination

These three empires signed an agreement, the Triple Entente,
linking them together [August 31, 1907]

WAR ERUPTS IN EUROPE

Following the crisis touched off by the assassination of Archduke Ferdinand of Austria in Sarajevo
Austria-Hungary declared war on Serbia -- July 28, 1914

Events happened very quickly:

- Russia mobilized its military in support of its ally Serbia -- July 31, 1914;
- Germany declared war on Russia -- August 1, 1914
Russia's ally France ordered a general mobilization the same day;
- German troops occupied Luxembourg -- August 2, 1914
- Turkey (the former Ottoman Empire) joined in an alliance with the German Empire
when a secret treaty was concluded -- August 2
Turkey was to declare war on the Allied Powers
one day after the German Empire declared war on Russia
- France and Germany declared war on each other -- August 3, 1914;

FIRST SHOTS ARE FIRED IN THE GREAT WAR

German troops crossed the border of neutral Belgium and attacked the city of Liege -- August 4, 1914
German military operations in Belgium were intended to bring its 1st, 2nd and 3rd armies
into position to initiate an invasion of France

Great Britain declared war on Germany for this violation of Belgian neutrality -- August 4
Germany established submarine warfare by unleashing its U-boats (Underwater boats)
to break the British control of the high seas
United States declared its neutrality -- August 4, 1914

UNITED STATES IS OF TWO MINDS WITH THE EUROPEAN WAR

President George Washington had set international policy for the country in his farewell address
he had warned the new nation to remain neutral in the affairs of Europe
following this advice our foreign policy took a predominately isolationist position
While we remained isolationist in foreign affairs, the country energetically expanded domestically
reaching into the west and into the north through the purchase of Alaska
At the close of the Spanish-American War [1898]
United States gained temporary control of Cuba
and indefinite colonial authority over Puerto Rico, Guam and the Philippines
America proceeded to expand into foreign markets not only for territorial advantages
but also for the economic benefit
At the outbreak of European hostilities America pursued a policy of isolationism -- 1914
President Woodrow Wilson and Congress maintained strict neutrality
avoiding conflict while trying to broker a peace
however, Americans continued to conduct business as usual
trade in such goods as food, clothing, medicines, equipment, and even arms went to both sides
American ports were open to all powers so long as they were used for non-military purposes
both belligerent powers agreed not to interfere with neutral shipping
business rapidly expanded in across the nation as the economy boomed
management, which was making money, was pro-war
labor unions, which faced the possibility of losing members, were opposed to the war

AUSTRIA-HUNGARY DECLARES WAR ON RUSSIA

Russia was strong but unready for war
it was estimated that it would take Russia six weeks to mobilize her army
after it had stated its intention to do so [July 31, 1914]
every day that passed gave the Russian army one more day to get ready
Austria-Hungary declared war on Russia -- August 6, 1914

RUSSIAN ARMIES INVADE EASTERN GERMANY

As Russia had promised its ally France, Russian 1st and 2nd Armies
began their advance into Germany to divert German resources and relieve pressure on France
during the opening weeks of the war
Both Russian Armies advanced in a two-pronged formation
separated by over 100 kilometers by the Masurian Lakes
For the Germans, the Russian advance came much sooner than expected
they had sent the great bulk of their forces west to face France
Russia's Second Army had advanced to threaten the region and its capital city, Konigsberg
(present-day Kaliningrad)

outnumbered, the German Eighth Army fell back to the Vistula River
but communication between Russia's First and Second Armies was poor -- August 7-9, 1914

AMERICAN BANKING MAKES LARGE LUCRATIVE LOANS TO BRITAIN AND FRANCE

J.P. Morgan, Jr. had taken over the Morgan House of Banking after the death of his father [1913]
at the outbreak of war, J.P. Morgan, Jr. had offered wartime financing to Britain and France
loans were also made to Russia

so much money was loaned that charges were made the banker was conspiring
to maneuver the United States into supporting the Allies in order to rescue his loans
Morgan favored the British government in providing loans
his banking firm became the official purchasing agent for the British government
buying cotton, steel, chemicals and food -- receiving a 1% commission on all purchases
Morgan organized a syndicate of about 2200 banks
and floated a loan of \$500,000,000 to the Allies

Control of the American monetary system had been given to the Federal Reserve System [1913]
an agency created by the federal government to avoid financial panics experienced in the past
J.P. Morgan was a member of the advisory council
for the Federal Reserve Bank of New York
thus the banker was an advisor to the regulator

PANAMA CANAL PROJECT IS COMPLETED

(Great Northern Railway's chief engineer John Frank Stevens was now working on the Panama Canal
he had been joined by his assistant, Major George Washington Goethals [February 1907]

After ten years of American construction effort
an enormous celebration was planned for the official opening of the canal
however, the outbreak of war in Europe forced cancellation of much of the festivities
only a modest local affair marked the event as the Panama Railway steamship *SS Ancon*
piloted by Captain John A. Constantine, the Canals first pilot
made the first official transit of the canal -- August 15, 1914

Washington State moved 8,000 miles closer to New York and to the war in Europe
as it became possible to ship articles to the Old World at a low cost

ISOLATIONISM KEEPS THE UNITED STATES OUT OF WAR

At the outbreak of European hostilities America pursued a policy of isolationism -- 1914
President Woodrow Wilson and Congress maintained strict neutrality
avoiding conflict while trying to broker a peace

President Woodrow Wilson urged America to be **“impartial in thought as well as in action...neutral in fact as well as in name.”** -- August 19, 1914

However, Americans continued to conduct business as usual
trade in such goods as food, clothing, medicines, equipment, and even arms went to both sides
American ports were open to all powers so long as they were used for non-military purposes
both belligerent powers agreed not to interfere with neutral shipping
business rapidly expanded in across the nation as the economy boomed
management, which was making money, was pro-war

labor unions, which faced the possibility of losing members, were opposed to the war
Sentiment soon polarizes Americans
into pro-Allies, pro-Germans, or pro-neutral
unions were anti-war
management was pro-war

JAPAN DECLARES WAR ON GERMANY

(One day after Britain entered the Great War against Germany [August 4]
the British foreign secretary requested limited naval assistance from the Japanese navy
in hunting armed German merchant ships
Japan gladly agreed, seeing the war as a great opportunity to advance its own interests in Asia
Government of Japan sent an ultimatum to Germany, demanding the removal of all German ships
from Japanese and Chinese waters and the surrender of Germany's largest overseas naval bases
to Japan [by noon August 23])
When Japan's demands were not met, Japan declared war on Germany -- August 23, 1914

RUSSIA LOSES THE BATTLE OF THE TANNENBERG RIVER IN GERMANY

Suffering from poor communication the Russian First and Second Armies
an advance to the West was begun by the Second Army
German resistance was encountered all along the front
most of the units turned to the northwest toward the Vistula River
leaving only a single unit to continue the advance as planned
German commanders intercepted two messages between the Russian First and Second Armies
these revealed the First Army would be marching away from the Second Army
With this knowledge of Russian plans, the German command ordered an attack
German troops surrounded Russia's Second Army on the German Eastern Front
Russian efforts to break out ended in costly failure -- August 26, 1914
of the 150,000 men in the Russian Second Army only 10,000 actually managed to escape
there were over 30,000 Russian casualties
more than 95,000 Russian soldiers were taken prisoner
many Russian soldiers simply threw away their rifles and surrendered
Battle of Tannenberg was a catastrophe for the Russian Army

GERMANY'S SUCCESSFUL INVASION OF BELGIUM TURNS TO THE INVASION OF FRANCE

German juggernaut was stopped by the French at the Marne -- September 3, 1914
both sides were forced to dig trenches and settle in for a horrendous three-year stalemate
Germany stepped up submarine warfare by unleashing its U-boats
to break the British control of the high seas

BATTLE OF THE MARNE RIVER IN FRANCE

German forces advancing in France were within thirty miles of Paris
alerted by French air reconnaissance and radio intercepts,
(the first time either had been used in a major conflict)
French Commander-in-Chief Joseph Joffre ordered an attack

French Sixth Army opened a gap between Germany's First and Second Armies -- September 6, 1914
requisitioned Paris taxis and buses rushed troops to the front
(this was the first extensive use of motorized transport in wartime)

Germans embarked on a retreat that ended north of the Aisne River -- September 10, 1914
this became the beginning point of trench warfare

French troops with the help of British Expeditionary forces tried to take advantage of the breach
but attacks failed to dislodge German positions north of the Aisne River
French, British and Germany armies began a series of flanking maneuvers
known as the "race to the sea," which left in its wake a system of linked trenches
protected by barbed wire

Battle of the Marne River saved Paris from capture -- September 12, 1914
by pushing the Germans back some forty-five miles
it stopped the massive German advance that had threatened to overrun France
and thwarted German plans for a quick and total victory on the Western Front

Battle of the Marne was a great strategic victory -- it enabled the French to continue the war
however, the Germans succeeded in capturing a large part of the industrial northeast of France
furthermore, the rest of 1914 saw a geographic and tactical deadlock
(that would take another three years and countless lives to break)

LABOR WINS A MAJOR VICTORY IN THE UNITED STATES

Congress passed the Clayton Anti-Trust Act -- October 15, 1914
interlocking corporations were made illegal
this law also placed unions on an equal footing with corporations in negotiations
unions were exempted from anti-trust laws
unions could not be declared combinations in restraint of trade
strikes, picketing and boycotting were all declared legal
court injunctions could no longer be used against unions to break strikes

American Federation of Labor (AFL) President Samuel Gompers
called it "labor's charter of freedom"

TURKEY ENTERS THE GREAT WAR

Turkey (the former Ottoman Empire) did not enter the Great War
until its navy bombarded Russian ports on the Black Sea -- October 29, 1914
(Allied Powers, declared war on the Ottoman Empire on [November 4])

WAR EXTENDS BEYOND EUROPE TO THE NORTH SEA

Great Britain responded to Germany's use of newly-developed U-boats
by declaring the entire North Sea a military area -- November 2, 1914
therefore, all neutral ships will pass only at their own risk
Germany responded with Wolfpacks of U-boats to sink shipping in the North Sea

IMPACT OF THE WORLD WAR IN AMERICA

War was a shock for most Americans and a staggering blow to progressives
whose faith in human reason and human goodness suffered horribly

Most Americans wanted the Allies to win
but more importantly they wanted the United States to remain neutral
Socialist Party, Industrial Workers of the World and pacifists
were all opposed to entry into war as a matter of principle
America, while maintaining a neutral position, began to profit from European war needs
by sending cargoes to both sides in the conflict

REFORMERS IN WASHINGTON STATE ATTEMPT TO CHANGE LAW THROUGH INITIATIVES

Voters in Washington had approved the Initiative and Referendum Process [November 5, 1912]
since it took time to gather the necessary number of voters' signatures on petitions
1914 provided the first real opportunity to place proposed legislation on the ballot
Washington's citizens took full advantage of the new opportunity to write law

Newly- allowed Initiatives were written and submitted to the voters on a variety of subjects:

- Statewide Prohibition, Eight Hour Law, Drugless Healers, Abolishing the Bureau of Inspection,
- Blue Sky Law (to regulates the offering and sale of securities to protect the public from fraud),
- Abolishing Employment Offices, Injured Workmen, Convict Labor Road Measure, Fish Code,
- Abolishing the Tax Commission, Legislative Reapportionment, Fundamental Reform Act,
- Legislative Reapportionment, State Road Measure

(Of these proposed laws only two proposals were enacted into law:

Abolishing Employment Offices [Chapter 1, laws of 1915]

Statewide Prohibition [State Constitution Amendment Number Seven])

WASHINGTON STATE EXPANDS ITS PROGRESSIVE AGENDA

Election was held in which nearly 95% of all eligible voters in the state voted -- November 3, 1914
two new Congressmen Republican Albert Johnson

Spokane Democrat Congressman Clarence C. Dill served two terms [1915-1919]

Bellingham Republican Congressman Lindley H. Hadley served nine terms [1915-1933]

Direct Legislation League achieved success in implementing a direct primary
and both the Initiative and the Referendum processes along with a recall process -- 1912
this success was a result of clever politics and hard work by Reformers who little left to chance
they relied on the Grange and Labor Unions for their major efforts

Several labor law reforms were enacted

worker's compensation, child labor laws, eight-hour workday for women,
and minimum wages for women and children

State legislature proposed a state constitutional amendment to prohibit the sale of alcoholic beverages

Prohibition was approved by a vote of: 189,840 for and 171,208 against

(implementation was to take place at midnight [December 31, 1915])

Seattle approved the initiative by a whopping sixty-one percent

this was an anti-saloon vote rather than an anti-drinking vote

alcohol consumption was confined to homes and druggists' medicinal supply

some counties voted to be "dry" except for larger cities

British Columbia, which did not place any restriction on alcohol, so close

many opportunities for smuggling in liquor existed

liquor was cached along the border

this was a common practice along coves and islands of North Puget Sound
Canadian officials did little to stop the practice

MARK REED IS A SUCCESSFUL BUSINESSMAN AND POLITICIAN

Simpson Logging Company owner Sol Simpson had placed his son-in-law Mark Reed
in the position of manager of Lumbermen's Mercantile
Reed took over the Simpson interests just as the Panama Canal opened -- 1914
to meet the expanded market, he introduced new timber products
improvements in equipment and an expanding labor force increased supply to meet the need
(World War [1917-1918] also rapidly increased the demand for lumber products)
Mason County grew in population as immigrants flooded into the logging camps and mill towns
Shelton, Washington was the economic center and Mark Reed was elected mayor
(fire in a hotel [1907] had devastated the downtown
eleven people were killed and twenty others were injured)
(in a second fire [August 1914] seventeen buildings went up in flames
under Mark Reed's leadership, the town rebuilt a fireproof downtown
Mark Reed was elected to the Washington Legislature -- 1914
(he served as state representative until 1931 and was elected Speaker of the House [1923-1925])
during his time in office he energetically pushed his vision for the county and the state
he was a champion of Washington's groundbreaking Workmen's Compensation Act
he pushed legislation to provide workers' compensation, imposed taxes to fund reforestation
he supported public ownership of electrical utilities
he favored a sales tax and a tax on utilities
he improved working conditions in logging camps and mills
he proposed increased funding for schools, colleges and highways
Mark Reed was one of the most powerful politicians in the state
he was often suggested as the progressive candidate for the governorship
but he chose to focus on his duties at Simpson Logging Company instead

KEYPORT, WASHINGTON BECOMES HOME TO THE PACIFIC COAST TORPEDO STATION

(Private land was officially acquired and turned over to the Navy [July 20, 1914]
Rear Admiral V.L. Cottman, Commandant of Pacific Coast Torpedo Station allowed the residents
to stay until their crops could be harvested, (but no later than [November 1])
Lieutenant Commander Henry N. Jenson arrived at Keyport -- November 11, 1914⁷⁹
the new Navy base was officially commissioned as Pacific Coast Torpedo Station (PCTS)

CHICAGO, MILWAUKEE, ST. PAUL AND PACIFIC RAILROAD REACHES SEATTLE DIRECTLY

St. Paul and Pacific Railroad Corridor featured sixteen tunnels
Snoqualmie Tunnel (Tunnel No. 50) is a very impressive structure
located at 11,888 feet elevation
blasted through Snoqualmie Pass's basalt rock at a cost of two million dollars ([1912-1914]
finished tunnel provided a direct connection for trains to reach Seattle from the east

⁷⁹ Lisa Poole with Dianne Robinson, *Torpedo Town U.S.A.*, P.17.

it took 700 men to complete the tunneling project which opened -- January 1, 1915
tunnel featured large wooden doors on either end that were kept closed in the winter
except when a train came through to prevent ice formation
First eastbound train passed through the tunnel -- January 15, 1915
electrification of the railroad eliminated smoke dissipation issues in the tunnel [1917]
(Today, Chicago, Milwaukee, St. Paul and Pacific roadbed
forms part of the John Wayne Pioneer Trail
six tunnels link the section in Washington State referred to as the Iron Horse State Park
including the longest trail tunnel in the country at -- 2.3-miles: Snoqualmie Tunnel, No. 50)

EUROPEAN WAR TOUCHES THE UNITED STATES

American merchant ship *William P. Frye* was on its way to England with a cargo of wheat
she was torpedoed in the South Atlantic off Brazil by the Germany Navy -- January 28, 1915
Americans were outraged at this first display of German aggression
German government's apology and admission that the attack was a mistake
did little to salve America's anger
Germany declared a war zone around the British Isles -- February 4, 1915

PACIFIC NORTHWEST'S POOR ECONOMY KEEPS WAGES DOWN

West Coast Lumberman's Association took advantage of the weakened condition of the unions
attacks were launched against the timber industry unions
fifteen strikes and lock-outs were on-going in as many towns in Washington -- February 1915
and the number was increased rapidly

SHINGLE WEAVERS IN EVERETT RECEIVE A WAGE CUT

Everett shingle mill owners in a united effort lead by David Clough
reacting to soft prices for shingles (the winter before)
cut shingle weaver wages by 20% -- February 1915
notices that shingle mills would be open shop were posted: **"We will employ only such men as we please, organized or unorganized, and will discharge anyone when in our judgment it is necessary."**⁸⁰

Everett shingle weavers, now members of the Sawmill and Timber Workers Union, went on strike
anti-union violence escalated to a level previously unknown to the Shingle Weavers
union members defended themselves bare fisted as they beat back the hired thugs
for acting in self-defense they were arrested, called **"Law breakers"**
and **"Trouble makers"** by the *Everett Daily Herald* and the *Everett Tribune*⁸¹

ITALY JOINS THE ALLIES IN THE WAR EFFORT

(Italy had become a nation when most of the states of the peninsula were united
under king Victor Emmanuel II of the House of Savoy [March 17, 1861]
Italy developed its own colonial Empire (during the last two decades of the 19th Century)

⁸⁰ Philip C. Emerson, "Strike" Pacific Northwest labor & Civil Rights Projects, university of Washington.

⁸¹ Philip C. Emerson, "Strike" Pacific Northwest labor & Civil Rights Projects, university of Washington.

although an ally of Germany and Austria-Hungary, Italy signed the Treaty of London and declared war on the Central Powers -- April 26, 1915

SECOND AMERICAN SHIP IS SUNK BY GERMANY

Despite American neutrality the American tanker *Gulflight* was torpedoed and sunk by a German U-boat (U-30) -- May 1, 1915
Germany quickly offered to make reparations for the error but refuses to change its strategy of unrestricted submarine warfare

BRITISH PASSENGER LINER *LUSITANIA* IS SUNK BY A GERMAN U-BOAT

Lusitania sailed out of New York's Harbor's Pier 54 -- noon May 1, 1915 she carried 1,959 people: 1,257 passengers and a crew of 702 off southern Ireland, *Lusitania* encountered fog and reduced speed to eighteen knots German U-boat U-20 fired a single torpedo at about 2:10 P.M. May 7, 1915 which struck the ship under the bridge a second, more powerful explosion followed some historians speculate the U-20 had, in fact, fired more than one torpedo however, the ship had been carrying shells and cartridges for the war effort 4,200,000 rounds of rifle cartridges, 1,250 empty shell cases, and eighteen cases of non-explosive fuses were listed on the manifest there is speculation she may have also carried undeclared high explosives in the confusion which followed the blast, 1,198 of the 1,959 people (114 Americans) were lost Sinking of the *Lusitania* turned public opinion in many countries against Germany this act was instrumental in bringing the United States into the war President Woodrow Wilson demanded reparations and an end to German attacks on unarmed passenger and merchant ships Despite Germany's initial assurances to the contrary the attacks continued

SAWMILL AND TIMBER WORKERS LOSE THEIR EVERETT STRIKE

Sawmill and Timber Workers Union shingle weavers ended their unsuccessful strike -- May 12, 1915 with the promise of the operators to raise wages again when the lumber market improved (During the year the Sawmill and Timber Workers Union fought fifty-five "lock-outs" (union members were banished from work) and lost every case Sawmill and Timber Workers Union was almost completely destroyed however, the few remaining locals did not collapse)

UNION PROTECTION IS NEARLY LOST IN THE WASHINGTON TIMBER INDUSTRY

As a result of the complete failure of the Sawmill and Timber Workers Union to protect its members against lock-outs and to win a single strike [1915] American Federation of Labor (AFL) revoked the union's jurisdiction over the sawmill and logging camp workers Sawmill and Timber Workers Union had only its jurisdiction over the shingle weavers left

CONSTRUCTION OF THE DALLES-CELILO CANAL IS COMPLETED

Travel on the Columbia River was hampered by a series of rapids
Construction began after Congress appropriated almost five million dollars [1904]
eight-and-a-half mile long Dalles-Celilo Canal is eight feet deep and 3,000 feet long
this system it contains five locks all forty-five feet wide
three are 265 feet long while the remaining two are each 462-foot long
Canal and locks were completed eleven years after the first work was done -- May 1915
after removal of this obstacle on the Columbia River
navigation upriver, impeded since the beginning of time, became possible
more than 25,000 people were attracted to the celebration
one hundred guns saluted the sunrise that day and did so again at the sunset
there were many celebratory speeches
this event was celebrated in Portland by sending a steamboat on a trip to Lewiston and back
Columbia River was now open for navigation as far as Priest Rapids 420 miles from its mouth
and up its principal tributary, the Snake River, to points beyond Lewiston, Idaho
more than 500 miles from the Pacific Ocean
however, the Celilo Canal and locks never lived up to the expectations of its promoters
this project was destroyed when it was covered by The Dalles Dam and lock [1957]

ANNA LOUISE STRONG BECOMES A PROGRESSIVE ACTIVIST IN SEATTLE

(Anna Louise Strong was born in Friend, Nebraska the daughter of middle-class liberals
who were active in missionary work and the Congregational Church
An unusually gifted child, Anna raced through grammar and high school
she graduated from conservative Bryn Mawr College [Pennsylvania]
and began her graduate work at liberal Oberlin College [Ohio]
at age twenty-three she earned her Ph.D. in social work from the University of Chicago
she was one of the first women to achieve such a high degree
As an advocate for child welfare for the United States Education Office
she organized an exhibit and displayed it extensively throughout the United States and in Europe
when she brought her display to Seattle it attracted more than 6,000 people per day [May 1914]
culminating with an audience of 40,000 [May 31, 1914]
unable to find solutions for the needs of children and the working class
Strong became convinced that capitalism was at fault -- she became an avowed Socialist)
At age thirty Anna Louise Strong returned to Seattle -- 1915
to live with her father who was pastor of Queen Anne Congregational Church
she favored the more liberal political climate in Seattle which was pro-labor and progressive
an energetic leader, she secured a job writing for *The Union Record* newspaper in Seattle
she was an outspoken champion of the labor movement
and a welcome addition to women's groups and liberal causes
she also enjoyed the outdoors and mountain climbing and led climbing parties up Mt. Rainier
several cooperative summer camps in the Cascade Mountains were organized by her
Anna became a practicing sociologist and welfare worker -- 1915
an intellectual, Anna Louise Strong became one of America's most radical voices
she wrote widely-read books on social reform:
China Millions, The Soviet World, Spain in Arms, and I Change Worlds

WILLIAM BOEING TAKES HIS FIRST FLIGHT

Aviator Terah Maroney landed an old Curtiss airplane on Lake Union -- July 4, 1915
Bill Boeing and his friend Naval Lieutenant George Conrad Westervelt
stood in line and took several flights each sitting on the wing holding on to the leading edge
as the plane skipped across the choppy water and into the sky
Exhilarated by the experience, Boeing decided to take lessons
at the Glenn L. Martin Flying School in Los Angeles and he purchased one of Martin's airplanes
Martin sent pilot Floyd Smith to Seattle to assemble Bill Boeing's new Martin TA hydroaeroplane
and to teach its owner to fly
Huge crates arrived by train, and Smith assembled the plane
in a tent hangar erected on the shore of Lake Union
William Boeing became a pilot

CANADIAN NATIONAL RAILWAY IS THE SECOND TRANS-CANADA RAILROAD

(Several Canadian railroads had failed in their agreement with the national government
to provide service across Canada
as a result the Canadian government folded these operations into one operating unit
for administrative and financial purposes
although the individual systems maintained their own names
construction of a second Canadian transcontinental railroad
was begun by the government [1903])
This second Canadian transcontinental line was completed
from Moncton, New Brunswick to Prince Rupert, British Columbia --1915
connections were made to Vancouver, British Columbia from Fort George
failure to build this transportation service
would have given strength to American annexation efforts in British Columbia

YET ANOTHER AMERICAN SHIP IS SUNK BY GERMANY

First complete destruction of an American ship by German U-boat occurred -- July 25, 1915
Leelanaw of New York was homeward bound with a cargo of flax from Belfast, Ireland
she attempted to escape but was stopped by a German submarine firing on her
Leelanaw captain sent the ship's papers to the submarine captain by small boat
German officer determined the captain could not take the contraband cargo into port
he decided to destroy it by sinking the ship
however, he gave the crew all of the time they needed to take to their boats
After the ship was sink by shot and torpedo fire, the submarine captain
took the American officers aboard and towed the crew's boats toward the mainland coast
eight miles from land a strange steamer appeared
captain of the German U-boat put the Americans in their boats
before disappearing under water
Crew of the *Leelanaw* reached land at Kirkwall, Scotland -- next morning

WILLIAM BOEING BELIEVES AMERICA SHOULD PREPARE FOR WAR

War was raging in Europe, Africa, and Asia

America, safely located behind two oceans, did not feel threatened by the conflict

but Bill Boeing was one of a growing number of Americans who advocated “preparedness”

Fourteen men and five women had formed the Aero Club of the Northwest

in the Ladies’ Annex of the University Club -- August 24, 1915

William Boeing was elected president

Boeing was a zealous advocate for National Preparedness

he was also interested in the ideas of Henry Woodhouse, editor of *Flying* magazine,

who wrote, **“With 5,000 aviators, this country would be in the position of the porcupine, which goes about its daily pursuits, harms no one, but is ever ready to defend itself.”**

EZRA MEEKER CROSSES THE CONTINENT YET AGAIN

Although he was eighty-four years old Meeker was not yet finished with his historic campaign

he drove across the trail in an 80-horsepower, 12-cylinder Pathfinder Touring Car

with his wagon cover mounted on top --1915

Meeker’s vehicle was nicknamed the Schoonermobile

Meeker used this trip primarily to lecture the need for a national highway

he emphasized the military value of this undertaking

(predating the interstate highway network by four decades)

Meeker met with President Woodrow Wilson

who endorsed the idea of a national highway [1916]

END OF MAY ARWRIGHT HUTTON’S DAYS

May Arkwright Hutton did not live to see woman suffrage become the law of the nation

her health had been declining for some time -- she soon became seriously ill

yet she managed to organize one more effort: Spokane Women for World Peace

At age fifty-five, May Arkwright Hutton died of a kidney condition -- October 6, 1915

people of Spokane, rich and poor, united in mourning May Arkwright Hutton

overshadowed in public awareness by her crusade for woman suffrage

were the many charities she had supported with both time and money

two of her favorites were the Spokane Children’s Home

and the Florence Crittenton Home for unwed mothers

Her funeral was held at the Hutton’s house, with the crowd overflowing onto the lawn

Spokane society’s upper crust, who had largely rejected her during her life, turned out in force

but so did the poor she had championed and assisted

Idaho miners, working women, unwed mothers, and other ordinary folk

Spokane Daily Chronicle lauded her as **“author, suffragist, philosopher, humanitarian and probably one of the best known women in the great northwest ... [who] in Spokane was generally beloved for her charitable and public-spirited activities.”**⁸²

ITALIAN PASSENGER LINER IS SUNK BY A GERMAN ALLY

⁸² Doris H. Pieroth, *The Hutton Settlement: a Home for One Man’s Family* P. 2-10.

Austria's first submarine operations of consequence was the sinking of the Italian steamship *Anacona* that made regular runs from Naples across the Mediterranean and Atlantic to New York City serving the needs of thousands of immigrants headed to America

Some dispute remains about whether the *Anacona* received and heeded an order to halt before the ship was struck twice by torpedoes -- November 7, 1915

Italian official figures say out of 507 on board, many of them women and children, 308 passengers were lost -- of twelve Americans were on board nine were lost along with twelve barrels of gold and a silver

as the *Anacona* went down so rapidly that it was impossible to properly deploy lifeboats

New York newspapers printed heavy coverage of this event including lists of survivors and reports of passengers who claimed that as they struggled in the water they were fired on by the submariners

President Wilson asks Congress for a standing army of 142,000 and a reserve of 400,000 members of Congress still did not respond to the growing outrage aimed at these acts

WILLIAM BOEING DEMONSTRATES HIS BELIEFS

Lumberman Bill Boeing was busy in his new "hydroaeroplane" flying with test pilot and mechanic Herb Munter as his passenger, Boeing flew to Tacoma and back to Seattle

he dropped cardboard "bombs" on a crowded Washington-California football game at the University of Washington to prove that Americans were vulnerable to foreign attack

one of the cardboard messages read: **"Protection Through Preparedness. This harmless card in the hands of a hostile foe might have been a bomb dropped upon you. Aeroplanes are your defense!!!! Aero Club of the Northwest."**

This was also the debut of the University of Washington Fight Song: *Bow Down to Washington* (Before the end of the year and Boeing had become disappointed with his Martin TA airplane Boeing asked Westervelt to design a better seaplane

Westervelt wrote later, **"I knew so little about the subject, so little about the difficulties involved, that I agreed to undertake it."**

HENRY FORD SELLS THE MODEL-T TO THE MIDDLE-CLASS

Ford's Model-T was the first mass produced automobile

assembly lines using interchangeable parts replaced individual hand crafting

Ford dropped the price from \$850 [1909] to a relatively affordable \$440 --1915 (and even less for used models)

Output leaped right off the production charts despite the fact that intercity roads in many areas consisted of little more than two muddy ruts across a field

Model-T was generally regarded as the first affordable automobile

it opened travel to the common middle-class American

SPOKANE STREETCAR ACCIDENT IS DEADLY

With popular new Model T Fords competing with streetcars for space, accidents were inevitable cars always fared the worst in a collision with a thirty-ton electric troll car

Worst accident in Spokane streetcar history occurred -- before dawn December 18, 1915
as two trolleys crossed the Division Street Bridge over the Spokane River
Suddenly the bridge deck collapsed violently, plunging the Astor Street car into the icy waters
then a steel girder from the damaged bridge came slashing down from overhead
shearing the top off of the half-submerged car

Several passengers were killed instantly and the others struggled to escape

Spokesman-Review reported an eye-witness account: **“As I was trying to climb out the car window, someone down in the car grabbed me by the feet and nearly pulled me back. His hold was finally released and I was able to climb on out. The screams of those pinned down there in the car were awful. I was the last man out of the car alive.”**

Hillyard streetcar, a second car on the line, had its front wheels on dry land
but the back of the car was dragged backward and down and the car hung at a perilous angle
its conductor and the only two passengers aboard climbed up the aisle using the seats as steps
they crawled out the front to safety

Passengers on the crowded Astor car were not so lucky
five died and twelve were injured

(engineers later suspected that the steel bridge had been damaged by debris
washed down in an earlier flood)

PRIVATE ELECTRIC COMPANIES BATTLE WITH PUBLIC UTILITIES

Public utility companies in Tacoma and Seattle provided their customers
with better service and lower cost power than did nearby privately owned utilities
Private utilities faced the prospect that their customers would notice the comparison
and would also want to form publicly owned utilities

Investor-owned utilities went to work to put the brakes on the public power movement
they tried to make the comparison more favorable to their cause
by charging less for power in certain areas,

they also worked to get state laws passed that would stop the spread of public power
Presidents of the state’s two largest privately owned utilities were regular fixtures in Olympia
where they had considerable influence on the state Legislature
they attempted to make it virtually impossible for municipal systems
to condemn the property of private utilities

State legislature passed a bill to place referendums before the voters --1915
(and again in [1921] and [1922]) that would make these restrictions law
voters rejected the proposal each time

However, in spite of the lower rates provided by the city-own electric utilities
privately-owned Seattle City Light acquired some 42,000 customers from the public company
about twenty percent of the Seattle customer base [by 1916]

SEATTLE CITY LIGHT EXPANDS THE AREA IT SERVES

City Light Superintendent J.D. Ross planned to expand City Light service to new areas
however, the new Cedar River Dam failed to hold water

Seattle Mayor Hiram Gill was opposed to the utility’s expansion but he reappointed Ross
perhaps in an effort to embarrass the superintendent

Ross went to work locating new sites for hydroelectric dams
these became the key to City Light's survival and success

PROHIBITION OF THE SALE OF ALCOHOL COMES TO WASHINGTON STATE

Saloon owners admitted that patrons had been cutting back on their drinking
since the Prohibition initiative had been approved [1914]
many saloons had closed because their leases expired,
or the saloon keepers did not want to renew liquor licenses,
or they had run out of hard liquor,
or they were afraid of general destruction to furniture and fixtures by customers

In Seattle, one of the largest cities in the nation to go dry, saw large crowds on the streets
but the enthusiasm and boisterous crowds of previous New Year's celebrations were not there
this year the loudest noise on the streets was made by vendors selling horns and cowbells

“Down below Yesler Way, where hilarity and rioting was to be expected ... there was more of pathos than of hilarity” (*The Seattle Times*)

snow began to fall and saloons closed to let staff get home early
no more than seventy-five bars and saloons remained open by 10:00 P.M.
those that remained open were very busy selling only straight drinks -- no time to mix drinks
as liquor ran out or got low more saloons closed -- New Year's Eve

At midnight all the saloons were legally required to close

“[t]he New Year had arrived with its soda pop” (*Seattle Star*)

Signs on the closed saloons said it all:

“Died December 31, 1915,” “Gone but Not Soon to Be Forgotten,” “Stock Closed Out -- Nothing Left,” “A Happy and Dry New Year,” “Closed to Open Soon as a Soft Drink Emporium”
(*Seattle Post-Intelligencer*)

Mood at the Woodinville, Washington branch of the Good Templars was far more upbeat
members had fought successfully for Prohibition -- they had a great New Year's Eve celebration

PROHIBITION TAKES EFFECT IN WASHINGTON STATE

Statewide Prohibition became the law -- January 1, 1916

Washington joined eighteen dry states that outlawed sale and manufacture of intoxicating liquors
New law mandated the closure of saloons and breweries, but it was not “bone dry”

individuals were allowed to obtain permits from county auditors

to import as much as two quarts of hard liquor or twelve quarts of beer every twenty days
Seattle Mayor Hiram Gill and his “Dry Squad”

(in a complete reversal of everything he stood for during his first term as mayor [1910-1914])

led highly publicized police raids on liquor stores, restaurants, the Rainier Club

and even private homes causing \$20,000 in damage to two establishments

even prohibitionists were offended by the mayor's actions

among those who criticized their harsh tactics was Prohibitionist Rev. Mark Matthews

Bootleggers were in business manufacturing, transporting and selling liquor in Washington

PROHIBITION IN WASHINGTON STATE

International border States such as Washington offered many opportunities for smuggling

liquor was cached along the border
this was a common practice along coves and islands of North Puget Sound
Canadian officials did little to stop the practice
Rumrunners with high-powered boats eluded Coast Guard cutters
low fogs were a frequent help to the smugglers
rumrunners about to be apprehended easily dumped the cargo overboard
Government countered with high-powered boats of their own mounted with wide-ranging guns
this increase in violence brought deaths and injuries to violators and law enforcement alike

IMPROVEMENTS IN LOGGING OPENS NEW FORESTS

After 1915]high lead logging replaced skidroads as the method of moving logs in the woods
huge spools of cable were strung overhead as rigging
trees were limbed to the top and used as spar trees to hold the suspended cables
logs, their front ends lifted off the ground, could more easily be removed from the forest
to be placed on loading platforms
Steam logging trains carried logs from the loading platforms to large mills
which were often at great distances from the forest

SHINGLE WEAVERS ATTEMPT TO REORGANIZE A UNION IN EVERETT

Shingle prices began to rise -- January 1916
“clears” (the best-quality cedar shakes) hit \$1.71 a square (one thousand bundled shingles)
Everett’s American Federation of Labor (AFL) leader Ernest Marsh set out to rebuild
Washington state’s Brotherhood of International Shingle Weavers’ of America -- January 1916
because of his dislike for the Industrial Workers of the World (IWW) he was determined
that more of an industrial union than an individual craft trade union be formed

SHINGLE MILL OWNERS PROMISE PAY RAISES TO THEIR WORKERS

In an effort to keep the union out -- especially the Industrial Workers of the World (IWW)
timber managers told the shingle workers that as soon as the prices rose again on shingles
owners would give the workers a wage increase
Since the beginning of the year workers had watched the prices rise
no wage increase was forth coming
workers realized the employers were not going to honor their word
shingle weavers knew that the only recourse they had was to organize again -- so they did

WILLIAM BOEING BUILDS HIS FIRST AIRPLANE

Wealthy lumberman William Boeing and his friend and partner Navy Lieutenant Conrad Westervelt
began final assembly in Boeing’s Lake Union boathouse on a small, twin-engine seaplane
consisting of a linen-covered wooden skeleton held together with wire
William Boeing and Conrad Westervelt believed they could build a better floatplane
Westervelt threw himself into the project as he contacted every manufacturer he could find
he arranged for the Massachusetts Institute of Technology to review his structural drawings
test were conducted in the school’s wind tunnel

There were several reasons Seattle was just about the worst place in America to build airplanes:

- high shipping and labor costs;
- lack of technology;
- bad weather

To make matters worse, Lieutenant Westervelt was transferred by the Navy to the East Coast

NAVAL LIEUTENANT CONRAD WESTERVELT LEAVES BOEING COMPANY

Conrad Westervelt never profited from his work with Boeing
 however he continued to advance aviation in his Naval career
 (during the world war he supervised construction of all Navy aircraft
 he designed the NC-4 flying boat [1919]
 which became the first airplane to cross the Atlantic
 Westervelt retired from the Navy as a captain
 he worked in aviation through World War Two
 he died in Florida [March 1956])

BAD WEATHER HITS THE PACIFIC NORTHWEST

More than 21½ inches of snow hit Seattle in twenty-four hours -- February 1, 1916
 (this huge snowfall still remains a record)
 that vast amount was added to the seven inches of snow already on the ground from day before
 before that storm was over a total twenty-nine inches had fallen
 outside of the city drifts of snow rose to four and five feet
 (Seattle's total snowfall for February -- 35.4 inches
 total for January and February combined -- 58.7 inches
 Conditions in Snohomish County -- 60.9 inches

SHINGLE WEAVERS RE-ORGANIZE A UNION OF THEIR OWN

Led by Everett's labor leader Ernest Marsh, shingle weavers started organizing a new union
 new officers were elected and conducted reorganization meetings
 this time the American Federation of Labor (AFL) craft union
 would be composed of only shingle weavers -- February 1916
 semi-skilled and unskilled workers of the Sawmill and Timber Workers Union
 would be eliminated
 this reorganized union took the name it had used [before 1913]
 International Shingle Weavers' Union of America
 it was quickly affiliated with the American Federation of Labor (AFL) as a stand-alone union
 International Shingle Weavers' Union of America organizational effort
 started at Blaine Manufacturing Company, a cooperative shingle mill, and worked its way south
 they were welcomed enthusiastically where ever they went by the shingle weavers

MEXICAN REVOLUTION MOVES INTO THE UNITED STATES

Mexican General Francisco "Pancho" Villa ordered nearly 500 Mexican revolutionaries
 to make a cross-border attack on Columbus, New Mexico
 to protest the U.S. government's official recognition of Mexican President Carranza's regime
 this raid, led by Villa himself, escalated into a full scale battle

between Villa and a detachment of General John Pershing's U.S. 13th Cavalry Regiment
eighteen Americans and about eighty Villistas were killed -- March 9, 1916
one hundred U.S. military horses and mules were captured and part of the town set on fire
Attack on Columbus, New Mexico was used as justification to send General Pershing's army
to invade Mexico in an unsuccessful year-long effort to capture General Villa
(Glen Springs, Texas was attacked killing a civilian and wounding three American soldiers [May 15]
bandits killed four soldiers at San Ygnacio, Texas [June 15]
one American soldier and a U.S. customs inspector were killed [July 31])

SILK TRAINS RUSH RAW SILK ACROSS THE CONTINENT

Bales of raw silk skeins brought from Japan to West Coast ports
were transported through St. Paul, Minnesota and other Midwestern rail centers
to East Coast distribution points in New York, New Jersey, and Pennsylvania
Raw silk, the long, delicate threads unwound from silkworm cocoons,
had long been transported by rail in the United States
however, its dramatic rise in price shortly before the Great War
(and high value for some years thereafter) demanded it be moved across the continent
on special express trains -- Silk Trains
Japan produced as much as ninety percent of the world's raw silk -- the country's principal export
about ninety percent of that arrived in the ports of San Francisco, Portland, Tacoma, Seattle
and Vancouver, British Columbia
New York City, second only to Shanghai among the world's raw silk markets,
was the center of the United States silk industry
Raw silk could have been transported from Yokohama, Japan entirely by sea
through the Panama Canal to New York
for half the freight costs of sending it by rail across the American continent
but low freight costs, important when shipping inexpensive commodities in great quantities,
were only a minor consideration when shipping costly silk
as long as silk commanded a high price, high freight costs incurred by transporting it quickly
across the continent on silk trains could be absorbed

JOHN HUELSDONK LEADS A MOST REMARKABLE LIFE

(John Huelsdonk and his wife, Dora [Wolff] Huelsdonk, were the first settlers
on the Olympic Peninsula's Hoh River
when the twenty-five-year-old German immigrant claimed a 160-acre homestead [1891]
on the west side of the Olympic Mountains in Jefferson County,
approximately thirty miles up the Hoh Valley
in the wettest area in the continental United States -- more than twelve feet of rain a year)
many pioneers found that creating a homestead was very difficult work in heavily timbered areas
cedar swamps first required draining as well as clearing
creating farmland meant cutting trees and brush by day and burning the debris by night
in order to have room to cut more the next day
huge stumps remained as obstacles
blasting them from the ground was expensive, difficult and dangerous

burning involved drilling holes in the stump which took time and patience)
to make money during the early years of homesteading, John Huelsdonk worked as a logger
unfortunately, while working in a camp north of Lake Crescent,
his hands were pulled into a block (pulley) by the sudden start of a donkey engine
this accident left him unable to perform any ordinary work at the logging camp
he returned to farming and raising livestock
over time, his hands healed and improved to the point that he could even milk cows)
many settlers left the Hoh Valley when President Grover Cleveland
established the Olympic Forest Reserve encompassing 2.2 million acres [1897]
it was the end of homesteading in the Hoh Valley
and dreams of becoming a viable farming community that would bring civilization
most of the settlers within the reserve's borders, tired of the isolation and heavy rainfall,
abandoned their claims -- convinced that without more people and roads
civilization would never arrive -- but John Huelsdonk stayed)
Trails were being cut into the wilderness of the Upper Hoh River -- 1916
John Huelsdonk next earned money by carrying heavy backpacks and equipment
for hunters, geologists, surveyors, and timber cruisers
he often strapped 175 to 200 pounds of provisions on his back
and packed them up to trail crews
because he was able to carry double loads, John received the salaries of two men,
which was important to his family's economic welfare
People on the Olympic Peninsula began hearing stories about the "Iron Man of the Hoh."
at 5 feet 10 inches tall, 240 pounds, he was known as the strongest man in the woods
stories about Huelsdonk's ability as a woodsman and his feats of strength were based in truth
but he neither sought publicity nor actively accepted it
On one occasion, Huelsdonk met by a Forest Ranger in the Olympic wilderness
John carried a camp stove on his back intent on walking the seventeen miles to a trail camp
when they met on the trail the Ranger said the stove must be heavy
John reportedly replied that the stove wasn't too bad
but the fifty-pound sack of flour in the oven kept shifting around
(over the years, the story grew until the stove became a large kitchen range
and the sack of flour became a barrel weighing 200 pounds)
In addition to packing heavy loads for money during the short working season
John Huelsdonk also trapped fur-bearing animals and hunted predators
(cougars, wolves, bears, and bobcats) for state bounties imposed to protect the elk and deer
U.S. Forest Service estimated that 500 deer and 305 elk were killed by predators [1928]
predator's hide was worth from \$5 to \$50 in bounty money from the State Game Department.
during these years that John Huelsdonk became a legendary woodsman
fearless when confronted by wild animals, John was a crack shot,
in his lifetime he collected bounties on 330 cougars, more than 150 cougars
and as many bears
(Huelsdonk was on fire patrol on the Snahapish Trail with his cougar dog, Tom [September 1933]
when a bear charged from the underbrush and hurled his dog thirty feet down the trail
dog ran, but the bear, instead of giving chase, attacked Huelsdonk,

knocking him down and grabbing him by the leg
Tom came back and attacked the bear so ferociously that it allowed Huelsdonk to escape
he kills the bear with a shot from his rifle
although suffering from a badly gashed leg and at least a dozen claw wounds
sixty-six-year-old Huelsdonk and his dog managed to walk five miles back to his farm)
(John Huelsdonk was credited with killing the biggest cougar ever seen on the Olympic Peninsula
it had been killing livestock on farms along the Hoh River for several years
because he left such huge tracks, the animal was named “Big Foot”
Huelsdonk was walking down a trail one afternoon when he noticed a large number of crows
feeding on the remains of a deer
thinking the animal was probably killed by a cougar, he rushed back to his farm
to get his cougar dogs and rifle and he began tracking the cat
an hour later the dogs treed the biggest cougar Huelsdonk had ever seen
after being shot several times, Big Foot finally fell out of the tree at Huelsdonk’s feet
dead cougar measured 11 feet from his nose to the tip of his tail [fall 1936])
(John Huelsdonk, at age 79, died in a Port Angeles hospital [October 25, 1946]
he had been sick for two weeks with a heart ailment
after a funeral in Forks, he was taken back to the Hoh Valley and buried in the family cemetery)
six months later Dora Huelsdonk, age 83, died of natural causes
at their homestead [April 27, 1947] she was buried next to John
their graves were placed by a huge bolder deposited during the last ice age
and marked with a brass plaque
Huelsdonk Homestead, located eight miles west of the Hoh Ranger Station
was listed on the Washington Heritage Register as an historic place[February 11, 1972])

NEW INTERNATIONAL SHINGLE WEAVER’S UNION OF AMERICA IS SUCCESSFUL

There were twenty-four International Shingle Weavers’ Union of America locals functioning
almost all of the old shingle weaver unions were reorganized
into the new International Shingle Weavers’ Union of America
Fourteenth Annual Convention of the International Shingle Weavers’ Union of America
was held in Seattle -- April 3, 1916
this was the first meeting of the union after the Sawmill and Timber Workers had departed
it was attended by delegates from fourteen locals who adopted a new international constitution
Seattle Union Record was made the official newspaper of the union
a new wage scale for District No. 1 (Seattle)
control of strikes was put in the hands of the union’s executive board

EVERETT SHINGLE WEAVERS PREPARE TO GO OUT ON STRIKE

Mill work was dangerous and mill owners were often ruthlessly enforced obscure rules and demands
in some instances, employees were not even allowed to talk during their work breaks
complaining about fluctuating market prices,
owners never made good on promises to raise wages
Everett shingle weavers prepared to strike
this was actually an American Federation of Labor (AFL) strike

it was not unusual for union men to carry two membership cards

SHINGLE WEAVERS GO OUT ON STRIKE IN EVERETT

Three weeks after the official reopening of the International Shingle Weavers' Union of America
Everett went on strike -- May 1, 1916
shingle mill owners hired strike-breakers (scabs) -- violence was close at hand
Seaside Shingle Company soon granted the demanded pay raise to their shingle weavers
but many of the other shingle mills, notably the Jamison Mill, began importing strike-breakers
timber barons had shattered the old Shingle Weavers' union
they were determined to do it again before the new union could get off the ground
Mill owner's vigilantes and Snohomish County Sheriff Don McRae
made sure the situation became as ugly as they could make it

LONGSHOREMEN PROVIDE A NECESSARY SERVICE FOR THE NATION

History of longshoremen can be traced to colonial America
when a ship arrived bearing goods from Europe it was greeted with cries for "Men 'long shore!"
these men, who were normally engaged in any number of full-time occupations,
left their work freely to unload anxiously awaited and sometimes desperately needed supplies
without compensation
as America developed a fledgling economy and shipping increased,
longshore work became a full-time occupation
Great economic upheaval swept across the continent during the late 19th Century
marked by periods of almost full employment and union expansion
followed by depression, lower wages and intense competition for jobs
between [1881] and [1905] there were more than 30,000 wildcat and organized work stoppages
that resulted in violence and massive losses in wages suffered by longshoremen
Longshoremen had begun to organize when the first modern longshoremen's union was formed
in the port of New York [1864]
it was called the Longshoremen's Union Protective Association (LUPA)
International Longshoremen's Association (ILA) traces its history back to [1877]
when lumber handlers organized their union on the Great Lakes
this union consolidated with the American Federation of Labor (AFL) [1895]
and became the International Longshoremen's Association
led by Irish tugboat crewman Daniel Keefe, the organization grew to 100,000 members
on the Great Lakes, the East Coast, the West Coast and the Gulf Coast [1905]
ILA faced competition, particularly from the Industrial Workers of the World (IWW)
which had a number of members on the West Coast who moved into longshoring
from other IWW organized occupations such as the lumber and mining industries [1910]
West Coast Maritime employers also had formed a union of their own to compete with the ILA
Federation of Waterfront Employers' Unions (WEU) [1915]

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION (ILA) MEETS IN CONVENTION

International Longshoremen's Association (ILA) District 38 Convention
met in Seattle -- May 1, 1916

delegates expressed unanimous dissatisfaction with the status of negotiations with employers issues revolving around establishing a “closed” shop (only union members to be employed), coastwide wages and labor practices and an ongoing lockout at Vancouver, B.C. all remained unresolved

delegates also pointed out that shipping and stevedore company profits were escalating because of the European war and the opening of the Panama Canal to commercial traffic

ILA organizer Paddy Morris suggested the union proceed with caution

after years of fruitless negotiations with their employers, forty-three West Coast ILA locals were determined to “hang the hook”

delegates ignored the advice of Paddy Morris as they voted to strike beginning [June 1, 1916] if the employers did not accept their demands for:

- coastwide closed shop (union members only could be hired);
- increase in wages based on a nine-hour working day to:

:
-fifty-five cents an hour and \$1 an hour for overtime for general cargo,
-sixty cents and \$1 for lumber handlers,
-forty cents and sixty cents for warehousemen

LONGSHOREMEN STRIKE ALONG THE PACIFIC COAST

International Longshoremen’s Association (ILA) negotiations with employers reached no agreement
12,500 longshoremen represented by forty-three West Coast ILA Locals
walked off the job on strike -- 6:00 A.M. June 1, 1916

Unlike regional strikes in previous strikes at a single port

this time 12,500 longshoremen struck from Bellingham, Washington to San Diego, California
included were 4,600 in San Francisco, 2,000 in Seattle, 2,000 in Portland,
1,200 in San Pedro (Los Angeles) and 1,100 in Tacoma

also joining with the large ILA locals were smaller unions such as Bellingham, Grays Harbor,
Willapa Bay, Astoria, Coos Bay, Eureka and San Diego

An effort was made to enlist the support of the Sailors’ Union of the Pacific,
but the sailors turned the longshoremen down

FEDERAL GOVERNMENT ATTEMPTS TO END THE LONGSHORE STRIKE QUICKLY

U.S. Secretary of Labor William B. Wilson contacted both sides

he appealed to the men to return to work and provide time for his Department to mediate
he also urged employers to refrain from using strikebreakers pending mediation
neither proposal was accepted

LONGSHOREMEN STRIKE TURNS VIOLENT

Waterfront strike resulted in violence in Seattle and Tacoma and other port cities
at first, Seattle’s Mayor Gill infiltrated union meetings with police

when African American strikebreakers struck and won at several docks,
Mayor Gill came down on the side of labor

he told employers that he would not support their efforts for an open-shop

NATIONAL DEFENSE ACT PASSES CONGRESS

National Defense Act passed was signed by President Woodrow Wilson -- June 3, 1916

this provided for an expanded army of 175,000 during peace and wartime:

- fourfold expansion of the National Guard (which will reach 450,000),
- creation of an Officers' and an Enlisted Reserve Corps,
- creation of a Reserve Officer's Training Corps in colleges and universities

president was also given authority, in a case of war or national emergency,
to mobilize the National Guard for the duration of the emergency

Budget allocation was the largest military budget to that date -- \$182,000,000:

- raised the lowest income tax rate from one percent to two percent;
- raised the top rate to fifteen percent on taxpayers with incomes in excess of \$1.5 million;
- imposed taxes on estates and excess business profits

ROAD TRIP TO SEATTLE

This tour was instigated by Frank W. Guilbert of Spokane,
an officer in the Good Roads Association of Spokane County
as well as the National Parks Highway Association

It was one of the most important of several such tours completed between [1912] and 1916
to demonstrate the feasibility of automobile travel, to promote tourism and commerce,
and to advocate for the improvement of roads and highways

Boosters from the National Parks Highway Association,
mainly civic and business leaders from Western and Midwestern communities,
assembled at the La Salle Hotel in Chicago to hear speeches on road improvement
and view hand-colored "lantern" slides of the scenic wonders of the Northwest

Expedition got underway with considerable fanfare as they set out -- morning of June 4, 1916
on a thirty-three-day, 3,100-mile journey from Chicago to Puget Sound in two Mitchell Six cars
in addition to Guilbert, the participants included

Lawrence H. Brown, a Spokane attorney and director of the sponsoring association
Frank R. Singleton of the Seattle Automobile Club,
James Hoag, a Mitchell Company driver and mechanic
others began the tour but did not complete it

National Parks Highway was not an actual highway, but rather a patchwork of existing roads
that were supposedly maintained by counties or townships
route designated by Guilbert and his colleagues went from Chicago to Milwaukee,
then across Minnesota, North Dakota, Montana, the Idaho panhandle
and finally across Washington by way of Spokane and Snoqualmie Pass

AUTOMOBILES PERFORM WELL -- THE ROAD DOES NOT

Both Mitchell autos performed well and did not need the extra tires, parts, and even spare motors
that had been placed in advance along the route

however, they frequently bogged down in axle-deep "gumbo"

produced by the rainiest June in decades

at times, humiliatingly, horses had to drag them out of the mire

serious improvements obviously would be needed

before the National Parks Highway could be recommended for tourist travel

Guilbert's tour group stayed in hotels, such as they were, along the route
at almost every stopover they entertained dignitaries and townsfolk with their lantern slides
often their arrival was delayed by bad road and weather conditions
it was frequently late before they fell into bed exhausted
early each morning, the two Mitchells and their occupants would set off on the next stage
usually accompanied by a convoy of local motorists

FEDERAL MEDIATION WAS ESTABLISHED TO END THE LONGSHOREMENS' STRIKE

Federal Mediator Henry White was selected to arbitrate the longshoremen's strike
talks began in San Francisco -- June 7, 1916
unlike mediation hearings, arbitration hearings end with a final decision by the arbitrator
there is no duty to try to find a compromise as there is mediation
Executive Committee of the Waterfront Employers' Union represented port management
and the International Longshoremen's Association (ILA) District Executive Board
represented the striking longshoremen

ARBITRATION RESOLVES THE ILA COASTWIDE STRIKE

San Francisco became the site of talks between the ILA District Executive Board
and port management's Executive Committee of the Waterfront Employers' Union
Federal Mediator Henry White mediated the talks
After intense negotiations, a truce was agreed to -- 2:00 A.M. June 9, 1916
longshoremen agreed to resume work immediately under the terms of their [May 1] contract
with improvements in wages and working conditions
it appeared the strike was settled in favor of the International Longshoremen's Association (ILA)
however, the use of nonunion strike-breakers (scabs) as longshoremen remained unresolved

STRIKING LONGSHOREMEN RETURN TO WORK

Longshoremen reported for work in ports all along the West Coast 6:00 A.M. -- June 16, 1916
Oakland International Longshoremen's Association member Lewis A. Morey returned to work
he was shot and killed by a scab (nonunion) lumber handler -- June 16, 1916
Two days later Thomas Olsen, another ILA man, was shot in the back
and died immediately [June 18]
Unresolved issue regarding the use of scabs on the docks turned white hot

ILA EXECUTIVE BOARD ISSUES DEMANDS TO WEST COAST PORT MANAGEMENT

International Longshoremen's Association (ILA) Executive Board called on port employers
to live up to the terms of the [June 9, 1916] agreement
by discharging and dispersing all strikebreakers in their employ [by June 21, 1916, at 5 P.M.]
or the strike would resume
Port employers disputed that the [June 9] agreement had called for the discharge
of so-called strike breakers and listed union incidents they believed violated the agreement

SAN FRANCISCO INTERNATIONAL LONGSHOREMEN MEMBER AGAIN GO ON STRIKE

True to their threat the San Francisco Riggers and Stevedores Union (ILA) struck -- June 21, 1916

they were followed by all of the remaining ILA locals on the West Coast -- [morning June 22
Picket lines were posted by the unions

employers responded by hiring scabs to replace ILA men
Sporadic violence erupted in San Francisco, Seattle, and Tacoma
as imported scabs began to work vessels
(within a month, West Coast trade was in shambles)

TACOMA LONGSHOREMEN'S "FLYING SQUAD" MAINTAINS ORDER AMONG MEMBERS

In the Pacific Northwest, strike activity took place mainly in Seattle, Portland and Everett
where police, armed guards, scabs and longshoremen fought sporadically
on the docks and in nearby streets

Tacoma escaped most of the violence because Commencement Bay employers
made few efforts to import scabs or to force the docks open to arriving ships
Perhaps the reason for the reluctance of the employers to break the picket lines
was the formation of a special unit of Tacoma longshoremen called the "Flying Squad"
who faced down strike-breakers and management thugs

CONDITIONS ARE RIPE FOR LABOR TROUBLE IN TACOMA

There were nine ships waiting to be unloaded in Commencement Bay in Tacoma
tons of cargo on the docks was waiting to be stowed aboard the ships

Tacoma Employers' Association decided it was time to call on the community for support
it was announced June 26 in the *Tacoma Daily Ledger*: **"We hereby call upon all of the
business men and others interested in the enterprise of this community to join us in a solemn pledge
that from this day on the open shop shall prevail in this community even if it be necessary to close
all of our manufacturing industries, our lumber mills, flouring mills and shipping interests.**

**For more than a month past we have offered to accede to almost every demand made by the
longshoremen who have tied up and are destroying the industry of this country in open violation of
their agreement. They not only refuse to carry out their agreement, but they persist in blocking the
industries of this country and are demanding wages and conditions that such industries cannot pay
and live."**

VIOLENCE OCCURS AT THE TACOMA DOCKS

About 250 Tacoma strikers stormed the Sperry dock where the Grace liner *Santa Cruz*
was scheduled to be loaded by strikebreakers -- June 27, 1916

Strikers, scabs and armed guards exchanged about fifty gunshots with each other

Johnny Now, a twenty-four-year-old member of Tacoma Local 38-3, was seriously wounded
he later recalled the incident, **"I was fighting with two strikebreakers when I saw this
fellow with a gun aimed at me. He looked at me for several moments and then pulled the trigger. I
never saw him again."** (Seattle International Longshore and Warehouse Union Local 19 document)

Fight on the *Santa Cruz* was over before Tacoma police arrived
three armed guards were arrested for carrying concealed weapons
police also disarmed both strikers and scabs

After conferring with the Tacoma ILA Strike Committee,
Governor Ernest Lister refused to call out the state militia

he declared that the local police were adequate to maintain order
Although the International Longshoremen's Association (ILA)
disclaimed responsibility for the *Santa Cruz* incident,
Sperry Mills and the Grace Line were granted injunctions
that prohibited picketing around their piers

WILLIAM BOEING CONTINUES WORK ON A BETTER SEAPLANE

Bill Boeing proceeded with assistance from Herb Munter and shop foreman Joseph Foley
weekly reports were sent to engineer Conrad Westervelt
Boeing ordered construction of the fuselage at his Lake Union seaplane hangar and factory
there employees assembled Boeing Airplane Model 1 also known as the "B&W"
which was named after the two builders
this first seaplane was christened *Bluebill*
Boeing was concerned with his boatyard's standard of woodworking
he insisted on reduced weight
he insisted on an improved wing and other change orders
ailerons were placed only on the top wing and larger vertical tail surfaces were provided
to improve stability during takeoff and landing the single pontoon
was replaced with two pontoons and two outriggers
Ed Heath was chosen to construct the pontoons at Boeing's boatyard
Bill Boeing flew the B&W *Bluebill* for the first time -- June 29, 1916
(pilot Herb Munter flew its sister aircraft, *Mallard*, on its maiden flight [November 1916])
eventually, Boeing sold *Bluebill* and *Mallard*,
to the New Zealand Flying School of Auckland)

SNOQUALMIE PASS IS REACHED BY THE AUTO TOUR

Heavy snowfalls had kept Snoqualmie Pass closed until July 3, 1916
but it was cleared in time to meet its projected arrival date in Seattle
as the party to passed between ten-foot banks of snow
automobile enthusiasts, state officials, and dignitaries from Seattle and Mt. Rainier National Park
greeted the Mitchells at the summit
before proceeding to Seattle, this distinguished group held a dedication ceremony
for the National Parks Highway

END OF THE AUTOMOBILE TOUR

Both Mitchell Six cars reached Seattle [July 6, 1916]
there a crowd of 3,000, the largest of the trip, attended the evening's slide show
Tour officially ended in Tacoma speedometers of the Mitchells registered 3,100 miles -- July 7, 1916

AUTOMOBILES TRAVEL TO MOUNT RAINIER

Tacoma Daily News reported a culminating event for the cross-country travelers -- July 8, 1916
fifty-two cars, sponsors Frank Gilbert and Lawrence Brown, 300 Tacomans and others
were guests of the Tacoma Club on a trip to Mt. Rainier National Park
(In fact, the purpose of the 1916 tour would not be fulfilled for a decade

when more Americans were able to take to the roads as tourists
to assist them, the National Parks Highway Association published maps and guides
covering road conditions, tourist facilities, garages, and the like)
(Frank Gilbert was tireless in his zeal for good roads -- particularly in Eastern Washington
he lobbied in Olympia for state funding of road improvement
and convinced legislators to invest millions of dollars in state highways
as head of the Inland Automobile Association (later AAA) in Spokane,
Gilbert worked for increased tourist facilities, standardized traffic laws and signs,
road maps, emergency services for motorists, and legislation promoting road safety)

LABOR UNREST CONTINUES IN TACOMA

Despite the injunction barring picket lines on the Tacoma docks
beatings of Tacoma longshoremen and strikebreakers continued
as the two sides fought each other on the docks
James Costello, a member of the strike committee, was knifed when he tried to persuade two men
not to scab at the Northern Pacific Railway and Milwaukee Road docks -- July 12, 1916
both railroad companies immediately obtained court injunctions
restraining the union from picketing or interfering with their employees
Milwaukee Road then imported 100 black laborers from the East and the South
to work cargo on and off ships in Tacoma

FEDERAL ATTEMPT TO END THE LONGSHORE STRIKE IS UNSUCCESSFUL

Federal mediators brought together San Francisco waterfront employers' representatives
and representatives of the San Francisco Riggers and Stevedores Union (ILA)
even while violence continued on the Tacoma docks
San Francisco's International Longshoremen's Association (ILA)
accepted the San Francisco port employer's proposal -- July 13, 1916
San Francisco ILA District Negotiating Committee agreed to submit the latest employer offer
to all ILA locals on the West coast for a membership vote
however, the new management proposal did not include a coastwide closed shop
or standard wages and working conditions
moreover, San Francisco employers stipulated in their offer
that the old wages and working conditions would remain in place
while a joint employer-longshoremen committee worked out a new agreement
San Francisco, Portland, Astoria, Eureka, and San Diego voted in favor of management's offer
but International Longshoremen's Association (ILA) Local 1604 of Seattle
and Local 759 of Tacoma rejected the employers' proposal
there was not a single vote for acceptance cast in Seattle or Tacoma

ANOTHER KILLING IN TACOMA

Strikers gathered at South Eleventh Street and Pacific Avenue in downtown Tacoma
striker Alexander Laidlaw was mortally wounded
by a Milwaukee Railroad guard -- July 15, 1916
(members of a Grand Jury decided Laidlaw was killed by a stray bullet fired in self-defense)

Thousands of labor men and their followers marched in Laidlaw's funeral procession
several unions declared a half-day of mourning for the slain longshoreman

PACIFIC AERO PRODUCTS COMPANY COMES INTO EXISTENCE

Less than a month after the B&W's first flight, wealthy lumberman William Boeing
incorporated his new business as Pacific Aero Products Company for \$100,000 -- July 15, 1916
Boeing bought 998 of the 1,000 shares of stock issued

Already a shrewd businessman, Boeing outlined his ambitions in the articles of incorporation

**"... engage in a general manufacturing business and to manufacture goods, wares and
merchandise of every kind, especially to manufacture aeroplanes ... and all patterns thereof."**

William Boeing transferred ownership of four of his aircraft

two B&Ws, a C-4, and a Martin TA became the property of his company

Chinese-born Massachusetts Institute of Technology graduate Wong Tsu met Conrad Westervelt

T. Wong soon moved to Seattle and became Pacific Aero Products Company's chief engineer
he designed a new aircraft: "Model C"

Operation was moved to the shipyard Boeing had bought [in 1910]

(many years later the "Red Barn" building was moved to Seattle's Museum of Flight
on the Duwamish River)

Boeing and the tiny U.S. aviation community pressed the U.S. government to support their industry
in the current political state of the world airplane production and pilot training were necessary

Aero Club of the Northwest proposed investments in airplane production and pilot training

their plan included U.S. government construction of Hydro-Aero stations

placed every 100 miles along the U.S. coastline with at least 15 men and two planes each

these would protect the country by searching for enemy submarines

and aiding Coast Guard search-and-rescue efforts

VIOLENCE CONTINUES IN TACOMA

Milwaukee dock was the scene of another shooting as strikers attacked scabs

striker Sam James was severely wounded

strikebreaker, Rangval Lienann, was killed when strikers attacked scabs

going to the Milwaukee docks -- July 17, 1916

Tacoma Commissioner of Public Safety Francis Pettit and Pierce County Sheriff Robert Longmire
notified the International Longshoremen's Association (ILA)

that no further picketing would be permitted

and no crowds would be allowed to congregate on the Tacoma docks

STRIKING LONGSHOREMEN HOLD A RALLY

As a result of the ban on picketing on the Tacoma docks,

Tacoma's Wright Park became the gathering point for a meeting of 1,500 strike sympathizers

one local attorney described the situation as greed versus humanity -- July 18, 1916

SAN FRANCISCO LONGSHOREMEN RETURN TO WORK

International Longshoremen's Association (ILA) strike in San Francisco was over -- July 19, 1916

but both Seattle and Tacoma maintain their position to reject the San Francisco offer

and vowed to continue their strikes
Puget Sound longshoremen were angry with the San Francisco ILA
who Seattle and Tacoma claimed had sold them out
one longshoreman later disgustedly reported: **“We got sold out by San Francisco in that 1916 strike. See, they were out on strike for about three or three-and-a-half months and then they put together some kind of agreement and they voted on it, but they voted it down for some reason I can't tell you so they went back out on strike again and they were out for another month-and-a-half or so. Then, lo and behold, what did their brothers down in San Francisco do but agree to go back to work. We were left holding the sack here.”**

(Seattle International Longshore and Warehouse Union Local 19 document)

SEATTLE AND TACOMA LONGSHOREMEN REMAIN ON STRIKE

At this point in the Tacoma and Seattle strike, wages and working conditions were not the main issue
what the longshoremen demanded was a closed shop
which Puget Sound employers were determined to avoid
With 600 scabs working on the Tacoma docks it was announced
by manager of the Federation of Waterfront Employers' Unions (WEU) O. C. Nelson
that employers were entirely satisfied with the results they were obtaining
they said they would never concede to the closed shop -- July 22, 1916
Nelson added that if the longshoremen who went out on strike wished to return to work
they would do so under the old pay scale
there would be no mediation, no settlement and no recognition of the union

CONDITIONS IN TACOMA TURN WHITE HOT

Lumber companies seized the initiative and declared their docks were “open shop” worksites
lumber owners then formed “Puget Sound Stevedoring” which began hiring non-union workers
other stevedoring contractors also agreed not to use union men
Only Rothschild Stevedoring (today's Jones Stevedoring Company) of Old Town Tacoma
chose not to join the open-shop companies
Rothschild formally agreed to the union's demand of a closed shop
lumber handlers returned to work on the Rothschild's dock
Rothschild's refusal encountered the wrath of other stevedoring companies and mill owners
but the company held firm to its position of hiring union men
whatever Rothschild's reasons for continuing as a union shop,
its position saved the lumber handlers of Old Town from total destruction as a union
However, in New Town Tacoma International Stevedoring was successful in breaking the union
strikebreakers and new men appeared on the docks to replace union workers
union members could do nothing about the situation
For all practical purposes the strike in Tacoma was over and the employers had won a major victory

SHINGLE WEAVERS' STRIKE CONTINUES IN EVERETT

International Shingle Weavers' Union of America Everett strike was three months old
many shingle mill owners agreed to International Shingle Weavers' Union of America's demands
wages were increased and working conditions improved

but Everett, Washington mill owners refused to even hold talks with the union
Everett union members were hanging on -- but only barely
most of the original 400 strikers were in jail -- arrested for picketing or disorderly conduct
but about sixty were still walking the picket line, fighting scabs and the gunmen
hired by the shingle mill employers
International Shingle Weavers' Union of America Everett had become desperate
only eighteen pickets remained on the line

INDUSTRIAL WORKERS OF THE WORLD (IWW) TAKE UP THE EVERETT STRIKE

Industrial Workers of the World (IWW) organizers arrived in Everett -- late July 1916
James Rowan, one of the IWW organizers tried to speak on the street on the night he arrived
he was arrested beginning the familiar pattern established in Missoula and Spokane
after Rowan was released without serving jail time
he went back to the streets and was rearrested -- this time he got thirty days in jail

TENSION INCREASES IN EVERETT

Sheriff McRae closed the Everett IWW office hoping this would keep the Wobblies out of town
but it only served to further intensify the Free Speech Fight
Realizing that arrest alone did not serve as a deterrent to the speakers,
police now began beating the speakers they arrested
IWW members were run out of town and prohibited entrance back into Everett
Industrial Workers of the World union began bringing members to town in groups
but the police, aided by citizen-deputies, beat these groups as well
seventeen pickets were attacked and badly beaten by seventy "mill guards" (private security)
within view of several Everett police who did nothing
they claimed the incident happened just outside the city limits
Ten hours later the thugs tried it again but there were more pickets on the scene
when the pickets started to gain the advantage the city police stepped in
several shots were fired to gain control -- one picket was shot in the hip
Everett police arrested only union men

VIOLENCE ERRUPTS AT EVERETT'S JAMISON MILL

Jamison Mill remained the only shingle mill on strike
at the beginning of the shift scabs and gunmen hired by the mill owners
to escort the scabs to and from work began beating the eighteen union members
who had gathered to picket
police did not get involved on the grounds the mill was private property -- August 19, 1916
At the end of that day's shift picketers retaliated -- this time the police intervened
eighteen striking pickets were taken away and beaten severely -- one man was shot in the leg

INDUSTRIAL WORKERS OF THE WORLD (IWW) MOVE INTO EVERETT

Following the arrest and beatings of the eighteen Everett strikers
Industrial Workers of the World (IWW) leaders
sent James Thompson, the first man arrested in Spokane [1909], to Everett to speak

Thompson was arrested for speaking on the street -- night August 22, 1916
he was followed by James Rowan and three women
frustrated police decided to arrest everyone in the crowd
(all of the arrested men and women were shipped by steamer to Seattle the next day
\$13 was seized from the personal funds of
Everett International Shingle Weavers' Union of America Business Agent James Orr
to pay their fare)

ANNA LOUISE STRONG IS ELECTED TO THE SEATTLE SCHOOL BOARD

Dr. Anna Louise Strong became the first woman
elected to the Seattle school board -- August 23, 1916
she won handily thanks to support from women's groups and organized labor
and thanks to her reputation as an expert on child welfare
She argued that public schools should offer social service programs
to resolve the injustices suffered by underprivileged children
and that schools should serve as community centers
(later board member James Duncan noted she was "the only one at the time who put kids first")
Mundane and practical matters like plumbing fixtures remained the school board's focus
Dr. Strong soon became bored with contracts and funding issues
she became a sympathizer with Industrial Workers of the World (Wobblies)
and other radical groups
She was opposed to the United States' entry into the war in European
as the war raged, she openly sympathized with the Wobblies and other radicals
she worked for various anti-war groups where she met many leftist activists
who helped to polish her political ideals

CANADIAN EXPLORER DAVID THOMPSON'S EFFORTS ARE FINALLY RECOGNIZED

Koo-Koo-Sint, "The Man Who Looks At Stars,"
Northwest Company trapper, explorer and geographer finally received the attention he was due
J.B. Tyrell, a locating engineer for the Canadian Pacific Railroad.
discovered yellowed copies of an unidentified map of the Columbia River
that was more accurate than available official government or railroad versions
Tyrell also discovered an unfinished manuscript titled
David Thompson Narrative of His Explorations in Western America: 1784-1812
which document Tyrell had published by the Champlain Society -- 1916
this biography assured Thompson would be recognition
as the greatest land explorer of the English people

UNIONS ACHIEVE NATIONWIDE GAINS FOR THEIR MEMBERS

Federal Employees' Compensation Act passed Congress -- September 7, 1916
this authorized allowances to federal civil service employees for disabilities incurred at work
Adamson Act, passed Congress same year
it established an eight-hour day for railroad labor
(However, President Woodrow Wilson's domestic reputation would soon be overshadowed

by his record as a wartime President who led his country to victory)

FEDERAL LABOR MEDIATOR WILLIAM BLACKMAN ARRIVES IN EVERETT

Industrial Workers of the World (IWW) rented a union hall in Everett while the Wobbly leaders were not ready to jump into another free speech fight they did recognize, along with the American Federation of Labor (AFL) that the shingle weavers were involved in a crucial fight Federal labor mediator William Blackman arrived in Everett to assist in the effort to settle the strike everyone, the city, mill owners and strikers were under federal scrutiny everyone was being very careful to avoid attention that could damage their position Everett city leaders quietly gave Snohomish Sheriff Don McRae the authority to deal with the strikers and the Wobblies Sheriff McRae organized a band of several hundred deputies to drive the Wobblies out of the city by any means

FEDERAL GOVERNMENT CREATES THE UNITED STATES SHIPPING BOARD

Congress had become concerned about the eroding American share of European shipping only ten per cent of the goods were carried on U.S. ships Congress created the United States Shipping Board to address the concern -- September 7, 1916 President Woodrow Wilson appointed five commissioners who were by confirmed by the U.S. Senate to acquire and construct merchant vessels and to create corporations under its control to carry out shipping fleet improvements

VIOLENCE ESCALATES IN EVERETT

Industrial Workers of the World (IWW) began bringing in groups of members from out of town to speak, be arrested and spend the night in the Everett jail Groups of Wobblies tried to slip into Everett onboard the launch the *Wanderer* including Mrs. Edith Frenette who had been previously arrested for street speaking when the boat reached Everett, deputies boarded and severely beat and arrested the Wobblies (after a week in jail without a hearing the arrested men and Mrs. Frenette were released) Many of the citizens of Everett were shocked and outraged by the [September 11] events a mass meeting was called attended by 10,000 people -- a third of the city's population still, Sheriff McRae's deputies continued their harassment of the IWW (an estimated 300 to 400 IWW members were arrested and deported in [October])

SEATTLE AND TACOMA LONGSHORE UNIONS SUFFER A CRUSHING BLOW

Seattle and Tacoma International Longshoremen's Association (ILA) strike ended in defeat -- October 1916 Sawmill owners and stevedoring companies working together crushed the ILA International Longshoremen's Association (ILA) unions from San Diego to Bellingham lost control of jobs on the docks except for Old Town Tacoma in every port the employers gloated over their victory then mounted a well-organized campaign to drive what was left of the unions into oblivion

SEATTLE AND TACOMA FINK HALLS BECOME THE CENTER OF MARITIME EMPLOYMENT

West Coast Maritime employers' Federation of Waterfront Employers' Unions (WEU), established maritime hiring halls in Seattle and Tacoma to employ needed men which came to be known as "fink halls"

West Coast steamship companies, general cargo stevedores and sawmill owners adopted and rigorously maintained a non-union hiring policy

In Seattle Frank Foisie, a labor relations professor from the University of Washington, ran the Waterfront Employers' Unions (WEU) hiring hall

operation of this fink hall was described by ILA member Burt Nelson:⁸³ **"When you came in the hall, you pegged in. There was also a section of organized gangs that didn't peg in. They got their orders in a different manner... They told you after you got through the evening before to call in at 6:30 a.m. You might get an 8 o'clock start or something else. Or they might tell you to call back at 11 a.m. They could keep you on the tether like that... This is the kind of a setup where men are sitting around waiting to go to work... Wondering whether they were going to be able to earn enough money for rent or groceries for the family."**

Officially known as the Waterfront Employers Hiring Hall, the Tacoma fink hall was housed in a building near the corner of Eleventh Street and "A" except for Rothschild International Stevedoring,

Federation of Waterfront Employers' Unions (WEU) included all of the shipping companies their strength was based not only on the number of members but also on their ability to maintain a united front toward waterfront workers

TACOMA HAS A FINK HALL OF ITS OWN

Tacoma's fink hall was housed in a building near the corner of Eleventh Street and A Street one of the first actions of Federation of Waterfront Employers' Unions (WEU) after the strike was to hire Harvey Wells to administer the fink hall

he was experienced in breaking strikes by lumber workers

his badges of office were a derby hat and a sawed-off shotgun

since Wells did not know who were ILA men and who were not

he issued each man seeking work a dispatch card ("Rustling Card" to union members) that listed the man's name and address

it also had a special code punched into numbered squares around the edges that indicated:

- whether the longshoreman was a member of the union,
- if he had participated in the 1916 strike,
- if he had been a strikebreaker

when a man came into the hiring hall looking for work or reported to a foreman on a dock, he was required to show this card

these "fink cards" became a bitter reminder to longshoremen of their defeat

Employer's implemented a policy that forbade hiring more than 50% union men at one time

Waterfront Employers' Unions (WEU), denied that this was discrimination

hiring scene in Tacoma was described: **"The strikebreakers lined up on one side of the hall ... union men lined up on the other side and they took two for one, two strikebreakers' gangs, one**

⁸³ Ronald Magden Collection, University of Washington Special Collections, 5185-1, Box 5, Folder 1

union gang. But these men, they were great union men and they very soon convinced the employer that the strikebreaker was the wrong kind of labor. They just went out and busted their tails and outworked them. They kind of fiddled along and fiddled along and these strikebreakers kept leaving, going elsewhere. There was an awful lot of pressure on a strikebreaker once a strike is over. One that stays, nobody ever forgets him, he's not adopted into the clan. So ultimately they got to the point that it got to be a two for one advantage-two union for one scab going.” (Seattle International Longshore and Warehouse Union Local 19 document)

TACOMA LONGSHOREMEN FACE A BLEAK FUTURE

Finding work on the docks in Tacoma was nearly impossible for any former union man
some were blacklisted by the employers
some former ILA men assumed a new name and went to work on the Seattle docks
where he hoped to work without being recognized
(Many longshoremen simply left the docks after 1916
they went to work in shipyards or joined the U.S. Army)

SNOHOMISH SHERIFF AND HIS DEPUTIES ATTACK IWW MEMBERS

Industrial Workers of the World (IWW) members in Seattle boarded the small steamer *Verona*
with the intention of speaking on the corner of Hewitt and Wetmore avenues
when they arrived at the Everett City Dock -- evening October 30, 1916
they were met by more than 200 armed deputies authorized by Sheriff Don McRae
IWW members were told they could only speak at a location away from the town center
when the refused to comply some of the Wobblies were beaten at the dock
Deputies then loaded forty-one Wobblies into waiting trucks and cars
they were driven southeast of town to a remote wooded area
near the Beverly Park interurban station
in darkness and a cold rain, Sheriff McRae's men formed two lines
from the roadway to the interurban tracks
they forced the Wobblies to run a gauntlet that ended at a cattle guard
one by one the men were beaten with clubs, guns, and rubber hoses loaded with shot
Jack Leonard Miller, a twenty-seven-year-old IWW member, said: **“They were some of the most respected businessmen in town [Everett] and some of the pillars of the church. And I was about fourth in line. I pulled my coat over my head and made a dash for it. I ducked the first two in line, then got my head split open. I woke up down by the river...”**⁸⁴
A family living nearby was startled by the shouts, curses, cries and moans they heard
and came to witness the brutal scene
injured were left to get back to Seattle any way they could
all of the victims survived but some were hospitalized

EVERETT CITY LEADERS FACE A PUBLIC OUTCRY

Many citizens had witnessed the beatings on board the *Verona* before the Wobblies were removed

⁸⁴ Margaret Riddle, *Everett Massacre (1916)*, HistoryLink, Essay 9981, Everett Public library audio, December 18, 2011

there was an immediate public outcry against the deputies
in a report to the State Federation of Labor,

International Shingle Weavers' Union of America leader Ernest Marsh wrote: **“The tale of the struggle is plainly written. The roadway was strained with blood... there can be no excuse for, nor extenuation of such an inhumane method of punishment.”**⁸⁵

this outrage was played down by local papers but most residents disagreed with the editorials
While Seattle IWW organizers signed up recruits for the battle in Everett
Sheriff McRae was also increasing his supply of men
he signed up new deputies until he had over 500
Events at Beverly Park hung like a dark cloud over Everett
both the IWW leaders and the Snohomish County Sheriff firmed their resolve

IWW MEMBERS IN SEATTLE TAKE TWO STEAMBOATS TO EVERETT

As a result of the mass beating given to the members of the Industrial Workers of the World (IWW)
by Snohomish County Sheriff Don McRae and his deputies
about 300 Wobblies met at the IWW hall in Seattle then marched down to the docks
steamboat *Verona* was loaded in Seattle with 250 Wobblies
steamer *Calista* carried fifty more union men
both boats headed north to Everett to conduct a “free speech” rally -- November 5, 1916

EVERETT MASSACRE SHATTERS THE TOWN

When Sheriff Don McRae learned of the IWW plans they placed 200 armed deputized vigilantes
and a contingent of Pinkerton Men (security guards) on the dock, in a warehouse
and on at least one tugboat in the harbor
other townsfolk gathered on the hills to watch the confrontation
Verona arrived in Everett first -- evening of November 5, 1916
as she tied-up at the Everett City Dock at west end of Hewitt Avenue, Wobblies sang:

**“We meet today in Freedom’s cause
And raise our voices high:
We’ll join our hands in union strong,
To battle or to die....”**

It was reported that Sheriff Don “McRae stepped forward and called out ‘Boys, who’s your leader?’
The IWW men laughed and jeered, replying ‘We’re all leaders,’ and they started to swing out the gang plank. McRae drew his pistol, told them he was the sheriff, he was enforcing the law, and they couldn’t land here. There was a silence, then a Wobbler came up to the front and yelled out ‘the hell we can’t.’⁸⁶

Just then a single shot of undetermined origin rang out
followed by about ten minutes of intense gunfire -- most of it came from vigilantes on the dock
although the majority of the passengers were unarmed some gunfire came from the *Verona*
Passengers aboard the *Verona* rushed to the opposite side of the ship, nearly capsizing the vessel

⁸⁵ Walker C. Smith, *The Everett Massacre*, P. 69-70.

²⁷ Norman H. Clark, *Mill Town -- A social history of Everett, Washington*, P. 186-87.

in the crush of humanity the ship's rail broke as a result
several passengers were ejected into the water
in the confusion some drowned but how many is not known
some may have been people who had been shot before they went overboard
More than 175 bullets pierced the pilot house alone, and *Verona's* Captain Chance Wiman
was able to avoid being shot only by ducking behind the ship's safe
Once the *Verona* righted herself somewhat, some slack came on the bowline
a Wobbly with a revolver forced Engineer Shellgren to put the engines hard astern
parting the line and enabling the steamer to escape
Calista arrived in Everett and was tied to the dock
but the land line somehow snapped -- the steamer wallowed away

RESULTS OF THE EVERETT MASSACRE

Everett Massacre had lasted ten minutes -- evening November 5, 1916
officially five Industrial Workers of the World (IWW) members were listed as dead
a dozen Wobblies were missing and were presumed drowned
twenty-seven IWW members were wounded
Two citizen-deputies were killed -- shot in the back shot by fellow deputies
sixteen to twenty others were wounded including Sheriff Don McRae
arrested union members were taken to the Snohomish County jail in Everett
Seattle police were waiting when *Verona* when she docked in Seattle
seventy-four men including prominent IWW leader Thomas H. Tracy were arrested peacefully
they were charged with first-degree murder of Snohomish Deputy and Jefferson Beard
and deputized vigilante C.O. Curtis
thirty-eight men aboard the *Calista* were charged with unlawful assembly
Seattle's Mayor Hiram Gill declared, **"In the final analysis it will be found that these cowards in
Everett, who, without right or justification, shot into a crowd on the boat, were murders and not
the I.W.W.'s..."**⁸⁷

Mayor Gill distributed free tobacco to IWW inmates of the city jail
which earned the wrath of *The Seattle Daily Times* and the *Post-Intelligencer*
in fact, Mayor Gill's record with labor was inconsistent at best

DR. ANNA LOUISE STRONG SUPPORTS THE EFFORTS OF THE WOBBLIES

Seattle school board member Dr. Strong was hired as a stringer by the *New York Evening Post*
to report on the bloody conflict between the Industrial Workers of the World (IWW)
and the army of deputies and armed guards hired by Everett mill owners
to drive them out of town
at first she was an impartial observer
but she soon became an impassioned and articulate spokesperson for workers' rights
Dr. Strong's endorsement of controversial liberal causes
set her apart from her colleagues on the Seattle school board
she openly opposed war as a pacifist

⁸⁷ *The Labor Journal from Everett, Washington* newspaper, **November 10, 1916, P. 5.**

STATE ELECTION SHOWED MIXED RESULTS

Nationally voters reelected Democrat Woodrow Wilson as President -- November 7, 1916
he ran on the slogan: "He Kept Us Out of War"

Almost all of the elected offices in both congress and the legislatures went to the Republicans
U.S. Senate was composed of fifty-four Democrats and forty-two Republicans
national House of Representatives was closely split 215 Republicans and 214 Democrats
in addition there were two Progressives, one Bull Mooser, one Prohibition Party
and one Socialist -- all possessing a swing vote

State voters reelected Democratic Governor Ernest Lister

U.S. Senator Miles Poindexter, the U.S. Senate's only Bull Mooser, was reelected
he abandoned the sinking Progressive ship and returned to Republican Party
where he became increasingly conservative and isolationist

Republican Congressmen Lindley Hadley, Albert Johnson and John W. Summers won reelection
as did the one Democrat, Clarence Dill

Congressman John F. Miller, Republican from Seattle was elected
to replace Republican William E. Humphrey
(Congressman Miller will serve seven terms [1917-1931])

In the state legislature

Republicans dominated the state senate with thirty-six members

Democrats held five seats and Progressive Party one
in the state House of Representatives overwhelmingly controlled with eighty-three members
while Democrats won only fourteen seats

Two liquor amendments were defeated by immense majorities

SHINGLE WEAVERS IN EVERETT END THEIR STRIKE

Three days after the Everett Massacre, the International Shingle Weavers' Union of America
voted to end the six-month strike -- November 8, 1916
they hoped to re-establish peace in their home town
Jamison Mill owners had made no concessions of any kind

PUBLIC LIBRARIES PROVIDE A RESOURCE TO CITIES AND TOWNS WORLDWIDE

Andrew Carnegie was steel magnet who founded U.S. Steel
he turned to philanthropy and interests in education with funding from his fortune
he founded the Carnegie Corporation of New York, Carnegie Mellon University
Carnegie Endowment for International Peace, Carnegie Institution of Washington
and the Carnegie Museums of Pittsburgh

But most of his wealth went to constructing local libraries in cities and towns

Carnegie libraries were built with money donated by Andrew Carnegie
between [1883] and [1929] 2,509 Carnegie libraries were built
including some belonging to public and university library systems
1,689 were built in the United States
660 in Britain and Ireland
125 in Canada

others are located in Australia, New Zealand, Serbia, the Caribbean and Fiji
very few towns that requested a grant and agreed to his terms were refused
Washington State received its last Carnegie Grant -- November 9, 1916
Washington is home to forty-four Carnegie libraries built from thirty-three grants
\$1,046,000 had been awarded by the Carnegie Corporation of New York for these buildings
thirty-three libraries still stand and fourteen are still used as libraries

PACIFIC AERO PRODUCTS COMPANY TESTS A NEW FLOATPLACE

William Boeing watched as pilot Herb Munter took off from Lake Union
and flew the Boeing Model 2 (also referred to as the Boeing "Model C")
on its first flight -- November 15, 1916
Boeing's Model C, atwo-place training seaplane, was the first "all-Boeing" airplane
it had been designed by Boeing's aeronautical engineer Tsu Wong
Munter discovered the rudder was too small -- Model C went back to the shop for a new rudder

MOTHER CABRINI LEAVES SEATTLE

Mother Francesca Xavier Cabrini, the founder of the Missionary Sisters of the Sacred Heart of Jesus
acquired Seattle's Perry Hotel which stood on Madison Street between Boren and Terry Avenues
She attempted to open this second Catholic hospital in Seattle after Providence Hospital
because the hospitals would be forced to compete, Seattle Catholic Bishop Edward John O'Dea
forbade her to found the hospital -- this opposition was devastating to her
Mother Cabrini was already very ill when she left Seattle -- November 1916

LABOR IS FRUSTRATED WITH THE ELECTION RESULTS

While they had supported the reelection of President Woodrow Wilson to keep the U.S. out of war
Republicans had swept the other offices -- January 1917
Washington State passed anti-labor laws as business was given a free hand
State Senate was composed of thirty-six Republicans, five Democrats and one Progressive
State House of Representatives held eighty-three Republicans and fourteen Democrats
the "Progressive Era" had come to an end

TIMBER WORKERS FORM THE INTERNATIONAL TIMBERWORKERS UNION

Former Sawmill and Timber Workers Union locals began organizing together
their effort resulted in the formation of the International Union of Timberworkers
it became strong enough to hold a convention in Aberdeen -- January 1917
it was chartered by the American Federation of Labor (AFL)
International Union of Timberworkers focused on stabilizing and organizing the timber industry

INDUSTRIAL WORKERS OF THE WORLD (IWW) MEN ARE HELD IN JAIL

Conditions in Snohomish County Sheriff Don McCrae's jail were disgusting -- January 1917
filth and inadequate food poorly prepared constituted the daily condition faced by the prisoners
Wobblies thoroughly cleaned the cells themselves
prisoners eventually received adequate food and blankets
by literally hammering the jail down

James M. McCulloch replaced Don McCrae as Snohomish County sheriff
committees of women were allowed to bring cooked food for the prisoners
feasts were set out on tables set up the full length of the jail corridor
these were full meals decorated with flowers topped off with cigars
Arrested Industrial Workers of the World (IWW) benefited a great deal from the union's
national defense fund campaign launched soon after the arrest of the seventy-four Wobblies
Los Angeles attorney Fred H. Moore and former Seattle deputy prosecutor George F. Vanderveer
were retained as defense attorneys using the funds raised

EDWARD HUBBARD JOINS PACIFIC AERO PRODUCTS COMPANY

Edward "Eddie" Hubbard became a mechanic at William Boeing's company -- January 1917
he had already established himself as a peerless pilot
Aero Club of America had issued hydroaeroplane license number 45 to him [1915]
after he flew figure eights around two pylons 500 yards apart
and completed an unpowered landing
he quickly became Boeing's test pilot

SPECTACULAR HALIBUT FISHING GROUNDS BECOMES DEPLETED

(Vast halibut banks between the mouth of the Columbia River and the Bering Sea
ranked as one of the major fisheries of North America [1907])
Then came the usual story
overfishing that reduced the catch from sixty-five to twenty-two million pounds per year
in little more than a decade -- 1917

GERMANY ANNOUNCES UNRESTRICTED SUBMARINE WARFARE

German government announced that U-Boats would invoke unrestricted warfare -- January 31, 1917
against all allied shipping and any neutral ships crossing into the waters around the British Isles
neutral ships, armed or unarmed, that sailed into a German zone
would be attacked without warning
With the German announcement of a return to the previous rules of submarine engagement
United States broke off relations with Germany and began to get ready for war

PRESIDENT WOODROW WILSON RESPONDS TO GERMANY'S ESCALATION

President Wilson deliberated three days before taking official action
he sent a ringing note to Congress breaking off diplomatic ties with Germany -- February 3, 1917
he declared he had no other alternative, consistent with the U.S. dignity and honor
but to return to the German Ambassador, Count von Bernstorff, his passports
and recall Ambassador James W. Gerard from Berlin
still Wilson held hope the brutalized German people would reject their government's action
(Germany proved its belligerent change in policy -- March 12, 1917
American merchant ship *Algonquin* is stopped by cannon fire from a German U-boat
all hands abandoned ship
Algonquin, its cargo, and the personal effects of the crew were all lost) capital

AUTOMOBILE BRIDGE LINKS VANCOUVER AND PORTLAND

Following the sale of county bonds a bridge over the Columbia River opened -- February 14, 1917
was built to replace an overcrowded ferry system at a cost of \$1.75 million
shared between Clark County, Washington and Multnomah County, Oregon
first bridge had a total of thirteen steel spans with three measuring 275 feet in length
while the remaining ten spans were 265 feet long
one of the 275 foot spans was the lift span to allow river traffic under the bridge
original paved roadway was thirty-eight feet wide with a five-foot-wide sidewalk
(Second bridge parallel to the first opened [1958])

ACCUSED EVERETT MASSACRE MURDERERS ARE BROUGHT TO TRIAL

Seventy-four Industrial Workers of the World (IWW) members were held for trial in Seattle
Thomas Tracy was first of the Wobblies to face the court
for the death of Snohomish Deputy Jefferson Beard and deputized citizen C.O. Curtis
Tracy's attorney, George F. Vanderveer, rose to open the case for the defense -- March 5, 1917
defense attorneys Vanderveer and Fred H. Moore both proved to be highly effective
at one point in the proceedings forensic evidence indicated that Curtis
was most likely killed by one of his fellow deputies so that charge was quietly dropped
Tracy's trial was complex and covered a wider range of topics than the murder charge indicated
this trial would go for sixty-two days
IWW saw the trial as a class struggle -- the poor working class against the wealthy establishment
during the trial the appalling working conditions in logging camps were brought to light
this made for one of the lengthier trials for the time

MARCH REVOLUTION TAKES PLACE IN RUSSIA

March Revolution took place after a series of heavy military setbacks during the European War
much of the Russian army was in a state of mutiny
Increasingly violent demonstrations and riots, some spontaneous,
swept the streets of Petrograd (present-day St. Petersburg) the capital of Russia
during a time when the Tsar Nicholas II was away from the capital
visiting troops on the war front
in the disorder of the demonstrations, members of the Imperial parliament or Duma
assumed control of the nation forming the Russian Provisional (temporary) Government
headed by Alexander Kerensky
the United States was the first nation to recognize the legitimacy of the new government
Although the March Revolution was a popular uprising
it did not necessarily express the wishes of the majority of the Russian population
since the event was primarily limited to the city of Petrograd (St. Petersburg)
(Note: This event took place in February 1917 in the Old Russian calendar
but March 1917 in the post-revolution Russian calendar thus either month applies)

RUSSIAN TSAR NICHOLAS II ABDICATES HIS THROWN

Defense of Russia against German troops left Russia unprepared to defend the Tsar from attack
army leadership did not feel it had the means to suppress the revolution

revolution in Russia became a class struggle between: “Haves vs. Have Nots”
Tsar Nicholas II of Russia, the last of the Russian Tsars, abdicated his throne -- March 15, 1917
leaving the weak and ineffective Alexander Kerensky Provisional Government in power
Kerensky’s Provisional Government was supported by members of the “proletariat” (working class)
who organized themselves into “soviets” (workers’ councils)
these were established in about fifty different towns
leaders of the “Soviets” were very radical economic Socialists
they believed the means of production and the allocation of resources
should be under common ownership and cooperative management
they initially permitted the Provisional government to rule
but insisted on a right to influence the government and control various militias
Faced with continuing war in Europe Russia remained in chaos

INDUSTRIAL WORKERS OF THE WORLD SUPPORT THE REVOLUTION IN RUSSIA

Industrial Workers of the World (IWW) was interested in supplying food, goods and supplies
for the Russian upheaval whose workers were attempting
to overthrow the wealthy ruling class in Russia
supporting the Russians would create enough jobs for all of the union members in America
prosperity could finally reach the American Working Class as well as the wealthy

GERMAN U-BOATS TARGET AMERICAN MERCHANT SHIPS

Getting American supplies to our European Allies was dangerous work
Four American steamships were sunk by German submarines within a week
Vigilancia was torpedoed and sunk by German submarine U-70
145 miles off the Scilly Islands, Great Britain: fifteen men were killed -- March 16, 1917
City of Memphis was sunk with gunfire from a German submarine
thirty-three miles south of Fastnet, Ireland: there were no casualties -- March 17, 1917
tanker *Illinois* was sunk with bombs by German submarine in the English Channel
twenty miles north of Alderney, Channel Islands: there were no casualties -- March 18, 1917
tanker *Healdton* was torpedoed and sunk by a German submarine
twenty-five miles north of Terschelling, Holland: twenty men were killed -- March 21, 1917

AMERICA REMAINS UNCOMMITTED IN SPITE OF GERMAN AGGRESSION

United States firmly maintained its neutrality in the affairs of Europe
until Germany conducted unrestricted U-boats warfare against neutral shipping
America also discovered, through an intercepted telegram known as the Zimmermann Telegram,
that the German government had attempted to ask Mexico to go to war against the U.S.
if the United States went to war with Germany
it was proposed that Mexico retake Arizona, New Mexico and Texas
all of which had been lost in the Mexican War [1846-1848]
America was still split regarding what was the appropriate action to take in Europe
sympathies among many politically influential Americans industrialists and bankers
had favored the British and French cause over that of the Central Powers
however, a sizable number of citizens, including many of Irish and German descendants

were staunchly opposed to U.S. involvement in the European conflict
especially on the British side

WAR IN EUROPE FEATURES GREAT ADVANCES IN MILITARY TECHNOLOGY

“The Great War” had been raging in Europe for more than three-and-a-half years
this war began as a clash of 20-century technology and 19th Century military tactics
much of the combat involved trench warfare where hundreds often died for each yard gained
many of the deadliest battles in history occurred during this war
commanders on both sides failed to develop tactics for breaching entrenched positions
as a result large numbers of casualties were inevitable
Impressive defensive systems which out of date tactics could not break through dominated battles
barbed wire was a significant hindrance to massed infantry advances
artillery, vastly more lethal than in the previous century, coupled with machine guns,
made crossing open ground very difficult
Germans introduced poison gas -- soon became used by both sides
those gases used included chlorine, mustard gas, and phosgene
widespread use of chemical warfare was a distinguishing feature of the conflict
although it never proved decisive in winning a battle
its effects were brutal, causing slow and painful death
poison gas became one of the most-feared and best-remembered horrors of the war
countermeasures to gas attacks, such as gas masks, were quickly created

CONGRESS GOES INTO SPECIAL SESSION

For nearly three years after the Great War ravaged Europe [August 1, 1914]
United States tried to steer a neutral course between the Allies
(Great Britain, France and Russia)
and the Central Powers (Germany, Austria-Hungary, Turkey and Italy)
President Woodrow Wilson appeared before a joint session of Congress -- 8:30 P.M., April 2, 1917
he delivered a “War Message” to the members of Congress
he asked for a declaration of war against Germany to **“make the world safe for democracy”**
to President Wilson the war was a Crusade to save the world
from the century-old clutches of ancient European Empires that made up the Central Powers
(Germany, Austria-Hungary, Turkey [Ottoman Empire] and Italy [Rome])
he tapped into the Progressive spirit
“The War to End All Wars” was the culmination and the perversion of the activist spirit

CONGRESS DECLARES WAR ON GERMANY

Congress granted Wilson’s request and declared war on Germany -- April 6, 1917
however, the vote was far from unanimous:
eighty-two for and six against in the senate; 373 for and fifty against in the House
A new trend toward conformity and unquestioning patriotism replaced the Reform Spirit in America

PRESIDENT WOODROW WILSON KEEPS THE ECONOMY ON A PEACETIME FOOTING

In spite of the declaration of war on Germany, President Woodrow Wilson

made only minimal preparations for war and kept the U.S. Army at a small peacetime level he did, however, enlarge the United States Navy to defend against German “wolfpacks” of submarines patrolling the Atlantic Ocean

WILLIAM BOEING OVERSEES IMPROVEMENTS IN HIS AIRPLANE

William Boeing’s test pilot Herb Munter flew the Model C again with its larger rudder also the vertical stabilizer had been enlarged -- April 9, 1917
Boeing wrote Chief Engineer Tsu Wong a check for \$50.77 for “payment in full for services rendered”
Wong returned to China where he started the first Chinese airplane factory

FEDERAL GOVERNMENT CREATES THE EMERGENCY FLEET CORPORATION

United States and the Allies demanded more ships when hostilities began in Europe although our merchant fleet was small
U.S. carried much of the trade formerly enjoyed by the combating nations at the start of the war Seattle had one steel shipyard: Moran Brothers which had already built four steel ships and had orders for ten times that number
War effort had created enormous demand for ships to carry goods and soldiers to Europe to successfully increase the tonnage of shipping necessary United States Shipping Board, which controlled American ships and shipping, established the Emergency Fleet Corporation (sometimes called the War Shipping Board) to acquire, maintain and operate merchant ships to meet national defense, and foreign and domestic shipping demands during war -- April 16, 1917
No one could have predicted the many problems of hiring, keeping and paying labor that such a huge increase in ship production would cause

FIRST LIBERTY LOAN ACT PASSES CONGRESS

As the war effort continued spending far outstripped income raising taxes, especially progressive taxes that raised the tax rate progressively higher based on the amount of wealth owned (the richer you were the more you paid), would frighten the wealthier classes and undermine their support for the war it was decided the necessary money could be acquired by borrowing money from the public to avoid raising taxes
Federal Treasury Department created Liberty Bonds -- April 24, 1917 these bonds could be cashed after fifteen years at a very low rate of interest but if held for thirty years would pay 3.5% interest
first Liberty Bond issue was undersubscribed -- an embarrassment for the U.S. Treasury an aggressive campaign was created by Secretary of the Treasury William Gibbs McAdoo huge rallies were held in which famous actors such as Al Jolson, Elsie Janis, Mary Pickford and Douglas Fairbanks urged crowds to buy Liberty Bonds
movie star Charlie Chaplin made a short film, *The Bond*, at his own expense for the drive even the Boy Scouts and Girl Scouts sold the bonds using the slogan “Every Scout to Save a Soldier”
famous artists were also enlisted by the federal government

to draw posters urging people to purchase bonds
Aviation Section of the U.S. Army Signal Corps established an elite group of Army pilots
who were assigned to the Liberty Bond campaign
they crisscross the country in their Curtis J4 “Jenny” training aircraft
in flights of three to five airplanes
when they arrived over a town, they performed acrobatic stunts
and put on mock “dog fights”
they would land in a pasture, on a road, on a golf course, or in pasture near the town
by the time they shut down their engines most of the townspeople,
attracted by their performance, would have gathered to see them
most people had never even seen an airplane, much less had a chance to ride in one
routinely each pilot stood in the rear cockpit of his craft and told the assemblage
every person who purchased a Liberty Bond would be taken for an airplane ride
this program successfully raised a substantial amount of money used to pay for the war effort
(later entrepreneurial flyers called Barnstormers purchased war surplus Jenny airplanes
they flew across the country selling airplane rides)
(there were three subsequent issues of Liberty Bonds
and one of shorter-term Victory Bonds after the Armistice
in all, the sale of these bonds raised over \$20 billion dollars for the war effort)

SAM HILL SERVES AS AN AGENT FOR THE ALLIES

During the Great War, Hill undertook a secret mission for the Allies,
starting in Europe, he traveled around the world to the Russian Far East, then across Russia
in an effort to evaluate Russian railroads

IWW MEMBER THOMAS H. TRACY’S TRIAL COMES TO AN END

Industrial Workers of the World (IWW) accused killer Thomas Tracy’s Seattle trial came to an end
Tracy had been accused of the murder of Snohomish Deputy Sheriff Jefferson Beard
members of the jury acquitted Tracy of the charge -- May 5, 1917
Shortly thereafter, all charges were dropped against the remaining seventy-three defendants
who were released from jail
There was no appeal of the verdict in Thomas Tracy’s trial
nor were any charges ever made against Snohomish County Sheriff Don McRae
or any of the citizen deputies who may have murdered five Wobblies killed in the massacre
(Eventually tensions were eased in Everett
mill owners gave raises to their employees, however small, and conceded to an eight-hour day
workers promised to “give their best efforts”
for the most part, the whole embarrassing incident was quietly forgotten)

WILLIAM BOEING CHANGES THE NAME OF HIS COMPANY

From Pacific Aero Products Company to Boeing Airplane Company -- May 9, 1917

William Boeing told his employees: **“We are embarked upon new science and industry in which our problems are so new and unusual that it behooves no one to dismiss any novel idea...our job is to keep everlastingly at research and development.”**⁸⁸

Clairmont L. Egtvedt and joined Boeing as a draftsman and mechanical engineer
after graduating from the University of Washington School of Engineering
Philip G. Johnson also joined the company
after graduating from the University of Washington School of Engineering
(Both Egtvedt and Johnson will become company presidents)

SELECTIVE SERVICE ACT (DRAFT) GOES INTO EFFECT

United States was remarkably unprepared for war as no major battle had been fought since the end of the Civil War [1865]
Military was miniscule and had some weapons that were decades old
it was necessary to begin a hasty expansion and modernization of the armed forces
In addition to calling for volunteers to fight in the war in Europe
Congress was authorized to raise a national army numbering in the hundreds of thousands
Military Draft (Conscription Act) passed Congress -- May 18, 1917
at first, men ages 21 to 30 were required to register for military service
first call for Washington men was 12,768 including volunteer enlistments
(At the request of the War Department, Congress amended the law [August 1918]
to expand the age range to include all men 18 to 45, and to bar further volunteering
by the end of the war some two million men had volunteered for various armed services branches
and some 2.8 million had been drafted
in fact, more than half of the almost 4.8 million Americans who served were drafted
Selective Service Act was canceled with the end of the war [November 1918])

PATRIOTISM HEIGHTENS NATIONWIDE

Bitter hatred was shown toward anyone suspected of being disloyal
this was to be “the war to end war” or “The Big One” by U.S. citizens
After the declaration of war anti-German phobia ran amuck:
•sauerkraut was referred to as “liberty cabbage”
•many Americans with German surnames had them anglicized
•state of South Dakota made it illegal for anyone to speak German over the telephone
and even the music of German composers such as Bach were banned
President Woodrow Wilson added to the war hysteria
he created the Committee on Public Information (CPI)
to control war information and provide pro-war propaganda
American Protective League, working with the Federal Bureau of Investigation,
was one of many private right-wing “patriotic associations” that sprang up to support the war
and at the same time fight labor unions and various left-wing and anti-war organizations

DR. STRONG’S OPPOSITION TO THE DRAFT ENDS HER POLITICAL CAREER

⁸⁸ Crutchfield, James A. *It Happened in Washington*. P. 88.

Industrial Workers of the World (IWW) was opposed to the draft
they believed young men should be home working -- and paying union dues
Seattle school board member Dr. Anna Louise Strong began writing and lecturing
in opposition to war and the draft
PTA and women's clubs joined her in opposing military training in the schools
on the other hand the Seattle Minute Men, many were veterans of the Spanish-American War,
branded her as unpatriotic

AN ARMY BASE FOR PIERCE COUNTY

(Joint Base Lewis-McChord [JBLM]) began as Camp Lewis
seventeen miles south of Tacoma -- 1917
named after Meriwether Lewis of the Lewis and Clark Expedition
it was the largest of sixteen military cantonments constructed during the war
Citizens of Pierce County voted by an eight to one margin to bond themselves for \$2 million
to buy 68,721 acres of prairie land cut from the Nisqually Plain
this was donated to the federal government for military use
it was stipulated that the tract must be used as a permanent army post
Pierce County through the process of condemning additional land
took 3,370 acres of the Nisqually Indian Reservation to be used by Camp Lewis
Captain David L. Stone and his staff arrived at the camp site -- May 26, 1917
initial construction began a few days later
Captain Stone supervised the construction of a "city" of 757 buildings and 422 other structures
entire camp was ready for occupancy, lighted and heated and ready for 60,000 men in ninety day
a full month ahead of schedule

AMERICAN TROOPS PREPARE FOR WAR

American Expeditionary Forces preparing to fight in Europe
were under the command of Major General John J. "Blackjack" Pershing
who remained in command for the entire war
General Pershing insisted American soldiers be well-trained before going to Europe
(as a result, few troops arrived before [1918])

COST OF LIVING RISES DRAMATICALLY

With food prices doubling, the cost of living rose nationally by 90%
goaded by the high cost of living, hundreds of union members in Seattle gained wage increases
by staging a series of short strikes:

- railroad passenger car cleaners at the King Street Station conducted a four-day strike
they won their demands;
- milk wagon drivers improved their wages after only a nine-hour strike;
- coal packers and laundry drivers increased their salaries after a seven-day walkout;
- packing house workers won pay raises and shortened their work day

WASHINGTON STATE ASSISTS IN THE WAR EFFORT

Women from all parts of the Northwest joined the war effort:

- they provided a variety of knit goods,
- they staged benefits and bazaars to raise money for the Red Cross,
- they promoted the conservation of vital supplies of meat, wheat flour, and sugar
- some took jobs in business and industry

as the lines of distinction between “men’s work” and “women’s work”

were temporarily eradicated by the war

Washington farmers fed armies, navies, and civilians

large acres of land, not classified as marginal or sub-marginal, were pressed into production

normally these lands would remain untilled and shielded the surrounding farm land

(after they were cultivated, they later became part of the “dust bowl” of the Depression)

“Liberty gardens” sprang up

vacant lots were cleared, sod was turned under

ground never before planted was seeded, watered, and carefully tended

peas, beans, and potatoes were favorite crops

Boy Scouts and Girl Scouts did their good deed by starting a garden patch

Scarcity of labor was the first effect to be noticed in agriculture

farm youth saw glamour in all occupations except those on the farm

fled to the city for work or to the army for glory

Canadian farms paid higher wages than Washington farmers could afford

also, Canadian government offered homestead opportunities

Labor problems were solved by country folks themselves

Filipino farm workers picked hops and packed apples

women drove tractors

high school students contributed after-school hours to farming and harvesting

even college professors donated weekends and holidays

some farm boys claimed to be indispensable as agricultural workers

they thus avoided the draft

business men donated a few hours now and then to assist in harvesting

WAR CONDITIONS CHANGES THE LIVES OF PEOPLE IN WASHINGTON STATE

War affected lives in Washington

drafting of men into the armed forces disrupted family lives

Coastline was fortified against possible German cruisers

United States government borrowed vast sums of money from its citizens to finance the war

People of the state bought Liberty Bonds, served on war industry boards rolled bandages

and knit sweaters and mittens

LABOR-MANAGEMENT CONFLICT ERRUPTS IN WASHINGTON STATE

Weyerhaeuser, along with the railroads, owned one-half of all private timber in the region -- 1917

Lumber mill operators were in strong support of the war effort

demand for wooden ships and housing materials greatly accelerated the lumber industry

mill owners wanted to maintain a ten-hour day to meet the increased demands of the war

Washington Governor Lister and many members of Congress supported the eight-hour day

SEATTLE CENTRAL LABOR COUNCIL REPRESENTS SEATTLE'S ORGANIZED LABOR

American Federation of Labor (AFL) Seattle Central Council (founded in [1905])

it had long been an advocate of the Progressive agenda

Labor shortages during the Great War allowed labor unions to organize much of Seattle

until the Central Labor Council represented almost every trade union and labor union in Seattle

one of the unions under the Seattle Central Labor Council

was the Seattle Metal Trades Council that represented Seattle shipyard union members

METAL TRADES COUNCIL FORMS TO BARGAIN FOR LARGE SHIPYARD UNIONS

American industry supplied much of the necessary war materials

biggest profits went to the most industrialized parts of the nation

and the most important military industry in Washington State was ship building

Seattle threatened to burst at the seams with over 40,000 manufacturing employees

seven out of eight Seattle employees (35,000) worked in the shipbuilding industry

American Federation of Labor (AFL) shipyard workers organized their local craft unions

into the Seattle Metal Trades Council to bargain with their employers

AFL Seattle Metal Trades Council signed a blanket agreement covering all shipyard crafts

individual union locals could bargain directly with small yards without government interference

but in large shipyards the Emergency Fleet Corporation claimed the right

to regulate employees' wages working on contracts for government-owned vessels

Ancillary industries related to shipbuilding sprang up as workers came from all across America

to the Pacific Northwest in search of jobs

CONSCRIPTION ACT OF 1917 (DRAFT) GOES INTO EFFECT

Men began being drafted into the U.S. Army under the Conscription Act of 1917 -- June 5, 1917

conscientious objector exemptions from the Draft were allowed

only for the Amish, Quakers and Church of the Brethren

all other religious and political objectors were forced to report for duty

under the Act, conscripts were inducted by the Army immediately and then evaluated

some could be discharged but only after reporting

(this contrasted with later draft board systems of evaluation before reporting for duty)

Government police action, vigilante groups and public war hysteria compromised civil liberties

in addition to requiring military service for men ages 21 to 30

CONGRESS PASSES THE ESPIONAGE ACT OF 1917

Congress, in an effort to bolster citizen support of war

and to address union support of events in Russia -- the first "Red Scare" -- June 15, 1917

passed the Espionage Act of 1917 which prohibited any attempt:

- to interfere with military operations,
- to support America's enemies during wartime,
- to promote insubordination in the military,
- or interfere with military recruitment

One section of the Espionage Act of 1917 enforced an old English common law concept

this allowed the government to restrict speech tending to cause or incite illegal activity

actions which defied the war effort were punished:

- publication of “false” information,
- inciting desertion or mutiny,
- obstructing conscription (the Draft)

(U.S. Supreme Court unanimously ruled in *Schenck v. United States* that the act did not violate the free speech rights of those convicted under its provisions [1919])

PROHIBITION OF ALCOHOL IS LESS THAN SUCCESSFUL IN WASHINGTON STATE

All over the state, the market for moonshine booze began a steady expansion -- 1917 many legitimate stores and shops sold home-made and illegally imported liquor
Spokane County prosecutor complained that soft-drink shops were worse than the old time saloons -- booze was plentiful
Tacoma longshoremen demanded that police clean up the drug stores and soft-drink shops where beer and hard liquor were easily obtained

SEATTLE REMAINS A WIDE-OPEN TOWN

Seattle was so wild the Army declared it off-limits to soldiers from Camp Lewis in Pierce County
local army officials questioned civilians in the Seattle area about their activities and beliefs
Seattle businessmen, who missed the soldier’s dollars, were outraged
several petitions were circulated to remove Mayor Hiram Gill (for a second time)
Mayor Gill, the city police chief and county sheriff were all were put on trial
for accepting police protection money from bootleggers, racketeers and prostitutes
these proceedings enhanced Seattle’s reputation for corruption and radicalism

U.S. ARMY’S FIRST DIVISION ARRIVES IN FRANCE

General John J. Pershing’s entourage of 190 American soldiers and civilians in France at Boulogne-sur-Mer -- June 13, 1917
contingent included only sixty-seven enlisted men and forty regular army officers (they had been the first U.S. military force to ever set foot in Great Britain a week earlier now they were the first to arrive on the Continent)
Coordination effort of moving a massive number of troops across the Atlantic Ocean was profound
landing the units, analyzing conditions and circumstances
and reorganizing the divisions as quickly as needed was an unprecedented task

INDUSTRIAL WORKERS OF THE WORLD (IWW) ORGANIZE STRIKES

IWW might have capitalized on the public sympathy they received during the Everett Massacre trial
instead the union saw a chance to gain their demands when the United States entered the war
Shortages of men to work in sawmills and logging camps developed with the draft
timber industry had been suffering from product oversupply and low prices
now wood was essential for the war effort
fir and cedar were needed for shipbuilding and structure construction
Sitka spruce was needed for airplane construction
not just in the United States but also in England and France
Spokane’s Lumber Workers Industrial Union No. 500, IWW

expanded its protest effort -- June 20, 1917

MORE AMERICAN TROOPS LAND IN FRANCE

More than 14,500 U.S. soldiers of the 1st Division arrived in France -- June 24, 1917

some were regular army, there was a battalion of Marines, and most were very raw recruits sent to fight alongside British and French Allied forces against Imperial German forces they were not the sharpest-looking outfit in their uniforms that were so new and ill-fitting that they looked as though they had been purchased from a catalogue they were not well-trained as many experienced officers and veterans had been left at home to help train other units

Singing American troops happy to be on land again disembarked at the ports of the ancient shipbuilding town of St. Nazaire, France whose residents gave a boisterous welcome they did not care what they looked like after the difficult Atlantic crossing or how little training they had received

Soldiers in the First Division may have been in desperate need of drilling but they were enthusiastic arriving safely on land after a fretful ocean crossing with the constant threat of German U-boats these Yankees were a happy, singing lot citizens of St. Nazaire did not care what they looked like or how long they had trained their welcome was boisterous

It took at least three days for the division to complete its debarkation in the port city long enough for the soldiers to avail themselves of all the amenities and introduce themselves to France.

Major General John J. "Blackjack" Pershing insisted American troops not be used merely to fill gaps in the French and British armies

He resisted European efforts to have U.S. troops deployed as individual replacements in decimated Allied units his attitude was not always well received by the Allied leaders who distrusted the potential of an army lacking experience in large-scale warfare

WAR DEPARTMENT NEEDS MASSIVE SHIPMENTS OF SITKA SPRUCE TIMBER

Northwest lumber went into ship building, army barracks construction and wooden airplanes because of its inherent valuable qualities the war created a huge demand for Sitka spruce it is light in weight, strong and pliable with long fibers and has no pitch

War Department called for a 200% increase in airplane production wood of the spruce tree was ideal for making long spars on airplane wings thus spruce was vital to the increase in production

Spruce wood tended to grow in isolated areas the most important spruce milling plant was in Vancouver, Washington where logs were cut into required lengths and shipped to airplane factories in the East additional logging railroads and sawmill facilities had to be built into the spruce forests

Timber Barons capitalized on wartime hysteria to resolve union issues in their own favor public pressure opposing strikers mounted as lumber operators fanned the flames patriotism in opposition to union efforts

INDUSTRIAL WORKERS OF THE WORLD (IWW) COMES UNDER ATTACK

Faced with a labor shortage caused by the military draft and improving wages in other industries timber industry owners and managers become very concerned about the use of strikes
timber owners convinced the U.S. government that spruce was vital to the war effort
they accused the IWW and other radical leaders of being German agents
IWW had been opposed to declaring war -- thus they were alleged to be unpatriotic
IWW, with help from the timber industry, alienated support for their cause

HIRAM CHITTENDEN LOCKS GOES INTO OPERATION

Seattle's Ship Canal was dug connecting salt water Salmon Bay on Puget Sound
and fresh water Lake Washington
construction of the eight-mile-long canal cost one million dollars a mile
Two locks were constructed to lower the water of Lake Washington to the level of Puget Sound
great Ballard lock with a lift of almost twenty-six feet
was 825 feet long, by eighty feet wide and thirty-six feet deep
and a second, smaller lock 125 feet long was thirty feet wide and sixteen feet deep
Locks were named for U.S. Army Major and Seattle District Engineer for the Corps of Engineers
Hiram Martin Chittenden who was also a historian of the American fur trade
locally, they were called the Ballard Locks
Hiram Chittenden (Ballard) Locks formally opened -- July 4, 1917
complex also includes a 235-foot spillway with six thirty-two by twelve-foot gates
to assist in water-level control
a fish ladder for the migration of fish, notably salmon, is part of the locks system

AMERICAN TROOPS ARRIVE IN PARIS

General John J. Pershing brought a battalion of the 16th Infantry
to parade in Paris with great pomp and circumstance -- July 4, 1917
In the dramatic ceremony following the parade, Pershing's aide, Lt. Col. Charles E. Stanton declared
"Nous voilà, Lafayette!" ("Lafayette, we are here!")
to jubilant Parisians assembled at the hero of the American Revolution's tomb
Pershing kissed the sword of Napoleon that was presented for his viewing
shunning protocol, French women infiltrated the ranks
to grab soldiers and shower them with garlands and kisses
others fell to their knees on the sidewalks.
(Arrival of the rest of the American Expeditionary Force would be less theatrical)

INDUSTRIAL MIGHT OF THE UNITED STATES IS UNLEASHED

Beginning of war in Europe coincided with the end of the Recession of [1913-1914] in America
before the war, the United States was known for being a debtor nation
(after the war, America became a creditor nation making around \$6.4 billion dollars)
industry and production for the wartime effort contributed greatly
to the new and improved American economy during the Great War
(American steel industry faced difficulties and declining profits during the Recession of [1913–1914])

as war began in Europe, however, the increased demand for the tools of war began a period of heightened productivity that revived many U.S. industrial companies even with price controls and a lower profit margin on manufactured goods enormous profits resulted from wartime sales Exports to belligerent nations on both sides rose rapidly over the first four years of the War from \$824.8 million [1913] to \$2.25 billion [1917] (this level of production continued even after the war had ended [1918])

WAR INDUSTRIES BOARD IS ESTABLISHED BY THE FEDERAL GOVERNMENT

War Industries Board was established in July 1917 its purpose was no less than to assure the full mobilization of the nation's resources it encouraged companies to use mass-production to increase efficiency and urged them to eliminate waste by standardizing products board members set production quotas and allocated raw materials it also conducted psychological testing to help people find the right jobs (in fact, the vast majority of the war material was produced too late to do any good in the war)

LUMBERMAN'S PROTECTIVE ASSOCIATION IS FORMED BY MILL OPERATORS

Both the Industrial Workers of the World (IWW) and craft unions asked lumber operators for improvements in working conditions -- especially an eight-hour day Sawmill operators refused the demands of labor unions and turned down federal government requests to arbitrate a resolution to disputes Lumber industry leaders formed the Lumberman's Protective Association to maintain a ten-hour work -- July 9, 1917 top leaders, including John P. Weyerhaeuser, met in Seattle lumber operators refused to negotiate and empowered themselves to fine any union member \$500 a day for working less than a ten-hour shift This stance appeared to focus more on anti-union attitudes than on the lumbermen's best interests demand for lumber was high and the lumber firms could afford to give a little as it was, with no lumber coming out of Washington because of massive strikes by loggers U.S. War Department was forced to transfer lumber orders to rival firms in the South Industrial Workers of the World, the best organized faction of the unions, began preparations for a strike

UNITED STATES SHIPPING BOARD TAKES CONTROL OF AMERICAN SHIPPING

President Woodrow Wilson by Executive Order gave the United States Shipping Board all his wartime power and authority over American ships and shipping Using its delegated presidential authority the United States Shipping Board created the Emergency Fleet Corporation to acquire existing vessels and to construct and operate all vessels acquired or to be acquired by the United States -- July 11, 1917

EMERGENCY FLEET CORPORATION TAKES CONTROL AMERICAN SHIPBUILDING

Emergency Fleet Corporation requisitioned shipyards and all steel ships over 2500 deadweight tons

then under construction
shipyards protested without success
With the available ships and shipyards commandeered, the Emergency Fleet Corporation
began to expand America's shipbuilding capacity

SHIPBUILDING IS THE MOST IMPORTANT MILITARY INDUSTRY IN WASHINGTON STATE

After the declaration of war [April 6, 1917], the United States government began to build ships
to meet transportation needs at home and overseas
Puget Sound's long coastline and well-protected ports made it the ideal location to build ships
Emergency Fleet Corporation placed orders with Seattle shipyards for record numbers of ships
Seemingly overnight shipyard owners sought to hire thirty-five thousand new workers
men thronged to Puget Sound to earn high shipyard wages
Seattle's union ranks grew from 15,000 members to 60,000 (in three years)
many of the new shipyard unionists were Wobblies and Socialists
from outlying logging camps in Eastern Washington, Idaho and Montana
they brought militancy as well as numbers to the Seattle union movement
Washington shipyards turn out vessels in record numbers
wooden hulls were constructed at nineteen shipyards in Washington
even after the declaration of war
these were located in Seattle, Olympia, Anacortes and Grays Harbor
Hall Brothers at Port Blakeley was the largest wooden shipbuilder in Washington
eight steel or steel and wood shipyards joined Seattle's Moran Brothers in production
Seattle shipyards produced more than twenty-six per cent of the tonnage output for the U.S.
Moran Brothers Shipyard in Seattle expanded its capacity
among other projects the yard built one destroyer: *Rowan*, one battleship: *Nebraska*
and a 12,000-ton steamer: *Walter Luckenbach*
Seattle's Skinner and Eddy Yard No. 1 became the largest shipyard in the Northwest
ships were launched in fifty-five days
ships were commissioned for use by the navy after twenty more days of sea trials
along the lower Columbia River there were three steel shipyards:
Northwest Steel Company (Portland),
Columbia Shipbuilding Company (Portland)
Standifer Yards (Vancouver)
Washington built more ships than any other state as 195 ships totaling 634,272 tons were launched
steel shipyards kept fifty launching ways busy
Seattle shipyards alone built 26.5 percent of all ships built for the Emergency Fleet Corporation

METAL TRADES COUNCIL BARRAINS FOR LARGE SHIPYARD UNIONS

Seattle threatened to burst at the seams with over 40,000 manufacturing employees
seven out of eight employees (35,000) worked in the shipbuilding industry
American Federation of Labor (AFL) union organizing in Seattle
thrived in this labor-starved environment
shipyard workers organized into craft unions that bargained with their employers
through local affiliates united into the AFL Seattle Metal Trades Council

AFL Metal Trades Council signed a blanket agreement covering all maritime crafts
individual councils could bargain directly with small yards without government interference
but in large yards the Emergency Fleet Corporation claimed the right
to regulate employees' wages working on contracts for government-owned vessels
Ancillary industries related to shipbuilding sprang up as workers came from all across America
to the Pacific Northwest in search of jobs

INDUSTRIAL WORKERS OF THE WORLD (IWW) STRIKE IN EASTERN WASHINGTON

Wages in the timber industry had increased to three or four dollars a day
but this was still lower than union construction hod-carriers who made five dollars
or bricklayers who earned seven dollars a day
IWW was aware of strike plans being developed in Seattle by timber workers
IWW did not intend to cooperate with the American Federation of Labor (AFL) union
in fact, the IWW felt the AFL was attempting to lure away members and destroy the IWW
Hoping to take advantage of the tight labor market caused by the war
and of the unprecedented demand for wood the IWW organized a strike
in protest against the war effort in general and the draft in particular
Membership in the radical Spokane-based Industrial Workers of the World Lumber Workers (IWW)
Industrial Union No. 500 ranged from 6,000 to 10,000
IWW Industrial Union No. 500 went on strike -- July 14, 1917
An epidemic of small, spontaneous strikes took place throughout the "short-log" region
(the pine forest region east of the Cascade Mountains
on-the-job work slowdowns eventually cut production
to as little as fifteen percent of normal)
almost half of the IWW loggers in the state went on strike

INTERNATIONAL UNION OF TIMBERWORKERS GOES ON STRIKE

American Federation of Labor (AFL) International Union of Timberworkers
walked off their jobs-- July 16, 1917
timber workers demanded an eight-hour day in the mills and nine hours in the timber camps
as well as union recognition, safer working conditions in the woods, better sanitary conditions
and a minimum wage of \$3.50 a day in the camps

BOEING RECEIVES A LARGE AIRPLANE CONTRACT

Boeing Airplane Company's Claude Berlin and Herb Munter assemble and fly two Model C's
for Navy officials in Pensacola, Florida
U.S. Navy became interested in the seaplane trainers
although airplanes were a very new invention and unproved in war
Boeing received a contract from the navy -- July 17, 1917
to build fifty Model Cs to be tested for use as trainer planes

TIMBER BARONS USE PATRIOTISM AS A WEAPON AGAINST UNIONS

Lumberman's Protective Association reported labor strikes had stopped lumber production
when wood was needed for the war effort in Europe

Lumberman's Protective Association lumped Industrial Workers of the World (IWW), American Federation of Labor (AFL) and all other unions together as enemies of the nation they accused Wobblie arsonists of starting forest fires and burning mills
Industrial Workers of the World were seen as unpatriotic and even Pro-Communist patriotic fervor supported business which favored the war effort

SEATTLE METAL TRADES COUNCIL DEMANDS IMPROVEMENTS FOR UNION MEMBERS

American Federation of Labor (AFL) Seattle Metal Trades Council negotiated for all of the shipyard unions in the city
Seattle Metal Trades Council presented shipbuilding employers with a set of demands for a new industry-wide agreement in Seattle
that called for wages of \$8.00 per eight-hour day for skilled craftsmen, increases in pay for semiskilled and unskilled workers and a closed shop (only union members would be employed in Seattle's shipyards)

CONGRESS BANS THE PRODUCTION OF ALCOHOL TO PRESERVE GRAIN SUPPLIES

In the midst of the wartime emergency, Congress adopted a temporary wartime alcohol prohibition as a measure to conserve grain for the army, America's allies and the domestic population
During the brief debate lines long-standing arguments centered around four issues:

- revenue:

opponents to prohibition noted an end to liquor taxes would eliminate about a third of the U.S. government's revenues and cause an increase in general taxation
proponents pointed out that existing prosperity and the new federal income tax undercut this argument

- property rights:

"wets" noted that destroying the value of liquor-industry property without compensation was unjust and a bad precedent
"drys" replied that property injurious to society's health and welfare had long been subject to confiscation
and the liquor industry would have one year to liquidate its property

- effectiveness of statutory prohibition:

skeptics questioned whether people accustomed to drinking would obey the law
advocates argued that violations of criminal laws had never been a sufficient reason for abandoning them
and the overwhelming sentiment for prohibition would make the law enforceable

- negative implications regarding increasing the power of the federal government:

southern conservatives were concerned about the federal government's growing power
prohibition supporters generally ignored this argument
in any case these arguments changed few minds

Lever Food and Fuel Control Act banned the production of distilled spirits for the duration of the war -- August 1, 1917

Political pressure built to pass an amendment to the U.S. Constitution to, in some form, ban alcohol so many congressmen were prepared to vote for a constitutional amendment that resistance was brushed aside

U.S. Senate by a vote of sixty-five to twenty approved a constitutional amendment prohibiting the manufacture, sale, transportation, import, or export of intoxicating liquors

WASHINGTON FOREST ARE SHUT DOWN

International Union of Timberworkers and Industrial Workers of the World combined effort resulted in men walking out of nearly every logging camp in the state within two weeks logging operations in Washington ceased
Number of strikes in the region's lumber industry soared from forty-four [1916] to 295 -- 1917 over 85% of logging camps and sawmills west of Cascades were closed by August 1, 1917 75% of lumber production was lost
logging and the sawmills they supplied came to a halt
this was the biggest strike the Far West had known in logging and sawmill history

AMERICANS RESPOND VIOLENTLY TO THE DEMANDS OF LABOR

Stirred up by antagonistic newspaper articles that supported the demands of corporate leaders one mob destroyed the printing plant where Industrial Workers of the World's newspaper was being published
suspected Industrial Workers of the World members at Cle Elum, Pasco and Vancouver were hustled off railroad cars and jailed
People thought to have foreign backgrounds or of being sympathetic to Germany were shunned, harassed, or arrested
Aliens were rounded up and deported from Washington and other states

FORT LEWIS TRAINS TROOPS FOR THE WAR EFFORT

Approximately 130,000 Pacific Northwest men served in the armed forces soldiers from Washington did not have a military division of their own they were attached to Western units such as the 91st and 13th Divisions vast majority were attached to the 91st which was first constituted at Camp Lewis -- August 5, 1917 it was considered by locals to be "Washington's Own" unit
As soon as the troops of the 91st Division shipped out of Fort Lewis bound for France Fort Lewis was occupied by the first contingent of the 13th Division formed primarily with Iowa, Minnesota, Nebraska, North Dakota, and South Dakota soldiers Washington draftees also trained in Camp Fremont, California with the 41st Division

SEATTLE METAL TRADES COUNCIL MAKES GAINS FOR ITS UNION MEMBERS

Shipyard union locals won a concession of both practical and symbolic importance: the closed shop maritime unions maintained their own hiring halls that used a "List System" only union members on the hiring list could be employed
metal trades in Seattle shipyards expanded faster even than the maritime trades
Shipbuilding firm of Skinner and Eddy at first agreed to comply with these demands but the other shipyard owners refused -- they pled an inability to bargain independently they claimed they could make no profit if the union proposal to increase wages was accepted

AMERICAN INDUSTRIES COME UNDER FEDERAL GOVERNMENT CONTROL

Once contracts for munitions were issued and the money began flowing, the federal government might have relied on the price system of capitalism to allocate resources

Instead a wide variety of agencies were created to control the economy during the mobilization

Food Administration was created by the Lever Food and Fuel Act -- August 1917

Herbert Hoover was appointed to stimulate production of food and assure a fair distribution among American civilians, the armed forces and the Allies -- and at a fair price
Food Administration did not set maximum retail prices (except for sugar) or ration food
it did set a high minimum price for wheat -- the key grain in international markets
prices and quantities sold at retail were controlled only by "voluntary" cooperation
price markups by food processors and distributors were controlled by licensing them
and then threatening to take their licenses away if they did not cooperate

Hoover's program reduced consumption of food needed overseas

and avoided rationing at home

there were, for example, Meatless Mondays

and Wheatless Wednesdays -- "when in doubt, eat potatoes"

heatless days were occasionally imposed to conserve energy

this was dubbed "Hooverizing" by government publicists

in spite of Hoover's continual orders that publicity should not mention him by name

Fuel Administration was created by the same Act as the Food Administration

Harry Garfield, the son of President James Garfield, was appointed to head the agency

its main purpose was controlling the price and distribution of bituminous coal

Fuel Administrators set the price of coal at the mines and the profit margins of dealers

it mediated labor disputes in the coalfields

(and later worked with the Railroad Administration to reduce long hauls of coal)

EMERGENCY FLEET CORPORATION TAKES OVER BARGINING WITH MARITIME UNIONS

It became imperative to meet labor problems with shipbuilding and shipping unions as they arose

U.S. Government's Emergency Fleet Corporation in agreement with shipyard owners

decided to centralize bargaining all labor disputes involving wages, hours

and working conditions for the duration of the war

Representatives of the federal government, shipyard owners and union leaders

agreed to the formation of the Shipbuilding Labor Adjustment Board

which was created -- August 20, 1917

by agreement of the Navy Department and the Emergency Fleet Corporation

after consultation with various craft union presidents

Shipbuilding Labor Adjustment Board was composed of three members

chaired by New York bank director V. Everit Macy who was appointed chairman

by President Wilson to represent the public in resolving disputes

other board member consisted of:

Edward Hurley President of the Emergency Fleet Corporation

which was responsible to acquire, maintain and operate U.S. merchant ships

Edward F. Carey Director of Operations for the Emergency Fleet Corporation

Shipbuilding Labor Adjustment Board became popularly known

as the “Macy Board” after its chairman

SEATTLE SHIPYARDS BECOME INVOLVED IN A LABOR DISPUTE

American Federation of Labor (AFL) Seattle Metal Trades Council prepared to call all their Seattle maritime union locals out on strike To head off the strike Edward Hurley President of the Emergency Fleet Corporation asked the Trades Council to send three delegates to Washington, D.C. to present the union case before the Shipbuilding Labor Adjustment Board (Macy Board) Seattle Metal Trades Council agreed and sent three delegates to Washington D.C.

CAMP LEWIS EXPANDS

An additional 70,000 acres of land was donated to the United States government by Pierce County with the understanding that site would revert back to the county when it was no longer needed Camp Lewis was renovated and enlarged into a fort at a cost of \$7 million to serve as an induction center, supply base and place for intensive training of recruits built along the south side of American Lake, provided for easy access by water or railroad At the peak of war-time expansion more than 200 heated and lighted buildings built held 50,000 men this was among the largest camps in America and provided terrain and climate for a variety of training programs First recruits moved into their new barracks on September 5, 1917 exactly two months after the post building plan had been handed to the contractors some 60,000 men, including the 91st Division, moved into the hastily constructed cantonment

FEDERAL GOVERNMENT ARRESTS IWW LEADERS AND MEMBERS

Industrial Workers of the World (IWW) organizer William “Big Bill” Haywood and his union had frequently clashed with the government during their labor actions Using the [1917] Espionage Act as justification, the U.S. Department of Justice raided forty-eight IWW meeting halls across the nation -- September 5, 1917 165 IWW members were arrested for **“conspiring to hinder the draft, encourage desertion, and intimidate others in connection with labor disputes”**⁸⁹ William “Big Bill” Haywood and 100 of the union leaders were bound over for trial

SEATTLE MARITIME UNION NEGOTIATIONS WITH THE MACY BOARD FAILS

Three delegates of the Seattle Metal Trades Council in Washington, D.C. presented an offer to the three-member Shipbuilding Labor Adjustment Board (Macy Board) unions demanded \$6.00 a day for skilled workers and a commensurate increase for other classifications some shipyards had agreed; others refused pleading inability to bargain independently Macy Board member Edward Hurley, President of the Emergency Fleet Corporation, demanded the Emergency Fleet Corporation have the power to veto Shipbuilding Labor Adjustment Board decisions

⁸⁹ Howard Zinn, *A People’s History of the United States: 1492-Present*, P. 373.

so that his agency could have the final say on the cost of ships
in response, Macy Board member Edward F. Carey,
Director of Operations for the Emergency Fleet Corporation, resigned from the Macy Board
leaving the board with too few members to have the authority to hear the complaints
of the Seattle Metal Trades Council delegates -- September 7, 1917

INDUSTRIAL WORKERS OF THE WORLD (IWW) CHANGE TACTICS

An equitable solution to the IWW strike became increasingly less likely as summer came to an end
with most of its leaders and organizers in jail the Wobblies changed tactics
three months into the strike IWW leaders proposed to take the strike to the job -- September 1917
IWW loggers returned to work but only for eight hours -- and if necessary ten
IWW loggers, now back to work in the woods, switched their tactics to work slowdowns
at some camps the Wobblies quit work after eight hours,
if they were fired the next crew was unlikely to be better
at other camps work was carried out as inefficiently as possible
to produce only eight hours of work in the ten hours spent on the job
at yet other camps strict adherence to safety regulations slowed production

Some Wobblies turned to sabotage
mysterious fires swept through property and logging trains derailed
Wobblies were accused of driving spikes into logs to shatter powerful saws in the mills
causing disastrous accidents -- when a saw hit the spike the mill was filled with flying steel
signs of the grinning black cat perched on a wooden shoe -- the symbol of sabotage
leered from the windows of Wobbly halls across the nation
Although this tactic served the IWW well, it did not make them popular with the lumber barons
IWW was left out of most negotiation sessions and meetings
IWW's strategy was not favorably received by the American Federation of Labor (AFL) unions either
even using stupid crews mills and camps could still produce some dressed lumber
which allowed the operators to maintain their position in opposition to the union's demands

PACIFIC NORTHWEST LABOR ISSUES DRAW THE ATTENTION OF THE U.S. GOVERNMENT

U.S. Army Signal Corps Colonel Brice P. Disque, a military "troubleshooter,"
was dispatched to the Pacific Northwest to investigate the shortage of spruce wood
available for military airplane construction
Colonel Disque met with timber industry leaders when he arrived in Seattle
before setting out on a ten-day tour of lumber operations in the region -- September 1917
Colonel Disque noted the impact of the widespread strikes in the region
he determined a special military division needed to be sent to the logging camps
to stop the detrimental impact of striking union workers
Colonel Disque returned to Washington, D.C. to win approval for his plan
which was quickly approved by President Woodrow Wilson's Administration
100 military officers were committed to the effort to put the Pacific Northwest lumber industry
under military control

INTERNATIONAL UNION OF TIMBERWORKERS UNION STRIKE IS BROKEN

Unlike the Wobblies many of the AFL men worked in town sawmills and had families to feed
most of the sawmill workers out on strike were in dire financial trouble
more and more International Union of Timberworkers Union men reluctantly returned to work
American Federation of labor (AFL) International Union of Timberworkers
was forced to end its strike
members returned to the sawmills where they worked with no concessions won -- September
some lumber companies, especially in Eastern Washington, accepted the eight-hour day
and attempted to improve working conditions
but many sawmills started up again imposing a ten-hour work day

INDUSTRIAL WORKERS OF THE WORLD (IWW) ARE UNDER ATTACK

U.S. Government officials raided various IWW headquarters
sometimes six or seven times -- September-(November) 1917
union records and papers were seized
hundreds of Wobbly leaders around the country were arrested in raids
some were held incommunicado for months before they were released without trial
others were held in jails while they awaited a trial date
no Wobbly or Wobbly sympathizer evaded the authorities altogether

LABOR ISSUES REMAIN UNRESOLVED IN SEATTLE'S SHIPYARDS

Seattle Metal Trades Council representatives decided to return to Seattle -- September 23, 1917
after they left Washington, D.C., Edward F. Carey agreed to rejoin the Macy Board
power to make binding decisions was restored
to the Shipbuilding Labor Adjustment Board (Macy Board)

LABOR UNIONS IN SEATTLE SHOW UNION SOLIDARITY

Failing in their effort to get direction from federal government's Macy Board,
12,000 American Federation of Labor (AFL) ship's carpenters and ships' caulkers
voted to go on strike under the leadership of the Seattle Metal Trades Council
in a show of solidarity with the AFL International Union of Timberworkers
they refused to handle "hot cargo" (lumber produced by scabs working ten-hour shifts)
Seattle Metal Trades Council unions struck -- September 29, 1917

SHIPBUILDING LABOR ADJUSTMENT BOARD TRAVELS TO SEATTLE

Only after the strike began did the Shipbuilding Labor Adjustment Board go to Seattle
to hold hearings and negotiation sessions
but the actual hearing was delayed when Macy Board member Edward F. Carey became ill
he was replaced by a new Emergency Fleet Corporation representative, Louis A. Coolidge

AMERICAN BUSINESSES MAKE VAST PROFITS FROM THE WAR EFFORT

American industry and trade prospered as the U.S. sent food, raw materials and munitions to Europe
United States government was reliant on private manufacturers to supply goods
while there were efforts to control the price gouging and fraud that accompanies war
the few months of the war were filled with confusion and disorganization in planning

U.S. Army and Navy attempted to purchase materials as they had in peace time
by purchasing from the lowest bidder
However, demands of the war did not allow for this type of purchasing for long
manufacturers would not give competitive bids at fixed prices,
but instead would give cost-plus contracts
cost-plus contracts were based on the cost of materials
plus time and labor to manufacture it
it is difficult for administrators and accountants to keep track of how much money
was going to producers for costs and for labor
many contractors gave in to the temptation to increase their profits by increasing the cost
efforts by congress to curb excessive profits that companies were experiencing were attempted
but no legislation was successfully passed and business benefited
American industry supplied much of the necessary war materials
biggest profits went to the most industrialized parts of the nation

WHAT IS GOOD FOR BUSINESS IS GOOD FOR AMERICA

American industry during the Great War boomed
in addition to supply the military needs of combating nations on both sides of the conflict
demand for supplies for the American army during the war drove industry profits
contracts from the Army and Navy for things like food, clothing, guns and ammunition
increased rapidly
never before had workers produced so much for so little money
inventories grew but prices stayed high as companies reported record profits
America also was able to take Europe's overseas markets during the war
modern U.S. industries could serve them more successful than its European competitors
advances in technology also made the US the new world leader in mechanization
and the development of plastics

WAR IS GOOD FOR WASHINGTON STATE BUSINESS

Agri-business exploded
many farmers mortgaged farms to buy more land to make more money while prices were high
(after the war some of these were lost to mortgage default and taxes)
improvements in farming focused on expanding both market facilities and production:
•cattle-slaughtering and meat-packing businesses came into existence
•flour milling increased four-fold with remodeling -- about twenty new flour mills were built
•dairy industry expanded under creation of four new dairymen's cooperatives
•poultry business advanced rapidly
with formation of Washington Cooperative Egg and Poultry Association
Coal at Coal Creek and Newcastle boomed again
during the war the federal government supported and controlled coal production and prices
mines were modernized and production boomed to a peak of 370,000 tons -- 1917
(production remained very high until [1919])
however, the price for coal was kept low to control war production costs
wages also were held down by federal regulation in an effort to help the war economy

U.S. BUDGET EXPLODES IN THE FACE OF WAR

Paying for the war became a major concern for the federal government

America's war effort was largely funded by the income tax (ratified on [February 3, 1913])
and the sale of Liberty Bonds

To raise the additional money necessary to pay for the war required increasing taxes

Congress passed the War Revenue Act -- October 3, 1917

this increased personal and corporate income tax rates

and established new excise, excess-profit and luxury taxes

these new taxes generated about half of the amount needed

(in 1916, a taxpayer needed \$1.5 million in taxable income to face a 15 percent rate)

in 1917 a taxpayer with only \$40,000 faced a 16 percent rate

and an individual with \$1.5 million in taxable income faced a tax rate of 67 percent)

these new tax rates were passed in spite of concerns regarding

frightening the wealthier classes and undermining their support for the war

BOLESHEVIK REVOLUTION (OR OCTOBER REVOLUTION) TAKES PLACE IN RUSSIA

Bolsheviks were members of a political faction in Russia

(which ultimately became the Communist Party of the Soviet Union)

Bolshevik leader Vladimir Ilyich Lenin (erroneously referred to as Nikolai Lenin in the West)

called for a new form of government based on worker's councils, or soviets

Bolsheviks were generally viewed as an extremist group

they had very little popular support when they began serious efforts in Russia

they enjoyed a majority of support only within Petrograd and other urban centers

though still a minority within the country as a whole, Bolsheviks' popular base continued to grow

Bolshevik Revolution (also called the October Revolution) -- October 1917

overturned Russia's provisional government and established the Soviet Union

Bolsheviks, who led this coup, prepared their revolution in only six months

however the event, orchestrated by a small group of people, was very deliberate

INDUSTRIAL WORKERS OF THE WORLD (IWW) SUPPORT REVOLUTION IN RUSSIA

IWW was interested in providing food, goods and supplies for the Russian Revolution

where workers were attempting to overthrow the wealthy ruling class

Supporting the Russians would create enough jobs for all of the union members in America

prosperity could finally reach the American Working Class as well as the wealthy

SAWMILL OWNERS CAPITALIZE ON WARTIME HYSTERIA

Wobbly work slowdowns, sabotage and strikes were met by attacks directed by the U.S. government

two new organizations were proposed to combat union activities:

- military Spruce Production Division headed by Colonel Brice P. Disque
which put 30,000 soldiers to work in lumber camps;
- civilian Loyal Legion of Loggers and Lumbermen (LLLL or 4-L)
which was essentially an enormous company union

WOMEN TAKES JOBS IN INDUSTRY

Before the war, women typically held the role of the homemaker
women had worked in textile industries and other industries as far back as the [1880]
but had been kept out of heavy industries and other positions involving any real responsibility
Women were judged by their beauty rather than by their ability
status usually was achieved through maintaining the family and raising the children
status centered on cleaning and caring the house, cooking for the family, maintaining a yard
and sewing clothing
As men left their jobs to serve their country overseas in the military, women took their jobs
numbers of women employed greatly increased in many industries and farming
wartime slogans that invited women to work in industry were aimed at women
such as: “You should aid nation in the war” and “Everyone has to be a helper”
there was a sudden influx of women in unusual occupations such as bank clerks, ticket sellers,
elevator operators, chauffeurs, street car conductors, railroad trackwalkers, section hands,
and railroad union workers
employment in machine shops, steel mills, powder and ammunition factories,
airplane works also drew large numbers of women
many of these women were married and some were mothers
whose husbands or older sons had been drafted and gone to the front for battle
Women were also a vital resource for meeting financial demands placed on Americans by the war
as purchasers of Liberty Bonds

WORKERS ENJOY FULL EMPLOYMENT AND POCKET MONEY FOR LUXURIES

American worker benefitted far less than American industrialists and international bankers
wages for people working the industrial side of the economy went up around six or seven percent
this increase in wages and the fact that it was now much easier to find work
led to an impressive increase in the labor force of America as four million workers
were added to the labor force to bring the total to forty-four million [1918]
However, wages and working improvements were nowhere near gains made by industrialists
labor contracts were frozen, the work day remained ten or twelve hours long
working conditions and labor camp condition remained dangerous and unhealthy
rising taxes, investing in low-yielding bonds and inflation took its toll on workers
families were forced to use credit for their basic necessities
America’s need for uninterrupted production during the “the war to end war”
led the federal government to involvement in both union recognition and collective bargaining

MACY BOARD BEGINS NEGOTIATIONS WITH THE SEATTLE METAL TRADES COUNCIL

Increased shipping was necessary for the war build-up
Five international union presidents involved in shipyard work were asked
to join the three members of the Shipbuilding Labor Adjustment Board (Macy Board) in Seattle
to help assess the situation and bring about a settlement with the Seattle unions
to resolve the strike -- October 8, 1917

SHIPBUILDING LABOR ADJUSTMENT BOARD HOLDS HEARINGS IN SEATTLE

Shipbuilding Labor Adjustment Board (Macy Board) public hearings in Seattle lasted five days
afterward the Board members decided to also hold hearings in Portland and San Francisco
before deciding the Seattle case
in the meantime, the Board instructed the shipyard workers to return to work -- October 13, 1917
Seattle Metal Trades Council union shipyard workers refused to return to work

SHIPBUILDING LABOR ADJUSTMENT BOARD RULES ON THE SEATTLE LABOR ISSUES

Shipbuilding Labor Adjustment Board (Macy Board) issued its ruling -- October 23, 1917
wages for Seattle Metal Trades Council union shipyard workers were adjusted
to a uniform nation-wide level -- November 8, 1917
this proposed scale played havoc with wages in the Far West
it resulted in journeymen skilled shipyard workers and laborers taking a pay cut
Federal Government disallowed any possibility of further adjustment
between the workers and owners
federal officials said that if exceptions were made for some workers
no contract to build ships for the United States government would be sacred
Seattle Metal Trades Council rejected the Shipbuilding Labor Adjustment Board decision
shipbuilding locals continued their strike and appealed the decision

SEATTLE METAL TRADES COUNCIL UNION MEMBERS RETURN TO WORK

After strenuous efforts and appeals to patriotism
Pacific Coast Metal Trades Council union leaders yielded
strikers returned to work under the old contract and conditions -- but they did so angrily
they looked forward to the end of the war
when they could win back what they saw as just wages and union rights

SPRUCE PRODUCTION DIVISION IS FORMED

U.S. War Department created the Spruce Production Division -- October 1917
these soldiers would be directed by the federal government to take over
all spruce production in Washington and Oregon
Spruce Production Division Commander Colonel Bryce P. Disque suggested that troops
would be helpful to both laborers and sawmill owners and operators
to support owners and operators, soldiers were to be used:
•to protect and log the forests,
•to protect the mills from the unions,
•to operate the machinery,
•to supplement the manpower in the mills
to support unions, the soldiers were to be used:
•to obtain better working conditions and living conditions,
•to establish an eight-hour work day,
•to stabilize wages among companies and differing regions,
•to provide more favorable status for loggers in the eyes of the public

COLONEL BRICE P. DISQUE MEETS WITH TIMBER INDUSTRY OPERATORS

Sixteen representatives of the Pacific Northwest's largest lumber companies met with Colonel Brice P. Disque in Centralia -- November 1917 they were persuaded to sponsor an effort to attempt to end labor strife through militarization Timber Barons and sawmill owners treated Colonel Disque like a timber "tsar" Colonel Disque followed the timber employers' bidding closely ironically, Colonel Disque became convinced most union demands would have to be met if lumber was to be cut Colonel Disque urged timber managers to implement an eight-hour day in return the industry received Army assistance thus Disque provided one of the major unmet union demands timber managers hoped this would eliminate the IWW from the woods troops in the lumber camps mandated other improvements that Wobblies had long sought such as shower facilities and clean bunkhouses

U.S. SOLDIERS ARRIVE TO WORK IN THE FORESTS OF THE PACIFIC NORTHWEST

Vancouver Barracks became the temporary home of 30,000 soldiers where the Spruce Production Division troops was quartered -- November 1917 although they were not skilled loggers or mill hands they were directed to get fir, hemlock, pine and especially spruce moving out of the woods

GREAT NORTHERN RAILWAY CONTINUES ITS ADVANTAGE IN THE ORIENT TRADE

Great Northern Railway renewed its contract with shipping partner Nippon Yusen Kaisha (NYK) steamship line -- 1917 and [1921] this formidable partnership continued to transport raw silk into the United States

LOYAL LEGION OF LOGGERS AND LUMBERMEN IS FORMED

Loyal Legion of Loggers and Lumbermen (LLLL or commonly 4-L) was established by the United States War Department Federal government's 4-L was an employer union composed of a joint pool of civilian timber workers and soldiers to ensure a decent work environment, to ramp up production and to undermine the IWW all employees in the woods were required to join the 4-L -- except Wobblies who were barred members were required to pledge to help the nation to produce war materials and, most importantly, to pledge not to strike First union local of the Loyal Legion of Loggers and Lumbermen (4-L) was organized in Wheeler, Oregon -- November 30, 1917 Soldiers under Colonel Brice P. Disque entered the woods and began logging spruce trees they also took over milling and shipping finished spruce lumber unions were shocked that the Army would be used for the direct production of lumber especially during a time of war

IWW MEMBERS ATTEMPT TO RETURN TO WORK IN THE FORESTS

Many Industrial Workers of the World (IWW) union members returned to their jobs in the forests where they worked side-by-side with Spruce Production Division soldiers

but after working an eight-hour shift IWW crews were notified to return to their bunkhouses where they were fired
next day replacement Wobblie crews refused to work more than eight hours
they in turn were fired at the end of their shift
this situation repeated itself for several weeks
International Workers of the World (IWW) charged and many workers believed that the Loyal Legion of Loggers and Lumbermen was loaded in favor of the operators
4-L was disparaging known by Wobblies as
a **“fifty-fifty outfit: half employer, half employee, and half you-know-what”**⁹⁰

LOYAL LEGION OF LOGGERS AND LUMBERMEN FLOURISHED

Legion of Loggers and Lumbermen grew to a membership of 110,000
bolstered by active publicity and recruiting campaigns in the 4-L union newspapers
Four L Bulletin and *The Lumberjack*
cooperation, nationalism, anti-Bolshevik sentiment and mutual prosperity was emphasized
and helped to destroy Industrial Workers of the World (IWW)
and weaken the American Federation of Labor (AFL)

ANOTHER AMERICAN INDUSTRY COMES UNDER CONTROL OF THE U.S. GOVERNMENT

Railroad Administration nationalized the railroad system and put it under federal government control
President Wilson’s son-in-law William Gibbs McAdoo was appointed to head the agency
railroads were under federal control for twenty-six months -- beginning December 1917
(lasting into [1920])
defenders of the takeover pointed out that unnecessary shipping competition was eliminated
critics pointed to a for nearly \$1.7 billion occurred and rolling stock deteriorated

WAR TECHNOLOGY IMPROVES IN EUROPE

Major armies, now numbering millions of men, modernized -- toward the end of 1917
telephone, wireless communication (radio) armored cars, tanks and airplanes were in use
infantry formations were reorganized
100-man companies were no longer the main attacking force
instead, squads of ten or so men, under the command of a junior officer were favored
artillery also underwent a revolution
most powerful land-based weapons were railway guns weighing hundreds of tons apiece
these were nicknamed “Big Berthas”
Germany developed the “Paris Gun” capable of bombarding Paris
from a distance of over sixth miles
Allies also had railway guns, but German models severely out-ranged and out-classed them

UNITED STATES DECLARES WAR ON AUSTRIA-HUNGARY

President Wilson had gone to a joint session of Congress to urge an immediate declaration of war
as Austria-Hungary had taken belligerent action against America

⁹⁰ W. Storrs Lee, *Washington State*, P. 430.

Congress acted on the request by passing a war declaration -- December 7, 1917
Senate vote was unanimous
one dissenting vote, that of a Socialist Congressman,
was counted in the House of Representatives
President Woodrow Wilson declared war -- December 7, 1917

RUSSIA WITHDRAWS FROM THE WAR IN EUROPE

Bolshevik leader Vladimir Ilyich Lenin had been elected President of Russian National Council
no other Russian political party was as tightly organized or active as were the Bolsheviks
President Lenin's first task was to withdraw Russia from a highly unpopular European war
both sides benefited from this:
Germans could shift all their forces on the Eastern Front to the Western Front
Lenin could concentrate all of his resources on what was happening in Russia
An armistice was concluded between Russia and the Central Powers -- December 14, 1917
Russia withdrew her troops from the battlefield

U.S. HOUSE OF REPRESENTATIVES PASSES A SECOND FORM OF ALCOHOL PROHIBITION

Congressmen voted to grant state and federal government
concurrent power to enforce prohibition of manufacture, sale, transportation, import,
or export of intoxicating liquors -- December 17, 1917

CONGRESS SENDS A PROPOSED EIGHTEENTH AMENDMENT TO STATE LEGISLATURES

U.S. Senators acceptance of the House alterations -- December 22, 1917
lobby groups such as the Anti-Saloon League had asked senators
to endorse national prohibition in return for its support
regardless of the senator's position on other issues
this pressure apparently worked:
in the Senate, twenty-nine Republicans and thirty-six Democrats voted for the resolution
eight Republicans and twelve Democrats voted against it
in the House, 137 Republicans, 141 Democrats, and four independents
supported the proposed constitutional amendment
sixty-two Republicans, sixty-four Democrats, and two independents stood opposed
Proposed Eighteenth Amendment to the United States Constitution
was sent to the states for ratification
if two-thirds of the legislatures of the states also approved it would become law

ALCOHOL CONSUMPTION IS LITTLE AFFECTED IN WASHINGTON STATE

All over the state, the market for moonshine booze remained steady or expanded -- 1917
rumrunners with high-powered boats eluded Coast Guard cutters
low fogs were a frequent help to the smugglers
rumrunners about to be apprehended easily dumped the cargo overboard
government countered with high-powered boats of their own
mounted with wide-ranging guns
increased violence brought deaths and injuries

Many legitimate stores and shops sold homemade and illegally imported liquor
Spokane County prosecutor complained that soft-drink shops
were worse than the old-time saloons -- booze was plentiful
Tacoma longshoremen demanded that police clean up the drug stores and soft-drink shops
where beer and hard liquor were easily obtained

MOTHER CABRINI BECOMES AMERICA'S ONLY CATHOLIC SAINT

Seattle Catholic Bishop Edward John O'Dea decided to allow her dream of opening
Columbus Sanitarium in Seattle to go forward
Before Mother Francesca Xavier Cabrini died -- December 22, 1917
she had the happiness of knowing that Columbus Sanitarium in Seattle
was well on its way to completion
(first named Columbus Hospital, it was renamed Cabrini Hospital in honor of its founder)
Seattle Catholic Bishop Edward John O'Dea was the first bishop to proclaim her publicly
as one of the greatest women of the twentieth century

WAR PROSPERITY PAYS GREAT DIVIDENDS FOR WASHINGTON BUSINESS

Lumbering increased almost three-fold -- 1917-1918
spruce trees provided strong, lightweight material for airplane industry
spruce industry employed 40.2% of all wage earners in the state
opening of Panama Canal made Eastern markets for wood close and cheap
Weyerhaeuser built a second, electrically operated, mill in Everett -- 1917
this was the most modern and efficient lumbering operation in the world
Positive development drove the food industry
farm prices rose as the demand to supply U.S. and Europe continually grew
fishing industry achieved enormous profits
Alaska was the most productive fishery of all
trollers fished with up to twelve lines and thirty hooks
Scandinavians and Finnish fishermen were the most active
Finns were the most independent of all
as they operated without any connection to a cannery

WOMEN'S SUFFRAGE PROPOSAL PASSES THE U.S. HOUSE OF REPRESENTATIVES

President Woodrow Wilson announced his support of the Nineteenth Amendment
which provide suffrage rights to women and access to the political process -- January 9, 1918
U.S. House of Representatives narrowly passed the amendment the next day
(but the US. Senate refused to debate it until [October 1918])

POWER SHIFTS IN RUSSIA

Vladimir Ilyich Lenin and the Bolshevik revolutionary leaders
realized that they could not maintain power in an election-based system
without sharing power with other political parties and compromising their principles
as a result they formally abandoned the democratic process -- January 1918
Bolsheviks declared themselves the representatives of a dictatorship of the proletariat (working class)

revolutionary leader Lenin called for a Communist revolution using the rallying cry:
“Workers of the world unite -- you have nothing to lose but your chains”

SEATTLE MAYOR HYRAM GILL REMAINS IN OFFICE

Even after his trial on corruption charges, Mayor Gill maintained his position
however, the Washington State Bar Association disbarred him as an attorney for a year
for unethical solicitation of legal work -- January 1918

ALEXANDER PANTAGES CONTINUES TO EXPAND HIS VAUDEVILLE BUSINESS

Theater owner and booking agent Alexander Pantages had amassed a considerable fortune
he owned mansions in Seattle and in Los Angeles
he managed or owned theaters up and down the Pacific Coast in the United States and Canada
at the peak of his career, Pantages owned or controlled more than sixty vaudeville theaters
virtually all under his direct personal management

Alexander Pantages' theatres formed the *Pantages Circuit* -- a chain of theatres
into which he could book and rotate touring acts on long-term contracts
performers of national reputation traveled the circuits
patrons followed the various billings in their local theater with enthusiasm
a typical billing was comprised of as many as ten acts, but most often seven
features might include musical performers, gymnasts, comic monologues or skits
sprinkled with a mixture of other acts
moving pictures were shown between vaudeville entertainers
Pantages' particular genius was his appreciation of which acts, or parts of acts, his audiences enjoyed
he exercised personal supervision over all bookings

TWO PLANS ARE PROPOSED TO DAM THE COLUMBIA RIVER

Rufus Woods, editor of *The Wenatchee Daily World*, scaled back Laughlin MacLean's dream
height of the dam would be limited so the lake behind it would only reach to the Canadian border
water would then be lifted the rest of the way into the Grand Coulee by huge pumps
powered by electricity generated at the dam itself
proponents of this scheme became known as “Pumpers”
since they suggested blocking the Columbia River with a dam and pumping water -- 1918
Woods' scheme was taken up by Ephrata attorneys William Clapp and James O'Sullivan
who supported the suggestion of backing water into the Grand Coulee
so the ancient channel could be used as a reservoir to store water
for both irrigation and the generation of electricity

E.F. Blaine, a Reclamation Service staff member, proposed a rival plan -- 1918
he preferred to take water for irrigation from Priest River and Pend Oreille Lake
using a dam at Albeni Falls to divert water along a canal past Spokane to the Big Bend region
because of the altitude of the source of water, gravity flow could be used
to bring water to dry Columbia Basin farmland
Spokane businessmen were instantly interested since the ditch would pass close to their city

COLUMBIA RIVER IS CONSIDERED FOR USE AS A SOURCE OF WATER

Since the arrival of farmers in Eastern Washington yearning eyes had looked down on the Columbia
as it flowed inaccessibly at the bottom of canyon almost a thousand feet deep

But that had not always been the case

during the last ice age (10,000 years ago) when the Columbia River had been much larger
an ice dam blocked the torrent and forced a new huge trench to be formed through basalt rock
fifty miles long, from two to six miles wide and in places more than six hundred feet deep
to the south through the heart of the Big Bend Country
at one spot an incredible volume of water had plunged over cliffs a mile and a half wide
this was perhaps the biggest waterfall the world had ever known
eventually the ice dam melted and the shrunken river resumed and deepened its former course
leaving behind the great high and dry channel -- silent and awesome

Who named the great channel the "Grand Coulee" is unknown today

fur traders used that name [in 1814] when Alexander Ross in wonder noted its **"columns, pillars, battlements, turrets, and steps,"** which he declared it to be **"the most romantic, picturesque, and marvelously formed chasm west of the Rocky Mountains...the wonder of the Oregon."**⁹¹

Looking at the spectacle of the Grand Coulee, a Big Bend real estate agent Laughlin MacLean
proposed [in 1892] to use the Grand Coulee not only for irrigation
but also as "a first-class ship canal"

he admitted there were difficulties with his vision

a dam a thousand feet high, MacLean estimated, would be necessary
to lift the Columbia River to the level of its onetime bed
the smelting city of **"Northport will then be in the bed of a huge lake, but it will make a metropolis of Grand Coulee City."**⁹²

MacLean failed to note that such a lake would also inundate a large part of British Columbia
but these problems and the difficulties of financing did not bother MacLean **"With the rich placer mines that will be exposed in the dry bed of the present channel, there will be plenty of capital.... It is surely a grand enterprise."**⁹³

Laughlin MacLean's grand scheme was largely ignored as a pipe dream
until Rufus Woods of the Wenatchee publicized the vision

SEATTLE ELECTS A NEW MAYOR

Hiram Gill once again sought re-election -- March 5, 1918

he finished a poor third in the primary election

Hiram Gill died less than a year later [January 7, 1919])

Ole Hanson, well-known for his oratory, became Seattle's mayor

he had been a real estate developer and co-founded of Lake Forest Park, Washington

as a state representative [1912] he supported Theodore Roosevelt for president

and ran for the United Senate as the candidate of the Bull Moose Party

WAR INDUSTRIES BOARD CHANGES THE DIRECTION OF THE AMERICAN ECONOMY

⁹¹ David Lavender, *Land of Giants*, P. 439.

⁹² David Lavender, *Land of Giants*, P. 439.

⁹³ David Lavender, *Land of Giants*, P. 439.

Bernard Baruch, a Wall Street investor, was put in charge of the War Industries Board
he installed a “priorities system” to determine the order in which manufacturers filled contracts
AA rated contracts had to be filled before A contracts and so on
War Industries Board’s Price Fixing Committee set prices of industrial products such as iron
and steel, coke, rubber, lumber, etc.

WAR DEPARTMENT IMPOSES IMPROVEMENTS ON THE LOGGING INDUSTRY

War Department ordered lumber companies
to rehire Industrial Workers of the World (IWW) loggers -- March 1918
these loggers were required to sign pledges to help United States win the war in Europe
In return for a guaranteed work force the War Department ordered timber operators
to cut shifts to eight hours and pay time-and-a-half overtime
employers were ordered to furnish bunkhouses with clean bedding
and change sheets and pillow cases weekly
War Department also insisted logging companies must burn heavily infested bunkhouses

CONSPIRACY TRIAL OF INDUSTRIAL WORKERS (IWW) OF THE WORLD LEADERS BEGINS

William “Big Bill” Haywood and one hundred of his fellow Industrial Workers of World leaders
began their trial in Chicago -- April 1, 1918
on charges of **“conspiring to hinder the draft, encourage desertion, and intimidate others
in connection with labor disputes”**

Judge (later the first commissioner of organized baseball) Kenesaw Mountain Landis presided
Wobbler trial lasted five months -- the longest criminal trial up to that time
Haywood himself testified for three days
all 101 defendants were found guilty
Haywood, along with fourteen others, was sentenced to twenty years in prison
(Wobbler organizers, with the exception of Bill Haywood, remained incarcerated
until they were pardoned by President Warren G. Harding [December 1921])
(William “Big Bill” Haywood served a year in Leavenworth prison
he jumped bond [1921] while out on appeal and fled to Moscow
where he became a trusted advisor to the new Bolshevik government
William Haywood died in Moscow [1928])

STUDENT’S ARMY TRAINING CORPS (SATC) BEGINS OPERATION

Organized by the federal government, National Army Training Detachments program was established
at 157 colleges, universities, and trade schools under a War Department contract -- April 1918
SATC was designed to train draftees in a variety of trades needed for the war effort
this effort was jointly administered by the military and the university
nation-wide enrollees were later enlisted in the regular army as privates
similar organizations created for the navy and marines
Even before training detachments got underway, the army realized it lacked required officer material
at the same time, colleges were concerned about the depletion of students by the war
and the attendant financial loss which was only partially redressed by the vocational program
University of Washington became largely an officer’s training school

as the campus was covered with barracks

BOEING SUCCESSFULLY FULFILLS ITS NAVY CONTRACT

Boeing Airplane Company began delivery of its Model C starts delivery to the Navy of its Model C seaplanes to be used for training pilots -- April 1918
(last of the fifty planes will be delivered [November 1918])

BOEING BEGINS PRODUCTION ON ANOTHER AIRCRAFT

Boeing Airplane Company called company vice president Edgar Gott from San Diego, California he was told to get the factory ready to build a new plane: the HS-2L -- May 14, 1918
this would be a Curtiss-designed patrol flying boat
(Glen Curtiss had designed the two-seat biplane -- two wings [1912])
(Boeing Company signed a contract with the Navy for \$116,000 to build fifty HS-2Ls [June 29]
but the war came to an end before the contract could be completed
thus only twenty-five of the planes were delivered)

CONGRESS PASSES THE SEDITION ACT OF 1918

President Woodrow Wilson signed the Sedition Act into law -- May 16, 1918
this law forbade the use of “disloyal, profane, scurrilous, or abusive language”
regarding the United States government, its flag, or its armed forces
also language that caused others to view the American government or its institutions
with contempt was made illegal
Sedition Act also allowed the Postmaster General to refuse to deliver mail
that met the standards for punishable speech or opinion
Sedition Act applied only to times when the United States was at war
(it was repealed on [December 13, 1920])

LABOR TROUBLE HITS CENTRALIA, WASHINGTON

Industrial Workers of the World members were being arrested across the country on sedition charges
to many people in Centralia the political leanings of the Wobblies were believed
to be un-American and possibly treasonous
Members of the Centralia Home Guard and Elks Club marched in a parade
to raise money for the American Red Cross -- May 1918
Shouting marchers broke ranks in front of the IWW union hall and raided it
windows and doors were smashed
furniture, union records and Wobbly literature was thrown into the street and set afire
a desk and a phonograph from the hall were auctioned off
proceeds were donated to the Red Cross
Wobblies in the hall were forcibly put into a truck and removed from the downtown area
where they were forced to run the gauntlet while being beaten with sticks and ax handles
Both sides disputed the details of the attack
some local residents claimed the action was in response to ongoing provocations by the Wobblies
and a desire to remove seditious elements from their town
IWW members said the looters were not just local residents

but included hired thugs acting under orders from lumber companies
in which the union had been organizing members
After the incident, the IWW reopened a union hall in the Roderick Hotel
Wobblies vowed they would not be evicted again

ANOTHER LABOR INCIDENT OCCURS IN CENTRALIA

Tom Lassiter, a partly blind newspaper vendor, sold publications from his newsstand in Centralia
including those published by the Industrial Workers of the World
Toughs overturned his newsstand -- June 1918
newspapers and magazines were thrown into the gutter
Tom Lassiter was taken out of town and thrown into a ditch
before the mob left, Lassiter was told not to return to Centralia

WASHINGTON STATE GRANGE COMES UNDER ATTACK

One of the political allies of farmers was the Nonpartisan League (founded in North Dakota [1915])
this progressive group led by former Socialists split from the Republican Party
they advocated state control of mills, grain elevators, banks and other farm-related industries
in order to reduce the power of corporate political groups
when it organized as a national political party, Nonpartisan League became active in Washington
Conservative businessmen and politicians reacted to the Nonpartisan League
with every weapon at their disposal -- both fair and foul
“Great War” had turned many cherished values and American traditions upside down
foul weapons not only became fair but they also enjoyed the sanctions of government
Federal and state agents shadowed league organizers
whose private lives were covertly pried into
authorities persecuted Nonpartisan League members because its quasi-socialist program
called for cooperative purchasing organizations
and for publicly owned power companies and railroads
At the annual convention of the Washington State Grange held in Walla Walla -- June 1918
Grangers refused to renounce the Nonpartisan League
vigilantes, believing the Nonpartisan League had been unpatriotic during the war
disrupted the gathering and forced nearly five hundred conventioners to leave town
Ironically, many Grangers had sons in the military and considered themselves good patriots
Grange leaders wired President Wilson a formal protest of the vigilantes’ actions
but the Justice Department concluded that nothing could be done
to punish those who had harassed the grange in Walla Walla

SAM HILL CONSTRUCTS A WAR MEMORIAL ALONG THE COLUMBIA RIVER

Hill built a memorial in Washington State located three miles east of his Maryhill mansion
designed as a Stonehenge replica
(the stone circle built some three thousand years ago on the Salisbury Plain in England)
it was constructed at his own expense on a bluff overlooking the Columbia River
Hill’s reinforced concrete monument was dedicated -- July 4, 1918
to three men from Klickitat County who had been killed in the Great War

(nine more names would be added to the list)

CIVIL WAR BREAKS OUT IN RUSSIA

Russian Civil War broke out -- summer 1918 of that year and would last well into [1920]
Bolshevik Red Army, often in temporary alliance with other leftist pro-revolutionary groups,
were opposed by the forces of the White Army -- loosely-allied anti-Bolshevik forces
(Most intense fighting took place from 1918 [to 1920]
major military operations ended [October 25 1922] when the Red Army occupied Vladivostok
previously held by the Provisional Government
successful Russian Revolution had sparked new sense of "Class Solidarity")

UNION MOVEMENT ACHIEVES REFORMS ON THE JOB

Union members were attempting to accomplish the same goals as the revolutionaries in Russia
but Americans were using strikes as the means -- not revolution

Unions were accomplishing major reforms in the work place:

- wages increased,
- working conditions improved,
- government control of industry expanded

Union membership grew nationwide to over four million members
in Tacoma, mills, mines, clerks, service trades and smelter workers organized
each trade improved wages and working conditions for their members

Unions called for U.S. recognition of the new Russian government under Vladimir Ilyich Lenin
union leaders also circulated American loyalty pledges among their members

Whole union movement was tilted to the political left

on the fringe of the movement was a vigorous Socialist Party
that contributed activists to the local unions and central labor councils

DR. ANNA LOUISE STRONG IS RECALLED FROM THE SEATTLE SCHOOL BOARD

Pacifist stance taken by the Industrial Workers of the World led to arrests at the Seattle IWW office
where Louise Olivereau, a typist, was mailing mimeographed circulars to draftees
urging them to consider becoming conscientious objectors -- 1918

Dr. Strong stood by the accused woman's side in the courtroom as the typist-activist
was tried for sedition (rebellion against the federal government)

Louise Olivereau was found guilty and sent to prison

Because of her political beliefs Anna Louise Strong's fellow Seattle school board members
launched an immediate recall campaign against her

she was recalled from the school board by a narrow count of 27,000 to 20,000

At their next meeting, Dr. Strong made an appearance
to argue that they appoint a woman as her successor

her former colleagues accepted to her request

but they made it clear that they wanted a mainstream, patriotic representative,
a mother with children in the schools

they replaced the radical unionist with Evangeline C. Harper -- a prominent club woman

UNITED STATES SOLDIERS GO INTO BATTLE

“Washington’s Own” 91st Division entered the “Great War”

Southeast of Verdun, France -- September 12, 1918

this was the first U.S. operation and victory by an Independent American Army
(91st Division participated in every battle on the Western front until the end of the war)

About 75,000 men and women of Washington State were enrolled in the Armed Forces

3,158 officers saw action in Europe -- more than 2,000 never returned

three hundred ninety-seven nurses from Washington volunteered -- three died

HYDROELECTRIC POWER FROM THE ELWA RIVER

Construction of a dam on the Elwha River of the Olympic Peninsula

was the brainchild of real-estate developer Thomas T. Aldwell

(who first arrived in Port Angeles [December 1913])

he spent twenty years acquiring land and arranging for financing and construction of the dam

which powered the Puget Sound Navy Yard at Bremerton during the Great War

Aldwell convinced A. H. Dougall to locate a boxboard mill in Port Angeles

to produce cartons and paper packaging

Crescent Boxboard Company (later Fibreboard Products) began production -- 1918

BATTLEFIELDS OF FRANCE EXPERIENCE HEAVY CASUALTIES

U.S. troops, inexperienced and unwillingness to learn from their French and British counterparts,
sustained heavy casualties

Even so the Americans ultimately proved to be crucial in bolstering the war-weary Allied armies
they turned back the powerful final German offensive

and advanced in the Allied final offensive (the Hundred Days Offensive)

SPANISH INFLUENZA SWEEPS ACROSS THE NATION

Flu Pandemic of 1918-1919 was compared with the Black Plague of Europe

(lasting from [1348] through [1351],

plague killed an estimated 25% to 60% of Europe’s population)

Spanish Flu raced across America from -- October 5, 1918 [through May 20, 1919]

pandemic took a larger toll of lives (50 million) than the war itself (40 million)

Serum was rushed to Seattle and an emergency hospital was set up in the old courthouse

John S. McBride -- Seattle's Health Commissioner issued strict rules: **“All these will wear gauze masks: barbers, dentists and assistants, waiters and waitresses, clerks in all stores, messenger boys and girls, elevator operators, bank tellers, all persons preparing food for the public.”**

American Red Cross made thousands of masks -- women were mobilized to make even more

Public Health Department ordered public telephones be sterilized nightly

Bon Marche advertised: **“Shop by phone. It is not unpatriotic.”**

Spanish Flu Pandemic would wane then flare up again

churches, theaters, the University of Washington and many stores closed

(by December homes with flu were marked with placards)

An estimated twenty million people around the world died of influenza

between 500,000 to 700,000 died of flu in the United States -- 50,000 died in combat

of the 315,000 people living in Seattle 772 deaths were recorded
Seattle's death rate of 5.6 per 1000 was lower than most parts of the nation
Philadelphia recorded 7.4 per 1000; Baltimore: 6.7 per 1000
in New York alone 20,000 people died
(by way of comparison an estimated 16,700 died in the first World War)

NATIONAL ELECTION FOCUSES ON VOTING RIGHTS FOR WOMEN

Democracy took a real beating on the home front
members of Congress who voted against the declaration of war
were vilified and publicly humiliated
(four-term Washington Republican Congressman William La Follette
failed to survive his party's primary election)
leaders of the National Woman's Party urged citizens to vote against anti-suffrage Senators
who were up for reelection -- 1918
following that election most members of Congress were pro-suffrage
Republican Party dominated national and state politics -- November 5, 1918
In Washington state voters went into polling booths wearing masks to protect against Spanish Flu
two new Republicans Congressmen were elected to serve with Democrat C.C. Dill
John W. Summers of Walla Walla served seven terms -- [1919-1933]
J. Stanley Webster from Spokane resigned after two terms -- [1919-1923]

PUYALLUP BRANCH OF THE INTERURBAN IS DISCONTINUED

Interurban line linking Puyallup with Tacoma was terminated after a bridge washed out -- 1918
early abandonment testified to the Stone & Webster management's lack of sympathy
for a company that was not showing a profit
there was great pessimism about the immediate future of the industry
Puyallup line certainly had greater potential than many roads that lasted two decades longer

SEATTLE'S STREETCAR LINES BECOME A PUBLIC UTILITY

Despite the greatly increased ridership generated by war defense workers
Stone & Webster Company found its Puget Sound Traction, Light & Power Company
Seattle streetcar company's finances hobbled by franchise-mandated fares
and growing labor unrest
In a controversial move, Seattle Mayor Ole Hanson negotiated a \$15 million purchase
for the entire city streetcar system -- approximately three times the market value
voters approved the purchase of the entire company -- November 5, 1918
(in an irony that apparently went unnoted at the time, Seattle took over operation
of all in-city electric streetcars on [April Fool's Day, 1919]
subsequent investigations found no intentional wrongdoing by Hanson or anyone else,
but merely "slack business methods")⁹⁴
(unfortunately, the high price and resulting debt crippled municipal streetcar operations

⁹⁴ John Caldbick, "William Grambs, acting for utilities conglomerate Stone & Webster in its push to consolidate Seattle electricity producers and street railways, incorporates Seattle Electric Company on January 19, 1900" HistoryLink.org Essay 1657, March 22, 2016.

in the Pacific Northwest for the rest of their existence
various refinance schemes failed as modern highways would soon offer fatal competition
Seattle converted to buses and “trackless trolleys” [1940]
old streetcar rails were torn up and [also ironically] was sold to Japan for scrap)

WORLD WAR COMES TO AN INCONCLUSIVE END

Germany signed an armistice (agreement to stop fighting) with the Allied Powers
in a railroad car at a railway siding in Compiègne Forest of France -- November 11, 1918
Germany was not allowed to negotiate -- terms of the armistice were harsh
(although the armistice ended the actual fighting, it took six months of negotiations
to sign a treaty of peace with Germany
other Central Powers of Austria-Hungary and Turkey-Ottoman empires
were dealt with in separate treaties)
Germany and France had been most affected by the war effort
each of which sent some eighty percent of their male populations
between the ages of fifteen and forty-nine to battle
Great War in Europe took the lives of more than nine million soldiers
twenty-one million more were wounded
civilian casualties caused indirectly by the war numbered close to ten million

AMERICAN TROOPS HAD SUFFERED DURING THE WAR EFFORT

During the Great War 116,516 American were lost, 204,002 were wounded and 3,350 missing
accidents and disease accounted for 63,195 deaths
nearly 60% occurred in the United States
the flu epidemic took 25,000 soldiers' lives at stateside camps
half of all Army deaths were from disease
at the height of the war, 11,000 soldiers in France
were hospitalized weekly from influenza and pneumonia
“Shell shock,” was a disabling state of depression thought to be caused by a concussion
that disrupted the brains physiology
almost 70,000 U.S. men were permanently evacuated from the battle line
more than 36,000 were hospitalized for long periods from its effects
in all 158,994 Doughboys were psychiatrically inactivated for some time

AMERICANS CELEBRATE THE END OF WORLD WAR

No one had expected a war of the magnitude or duration of the Great War
citizens were greatly relieved the war had ended in victory for the Allies
talk immediately focused on “bringing the boys home” and “getting back to normalcy”

A DARK CLOUD HOVERS OVER AMERICA’S NEW-FOUND WEALTH AND POWER

European empires of the Central Powers had been defeated by the armies of the Allied Powers
with enough involvement by the American military to justify many of the hardships
imposed on the nation’s people by the draft and the demands of the war economy
improvements in America justified the sacrifices:

- America had burst on the world scene with industrial potential never before seen,
- American farmers had fed the nation and the people of Allied Europe at the same time,
- American banking had financed the development of both industry and agriculture at home and funded the Allied war effort (and Central Powers effort at the outbreak)

However, another battle had been joined in Europe without American help or intervention as the Russian Empire of Czar Nicholas II was crushed by Russian civilian workers the prospect of this eventuality in the United States terrified government officials and the powerful wealthy class who had derived so much from war

TWO INDUSTRIES REMAIN UNDER FEDERAL CONTRAL AFTER THE WAR

Federal government's War Industries Board maintained control of only two industries after the war War Shipping Board and the Railroad Administration continued to limit contracts to businesses and controlled wages and working condition in those industries Wages had failed to keep pace with the wartime inflation

AMERICAN TROOPS RETURN HOME FROM EUROPE

Soldiers and sailors returned home from Europe to ticker-tape victory parades, marching bands, speeches and the good will of all Americans celebrations were held in their honor all around the country as euphoria swept the nation unfurled American flags waving the breeze decorated streets and homes reveling continued non-stop for weeks; it seemed as though the nation and its citizens could not do enough for the returning service men and women a grateful nation was anxious to show its admiration and support to the returning soldiers Troops of "Washington's own" 91st Division returned to the Northwest from Europe they were greeted with a parade in Seattle and a thirty-minute air show that delighted the crowd when Boeing's test pilot Edward "Eddie" Hubbard marked the festivities by taking Boeing officials on stunt rides above downtown Seattle engineer Louis Marsh rode through two loops

WAR PROHIBITION ACT PASSES CONGRESS

Manufacture and sale of all intoxicating beverages of more than 2.75 percent alcohol content, beer and wine as well as hard liquor, was forbidden by Congress -- November 18, 1918 until demobilization was completed

AMERICAN INDUSTRY FACES CHANGE

At the time the armistice approximately nine million people worked in war industries while another four million were serving in the armed forces once the war was over the war industries were left without contracts people were left without jobs -- economic difficulties and worker unrest increased With the arrival of peace, the demand for farm goods fell as did production agricultural prices fell as farm surpluses increased farmers had borrowed money to buy acreage and purchase equipment to grow large crops now mortgages on farmland came due as harvests generated vast surpluses

grain was once again in oversupply -- wholesale price dropped by more than half
money increasingly remained in the hands of fewer and fewer people
farmers were losing their farms to foreclosures in record number
wages stagnated for coal miners, railroad workers and the textile industry

AMERICANS BEGIN AN ECONOMIC ROLLERCOASTER RIDE

After the war the U.S. government cancelled military production contracts
men lost their job and families lost their income
as soldiers returned from Europe conditions worsened
numbers of unemployed workers increased considerably right after the end of the war
at the same time workers were eager to receive the benefits
that war propaganda had promised to them
Post-War economic recession hit the United States (with a mild recovery occurring in [1919])
opportunities varied in the nation by geographic location and the type of work available
demobilized soldiers and sailors who arrived home and needed jobs became desperate

BOEING AIRPLANE COMPANY SUFFERS AFTER THE WAR

William Boeing's corporation fell on hard times at the close of the war
government contracts dried up
there little demand anywhere for airplanes or their manufacture
Boeing kept his craftsmen busy building boats and furniture
In order to continue his profitable business, Boeing conceived of an air-mail transport service
Boeing launched into civilian commercial aircraft production
with construction of the B-1 "Flying Boat"
like all Boeing airplanes at that time, the B-1 used pontoons in place of wheels
this plane had an open cockpit for the pilot
with a closed cabin for mail or for two passengers behind the pilot

RETURNING TROOPS FACE HARSH ECONOMIC REALITIES

Increased mechanization had limited the number of manual labor jobs in many industries
returning soldiers who had survived the ravages of war returned looking for jobs
which flooded the labor market
they faced a shrinking economy and shortages of jobs
Returning combatants were to be paid a \$60 bonus for their services
this practice of war-time military bonuses began in [1776]
as payment for the difference between what a soldier earned
and what could have been earned if the soldier not enlisted
however, for the returning veterans no bonuses were forth-coming
as the federal government stalled rather than fulfill its promise to veterans

TIMBER INDUSTRY FACES CHANGE

Demands for shipping slowed which negatively affected the maritime unions and shipbuilding
at the same time, the armistice released shipyard workers from their wartime no-strike obligation
Seattle Metal Trades Council, like unions across the nation,

demanded resolution of long-standing labor issues
Lumber industry retrenched as the demand for wood and forest products collapsed
with the outbreak of peace for the United States
Spruce Production Division and Loyal Legion of Loggers and Lumbermen (4-L) Union
no longer controlled the timber industry
American Federation of Labor (AFL) tried to fill the vacuum in union mills and logging camps
when they failed, the woods were taken over by the Industrial Workers of the World
IWW charged, and many workers believed, that the 4-L was loaded in favor of the operators
as a result, much of the appeal of the management union vanished with end of the war
(later, the Depression wiped-out its membership)

SEATTLE METAL TRADES COUNCIL ATTEMPTS TO HELP RETURNING VETERANS

American Federation of Labor (AFL) Seattle Metal Trades Union shipyard workers
were laid off due to production decreases and the return of veterans from Europe
even so, the Seattle Metal Trades Council sponsored the organization
of the Workers, Soldiers and Sailors Council to assist veterans in finding work
and to prevent the use as strike breakers by management

SOCIALISTS TAKE UP THE CAUSE OF FRUSTRATED WORKERS

Many Socialists (an economic system) grew increasingly disgusted
by the deteriorating capitalist economic conditions faced by workers
and the federal government's reluctance to address the growing crisis
Some Socialists joined American Communist Party (a political system)
they believed the Bolshevik Revolution and Russian Soviets pointed the way to their goals
as their newspaper headlined: **"Local Soviet Declares for End of Capitalist Exploitation"**
Russian word *Soviet* meant "council of workers"

UNION MEMBERS BECOME INCREASINGLY FRUSTRATED BY GOVERNMENT INACTION

Union members had been promised a "New Era" after the war
if they continued to work under and terms of their old contracts and did not strike
What they received was declining real income, growing unemployment and an undermining
of what little recently won defense against arbitrary management authority they had gained
Labor unions in the United States believed the Allies had forced change in Europe
it was time for Americans also to escape from the crushing grip of the enormously wealthy
rise of industrialists, Robber Barons and Trusts assured the Working Class
would continue to provide a source of cheap, unskilled laborers
economic and political control would remain in the hands of the elite
Socialists became activists in the labor union movement

SEATTLE UNIONS DEMAND PROMISES MADE BY THE FEDERAL GOVERNMENT BE KEPT

While the war had continued, unions asked their members to stay on the job out of patriotism
however, during the war the Seattle Metal Trades Council had remained frustrated for a year
by the Shipbuilding Labor Adjustment Board (Macy Board) ruling that had cut wages
for Seattle journeymen shipyard workers and laborer

Seattle Metal Trades Council representing shipyard workers
insisted the American Federation of Labor (AFL) Seattle Central Labor Council
negotiate directly for wages which the Shipbuilding Labor Adjustment Board (Macy Board)
previously had refused to accept
Metal Trades Council demanded pay be increased from \$4.16 to \$6.00 for an eight-hour day
To fully arm the American Federation of Labor (AFL) Seattle Central Labor Council for the talks
less than two weeks after the armistice was signed Seattle Metal Trades Council union leaders
asked their shipyard locals to vote for authorization to strike

SEATTLE METAL TRADES COUNCIL UNION VOTE TO AUTHORIZE A STRIKE

Seattle Metal Trades Council shipyard union members gave their approval
for a strike vote to be taken in the future -- December 10, 1918
according to Anna Louise Strong, then a progressive writer for the union-owned Seattle daily,
The Union Record, Bert Swain, secretary of the Seattle Metal Trades Council,
announced the following day [December 11]: “...**the proposition to reject the Macy
award, which carried with it authorization to the Pacific Coast Council of the Metal Trades to call a
strike has been adopted by the requisite two-third majority in a majority of the unions affiliated
with the Seattle Council.**”

vote count for each of the seventeen unions were not made public
so that the employers could not offer a wage increase only to the smaller unions
which voted not to strike and thereby break labor’s solidarity
Backed by the vote for strike authorization, Seattle Metal Trades Council opened negotiations
with the shipyard owners
union members demanded \$8.00 a day for mechanics, \$7.00 for specialists, \$6.00 for helpers
and \$5.50 for manual laborers

DAVE BECK RISES FROM AN IMPROVISHIED CHILDHOOD IN SEATTLE TO PREEMINENCE

Born the only child of Lemuel and Mary (Tierney) Beck in Stockton, California [June 16, 1894]
Dave Beck’s family moved to Seattle [1898] when he was four years old
his father ran a not-so-successful carpet laying business
his mother worked at a Seattle laundry to help keep the family fed and together
Beck never hid the fact that he was raised in a ramshackle house
in Seattle’s old Belltown near the south end of Lake Union
from the age of twelve through his first year in high school
Beck had a 350-customer *Seattle Post-Intelligencer* newspaper route
he also delivered *The Seattle Times*
he helped out by catching and selling fish and selling fir trees at Christmas
he even shot wharf rats to turn in to the Health Department
he got \$5.00 for each dead rat that showed signs of bubonic plague
Dave Beck attended Broadway High School his Freshman year
but was forced to quit high school at the age of sixteen in order to go to work
he took a job as a laundry worker at the Central Laundry [1914]
and joined the Laundry Workers International Union
Beck was drafted in the Great War and served in the United States Navy in England

as a machinists' mate and gunner
When he returned from military service, the Central Laundry had been sold
he took a job at the Mutual Laundry driving an old Ford truck in a University District route
Dave Beck became a part-organizer with the Teamsters Union -- 1918
he successfully convinced hotels to contract only with unionized laundry services
this led laundry companies to unionize to win business

PRESIDENT WOODROW WILSON HAS PLANS FOR AMERICA

President Wilson wanted the United States to play a larger role in international affairs
at the Versailles Peace Conference following the Armistice -- January 1919
he endeavored to create an alternative world order
where problems would be solved through collective security

POLITICAL CONSERVATISM FOLLOWS THE WAR EFFORT

End of World War marked the end of the Progressive Era as the nation moved toward isolationism
class-inflicted upheavals in Europe stoked fears of radical upsurge in America
and sparked a crackdown on the progressive agenda of the political left
Republicans controlled the nation and the state -- fewer restrictions were placed on business
economy and efficiency became political watchwords
in the next fourteen years Washington changed only three names in our Congressional Delegation
U.S. Senator Miles Poindexter representing Washington State
abandoned the sinking Progressive ship and returned to the Republican Party
he became increasingly conservative and isolationist
As the lines of authority were gathered into the Governor's hands
the governor's political patronage expanded high paying jobs provided to state bureaucrats
when unions demanded higher wages, the state government ordered shipyards not to give in

TACOMA LONGSHOREMEN UNION WINS A CLOSED SHOP AGREEMENT

Because of the increase in cargo coming through the port of Tacoma
there was a resurgence of local bargaining power
Tacoma's Longshoremen's Union walked off the docks
in support of the Seattle Metal Trades Council strike
longshoremen also wanted guarantees against unemployment and wage-cuts following the war
International Longshoremen's Association (ILA) formerly signed a closed shop agreement
they had been seeking for more than twenty years -- January 14, 1919

WASHINGTON STATE LEGISLATURE CRIMINALIZES ADVOCATING TERRORISM

Conservative Washington State legislators passed a law criminalizing advocating "Syndicalism"
(syndicalism is a socialist alternative for capitalism in which ownership and control
of the means of production and distribution is transferred to workers' unions)
As passed, this law stated: **Section 1. Criminal syndicalism is the doctrine which advocates crime, sabotage, violence or other unlawful methods of terrorism as a means of accomplishing industrial or political reform. The advocacy of such doctrine, whether by word of mouth or writing, is a felony....**" (This law was first passed in 1917 but was vetoed by Governor Ernest Lister

Chapter 174, Laws 1919 was passed over the governor's veto [January 14, 1919]
Labor union leaders knew this law was passed to stop organizing efforts

SEATTLE LABOR UNIONS ARE POSED FOR A FIGHT

Seattle's maritime industry workers were among the most organized in the nation
with a solid union representation in shipyards, warehouses, longshore and sailors
Although most union locals were affiliated with the American Federation of Labor (AFL)
Seattle's membership was not limited to elite craft workers
semi-skilled and unskilled workers such as longshoremen and waitresses
could be members of some of Seattle's unions such as retail businesses and waitresses
Many Seattle union members stood well to the left of the mainstream AFL in political ideology
Socialists and, to a lesser extent, Industrial Workers of the World (IWW)
were substantial minorities in some unions and occupied a number of leadership positions
however, moderate Seattle Central Labor Council union leaders kept radicals on a short leash
Rank and file union members enjoyed a flourishing working-class culture in Seattle
they read the widely circulated labor-owned daily *The Union Record*
listened to the popular leftist speaker circuit
and participated in an array of consumer and producer cooperatives
However, like AFL unions everywhere, Seattle barred people of color as well as women in most cases
although the city was home to several thousand Japanese, Chinese and African American workers

UNION MOVEMENT COMES UNDER ATTACK IN WASHINGTON STATE

Local leaders who held competing beliefs regarding the nature of the work force clashed
Seattle businessman sponsored newspaper advertisements that called for an "open shop"
barring unions from demanding that only union members be hired into a position
these ads called Seattle: "**the most labor-tyrannized city in America**"⁹⁵
Progressive activist Anna Louise Strong printed a leftist editorial in *The Seattle Union Record*
which frightened many conservatives into thinking a revolution was coming to America
Washington legislators passed a law making it illegal to use violence or terrorist tactics
such as strikes for social or political reform -- January 1919
this law prevented Puget Sound shipyards from successfully negotiating contract agreements

SHIPYARD NEGOTIATIONS STALL

Union negotiators for the Metal Trades Council shipyard union members
met with representatives of three shipyards
Skinner and Eddy, Seattle North Pacific and the Ames Yard -- January 16, 1919
as threat of a strike loomed, the employers tried to split the union
by offering an increase to \$6.92 a day for mechanics
while offering nothing for the less-skilled workers
No progress could be made in achieving pay increases to counter two years of strict wage controls
imposed by the federal government

⁹⁵ Anthony Read, *The World on Fire: 1919 and the Battle with Bolshevism*, P. 97.

FEDERAL GOVERNMENT BECOMES INVOLVED IN THE ONGOING NEGOTIATIONS

In their struggle to improve shipyard wages and consolidate the little union power they had gained during the war, unions found that they faced not only local management but the power of the federal government as well

Emergency Fleet Corporation General Manager and Vice-president Charles Piez outraged union members when he wired shipyard owners to stand firm or lose their steel ration

Piez's telegram reached the union rather than employer offices when the messenger boy made a "mistake"

Piez's telegram confirmed the Metal Trades Council's fear that more than shipyard wages were at stake

Piez refused to make further concessions to the Seattle Metal Trades Union

he declared the government now did not need ships to the extent that it would compromise on a "question of principal"

Piez also felt that it was time to more thoroughly suppress the Seattle labor movement

he believed the unsettled conditions in Seattle shipyards were being used by radicals for "subversive purposes"

he was convinced that the real problem was not industrial, but political

Piez publicly condemned the strike and publicly asserted that it would be unpatriotic and illegal for employers to grant higher wages

SEATTLE METAL TRADES COUNCIL LEADERS VOTE TO STRIKE

Many of the moderate leaders of the Seattle Metal Trades Council were in Atlanta, Georgia attending the Third Annual Convention of the Metal Trades Department of the American Federation of Labor (AFL)

Remaining Seattle Metal Trades Council members, met in Seattle

in the absence of more moderate union leaders, more radical members of the council turned to the discussion toward support for the ongoing Metal Trades Council strike and the impact of the Syndicalism law to inhibit union organizing passed by the legislature

despite appeals that all of the union members be given a chance to vote, fifty-seven delegates representing the twenty-one unions of the Metal Trades Council voted to call a strike Seattle's shipyards (to begin five days later) -- January 16, 1919

Most of the press on the strike portrayed the strikers negatively

some claimed that the workers were coerced to go on strike by a minority of radicals

SHIPYARD OWNERS ATTEMPT TO STOP THE STRIKE EFFORT

A.E. Miller, chairman of the conference committee of the Metal Trades Council, began distributing formal strike notices to the managements of the various shipyards -- January 18, 1919

these notices stated that all work in the shipyards would cease on January 21, 1919

Shipyard employers attempted to pressure their employees not to strike

rumors began circulating that the shipyard employees did not really favor the strike but were forced into compliance by radical union leaders

foremen and other supervisory personnel began circulating petitions among the shipyard workers requesting that a re-vote be taken on permission to strike

management representatives conducted a straw vote at the Skinner and Eddy Shipyard it was claimed that ninety-five per cent of the workers voted against the strike

SEATTLE METAL TRADES COUNCIL MOVES FORWARD WITH ITS STRIKE PLANS

In response to pressure by the shipyard owners, the Metal Trades Council issued a statement that denied the rumors and challenged the validity of the petitions and straw vote because they were circulated by the employers

Seattle Metal Trade Council efforts would probably not have escalated to other unions if the moderate labor leaders had been in town

Activist Anna Louise Strong reported: **“The general strike thus thrust upon unwilling leaders grew out of a strike of thirty-five thousand shipyard workers for wage adjustments. Throughout the war, wages had been fixed by government boards in consultation with national presidents of craft unions. They bribed the highly skilled workers and cut the pay of the unskilled.... Discontent smoldered for a year and a half of war-time, ready to burst into flame when restraints should be removed.”**⁹⁶

SEATTLE METAL TRADES COUNCIL STRIKES THE SHIPYARDS

Union members struck the Seattle shipyards -- January 21, 1919

about 35,000 men silently filed out of the gates on strike

25,300 in the metal yards, 3,250 in the wooden yards and the rest in allied trades

Union Record newspaper reported the walk-out was both orderly and free of violence

There was a similar strike in the Tacoma shipyards

which had, in fact, gone out a few hours earlier than Seattle

but the work stoppage did not spread further down the Pacific coast

Portland's Metal Trades leadership did not comply with a request that they join the strike

Suddenly, shipyard employers left Seattle on vacation

this move clearly indicated that they had no intention of negotiating

and meant to starve the workers out

At the same time, in telegrams to all the struck companies,

Emergency Fleet Corporation President V. Everit Macy and General Manager Charles Piez

stated that the unions had violated their agreement with the United States Government

and reasserted the federal Shipbuilding Labor Adjustment Board's

determination to stand by the Macy award -- no wage increases would be approved

SEATTLE RESIDENTS DO NOT SUPPORT THE STRIKERS

Labor felt it was under attack throughout Seattle

grocers cut off striking shipyard workers' credit

police raided the offices of the union-based Cooperative Food Producers

which had stepped in to fill the credit gap for striking union members

Seattle Metal Trades Council asked the American Federation of Labor (AFL)

Seattle Central Labor Council to propose a general sympathy strike by unions citywide

many union members supported the strike effort by the Seattle shipyard workers

⁹⁶ W. Storrs Lee, *Washington State*, P. 434-435.

Seattle Central Labor Council Secretary James Duncan predicted: **“If Seattle gets away with this, the war will be carried further than the confines of Seattle.”**

one plasterer explained his union local’s pro-strike vote: **“We knew that if the metal trades were forced to their knees our turn would come next,”**⁹⁷

CENTRAL LABOR COUNCIL STRIKES IN SYMPATHY WITH THE METAL TRADES COUNCILS

Seattle Central Labor Council adopted a resolution proposed by the Seattle Metal Trades Council to call a general strike in Seattle if the proposal was approved by a referendum of local unions this would be 130 locals, representing over 30,000 workers

Seattle Central Labor Council made it clear that it was a “sympathetic strike,”

not a “mass strike” in which each union lists its grievances

and stays on strike until all demands are met

Seattle Central Labor Council proposal passed without a dissenting vote -- January 22, 1919 many Seattle unionists, as well as labor generally,

believed the war’s end and “return to normalcy” signaled a massive open-shop drive to wipe out their unions and drive down their living standards

This was a showdown with the American Federation of Labor (AFL) facing

federal war agencies, business interests and local politicians

all of whom saw it as a crucial test of the power that organized labor would wield in the wake of the world war

Local unions and councils in Seattle endorsed the general strike proposal enthusiastically each union local elected three delegates to a General Strike Committee

President of the Seattle Central Labor Council Hulet Wells declared: **“Seattle is one place where a universal strike can be pulled off with success. I am confident that the shipyard workers could win alone. ...But if we win it with a universal strike, every union in the city will get the benefit of the victory.”** [*Union Record*, January 25, 1919]

TACOMA CENTRAL LABOR COUNCIL JOIN IN SEATTLE’S STRIKE EFFORT

Tacoma Metal Trades Council secretary in response to the Emergency Fleet Corporation telegram to Seattle proposed a sympathy strike -- January 22, 1919

Tacoma Central Labor Council passed the motion without a dissenting vote

Tacoma American Federation of Labor (AFL) union members would join with Seattle

OPPOSITION TO THE METAL TRADES STRIKE PERPETUATE THE RED SCARE

Edwin Selvin ran an editorial in the *Business Chronicle* -- January 25, 1919

which was reprinted as an advertisement in the *Seattle Post-Intelligencer*

“Spectacle of a City Committing Industrial Suicide”

P-I editorial described how the **“once proud city”** had become

“the most labor union tyrannized city in America”:

⁹⁷ Roberta Gold, “The Seattle General Strike of 1919,” *Encyclopedia of Labor History Worldwide*, by St. James Press.

“A radical labor leadership usurped control of the legitimate labor movement. ...Now we have Bolshevism rampant, and cries for ‘the overthrow of the government’ made at a meeting called by and held under the acknowledged auspices of Organized labor.

Seattle today is overrun by red-flag agitators in the guise of ‘labor leaders.’ ...they dominate the city, defy the law, and make a jest of honest working men who perform in a closed shop town must belong to a Labor Union and pay the walking delegate the title of the weekly wage for the privilege of earning a living...;

Now is the time when Close Shop can be superseded by Open Shop. ...This city must not tolerate anarchy and the industrial despotism of the walking delegate.... Here is Seattle’s solution to the labor problem: As fast as men in the plant strike, replace them with returned soldiers.... If the employers will stand together in this, Seattle can be freed of the closed shop.... In this way the Bolshevik’s strangle-hold on local industry can be broken.” [*Seattle P-I*, January 28, 1919]

EIGHTEENTH AMENDMENT TO THE UNITED STATES CONSTITUTION IS RATIFIED

Proposed Eighteenth Amendment to the U.S. Constitution prohibited the manufacture, sale, transportation, import or export of intoxicating beverages within the US and all the territories falling under its jurisdiction

Section 1. After one year from the ratification of this article the manufacture, sale, or transportation of intoxicating liquors within, the importation thereof into, or the exportation thereof from the United States and all territory subject to the jurisdiction thereof for beverage purposes is hereby prohibited.”

Sections 2 and 3 dealt with enforcement of the Amendment

Ratification of the proposed amendment was completed -- January 16, 1919

when Nebraska became the thirty-sixth (of the then forty-eight states) in the Union to ratify it providing the **required three-quarters of the states**

acting-Secretary of State Frank L. Polk certified the ratification -- January 29, 1919

Lop-sided vote of Congress in submitting the resolution

and the rapid ratification of the Eighteenth Amendment by three fourths of the state legislatures gave an indication of the wide acceptance of the prohibition concept

However, the constitutional amendment did not define intoxicating liquors enforcement legislation was necessary for it to become effective

GENERAL STRIKE COMMITTEE MEETS TO COORDINATE UNION EFFORTS

General Strike Committee numbering over three hundred delegates

representing the American Federation of Labor (AFL) met -- Sunday February 2, 1919

to organize their sympathy strike in support of the Seattle Metal Trades Council

members of the strike coordination committee were mostly rank-and-file men

with little previous leadership experience

both participants and opponents saw a General Strike as part of a process

through which workers prepared themselves to run industry and society

It was determined the strike would begin on Thursday morning, [February 6] and last indefinitely

Activist Anna Louise Strong commented: The General Strike Committee, composed of more than three hundred delegates from one hundred and ten unions, met all day Sunday, February 2, 1919. They faced and disregarded the national officers of craft unions who were telegraphing

orders from the East.... They rejected as strike slogan the motto ‘We have nothing to lose but our chains and a whole world to gain,’ in favor of ‘Together WE Win.’ For they reasoned that they had a great deal to lose -- jobs at good wages with which they were buying silk shirts, pianos and homes. They wanted solidarity but not class war. ...They fixed the strike for the following Thursday at 10 A.M. and adjourned to meet on Thursday evening after the strike should have started....”⁹⁸

Union Record carried an editorial written by Anna Louise Strong

“We are undertaking the most tremendous move ever made by LABOR in this country, a move what will lead -- NO ONE KNOWS WHERE! ...NOT THE WITHDRAWAL OF LABOR POWER, BUT THE POWER OF THE STRIKERS TO MANAGE WILL WIN THIS STRIKE. ...Labor will not only SHUT DOWN the industries, but Labor will REOPEN, under the management of the appropriate trades... If the strike continues, Labor may feel led to avoid public suffering by reopening more and more activities...UNDER ITS OWN MANAGEMENT. ...And that is why we say that we are starting on a road with leads -- NO ONE KNOWS WHERE!”

General Strike Committee planned carefully to provide for the needs of Seattle citizens to insure a peaceful strike, arrangement was provided for food, sanitation and hospital needs

GENERAL STRIKE EXECUTIVE COMMITTEE OF FIFTEEN MEMBERS IS SELECTED

Delegates to the General Strike Committee announced the names of fifteen members elected by the rank-and-file to lead the strike effort

this committee became the unintentional but actual rulers of Seattle -- Monday, February 3, 1919 operation of the city fell into their hands

Union activist Anna Louise Strong noted: **“The tension in Seattle before the strike is difficult to exaggerate. Businessmen took out riot insurance and purchased guns. Citizens laid in supplies for a long siege; kerosene lamps were dragged from storage to sell at high prices in case the strike should involve City Light. Some of the wealthy families took trips to Portland to be out of the upheaval. The press appealed to strikers not to ruin their home city. Later they changed their tone and demanded threateningly: ‘Which flag are you under? ...if under the American flag then put down Bolshevism in your midst’.”**⁹⁹

GENERAL STRIKE BEGINS ALONG PUGET SOUND

First general strike in United States labor history began -- Thursday, February 6, 1919 just fifteen months after the outbreak of the Russian Revolution

no demands were made -- thus there was no way to win anything and return to work Seattle and Tacoma Central Labor Councils led more than 65,000 workers off their jobs

130 local unions, 110 American Federation of Labor (AFL) unions, were on strike as they walked off their jobs -- 10:00 A.M., February 6, 1919

many of them broke their labor contracts to participate

another 40,000 non-union members stayed home from work in support of the strikers, or because transportation was not available to get them to work,

or there was no work for them

Seattle Metal Trades Council shipyard union members had been on strike for sixteen days

⁹⁸ W. Storrs Lee, *Washington State*, P. 435-436.

⁹⁹ W. Storrs Lee, *Washington State*, P. 435.

union leaders bragged: **“Sixty thousand out and not even a fist fight.”**¹⁰⁰

SEATTLE GENERAL STRIKE IS A SHOW OF CLASS SOLIDARITY

In Tacoma, timber workers, streetcar men, meat cutters, some retail clerks, barbers and Tacoma Metal Trades Council members struck

Activist Dr. Anna Louise Strong became openly associated with the liberal press she noted this was: **“Our first vacation in three years.”**

she wrote forceful pro-labor articles and promoting the new Soviet government: **“Yet swiftly union after union violated its constitution, flouted its national officers and sacrificed hard-won agreements to join the strike. The conservative typographical union, the property-holding carpenters union, the weak hotel-maids union, the staid musicians, the fighting longshoremen and teamsters -- swung united into line.... So did IWW organizations....”**¹⁰¹

she also noted: **“Ours was the first general strike, involving all the workers in a city, that ever took place on the North American continent. For years the IWW had talked of the general strike, declaring that the power of the workers’ folded arms would bring the collapse of capitalism. Few of them claimed to know concretely what would happen when such a strike started. It was like pulling the trigger of a gun without knowing with what ammunition it was loaded. Government officials and local business men said it was loaded with revolution. All our labor leaders busily denied this.”**¹⁰²

DAVE BECK, A TEAMSTER UNION ORGANIZER IN SEATTLE, OPPOSES THE STRIKE

Dave Beck abhorred strikes and stood for free enterprise -- he believed the Wobblies were crackpots. At his first union meeting after returning from the Great War, dressed in his navy blues, Dave Beck argued the laundry workers out of supporting the Seattle General Strike the only part of capitalism that he did not like was its untidiness competition meant that the price structure was inconsistent and therefore, the wage structure was unpredictable

ORGANIZATION OF THE GENERAL STRIKE WAS IN THE EXTREME

Solidarity of Seattle strikers was carefully guided into a demonstration of law and order

General Strike was not a simple shutdown of the city

rather, workers in different trades organized themselves to provide essential services:

- striking war veterans patrolled the streets unarmed and kept peace in Seattle’s streets with astonishing organization and efficiency,
- hospitals remained open and the laundry washed,
- prescription counters dispensed prescriptions,
- milk was delivered to the homes of babies,
- newspapers were printed,
- wet garbage was collected,
- telephone companies and electric services were exempted from the strike

downtown Seattle workers were fed by the provision and restaurant trades:

¹⁰⁰ Conrad Johnsdorf, Member Local No. 86, Seattle “The Bridgemen’s Magazine” *Ironworker*, Vol 19, P.364.

¹⁰¹ W. Storrs Lee, *Washington State*, P. 435-436.

¹⁰² W. Storrs Lee, *Washington State*, P. 433-434.

twelve great kitchens distributed food at low cost in twenty-one special dining rooms
that had been opened for the duration of the strike
by the end of the strike they were serving thirty thousand meals a day
Seattle suddenly fell eerily quiet as business was at a standstill:

- street cars stopped,
- taxis disappeared,
- commercial traffic stopped,
- restaurants and cafes closed,
- stevedores walked off the docks

General Strike Committee, composed of delegates from the key striking unions,
tried to coordinate vital services and negotiate with city officials
but events moved quickly beyond their control

BUSINESS LEADERS EXPRESSED MAJOR CONCERNS REGARDING THE STRIKE

They believed both Seattle and Tacoma would both be paralyzed by strikers
they said Alaska would be threatened with famine if the docks were shut down
Businessmen knew power had slipped from their hands into the keeping of union leaders
exasperation grew hourly into rage and a thirst for blood
business leaders pressured both cities mayors and Washington, D.C.
they bought guns from hardware stores and demanded rights as deputies
Most of the local and national press denounced the strike
while conservatives called for stern measures
to suppress what looked to them to be a revolutionary plot

SEATTLE'S MAYOR OLE HANSON FANS THE FLAMES OF FEAR

Events in Seattle and Tacoma frightened Americans across the nation
many believed a revolution similar to that in Russia was beginning here
Seattle Mayor Ole Hanson (who had won election with labor support) asserted that revolutionaries
were responsible for the unprecedented work stoppage
he threatened Seattle Central Labor Council's General Strike Committee
with martial law and federal troops
he joined with company managers and the local press
to unleash a hysterical campaign against the strikers
Mayor Hanson fanned conservative suspicions
he promised protection for citizens and punishment for all law violators
he issued a proclamation which added 600 extra police officers
two thousand four hundred citizens received badges and guns
however, guards employed by the General Strike Executive Committee refused to take part
Seattle's police chief even formed a machine-gun squad
Secretary of War Newton D. Baker ordered National Guard troops into the city -- February 6, 1919
they were stationed in the armory although no evidence of violence by strikers existed

SEATTLE CENTRAL LABOR COUNCIL FACES OPPOSITION

Central Labor Council members decided that electricity was not a vital necessity for the public

Seattle City Light was not allowed to operate at full capacity
under strong pressure from business leaders, Mayor Ole Hanson
declared the strike was a Bolshevik action -- Friday February 7, 1919
he issued an ultimatum: run City Light or it would be operated by the National Guard
local newspapers decried the Seattle Central Labor Council's obstinate position
they played on the public's fear of armed federal strikebreakers and fears of bloodshed
American Federation of Labor (AFL) leaders also were concerned
they feared Seattle's conflict would destroy organizing efforts in the east
AFL declared the strike an unauthorized action and withheld support funds
they also threatened to revoke striking locals' charters

PUGET SOUND REGION IS OVERCOME BY A FEAR OF COMMUNISTS

Conservatives focused on fears surrounding a revolution such as Russia experienced
Communists swore that workers would take over the economy
and destroyed the moneyed upper classes in the United States
rumors persisted that Communism had spread to Seattle
and that a radical takeover of the city was imminent
Bolsheviks, successful in Russia, hoped to start a revolution in Seattle
Seattle and Tacoma newspapers carried the story of the strike
they screamed headlines of revolution
Newspapers from Boston to Bellingham trumpeted
"Red Scare" -- "The Seattle Revolution"
it was reported the General Strike was led by Bolsheviks
who had gained control of the Labor Councils

SOME SEATTLE UNION BEGIN TO WAVER

By the third day of the strike some of the striking unions returned to work -- Sunday February 9, 1919
attacks from local and national business leaders, national and local newspapers,
Seattle Mayor Ole Hanson and threats of unleashing the National Guard already in the city
proved to be too much for some union locals who trickled back to work

SEATTLE'S GENERAL STRIKE COMES TO AN END IN SEATTLE

International unions stated that Seattle and Tacoma Locals had violated their agreements
strong pressure also was applied on union members to return to work
by local officers and employers -- many union locals did return to work
General Strike Committee rejected a resolution from its Executive Committee to end the strike
committee members did not want to appear to be bowing to Mayor Hanson's provocations
however, the Seattle Central Labor Council's union leaders
voted to end the General Strike -- noon, Tuesday February 11, 1919
Sometimes overlooked in all the excitement was the true cause of the Seattle general strike
wages had failed to keep pace with the wartime inflation
Seattle's five day "revolution" ended as it had begun -- peacefully without bloodshed
radicals did not control the strike and the goals of the effort remained undefined

COST OF THE GENERAL STRIKE IS HIGH FOR ORGANIZED LABOR

By the time Seattle's Central Labor Council called off the strike
shipyard union members had lost their effort to increase wages
moreover, true to labor's fears, Seattle industrialists
launched a successful offensive against the closed shop
Government repression intensified
police and vigilantes were hard at work rounding up "Reds" (suspected Communists)
Industrial Workers of the World (IWW) hall and Socialist Party headquarters
were raided and leaders arrested
Federal agents also closed the *Union Record*, the labor-owned daily newspaper,
and arrested several of its editors
across the nation headlines screamed the news that Seattle had been saved,
that the revolution had been broken,
that, as Mayor Old Hanson phrased it, "Americanism" had triumphed over "Bolshevism"
Seattle's General Strike had cost organized labor popular support
and contributed to the mounting national hysteria known as the great Red Scare

GENERAL STRIKE LEAVES A BITTER TASTE IN EVERYONE'S MOUTH

Union activist Anna Louise Strong characterized events: **"The strike could produce no leaders willing to keep it going. All of us were red in the ranks and yellow as leaders. For we lacked all intention of real battle; we expected to drift into power. We loved the emotion of a better world coming, but all of our leaders and not a few of our rank and file had much to lose in the old world. The general strike put into our hands the organized life of the city -- all except the guns. We could last only until they started shooting; we were one gigantic bluff...."**

"Even when the strike was over, we would not admit it lost. Organized life of the city fell into their hands. ... We bluffed ourselves and the workers with phrases of victory. We had 'shown the strength of labor'.... We had 'come close to the problems of management.' We persuaded ourselves that this was what the strike had been for. And the workers believed us, or half-believed us, and went back to work with a sense of having gained something, they were not sure just what.

"With determined optimism and almost mystical idealism, I was writing editorials which declared: 'If by revolution is meant violence, forcible taking of property, killing of men, surely none of our workers dreamed of such action. But if by revolution is meant that a Great Change is coming over the face of the world which will transform our methods of carrying on industry -- then we do believe in such a Great Change and that our general strike was one step towards it.'"¹⁰³

In her autobiography Anna Louise Strong asked: **"Shall one blame the yellow leaders who sabotaged the strike and wished to end it? ... But it is more to the point to ask why it happened that as soon as any worker was made a leader he wanted to end the strike. ... Workers in the ranks felt the thrill of massed power... But as soon as one of these workers was put on a responsible committee, he also wished to stop.... For we lacked all intention to real battle; we expected to drift into power."¹⁰⁴**

WILLIAM BOEING AGAIN MAKES AVIATION HISTORY

¹⁰³ W. Storrs Lee, *Washington State*, P. 438.

¹⁰⁴ Roger Sale. *Seattle: Past and Present*. Seattle, 1986. P. 132.

William Boeing and pilot Eddie Hubbard flew Boeing's C-700 to Vancouver, British Columbia where they picked up sixty letters as part of the Canadian Exposition to be delivered back to Seattle

Boeing and Hubbard had a difficult journey

halfway through the northbound leg of the flight snow forced an overnight stop in Anacortes on the return trip low fuel forced them to land twenty-five miles north of Seattle -- March 3, 1919 the flight of 141 miles had taken two days

However, Boeing signed first international air-mail service contract between Seattle and Victoria

GENERAL STRIKE IS SETTLED IN TACOMA

It was obvious the citizens of Seattle had been inconvenienced

many local residents withdrew their support from the union movement

However, Tacoma remained committed to the goals of its unions

even so, shipyard workers returned to work without gaining their demands -- March 18, 1919 although the International Longshoremen's Association (ILA) kept its closed shop

ACTING-GOVERNOR LOUIS F. HART SHRINKS THE SIZE OF STATE GOVERNMENT

Republican Governor Hart was concerned about rising cost of government

he called the legislature into Special Session to consider how to best cut expenses

he believed taxes were exorbitant -- with tax burdens approaching confiscation

Governor Hart recommended consolidation of agencies

he also did not approve of any appropriations for state institutions or the public schools

SHELLFISH INDUSTRY EXPANDS IN WASHINGTON STATE

First Pacific Oysters brought to this country from Japan in commercial quantities

about 400 cases of oysters produced in Miyagi Prefecture

were shipped in a batch from Yokohama -- April 1919

they were large in size with small spats (seeds) attached to their shell

but this fact was not noticed as the spats were very small

When the shipment arrived at Samish Bay almost all the larger oysters were dead

to dispose of them they were spread on the mud flat without any expectations

After a few months the workers found, to their surprise, that there were many young oysters

growing on the ground where the dead oysters had been scattered

Further experiments proved that the oyster seeds produced in Miyagi Prefecture, Japan

were the most superior in growth and the small spats attached on dead shells

were the most suitable for transplanting

NINETEENTH AMENDMENT IS PASSED BY CONGRESS

U.S. House of Representatives passed the women's suffrage amendment

by a vote of 304 to eighty-nine [May 21, 1919]

U.S. Senate followed suit on June 4, by a vote of 56 to twenty-five -- June 4, 1919

Proposed U.S. Constitutional Amendment was sent to state legislatures for ratification

(it is necessary for three-fourths of the state to pass the ratification proposal

before the constitution is actually amended)

AFTER A LONG ILLNESS WASHINGTON STATE GOVERNOR DIES IN OFFICE

Democrat Governor Ernest Lister became ill during his second term
he relinquished his office to Republican Lieutenant-Governor Louis F. Hart
who became acting-governor [February 1919]
During his six-year term in office Governor Lister
supported agricultural aid, irrigation and reclamation projects,
and state industrial accident insurance
he vetoed legislation that would have denied civil rights
to members of the Industrial Workers of the World
his efforts helped bring the eight-hour work day to the Pacific Northwest.
Governor Ernest Lister died one day before his forty-ninth birthday
as a result of heart and kidney disease -- June 14, 1919
Louis F. Hart was sworn in a Washington governor
He had won the respect of both political parties with his honesty and courage
he refused to sacrifice his convictions to appease the legislature

TREATY OF VERSAILLES IS SIGNED IN EUROPE

(Although an armistice which ended the actual fighting was signed [November 11, 1918])
it took six months of negotiations at the Paris Peace Conference to conclude the peace treaty
which was signed -- June 28, 1919
Germany suffered under the harsh terms of the Treaty of Versailles that ended the Great War [1918]
of the many provisions in the treaty, one was the most important and controversial
it required Germany to accept sole responsibility for causing the war
and to disarm, make substantial territorial concessions and pay reparations to the victors
Weimar Republic had been placed in power by proclamation of the Allies
Germany's parliament, the Reichstag (National Assembly), was elected democratically
Friedrich Ebert was elected by the National Assembly as the republic's first president --1919
he served in office until his death [February 28, 1925]
Weimar constitution provided several "social safety net" programs
while capitalists and the army retain with full power
although they more or less "promised" to never abuse their control
Despite President Woodrow Wilson's requests for treaty terms agreeable to Germany
Britain, France and Italy imposed severe economic penalties on Germany
United States Senate did not ratify the Treaty of Versailles
instead, America signed a separate Armistice (peace treaties) with Germany and her allies
(United States remained officially at war until [June 1921])
(Harsh economic demands for reparations mandated from Germany by the Versailles Treaty
became a direct cause of the rise of Adolf Hitler and thus World War Two in Europe
additionally, failure of the treaty to meet Japan's imperial and colonial demands
helped lay the groundwork in Japan for the rise of a Japanese military dictatorship
and thus World War Two in the Pacific)
On a more positive note, forty-two nations joined together to form a League of Nations
forty-two founding member nations dedicated the organization to

preventing war through collective security, disarmament,
and settling international disputes through negotiation and arbitration
other goals focused on labor conditions, just treatment of native inhabitants,
trafficking in persons and drugs, arms trade, global health, prisoners of war,
and protection of minorities in Europe
President Woodrow Wilson promoted the idea of the League
as a means of avoiding any repetition of the bloodshed seen in “The War to End All Wars”
President Wilson was awarded the [1919] Nobel Peace Prize for his efforts
However, United States did not join the League of Nations
Senate Republicans refused to participate in the League of Nations on Wilson’s terms,
and Wilson rejected the Senate’s compromise proposal

VICTORIOUS ALLIES IMPOSE A NEW GOVERNMENT ON GERMANY

Germany suffered under the harsh terms of the Treaty of Versailles that ended the Great War [1918]
Weimar Republic had been placed in power by proclamation of the Allies
Germany’s parliament, the Reichstag (National Assembly), was elected democratically
Friedrich Ebert was elected by the National Assembly as the republic’s first president --1919
he served in office until his death [February 28, 1925]
Weimar constitution provided several “social safety net” programs
while capitalists and the army retain with full power
although they more or less “promised” to never abuse their control

REVOLUTION SWEEPS ACROSS EUROPE

Austria-Hungary was ill-treated by the victorious Allies
smoldering unrest burst into revolution in Budapest [October 31, 1918]
King Charles IV of Hungary surrendered his powers -- however he did not abdicate
final postwar boundaries imposed by the armistice were unacceptable to all Hungarians
Hungary turned to Soviet Russia to help restore the original borders
this was to no avail as Hungarians were forced to surrender
more than two-thirds of their prewar lands
Germany was faced with a politically driven revolution lasting almost a year
revolutionaries, inspired by communist ideas, failed in their effort to take control
after a year of political unrest a German National Assembly, the Reichstag, met
to write a constitution [August 11, 1919]
Germany was to be a democratic federal republic governed by a president and parliament
(Turkey-Ottoman nationalists decided that Christian Armenians were undesirable
massacres had taken place in [1894-1896 and 1909]
Turkey-Ottoman Empire was dissolved with the Treaty of Sevres -- [August 10, 1920])
modern Turkey filled the power vacuum created after “The Great War”
genocide beginning in [1920] eradicated Armenians from their historic homeland
Turkish nationalists, who had refused to accept the peace terms, overthrew the sultan [1922]
Russian Empire had expanded under the 300-year rule of the Romanov family [1613-1917]
spreading out from Moscow, the kingdoms of Kazan, Astrakhan, and Siberia
came under Russian influence as did the Ukraine and Belarus

Tsar Nicholas II, his wife, his son, his four daughters and several others were all executed by the Bolsheviks [night of July 16-17, 1918]
with no heir remaining Vladimir Ilyich Lenin had assured his control of the government

PROGRESS ON SEVERAL FRONTS

Seattle saw the development of first gas station in the nation
Rev. Dr. Mark Matthews broadcast on nations' first church-owned station
KRW in Seattle
Silent films replaced by "talkies"
Refrigerators, electric ovens, vacuum cleaners, clothes washers
all added to the convenience of housewives

PACIFIC COAST BASEBALL LEAGUE EXPANDS

Eight franchises made up the "AA" level league with teams representing
Los Angeles, Oakland, Sacramento and San Francisco in California facing
the Portland Beavers, Salt Lake City Bees, Seattle Rainiers and Vernon, B.C. Tigers -- 1919
Franchises were added and removed invoking such names as the San Francisco Mission Reds,
Sacramento Solons, San Diego Padres and Hollywood Stars
Mild climate of the West Coast, especially in California, allowed the league to play longer seasons
often starting in late (February) and ending as late as the beginning of (December)
teams sometimes played over 200 games in a single season
players could potentially hone their skills and also to earn an extra month or two worth of pay
which reduced the need to find offseason work
longer playing season also provided room for additional games on the schedule,
giving team owners a chance at generating more revenue

SEATTLE MAYOR OLE HANSON RISES IN POPULARITY

After claiming to have crushed the Seattle strike, which in fact expired of its own lack of clear goals,
Seattle's mayor became a national hero for his strong statements
against communists and strikers -- both equally essential to his cause
Mayor Ole Hanson's picture was in newspapers across the country
telegrams congratulating him on his decisive action flooded his office
Mayor Ole Hanson soon resigned his city position
he joined a lecture circuit and toured the country
he told how he brought "the Bolsheviks" to their knees in his city
Ole Hanson wrote a pamphlet giving his perspective: *Americanism versus Bolshevism*
(he attempted to run for President [1920] but was never seriously considered as a candidate)

LONGVIEW ANTICIPATES A MAJOR INDUSTRY ARRIVING

Missouri lumber baron Robert Alexander Long first came west -- 1919
he eventually purchased 70,000 acres of timber in the Lower Cowlitz River area
as president of the Long-Bell Lumber Company he built a sawmill
on the site of historic Monticello (opposite the town of Kelso)
he began making plans for a dream city to be built for his sawmill workers

PORT ANGELES ACQUIRES A NEW INDUSTRY

Hemlock was unsuitable for timber -- it was considered a weed tree
however, it was well suited to pulp and paper production
Elwha River hydropower put Port Angeles at the forefront of the pulp and paper industry
Port Angeles Real Estate developer Thomas T. Aldwell invited Isadore Zellerbach,
who owned Zellerbach Paper Company, a San Francisco paper distribution business
to invest in a planned pulp mill at Ediz Hook
next to the Crescent Boxboard papermill site -- 1919
Isadore Zellerbach partnered with sales genius Edward M. Mills
together they purchased Elwa Dam near Port Angeles
to produce power for new industrial enterprise
Operating first under the name Washington Pulp and Paper Corporation (later Crown Zellerbach)
construction of the mill began at the ancient Native American site of Tse-whit-zen
remains of hundreds of Indians were disturbed
this fact widely reported at the time (but was largely forgotten over the years)
(Washington Pulp and Paper Corporation began production newsprint and paper
at the Port Angeles pulp mill [1921])

BOEING AIRPLANE COMPANY SETS AN ALTITUDE RECORD

Boeing pilot George Bolt set a New Zealand altitude record of 6,500 feet flying the Boeing B & W
(three months later, Bolt will set a one-day distance record in the same seaplane
flying 306 miles in four hours and thirty-nine minutes

PRESIDENT WOODROW WILSON BEGINS A NATION-WIDE TOUR FOR PEACE

Woodrow Wilson had successfully sold his concept of a League of Nations to European powers
who included the international consortium in the Versailles Treaty
He had more difficulty convincing the U.S. Senate
Conservative Republican Senators blocked ratification of the treaty
because it included provisions for a League
Bitterly disappointed that the U.S. Senate had rejected the opportunity to join the League of Nations
President Wilson was determined that citizens should hear of its importance
Woodrow Wilson began a nationwide speaking tour
however, wherever he went he was followed by a team of dissenters
who attempted to counter each of his points
In Seattle, the President received a spectacular welcome -- September 13, 1919
he participated in a parade in his honor as he stood in an open automobile the entire parade route
and acknowledged locals with a wave or a nod
he spoke from the battleship *Oregon* at anchor in the Elliott Bay -- September 15, 1919
he was joined by Secretary of War Josephus Daniels who was there to review
5,000 sailors and the fifty-one U.S. Navy vessels of the Pacific Fleet
this was the largest fleet ever assembled on the Pacific Coast.
Presidential party arrived in Spokane to be greeted by nearly 5,000 people
packed into Spokane's National Guard Armory -- September 22, 1919

his reception was friendly and a resounding applause followed the speech
President Wilson again experienced a very warm reception
as he spoke to a crowd of 25,000 flag-waving citizens in the Tacoma stadium -- September 30

PRESIDENT WOODROW WILSON SUFFERS A STROKE

President Wilson continued his speaking tour across the nation
he drove himself unmercifully as he attempted to build support for the League of Nations
Finally, in Wichita, his doctor found the president very close to collapse
under doctor's order Wilson's special train sped back to Washington, D.C. to give him a rest
Edith Wilson, second wife of President Wilson, found her husband unconscious
on the bathroom floor of their private White House quarters bleeding from a cut on his head
he had suffered a massive stroke -- October 2, 1919
that paralyzed his left side and impaired his vision
For seventeen months the enfeebled President lay in his bed on the brink of death
he was barely able to write his own name
Outside of the White House no one of his condition
all communication with the President went through his wife
she entered the sick room with messages and emerged with verbal instructions
or the scrawl of a signature on a piece of paper
Edith Wilson called the period her "stewardship"
(later, others called her the first woman President)
Although Wilson's health improved, he never fully recovered

U.S. SENATE REFUSES TO JOIN THE LEAGUE OF NATIONS

U.S. Senate refused to join the other victorious nations in accepting peace
senators rejected the Treaty of Versailles with its provision for League of Nations
Some sort of compromise language could have been drafted
there were pro-treaty Republicans who could have formed a coalition with the Democrats
to win the necessary two-thirds vote majority
but after his massive stroke President Wilson was in no condition to compromise
Republican leadership made no effort at accommodation
United States remained officially at war [until July 2, 1921]

CENTRALIA BUSINESSMEN ORGANIZE THE TOWN

Industrial Workers of the Worker (IWW) had defied patriotism during the Great War
they had supported strikes and carried out industrial terrorism
in an effort to change America's capitalist system to provide workers control of production
Wobblies opened a new union hall in Centralia on the street level of the Roderick Hotel
some people believed the Wobblies to be anti-Americanism
Local businessmen formed the Centralia Citizens Protective Association
their avowed purpose was to combat the Industrial Workers of the World (IWW)
Eight platoons of the Centralia American Legion planned an Armistice Day Parade
to celebrate the first year of peace
During a meeting of the Citizens Protective Association, a threat was made

to deal with the Industrial Workers of the World (IWW) members in town -- October 1919 rumors about an intended raid on the Wobblie Hall during the upcoming parade were an open secret

VOLSTEAD ACT STRENGTHENS THE EIGHTEENTH AMENDMENT TO THE CONSTITUTION

Congress passed the Volstead Act, drafted by the Anti-Saloon League's general counsel, to define the purpose of the Eighteenth Amendment -- October 28, 1919

three distinct purposes of the Act were identified:

- to prohibit intoxicating beverages;
- to regulate the manufacture, production, use and sale of high-proof spirits for other than beverage purposes;
- to ensure an ample supply of alcohol and promote its use in scientific research and in the development of fuel, dye and other lawful industries and practices, such as religious rituals

this law further provided that **“no person shall manufacture, sell, barter, transport, import, export, deliver, or furnish any intoxicating liquor except as authorized by this act”**

it did not specifically prohibit the use of intoxicating liquors

President Woodrow Wilson, largely on technical grounds, vetoed the Volstead Act

but the U.S. House of Representatives immediately voted to override the veto -- October 28, 1919 and the Senate voted similarly the next day

The Volstead Act set the starting date for nationwide prohibition [January 16, 1920]

LABOR UNREST PRODUCES SEVERAL LARGE UNAUTHORIZED STRIKES

There were several large strikes -- many of them “wildcat” or “outlaw” efforts

these were openly and heartily opposed by the unions

railroad workers' wildcat strike was the most important of these as it spread across the nation

(it was eventually ended by the combined pressures of repression and some concessions)

most protracted effort was the mass upheaval in the coalfields

which saw sporadic strikes, national strikes and armed battles running from 1919 into [1922]

Frequently in the course of these struggles, the idea of workers' management of production was often cussed and discussed

INDUSTRIAL WORKERS OF THE WORLD (IWW) ARE ATTACKED IN CENTRALIA

An American Legion Armistice Day Parade was held in Centralia -- November 11, 1919

parade route of young Veterans who had made the world safe from the German Kaiser

circled twice around the town

local attorney Warren “Wedge” Grimm, an All-American at the University of Washington

and a lieutenant in the United States Army, led the parade

he was Commander of Grant Hodge American Legion Post

Wobblies had been warned by their young sympathetic attorney Elmer Smith of a possible attack

IWW had even appealed to their old enemies, the police and governor, for protection

they were told none would be provided

their lawyers had advised the Wobblies that if they were attacked

they had a right to protect themselves

Inside Centralia's union hall at Second and Tower streets were armed men

other Wobblers with rifles were stationed in a hotel across street
and more were located on a nearby hill
On the second trip passed the Wobbler hall, the parade stopped
several veterans broke ranks and rushed the hall -- guns were fired
three young American Legionnaires were dead:
Warren Grimm marching at the head of his platoon was the first to fall
Ben Casagrande and Arthur McElfresh also were killed
five other Legionnaires were wounded
Wobbler Wesley Everest, Secretary of the local union, had been inside the union hall
he stepped outside where he was met by one of the veterans -- Dale Hubbard
Hubbard pointed a pistol he knew was jammed at Everest and ordered him to surrender
as Hubbard moved forward Everest shot him
Hubbard lay on the ground as Everest shot him twice more emptying his gun
Hubbard died in the hospital later that night becoming the fourth death from the parade melee

ANGRY MEN ATTACK THE INDUSTRIAL WORKERS OF THE WORLD (IWW) HALL

Frenzied, the mob pillaged the front of the Industrial Workers of the World Centralia headquarters
they built a huge bonfire of wood planking and "Red" literature found in the hall
Ten Industrial Workers of the World members and lawyer Elmer Smith
were arrested and charged with murder
One of the arrested Wobblers, Wesley Everest, was paraded around the town
with a belt cinched around his neck before he was beaten
outside city hall the mob made a half-hearted effort to lynch him
Everest shouted to the mob that nobody had the guts to kill him in the daylight
he was put in jail
That evening electric power went off in Centralia
eight men from the mob broke into the jail where they faced only token resistance
Everest was removed from his cell and beaten again
his teeth were knocked out with a rifle butt
he was then tossed several times over the side of a bridge across the Skookumchuk River
until his neck was broken from the noose tied around it
his lifeless body was riddled with bullets
(today the location of the lynching is known as Hangman's Bridge)
Wesley Everest's body was cut down and taken back to the jail
where police officers threw it into a corridor between the cells occupied by IWW members
armed men forced several Wobblers to dig Wesley Everest a pauper's grave
there was no ceremony nor any marker
(a headstone was added in 1938: **Wesley Everest killed Nov. 11, 1919 age 32**)
Events in town November 11, 1919 became known as the "Centralia Massacre"
(later a coroner's verdict of death by suicide was an insult to Wesley Everest and the IWW
it is impossible for a dead man to shoot himself)

CENTRALIA BECOMES AN ARMED CAMP

Day and night a posse of men roamed the streets of Centralia searching for "the Wobs"

suspected Industrial Workers of the World (IWW) sympathizers were subjected to a beating
Trains were stopped as they came through town
searches were conducted seat by seat by young men looking for Wobblies
Little effort was made by local law enforcement to find Wesley Everest's killers

ORDER IS RESTORED IN THE TOWN OF CENTRALIA

Governor Louis F. Hart was notified of the incident in Centralia
ordered Washington National Guard 3rd Infantry Company F from Tacoma to the scene
Centralia's jail had been filled with suspects -- most of whom were released
it was discovered they had no connection with the incident

BITTER LABOR STRIKES END IN BITTER DEFEAT

Shipyard workers, telephone linemen and operators, longshoremen, sailors and railroad shop workers
all lost strike efforts -- 1919
Post-war strikes by United Mine Workers between 1919 [and 1923] were accompanied by lockouts
many union miners moved out of the mining town of Newcastle, Washington
(mining unions finally gave in but the mine owners also were almost broke [1923])
Unions struggled to hold their wartime gains against the new open shop drives
that ushered in the "American Plan" decade of the [1920s] which eliminated union closed shops

BOEING AIRPLANE COMPANY PROVIDES AIRMAIL SERVICE

Boeing Airplane Company was struggling to stay aloft before signing an airmail contract -- 1919
Eddie Hubbard flew the first Boeing-designed commercial aircraft a three-seat B-1 "Flying Boat"
as he delivered mail between Seattle and Victoria, B.C. -- December 27, 1919
this airplane probably set the record for the most miles flown by a plane up to then
as Eddie Hubbard flew the plane more than 350,000 miles delivering the mail

1920-1929

AMERICAN SOCIETY CHANGES FOLLOWING THE GREAT WAR

Following the end of the war Americans threw off restraints, responsibilities, inhibitions and women shed some of their clothing

King Cotton, King Wheat, and King Corn lost their thrones to Queen Silk

Silk's great tensile strength and elasticity was especially suited for making women's stockings as women shortened their skirts in the 1920s, they exposed their legs above their knees an average American woman may have spent more than ten percent of her clothing budget on silk stockings

Advertisements encouraged women to consider silk stockings as a necessity rather than a luxury pictures of shapely legs covered with sheer silk stockings

advertised everything from auto ignition systems to shingles and washing machines

magazines ran stories with provocative titles featuring silk in general and stockings in particular

Importing silk from Japan boomed

(United States imported about 1 million pounds of raw silk valued at about \$4.5 million [1874])

imports grew to about 26 million pounds, worth \$80.5 million [by 1914])

and reached almost 45 million pounds, worth nearly \$330 million [1919]

Great Northern Railway justifiably prided itself as being the leading rail line handling silk

value of the business was reflected by the value of the product

price per pound rose from about \$4 [1874] to almost \$18 [1919]

one silk bale weighing 130 pounds was worth about \$2,300

THREAT OF COMMUNISM SPREADS FEAR ACROSS AMERICA

Allied victory over Germany and the Central Powers brought American joy but not peace of mind as "The War to End All Wars" faded into the past, fear of change gripped the nation

Shortly after the Bolshevik Revolution in Russia and the end of the Great War

Bolsheviks had overthrown the royal family [1917] and murdered them [1918]

several efforts at revolution had been achieved success in Europe and America:

- Russian Revolution had been successful
communists had also announced a world-wide revolution;
- revolution had taken place in Hungary;
- uprisings in were ongoing Germany;
- racist lynchings in the American South sparked the worst episodes of racial violence
in United States history

Fear of communism increased when a series of strikes occurred [1919]

a series of bomb explosions including a bungled attempt to blow up the U.S. Attorney-General

lead to a campaign against the communists in America [1919]

over 6000 people were arrested and put in prison New Year's Day, 1920

only three guns were found in their homes and many had to be released within a few weeks

such was the fear of communism that very few people outside of the 6000 arrested

complained about the legality of these arrests

our judicial system seemed to turn a blind eye as America's national security was paramount

WOVOKA, A MYSTIC, DEVELOPS A RELIGION THAT APPEALS TO INDIANS

Wovoka [1856-1932], a Nevada Indian, began to have visions
because Whites had rejected the Messiah, He had returned to the Indians
in the person of Wovoka
Messiah said: “live in peace and brotherhood; watch and pray; give up firearms and whiskey”

1920 STATE CENSUS FIGURES SHOWS AN INCREASE IN POPULATION

Washington’s population had increased 18.8 per cent in ten years -- 1920
grew to 1,356,621 inhabitants of which 9,061 were Native American
by far the greatest increase was in Western Washington
with an urban increase of 254 percent overshadowing a rural increase of seventy-nine percent
accounting for at least part of the urban growth
were newcomers who moved to Washington from other regions
and residents who relocated from farm to city with the region
Lumbering was still the state’s dominant industry
steel shipbuilding ranked second
number of farms increased from 56,192 to 66,288
Electric industry powered a variety of new consumer products
ranging from refrigerators and vacuum cleaners to record players and hair curlers

PROHIBITION CHANGES LIFE IN AMERICA

Eighteenth Amendment to the U.S. Constitution went into effect -- January 16, 1920
under terms of the Volstead Act prohibited throughout the nation
sales, manufacture, transportation, and sale of alcoholic beverages -- except for druggists
(when Washington state had imposed its own form of prohibition three years earlier
British Columbia offered a nearby wet haven for those in need)
National prohibition did not eliminate corruption as intended
rather it spawned Speakeasies, bathtub gin, and gangsters
bootleggers and vice squads escalated their activities
it encouraged a new type of crime that many considered semi-respectable

NORTHERN PACIFIC RAILWAY IMPORTS SILK FROM JAPAN

Transferred its main office from Tacoma to Seattle -- 1920
Seattle had become the steamship center for the Pacific Northwest
Express trans-Pacific ships brought great bales of cream-colored raw silk
from Japan and China to Seattle’s Pier 91, the West coast depot [1925]
steamer *Korea* carried \$18 million in raw silk
cargo average value -- \$10 million
Speed mattered to silk shippers because, except for gold and silver bullion,
raw silk was the most precious commodity shipped over a long distance by commercial carrier
when prices reached a peak of nearly \$18 per pound -- 1920
one train’s cargo could be worth more than \$5 million
because raw silk is susceptible to damage from heat, moisture, fumes, or puncture

shippers minimized their risk by moving the silk as quickly as possible
speed was necessary in delivering the goods to New York as raw silk is delicate
insurance cost \$2000 a day from the time the cargo left the Orient
In Seattle the ship's hatches were broken open and stevedores hauled out the bales
loaded the silk onto waiting railroad cars in the transit shed
Each railroad car designed to carry twenty-eight tons of silk
cars had special sealed doors with locks in place
Locomotives were P-2 type
engine and tender weighed 617,000 pounds
almost one hundred feet from pilot to end of tender
could carry 5000 pounds of fuel oil -- 12,000 gallons of water
four driver wheels six-feet in diameter
heaviest, fastest locomotive ever built to cross the continent
"Silks," as the silk trains were dubbed, had the right of way over all other traffic
Silk Train flew white flags and feather on its stack
300-ton juggernaut raced eastward at speeds up to eighty miles-per-hour
they had the right-of-way, with very few exceptions, over every other train on the tracks
crack passenger trains were shunted on to side tracks as a Silk Train approached
this accounted for a 24-hour difference in trans-continental travel time
between the silk and passenger trains
Preparations were begun even before the ship arrived at Seattle
men tested brakes, jacked up wheels, inspected the brasses or bushings,
and then tested and inspected everything a second time
an engine, a coach for the crew and guards, and the baggage cars waited at the pier
for the silk to arrive
Meanwhile, personnel from the mechanical department prepared the waiting baggage cars
thorough cleaning and inspection took place for each unique silk car
with its walls finished using steel or varnished wood to minimize damage
to delicate silk fibers during transport
doors and vents were sealed to keep out dust and moisture;
splinters, lamps, stoves, and anything else that might puncture the bales
if they shifted while in transit were removed or padded;
steam pipes were removed or capped;
windows were covered to block the view of the cargo and its security
Great Northern Railway enjoyed advantages over other potential shippers
as a ship neared Seattle, Great Northern personnel went into action
everything possible was done to avoid even a minute's delay
a GN attorney obtained the permits to move the silk through customs without delay
GN customs clerk and representatives of its operating and traffic departments
boarded the ship at Victoria en route to Seattle
they prepared the customs clearance documents and all other necessary papers
ship's manifest included a detailed list of where the silk had been loaded
and where each bale or package was to be delivered
this information was transmitted to the GN freight agent in Seattle

at the same time a GN vice-president secured insurance for the silk while the transportation superintendent arranged with other railroads such as the Chicago, Burlington & Quincy and the Pennsylvania to run the silk from St. Paul to Chicago and on to New York security supervisors engaged special armed agents to guard the train Activity dealing with the ship and its cargo were equally frantic even before the ship docked, the crew opened hatches and ran out the gangplanks stevedores followed the boarding officer on board and began moving the silk the transit shed where the bales were sorted according to its destination before being loaded into cars to guard against theft and smuggling, customs officials checked the bales, and when the customs appraiser released the silk, it was trundled into waiting railroad cars each railroad car designed to carry twenty-eight tons of silk train car doors were then locked and sealed because the conductor already had his orders and wheel report, the train did not have to stop at the terminal office

Unloading a 280-ton ship's cargo of raw silk, loading an eight-car train and bracing the bales to minimize shifting could be accomplished in one hour, forty minutes Occasionally, silk trains passed out of the yard on their way to St. Paul before the ship's passengers had even disembarked

SEATTLE IS THE LEADING PORT FOR SILK

Seattle advertised itself in the 1920s as the "Silk Port of America" twenty thousand to thirty thousand bales of raw silk worth \$20 million to \$30 million entered the United States through the Port of Seattle each month Three major shipping lines dominated delivery of silk to Seattle Admiral Oriental Line was known for its ships named for presidents used the large, fast, dependable 535-foot long ships were put in service [1921] these liners alone brought in more than \$300 million worth of raw silk into Seattle two other significant carriers were Japanese:

Nippon Yusen Kaisha (NYK) partnered with Jim Hill's Great Northern Railway
Osaka Shosen Kaisha (O.S.K.) Line (today's Mitsui O.S.K. Line)

NYK enjoyed advantages not available to other shippers thanks to its arrangement with Jim Hill's Great Northern Railway and its fleet of fast, specially designed, diesel-powered ships with "silk rooms" to protect precious bales from damage while crossing the frequently rough Pacific Ocean

SHIPPING SILK WAS A FINANCIALLY RISKY VENTURE

High cost of insuring raw silk against damage, delay, and theft was the largest single expense for shippers

An hour's delay in delivering a shipment from Yokohama, Japan to New York could cost tens of thousands of dollars

Interest charges on the capital borrowed to purchase the silk were also high for example, interest charges on a shipment of 10,000 bales valued at \$10 million could be as much as \$1,650 a day

Because raw silk was imported duty free, it had to be billed in bond while being transported across the continent
railroad companies had to furnish the bond which might amount to \$2 million per train
Unpredictability of the silk market was another reason for speed
because silk was not purchased directly by a manufacturer
shipments were usually consigned to a New York bank or brokerage house
receipts for shipments were traded on the volatile commodities market
price of silk could fluctuate considerably in a matter of minutes or hours,
only few minutes' delay in the delivery could mean the loss of thousands of dollars
for a firm or speculator
Shippers moved silk quickly because, valued at hundreds of dollars per bale, it was worth stealing
many thieves preferred silk to gold or jewels because raw silk could not be marked
and was impossible to trace since one skein looked like the next
moreover, demand usually exceeded supply
stolen silk could readily be converted into cash for almost full value
silk had always attracted thieves, but during the silk-train era
their operations were as efficient and profitable as those of rum-runners and bootleggers
Hijackers feared and schedules were secret
although silk cargoes were always heavily guarded with a car for railroad detectives on each train
at each stop checked door seals were checked on each car
and were unlocked only when the East Coast mills were reached
still thefts were reportedly so staggering many leading railroads refuse to transport silk
Silk trains ended with development of rayon

IWW MEMBERS INVOLVED IN THE CENTRALIA MASSACRE GO ON TRIAL

No lawyer in Lewis County would defend the Wobblies facing trial
attorney Ralph Pierce came down from Seattle
Pierce was an associate of George Vanderveer who had so ably defended IWW members
after the Everett Massacre [1916]
by the time Pierce arrived in Centralia, many of his clients had already given statements
George Vanderveer, a Seattle lawyer with a passion for the underdog, soon took over the defense
It was quickly agreed that a fair trial was impossible in Centralia
Montesano, county seat of Grays Harbor, forty miles away was chosen for the site of the trial
Defense attorney Vanderveer faced personal and professional difficulties
few men in Montesano walked the streets without weapons
but Vanderveer was asked to surrender his weapon upon entering the courthouse
because of threats to his life
Vanderveer refused to stay in Montesano during a trial recess and went to Aberdeen instead
Vanderveer did not believe a fair trial could occur in Montesano either
but his motion to move the trial to Olympia was denied by Judge John M. Wilson
Vanderveer attempted to have the men tried separately rather than together -- this was denied
Vanderveer's appeals of these decisions were also denied
nor did the judge allow Vanderveer to discuss any incidents
that had happened to the Wobblies in Centralia previous to this massacre day

All eleven of the accused submitted pleas of not guilty
Loren Roberts entered a special plea of “not guilty by reason of insanity”
two of the Wobblies who were accused were never present at their trial
Trial of Industrial Workers of the World members was a huge event
for the small town of Montesano beginning -- February 16, 1920
thirty-four Legionnaires were deputized for the event
Legionnaires were paid and provided with shelter to attend the trial
Congress even passed an act allowing ex-servicemen to wear their uniforms
these paid attendees appeared to be quite official

MORE MILITARY MEN ARE SENT TO THE IWW TRIAL

At the request of Prosecutor Herman Allen, a U.S. Army infantry regiment arrived at the trial
ostensibly as a “precautionary measure” but more to further intimidate the jury -- March 1, 1920
U.S. troops patrolled the courthouse against demonstrations by the union
but allowed Legion member to attend the trial in uniform
Judge John M. Wilson, on a positive note for Wobblies, dropped the charges against one defendant
twenty-one-year-old Bert Faulkner was released
possibly because his mother attended the trial daily
this left ten men on trial

MONTESANO TRIAL OF THE IWW MEMBERS COMES TO AN END

After six weeks of testimony, the trial ended and the jury went into deliberations
their first verdict acquitted Elmer Smith and Mike Sheehan, found Loren Roberts insane,
and found the others guilty of third-degree murder in the death of Warren O. Grimm
Judge John M. Wilson rejected this verdict
saying there was no such thing as third-degree murder
he sent them back for further deliberations
Two days after the initial deliberations began, a final, acceptable verdict was reached
torn between doubts the accused were guilty and the emotions seething around them
jury members tried to compromise with a weak, ridiculous verdict
Smith and Sheehan were acquitted, Roberts was declared guilty but insane
and the other seven were convicted of second-degree murder -- evening, March 13, 1920
all twelve jurors signed a petition requesting leniency for the convicted men
Judge Wilson disregarded their plea
he sentenced the eight men to twenty-five to forty-year sentences
far more than the ten-year standard sentence for second degree murder
Verdict and the sentences were almost universally disliked
supporters of the Legionnaires thought it too weak
IWW supporters thought it too harsh
Prosecutor Herman Allen re-arrested all the men, with the intent of trying them for McElfresh’s death
Vanderveer requested a new trial -- but that plea was rejected
Vanderveer appealed the case to the State Supreme Court where the appeals were also rejected
as were his attempts at gaining a rehearing
Vanderveer had no other options left

convicted eight men were sent to prison or, in the case of Roberts,
a ward for the criminally insane
additional McElfresh murder charges were dropped

AN END TO THE ERA OF VIOLENCE IS REACHED

Most of those IWW members convicted were released before their sentence was up
James McNery died while serving his term
five others were pardoned [1933]
Ray Becker's sentence was commuted by Governor Martin [1939]
Though justice had been ill served, the Wobblies had violated popular opinion too often
there was little left to remind people of what can happen when public hysteria takes over
and when people are put on trial for their beliefs as much as for their actions

TEMPLE OF JUSTICE IS COMPLETED ON THE NEW STATE CAPITAL CAMPUS

Temple of Justice was the first building completed on the capital complex -- 1920
this was followed by the business-like Insurance Building
and the power and heating plant beside Capital Lake

WASHINGTON LEGISLATURE RATIFIES NATIONAL WOMEN'S SUFFRAGE

Governor Louis Hart called the Washington State Legislature back into session -- March 22, 1920
to ratify the proposed Nineteenth Amendment to U.S. Constitution
known as the "Susan B. Anthony Amendment"
as one of the three-fourths of the states necessary to enable national women's suffrage
Representative Frances Haskell from Pierce County introduced the resolution
and the only other woman legislator at the time, Representative Anna Colwell of Snohomish,
addressed the session along with suffragists Emma Smith DeVoe and Mrs. Homer T. Hill
Washington, although a long supporter of women's voting rights
(Territorial legislature had granted women the vote [1883]),
was the thirty-fifth (next to last) state to ratify the proposed amendment to the U.S. Constitution

DR. ANNA LOUISE STRONG LEAVES THE UNITED STATES

Labor and political radical Dr. Anna Louise Strong had nothing remaining to keep her in Seattle
when American journalist, lecturer, political philosopher and muckraker Lincoln Steffens
lectured in Seattle about his trip to Russia -- 1920
Strong accepted his advice and went to Moscow with a Quaker relief group as a journalist
Welcomed in the Soviet Union, Dr. Strong supported herself for several years
as a foreign correspondent for radical American newspapers
she lived in and defended the policies of the Soviet Union
and Peoples Republic of China while keeping ties to her Seattle roots

EMPLOYERS DEMAND OPEN SHOPS "AMERICAN PLAN" REPLACE UNION SHOPS

"American Plan" promoted union-free open shops
that is, shops where workers would not be required to join a labor union
National Association of Manufacturers endorsed American Plan -- 1920

to protect workers from “Un-American” unions
in theory a job would be open to union and non-union workers alike
in practice employers refused to recognize and bargain with unions

MANAGEMENT HIRES UNION BUSTERS TO PROTECT BUSINESS INTERESTS

Corporations confronted with union organizing drives
hired labor relations consultants and industrial psychologists
who were opposed to unionization,
or engaged in practices designed to stop workers from forming unions,
or convinced members to no longer remain in trade unions
most labor relations attorneys and consultants participated in multiple disciplines
such as bargaining, arbitration and mediation and compensation analysis
Labor relations consultants were employed to help employers prevent or get rid of unions
because unions depend on the support, confidence, and good will of its members
some labor relations consultants target those qualities in strike breaking
or union avoidance campaigns
management said collective bargaining is “third party intervention”
they blamed “labor problems” on “excessive power by unions”
and the “increasing arrogance of union officials”

YELLOW DOG CONTRACTS ARE REQUIRED TO BREAK THE UNIONS

Many employers tried to combat the growing strength of unions
by compelling employees to sign contracts before they were hired
stipulating that they would not join a union after they are hired
these were called “Yellow Dog” contracts by union members
who said only a yellow dog would sign such an agreement
employers used spies, thugs, and blacklists of union members to avoid hiring pro-union people
One contract read in part: **“I will not take part in any strike or hinder the conduct of the factory as an open or nonunion shop. My employment may be terminated at any time by you or by me without written notice....”**

LONGSHOREMEN-MANAGEMENT CONTRACT TALKS IN SEATTLE ARE FUTILE

Union-controlled List System hiring practice in Seattle
provided equal job opportunities for black members
Seattle’s Local had managed to integrate their union using this hiring practice
over 300 black workers joined International Longshoremen’s Association Local 38-12
Negotiators reached a new contract -- April 19, 1920
wages and working conditions were kept essentially identical to those of [1919]
and a new provision was negotiated dealing specifically with the “List System” in Seattle
as negotiated the agreement read: **“All men employed on board ship, including sling men, shall be picked by the employer and no list system shall be in operation.”**
When the agreement was reached Seattle was faced with an “open shop”
rank and file members accused Local 38-12’s president of selling out the membership
International Longshoremen’s Association Executive Council in an effort

to maintain the new contract revoked the charter of Local 38-12 -- April 19, 1920

ELECTRIFICATION FAILS TO MEET NEEDS

Lack of rural electrification in the 1920s and [1930s]

was blamed on a monopolistic private electric industry

Private electrical service was expanded into interurban (suburban) and rural areas

however, additional and more widely scattered dams and power plants were needed
to meet the steadily growing statewide demand

Puget Sound Power Company was founded

operated as a subsidiary to the Seattle Electric Company

UNITED STATES IS ECONOMICALLY DIVIDED

With the end of the “Great War” the “Roaring Twenties” began in leading metropolitan centers
especially New York, Paris and Berlin and then became widely spread

United States gained dominance in world finance

Spirit of the Roaring Twenties (sometimes called the “Jazz Age”)

was marked by a break with traditions

Roaring Twenties was meant to emphasize the period’s social, artistic, and cultural drive

jazz music blossomed, dancing rose in popularity, Art Deco flourished

“flappers” redefined modern womanhood as they wore short skirts and bobbed their hair

they flaunted their disdain for what was considered acceptable behavior

flappers were seen as brash for wearing excessive makeup, drinking,

treating sex in a casual manner, smoking, driving automobiles

and otherwise flouting social and sexual norms

everything seemed to be feasible through modern technology

inventions, especially, automobiles, moving pictures and radio proliferated

large portions of the population were exposed to “modern” ideas

Roaring Twenties were marked by a flourishing

modern mass-production and mass-consumption economy

fueled by electricity provided ample opportunities for profitable investments

while also raising the living standard of urban middle- and working-class Americans

stock market began its famed ascent

Dow Jones Industrial Average peaked [1929] at a value six times as high as in [1921]

but since less than one percent of the American people owned any stock,

fabulous returns in the stock market directly benefited only the wealthy

as a result, the share of America’s wealth controlled by the richest of the rich

increased rapidly to perhaps the highest level in American history

(good statistical measurements of wealth inequality do not exist)

Roaring Twenties offered a classic case of the rich getting richer -- much richer

Members of the urban working- and middle-classes also experienced real and sustained gains

in spite of the collapse of the labor movement real wages for urban workers

increased by about 20% during the 1920s

wage gains were enhanced due to the falling cost of astonishing new mass-produced goods

cost of Henry Ford’s Model T fell every single year from an initial cost of \$1000

when it was replaced by the more modern Model A [1927] -- it cost less than \$300
in addition to automobiles, technologically produced other modern conveniences
washing machines, refrigerators and a host of other modern conveniences
drastically reduced housework and improved the quality of life
However, the prosperity of the 1920s was not universal
for a large minority of Americans resided in rural areas and made their livelihoods in agriculture
this decade roared only with the agony of prolonged depression
1920s marked the end of a period of great prosperity brought on by the demands of the Great War
American agricultural production fed much of Europe
this enormous demand resulted in high prices for farm products throughout the world
farmers in America had increased production accordingly and reaped great profits
however, the war's end allowed the resumption of normal European production
suddenly the world faced a huge glut of agricultural products with no buyers
farm prices fell at a catastrophic rate
price of wheat, the staple crop of the Great Plains, fell by almost half;
price of cotton, still the lifeblood of the South, fell by three-quarters
many farmers took out loans to increase acreage and buy efficient new agricultural machines
suddenly could not make their payments
throughout the decade farm foreclosures and rural bank failures
increased at an alarming rate
agricultural incomes remained flat, with rural Americans' wealth falling far behind urban workers
rural electrification increased very slowly
more than ninety percent of American farms still lacked power [into the 1930s]
proportion of farms with access to a telephone actually fell during the Roaring Twenties
It is no great exaggeration to say that for rural America, the Great Depression began in 1920
and continued for an entire generation
roaring prosperity of America's cities during the 1920s
made the privation of rural life all the more painful
divide between Haves and Have Nots in the 1920s was the divide between city and country
economic resentments created by that divide helped to fuel a powerful traditionalist backlash

COMMERCIAL RADIO COMES TO SEATTLE

Commercial radio broadcasts were just beginning -- 1920
First Presbyterian Church of Seattle was the first church in the world
to own and operate its own radio station: KTW-Radio
Rev. Dr. Mark Matthews preaching audience increased dramatically with his broadcasts
he claimed the largest Presbyterian congregation in the world
KTW was granted a license to operate [April 22, 1922])

RURAL AREAS DO NOT HAVE ACCESS TO ELECTRICITY

Most of the cities and towns in Washington had enjoyed electricity for at least a decade by 1920
but that was not the case in rural areas where lack of rural electrification in the 1920s [and 1930s]
was blamed on a monopolistic private electric industry
Private electrical service was expanded in interurban and suburban areas

however, additional widely scattered dams and power plants were needed
to meet the steadily growing statewide demand
Puget Sound Power Company, a subsidiary of privately-owned Seattle Electric Company
was founded -- 1920
Private utilities assessed charges based on population density and the distance from the generator
while Seattle paid five-and-a-half cents for a kilowatt-hour for publicly produced electricity
Chehalis paid twelve cents for the same amount of privately generated electricity
In fact, rate difference was only the beginning of the variables in the cost of electricity
rural customers to receive service from a private power company
would have to grant the company a right of way to the property
purchase the poles, set the poles, and string the line
then, before the line was energized, the farmer had to deed all the equipment to the utility
because rates were based on the value of the utility's property
these improvements, including the farmer's poles and line,
were then added in to drive up the rate base
rates for rural customers were increased again to an even higher rate
to assure the utility company a return on the investment
which the farmer had actually made on behalf of the utility
in other words, a farmer ended up paying several times over
for the cost of a line extension he built and paid for himself
As a result electricity was beyond being affordable and so was not available

ILLEGAL ACTIVITY INCREASES IN WASHINGTON STATE

Homemade stills proliferated in rural areas
Rumrunners loaded boats in British Columbia and smuggled their cargoes
into Puget Sound coves and inlets
Former Seattle Police Lieutenant Roy Olmstead blatantly directed his own fleet of fast boats
to unguarded landing places by transmitting coded messages
his wife, it was rumored, broadcast coded instructions regarding routes to his boats
during a local children's radio program
well financed, he had over eighty employees and was able to under sell his competition
his knowledge of police work helped frustrate his pursuers
when he was eventually caught over ninety-six cases of Canadian whiskey
the largest cache of illegal liquor ever found, was uncovered from an Olmstead boat
on a beach north of Edmonds
a search of his home provided enough evidence to convict Olmstead
a long prison term ended his role as the biggest rum runner in the state

SEATTLE LONGSHOREMEN GO ON STRIKE

Under the terms of the new Seattle agreement, opportunities for African Americans on Seattle docks
shrank under the management-operated open shop hiring system
In the first of many revolts against union leadership
longshoremen's Local 38-12 walked off the docks in a wildcat strike
to protect the "List System" -- April 30, 1920

an agreement that had been won in [1917] and [1919] strikes
this was by no means an organized effort
International Longshoremen's Association national president T.V. O'Connor
forced the Seattle members back to work
With the ILA Seattle strike lost and without a charter Seattle, union members were unrepresented
wages and working conditions deteriorated under the open shop
black union members declined in number to less than 100 [by the end of 1920]
all-black gangs were limited to the Great Northern and Milwaukee docks
and Alaska Steamship's Pier 2
only about a fourth of the black members worked regularly out of the fink hall
many worked in extra gangs handling penalty cargoes
such as explosives, chemicals, and goods damaged by fire or water

ALEXANDER PANTAGES GOES TO HOLLYWOOD

Pantages shrewdly invested his theatrical profits from his chain of theatres ("Pantages Circuit")
into new outlets West of the Mississippi River
to take advantage of his status as a powerful theatrical mogul
he moved from Seattle to Los Angeles -- 1920
Throughout the 1920s Pantages Circuit dominated the vaudeville and motion picture market
in North America west of the Mississippi River
his theaters offered plentiful and respectable outlets for the infant motion picture industry
It is remarkable that Alexander Pantages was probably illiterate
certainly he received no formal education
however, he possessed the prodigious memory of the unschooled
and a shrewd ability to compensate for his deficiencies in his business and theatrical dealings
John Considine and his son John Considine, Jr. did very well as motion picture producers
(John Jr. had married rival entertainment entrepreneur Alexander Pantages' daughter Carmen)
(John Considine's grandsons, actor John and actor/writer/photographer Tim Considine
continue the well-known family name)

NORTHERN PACIFIC RAILWAY MOVES ITS WESTERN HEADQUARTERS

Northern Pacific Railway had its headquarters building located at Seventh and Pacific
across the street from the (Old) City Hall
when the company transferred its western headquarters office to Seattle -- 1920
this building was sold to a private company for use as business offices
although the building still stands, half of the building was demolished
(the missing half is now a park)

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION LOCAL 38-12 REMAINS UNHAPPY

Continuing their effort to retain their dispatching system Local 38-12 struck again -- May 6, 1920
that led in many respects to self-destruction of a local
which until that time represented over 3000 dockworkers
ILA's International President revoked the local's charter for holding an unsanctioned strike
Having lost the International's backing and therefore, legitimacy as a bargaining agent,

Seattle Local 38-12 soon gave up
(Seattle ILA's strike over the list system would eventually split the union into three
and then later two, separate locals)

With the failure of the strike, the fink hall hiring system gained a much stronger foothold in Seattle
waterfront employers banded together and merged their separate hiring halls
into a single employment office which would register and dispatch all Seattle longshoremen

INTERURBAN TRANSPORTATION SYSTEM

Puget Sound Traction, Light, and Power Company provided the service
linked Puget Sound communities from Bellingham to Olympia
However, the advance of automobiles caused a decline in the interurban railroad service
"Traction" was dropped from the name of the company -- 1920

FRANKLIN D. ROOSEVELT VISITS EASTERN WASHINGTON

Like his cousin Theodore Roosevelt, Franklin D. Roosevelt supported
conservation of natural resources and development of water power on the nation's rivers
While he was campaigning for the vice presidency, Democrat Franklin Roosevelt
arrived in Portland after traveling down the Columbia River Gorge -- 1920

he was very impressed by the river as he noted in a speech: **"When you cross the Mountain States and that portion of the Coast States that lies well back from the ocean, you are impressed by those great stretches of physical territory now practically unused but destined some day to contain the homes of thousands and hundreds of thousands of citizens like us, a territory to be developed by the Nation and for the Nation. As we were coming down the river today, I could not help thinking, as everyone does, of all that water running unchecked down to the sea."**

SHELLFISH INDUSTRY RAPIDLY EXPANDS

After the successful oyster seeding operation in Samish Bay [1919]
seed oysters from Japan were introduced and raised along the tide flats of Puget Sound
along the Pacific coast -- 1920
(Today razor clams, littleneck clams, butter clams, and geoducks
still provide food for both commercial industries and sports enthusiasts
this is also true of Dungeness crab
although strict regulations are now imposed to assure future harvests
shrimping is a growing industry in Washington
as demand increases more and more fishing boats may be converted to carry shrimp nets

WASHINGTON LOGGERS' JARGON WAS A LANGUAGE UNTO ITSELF

Logger Johnny Bedore loading a flatcar at the landing when an accident occurred -- 1920
as a mishandled log swung around and knocked him off the top of the load
one leg was obviously broken
from the pain in his side Bedore knew he had cracked or broken several ribs
Johnny was taken to the local hospital
there a nurse came around to his room with a handful of compensation papers to fill out
she wrote his name, date of birth, and employer

she next asked the patient to describe the accident

“In your own words, Mr. Bedore, will you tell me how the accident happened?”

Johnny, who had lived around logging camps all his life, began, **“Well, Miss, it’s ‘bout like this. See, I’m a top loader by trade. Experienced. Today the squirrel we had on the ground running the show was green as grass. We had a long, slippery school marm on the landing and I signaled the puncher to give the St. John’s flip but he up and gave her the Cannuck instead. The jammer cocked her tail and she saginawed, knocked me off the top, breaking my leg and three of my slats.”**

With a puzzled look on her face the Nurse stated:

“Mr. Bedore, I am afraid I do not understand.”

Johnny replied:

“Me either, Miss. How could a man pull a Cannuck when you call for a St. John’s flip. Mystery to me.”¹⁰⁵

PLANS FOR IRRIGATING THE COLUMBIA BASIN (BIG BEND) ARE DISCUSSED

Debate between the supporters of the “Pumpers” and “Gravity Plan” raged on for years -- 1920 (and still raises blood pressure in parts of Eastern Washington)

Rufus Woods and his Pumpers envisioned construction of a 550-foot-tall hydroelectric dam on the Columbia River to generate power to operate gigantic pumps to lift water from the reservoir uphill to a storage lake formed by damming both ends of the Grand Coulee from there the water would be siphoned into a maze of tunnels and canals to be delivered in the Big Bend Country

support for this option came from Wenatchee and Ephrata leaders

William Clapp ran a business in Ephrata and also studied geology of the area

he said, **“If ice can build a dam in that big river, why can’t man do it?”¹⁰⁶**

Using E.F. Blain’s Gravity Plan scheme called for a storage dam to be built on the Pend Oreille River at Alburni Falls (near Newport, Washington) to create a storage reservoir for Lake Pend Oreille irrigation water would be carried from Lake Pend Oreille through a 134-mile system of gravity-flow canals, tunnels, aqueducts and reservoirs to the Big Bend Country where the water would be distributed to farms and ranches

during winter, non-irrigating season, when local water supplies for generating power were short reservoir water could be used to turn private dynamos in Spokane

if a higher more expensive dam was constructed hydroelectricity also could be produced but water would cost \$400 per acre support for this option came from Spokane leaders

IRRIGATION DETAILS NEED TO BE RESOLVED

Regardless of the plan chosen federal government money would be necessary to provide water for the Big Bend irrigation system

In fact, there was no guarantee that irrigated water would ever reach the Big Bend or the surrounding communities until irrigation districts could be organized

¹⁰⁵ Rick Steber. *Loggers, Volume 7*. Bonanza Publishing, Prineville, Oregon, 1989. P. 17.

¹⁰⁶ Cecil Dryden, *History of Washington*. P. 328.

under either plan the water produced would be used to develop privately owned farms
supposedly, farmers would eventually pay for the water that was supplied to them
no irrigation would take place until variable rates of around \$85 per acre
were paid by the farmers to the government
these payments were to be made in equal annual installments over a period of forty years,
beginning ten years after water first became available through the project.

However, other private industries also demanded to receive benefit
from so vast an expenditure of public money on natural resources
another debate ensued:

how loud a voice should industries have in determining the policy of the public works?
Generally Pumpers represented the view that reclamation of public lands
was a legitimate cause for public expenditures
but that fostering private power corporations was not
Of course, Gravity Plan men took the contrary stand
if the government went into the business of producing power
(as it would have to if Grand Coulee were built)
this would constitute an unwarranted interference with the rights of private enterprise
Eastern Washington newspapers focused biased attention on both proposals
as the increasingly contentious debate grew in intensity,
Washington legislators addressed the issue
they established the Columbia Basin Survey Commission to study the two plans

RED SCARE SWEEPS ACROSS AMERICA

Allied victory over Germany and the Central Powers brought American joy but not peace of mind
Americans feared that a Russian-style revolution was near
“Red Scare” was a reaction against aliens and radicals following the Great War -- summer 1920
America psyche was gripped by fear of communists, socialists, anarchists and other dissidents
wartime patriotism provided the background for concern that such a revolution
would change church, home, marriage, civility and the “American Way of Life”
after all, an anarchist had shot President William McKinley [1901]
innocent people were jailed for expressing their views -- civil liberties were ignore
Newspapers fed on the fear as they focused on foreigners who were perceived
as dangerous agents of change attempting to resolve the poverty they faced
strong feelings were aroused in favor of the jail terms which had been given
to a woman who distributed anti-war leaflets
and to two Socialist Party members who agitated against Conscription (Draft) laws
Politicians traded on people’s fears of radicals and dissidents
U.S. Attorney General A. Mitchell Palmer led arrests of alien radicals throughout the country
several national leaders, including Seattle Mayor Ole Hanson, received bombs in the mail
Industrial Workers of the World (IWW) had led several labor strikes [1916] and [1917]
IWW violence well known -- all unions came under suspicion and attack
newspapers portrayed strikes as radical threats to American society
inspired by left-wing, foreign agents
legitimate labor strikes were portrayed as “Crimes against society,”

“Conspiracies against the government,” and “Plots to establish Communism”

WASHINGTON LEGISLATURE INVESTIGATES BOTH IRRIGATION PROJECTS

Columbia Basin Survey Commission was created to resolve the opposing views
this commission spent a hundred thousand dollars on surveys
when the report on the Big Bend Country irrigation proposals was released
Commissioners declared that a dam at Grand Coulee was not feasible
they recommended the gravity plan with a dam at Albeni Falls -- July 1920
Supporters of the pumping plan fought back
they organized the Columbia River Dam, Irrigation, and Power Association
to keep their proposal alive
Both sides continued to argue for years -- meanwhile, neither scheme moved closer to reality

CONSTITUTIONAL AMENDMENT XIX PROVIDES WOMEN THE RIGHT TO VOTE

Amendment XIX to the Federal Constitution was passed by Congress
and approved by the required three-quarters of the states -- August 18, 1920
“The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of sex.”
Tennessee General Assembly, by a one-vote margin, became the thirty-sixth state
to ratify the proposed constitutional amendment
making this the Nineteenth Amendment to the U.S. Constitution
U.S. Secretary of State Bainbridge Colby certified what became known
as the “Susan B. Anthony Amendment”
Women could now participate in the political process by voting, holding office and serving on juries
League of Women Voters was founded nationally

NATIONAL ECONOMIC DOWNTURN DEEPENS

Inflation drove prices ever higher as the cost of living index (between [June 1919] and [June 1920])
rose from 177 to 216
Hard times began for hundreds of thousands in the West (eight years before the Wall Street crash)
shipbuilding slowed and the lumber industry retrenched
agricultural production was not good and prices declined as farming suffered
There was heavy local reliance on a few major old standby industries
pulp and paper, furniture making, and construction related to timber
printing, publishing, clothing, manufacturing and food processing
mining industry was serving a shrinking market
American industries were geared to mass production were growing
on ever-faster moving assembly lines -- 1920
auto industry, rubber industry and electrical manufacturing
generated great demand for semi-skilled production workers
output increased as wages stagnated -- families turned to credit to make ends meet
management charged unions with being agents for the Communists
employers characterized labor leaders as being corrupt labor dictators
who were interested only in advancing themselves and were victimizing union members

BUSINESS PRACTICES CHANGE IN WASHINGTON STATE

Banking laws were changed by the state legislature to allow for bigger and bigger banks
group banking became the new trend as banks took over smaller businesses
“chain banks” developed as large banks acquired practical control of smaller banks
bank mergers in Washington began in Seattle where “Fewer and Better Banks” set the tone
largest merger in the state took place in Seattle

Dexter Horton Bank, Seattle National, and First National formed one bank
in Spokane, Old National Corporation secured control of twenty-two smaller banks
to protect the newly formed banks, the state opposed the formation of new branch banks
forty-seven banks merged into twenty-four [during the 1920’s]

(in the following four years, forty-four more banks merged into twenty-two)

Management of trust funds changed after the World War

led to the formation of trust companies which had been made legal in Washington

Savings and Loan associations were created

(in the period from [1918] to [1930] their number doubled)

Liberty Bonds which had been floated by the federal government to finance the war effort
made customers and banks alike “bond conscious”

some larger banks, like Dexter Horton’s Seattle bank, set up bond departments

From bonds the investor appetite turned to stocks

(which lured investors for the rest of the decade)

Banking resources faced competition from trust funds, savings and loans, Liberty Bonds, and stocks
dropped almost 25% in Washington during the 1920’s

eleven state banks failed

This economic downturn became known as the “Little Recession”

LITTLE RECESSION (ECONOMIC DOWNTURN) HITS WASHINGTON STATE

Eastern Washington suffered greatly with:

- drought,
- falling European sales,
- restrictions on government credit

Violence erupted among competing groups

especially between unemployed workers and “scabs” brought in during strikes

Socialist Utopians were very visible spreading radical ideas to anyone who would listen

PROSPECTS LOOK UP FOR THE BOEING AIRPLANE COMPANY

Outside of the tiny contract to carry airmail between Seattle and Victoria

there was little demand for the B-1 “Flying Boat”

Boeing’s company was \$300,000 in debt

William Boeing paid off the bills with his private income -- 1920

Boeing received a contract from the Army Air Corps to build 200 MB-3A pursuit planes
while these planes were under construction, William Boeing kept his engineers busy
developing improvements for the plane

at end of the contract the company was in a position to build a better type of aircraft

Boeing and engineers prepared to construct a series of new airplanes for the country
unfortunately, all the airplanes necessary to meet the nation's needs had been constructed
William Boeing looked for new investments

CONSTITUTIONAL AMENDMENT XIX GOES INTO EFFECT

Nineteenth Amendment was successfully added to the U.S. Constitution -- August 26, 1920
eight days after it had been ratified by the states
Secretary of State Bainbridge Colby declared the 19th Amendment in effect
years of struggle (beginning with the Seneca Falls Convention [July 19–20, 1848])
had come to an end as women could now take part in the political process

WOMEN PARTICIPATE IN THE NATIONAL ELECTION OF 1920

(League of Women Voters had been founded nationally during the ratification effort [February 1920])
In the first national election which provided for universal suffrage
women turned out to vote in great numbers -- November 2, 1920
anarchy, feared by many because of women voting, did not happen
However, the nation did turn more Conservative as Americans stopped to breathe
collectively they gathered their strength to modernize and to a return to "normalcy"
almost everything President Woodrow Wilson stood for was repudiated
as voters turned their thoughts from war and the League of Nations
Republican Warren Gamaliel Harding was elected president -- November 2, 1920
he easily defeated ex-Seattle Mayor Ole Hanson
and replaced ailing President Woodrow Wilson who was on almost all "worst President lists"
President Harding was an ardent supporter of prohibition on White House's first floor
but on second floor he served bootleg booze to his poker playing buddies

"NORMALCY" REIGNED IN THE WASHINGTON STATE ELECTION

Political parties in Washington were torn by factions
farmer-labor cooperation continued to be as strong as in the early days of the Populist movement
newly organized Farmer-Labor Party which succeeded the Nonpartisan League
ran better in Washington than in any other state
it finished well ahead of the Democrats in many races
but not well enough to capture a single statewide election or congressional seat
Democratic were torn by "**jealousies, factionalism and general incompetence**"¹⁰⁷
among farmers and a coalition of various labor unions along with Socialist Party members
Republican political unity was split by the effort to bring women into the party
Emma Smith DeVoe had served as the only woman chosen as a presidential elector
by the Republican state convention
she wrote a column for the *Tacoma News Tribune*:
The Viewpoint of a Republican Woman
party leaders felt she swayed voters of both sexes to their candidates
she organized Republican Day at the Western Washington Fair in Puyallup

¹⁰⁷ Shelby Scates, *Warren G. Magnuson*. P. 27.

where the Washington State Republican Party opened a temporary headquarters
But the status quo won out
acting-Republican Governor Louis F. Hart had replaced the deceased Ernest Lister
Robert Bridges, an old-time Populist and the Farmer-Labor candidate for governor, ran second
Democrat lumber baron Roland H. Hartley placed third in the election
Governor Louis F. Hart was returned to office for one term -- [1921-1925]
Republican U.S. Senator Wesley Jones was reelected to another term
members of the state's Congressional delegation remained the same
Democrat Party members were virtually displaced in the legislature by Republicans during the 1920s
Republicans won an impressive string of election victories
and maintained an overwhelming majority in the state legislature
Democrats held only one state Senate seat during legislative session in [1921-1922]
of a potential 873 state House of Representatives seats up for election
between [1914] and [1930] only seventy-two Democrats were elected

RAILROADS SUFFER A DECLINE

Road building had a troubling impact on the once almighty railroad industry
whose nationwide network of track reach a peak [1916]
passenger traffic declined sharply during the 1920s
majority of salesmen and commercial travelers abandoned passenger trains for the automobile
following them were many other categories of travelers
Formerly, the railroad station functioned as a community portal to the outside world
but the highway and the gas station increasingly assumed that role in the 1920s

WASHINGTON'S LEGISLATURE CHANGES THE PRIMARY ELECTION SYSTEM

Voter registration had been implemented in all areas of the state -- 1921
Two new statutes affecting political parties and primary nominations were adopted
and referred to the voters for their acceptance:
•Referendum 14B regulated political party caucuses and conventions
and the election of political party officers;
•Referendum 15 required voters to declare their political party affiliation
either when they registered to vote or at the time they voted in the primary election
voters were restricted to the ballot of that political party for the primary election
thus imposing a "closed primary" voting system on Washington voters

WASHINGTON STATE GOVERNMENT AGENCIES ARE CONSOLIDATED

Republican Governor Louis F. Hart continued his efforts to downsize state government
Governor's recommendation to consolidate state agencies
resulted in the Administrative Code of 1921 that laid the foundation
for the steady centralization of the government
several "code" departments which became part of the Executive Branch
were each given a specific responsibility such as
health, conservation and development, fisheries, highways, and licenses
Washington's tax structure was revised at Governor Hart's suggestion

several highway tax levies were abolished
roads were to be built and maintained by the sale of auto licenses
and a gasoline excise tax of one cent a gallon

FIRST SHIP CALLS AT THE NEW PORT OF TACOMA

Tacoma's shipping, primarily lumber sold to the San Francisco market, took place along Ruston Way and along the mouth of the Thea Foss Waterway which opens into Commencement Bay connected with the larger Puget Sound Northern Pacific Railway established its western terminus in Tacoma [1873] Pierce County citizens voted [November 5, 1918] to develop a new Port of Tacoma located on 240 acres of undeveloped tidelands across the Thea Foss Waterway Steamship *Edmore* arrived at Port of Tacoma's newly constructed Pier 1 to load the first cargo to be shipped from the Port -- March 25, 1921

Tacoma News Tribune described the first ship's arrival in a front-page article published later that day: **"Beginning its career of commercial utility to Tacoma and its tributary territory exactly a year from the day the first pile in its construction was driven, the Port of Tacoma became an operating concern in the field of world commerce Friday morning. The anniversary of the start on the construction work of the port was celebrated when the steamship *Edmore* of the Pacific Coast Steamship Company's fleet drew up to Pier 1 at 8 o'clock Friday morning and began the loading of a cargo of 25 carloads of lumber, approximately 600,000 board feet. The freight cars were all in readiness as the big ship drew alongside, and in a few moments the great locomotive crane of the port was jerking them into place beside the ship's hatches, into which the lumber was expeditiously transferred by the ship's own tackle."**¹⁰⁸

International Longshoremen's Association (ILA) Locals 38-3 and 38-30 worked around the clock to load 600,000 board feet of lumber in record-setting time twenty-four hours after it arrived, *Edmore* was fully loaded and set sail for Yokohama, Japan

MUTUAL HOME ASSOCIATION DISSOLVES

Home Colony was dissolved by court order and the anarchist community ended -- 1921 when the state government changed the law to make cooperative land holdings illegal Plots were then sold back to the residents with about 300 more conventional residents Home became like every other small town on the Key Peninsula

LONG-BELL LUMBER COMPANY MOVES TO WASHINGTON

(Missouri lumber Baron Robert Alexander Long and his partner Victor Bell founded Long-Bell Lumber Company in Columbus, Kansas [1876] over forty-two years it had grown into a prosperous lumber manufacturing giant with sales approaching \$50 million but the company's supply of Southern pine for its mills in Louisiana, Texas and elsewhere was fast running out and Long-Bell executives faced a decision [1918]

¹⁰⁸ Ronald E Magden and A.D Martinson, *Working Waterfront: The Story of Tacoma's Ships and Men* P. 47-48.

company could abandon manufacturing and carry on its operations on a smaller scale
with its retail lumber yards and string of mill town stores
or it could find a new timber supply and make a new beginning in the sawmill business
R.A. Long decided to move the company to Washington
originally, Long-Bell Company planned to build only one mill at the site
Chief Engineer Wesley Vandercook set up headquarters in Kelso -- May 1921
one hundred men began to survey the site of the new purchase
this resulted was a highly detailed contour map that filled an entire room
to be used by the loggers to plan their cuttings, the location of railroad grades,
and even the spar trees to be used in hauling timber up inclines
before any operations were begun

VETERANS INSIST ON STATE AID FOR THEIR WAR SERVICE

At the insistence of the veterans of The War to End All Wars
Washington's legislature passed a law providing aid to War veterans
financial assistance was to take the form of irrigated plots of land which could be claimed
Plots of ten and twenty acres were laid out at White Bluffs and Hanford on the Columbia River
however, this project lost money for both the state and veterans and the plan was given up
in light of the failure, the state withdrew from such efforts

BOEING AIRPLANE COMPANY EXPANDS

William Boeing kept his company alive after the war by building furniture
and speedboats which were popular on Puget Sound during Prohibition)
and with personal checks
Military and naval contracts tipped the scales toward survival beginning -- 1921
U.S. Army Air Service ordered 200 Thomas-Morse MB-3A pursuit fighter biplanes --1921
William Boeing's company underbid Thomas-Morse Company to gain the contract
Thomas-Morse had to absorb the aircraft's development costs
but it retained no rights to the design
Boeing demonstrated its efficient production methods that allowed it to profit
while charging the Army Air Service a lower price
U.S. Army Air Service contract kept Boeing in business
and put them on the road to financial success
for Thomas-Morse, however, the order was the beginning of the end for the company
Boeing also modified and rebuilt De Havilland DH-4 fighters -- 1921
fuel tanks were moved to a location where they were less likely to burst into flames
and trap the pilot (thus receiving the nickname: "Flying Coffin")
Boeing won an order for a new type of bomber that General Billy Mitchell favored -- 1921
Ground Attack Experimental (or GAX)
Boeing produced ten GA-1 models based on the GAX

WORLD WAR ENDS FOR THE UNITED STATES

For Europe "The War to End All Wars" or "The Great War"
had ended with the signing of the Versailles Treaty [November 11, 1918]

United States remained officially at war until July 2, 1921
when President Warren Harding approved a joint congressional resolution
proclaiming the war with the Central Powers ended and later signed a separate peace
Both the resolution and the treaty specified
that although the United States was not a party to the Versailles Treaty
it retained all rights and advantages accorded to it under the terms of the pact
excluding the League Covenant
America never joined the League of Nations

WORK BEGINS ON THE NEW LEGISLATIVE BUILDING

After it was agreed that architect Ernest Flagg's original foundation could be expanded,
was especially challenging work on the Legislative Building began
Great care was necessary to assure the capitol's extraordinary weight
would be spread out equally over the building's frame
capitol's self-supporting 30.8-million-pound masonry dome rose 278 feet above the ground
it was the fourth-tallest dome in the world
additional effort was needed to ensure that ground settling in the years after construction
would not somehow leave the building lopsided
these tasks required precise calculations and a great deal of testing

PORT OF TACOMA REMAINS A CLOSED (UNION) SHOP

Tacoma's International Longshoremen's Association union members and port management
could not reach an agreement on a new contract -- July 1921
however, shipowners did not dare to set up a fink hall
Fink hall dominated most small ports
even Tacoma local although they kept their closed shop agreements
was compelled to accept the prevailing open-shop wages and conditions
as long as the other ports remained unorganized

IWW ORGANIZER WILLIAM "BIG BILL" HAYWOOD FLEES THE COUNTRY

Despite the efforts of his supporters, Haywood was unable to overturn his conviction
for **"conspiring to hinder the draft, encourage desertion, and intimidate others in
connection with labor disputes"**¹⁰⁹
Industrial Worker of the World organizer Bill Haywood skipped bail while out on appeal
and fled to Russia -- 1921
Haywood became a labor advisor to Lenin's Bolshevik government
but Lenin's illness and death and Stalin's rise to power
ended his role as an advisor to the Soviet labor movement ([n 1923]
various visitors to Haywood's small Moscow apartment in later years
recalled that he was lonely and depressed
he expressed a desire to return to the United States
he took a Russian wife [1926] though the two had to communicate in sign language

¹⁰⁹ Howard Zinn, A People's History of the United States: 1492-Present, P.373.

William “Big Bill” Haywood died in a Moscow hospital from a stroke
brought on by alcoholism and diabetes [May 18, 1928]
half of his ashes were buried in the Kremlin wall
an urn containing the other half of his ashes was sent to Chicago
to be buried near the Haymarket Martyrs’ Monument

GRAND COULEE DAM PROJECT IS KEPT ALIVE

Despite a [1920] legislative study that recommended the gravity plan over the Grand Coulee plan,
members of the Wenatchee-Ephrata Pumper plan pushed on
Columbia River Dam, Irrigation, and Power Association was founded to keep their proposal alive
pump proponents ridiculed the cost estimate presented by the commission
for the Albeni Falls dam as far too low
in another study the Federal Reclamation Service supported the figures presented by the Pumpers
yet another study supported the Grand Coulee plan in part because it could
generate enough hydroelectric power to help offset the cost of irrigation canals
Pumpers were further heartened when a Seattle engineering firm brought in a report
that favored the use of the Grand Coulee as a reservoir
However, before anything could be accomplished it was necessary to form irrigation districts
Pumpers proposed a new state law that stated only affected property owners
would be allowed to vote on the creation of an irrigation district
in fact, many of the landowners did not physically live in central Washington
of those who did, many were wheat farmers or livestock ranchers
who did not necessarily support the irrigation project
as a result, the Columbia Basin Irrigation League was formed in order to “round up the vote”
Pumpers organized the Columbia Basin Irrigation League in Pasco -- 1921
with the blessing of the state’s two U.S. Senators
Republicans Miles Poindexter and “Yakima” Wesley Jones
Columbia Basin Irrigation League became powerful lobby force
a nation-wide campaign in favor of a dam on the Columbia River was launched

PEACE ARCH PARK OPENS

This international park consists of Peach Arch Provincial Park on the Canadian side
and Peach Arch State Park on the American side of the border
Within the park is the international major border crossing which has never closed
symbolic of the long history of peace between the two nations
it is located on the longest undefended boundary in the world
and the busiest such crossing west of Detroit
it was the first Monument build and dedicated to world peace
in Canada, the crossing is officially named Douglas
in honor of the first governor of the Colony of British Columbia: Sir James Douglas
Americans refer to the park as the Peace Arch Border Crossing
Peace Arch Monument which stands 67.2 feet high was built of reinforced concrete
by road builder Sam Hill
to commemorates the signing of the [1814] Treaty of Ghent ending the War of 1812

and to celebrate 100 years of peace
this monument was dedicated -- September 6, 1921
to mark crossing at the 3,000-mile-long border
Peace Arch has the flags of the United States and Canada mounted on its crown
inscriptions are located on each side of the monument
north (Canadian) wall is inscribed: "Brethren Dwelling Together in Peace and Unity"
south (American) wall reads: "Children of a Common Mother"
within the passageway are steel gates which are always open
two additional inscriptions are placed on the Peace Arch:
west side displays the words "1814 Open One Hundred Years 1914"
east side displays "May These Gates Never Be Closed."
Sam Hill's friend, Queen Marie of Romania, participated in a second dedication [1926]
she was a very popular celebrity who was touring the United States on a special train
with Sam Hill accompanying Her Majesty on the Washington part of the tour

LUMBERING BECOMES MORE ENVIRONMENTALLY FRIENDLY

Passed from mere exploitation of the forest -- 1921
thinking people preached conservation
Laws were passed
Adamson Law -- appropriated a small sum to buy logged-off land for reforestation
New State Forests Board was charged with reforestation and management of lands
Counties were required to turn over to the state logged-off land
acquired through delinquent taxes

WASHINGTON STATE PATROL COMES INTO EXISTENCE

State Patrol is the police agency of the state of Washington
six motorcycle patrolmen (of the then Highway Patrol) were commissioned -- September 1, 1921
(this agency was renamed the Washington State Patrol [June 1933])
State Patrol has law enforcement authority throughout the State of Washington
although authority is limited on Federal property and on Indian reservations
Individual officers of the Washington State Patrol are known as "Troopers"
although they are sometimes referred to as "Staters"

END OF THE LINE FOR THE INTERURBAN

Financial pressure and natural disasters spelled doom for the forward-looking transportation system
after flood damage the Everett-Snohomish Interurban line ceased operations -- December 1921
(Other line come to end in their turn
Sedro-Woolley branch was abandoned was replaced with bus service [1925]
northern line, with less traffic and greater maintenance expenses because of the numerous trestles,
was abandoned [September 1931]
southern division trains between Seattle and Everett,
which handled extensive suburban business as well as through traffic,
operated until the Seattle Municipal system abandoned the streetcar lines [1939]
leaving the interurban without an access to the downtown area

whole North Coast system was purchased by Greyhound Bus Company [1947])

COMMUNIST PARTY IN AMERICAN HAD ATTEMPTED TO INFILTRATE UNIONS

Communist International directed American Communists

to slow their unsuccessful infiltration of unions and to organize revolutionary competing unions:

Trade Union Educational League became the Trade Union Unitary League,

Marine Workers League became the Maritime Workers Industrial Union (MWIU)

In an all-out effort to control union membership

Wobblies and Communists faced each other in a war of words on waterfronts across the nation

PROBLEMS CONTINUE IN THE SHIPPING INDUSTRY

Unions could not resist wage reductions insisted on

by the Federal Shipbuilding Labor Adjustment Board

shipping company owners cut wages -- February 1922

Simultaneous with the wage cut, shipowners completed their control of maritime unions

by adopting a new "continuous discharge book" (fink book)

that replaced the shipping card formerly used to report for work

it was clear to union members why the change was made: **"Besides space for discharges from each voyage, the book contained the owner's sea experience, personal description, and photograph. It stated that 'no person will be employed by these associations unless he is registered at their employment office and has in his possession this certificate and discharge.' A seaman surrendered the book to the master when signing articles, to be returned at the end of the voyage with the discharge noting the seaman's rating, conduct, and efficiency. The bureau advised the sailor 'to conduct himself so that his record will be found satisfactory for future service'."**¹¹⁰

Federal Shipbuilding Labor Adjustment Board maintained a nationwide deferred list

of undesirable sailors who would not be employed

shipowners could blacklist union militants and intimidate others by refusing their shipping book

CHANGE COMES TO SKYKOMISH

Great Northern Railroad's dividing line for the Cascade Division

shifted several times between Goldbar and Skykomish [1894] to [1921]

Division point was moved back to Skykomish -- 1922

and the original depot that was built on the south side of tracks was moved to the north side

Other changes occurred in Skykomish -- 1922-[1923]

Martin's Boarding House was replaced by a new hotel (now known as *The Cascadia*)

many of the shacks standing along the tracks on the southside of the street were removed

and the area was cleaned up and a small park was built and maintained by the Great Northern

many of the changes were probably made in anticipation of the electrification of the railway

STORY OF THE TEAPOT DOME BRIBERY SCANDLE BREAKS

(By executive order President Warren G. Harding had given control of U.S. Navy petroleum reserves set aside for the Navy by President Taft at Teapot Dome, Wyoming)

¹¹⁰ Otlie Markolt, *Maritime Solidarity, Pacific Coast Unionism 1929-1938*. P.6.

and at Elk Hills and Buena Vista in California to the Department of the Interior [1921]
U.S. Secretary of the Interior Albert. B. Fall, without competitive bidding, leased
Teapot Dome fields to Harry F. Sinclair of Sinclair Oil and the Elk Hills oil field
to California oil tycoon Edward L. Doheny of Pan American Petroleum
Secretary Fall attempted to keep his actions secret,
but the sudden improvement in his standard of living prompted speculation)
Wall Street Journal reported -- April 14, 1922
that in a secret arrangement Secretary of the Interior Albert Fall had leased petroleum reserves
to a private oil company without competitive bidding
Fall denied the claims and the leases to the oil companies seemed legal enough
however, Senate Committee on Public Lands undertook an investigation of the matter
at first Republican Senator Robert M. La Follette, Sr. of Wisconsin
believed Fall was innocent
but after the senator's office was ransacked the he became more suspicious
without any proof of wrongdoing the story faded from public view
however, the Senate kept investigating -- for two more years

TEAPOT DOME SERVICE STATION SERVES AS A REMINDER OF THE SCANDLE

Located on Highway 12 near Zillah, Washington the service station stands
as a reminder of the scandal that rocked President Warren G. Harding's administration
Building was handcrafted in the shape of a teapot by Jack Ainsworth -- 1922
service station building circular with a conical roof and sports a knob on top
handle of the teapot is sheet metal and the spout is of concrete
Originally located on Highway 12 between Zillah and Granger, Washington
construction of Interstate 82 forced the building to be moved less than a mile [1978]
this unique building was placed on the National Historical Register [1985]
Teapot was listed on the "Most Endangered List" [2007]
(Although the service station is no longer in operation,
Zillah purchased the station
an effort is being made to bring the building into the city and keep it operational
to serve as a Visitor's Center/Tourist Destination with historical information on site)

ALEXANDER SCOTT BULLITT EMERGES AS A POLITICAL LEADER IN WASHINGTON

(Scott Bullitt was born to a family of prominent lawyers and Democrats
in Louisville, Kentucky, [January 23, 1877]
Scott attended Princeton when Woodrow Wilson was a student there
young Bullitt was active in football and boxing
and later went to law school at the University of Virginia.
When Scott return home, reform-minded Kentucky Governor Beckham
appointed the young man Sheriff of Jefferson County
Bullitt crusaded against gamblers, raided poolrooms, and stopped racetrack bookmaking
much of the establishment was angry
but Bullitt was a hero to the Louisville *Courier-Journal*
he was elected the office of county attorney [1910]

Scott Bullitt remained single up to the age of forty
but during a trip to Seattle while visiting his brother [1917] he met Dorothy Stimson
whose father C.D. Stimson was a wealthy and influential Puget Sound lumbermen
they married after a whirlwind romance and moved to Louisville
Scott enlisted in the Army during the Great War
after the Armistice Scott Bullitt and his wife Dorothy Stimson Bullitt returned to Seattle
Scott and Dorothy lived in the exclusive Highlands area
his Southern charm was disarming, he made friends easily, and he was a master story-teller)
Scott and his father-in-law genuinely enjoyed each other's company
C.D. bought "Greenway Mansion" next door to his estate
he presented it to the couple -- 1922
Scott Bullitt found himself in an odd position among Seattle's elite in the Highlands
he was an enthusiastic Democrat in a land of Republicans
but, because his in-laws comprised a quarter of the enclave's population,
they were tolerated as political eccentrics

LONG-BELL LUMBER COMPANY EXPANDS ITS PLANS

Long-Bell Company expanded its plans to build a second mill at the site
it became clear that major accommodations would have to be made for the mill site
and for the workers who would man it
first, the majority of the flat land, purchased by Long-Bell across the Cowlitz River
about four miles from Kelso, had a high water table that would require
building a large dike in order to become suitable land for building
in addition, Mr. Vandercook realized that Long-Bell
had not purchased enough of the flat valley land to contain their operations
(Long-Bell Lumber Company eventually purchased 70,000 acres of timber
in the Lower Cowlitz area)
Majority of the flat land across the Cowlitz River about four miles from Kelso
that has been purchased by Long-Bell had a high water table
that would require the surrounding protection of a large dike
in order to be suitable land for building.
In addition, Mr. Vandercook realized that Long-Bell
had not purchased enough of the flat valley land to contain their operations
After conferring with R.A. Long, the principal stockholder and general manager of Long-Bell,
additional options to buy land were contracted on the lowlands
stretching between the Cowlitz and Columbia Rivers
all of these options to buy were exercised by Long-Bell in the next five months
giving the company a majority of the valley's flat land for its mill site
R.A. Long built a sawmill on the site of historic Monticello (opposite the town of Kelso)
at the confluence of the Cowlitz and Columbia Rivers -- this site had long been settled
Monticello was the location of a gathering to draft a Memorial to Congress [1852]
that expressed their desire to be granted statehood under the name of Columbia
meeting came to be known as the Monticello Convention
(today, a monument to the Monticello Convention stands near the Longview Civic Center)

WASHINGTON ARTIST MARK TOBY EARNS AN INTERNATIONAL REPUTATION

Mark Toby was a forerunner of the abstract expressionist school of painters
he moved to Seattle where he taught art at the University of Washington -- 1922
he was introduced by one of his Japanese students to Oriental painting techniques
Toby traveled through Europe and Japan where he studied art forms including calligraphy
When he returned to America he devoted himself full-time to painting
(Mark Toby is considered by many to be the most important influence
in the introduction of abstract expressionism in the United States)

ABOVE GROUND WORK ON THE NEW CAPITOL BUILDING IS UNDERTAKEN

Sandstone for the dome was from Mt. Rainier -- Wilkinson Sandstone from Wilkinson, Washington
this stone was carved at the docks in Tacoma and shipped down Puget Sound to Olympia
trains brought them to the capitol during construction to be placed unfinished on the building
final ornamental carving was done in place by Scottish stone masons

DEBATE ABOUT EASTERN WASHINGTON IRRIGATION PLANS CONTINUES

Early rounds went to the gravity men as they worked to mold congressional opinion in their favor
Columbia Basin Irrigation League was formed to prepare national publicity -- 1922
visiting congressmen were taken on sight-seeing tours of the area
lobbyists were established in the national capital
Meanwhile, poverty-stricken Wenatchee and Ephrata Pumpers had no such resources at their disposal
Rufus Woods used his newspaper, the *Wenatchee Daily World*, and its editorial page
to deliver his arguments in support a Grand Coulee Dam project
Ephrata attorney James O'Sullivan was a dedicated advocate of the proposed dam -- 1922
he was scholar enough to gather and interpret facts intelligently
and Irish enough to enjoy a good fight as he made promotion of the dam his life's work
William Clapp, who ran a business in Ephrata, received strong support
from W. Gale Matthews who also was from Ephrata
together they formed the "Ephrata Group" in support of a dam with a pumping system
William W. Robertson in Yakima wrote editorials in the *Republic* and the *Herald*
which were supportive of the project but also very cautious
in keeping with his conservative ideals
Gravity Plan also had strong backing in Idaho and Montana
Gravity plan envisioned getting its necessary storage capacity
by increasing the size of Pend Oreille Lake in Idaho and Flathead Lake in Montana
in both sections prosperous farms and towns would be flooded
for the benefit of Washington citizens
considerable animosity was focused toward the Gravity Plan
Idaho went so far as to pass a law that would make the Pend Oreille reservoir
virtually impossible
angrily, gravity men sputtered darkly that Pumpers from the Big Bend
were behind this despicable move

REPUBLICAN PARTY IS EVEN MORE SUCCESSFUL IN THE STATE ELECTION

Control over state politics which the Republican Party enjoyed grew into a landslide during the election-- November 7, 1922 only two Democrats were elected to Congress newly elected Democratic U.S. Senator Clarence C. Senator Dill from Spokane was the first popularly-elected Senator from the state (all previous U.S. senators had been elected by the state senate) Senator Dill will serve for two terms [1923-1935] Congressman Samuel B. Hill, Waterville Democrat (no relation to the road builder) replaced Republican Congressman J. Stanley Webster -- December 1922 (he will hold the Fourth Congressional District seat for thirteen years before resigning -- [1923-1936] in the State Senate the single Democrat was outnumbered by thirty-nine Republicans and two Farm-Labor Party members in the state House of Representatives eighty-four Republicans surrounded nine Democrats and three Farm-Labor Party members -- one was Homer Truett Bone from Tacoma

REFERENDUM 14B and 15 ARE ON THE GENERAL ELECTION BALLOT

Two ballot proposals from the legislature attempted to change Washington's Primary Election laws approval by the voters was necessary to implement the proposed changes -- November 7, 1922 Referendum 14B regulated political party caucuses and conventions and election of party officers this proposal from the legislature was rejected -- For: 60,593; Against 184,004 Referendum 15 required voters to declare their political party affiliation ("closed primary") this, too, was rejected by the voters -- For: 57,324 Against: 140,299 As a consequence neither measure became law thus voters were not required to declare their party Washington remained under "Direct Primary" election laws allowing only major political parties to participate in primary elections (those who received more than ten percent of the votes in the last general election) minor political parties continued to nominate their candidates at party conventions

PRIVATE-PUBLIC UTILITY BATTLE CONTINUES IN THE STATE LEGISLATURE

First-term Farm-Labor Party state representative and public utility advocate Homer T. Bone of Tacoma immediately submitted the "Bone Bill" -- January 1923 which would give municipal electrical utilities to sell their service beyond the city limits his opponents, supporters of private utility companies, called him a radical, a demagogue, and a Bolshevik among other epithets Legislative battle lines were formed Homer Bone's bill started one of the bitterest fights the legislature had ever witnessed this two-month session, one of the stormiest in legislative history, escalated the simmering public power vs. private power battle and catapulted Homer T. Bone into the political spotlight Private utility interests flooded the legislature with printed propaganda and lobbyists to make sure Bone's proposal was defeated to counter the Bone Bill, Speaker of the House proposed a law that would levy punitive taxes

against any municipal light system that sold power outside its city limits
legislators passed a referendum to punish expanding public utilities for the voters to consider
Ambitious, self-taught attorney and eloquent orator Homer T. Bone did not give up
he also decided to take the issue to the voters by sponsoring an initiative to the people
to allow for the expansion of public utility companies into the suburbs and rural area

STATE REPRESENTATIVE HOMER T. BONE IS ACTIVE AS A FRESHMAN LEGISLATOR

Homer T. Bone moved from Indiana to Tacoma as a child with his parents [1899]
destitute, the family survived on whatever young Homer could earn
and his father's \$20 monthly Civil War pension
Homer's formal education had ended in the eighth grade
he worked variously in a grocery store, a furniture store, and for the postal service
he studied law at night and passed the bar at age twenty-eight [1911]
like many self-educated men, he remained a voracious reader all his life
Bone specialized in labor law and became a special deputy prosecuting attorney [1912]
before becoming a council for corporations
Homer T. Bone was of slight build -- five feet, six inches tall and 135 pounds
had been politically active in Tacoma for several years
(he ran unsuccessfully for prosecuting attorney and for mayor of Tacoma as a Socialist
at a time when conservative Republicans firmly controlled the state
he was ousted from the Socialist Party [1916] for being too moderate
he had then joined with Republicans and Farmer-Labor banner
he ran for the Third District congressional seat as a Farmer-Labor candidate,
but lost in the Warren G. Harding landslide [1920])
however, his impassioned speeches and tart tongue
had established him as the major Pacific Northwest voice for public power
Homer T. Bone was elected State Representative from Tacoma -- 1922
Farmer-Labor candidate Bone used his impassioned oratory and tart tongue
to quickly establish himself as the major Pacific Northwest voice for public power utilities
in Washington State

TIMES ARE CHANGING IN THE WEST

Stoddard King, a popular columnist for the Spokane *Spokesman-Review*
wrote a whimsical poem of the changing world of the West -- 1923:

Etude Geographique

**Out West, they saw, a man's a man; the legend still persists
That he is handy with a gun, and careless with his fists.
The fact is, though, you may not hear a stronger word than "Gosh!"
From Saskatoon, Saskatchewan, to Walla Walla, Wash.**

**In western towns 'tis many years since it was last the rage
For men to earn their daily bread by holding up a stage,
Yet story writers still ascribe such wild and wooly bosh
From Saskatoon, Saskatchewan, to Walla Walla, Wash.**

**The gents who roam the West today are manicured and meek,
They shave their features daily and they bathe three times a week.
They tote the tame umbrella and they wear the mild galosh
From Saskatoon, Saskatchewan, to Walla Walla, Wash.**

**But though the West has frowned upon its old nefarious games,
It still embellishes the map with sweet, melodious names,
Which grow in lush profusion like the apple and the squash
From Saskatoon, Saskatchewan, to Walla Walla, Wash.¹¹¹**

WASHINGTON STATE DOES ANOTHER STUDY OF IRRIGATION IN BIG BEND COUNTRY

Congress appropriated \$50,000 for investigation of feasible irrigation methods
and location of the proposed dam for the Columbia River -- 1923
Washington State hired Major General George W. Goethals, the builder of the Panama Canal,
to develop yet another report on irrigating the Big Bend region of Eastern Washington

STATE PROGRAM TO TAKE JAPANESE AMERICAN PROPERTY

(Washington State had passed a land law restricting property ownership by Chinese residents [1886]
this law was expanded [1921] to any alien who had not declared an intention to become a citizen
Citizens owning land in Washington and alien Japanese sued
this case all the way to the State Supreme Court
which denied the legal challenge and declared the law was upheld by the state constitution)
State Supreme Court decision was appealed to all the way to the U.S. Supreme Court
under the U.S. Constitution's Fourteenth Amendment due process clause -- April 23-24, 1923
once again the state law was upheld

NEW TECHNOLOGY IS DEVELOPED BY BOEING AIRPLANE COMPANY

Boeing Airplane Company entered into a race with Curtiss Aeroplane and Motor Company -- 1923
to design the best pursuit fighter airplane
Curtiss finished its design first and was awarded the first Army Air Service contract
Boeing developed an Arc-welding process for its Model 15
to make metal tubes for internal bracing rather than the spruce and wire used in older biplanes
however, this plane still had wooden spars and ribs
Boeing introduced its Model 15 prototype six months later -- June 12, 1923
this was the first successful Boeing-designed fighter
Boeing was established as a major American builder of military aircraft
157 Model 15s in different versions were built for the Army Air Force
as well as seventy-seven derivatives used as Navy training planes
Boeing also sold five of the airplanes to Peru

STIMSON MILL COMPANY EXPANDS ITS REACH

¹¹¹ W. Storrs Lee. *Washington State*. P. 444-445.

Charles Willard (C.W.) Stimson added to the family lumber operation on Hood Canal when one of the oldest mills in Seattle, the Brace-Hergert Mill on Lake Union, was purchased Stimson Mill Company became the Stimson Lumber Company -- 1923
over 200 men were employed
about fifty million feet of dressed fir lumber was produced annually

LONGVIEW COMES INTO EXISTENCE

Long-Bell Lumber Company at that time was the largest lumber mill in the world mill executives built the city of Longview, and employed over 3,000 people
It became apparent that upwards of 14,000 workers would be needed at the location Kelso, the nearest center of population, had less than 2,000 residents
it was obviously too small to meet the needs for so large a work force
In those days it was common to build a mill and then let a mill town spring up around it living conditions for loggers and mill workers alike were usually abysmal
little thought was given to their comfort or to that of their families
However, Robert Alexander Long decided to build a model city for his workers and their families at the time Longview was the only planned city of its magnitude
to have ever been conceived of and built entirely with private funds
Land was drained and the Cowlitz River diked thus making the site he chose safe for his mode
Longview, named in honor of its founder, was built on 14,000-acre triangular tract with rolling timbered hills to the west
George B. Kessler of St. Louis, and Hare & Hare of Kansas City, nationally known city planners, were contracted to complete the plans
Longview, a completely planned town before construction ever began, was dedicated -- July 2, 1923
city planners originally imagined a fully developed Longview to be a city with 75,000 residents
planning allowed for the city to grow inwards along organized lines
with separate areas designated for business, industrial and residential areas
streets had all been laid out and named
town center and residential section had been mapped
five dormitories for workers were constructed as well as 300 residences
dominating the city was the six-story Monticello Hotel with 160 rooms
which had been donated to the city by Robert A. Long personally
Mr. Long also donated R.A. Long High School, the YMCA building,
and the Longview Public Library

PRESIDENT WARREN G. HARDING VISITS WASHINGTON STATE

President Harding set out on a cross-country "Voyage of Understanding" speaking tour
he planned to meet ordinary people and explain his policies
during this trip he became the first president to visit Alaska
Harding's health prior to the Alaskan venture was poor -- he looked tired and dogged
his personal doctor believed getting away from the stresses of government would help him
rumors of corruption in his administration were beginning to circulate in Washington, D.C.
While in Alaska, Harding was profoundly shocked by a long message he received
detailing illegal activities in his administration previously unknown to him

As the presidential party traveled south from Alaska through British Columbia,
in Vancouver Harding developed what was believed to be a severe case of food poisoning
The President arrived in Puget Sound Country on his way south from Alaska -- July 27, 1923
he was met in Seattle with 21-gun salute and a crowd of 50,000
President Harding spoke at a rally in Volunteer Park
he also gave a short speech to schoolchildren in Woodland Park
followed by a major speech at the University of Washington
on the development of Alaska -- this was his last public address

PRESIDENT WARREN G. HARDING CONTINUES HIS “VOYAGE OF UNDERSTANDING”

President Harding left Seattle by train for San Francisco
when he arrived at the Palace Hotel six days later, Harding developed respiratory difficulties
President Warren G. Harding, while in the middle of conversation with his wife
in the hotel’s presidential suite when the twenty-ninth president suddenly died -- August 2, 1923
presidential physician and family friend Dr. Charles E. Sawyer diagnosed a stroke
Within minutes of the president’s death at 7:10, 7:20, or 7:30 P.M. rumors began to circulate
(no one on hand in the San Francisco hotel room when he breathed his last seemed to be sure)
four physicians who had been caring for Harding for the previous week
could not agree on the cause of death
it had something to do with his heart or perhaps it was a stroke
alternatively, it could have been both, exacerbated by the ptomaine poisoning
that he may or may not have experienced a few days earlier in Vancouver
First Lady Florence Mabel Kling “Flossie” Harding, refused to allow an autopsy
by morning the President Harding was on his way by train to Washington, D.C.
speculation regarding his unexpected death centered on four possibilities:
natural causes, negligent homicide, suicide and murder

VICE-PRESIDENT CALVIN COOLIDGE IS SWORN IN AS PRESIDENT

News of the death of President Warren G. Harding took four hours to reach the East Coast
a telegram arrived at the Coolidge farmhouse around 2:30 A.M., August 3, 1923
Calvin Coolidge’s father trudged up the stairs to awaken his son
the senior Coolidge, a notary public, administered the oath of office to his son
by the light of a kerosene lamp in the parlor
“Silent Cal” as he was known was an unadventurous conservative
who took a passive approach to the Presidency
he presided over gains in American business and stock market speculation

U.S. SENATE CONTINUES TO INVESTIGATE THE TEAPOT DOME OIL LEASES

U.S. Senate Committee on Public Lands continues to investigate
sweetheart oil lease contracts between Interior Secretary Albert Fall and oil tycoons [1922-1923]
Committee on Public Lands found no evidence of wrongdoing the leases were legal enough
but records kept disappearing mysteriously
Eventually it was discovered that in exchange for the oil leases
Edward L. Doheny of Pan American Petroleum had loaned Interior Secretary Albert Fall

\$100,000, interest-free
and when Fall retired as Secretary of the Interior [March 1923]
Harry F. Sinclair of Sinclair Oil lent him \$304,000
money from the bribes went to Fall's cattle ranch and investments in his business
it was this money changing hands that was illegal -- not the leases themselves

OTHER SCANDALS ARE INVESTIGATED

Throughout the 1920s the U.S. Senate Committee on Public Land held investigations which resulted in a series of civil and criminal suits
Edward L Doheny of Pan American Petroleum and Harry F. Sinclair of Sinclair Oil were acquitted although Sinclair was subsequently sentenced to prison for contempt of the Senate and for employing detectives to shadow members of the jury in his case
this was one of most sensational scandals in the history of American politics and was a key factor in posthumously destroying the public reputation of President Harding (who was extremely popular at the time of his death in office)
These public trials showed President Harding's administration to be one of the most corrupt and resulted in his being named "worst president ever"
(Oil fields were restored to the U.S. government through a Supreme Court decision [1927])

BUREAU OF INDIAN AFFAIRS CLOSES MORE INDIAN BOARDING SCHOOLS

Bureau of Indian Affairs had changed its philosophy regarding Indians boarding schools -- 1920s complaints that the schools were too expensive and that they encouraged dependency more than self-sufficiency became widespread
other complaints of deficiencies in the boarding schools hounded the Bureau of Indian Affairs
poor diet, substandard teachers, overcrowding, below-standard medical service and excessive labor on the part of the students without much distinction between work to maintain the schools and vocational training
however, the ultimate goal of eradicating traditional Indian culture was not questioned
States began to assume more control over Indian education
more and more children enrolled in public schools
majority of Indian children nationwide attended public schools -- 1923
Children remaining at the Indian Boarding Schools were returned to their families
life returned back to the way it was before the boarding school opened, but it would never be the same:

- Indian students had learned to read, write and speak some English while at school;
- they had learned some mathematics;
- they brought skills in agriculture or homemaking with them back to the reservations
their skills were observed and adopted by others on the reservation

Indian culture began to change
(eventually [in 1978] Congress passed the Indian Child Welfare Act
Indian parents gained the right to deny sending their children to boarding school)

PEARL ANDERSON (WANAMAKER) BEGINS HER CAREER IN EDUCATION¹¹²

Pearl Anderson was born at her family's homestead
at Mabana, Camano Island, Washington [January 18, 1899]
she was the third child with two sisters and a brother
her Swedish-born parents, Nils Anderson and Johanna (Hellman) Anderson,
were pioneers who had emigrated from Finland
Nils, known as "Peg-leg" after losing a leg in a logging accident
he made a fortune brokering timber on Camano and Whidbey islands
and on the Olympic Peninsula

Nils Anderson moved his young family to Seattle to be raised in the Roger-Seward neighborhood
but he held onto their Mabana property for use as a summer home
(after his children were out of high school, Nils Anderson moved back to Mabana
where he was elected to such Island County leadership offices as county engineer,
county commissioner and state representative)

Beginning at age sixteen, Pearl Anderson studied at the University of Washington [1915-1917]
but her education was interrupted for three years when she answered the call for teachers
to replace draftees who had gone off to the "Great War" -- World War I
she taught in a rural one-room school in Mabana
her duties included keeping a wood stove burning, carrying water and sweeping floors
at times she taught boys who were older than her eighteen years
at age nineteen she took a job as an elementary school principal
in a two-room school on Whidbey Island
during this time, she attended summer school at Bellingham Normal School
(now Western Washington University)

Pearl returned to the University of Washington where she graduated in education [1922]
after college Pearl went to Jordan, Montana as a teacher and dormitory matron
she had already decided to run for election to the non-partisan (no political affiliation) position
of Island County Superintendent of Schools (county superintendents no longer exist)

Pearl Anderson was elected Island County Superintendent of School -- 1923
she became the youngest elected county superintendent in the nation
(at one point she will share the ballot with her father, Nils Anderson)

AN EFFORT IS MADE TO EXPAND WOMEN'S RIGHTS

Three years after women won the right to vote, the Equal Rights Amendment (ERA)
was introduced in Congress by two Kansas Republicans
U.S. Senator Charles Curtis -- Senate Joint Resolution No. 21 -- December 10, 1923
U.S. Representative Daniel R. Anthony, Jr. House Joint Resolution No. 75 on December 13

ERA proposal was authored by the head of the National Women's Party, Alice Paul
who had led the suffrage campaign

"Equality of rights under the law shall not be denied or abridged on account of sex."

Although the ERA was introduced in every Congressional session between 1923 [and 1970],
it almost never reached the floor of either the Senate or the House for a vote

¹¹² Michael Hood, HistoryLink.org, Essay 9171, September 26, 2009.

instead, it was usually “bottled up” in committee
(exceptions occurred [1946], when it was defeated in the Senate by a vote of 38 to 35
and, in [1950] and [1953], when it was passed by the Senate with an amendment
that made it unacceptable to its supporters)
(Congress passed a proposed Equal Rights Amendment to the U.S. Constitution [March 1972]
**Section 1. Equality of rights under the law shall not be denied or abridged by the United
States or any State on account of sex.**
**Section 2. The Congress shall have the power to enforce, by appropriate legislation,
the provisions of this article.**
Section 3. This amendment shall take effect two years after the date of ratification.
In addition, Congress placed a time limit of seven years
for the required three-fourths of the states to also ratify the amendment
thirty-five states out of the thirty-eight needed had ratified by [1978]
Congress extended the deadline for ratification to [June 30, 1982]
but still the amendment failed to achieve the necessary thirty-eight ratifications)

HALIBUT FISHING IS ENDANGERED

Overfishing of the halibut banks ranging from the Columbia River to the Bering Sea
alarmed United States and Canadian officials who appointed a commission to study
methods of saving the industry -- 1924
Cautiously, working over several years, the committee
researched fishing company records, government files, and fishing vessel logs
sixteen thousand halibut were tagged and released
halibut eggs were gathered and examined
all in the hope that adequate regulation of the fishery
would depend on a thorough understanding of their habits
Out of the mass of statistics emerged a surprising fact
halibut are divided into distinct “**rac**es” and each race stays within fairly well defined localities

LONGVIEW’S POPULATION BOOMED

Longview was incorporated and a municipal government was established -- February 1924
within a year, 5,800 people lived in Longview and forty businesses were booming
Within a decade, the Port, Longview Fibre and Weyerhaeuser followed
expanding rapidly to serve the growing timber industry)
this industry was one of growth and optimism reflected in the term: “Roaring 20s”
(Today Long-Bell Lumber Company operates the largest sawmill in the Northwest
Weyerhaeuser Company is also a very important industry in the area
unfortunately, together the giant corporations greatly added to the overproduction of lumber
driving the price of finished lumber ever lower)

NEW PRIVATE UTILITY COMPANY BEGINS IN WASHINGTON

Puget Sound Power & Light was a leader among investor-owned utilities
in getting electricity to rural areas
Company organized a farm electrification department in Snohomish County -- 1924

yet it still had the problem of multiple layers of ownership
all the stock of Puget Power was owned by Engineers Public Service Company
which was owned by Stone & Webster

BUS SERVICE COMPETES WITH THE RAILROADS

One of America's pioneer bus operators was the Spokane, Portland and Seattle Railway -- 1924
which substituted buses for steam-powered trains linking Portland, Astoria and Oregon's coast
Innovation was the keynote of early-day bus travel
some companies offered sleeper coaches between the Northwest and California
some adopted a double-decked design especially suited to enjoy the scenery of the Northwest

McNEIL ISLAND FEDERAL PENITENTIARY EXPANDS AGAIN

Cell house No. 3 which contained fifty-eight-man cells was completed¹¹³ -- 1924
(only the year before a telephone arrived on McNeil Island almost fifty years after its invention
one telephone line served nine parties
island residents paid to use the phone at the general store)

FIRST FLIGHT AROUND THE WORLD

Sand Point, a peninsula in north Seattle that juts into Lake Washington,
served for almost fifty years as an air base, aviation training center
and aircraft repair depot for the U.S. Navy
One of the most sensational aviation events of the 1920s
was the Air Service round-the-world flight beginning -- April 6, 1924
Four Douglas World Cruiser biplanes (two-man open cockpit wood and fabric airplanes)
Seattle pilot Major Frederick Martin and flight mechanic Sergeant Alva Harvey
Boston pilot First Lieutenant Leigh P. Wade and Sergeant Henry H. Ogden
New Orleans pilot Lieutenant Erik Nelson and Lieutenant Jack Harding
Chicago (pilot Lieutenant Lowell Smith and First Lieutenant Leslie Arnold
departed from Sand Point Field on Lake Washington with pontoons strapped on
after two weeks of preparation they headed to Alaska
before they turned westward to Asia and on around the world

AROUND THE WORLD FLIGHT CONTINUES

Eight pilots flying four Douglas World Cruiser biplanes encountered the worst flying weather
excessive head winds, rain, ice, snow and fog
Attu Island in the Aleutians was reached -- May 9, 1924
(*Seattle* piloted by Major F.L. Martin and Sergeant Alva L. Harvey had crashed into a mountain
while flying through fog [April 30] neither were uninjured and they walked to safety)
Remaining three planes, *Boston*, *New Orleans* and *Chicago* continued crossing the Pacific Ocean
from Attu to Kagoshima, Japan
they changed back and forth from pontoons to wheels
as determined by the weather and whether they were to be flying over land or water

¹¹³ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

SEATTLE BECOMES THE NATION'S PREMIER SILK PORT

Closer to Japan by one or two days' sailing time than the other major U.S. ports,
Seattle welcomed five times as much silk as San Francisco -- 1924
Customs records indicate that raw silk was often the Seattle's principal import
Seattle Daily News and *Daily Journal of Commerce* featured the arrival of silk shipments
in their marine activities sections always featuring prominent headlines
and often with pictures of ships and captains printed

STEAMSHIP COMPANIES ALSO COMPETED TO SET RECORDS

Keenly competition among shipping companies drove them to set records
both for size and speed of shipments
yearly, monthly, and sometimes daily records were shattered
Average time required for Admiral Oriental ships to cross the Pacific from Yokohama
was nine days, twenty hours, and seven minutes -- 1924
some eighty-three minutes faster than the average time required [in 1923]
then the company's steamship *President Grant* made the passage
in eight days, twenty-three hours, and ten minutes when it arrived in Seattle -- May 10, 1924

ALEXANDER SCOTT BULLITT BECOME ACTIVE IN THE DEMOCRATIC PARTY

Scott Bullitt was shocked to discover the Democratic Party had no headquarters in Washington State
so he created one
He established himself as an advocate of modifying Prohibition laws
to allow for consumption of beer and lighter wines
He went on record as being pro-labor
He attended the Democratic National Convention -- 1924

GREAT NORTHERN RAILWAY GENERATES ITS OWN PUBLICITY

Great Northern Railway cashed in on its advantages in being able to ship silk faster than any company
but to maintain this advantage drama was as much a requirement as speed
GN assembled record length trains of everything from silk and apples to Buick automobiles
one train of 125 cars contained enough shingles to roof every house in a town of 10,000 people
this was the largest shingle shipment ever transported across the continent
crossing from Seattle to St. Paul, Minnesota
newspaper accounts and newsreels drew attention to the train's length and cargo -- July 1924

RAILROAD BALLYHOO GENERATES A COMPETITION OF ITS OWN

When a particularly valuable silk cargo arrived in Seattle
on a steamship that had made exceptionally fast time from Yokohama
Great Northern Railway made efforts to publicize the event -- early August 1924
however, their effort resulted in a second-best showing
For some time the Great Northern had moved silk between Seattle and St. Paul
on a fifty-six hour schedule. In July 1924 the
rival Northern Pacific Railway made the same run in forty-four hours and eighteen minutes,

bettering the Great Northern's record by almost an hour
accepting the challenge, the Great Northern set out to break the new record
with a twelve-car silk train leaving Seattle -- August 2, 1924

GREAT NORTHERN RAILWAY ATTEMPTS TO SET A NEW SPEED RECORD

After leaving Seattle, Great Northern's Silk Train made good time on the Western Division
but then problems plagued the train
Car 2063 entered Williston, North Dakota, with a rough journal (a "hotbox")
this was cooled with water to prevent overheating until the train reached Minot, North Dakota
Nineteen precious minutes were lost in replacing a bushing ("brassing the box")
only a short time later same journal box caused a twelve-minute delay
However the longest and most difficult problem occurred at Davenport, North Dakota
where the rails of the Great Northern and Northern Pacific crossed at the "interlocking plant"
When a special NP train passed through earlier in the day, the crew neglected to switch back the track
Great Northern's silk train arrived -- Sunday night, August 3, 1924
it took the crew twenty-eight minutes to locate the towerman
whose job it was to change the tracks
outside Davenport there was more trouble with hotboxes
Although the GN managed to better the NP's time by sixty-three minutes
this difference was not enough to discourage the NP from trying to re-set their own record

GREAT NORTHERN MAKES A SECOND ATTEMPT TO IMPROVE THE SPEED RECORD

Extensive preparations began immediately to improve the GN record
dramatic moment came when a large shipment of raw silk reached Seattle -- August 13, 1924
some 400 thousand pounds from the steamer *Iyo Maru* filled ten baggage cars
plus nearly 326 thousand pounds from the *President McKinley* filled nine more
Special port crews moved the silk to the dock, warehouse, and waiting train in three hours
working at top speed, they loaded each car in just eight minutes
Only the most experienced crew members were selected to crew the trains
engineers were allowed to choose their favorite locomotives
from those known to be most reliable and capable of sustaining high speeds
without requiring frequent water stops
Two GN trains left Seattle within hours of each other, making record times
three hour and eighteen minutes between Wenatchee and Hillyard, Washington
eight hours and nine minutes from Cut Bank, Montana to Williston, North Dakota
on this crossing the trains averaged more than fifty-three miles an hour
no one made any mistakes
at division points, crews inspected air hoses and steam lines, checked brakes,
lubricated journals, and switched locomotives in four minutes or less
not so much as a single hotbox delayed the trains
even the weather cooperated
no mountain winds slowed or immobilized the trains by blowing sand
from under the locomotives' drive wheels
Lead ten-car silk train reached St. Paul in thirty-nine hours twenty-eight minutes

and arrived in Jersey City seventy-five hours fifteen minutes after leaving Seattle
Second nine-car silk train made even better time
thirty-eight hours fifty minutes to St. Paul established a record for the route -- August 14, 1924
this Great Northern record was never broken by another railroad
nine minutes were spent in St. Paul switching to the Burlington road
and nine hours nineteen minutes from St. Paul to Chicago
where it was switched to the Pennsylvania Railroad track
silk reached Jersey City just seventy-three hours and twenty-five minutes after leaving Seattle
silk had left Yokohama a record twelve days, fourteen hours, and thirty-six minutes earlier
bettering the old record of thirteen days, three hours, and eight minutes
Great Northern touted its achievement, according to a company news release, as “a big victory”
no one bothered to explain how
But silk trains were more than publicity stunts
pound for pound silk earned more revenue for the Great Northern Railway than any other product
eight times as much per train mile as its crack passenger train, the *Oriental Limited*

SEATTLE RECEIVES THE MOST VALUABLE CARGO OF ANY U.S. PORT

Admiral Oriental’s steamship *President Jefferson* docked at Seattle -- September 7, 1924
with a cargo valued at more than \$16 million
the single most valuable shipment of silk ever received at a U.S. port

SILK TRAIN REPORTS HAVE BEEN LOST

It is now impossible to determine exactly how many silk trains
ran on the Great Northern Railway’s Seattle-St. Paul route
but the numbers are impressive, especially for the 1920s
but Great Northern ran thirty-four silk trains, eight of them in one month -- 1924
three trains totaling thirty-six cars arrived in St. Paul
within hours of each other -- September 19, 1924

UNION PACIFIC RAILROAD ATTEMPTS TO SET A SPEED RECORD OF ITS OWN

Great Northern Railway made many fast runs across the continent
Japan’s Nippon Yusen Kaisha (NYK) steamship line constantly urged more speed
who noted challenges from competing rail companies
Union Pacific Railroad attempted to beat Great Northern’s record -- September 1824
Northern Pacific Railway also competed fiercely for the silk business
NYK officials off one railroad against another and pressed for ever faster times

FLIGHT AROUND THE WORLD IS COMPLETED

After leaving Kagoshima, Japan three biplanes to Calcutta, India [June 4-30, 1924]
next was the leg from Calcutta to Constantinople, Turkey [July 1-11, 1924]
then from Constantinople to London, England [July 12-16, 1924]
Atlantic Ocean was crossed from London to Boston, Massachusetts, [July 17 to September 7]
all three biplanes were headed for Iceland from the British Isles [August 3]
when the Liberty engine in the *Boston* lost all oil pressure

biplane was forced to land at sea
unfortunately, high waves damaged the *Boston* excessively and it had to be sunk
New Orleans and the *Chicago* continued westward and arrived in Nova Scotia
they were joined for the remainder of the flight by a test aircraft christened *Boston II*
Last portion of the adventure was across the United States [September 8-28, 1924]
seventeen replacement engines later, two of the Douglas World Cruiser biplanes,
New Orleans and *Chicago* completed their 26,345-mile journey 175 days after takeoff
when they returned to Sand Point Field on Lake Washington -- September 28, 1924
they were greeted by 50,000 wildly applauding spectators
actual flying time was fifteen days, three hours, seven minutes (371 hours)
at an average speed of 72.5 miles per hour
stopovers for bad weather or repairs lasted several days
Two of the four Douglas World Cruiser biplanes are preserved in museums
Chicago is part of the collection of the Smithsonian Institution National Air and Space Museum
New Orleans is in the collection of the Los Angeles County Museum of Natural History
wreckage of the *Seattle* was recovered and is on display in the Alaska Aviation Heritage Museum
both the *Boston* and *Boston II* were destroyed

SKAGIT RIVER HYDROELECTRIC PROJECT SERVES SEATTLE AND ENVIRONS

Skagit River Hydroelectric Project is a series of dams with hydroelectric power-generating stations
on the Skagit River in northern Washington State
This project is owned and operated by Seattle City Light to provide electric power
for the City of Seattle and surrounding communities
Three dams were built to provide approximately twenty-five percent Seattle's electric power needs
Gorge Dam [1924], Diablo Dam [1936], Ruby Dam -- which was renamed Ross Dam [1940]
Construction of Gorge Dam by Seattle City Light began [1921]
electric power was delivered at a cost of \$13 million to Seattle -- 1924
(Original Gorge Dam was replaced by a new 300-foot Gorge Creek High Dam completed [1961])

EZRA MEEKER RETRACED THE OREGON TRAIL ONE MORE TIME

Ezra Meeker once again brought publicity to the Oregon Trail -- 1924
at age ninety-four Meeker flew over the trail in an open cockpit army airplane
his flight started in Vancouver, Washington and ended at Dayton, Ohio
where he attended the air races at McCook Field
(a predecessor of Wright Patterson Air Force Base)
Meeker's first 2,000-mile crossing of the continent in a covered wagon
had required five months [1852]
Rather than his usual pace of oxen speed, Meeker flew the route at 100 miles per hour
2,560-mile flight took twenty-three hours and thirty minutes
with thirteen hours and thirty minutes spent over the Oregon Trail

VOTERS FACE THE ISSUE OF PUBLIC VS. PRIVATE UTILITY COMPANIES

Big private utilities operated at a huge profit
there was no government control

rural areas were not served
Cities of Tacoma and Seattle established their own companies
forced rate reductions of private utilities through competition
Those who saw electricity as a financial opportunity and those who saw it as a public service
engaged in a bitter, intense hard fought campaign -- 1924
Legislators had referred a bill to the voters that proposed punitive taxes be levied
against any municipal light system that sold power outside its city limits
State Representative Homer T. Bone had successfully sponsored an initiative to the people
to allow for the expansion of public utility companies into the suburbs and rural area
both sides distributed thousands of pieces of literature
they engaged the services of every well-known advocate they could find
Homer T. Bone charged that the private utilities spent the unheard-of sum of a million dollars
to defeat his initiative and get the referendum passed
Bone collected enough signatures to place his counterproposal on the ballot

ELECTION RESULTS OF 1924 ARE EVEN MORE CONSERVATIVE

Farmer-Labor Progressives bickered among themselves
many one-time Farmer-Laborites supported Robert M. La Follette, the Wisconsin senator
who ran for president as a Progressive -- 1924
La Follette campaign called for farm relief measures,
public ownership of railroads and waterpower,
and legal recognition of collective bargaining for labor unions
La Follette insurgency threw a genuine scare into the two major parties
in Washington he finished second as he bested hapless Democrats by nearly a 4-to-1 margin,
La Follette's campaign represented the last hurrah of left-wing insurgency of the 1920s
President Calvin Coolidge was returned to office -- November 4, 1924
(Vice-President Coolidge had assumed the office of the presidency the year before
after President Warren G. Harding died
Coolidge had had little time to enjoy his new job as President
before he had to begin campaigning to keep the position)
initially, winning the election seemed a daunting task for Coolidge -- he was a man of few words
but Coolidge was an astute politician who before he became vice president [1920]
had served as an elected official for more than two decades
more importantly, he remained extremely popular with the American public
Coolidge epitomized the honest, hard-working, and business-minded attitude
that promised to streamline government
and rid Washington of the corruption and scandals
found in the Harding administration
Due to poor health Governor Louis F. Hart did not run for reelection
progressive Shelton lumberman and state Speaker of the House of Representative Mark Reed
was the most logical successor to Hart, but he chose not to enter the race
Washington voters elected mean-spirited anti-labor timber baron and former mayor of Everett
Roland H. Hartley to two terms as governor [1925 to 1933]
he had been a leading opponent of the IWW during the Everett Massacre [November 5, 1916]

he believed labor unions were trying to destroy business in America
he fought unions and their influence and provided a rancorous political tone
Roland H. Hartley and Mark Reed clashed frequently
Farmer-Labor infighting together with growing prosperity in the state's urban areas
reduced the political party to insignificance in Washington State
State Representative Homer T. Bone was re-elected -- but this time as a Progressive
Washington State voters were faced with two ballot items addressing utility companies:
•legislators had referred to them for their consideration a proposal to levy punitive taxes
against any municipal light system that sold power outside its city limits
•State Representative Homer T. Bone's Initiative 52 to the people
to allow for the expansion of public utility companies into the suburbs and rural area
voters rejected both measures
yet the battle between the private power interests and the public power interests continued
U.S. Representative Samuel B. Hill, Democrat, retained his seat in congress

DEMOCRATS REMAIN OUT OF POWER

Region's Democratic Party, especially in Washington, remained in a woebegone condition
weak and generally ineffectual at the polls it was badly divided
as a result of personality conflicts
and the inability of anyone to bring discipline
to the motley assortment of disgruntled agrarians, trade unionists, onetime Populists,
Nonpartisan Leaguers, and all-around political cranks that drifted into its ranks
with a history of defeat at the polls, the Democratic Party could not afford to be too choosy
Republicans dominated government not only in the Pacific Northwest during the 1920s
but also in many of the states outside the South

GOVERNOR ROLAND H. HARTLEY ELECTION ASSUMES OFFICE

Republican Governor Hartley maintained he stood on the side of the taxpayers against the **"wasters"**
he convinced voters he would fight big interests, big spenders, and big bosses
and look out for the common people
he stated (very often) the government was sliding toward complete paternalism
Governor Hartley was elected Washington state Governor by a large majority
and served as governor of Washington for two terms -- 1925-[1933]
Governor Hartley believed the post-World War government agencies and regulations
established by President Theodore Roosevelt had gotten out of control
he set out to reduce the number of governmental agencies and regulations
that had been imposed on Washington business
An arch-conservative Governor Hartley tried to bring state government under his control
to further reduce taxes Hartley proposed to cut back on many governmental services:
•he cut programs he considered to be too expensive;
•he said government aid interfered with incentives to work hard;
•he opposed increased funding for schools, libraries, and parks;
•he opposed to appropriations for reclamation projects;
•he disapproved of child labor laws and their protections

However, the governor saved his most excessive wrath to be vented at the extraordinary costs of the yet-to-be-completed Legislative Building as if the \$6,791,595.88 (1928 dollars) was not excessive the furnishing were outrageous thirteen oak and leather chairs for the Reception Room of the Secretary of State thirty five-foot oak roll- top desks and eleven six-foot roll-top desks were ordered work rooms, stenographers' rooms, committee rooms were beautifully furnished Senate and House accountants, assistants, clerks and secretaries were provided for Auditor, Treasurer, Secretary of State and even the Governor's offices were lavishly fitted five identical chairs embossed with the seal of the State of Washington were ordered for the Lieutenant Governor, Secretary of State, State Auditor, State Treasurer, and Speaker of the House of Representatives the Governor's office received a larger and more ornate sixth chair Governor's Conference Room featured a handsome mahogany and walnut conference table, chairs and matching bookcases but most outrageous of all in the eyes of the governor were the \$47.50 cuspidors (spittoons) no one objected to the spittoons themselves -- it was the price that was shocking Governor Hartley persuaded the legislature not to ratify the Federal Child Labor Amendment which created child labor laws to help children work in a safer environment and under safer conditions Hartley maintained it was another attempt by the government to restrict private business freedoms Governor Hartley bickered constantly with the Commissioner of Public Lands over policy and management Roland Hartley was, in fact, shrewd, and heavy-handed he faced strong criticism by both political parties and almost came into armed conflict with the legislature he declared education was costing too much and recommended cutting appropriations

McNEIL ISLAND BECOME FEDERAL PROPERTY

Federal government began a program to purchase all the privately owned land on the island -- 1925 and move the civilians off the island -- (this was accomplished [1936]) McNeil Island became the largest prison reservation in the United States¹¹⁴

BOEING RECEIVES A CONTRACT TO CARRY AIR MAIL

Congress gave up on the Post Office flying the mail -- 1925 thirty-one of the forty pilots hired by the Post Office had been killed Federal legislation passed to contract private firms instead -- commercial aviation became viable Eddie Hubbard convinced Boeing to get into the Air Mail business in addition to building the planes Air Mail contracts made passenger airplanes possible mail revenues of Boeing Air Transport underwrote passenger service and the development of navigational aids and airports

¹¹⁴ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

CHICAGO, MILWAUKEE, AND ST. PAUL RAILROAD GOES BROKE

Milwaukee Road's Board of Directors' decision to expand westward created a huge financial burden
estimates of \$45 million [1901] proved to be extremely optimistic
actual construction costs were many times more than expected
and operating costs on the mountain grades were out of control
Milwaukee Road decided to electrify about 600 miles of the toughest mountain routes
technological marvels that they were, the electrified lines were never successful
they became a major contributor to the financial downfall of the railroad
government takeover of the railroads during the World War did not help matters
and completion of the Panama Canal siphoned anticipated traffic from the line
Chicago, Milwaukee, and St. Paul Railroad was the first transcontinental line to disappear
after suffering a series of financial setbacks
Milwaukee Road passed into the hands of a receiver -- March 25, 1925
this was largest such case in United States History up to that time

CONSTRUCTION BEGINS ON A SECOND GREAT NORTHERN RAILWAY CASCADE TUNNEL

(First Cascade Tunnel was a 2.6-mile-long single track tunnel through the Cascade Mountains
construction at Stevens Pass started [August 20, 1897] was completed [December 20, 1900]
this tunnel was built to avoid problems caused by heavy winter snowfalls on the original line
but because of the length of the tunnel steam trains were not able to pass through the tunnel
without using up all of the air supply
steep grade to the summit resulted in great amounts of smoke from the locomotives
this tunnel was electrified which eliminated the fume problem
two electric switch stations were developed to replace the steam or coal engines
with an electric engine [July 10, 1909])
after the Wellington Disaster avalanche killed ninety-nine people [March 1, 1910]
Great Northern Railway decided to reroute through a new tunnel
surveys began on a new 7.79-mile long replacement tunnel between Berne and Scenic -- 1925
route over Stevens Pass would be shortened by 8.9 miles
seven miles of snowsheds would be eliminated

SAUL HAAS SEARCHES FOR HIS WAY -- AND DEVELOPS A POLITICAL VOICE

Saul Haas was born in New York City's Lower East Side [June 12, 1896],
to Romanian-Jewish immigrants Albert and Lena Haas
he was raised in a Bronx, New York tenement
After high school graduation [1912] Haas left home and became a hobo riding the rails with a buddy
he ended his travels in Lewiston, Idaho
there he briefly attended Northern Idaho College of Education (Lewis-Clark State College)
next he taught school -- also briefly
Saul Haas became a reporter for the *The Portland (Oregon) News* [1918]
he married Jesse Nores [1919] and the couple briefly tried publishing a paper in Port Angeles
Saul returned to New York with Jesse and took work with the Hearst International News Service
he transferred back to Seattle as manager of the local Hearst news agency [1921]
Saul Haas soon once again changed jobs when he left the Hearst organization

to join the Seattle Labor Council's struggling *Seattle Union Record* --1925

Haas joined with Harry Ault to buy the paper with Ault as publisher

Saul Haas became the editor and a minority stockholder

Seattle Union Record's editorial policy blasted the mainstream press when they charged: **“The news itself is often distorted and it is by no means unusual that important developments are entirely suppressed. Misinformation has become a science on many of our metropolitan dailies.”**

Union Record's motto was **“A newspaper for thinking people”**

but apparently there were not enough thinking people -- even in Seattle

Seattle Union Record published its last issue [February 18, 1928]

GREAT NORTHERN RAILWAY ATTEMPTS TO SET AN ENDURANCE RECORD

Locomotives pulling Silk Trains between Seattle and St. Paul, Minnesota

were changed at division points along with the crews on the average of every 150-200 miles

to emphasize the superiority of freight service that the Great Northern Railway offered

it was decided to attempt an endurance record across the continent

Great Northern Railway sent Engine Number 2517, *Marathon*, on a well-publicized endurance run reported to be the longest continuous run ever made by a single locomotive

this effort was made to impress Japanese shippers,

remind its competitors of its commanding position in the business of transporting raw silk,

and convince the railroading public of its reliability in handling passengers and freight

Engine Number 2517 was a sleek, fast, and powerful mountain-type, P-2 oil-burning engine

Marathon was one of twenty-eight Baldwin-built 4-8-2 locomotives

(four leading wheels, eight driving wheels, and two trailing wheels)

that had been put into service beginning in [1923] as part of a major equipment upgrade

P-2 engines were the ultimate locomotive and were remarkably reliable

they were the heaviest unit ever built, engine and tender weighed 617,000 pounds,

reaching almost one hundred feet from pilot to end of tender

P-2s carried 5,000 pounds of fuel oil and 12,000 gallons of water

four driver wheels six-feet in diameter made this the fastest and most efficient

steam locomotives ever built for transcontinental service

P-2s were used on every Great Northern “name” train

the *Oriental Limited*, the *Fast Mail*, the *Glacier Park Limited*, and the *Empire Builder*

(until they were scrapped in the [1950s])

they set many records as they were capable of sustaining high speeds

Engine Number 2517 was coupled to eighteen cars of silk valued at more than \$5 million

this was “the largest individual silk shipment ever transported in the Northwest”

extreme value of the cargo heightened the drama for the endurance run

Engine Number 2517 left Seattle -- 4:30 P.M., September 25, 1925

run to St. Paul, Minnesota was made in five hours less time

than the schedule of the *Oriental Limited* passenger train

For the return trip from St. Paul to Seattle, Number 2517 was coupled to engine Number 27

which was the fastest long-distance mail train in the world

departure from St. Paul was delayed by twenty minutes

because the westbound mail from Chicago arrived late
Number 2517 made up the time and arrived back in Seattle on schedule
average speed for the run was forty-five-miles-per-hour including stops, inspections
and twenty-four crew changes
this engine had traveled 3,578 round-trip miles in just under 100 hours
with stops only to change crews and take on fuel oil and water
between Cut Bank, Montana and Williston, North Dakota and over the Breckenridge
and Willmar Divisions, the silk train had averaged more than fifty-mile-per-hour
(this was faster than diesel-powered trains decades later)
this singular feat were never before accomplished by any American railroad
and perhaps by no other railroad in the world
it was all the more remarkable because Number 2517 was a stock engine
with no special modifications for the trip

In celebration (and to keep the memory of the event alive) Great Northern Railway ticket offices
displayed large replicas of Number 2517, *Marathon*, in Chicago and other major cities

YET ANOTHER RECORD IS SHATTERED ON THE SEATTLE DOCKS

Osaka Shosen Kaisha (O.S.K.) liner *Arabia Maru* delivered the largest silk shipment
ever to arrive in Seattle -- October 1925
10,124 bales of raw silk and sixty tons of silk goods

REPUBLICANS CONTINUE TO DOMINATE STATE POLITICS

Republican dominance of Pacific Northwest went all but unchallenged
only notable exceptions were Senator Clarence Dill and Congressman Sam B. Hill of Washington

FOUR GREAT NORTHERN RAILWAY'S SILK TRAINS CROSS THE CONTINENT IN TANDEM

Within months of the remarkable performance by locomotive Number 2517, *Marathon*
Great Northern silk trains made another remarkable run -- January 1926
four trains consisting of forty-three cars of silk valued at \$11,280,000 left Seattle
not ten hours separated the trains when they moved through Whitefish, Montana
as they sped along to St. Paul, Minnesota

BERTHA K. LANDES BECOMES THE FIRST BIG CITY MAYOR IN AMERICA

Many women in the 1920s saw social reform as "women's work,"
something like "municipal housekeeping"
Bertha K. Landes of Seattle was one of these
(Landes first ran for the Seattle City Council [1922] and became Council president
she briefly served as acting mayor when Mayor Edwin J. "Doc" Brown
went to New York to attend the Democratic National Convention [1924]
acting-Mayor Bertha Landes ordered Police Chief William Severyns
to clean up corruption in the police department
when Severyns procrastinated, acting-Mayor Landis issued General Order Number One
which proclaimed her to be the head of the police department
Mayor Brown sped home by train to overrule Landis

members of a Grand Jury investigated and called for Brown's impeachment
Voters turned out in record numbers of the Seattle mayor's race -- March 1926
this was attributed to the work of various women's clubs
Landes, darling of the reformers, ran on a platform of strict law enforcement
Bertha Landes was elected Seattle's first woman mayor
and first woman mayor of an American major city
a fifty-eight year old mother and grandmother, she began an energetic "sweep"
of Seattle's corrupt police force, boot-legging operations
and dens of prostitution and gambling
Once elected Mayor in her own right, Bertha Landis did her best to clean up corruption
she called on citizens to report bootleggers
she offered to pay \$1 a year to those who reported the license numbers of reckless drivers
her detractors accused her of attempting to organize "government by snitch"

TACOMA CITY LIGHT CONSTRUCTS LAKE CUSHMAN DAM NUMBER ONE

Prior to the construction of the Cushman Hydroelectric Project,
Skokomish River, named for the Native Americans who lived along it,
was once Washington State's largest and most productive salmon-producing river
Cushman Dam Number 1 was built using a "concrete arch" and "gravity and embankment" design
this dam consists of ninety thousand cubic yards of concrete
with a top width of eight feet and a base width of fifty feet
standing 275 feet high and 1,111 feet long
it is capable of generating 50,000 horsepower of energy
city owned Tacoma City Light's Cushman Dam Number One was activated -- March 23, 1926
with the push of a button by President Calvin Coolidge in a ceremony at the White House
Tacoma City Light began to successfully compete with privately owned electric companies
Lake Cushman was named in honor of Orrington Cushman who served as interpreter
for Governor Isaac Stevens during the Treaty of Point Elliott negotiations
with Puget Sound Indians [1854]
4,010-acre Lake Cushman with twenty-three miles of shoreline sits behind the dam,
on the north fork of the Skokomish River in Mason County, Washington
its design diverts water through a pipe connecting the reservoir to a powerhouse on Hood Canal
hydroelectric power travels on a forty-mile transmission line,
which includes a suspension across the Tacoma Narrows strait in Puget Sound,
spanning 6,244 feet of water
(A second, smaller dam, Cushman Dam Number Two was completed [December 1930])

SAM HILL TURNED HIS MANSION ON THE COLUMBIA RIVER INTO A MUSEUM

Businessman Sam Hill renamed his mansion on the Columbia River the Maryhill Museum of Art
it was dedicated by his friend Queen Marie of Romania -- 1926
(however, the building was not finished until after Hill's death [1931]
this museum finally opened [May 13, 1940])
many of Queen Marie's personal effects such as her splendid clothing, furniture
and other possessions, including her crown, can be seen at Maryhill Museum

EZRA MEEKER CONTINUES HIS LONG AND ACTIVE LIFE

Meeker appeared with the J. C. Miller Wild West Shows -- the largest Wild West show of the era where he demonstrated the proper way to drive an ox team -- [1925] and 1926

Meeker was heard on the new medium of radio -- April 1926

he later wrote, **“They gave me the title of ‘the world's oldest broadcaster.’ I was happy that the privilege had come to me of using this new and wondrous invention to spread farther the story of the pioneers.”**¹¹⁵

Meeker while staying in New York, founded and became president of the Oregon Trail Memorial Association

he once again went to Washington, D.C., to lobby Congress to create a special Oregon Trail coin this 50-cent commemorative coin sold for a dollar, with the profit going toward paying for more trail monuments

Congress passed the bill [May 26, 1926] and President Calvin Coolidge signed it into law

CONGRESS ISSUES A REPORT ON AMERICAN WATER RESOURCES

U.S. Senator Wesley “Yakima” Jones adroitly maneuvered into a river and harbor bill authorization for the Army Corps of Engineers and the Federal Power Commission to conduct a nationwide survey of the irrigation, navigation, flood control, and power potential of all major United States rivers

(Congress authorized the U.S. Army Corps of Engineers and the Federal Power Commission to jointly: **“. . .prepare and submit to Congress an estimate of the cost of making such examinations, surveys or other investigations. . . of those navigable streams of the United States and their tributaries . . . with a view to the formulation of general plans for the most effective improvement of such streams for the purposes of navigation and prosecution of such improvement in combination with the most efficient development of the potential water power, the control of floods and the needs of irrigation.”** [1925])

As the time neared for the publication of the highly secret document, settlers of the Columbia Basin nearly perished with suspense

Inches thick, a 1,845-page long report Entitled *Columbia River and Minor Tributaries* was printed as House Document 308 (it became known as the “308 Report” -- April 12, 1926 it recommended many things -- but not the Pend Oreille gravity system

engineers said, would cost more even than a dam at Grand Coulee 550 feet high and 4300 feet long, equipped with twelve of the biggest pumps ever conceived to lift water the remaining 280 feet to the canyon rim

furthermore, the report said the Grand Coulee system could be largely paid for by selling surplus power -- not possible with the gravity system

finally Grand Coulee Dam would cause no interstate bickering with Idaho and Montana

In essence, the 308 Report noted the additional possibility of hydroelectric power generation it supported a plan for building eight dams on the Columbia River

¹¹⁵ Ezra Meeker *Covered Wagon Centennial and Ox Team Days, Oregon Trail Memorial Edition*, edited by Howard R. Driggs, P.286.

including hydroelectric dams at Grand Coulee and Bonneville
it also proposed storage projects farther upstream
(at the site of present-day Hungry Horse Dam on the South Fork of the Flathead River
and raising the water levels in both Pend Oreille and Flathead lakes)

two new factors were considered in the “308 Report”:

- method of moving power to market
- and the make-up of the market itself

this and subsequent “308 Reports” were the basic planning documents
for the development of navigation, flood control, irrigation and hydropower
in the Columbia River Basin

Secretary of War provided cost estimates and recommended surveys of potential dam sites -- 1926
(these were authorized the following year in the River and Harbor Act of [1927])

Two United States Senators from Washington, Wesley Jones and newly-elected Clarence Dill,
strongly supported the campaign for a dam on the Columbia River

Several 308 surveys on the Columbia continued from 1926 until [1931]

McNEIL ISLAND FEDERAL PENITENTIARY SEES IMPROVEMENTS¹¹⁶

Old prison hospital (built in [1906]) was torn down and rebuilt --1926

Although they had been supplementing their food supply with farming since the early days,

U.S. Attorney General authorized the development of a 360-acre self-contained farm --1926

ALEXANDER SCOTT BULLITT RUNS FOR THE U.S. SENATE

Scott Bullitt entered the election race as a Socialist

against longtime Republican incumbent Wesley Jones

Bullitt’s campaign was funded to a large degree by his wife Dorothy Stimson Bullett
and her lumber family’s money

Bullitt faced two serious handicaps:

- he was an outsider only recently active in Washington politics;
- he was wealthy and lived in isolation from the common people

Scott Bullitt received 46.52 per cent of the vote -- a resounding defeat -- 1926

however, he had established a network within the Democratic Party
that would become increasingly active

MARK REED EXPANDS HIS LUMBER EMPIRE

Rather than run for governor of the state, the progressive president of Simpson Logging Company
joined Edward M. Mills and Isadore Zellerbach to open Rainier Pulp and Paper Company -- 1926
to make better use of waste wood that was otherwise just burned
this company was headquartered in San Francisco

Construction was begun on the Rainier Pulp and Paper Company mill in Shelton

(when opened in 1927 the mill utilized the area’s plentiful western hemlock tree species
for the production of a superior grade of bleached paper pulp)

Shelton, Washington became the hub for progress in Mason County

¹¹⁶ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

(Northern Pacific Railway extended its branch line to Shelton [1926]
regular passenger train service came to the city)
(lumber was big business in Mason County [by 1930]
new mills reversed a loss of population
number of residents in Mason County doubled to more than 10,000
Shelton's population tripled)

BOEING ENTERS THE MAIL DELIVERY BUSINESS FOR THE POST OFFICE

Postal Department decided to try air mail -- 1926
bids from companies were accepted to fly mail from New York to Chicago
and from Chicago to San Francisco
William Boeing felt new improved MB-3A called the 40-A could carry mail
joined with another pilot, Eddie Hubbard, to form Boeing Air Transport Co.
to deliver the mail

PEARL ANDERSON (WANAMAKER) RUNS FOR THE LEGISLATURE¹¹⁷

While Pearl Anderson served as the Island County superintendent of schools
she ran and lost a race for the State House of Representatives --1926
Pearl Anderson's county superintendent job took her to Island county's rural schools
many were accessible only by ferry or small boat
she shared many hours on these vessels with quiet, shy County Engineer Lemuel A. Wanamaker
they were married [1927] but her husband, "Lem," made her promise
she would quit teaching and politics and be a homemaker
she agreed take on the clubby civic duties expected of married women of the time

GOVERNOR HARTLEY-UNIVERSITY OF WASHINGTON PRESIDENT SUZZALO FEUD

Dr. Henry Suzzalo had been President of the University since [1915]
he provided strong leadership and doubled the student population
Dr. Suzzalo had taken an active part in war-time activities
he established cooperation with various industries in the state
for example the college-industry collaboration was the College of Fisheries
was the first of its kind in the nation
Conservative Governor Roland Hartley maintained a months-long quarrel
with liberal University of Washington President Henry Suzzalo -- 1926
this feud stemmed from problems concerning "The War to End All Wars"
Suzzalo, of Jugo-Slav ancestry, was serving on the National Defense Council
he voted in favor of the eight-hour work day
Lumbermen, including lumber baron Hartley, were strongly opposed
Governor Hartley struck the fatal blow to University president Suzzalo -- October 26, 1926
University of Washington Board of Regents demanded Dr. Suzzalo resign
because of his involvement in politics
Dr. Suzzalo resigned

¹¹⁷ Michael Hood, HistoryLink.org, Essay 9171, September 26, 2009.

President of the Washington Federation of Labor accused the governor of extreme prejudice and of promoting his own personal and political agenda
Governor Hartley was threatened by a recall campaign supported by many groups and individuals after big cuts to University of Washington appropriation and the firing of University President Henry Suzzalo
Seattle Times favored the movement to recall or impeach the governor
Governor Hartley, in his own defense, stated he had nothing to do with Dr. Suzzalo's resignation
a spokesman for the board of regents explained the dismissal was initiated because of the existing discord between the president and some faculty members
Governor Hartley was proclaimed by some to be
“the most hated man in the state of Washington”¹¹⁸
Recall effort failed and Governor Hartley was reelected governor
(he remains the only governor in state history to face such an attack)

HENRY J. KAISER IS ONE OF AMERICA'S MOST REMARKABLE INDUSTRIALISTS

Kaiser was born in Sprout Brook, New York [May 9, 1882]
beginning at a young age, he worked as an apprentice photographer
he was running the company by the age of twenty
Kaiser used his earnings to move to Spokane [1906]
he took over a bankrupt road construction company [1914]
and started Kaiser Paving Company
he bid for and won contracts to build highways in Washington, California, and Canada
his was one of the first companies to use heavy construction machinery
Kaiser Paving Company expanded significantly -- 1927
when it received a \$20-million contract to build roads in Cuba
But Henry J. Kaiser was just beginning

DAVE BECK'S RISE IN THE TEAMSTERS UNION WAS RAPID

After the Great War had ended, Beck returned to Seattle and his job as a laundry truck driver
He became an organizer with the Teamsters Union
where he displayed leadership ability far beyond his education
he also was not timid about using persuasive tactics which were supported by goon squads
threats, beatings, car sideswipings, and window smashings all were employed
his subsequent rise in the Teamsters was rapid;
•Dave Beck was elected to the executive board of Local 566 [1920]
•he became president of Joint Council 28 which covered Seattle [1923]
•he was Secretary Treasurer of the Laundry Drivers Local 566 [1924]
•he was elected President of Seattle Teamster Local 566 -- 1927
he was also hired by the International Teamsters Union as a full-time organizer
responsible for the whole Pacific coast and British Columbia [1927]
Power of the Teamsters Union is its unique ability to support other striking unions

¹¹⁸ Cecil Dryden, *History of Washington*. P.271.

if the Teamsters did cross the picket line no delivers could be made and no business conducted
Teamsters targeted for attack any business that fought Dave Beck and his union
it became unhealthy to drive anything for pay if you did not wear a Teamster button
Teamster slogan was “Vote no and go to the hospital.”

GREAT NORTHERN RAILWAY IMPROVES SERVICE THROUGH THE CASCADE TUNNEL

Electric engines began operation from the town of Skykomish eastward -- March 5, 1927
(Glory days of Skykonish ended when a ventilation system was installed in the Cascade Tunnel
to permit the operation of diesel engines through the tunnel
last electric engine left Skykomish [July 31, 1956]
last passenger service ended in [May 1971])
business district of Skykomish was nearly destroyed by a fire [December 1970]

CONSTRUCTION OF WASHINGTON’S LEGISLATIVE CAPITOL BUILDING IS COMPLETED

Washington’s Legislative Building was completed -- 1928

to serve as both a working governmental center
and as a symbol of Washington’s free and democratic government

This building is the dominant feature of the capitol grounds, with its 287-foot-high dome
this is one foot shorter than the United States capitol building in Washington, D.C.
it features the largest quantity of marble of any state capitol:

- Senate Chamber displays *Formosa* marble from Germany;
- House of Representatives Chamber exhibits *Escalette* marble from France;
- State Reception Room presents *Bresche* marble from Italy;
- Main Corridors uses *Gray* marble from Alaska

two features commemorate Washington being the forty-second state in the Union
forty-two granite steps lead up to the building’s North entrance

Legislative Building currently possesses one of five forty-two star flags

(these were never official flags because Idaho became a state shortly after their release)

all lamps and Roman fire pots in the rotunda were made by Louis Comfort Tiffany

son of Tiffany and Company founder Charles Lewis Tiffany

this is the largest collection of Tiffany bronze in the world

and Charles Tiffany’s last large commission before his death [January 17, 1933]

suspended 175 feet above the rotunda floor is a five-ton bronze chandelier
containing 202 light bulbs

at twenty-five in length and eight feet in diameter it is the largest chandelier
ever created by the artists at Tiffany Studios in New York

this artistic piece traveled west by train and was assembled and installed on site

it could contain a Volkswagen Beetle if placed sideways

it features life-size faces and human figures

when it was assembled every piece fit perfectly

this chandelier is suspended on 101 feet gold-plated chain

which weighs one and one-half tons

Legislative Building is also home to a large brass bust of George Washington

superstitious lobbyists rub the nose of the bust for good luck thus explaining its shiny feature

Washington's state seal, designed by jeweler Charles Talcott,
is featured throughout the building on the state flag
(this is the only state flag picturing a president and the only one with a green background)
tapestries, railing, door handles
there is even a brass seal embedded in the floor of the rotunda
(George Washington's nose has been flattened over time
as a result of people walking on it -- the seal is now roped off from foot traffic)
(Today the Legislative Building is the centerpiece of the five historic buildings
designed by New York architects Walter Wilder and Harry White [1913])

WASHINGTON STATE'S GRAND CAPITOL BUILDING IS OCCUPIED

Although the building was still under construction, Legislators moved in -- March 7, 1927
after six years of construction and multiple revisions to the plans
During the gala ceremony music was provided by the Salvation Army band
and the University of Washington glee club

WASHINGTON STATE CAPITOL CAMPUS HAS EVOLVED OVER DECADES

Washington State Capitol in Olympia, Washington is the seat of the state government
rather than a single building, as is the case in most states, the capitol consists of a campus
with several buildings on it -- the central core of which is composed of the:
Legislative Building which houses the Washington State Legislature
and offices of the Governor, Lieutenant Governor, Secretary of State and Treasurer,
Insurance Commissioner's office is located in the Insurance Building
other elected state officers maintain offices off campus: Attorney General, State Auditor,
Commissioner of Public Lands,
Superintendent of Public Instruction has offices located in the Old Capitol Building
Temple of Justice is where the Washington State supreme Court meets
and the State Law Library is located there
Washington Governor's Mansion is the home of the state's chief executive
Insurance Building holds the office of the State Insurance Commissioner
John O'Brien Building is the location
of most of the members of the State House of Representatives
John Cherberg Building is the location of most of the Democratic State Senators
Irv Newhouse Building is the location of most of the Republican State Senate
Joel Prichard Building is the location of staff members' offices and a cafeteria

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION (ILA) IS IN DISARRAY

West Coast longshoremen had been completely organized by the ILA with the exception
of San Francisco where the unaffiliated Riggers and Stevedores controlled the waterfront
Then a series of lost strikes overwhelmed the International Longshoremen's Association (ILA)
San Francisco [1919], Seattle [1920], Portland [1922], San Pedro (port for Los Angeles [1923])
To maintain a tight control over the waterfront, employers set up fink halls
in Seattle, Portland, San Pedro and smaller ports
On the Pacific Coast only Tacoma and its 1,200 members

maintained a closed shop (only union members were employed)
this was in no small measure thanks to the efforts of ILA organizer William I. "Paddy" Morris
and John C. "Jack" Bjorklund

Both Morris and Bjorklund attended the International Longshoremen's Association 1927 convention
where New York City ILA labor leader Joseph P. Ryan was elected ILA president
in keeping with the times, Ryan was a strong anti-Communist while at the same time
casting a far less penetrating gaze on the actions of criminal elements within the union
International Longshoremen' Association (ILA) survived even if the hated fink halls left it weakened
Membership again soared -- in some districts growth was as much as six fold in six years
ILA President Joseph P. Ryan and the union's regional and local leaders
regained much of the lost ground

NORTH AMERICAN AND EUROPE ARE LINKED BY FLIGHT

(French-born New York hotelier (Lafayette Hotel) Raymond Orteig
offered a prize of \$25,000 [May 19, 1919] to anyone who could fly the nearly 3,600 statute miles
between the United States and France alone within five years
no serious challenger emerged due in large part to the lack of technology to accomplish the feat
Orteig extended the challenge another five years)

Orteig's prize attracted an impressive group of well known, highly experienced
and well financed aviators -- six well contenders were killed in the effort
U.S. Air Mail pilot Charles Augustus Lindbergh, then twenty-five years old,
virtually anonymous to the public had considerably less overall flying experience
he had been flying for only five years

Lindbergh was financed by a \$15,000 bank loan taken out by two St. Louis businessmen
and \$2,000 of his own savings

another \$1,000 was donated by the builder of the Ryan aircraft Lindbergh was to fly
Lindbergh was prepared to undertake the effort in a fabric covered, single-seat, single-engine
"Ryan NYP" high wing monoplane was burdened by its heavy load of 450 gallons of gasoline
and hampered by a muddy, rain soaked runway at Roosevelt Field
on New York's Long Island

Lindbergh's airplane, dubbed the *Spirit of St. Louis*, gained speed very slowly
as it made its takeoff -- 7:52 A.M., May 20, 1927

Over the next 33-½ hours Lindbergh flying the "*Spirit of St. Louis*" alone faced many challenges
including skimming over both storm clouds at 10,000 feet and wave tops at as low as ten feet
fighting icing, flying blind through fog for several hours,
and navigating only by the stars when they were visible, and "dead reckoning"

Charles Lindbergh landed at Le Bourget Field in Paris, France -- 10:22 P.M., May 21

there a crowd estimated at 150,000 spectators stormed the field

they dragged Lindbergh out of the cockpit and literally carried him around above their heads
for nearly half an hour

Lindbergh's daring earned him the admiration of Frenchmen and Americans alike

(when he spoke of the *Spirit of St. Louis* Lindbergh always referred to the plane simply as "we")
although his nickname was "Slim," he became known as "Lucky Lindy" and "The Lone Eagle"
since he was a U.S. Army reserve officer, he awarded the nation's highest military decoration,

the Medal of Honor, for his historic exploit
Lindbergh's fame also brought him less desirable attention
(in what became known as the "crime of the century"
twenty-month old Charles Augustus Lindbergh, Jr., was abducted from his crib
by an intruder in the second story nursery of his family's rural home -- March 1, 1932
negotiations resulted the payment of \$50,000 in gold certificates, but this proved futile
when the infant's remains were located in the woods near a road
two miles from the Lindbergh home
a month later the Congress passed the so-called "Lindbergh Law" [June 13, 1932]
which made kidnapping a federal offense)
(Charles Lindbergh expressed racist and pro-Nazi sympathies
he argued that America did not have any business attacking Germany
he believed in the Monroe Doctrine which separated the U.S. from the affairs of Europe
during the Second World War he was accused of being "pro-Nazi")
(Lindbergh's reputation as a decent, moral man also came under attack
DNA tests showed he fathered her three children with German hat-maker Brigitte Hesshaimer
he may have had as many as seven children in Germany
it was reported that ten days before he died Lindbergh wrote three letters from his hospital bed
to three mistresses and requested "utmost secrecy")¹¹⁹

AMERICAN PUBLIC IS FACINATED WITH SETTING RECORDS

Record performances of the Silk Trains were publicized far and wide to the benefit of the companies
"Roaring Twenties" reflected a fascination with speed and setting records
contests such as marathon dancing and flagpole sitting were reported and admired
when Charles A. Lindbergh made his solo flight across the Atlantic -- May 1927
Americans went wild -- as did the French public where he landed
(debut of the greatly anticipated Ford "Model A" saw millions people
brave rain, snow and freezing temperatures to catch a glimpse [December 1927])

FOSS MARITIME TUG SUFFERS A GREAT LOSS

"The War to End All Wars" [1917-1918] propelled the small towing business to a new level
Foss purchased interest in a Seattle-based towboat company
Thea Foss died a day before her 70th birthday -- June 6, 1927
Thea Foss Waterway, a 1-½ mile inlet in Tacoma's industrial connected to Puget Sound
is named after her as a remembrance of her foresight, hard work and success
(Foss Maritime was bought [1987]
by Saltchuk Resources, Incorporated -- a privately owned family investment company
that that primarily focuses on maritime transportation.
although Foss Maritime continues to operate independently,
it is now part of a worldwide network
green and white colors that Thea Foss painted her first rowboat
are still used on the company's powerful state-of-the-art tugs

¹¹⁹ Rudolf Schroeck, *Das Doppelleben des Charles A. Lindbergh (The Double Life of Charles A. Lindbergh)*, 2005.

which can now be seen in waters throughout the world)

WILLIAM T. “PADDY” MORRIS PROVIDES A HISTORY LESSON

Tacoma Delegate William T. “Paddy” Morris

attended the 1927 International Longshoremen’s Association (ILA) Convention

there he reviewed for members the series of broken strikes

that had overwhelmed Pacific Coast Longshoremen

San Francisco [1919], Seattle [1920] Portland [1922] and San Pedro [1923]

To maintain control of the waterfront after smashing the unions,

employers in Seattle, Portland, San Pedro, and smaller ports

set up their own hiring halls (fink halls)

they required all longshoremen to work out of those halls

fink halls divided the longshoremen competing for work into two groups

“steady men” who made up company-preferred gangs

“casuals” who were relegated to occasional undesirable jobs

or he could even be blacklisted to eliminate troublemakers and union agitators

RADIO STATION KPCB ENTERS THE SEATTLE MARKET

KPPCB, 650 on the AM dial was a small day-time only 100-watt station

it was owned by Moritz Thomsen whose Pacific Coast Biscuit Company (thus the call letters)

competed with the Fisher flour family who owned KOMO

Seattle’s National Broadcasting Company (NBC) affiliate at the time

EMMA SMITH DEVOE PASSES AWAY

Long-time campaigner for women’s suffrage died in Tacoma at age 79-- 1927

her efforts in Washington state were both effective and controversial

she served as president of the Washington Equal Suffrage Association

and National American Woman Suffrage Association for which she was a paid organizer

she avoided alienating potent forces, such as big business and the brewers,

by urging supporters like labor and temperance organizations

to support the movement quietly rather than aggressively

she brought to a head controversies with the Eastern Washington suffrage clubs

led by Spokane’s more outspoken May Arkwright Hutton

she told her workers to remain “good-natured and cheerful” to demonstrate

suffragists did not want to change women’s traditional homemaker role

Despite what some considered a heavy-handed leadership style,

Emma Smith DeVoe’s contribution to the suffrage movement was extraordinary

After ratification of the Nineteenth Amendment, DeVoe entered Republican Party politics

she eventually rose to leadership positions on the state and national levels

Emma Smith DeVoe was mourned in newspaper headlines as a “Mother of Woman’s Suffrage”

she was elected to the National Women’s Hall of Fame in Seneca Falls, New York [2000]

OYSTER INDUSTRY SUFFERS FROM A VARIETY OF ILLS

Over-harvesting and pollution from logging and industrial development and human occupation

pushed the small Olympia oyster into decline
Red liquor discharged by Mark Reed's Edward M. Mills' and Isadore Zellerbach's
new Rainier Pulp and Paper Company which began operation -- 1927
devastated the oyster beds in Oakland Bay
fish swam up Hammersly Inlet and rolled over dead in the discharge plume
Oyster growers sued the pulp mill and the
community of Shelton split between the need for mill jobs and the oyster business
citizens there raised \$166,000 (Mark Reed was the top contributor)
to buy up the oyster beds in Oakland Bay and Hammersly Inlet
nonetheless 350 jobs moved to Hoquiam
Other growers tried without success to transplant Eastern oysters
however, larger species of oysters from Japan took well to the Northwest
and they did not require as much work as the Olympia oyster
(Japanese oysters eventually dominated the market)

MILWAUKEE ROAD REORGANIZES

Defunct Chicago, Milwaukee, and St. Paul Railroad emerged from receivership
as the Chicago, Milwaukee & St. Paul and Pacific Railway incorporated [March 31, 1927]
new railroad company officially adopted the familiar trade name *The Milwaukee Road*
Operation of 10,000 miles of track from Chicago to the Pacific coast began -- January 13, 1928
Hiawatha was the company's famous high-speed train that reached speeds of over 100 mph
(over time, traffic began to die off and the high cost of maintaining its transcontinental route
forced the railroad to gradually sell off portions of its track
this company was driven into bankruptcy three times, [1925], [1935] and, finally, [1977])
(an employee plan to purchase the Puget Sound extension
was deemed financially unrealistic by the federal Interstate Commerce Commission
which cleared the way for abandonment approval [January 30, 1980]
less than a month later, bankruptcy court judge Thomas McMillan
authorized an embargo of the transcontinental lines)

BERTHA K. LANDES IS DEFEATED AS THE MAYOR OF SEATTLE

Bertha Landes served as the first woman mayor of a major American city
after her [1926] landslide victory
an honest official, she ran a scandal-free administration but it only lasted two years
she supported city planning and zoning, improved public health and safety programs,
she and promoted social concerns such as hospitals and recreation programs
she encouraged the use of professional expertise in many areas
and advocated hiring by merit through a strengthened Civil Service Commission
Political unknown Frank Edwards defeated her in her bid for reelection -- March 1928
he spent a lavish campaign budget well -- Landes blamed her defeat on "sex prejudice"
Bertha K. Landes spent the rest of her life as an un-elected civil leader and journalist
who focused her attention on the importance of having women in politics

GOVERNOR HARTLEY CONTINUES HIS CAMPAIGN AGAINST THE LEGISLATIVE BUILDING

On the day before the state executives were to move into the \$7 million Legislative Building Governor Hartley marked the occasion with a speech -- March 27, 1928

he attacked the free-spending legislators as he noted **“Today is an epochal day but it brings no joy to the heart of the taxpayer.”**

he concluded: **“May the new building be a deterrent, rather than an incentive, to future extravagance on the part of those in whose hands the business affairs of the state are entrusted.”**¹²⁰

(But Governor Hartley took expressions of his disapproval to even greater extremes he loaded some of the new capitol’s “sumptuous furnishings” such as the pricey cuspidors into an automobile and paraded them about the state to prove that others in Olympia had no restraint in spending the taxpayers’ hard-earned money that the posturing governor had made sure his own office in the Legislative Building would be the most elegantly appointed of all was not mentioned in his speeches)

PRICE FOR SILK FALLS AS TRANSCONTINENTAL SHIPPING DECREASES

Only five percent of the raw silk entering the United States did so via the cheaper all-water route through the Panama Canal -- 1928

Although the Great Northern Railway could compete successfully with other railroads it could not control the price of raw silk increasingly silk importers turned to ocean travel and a Panama Canal crossing to cut costs

These developments had an inevitable negative impact on West Coast ports Seattle’s Chamber of Commerce tried to maintain the volume of silk moving through the port by inducing railroads to reduce rates -- but silk receipts dropped rapidly

PRIVATE UTILITY COMPANIES TIGHTEN THEIR GRIP ON RURAL CUSTOMERS

Holding companies were organized for the purpose of acquiring access to utilities -- 1928

Electric Bond and Share Company was the largest private utility in the nation with control of fifteen percent of the nation’s output of electricity including fifty-three percent of the electric load in the Pacific Northwest to enhance the company’s return on investment electricity users ended up paying high charges for nominal services

Clark County demonstrated a typical example of price gouging Clark County was served by Northwestern Electric Company which was owned by American Power and Light Company which was in turn owned by Electric Bond and Share Company Northwestern Electric leased its lines and transformers from Pacific Power and Light Company which also was owned by American Power and Light therefore, electric ratepayers in Clark County not only paid a rate high enough to cover the “sweetheart” leasing costs Northwestern paid to its parent company but also paid a rate that was high enough to earn a profit for Northwestern to earn a profit on American Power and Light’s stock and to earn a profit on Electric Bond and Share Company stock

¹²⁰ J. Kingston Pierce, HistoryLink.org, Essay 5443, April 2, 2003.

it was a profit on a profit for a profit

STATE GRANGE WANTS ELECTICITY PROVIDED TO RURAL AMERICANS

Farmers grew tired of the abuses and failures of the utility companies -- 1928

they wanted to get rid of the old kerosene or coal oil lamps

they wanted to have the benefits of electricity that their city neighbors enjoyed

without having to meet demands they considered to be outrageous

conditions were ripe for a rural revolt

With the help of State Representative Homer T. Bone who served as council,

Washington State Grange drafted a proposed law that would give citizens in rural areas

the same right to form publicly owned electric systems that was enjoyed by city residents

Grange members had in mind one of the strongest public power laws in the nation

their proposal called for a municipal corporation

that would provide utility service without profit,

that would be operated by a board of elected citizens,

that would have the power to issue revenue bonds,

that could use the right of eminent domain to take over

properties of a private power company if that company refused to sell

fearful of the domination private power interests had over the state legislature,

Grange submitted their bill through an initiative to the voters

although the group needed only 40,000 signatures to get the proposal on the ballot,

they collected over 60,000 in two months

Grange's rural electrification Initiative was to the legislature (to be enacted in the 1929 session)

SAUL HAAS MEETS STATE REPRESENTATIVE HOMER T. BONE

After leaving the defunct *Seattle Union Record* Haas moved to *The Seattle Star* -- 1928

Haas found progressive Homer T. Bone, a zealous, sharp-tongued champion of public power

and an advocate for the worker, the farmer, and the "common man"

their shared empathy for the worker fostered a mutual hatred

of the adventurer capitalism of the time

BOEING IMPROVEMENTS LEAD TO COMPANY EXPANSION

Boeing employed more than eight hundred people

who designed and manufactured several types of airplanes

Boeing became a leader among aircraft companies in the United States

Boeing Air Transport Company constructed the first airplane designed to carry passengers

their newest airplane was capable of carrying twelve civilians -- 1928

this plane was added to the growing fleet of aircraft being produced

Boeing implemented the first international air service

when they carried passengers from Seattle to British Columbia

company success as a passenger carrier service

led to the plane being enlarged to carry eighteen people

stewardesses were hired at a rate of \$125 a month -- 1928

that year Boeing carried 230,000 pounds of mail and 525 passengers

Boeing's success led to formation of the new Boeing Airplane and Transport Corporation to oversee the operations of its two divisions -- construction and transport -- 1928 (Boeing Airplane and Transport Corporation later became United Airlines)

GREAT NORTHERN RAILWAY TUNNEL THROUGH THE CASCADES

Fifty cubic yards of granite separated the east from the west ends of the tunnel
400 pounds of gelatin dynamite was wired to blasting caps
President Calvin Coolidge waited in the Oval Office
for 4:00 p.m. Eastern time -- May 1, 1928
2,700 miles away 1,000 feet underground people waited for 1:00 Pacific time
President Coolidge touched a telegraph key
a blast was touched off and the chamber under the Cascades began to vibrate
a muffled roar and a powerful rush of air escaped the tunnel
fine particles of rock dust rained down
After a brief wait to allow gasses to escape
compressed air "mucking machines" moved up the tracks
blasted rock was soon scooped up opening a crawl space through the Cascade Mountains

EZRA MEEKER BECOMES ILL

Henry Ford had built Meeker a special vehicle
an automobile chassis fitted with a covered wagon top which he called the "Oxmobile"
Meeker had driven the Oxmobile east
planning to visit Ford production plant in Hamilton, Michigan
when he reached Detroit, Meeker became ill while visiting with Henry Ford -- summer 1928
Meeker spent several months in the Ford Hospital
before he was loaded onto a Pullman car for the three-day trip home by rail

ALEXANDER SCOTT BULLITT RUNS FOR THE OFFICE OF GOVERNOR

Scott Bullitt enhanced the Democratic organization he had founded [1926]
to support his race for governor as a Democrat in the Primary Election -- August 14, 1928
Bullitt studiously avoided making any comments on his chief rival, Democrat Stephen J. Chadwick
he also remained silent on the subject of Prohibition
rather than relying on the ineffective traditional Democratic Party for campaign support,
Bullitt built his own version of the party
Scott Bullitt campaigned across the state as if he had already won the general election
he spent his time and energy attacking the conservative Republican incumbent
Governor Roland Hartley
Many of the Democrats who supported Chadwick dismissed Bullitt
as a rich, vain, egotistical political annoyance -- they seriously underestimated him
during the primary campaign Bullitt was approached
by a young University of Washington law student interested in politics: Warren G. Magnuson

PUGET SOUND ELECTRIC RAILWAY COMPANY SUFFERS ECONOMIC COLLAPSE

Seattle-Tacoma service interurban rail service was hard hit by automobile and bus competition

with the opening of Highway 99, the company ended operations -- 1928
(Seattle-Everett service ended eleven years later [1939]
Seattle ripped up its streetcar lines [1941]
several rail rapid transit proposals were rejected
before regional voters approved a Sound Transit system [1996]
Sound Transit inaugurated commuter rail service
between Seattle and Tacoma [September 2000])

OYSTERS GROWS INTO A MAJOR WASHINGTON INDUSTRY

After a very slow start, the industry began to expand -- 1928
“seed” production in Japan greatly increased -- and at a lower price than before
Willapa Bay became an area of extensive oyster development
this new shellfish industry joined clamming, crabbing, and shrimping
as an important Northwest industry

ELECTION DAY IS HELD ACROSS THE NATION

Conservative Republican Governor Hartley defeated Democrat Scott Bullitt -- November 6, 1928
while Bullitt lost the election, but he had introduced Warren G. Magnuson
(who was known as Warren to his close friends and “Maggy” to everyone else)
to Democratic politics
Hartley’s conservative administration further reduced government control on business
as Washington state’s political leaders echoed policy changes in the nation’s capital
Democratic U.S. Senator Clarence Dill of Washington also was reelected
because most Washingtonians supported his pro-Columbia River dam position

PEARL ANDERSON WANAMAKER IS ELECTED TO THE STATE LEGISLATURE¹²¹

Within a year, of getting married, Pearl was bored and ran for the 50th District House seat --1928
she ran successfully on the issue of a proposed Deception Pass Bridge
between Whidbey and Fidalgo Island which she favored
Freshman Representative Pearl Wanamaker was one of four women in the State House
as a Democrat she was also in the minority [1929-1930]
having run on the bridge issue and being the daughter and wife of civil engineers,
Pearl took great interest in highways and bridges
she helped shepherd the Deception Pass Bridge bill through both state houses
but it was killed by the busy veto pen of Republican Governor Roland Hartley
After losing a spirited battle to override the governor’s veto Pearl considered herself a failure,
she left the legislature, went back to Camano Island -- she taught high school and had a baby
in fact, in three years she had three babies: Robert [1932], James [1933], and Joanna [1934]
(without maternity leave or fuss, she taught school and held public office during her pregnancies)

END OF THE TRAIL FOR EZRA MEEKER

Ezra Meeker, very seriously ill, had returned to Seattle by train from Detroit

¹²¹ Michael Hood, HistoryLink.org, Essay 9171, September 26, 2009.

he took up residence in the Frye Hotel
Meeker was well known locally as a rugged Pacific Northwest pioneer
even before he took up the cause of marking the Oregon Trail
Ezra Meeker had become a household name throughout the nation
to many who read newspaper stories about his exploits he was a symbol of the American pioneer
he was the self-appointed spokesman for the men and women who walked the emigrant road
and for the dead they buried along the way
during his final days *The New York Times* published frequent bulletins on his condition
As he lay dying, two chartered airplanes flew above the hotel
they were loaded with coastal rhododendrons -- Washington's state flower
Seattle Post-Intelligencer reported [December 4, 1928] that as the planes soared over the hotel
they **“dipped their wings in salute and the pilots released their blossoms, which
showered the hotel and the crowds in nearby streets”**

Ezra Meeker died twenty-seven days shy of his 98th birthday -- December 3, 1928
Meeker's long life had extended the nation's historic reach back to a different time
Members of the Washington State Historical Society filled Meeker's famous covered wagon
with an enormous floral wreath
a prize show pair of oxen to pull the wagon to the Hamilton Mortuary in Puyallup
hundreds of mourners attended the service

among them were many schoolchildren whom Meeker had met
in his educational visits to Washington classrooms
Meeker's funeral service was conducted at Westminster Presbyterian Church
Ezra Meeker was buried beside his wife Eliza Jane in Puyallup's Woodbine Cemetery
(Oregon Trail Memorial Association erected a marker engraved
with a covered wagon drawn by two oxen over the pair of graves [1939])
(Although the Meekers' tiny cabin in downtown Puyallup was gone by the early twentieth century
the ivy Eliza Meeker planted near the front door still flourishes in Puyallup's Pioneer Park
it is now trained over a pergola that marks the site of Ezra and Eliza Meeker's
first Puyallup home)

In his lifetime Ezra Meeker was a busy author -- some of which have been reprinted, include:

Washington Territory West of the Cascade Mountains by Ezra Meeker 1870
Hop Culture in the United States by Ezra Meeker 1883
Pioneer Reminiscences of Puget Sound by Ezra Meeker 1905
The Tragedy of Leschi by Ezra Meeker 1905
The Ox-Team of the Old Oregon Trail by Ezra Meeker 1907
Ventures and Adventures of Ezra Meeker by Ezra Meeker 1909
Personal Experiences on the Oregon Trail 60 Years Ago by Ezra Meeker 1912
The Busy Life of 85 Years: Ventures and Adventures by Ezra Meeker 1916
Seventy Years of Progress in Washington by Ezra Meeker 1921
Ox Team Days on the Oregon Trail by Ezra Meeker and Howard R Driggs 1923
Kate Mulhall, A Romance of the Oregon Trail by Ezra Meeker 1926
Covered Wagon Centennial and Ox Team Days, Oregon Trail Memorial Edition,
by Ezra Meeker and Howard R. Driggs 1931

GREAT NORTHERN RAILWAY TUNNELS THROUGH THE CASCADES

Seven months after the original tunnel was opened two main tunnels were connected
tunnels, walled in concrete, were sixteen feet wide and twenty-two feet ten inches high
this project was completed -- December 1928

Both train time and economic efficiency improved profits for the company
reduced the summit to from an original 4,059 feet
to an average elevation of 2,500 feet
with a grade of 1.56 per cent

STATE LEGISLATURE CONSIDERS THE RURAL ELECTRIFICATION INITIATIVE

Republicans once again held the power in the legislature

State Senate was composed of forty-one Republicans and one Democrat

in the State House of Representatives, Republicans held ninety-one seats and the Democrats six

State Grange-sponsored Initiative was introduced -- January 1929

however, legislators refused to pass the bill in the 1929 session

so, under procedures outlined in the State Constitution, the bill was placed on the ballot

for the general election of [November 1930] -- listed as State Initiative Number 1

SECOND GREAT NORTHERN RAILWAY CASCADE TUNNEL PROJECT IS COMPLETED

New tunnel, built a few miles south of Stevens Pass was a replacement of the earlier tunnel

its western entrance is near the confluence of Tunnel Creek and the Tye River

Cascade Tunnel was cut through solid granite as straight as humanly possible

construction required 237 freight cars of dynamite (4.7 million pounds)

at 7.8-miles, this would be the longest tunnel in the Western Hemisphere from [1929-1989]

it connected Chelan County on the east (Berne, Washington)

with King County on its west (Scenic, Washington)

new tunnel reduced the summit by 501 feet to an altitude of 2,881 feet

Length of time needed for construction, almost four years, set a world record

this was the largest bore of any single-track tunnel when it was finished:

sixteen feet wide inside the two-foot thick concrete lining

opening was twenty-one feet high from the top of the rail to the top of the arch

construction of the tunnel was one of the major engineering feats of the decade

accuracy of the survey was exceptional with error of only 0.02 feet in horizontal alignment

it was just eight inches shy of a perfect union on the sides

and just nine inches off grade on the bottom

project was completed at a cost \$25 million and nine lives

GREAT NORTHERN RAILWAY TUNNELS THROUGH THE CASCADES

Long single-track Cascades Tunnel through Stevens Pass

was dedicated by President-elect Herbert Hoover

during a coast-to coast NBC radio broadcast -- January 12, 1929

With the opening of the new tunnel, all switchbacks and the old tunnel itself were abandoned

(second Cascade Tunnel continues to be a vital transportation artery in the Pacific Northwest)

GREYHOUND CORPORATION COMES INTO EXISTENCE

(Swedish immigrant Carl Wickman moved to the United States

he became an iron mine drill operator in Alice, Minnesota until he was laid off [1914]

he became an unsuccessful Hupmobile [a make of automobile] salesman in Hibbing, Minnesota

he used his last seven-passenger Hupmobile to transport from Hibbing to Alice

which was known for its saloons

Wickman charged fifteen cents a ride

Wickman partnered with Ralph Bogan who was providing the same service from Hibbing to Duluth

Mesaba Transportation Company made \$8,000 in profit in its first year [1915]

mergers with other private bus companies allowed Wickman to expand his territory

Wickman's bus operations became known as the Greyhound Lines [1926]

General Motors was issued a contract to construct Greyhound busses

service from California to New York was initiated [1927]

Greyhound Bus Company earned a profit of \$6 million [1928])

Nationally, the Greyhound Corporation was formed --1929

eventually the corporation acquired most of the bus lines of the Pacific Northwest

by the end of the decade, nearly every major railroad in the Pacific Northwest

had substituted bus service on lightly patronized branch lines

transportation monopolies run by railroads faced a new, more mobile competitor

AIRPLANES ALSO COMPETE WITH RAILROADS

First airplanes to carry passengers consisted of open cockpit planes that carried a passenger or two in addition to the mail

Boeing Company secured a federal contract to operate between San Francisco and Chicago carrying mail and two persons per airplane

Boeing Air Transport held thirty percent of the air mail and air passenger market in the United States [1928]

Competitors threatened Boeing's market share

William Boeing accepted an offer to merge his airline and manufacturing business with engine supplier Pratt & Whitney and with Standard Propeller Company

United Aircraft and Transport Corporation was formed -- 1929

Boeing became chairman of the board of directors

(Boeing Air Transport later expanded into United Air Lines)

RURAL ELECTRIC PROPOSAL IS DEBATED ACROSS THE STATE

State Initiative Number 1 was to be submitted to the voters for their approval -- 1929

Like the previously submitted public power measure [1924] there was a hard fought campaign private power companies called it the most dangerous tax measure

ever submitted to the voters of the state

president of one utility company warned voters that the bill was "filled with dynamite"

and was a "new departure along the line of political ownership of business"

State Representative Home T. Bone, on the other hand, told voters that if the private utilities

beat this bill they “**will have the country people by the throat so far as electric light and power rates are concerned.**”¹²²

CONGRESS ESTABLISHES THE FEDERAL BUREAU OF PRISONS

For the first time in American history, coordinated administration of the federal prison system was accomplished -- 1929

because they were used to operating independently,

prison wardens did not appreciate the newly imposed bureaucracy¹²³

to ensure the new prison system would run smoothly

many adjustments in supervisory personnel were made

McNeil Island penitentiary saw a new and bigger power plant constructed outside the prison

Funds were appropriated to move the bodies of eighty-six pioneers off the McNeil Island

to cemeteries of the families' choice

Also, the U. S. Public Health Service was authorized to provide medical services to federal prisons

GREAT NORTHERN RAILWAY INTRODUCES ITS PREMIER PASSENGER SERVICE

Great Northern introduced its new *Empire Builder* train -- named to honor James Jerome Hill

this flagship train linked the Midwest with the Pacific Northwest in 6.3 hours -- June 11, 1929

and replaced the *Oriental Limited* as the railroad's premier train

It was no coincidence that when the inaugural run left St. Paul's Union Depot the *Empire Builder*

was pulled by engine Number 2517 *Marathon* -- the fastest of the Silk Trains

(Today the main line of the Burlington Northern Railroad passes through the Stampede Pass tunnel

Amtrak's *Empire Builder* between Seattle and Spokane still runs through it

however, speed through the tunnel is restricted to twenty-five miles per hour)

GREAT NORTHERN RAILWAY SILK SHIPPING DECLINES

American ships operating out of Seattle and California to Japan

carried the bulk of the raw silk to the United States

As silk prices dropped, interest and insurance costs also declined

silk importing companies found the falling prices

no longer justified the expense of overland shipping

use of the longer all-water route to New York became increasingly frequent -- 1929

DROUGHT SWEEPS ACROSS THE NATION

Several factors all seemed to come together at the same time -- 1929

problems had been building up for at least a decade

Great Plains early on in our history had been called “The Great American Desert” -- it was true

this entire area was mainly covered in native grasses which kept the soil healthy and in place

Farmers were part of the trouble

more land was planted to meet the rising need (and profit) induced by the World War

to plant more crops, farmers were buying new land and equipment on credit

¹²² Public Power in Snohomish County, 2002-2019 Snohomish County PUD.

¹²³ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003..

new technology developed that allowed farmers used to tear up land even faster
farmers did not rotate crops nor did they leave areas of native grasses
rather they dug up everything and planted crops
native grasses were now underneath and the dirt on top

Economics were devastating for farmers

crops burned in the fields in an effort to drive prices upward
farm mortgages were foreclosed by banks -- farmers move into cities
tax-delinquency took land out of production and added to the nation's trust lands and parks

Nature played a role in the water shortage

light snows in the mountains and early thaws in the spring were a factor in the drought
winds carried water vapor away from the coasts instead of inland

PUBLIC UTILITY DISTRICTS COME INTO EXISTENCE IN WASHINGTON

Success of municipal power companies throughout the nation and in Tacoma
pushed the demand for electricity was to the limit
however, electricity did not reach out to farm families

high costs kept municipal electric systems out of rural areas
Because of discontent over lack of electric service in rural areas

due to the failure of private power companies or municipal plants to serve them
there grew a demand by farm people for some other form of agency
through which they could get the benefits of electricity

Voters of Washington started an initiative campaign -- 1929

that requested a new form of municipal corporation to provide service to rural residents
these became known as Public Utility Districts (PUDs)
movement to form such service districts rapidly gained momentum

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION EXPANDS ITS MEMBERSHIP

Longshore unions along the Pacific coast barely held on under management's fink hall hiring
Everett longshoremen returned to the ILA

when they faced a threat of compulsory physical examinations
and an age limit of forty-five years --1929

old-timers, who believed they must organize to prevent the employers' plan,
appealed to the ILA for assistance in resolving the dispute

Longshoremen's union sent Paddy Morris from Tacoma to Everett -- June 25, 1929

there a group of longshoremen soon formed a union

Local 38-76 grew to almost 250 members [in July]

SCOTT BULLITT CONTINUES TO ORGANIZE THE DEMOCRATIC PARTY IN WASHINGTON

Scott Bullitt was elected at the State Democratic Party Convention in Spokane

to serve as Washington State Democratic National Committeeman [July 1929]

Bullitt strove to expand the political base he had created in his run for the governorship

he was also actively involved in the prohibition of the sale of alcohol "wet-dry" debate

he sided with the "wets" who advocated an end to Prohibition

ANOTHER LONGSHOREMEN'S LOCAL UNION IS FORMED

Following the lead of Everett longshoremen, Grays Harbor also wanted An ILA affiliate in response to their appeal, Paddy Morris went to Aberdeen when district funds for organizing became exhausted the international union put him on the payroll -- August 5 to [December 28] Morris found conditions on the Grays Harbor waterfront deplorable aided by many local union veterans, the organizing drive went forward International Longshoremen's Association installed the charter for Gray Harbor Local 38-77 Grays Harbor was the second port in Washington to successfully defy blacklists and organize a union they dared to demand small improvements in their working conditions -- and won them they proved that unions could exist because employers needed their skills management's fink halls were becoming vulnerable

MINE PRODUCTION IN WASHINGTON DECLINED

Twin towns of Newcastle and Coal Creek were Company towns first and foremost these two communities once had as many as 600 houses between them While neighboring communities such as Renton and Issaquah had their coal mines these towns existed before the mines -- they had other industries and farming to maintain them Work in the mines declined with many three-day work weeks bunkers and coal cleaning plant burned at Newcastle and Coal Creek -- August 14, 1929 Pacific Coast Coal Company closed their mine for good when the company left Newcastle and Coal Creek the towns left too all mining equipment was either removed for use elsewhere or sold for scrap all of the houses were either sold and moved or dismantled for materials

PROSPERITY SWEEPS ACROSS CITIES AND SUBURBS

"Roaring Twenties" was a time of wealth and excess -- financial speculation ran wild after a six-year run the Dow Jones Industrial Average increased in value fivefold rising share prices encouraged more people to invest people hoped the share prices would rise further Despite the dangers of speculation, many believed the market could sustain high price levels hundreds of thousands of Americans invested heavily in the stock market many of them borrowed money to buy more stocks stock brokers routinely provided small investors more than two-thirds of the face value of the stocks they were buying over \$8.5 billion was out on loan more than the entire amount of currency circulating in the U.S. at the time

"BLACK THURSDAY" HITS THE STOCK MARKET

Dow-Jones Industrial Average of stock prices had remained near its historical high when the stock market hit an average of 381.17 [September 3] New York Stock Exchange typically traded around four million shares each trading day Stock prices finally turned down -- October 24, 1929 this was the first major fall in stock prices in over a decade

record numbers of stock, 12.9 million shares, were exchanged at falling prices
Systems for tracking the market prices could not keep up with the trading volume
(this may have contributed to panic selling on that day)
at one point, ticker tapes were running nearly ninety minutes behind the market
by the end of the day, the market had fallen thirty-three points or around nine per cent
Seattle Times reported President Herbert Hoover and business leaders were not worried

LARGE U.S. BANKERS ATTEMPT TO BOOST STOCK PRICES

Several of the nation's largest bankers met -- Friday, October 25
among attendees were the heads of Morgan Bank, Chase National Bank, and National City Bank
they ultimately decided to purchase a number of U.S. Steel shares above market price
(this had worked during the [1907] Wall Street scare)
In those days, the stock market traded six days a week instead of five
bankers' move led to a slight increase in stock price on Saturday, October 26
but over the weekend many investors lost faith in stocks and decided to sell their shares

“BLACK MONDAY” SEES PANIC SELLING OF STOCKS CONTINUE

(Following Black Thursday, the market bounced back a bit on Friday
this led to a sense of security over the weekend as investors felt the market could rebound)
Stock Market conditions quickly deteriorated again on “Black Monday” -- October 28, 1929
high trading volumes once again put pressure on the flow of information
trading volumes were near 9.25 million shares as market confidence declined sharply
by the end of the day the market was down another thirteen per cent

“BLACK TUESDAY” DEALS THE FINAL BLOW TO THE ECONOMY

Stocks sold at a record pace: 16.4 million shares changed hands -- October 29, 1929
ticker tape machines fell behind by nearly three hours
with all hope of a market recovery now gone, panic selling continued
Wall Street prices fell another twelve per cent
(Over the next month the market continued to decline sharply,
however, the market would not bottom out until [July 1932]
when the Dow hit 41 from a 1929 high of 381 -- a decline of nearly ninety per cent)

CLOSURE OF THE U.S. STOCK EXCHANGE

Threatened with a breakdown of its personnel and of its physical machinery after an exhausting week
leaders of the New York Stock Exchange
decided to reduce the trading period from five to three hours -- October 31, 1929
Stock Exchange opened at noon instead of the usual 10 o'clock
leaders also decided to suspend trading entirely for two days [November 1 and 2]

UNITED STATES FACES THE GREAT DEPRESSION

During this period business was weak and many people were out of work
twelve million Americans lost their jobs;
5,000 banks failed,

U.S. Gross National Product was halved
Depression altered political atmosphere in America
before Depression hit, Americans valued rugged individualism
families were responsible for own well-being
charity was thought to begin at home
Crisis quickly turned into a worldwide economic crisis owing primarily to the close relationships
forged between the United States and Europe during World War
it was the industrial world's longest and most severe economic depression ever

SEVERAL CAUSES CONTRIBUTED TO THE GREAT DEPRESSION

Stock Market Crash of 1929

two months after the October crash, stockholders had lost more than \$40 billion dollars
even though the stock market began to regain some of its losses it just was not enough
at this point, America truly entered what is called the Great Depression

Bank failures

throughout the 1930s over 9,000 banks failed
bank deposits were uninsured and thus as banks failed people simply lost their savings
surviving banks, unsure of the economic situation and concerned for their own survival,
stopped being as willing to create new loans

Reduction in purchasing power

with the stock market crash and the fears of further economic woes,
individuals from all classes stopped purchasing items
this led to a reduction in the number of items produced and thus a reduction in the workforce
as people lost their jobs, they were unable to keep up with paying for items
they had bought through installment plans and their items were repossessed
more and more inventory began to accumulate
unemployment rate rose above twenty-five per cent which meant even less spending

American economic policy with Europe

as businesses began failing, the government raised the tariff on imports
to help protect American companies
this high tax on imports led to less trade between America and foreign countries
along with some economic retaliation

LABOR ISSUES REMAIN UNRESOLVED ALONG THE PACIFIC COAST

Management fink halls still dominated hiring practices for sailors -- 1929

fear and humiliation remained the harsh realities of seamen looking for shipping jobs

Sailors' Union of the Pacific (SUP) opened an office in San Pedro

(a port district of the city of Los Angeles)

this was the first sailor's union hall on the Pacific coast

International Seamen's Union President Andrew Furuseth

resented this new union of potential members

bickering and jurisdictional disputes became all too frequent

WASHINGTON STATE SUFFERS DURING THE GREAT DEPRESSION

Lumbering was Washington's biggest industry

this industry accounted for one-third of all manufactured products in the state

and employed one-half of all industrial employees in the state

lumbering suffered more from depression than any other industry

almost overnight more than 30,000 workers were unemployed in Seattle

North Bend, Hoquiam, and Aberdeen were hardest hit

it was not uncommon for every worker in a small town to be unemployed

Wobbly spirit rose again in the formation of the National Lumber Workers Union (NLWU) -- 1929

NLWU, which made no secret of its Communist sympathies,

as it carried on some of the old Industrial Workers of the World demonstration tactics

but the union was unable to bargain effectively with mill owners

Agriculture suffered to a lesser extent

Washington was free from drought during the depression

state had good harvest and large market

land was adaptable to specialized farming

orchard crops gained by increased irrigation and by planting more trees

yield was very high -- Washington was first in apple production; second in cherries and pears,

it was third in prunes and tenth in peaches

TACOMA LOSES ELECTRIC POWER

Severe drought in the region left water reservoirs too low to generate electricity

Tacoma in particular was hard hit as power production was cut back

Tacoma begged the Navy to move the aircraft carrier *Lexington*

from Bremerton to Commencement Bay

Lexington had four generators -- one was all that was needed to supply power for Tacoma

Telegrams to Washington, D.C. reminded the Navy how generous King and Pierce County had been

land had been donated land for

Camp Lewis, Sand Point Naval Air Station, and Fort Lawton

Lexington was ordered to Tacoma -- December 13, 1929

navy paid \$95,000 for the deployment

Tacoma paid \$20,000 for private moorage

Rain and snow arrived finally arrived and the city's water reservoirs began to fill

Tacoma's hydroelectric dams began to provide power

(*Lexington* set sail from Commencement Bay [January 16, 1930])

1930-1939

DEPRESSION YEARS CHANGES LIVES

Survival in the Pacific Northwest was difficult at the beginning of the 1930s
economic realities of falling farm prices, industrial unemployment and foreclosed mortgages
all added up to pervasive despair
ironically, this reality followed the most prosperous decade in regional history to date

AGRICULTURE WAS HARD HIT BY DEPRESSION

Farming was in the doldrums with the collapse of the world economy
although farming remained an important source of employment in Washington state
farm population during the 1930s dropped to 20% of its former number
Farm life changed during the Great Depression
income was down which meant many farmers were forced to sell out to more fortunate neighbors
number of farms shrank as the economic depression eliminated markets for farm goods
percentage of tenants renting farms increased dramatically
Drought added to the misery factor as crops burned in the fields in Eastern Washington
banks foreclosed on farms -- farmers moved into cities
tax-delinquency added land to state's public trust lands
Soil erosion was a most serious long-term problem for farmers and tenants alike
one quarter of the cropland of the Northwest was badly damaged by erosion
in the cattle industry overgrazing destroyed vegetation and soil alike
But farmers who could hold on were able to increase the size of their holdings
wheat, hay and oats were the principal products with fruits and nuts rising in importance

GREAT DEPRESSION EXPANDS THE DEMAND FOR THE PIKE PLACE MARKET

Several multi-level buildings were constructed creating a central marketing district
accessible to pedestrians and motorized vehicles
During the Great Depression the market expanded by offering the cheapest food in town
at one time a bag full of vegetables sold for 25 cents
Hotels and an auditorium stage also brought entertainment and more income to the area
allowing Seattle boosters to claim that Pike Place
was "The Finest Public Market In The World"

INDUSTRY SUFFERED FROM THE DEPRESSION

Misery was nowhere more prevalent in the Northwest than in the timber industry
which suffered the greatest loss of income during the Great Depression
significant losses were felt in Tacoma, Bellingham, Hoquiam, Aberdeen and Vancouver
it was no longer profitable to bring logging railroad tracks, trains and giant steam donkeys
into small cutting areas
logging roads and logging trucks dominated the industry as forest areas diminished
at first, gasoline trucks were used and then diesel trucks came to the fore
Other industries suffered only slightly less

shipbuilding, flour milling, grain production, meat packing, printing and publishing,
fruit and vegetable canning all suffered decline
rail service to the mines of the Coal Creek region stopped
coal mine and town of Newcastle were both dismantled

Fishing industry also suffered during the depression

collapse of the fishing market drove boats into harbor and their crews to the relief lines
fishing, which had been declining anyway for several decades, never really recovered

TOURISM DECLINED AS FUNDS DRIED UP DURING THE GREAT DEPRESSION

Although railroads and bus lines cut the price of tickets to attract tourists

few people, inside or outside of the region, could afford to buy at any price

Hotel and tourist court (motel) operators, restaurant owners

and service station attendants all suffered

UNION MOVEMENT IN THE NORTHWEST WAS SLOWED BY ECONOMIC INACTIVITY

Great Depression ate into management's profits

many corporations reduced wages and laid-off workers

union welfare plans were reduced to accommodate the growing number of those in need

assembly lines were speeded up causing exhaustion and accidents

Longshoremen, warehousemen, salmon canning workers and inland boatmen

were involved in organizing the docks along the waterfront but few gains were made

UNEMPLOYMENT EXPLODED AS THE ECONOMY DETERIORATED

Total unemployment was estimated at between 25 and 30 percent of the labor force

"working stiffs" were accustomed to losing their jobs

white collar workers and professionals were not

they attached their status as well as income to their employment

Money vanished in failed banks; farms were lost to unpaid mortgages -- many faced hunger

there were no safety nets to catch laid-off workers in an economic free fall

quickly despair yielded to anger -- then anger turned to determination

Yet there was no violent revolution in the nation

given the terrible state of the economy it is surprising

that there was not more violence during the Great Depression

this period of time was peaceful although there was ferment and labor strife

McNEIL ISLAND FEDERAL PENITENTIARY POPULATION REMAINS ABOUT 1,000 INMATES

Cell house No. 5 containing two new wings holding thirty-eight-man cells was finished -- 1930

penitentiary also added an administration building, auditorium, kitchen and dining hall

Due to the need for water another 1,618.33 acres were purchased

this brought the total prison acreage to 2,107.3 -- just less than half the island's 4,445 acres

During these years, sewage was just dumped onto the shoreline

(eventually, the penitentiary installed a pipe to discharge sewage directly into Puget Sound)¹²⁴

¹²⁴ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

PACIFIC NORTHWEST ABSORBED THOUSANDS OF MIGRANT WORKERS

(Early Hispanic immigration to the Pacific Northwest had begun in the [1850s]
a small number of Hispanics workers as muleskinners [team drivers] and cowboys
skill, courage, and responsibility brought some of them important positions such as foreman
but these jobs disappeared by the turn of the century as large-scale wheat farming
caused the disintegration of big ranches)

U.S. citizens of Mexican descent began new pursuits in the Northwest during the 1920s and 1930s
many became migratory agricultural laborers

these workers were mainly single men, residents of Texas, Arizona and New Mexico
who followed the crops north to California, Oregon Washington and Idaho
tracking the ripening fruit and vegetables
they worked in the Willamette Valley of Oregon and Yakima Valley of Washington
little is known about them
but their working conditions and social lives could hardly have been very good

BLACK CITIZENS CONTINUED TO WALK A DIFFICULT PATH

Terrible pressures of discrimination which they had experienced everywhere
were exacerbated by the Great Depression

but the black experience was, as always, one of fulfillment as well as discrimination

Urban blacks worked as musicians, maintenance workers, businessmen and in the professions
as well as in transportation which remained the chief means of livelihood for black workers
in Seattle transportation was a significant source of employment

African Americans worked as sailors and longshoremen
and for the Great Northern and Northern Pacific railroads

JAPANESE IMMIGRATION SLOWED DURING THE GREAT DEPRESSION

Washington state was home to 17,837 Japanese

there were 4,958 Japanese in Oregon

Idaho counted 1,421

There was a tendency for Japanese to congregate in cities which served as ports of entry
Portland, Seattle, and Tacoma

many Japanese settlers gardened, farmed and carried on small businesses with remarkable success
they mixed rather freely with the majority population

NORTHWEST POETRY AND FICTION SOFTENED THE GREAT DEPRESSION

Northwest authors were essentially descriptive

their writing was characterized by romanticism and parochialism

most of the plots were set in the pioneer years

which was safely removed from the conflicts and controversies of the Great Depression
characters in Northwest literature were heroic men and women -- people without flaws
“realism,” “naturalism”, and any critical note about the region, was absent

PLANS FOR LANDSCAPING THE CAPITAL GROUNDS ARE CARRIED OUT

Brothers John Charles Olmsted and Frederick Law Olmsted, Jr. were renowned landscape architects who served as consultants [1911-1912] for the Olympia campus they designed the original landscaping plan

trees and gardens were added to the dignity of the capitol and other buildings

this work was virtually completed by 1930

(Monuments have been added to what today is called the West Campus grounds)

- *Winged Victory* statue sculpted by Alonzo Victor Lewis was dedicated [May 30, 1938]

this bronze statue and its granite pedestal has four inscriptions:

facing South: **“They fought to safeguard and transmit to posterity the principles of justice, freedom, and democracy”**,

facing East: **“To the memory of the citizens of the State of Washington who lost their lives in the service of the United States during the World War 1917 1918”**,
and the state seal

facing West: **“Their sacrifice was to vindicate the principles of peace and justice in the life of the world”**,

facing North: **“Greater love hath no man than this, that a man lay down his life for his friend.”**

this monument has been restored numerous times since its installation

- *Story Pole* carved by Snohomish Artist-Chief William Shelton dedicated [May 14, 1940]

after the death of the chief, the project was completed by tribal carvers

- *Tivoli Fountain* designed by architects Wohleb, Wohleb and Bennett [April 15, 1953]

inscribed on it is **“Replica of the Tivoli Fountain—Tivoli Park, Copenhagen, Denmark. Presented to the State of Washington by Olympia-Tumwater Foundation. Peter G. Schmidt, President.”**

- *Du Pen Fountain* designed by artist Everett Du Pen for the front side of the state library building

this monument was dedicated [January 23, 1959]

today the Joel Pritchard Building houses government staff offices and a cafeteria

Du Pen’s design evokes images of the Pacific Northwest’s beauty

it features four sea gulls soaring above rippling waves, flanked by two leaping salmon
behind the sea gulls, level with the waves, sits a small crab

these forms symbolize the vigor and strength of the state

light, air, and water surrounding them represent Washington’s great natural resources
and prosperous industries

three water jets are positioned front and center in the fountain

they spray water straight up into the air

two more jets spurt water from supporting waves underneath the salmon

- *Territorial Sundial* was designed by artist John W. Elliot

it was dedicated [January 23, 1959]

its inscription reads: **“Time is a sort of river passing events, and strong is its current”**

~**Marcus Aurelius**

- *Medal of Honor* Monument located northeast of the Legislative Building

in the center of the west campus drive-around circle

this memorial it was dedicated [November 7, 1976]

it is a replica of the Washington State Obelisk in the Medal of Honor Grove,

Valley Forge, Pennsylvania

its inscription is an explanation of the Medal of Honor, U.S. Seal, Washington State Seal, an acknowledgment of donors, and the names of state recipients of the Medal of Honor

- *Vietnam Veterans Memorial* was designed by artist Kris Snider

located on the east lawn of the Insurance Building it was dedicated [May 25, 1987]

its inscription reads: **“Washington State Vietnam Veterans Memorial,”**

“To all my brothers and sisters who made it back, but never made it home. In memory of those who have died from physical and emotional wounds received while serving in the Vietnam War.

We honor and recognize their pain and suffering, but above all we respect the courage of these Washington State residents. When our country called, you were there. We have not forgotten, you are not alone. You Now Rest in Glory,”

names of the 1,116 state residents killed or missing are listed

- *POW-MIA Memorial* is dedicated to American prisoners of war and those missing in action

located directly east of the Winged Victory Monument

originally created as the Vietnam Veterans Memorial it was dedicated [1982]

when the larger Vietnam Memorial was dedicated, the original marble monument

was refitted with a new granite top inscribed with words honoring POWs and MIAs

its inscription reads: **“In gratitude to those who sacrificed their freedom in the service**

of our country we, the citizens of the State of Washington, dedicate this monument to honor all former American prisoners of war, those still missing, and those Americans who may still be held prisoner. National POW/MIA Recognition Day, September 16, 1988.”

- *World War II Memorial* designed by artist Simon Kogan dedicated [May 28, 1999]

is located on the Northeast campus lawn beside 11th Avenue

it focuses on the soldiers of Washington State who gave their lives in battle

bronze blades contain the names of the nearly 6,000 Washingtonians killed in the war,

large granite stones are engraved with a list of major battles fought by year,

over 1,000 granite tiles are inscribed with personal messages from project donors,

one bronze plaque gives a summary of World War Two events

another bronze plaque reads **“When my country called, I answered... When my**

country asked, I gave... Reach out now, across the years and through the tears...

Remember me.” - A WWII Veteran

- *Law Enforcement Memorial* designed by artist John Swanson

was dedicated to the Citizens of the state of Washington [May 1, 2006]

it is located north of the Temple of Justice

overlooking Capitol Lake, Heritage Park, and the Overlook Trail

an inscription reads: **“Their duty was to serve. Our duty is to remember”**

listed are the names of Washington state law enforcement officers killed in the line of duty

(Additional monuments and art pieces are located on the East Campus across Capital Way

- *The Shaman* is an abstract form depicting a prehistoric Indian Medicine Man

located on the East lawn of the Transporting Building it was dedicated [October 8, 1971]

an inscription reads: **“The Shaman, Sculptor James Lee Hansen, 1971”**

- *Water Garden* is a soothing water feature designed by artist Lawrence Halprin

- this art piece was installed [1972]
 sculptural concrete forms over which water would flow in a variety of ways
 terminates in pools and basins of varying depths
 cascading water is the dominant feature
- *untitled Stainless Steel* art piece was designed by Lee Kelly
 it is located on the North side of the Transportation Building
 installed [May-14-17, 1973] the stainless steel, Stonehenge-like piece was selected
 as it was “...**compatible with the building and plazas in scale and materials, even though clearly having a life of their own.**”
 - *Mysteries of Life* by artist James Washington, Jr. was dedicated [1973]
 located on the lower East lawn of the Transportation Building
 it depicts numerous religious and nature symbols
 a fish -- the universal symbol for the Christian Church,
 a rabbit -- representing the lower animal kingdom,
 a fetus-- representing the higher animal kingdom
 - *Boiler Works* designed by artist Thomas Jay
 is located on the lower lawn of the East Campus Transportation Building
 installed [1973] this nine-piece art work is designed “**to be accessible to people so that they can become involved both physically and socially. -- Jay**”
 - *Woman Dancing* was installed [February 7, 1976]
 it is located on the East Campus near the Highway-Licenses Building and Office Building
 its inscription reads: “**Woman Dancing, 1976, Phillip Levine**”
 - *Korean War Memorial* is located on the East Campus Plaza next to the Capitol Way skybridge
 was designed by artist Deborah Copenhaver Fellows and dedicated [July 24, 1993]
 it features three soldiers huddled around a campfire -- each displays a “**thousand yard stare**”
 inscribed on the memorial are the words: “**Korean War Veterans Memorial 1950-1953,**”
 “**The Forgotten War,**”
 it lists the names of all Washingtonians killed in that Police Action
 - *Sea to Sky* is an art piece mounted on the North entrance of the Natural Resources Building
 its inscription reads: “**Sea to Sky, by Susan A. Point, August 5, 1993. Washington State Arts Commission Arts in Public Places Program in Partnership with: Department of Agriculture, Department of Fisheries, Department of Natural Resources.**”

UNION PACIFIC RAILROAD ABSORBS SMALLER PACIFIC NORTHWEST RAILROADS

Washington Rail & Navigation (OWR&N) track

from Vale, Oregon through the Malheur Valley was abandoned in Eastern Oregon
 as well as fifty-eight miles of track connecting Robinette, Brownlee, Copperfield,
 and Homestead, Oregon

Northwesters Railroad Company’s short line from Huntington, Oregon along the Snake River
 was sold the Union Pacific Railroad

In Central Oregon the Oregon Trunk Line that connected Bend, Oregon with the Columbia River
 became part of a joint operation with the Spokane, Portland & Seattle Railroad

(Over the next thirty years the Union Pacific Railroad’s main line was rebuilt
 to accommodate various river dam projects constructed on the Snake and Columbia rivers

OWR&N name slowly fell into disuse as steam locomotives were replaced by diesel locomotives with the Union Pacific emblem on them)

PLAYLAND AMUSEMENT PARK OPENS IN SEATTLE

This twelve-acre recreational resort along the shores of Bitter Lake north of the Seattle city limits opened with a flourish -- May 24, 1930

Playland's feature ride was "The Dipper" a state-of-the-art roller coaster soaring eighty-five feet into the air with 3,400 feet of track

filled with reverse curves, sixty-degree banks and one virtual somersault
Playland was well located for thrill seekers coming from the north and the south

it was easily reached by electric streetcar and the Interurban trolley

whose 25¢ round trip fare included admission to the park -- rides were 10¢ each
by this time automobiles were well established in Seattle

Playland's location between Greenwood Avenue and Aurora Avenue

made driving north from downtown Seattle and south from Everett very easy
after the Aurora Bridge opened [1932] travel from Seattle was even easier

as a result land next to the park was cleared to provide free parking for 12,000 cars
entrance price for those who did not use the interurban was 10¢ for anyone over twelve

Rides provided entertainment for patrons seeking all levels of excitement

in addition to The Dipper for the more adventurous there was the "Giant Whirl"

made up of eighty-five-foot steel chains that connected thirty cars to a giant Maypole
or a quarter-mile long race track, the "Red Bug Speedway," awaited thrill-seekers

a fleet of bumper-cars, "Dodgems," provided an outlet for aggression by all age groups
for patrons with queasy stomachs there was the Penny Arcade and Shooting Gallery

and a Fun House with its trick mirrors and a revolving barrel best negotiated
by crawling on all fours

there was a Merry-Go-Round and a miniature scenic railroad

that ran along the shore of Bitter Lake

canals of Venice led boats through 1,200 feet of mysterious "underground"

dark and exotic passages provided an opportunity to hide adolescent displays of affection

Bill Darby's Playland Dance Band performed daily

in a 9,600 square foot hardwood floor dance pavilion

Playland was well planned with a variety of rides, quality concessions, and efficient public relations

it was poised for profitability but the owners opening was badly timed

it failed after only a year of business

operation was taken over by Carl E. Phare, the builder of The Dipper, who took over the lease

Fun could also be had for free inside the turnstiles

flagpole sitting and dance marathons were the fads of the day during the Great Depression

Park owners constructed an automobile race course, the "Aurora Speedway," [1932]

it was located on the vast parking lot to the east of Playland

across the Interurban tracks and fronting on Aurora Avenue

the oval track and large wooden grandstand covered the ground

between N 130th and N 135th Streets

(Playland thrilled park goers for thirty years until its demise at the end of the [1961] season)

rides were removed and their foundations covered with fill dirt
R. H. Thomson Junior High School was constructed at the west end
Bitter Lake community center and adjacent grassy fields were eventually built
near the site of The Dipper
the Speedway site became incorporated into a shopping center)

SILK PRICES CONTINUE TO FALL

Raw silk was Japan's major money crop
silk financed the country's foreign exchange and paid for its imports
From a high of nearly \$18.00 per pound [1920], prices dropped to \$3.56 --1930
as the price declined, shippers began using the longer but cheaper water route to New York
thus the demand for fast silk trains declined until thirty-six percent of imported silk
was shipped via the Panama Canal
Because the Japanese dominated the silk trade from production to marketing,
Japanese exporters could determine how silk reached its market
Lower prices for raw silk and declining silk imports in Seattle
meant the Great Northern ran fewer and shorter silk trains

COMMUNISTS BEGIN AN INDUSTRIAL UNION OF THEIR OWN

International Communist Party abandoned their policy of "boring from within" organizations
Communists hosted a convention of about 180 delegates
mostly former members of the Industrial Workers of the World (Wobblies)
Marine Workers Industrial Union (MWIU) was created -- April 26, 1930
it was to be a revolutionary, industry-wide Communist-led alternative
the American Federation of Labor (AFL)
MWIU claimed to represent seamen, longshoremen, and all other port workers
however, efforts to recruit longshoremen failed and it remained primarily a union of seamen
In the tradition of the IWW, MWIU carried out a series of highly visible protests and strikes
but each one ended in defeat

UNITED AIRCRAFT AND TRANSPORT CORPORATION REVOLUTIONIZES AIRPLANES

Monomail Model 200 was developed as a mail and cargo plane -- 1930
this sleek, low-wing airplane was most revolutionary commercial airplane at the time
with single, all-metal wings and retractable wheels
Improvements in design and range were made with the Model 221
in addition to cargo and mail, this six-passenger transport could accommodate six people
for flights up to 575 miles at 135 mph
However, major drawbacks of the Monomail held back production
its design was too advanced for the engines and propellers of the time
Model 221 required a low-pitch propeller for takeoff and climb
and a high-pitch propeller to cruise
by the time the variable-pitch propeller and more powerful engines were available
the Monomail was being replaced by newer, multiengine planes it had inspired

BOEING EXPANDS ITS MAIL AND PASSENGER SERVICE

U.S. Postmaster General Walter Brown used new legislation to consolidate the airline routes meetings (later called “the Spoils Conferences”) with key airline executives were held -- 1930 to provide service to regions of the nation and to establish routes

As a result of these meetings, three companies that would evolve into the modern airlines emerged:

- Stout Air Services and National Air Lines, which carried passengers throughout the mid-West, combined with Boeing Airplane and Transport Corporation to form a new company -- United Air Lines which flew the northern airmail route this company used only Boeing airplanes

United Air Lines changed its name to United Air Lines Transport Corporation it soon received a mail contract of its own

- Transcontinental Air Transport (TAT) and Western Air Express merged to form Transcontinental and Western Airline (TWA) which flew across the middle of the United States

- American Airways operated the southern route, which was extended to the West Coast

All competitors to these three companies were forced out of the airmail market

Postmaster General Brown also awarded bonuses if the airlines carried more passengers even more money was provided if they bought larger aircraft

powered by more than one engine and equipped with two-way radios and navigation aids

WILLIAM BOEING CELEBRATES HIS GOVERNMENT CONTRACT

Boeing enjoyed horse racing, golf, fishing, and boating

he commissioned construction of the 125-foot yacht *Taconite* -- 1930

named after the iron ore used in steelmaking that helped build his fortune

he cruised Northwest and Canadian waters

mail was ferried to him by a Douglas floatplane

on one of these vacations Boeing met bush pilot Clayton Scott

at the fuel dock in Carter Bay, British Columbia

Boeing hired Scott to pilot the Douglas amphibian airplane around the country

DIFFICULT WEATHER CAUSES PROBLEMS FOR MIDWEST FARMERS

Unusually wet period of the [1920s] encouraged increased settlement

and expanded cultivation in the Great Plains states

Weather across the mid-Western states turned violent

severe spring weather was quickly followed by a very dry summer

Oklahoma and the southern Great Plains states suffered from drought (long period of dryness)

but most farmers produced a wheat crop

Not all farming regions in the nation, or in the Midwest, suffered from dry conditions -- 1930

where rainfall was adequate bumper wheat crops were produced

which drove down the price for the harvest

wheat was everywhere, in the elevators, on the ground and on the roads

bumper crop of over twelve million bushels of wheat was produced

world's wheat surplus was reported at almost 600 million bushels

(almost 1/7th of total world average production)

wheat dropped nineteen cents hitting a price of eighty-six cents a bushel
(it would hit twenty-five cents a bushel [July 1931])
many farmers went broke and others abandoned their over-productive fields

OKLAHOMA SUFFERS FROM RECORD-BREAKING WEATHER CONDITIONS

Drought was accompanied with record breaking heavy rains, blizzards, tornadoes and floods
heavy rains of over five inches fell in a very short time in the Oklahoma Panhandle
causing flooding -- September 1930
flooding in Cimarron County was accompanied by a dirt storm
which damaged several small buildings and granaries
Corn was the only major crop not suffering from surplus production
smallest crop [since 1901] drove the price per bushel higher -- even surpassing wheat
Beef prices also plummeted

WASHINGTON POLITICS TAKES A TURN

Democratic Party's Progressive wing seized its opportunity during the Great Depression
Democrats did have internal divisions but these were manageable
first step was the selection of newly-elected U.S. Senator Clarence Dill and Scott Bullitt
as a National Democratic Committeeman
to help organize Democratic campaigns for office
Senator Dill and Scott Bullitt realized both the nation and the state
were ready to adopt drastic changes to pull their citizens out of the economic depression
they corresponded with Governor Franklin D. Roosevelt of New York
who was attempting to lead the Democratic Party in a Progressive direction
Roosevelt was also interested in running for the presidency

WASHINGTON STATE FARMERS GRANGE REVIVES PUBLIC POWER

Development of electric power was in the hands of private enterprise and municipalities
public ownership of power companies was idea whose time had come
Farmers Grange leaders proposed an initiative to be voted on in the 1930 election
which would permit formation of public utility districts (PUDs)
State Representative Homer T. Bone aided by U.S. Senator Clarence Dill
led the fight for the Grange Initiative
U.S. Senator Clarence Dill was a strong advocate for public utilities
he approached Franklin Roosevelt about the prospect of constructing a dam
on the Columbia River as he noted: **"I first spoke to Franklin Roosevelt about
Grand Coulee after dinner at his Hyde Park house in 1930 -- a year before he'd even declared he
was running for President. He was blowing cigarette smoke and bubbling with ideas on how to halt
the Great Depression."**¹²⁵

Public Utility Districts were a splendid progressive issue, but it had one weakness:
opposition from supporters of Seattle and Tacoma municipal electric systems
which hoped to run their own power lines into the surrounding country

¹²⁵ Crutchfield, James A. *It Happened in Washington*. P. 101.

ANNA LOUISE STRONG MAKES A NAME FOR HERSELF IN THE SOVIET UNION

Dr. Strong helped begin the first English language newspaper in the Soviet Union

The Moscow Daily News -- 1930

(she was later made editor of the newspaper)

(She married a Soviet official [1932])

and continued her writings praising Communist governments:

•*The Soviets Conquer Wheat* [1931]

•*China's Millions: The Revolutionary Struggles from 1927 to 1935* [1935]

she also wrote an autobiography, *I Change Worlds: the Remaking of an American* [1935]

and a book entitled *The Soviet Constitution* [1937]

OPTIMISM RUNS HIGH IN THE NATION

Great Depression's eight month old panic had subsided

there was a feeling of bewilderment about the economy but there was also optimism -- fall 1930

many expressed the belief that "prosperity was just around the corner"

Most people could accept their plight

everyone was worse off than they had been a year ago

but people could still live off their accumulated savings -- and credit was still available

it was said 1930 was bad only in comparison to [1929]

People talked about the upturn that would come -- and they believed it was inevitable

they had faith in it, and because they did, they set up a pattern of living called "hanging on"

businessmen struggled to keep going any way they could until the upturn came

those with a job hung on any way they could

they took lower wages and worked longer hours -- soon things would return to normal

those out of work remained close by so they could return to work when jobs opened up again

President Herbert Hoover's sentiment regarding federal funds for relief to the southern Great Plains

was to reiterate President Grover Cleveland's [1887] statement: "...**the people should**

patriotically and cheerfully support their Government its functions do not include the support of the people." (Cleveland's Second Inaugural Address)

President Hoover promoted self-help and volunteerism

he said there had been "minimum actual suffering"

instead of federal food relief funding,

Hoover called on the Red Cross to meet the disaster relief need

Congressional drought bills waffled on the Senate and House floors

proposed loans for farmers required a mortgage on the upcoming crop

but with the last year's mortgage yet unpaid, most farmers did not qualify

idea of dispensing food for livestock but not citizens was discussed and loudly criticized

finally a compromise was reached:

\$45 million for seed and feed and a later appropriation of \$20 million for feeding people

STATE ELECTION CONTINUES REPUBLICAN DOMINATION

Republicans dominated the state's Congressional offices -- November 4, 1930

newly elected Congressman Ralph A. Horr, Seattle Republican

replaced Seattle Republican John F. Miller also a Seattle Republican
(Horr served one term -- [1931-1933])

Three of the five Washington state congressional representatives were Republicans
Whatcom County's Lindley Hadley, Tacoma's Albert Johnson, John Summers from Walla Walla
two exceptions were:

- Democrat National Senator Clarence C. Dill who was reelected;
- Waterville Democrat Congressman Samuel B. Hill also was reelected
(U.S. Senator Wesley Jones from Yakima did not stand for reelection this year)

Republicans also continued their domination over state politics:

- forty-one Republican state senators were elected
one Democratic state senator was elected
- eighty-nine Republican state representatives took their seats
eight Democratic state representatives took office
- Republicans also held every state executive office

INITIATIVE 57, LEGISLATIVE REDISTRICTING, IS APPROVED BY THE VOTERS

Voters approved an initiative to redistrict the legislature -- November 4, 1930
this proposal provided for an increase of state senators from forty-two to forty-six
and state representatives from ninety-seven to ninety-nine

Other changes included:

- state representative districts were made the same as state senatorial districts;
- each district had a minimum of two representatives;
- county lines were used primarily as boundaries for legislative districts

(A later State Supreme Court ruling upheld the use of the initiative's process for redistricting)

GRANGE INITIATIVE CREATES PUBLIC UTILITY DISTRICTS IN WASHINGTON STATE

Formation of public utilities was authorized by the voters of Washington -- November 4, 1930
although the legislature had previously refused on consider the proposal
voters approved the Grange Power Bill (Initiative No. 1) by a margin of 152,487 to 130,901
many voters who were served by private power companies were opposed the measure
yet it was approved by a 54 percent majority and by 28 of the state's 39 counties

Grange Power Bill created one of the strongest and most unique public power laws in the nation
it is unique because the law provides for the establishment of municipal corporations
that encompass the strongest elements of private corporations, rural electric cooperatives
and municipal utility systems

Public Utility Districts (PUDs) have the basic business structure of a private corporation:

- board of commissioners serve in the same capacity as a board of directors;
- PUDs combine the public interest benefit of a non-profit operation
with low cost public financing methods of a municipal system;
- PUDs incorporate the area coverage concept in utility service
as practiced and promoted by the rural electric cooperatives

PUBLIC UTILITIES DISTRICT (PUD) ARE FORMED IN WASHINGTON

Grange Power Bill only created laws that enabled county residents to form Public Utilities Districts

hardest part was yet to come
development of electric power had been in the hands of municipalities and private enterprise
ominous task of actually forming publicly owned utilities
and getting them into the power business
met with constant opposition and continual resistance
Public Utilities Districts (PUDs) usually existed within a single county's boundary
PUDs were given the authority to acquire any or all of the facilities of privately owned businesses
including both the generation and distribution of power
PUDs also were provided the power to borrow money and to tax
PUDs became the agents of building projects
(In the next ten years public utility districts (PUDs) sprouted
until [by 1940] twenty-three of thirty-nine counties had them)

WASHINGTON'S U.S. SENATOR CLARENCE DILL ADVOCATED PUBLIC UTILITIES

Democrat Clarence Dill approached then-New York Governor Franklin Roosevelt
who was then considering running for president
their conversation focused on constructing a dam on the Columbia River
as Dill later reported: **"I first spoke to Franklin Roosevelt about Grand Coulee after
dinner at his Hyde Park house in 1930 -- a year before he'd even declared he was running for
President. He was blowing cigarette smoke and bubbling with ideas on how to halt the Great
Depression."**¹²⁶

WEATHER TURNED TO SEVERE STORMS

After a (summer and fall) of drought had swept the Great Plains
record breaking heavy rains, blizzards, tornadoes and floods
swept the nation's heartland -- winter 1930-1931
yet another dirt storm later swept the mid-West
before the winds gave way to blizzards from the north

TWENTY-SECOND ANNUAL MEETING OF THE STATE LEGISLATURE

Convened -- January 12, 1931
At the beginning of the 1931 legislative session
nine members of the State Tax Advisory Commission gave their report to the legislature
they recommended that in order to equalize the tax burden on Washingtonians -- 1931
the state derive its revenue from an income tax rather than from the property tax
property tax would be left to local government as their chief source of revenue
although Governor Roland Hartley favored the sales as the remedy
State Tax Advisory Commission came out opposed
they viewed the sales tax as a last resort to solving the property tax problem
This report validated the Farmers Grange's long-held support for the income tax
Grange and other proponents of an income tax felt that their best chance had come:
•Governor Hartley's commission had recommended it;

¹²⁶ Crutchfield, James A. *It Happened in Washington*. P. 101.

- Great Depression created a climate for action that could buoy public support

Early in the legislative session, bills were introduced in both the state House and Senate
one measure called for a personal income tax
another bill proposed an income tax on corporations
both measures passed the legislature with large margins in each chamber
they were sent to the governor's desk for signing

END OF THE SILK TRAIN ERA

Falling silk prices and an increase in all-water shipping from Japan to New York
drove silk shipping out of Seattle and the West Coast
Great Northern Railway alone had run 307 silk trains averaging more the thirty-eight a year
(between [1925] when records began and [1932])
(Engine No. 2517, *Marathon*, had made its endurance run with eighteen cars [1926])
now the white flag trains of nine, ten, or more cars were gone
silk trains of four five and six cars became common
many special trains now carried not only silk, but berries, cherries and fresh salmon
increasingly, the Great Northern Railway attached silk cars to passenger trains
Nippon Yusen Kaisha (NYK), among the largest and most aggressive Japanese shipping firms,
all but ceased delivering silk to Seattle -- 1931

END OF ROAD FOR BUILDER AND ENTREPRENEUR SAM HILL

On his way to address Oregon's legislature, Sam Hill was stricken with "intestinal influenza"
he died in Portland two weeks later -- February 25, 1931
his ashes were entombed near his Stonehenge memorial on his Columbia River estate
Hill's daughter Mary Mendenhall Hill, suffered from emotional and mental problems all of her life
mentally ill, she was eventually declared incompetent and resided in an institution
Hill's son James Nathan Branson Hill lived the life of a wealthy man
but he did not live up to his father's expectations regarding ambition or academic excellence
he never made any particular mark on the world
father and son did not speak to each other during the last years of Hill's life
Sam Hill had at least three other children with women he did not marry
he provided for them by setting up trust accounts in their names
(Today, *Sam Hill Memorial Bridge* carries U.S. Route 97 across the Columbia River near Maryhill)

ECONOMIC CONDITIONS WORSEN FOR AMERICANS

It was now apparent the Stock Market crash [1929] would have a long and devastating impact:

- unemployment doubled to 16.3% as eight million men were out of work
(women were not counted in the job market);
- consumer consumption of goods dropped an estimated seventeen percent [from 1930];
- 2,500 banks in the U.S. failed;
- many car manufacturers also went out of business
as people did not have money to buy new cars;
- Chicago ran out of money and could not pay teachers for two months;
- Las Vegas, Nevada made the decision to legalize gambling

Even so, successes were to be found

Star Spangled Banner was named the United States' National Anthem -- March 3, 1931
(New York City's Empire State building, the tallest building in the world at that time
at 102 stories was completed [May 1, 1931]

New York also saw the completion of the George Washington Bridge [October 25, 1931]
which connected New York and New Jersey

GOVERNOR ROLAND HARTLEY VETOES THE INCOME TAX BILLS

Governor Hartley vetoed both the corporate and personal income tax bills -- March 24, 1931
he was vehemently opposed the income tax
in his argument in support of his veto,

Hartley claimed that the enforcement of the income tax would be too difficult
and would require huge numbers of new workers to administer
he also claimed that shrinking government and reducing costs would do far more
to help relieve the tax burden than the income tax
finally, he argued that an income tax would not withstand judicial scrutiny

CONSTRUCTION OF BOULDER DAM IS UNDERTAKEN

This enormous construction project was filled with controversy
engineers reassessed the location and moved the project from Boulder Canyon
to its present location in Black Canyon ten miles further south
even naming the dam was controversial
Hoover's Administration changed the name from Boulder Dam to Hoover Dam [1930]
Franklin Roosevelt Administration changed it back to Boulder Dam [1933]
Harry Truman's Administration restored the Hoover Dam name [April 30, 1947])

Before work could start on the project, the Colorado River had to be diverted
to accomplish this, four tunnels, each fifty feet in diameter, were drilled
through the solid rock walls of Black Canyon

Construction of the dam was ordered to begin -- late March 1931
this project was so enormous that six huge western contracting firms
created a consortium call Six Company, Inc. to submit a competitive proposal
one of these was Henry J. Kaiser & W.A. Bechtel of Oakland, California
their bid of \$48,890,955.50 was the lowest to qualify
they had won the largest labor contract let by the U.S. Government up to that time
Six Company, Inc. given incentive bonuses for finishing ahead of schedule
and would be fined for each day construction overran the assigned target date
thus began a furious pace of around the clock construction

SPOKANE INDUSTRIALIST HENRY J. KAISER LEADS THE HOOVER DAM PROJECT

Kaiser partnered with Warren A. Bechtel to form
Henry J. Kaiser & W.A. Bechtel of Oakland, California
as part of Six Companies, Incorporated this firm was one of the prime contractors
in building Hoover Dam -- 1931
Henry J. Kaiser became the head of Six Companies, Inc. [1930-1939]

(in addition to Hoover Dam the company constructed more than seventy large-scale projects
piers for the San Francisco-Oakland Bridge, Bonneville Dam, and Grand Coulee Dam)
Kaiser had only hit his stride as an industrialist

CONGRESS PASSES THE *REFORESTATION RELIEF ACT*

President Roosevelt asked for and received from Congress the Reforestation Relief Act -- March 31
this established the *Civilian Conservation Corps (CCC)*

workers were supplied with food, shelter, transportation, clothing, medical care
and some education or training

250,000 immediate jobs for urban poor and unskilled men age 18-25 opened up
employees planted trees in reforestation projects, constructed dams and roads,
installed telephone lines, worked to prevent soil erosion and flood control
and developed national parks and national forests

(before its end [in 1941], 2½ million men had worked in 1,500 CCC camps
critics, then and now, claimed this was “make work”

more than forty camps were operated in Washington state

2,500 men mostly single aged eighteen to twenty-five and those with dependent families,
became “dollar-a-day men” -- \$30 a month with \$25 deducted for their families
many of these workers learned about punctuality, reliability, hard work
and they learned a trade

NEW WOOD BY-PRODUCTS GO ON THE MARKET

Forest industry did show a few gains

process of adapting wood to new by-products was accomplished without government help
Weyerhaeuser Timber Company, for example, opened its first pulp mill -- 1931
at Longview, Washington

By-products developed in the 1930s included ceiling tile and insulation
plywood, invented earlier, was improved as machinery and glues progressed
pres-to-logs made from wood shavings and chips came on the market

SEVERE WEATHER CONTINUES IN THE MIDWEST

After the blizzards of (winter) subsided (with the spring) the drought began anew and spread -- 1931
first the northern plains felt the dry spell
then the southern plains suffered from the drought -- July
(drought conditions continued for almost a decade)

SEATTLE LIBERALS DEMAND RELIEF FOR THE UNEMPLOYED

In response to the Great Depression, West Seattle liberals, radicals, reformers, socialists, unionists
and unemployed workers gathered at the Olympic Heights community clubhouse -- July 23, 1931
to demand that government officials increase relief assistance to the unemployed
by creating public works jobs with a total expenditure of no less than \$1 million in wages

SEATTLE LIBERALS FORM THE UNEMPLOYED CITIZEN'S LEAGUE

Liberal activists around Seattle met once again to demand relief for the unemployed

they named their organization the Unemployed Citizen's League (UCL) -- August 6, 1931
In addition to demanding public works jobs be provided, these activists
began to organize relief measures such as harvesting corps, cutting fuel wood and fishing
they also established cooperative self-help enterprises
declaring that the unemployed must produce some of what they needed on their own
Individual contributions of each Unemployed Citizen's League branch strengthened the movement
(over the next few months, UCL branches sprang up across Seattle
almost two dozen branches operated on a regular basis in the city's neighborhoods
these involved thousands of men and women many of whom
worked in the cooperative enterprises housed in each branch headquarters)

CROPS CAN FINALLY BE PLANTED

It was not until fall that the ground had enough moisture for planting -- late September 1931
with no rain crops began to die
lack of crops meant the wind blew bare soil high in the air creating dust storms
schools were closed because of dust storms, not snowstorms
An early frost ended what hope remained for those trying to make a living from the soil
hard times caused by the Depression, drought and frost forced those who were heavily in debt
to give up and move from their farms to look for work -- leaving the land exposed to the wind
even technology seemed to work against the farmers
pushed by the good times [of the 1920s], farmers bought tractors, new hybrid seed,
chemicals, irrigation systems and more land expanded their farming operation
all bought on credit -- and all useless against the drought

ALASKA ADVENTURER EXPLORES NORTHERN ALASKA

Leslie Melvin, a 21-year-old Highline High School graduate,
mushed four unmatched dogs from Martin Point on the Beaufort Sea to Nome, Alaska
he covered 1,500 miles in 132 days -- October 1931 to [February 1932]
he estimated he had actually gone at least 3,000 miles
due to unplanned wrong turns, endless circling in blizzards and intentional side trips

WASHINGTON WRITER WINS A PULITZER PRIZE

Washington poets have been both productive and successful
Audrey Wurdemann, from Seattle, won the Pulitzer prize -- 1931
for her second volume of poetry, *Bright Ambush*
at that time, she was the youngest writer to ever be so honored

STATE ELECTION SHOWS LITTLE CHANGE

Although the economy was continuing to fall as the Great Depression deepened
voters made little change in the state legislature -- November 2, 1931
State Senate members remained divided Republicans forty-one; Democrats one (as in [1929])
State Representatives showed only a very slight gain for Democrats
Republican fell from ninety-one members [1929] to eighty-nine
Democrats rose from six [1929] to eight members -- 1931

TOWNS OF DISPLACED AMERICANS SPRING UP

Homelessness quickly followed joblessness as the economy continued to crumble
homeowners lost their property when they could not pay their mortgage or their taxes
renters fell behind and faced eviction
Many of the displaced squeezed in with relatives
others simply squatted -- taking over available property
they found shelter in one of the increasing numbers of vacant buildings
hundreds of thousands, no one knows how many, took to the streets
they found what shelter they could under bridges or in culverts
thousands of others moved to vacant public land
where they built crude shacks and often defied eviction efforts by local officials
these settlements took various local names: Shacktown, Shantytown and Ragtown
many locales politicized the need of the suffering by calling their camp "Hooverville"
in sarcastic honor of President Herbert Hoover who was sitting in the White House
some cities allowed squatter encampments for a time; others did not

SHACK TOWNS SPRING UP IN SEATTLE

Many of the region's jobless clustered wherever else they could find shelter
Tacoma's Shantytown was called Hollywood-on-the-Flats
locations in Seattle went by such names as:
"Indian Town" on the Duwamish tideflats;
"Hollywood" on Sixth Avenue South just South of Lander;
"Reno" North of Lander;
there were collections of shanties located on Harbor Island and under the Magnolia Bridge
Seattle's Hooverville was one of the largest, longest-lasting and best documented shanty towns
in the nation

HOOVERVILLE COMES TO LIFE IN SEATTLE

Jesse Jackson, an unemployed logger, and twenty others started building shacks
on nine acres of vacant land owned by the Port of Seattle
located a few blocks south of Pioneer Square -- October 1931
Skinner and Eddy Shipyard Plant 2 formerly occupied the location but had closed [1920]
within a few days they built fifty shanty huts fashioned from every conceivable sort of material
When the shacks were brought to the attention of the City of Seattle,
Seattle Health Department posted notices on every shack ordering it vacated within one week
seven days later the Seattle Police arrived with cans of kerosene and burned down the shacks
Squatters immediately rebuilt
about a month later the city burned down the shacks once again
this time the residents burrowed into the ground and constructed roofs made of tin or steel
unable to burn them out, the city relented and allowed them to stay
on the condition that they adhere to safety and sanitary rules

SEATTLE'S HOOVERVILLE WAS VERY WELL ORGANIZED

Hooverville's population continued to climb as the economic crises deepened
(census taken [March 1934] counted 632 men and seven women living in 479 shanties
they ranged in age from fifteen to seventy-three
there were 292 foreign-born Caucasians, 186 Caucasians born in the United States,
120 Filipinos, twenty-nine African Americans, three Costa Ricans, two Mexicans,
two Indians, two Eskimos, and one Chilean)
many of these were the middle-aged laborers who had provided the migratory muscle
necessary to build an expanding nation
(over its ten years of its existence, Hooverville claimed a population of up to 1,200)
Hooverville operated its own community government including an unofficial mayor
unemployed logger Jesse Jackson was the most public Hooverville resident
he became the liaison between the inhabitants and City Hall and local businesses
people began to refer to him as the mayor of Hooverville
Mayor Jackson settled fights and called ambulances
he met with city officials and played host to visiting sociologists and professors
studying "how other half lived"
Reuben Washington served as "police chief"
Hooverville enjoyed the protection of Progressive groups and sympathetic public officials
Seattle authorities attempted, without total success, to decree that no women or children
were permitted to live there

LIVING CONDITIONS IN HOOVERVILLE REFLECT THE ECONOMIC TIMES

Packing crates and scrap lumber were pressed into service as houses
roofs were made of metal pieces with joints caulked using tar scraped from city streets
shacks rented for \$5 a month
with the addition of firewood and some decorator touches the price could go up to \$30
unemployed men made stoves out of oil drums and rigged their own lanterns for use at night
Food was cooked over open fires in tin cans
wholesale bakeries dropped off truckloads of stale bread and pastries
shriveled vegetables were available for consumption at local produce houses
chickens seemed to often stray outside of their pens and get lost
stew meat of some type was referred to as "slumgullion"
it was gathered from somewhere and was of dubious quality -- questions were not asked
At night residents had a bed and blanket which they provided for themselves
perhaps a pipeful of tobacco could be enjoyed
"Mayor" Jessie Jackson had a radio at the "executive mansion"

OTHER SHANTY TOWNS APPEARED ALONG PUGET SOUND

Tacoma's "Hollywood" shantytown was located on the tidflats at the end of the Puyallup River
near the city dump
Olympia's, "Little Hollywood" consisted of floating houses in the mudflats
on what is now Capitol Lake
(City authorities burned down both shantytowns but they would rise again when the ashes had cooled
only to be burned again before finally disappearing for good [1953])

ALEXANDER SCOTT BULLITT IS ACTIVE IN DEMOCRATIC POLITICS

As Seattle's Hooverville and other shack towns expanded and the Depression deepened, Scott Bullitt saw in Franklin D. Roosevelt a perfect political candidate
he said Roosevelt was philosophically an aristocrat with a noble purpose
who sympathized with the needs of working people -- not unlike Scott Bullitt himself
Bullitt became an active member of the Roosevelt campaign for the presidency
and helped unite Washington State behind him

WASHINGTON VOTERS ATTEMPT TO REPEAL STATE LIQUOR LAWS

Washington State's "blue laws" made liquor sales illegal on Sundays
beer and wine could be imbibed in taverns, but by-the-drink sales of hard liquor were forbidden
State Initiative Measure Number 61 to the voters to repeal some of Washington's blue laws
was filed in Olympia -- January 1932

PRESIDENT HOOVER ATTEMPTS TO HELP STATE AND LOCAL GOVERNMENTS

Great Depression had so strong a grip on the American economy that President Herbert Hoover moved away from his hands-off policy in dealing with the crisis
Hoover now believed if the government would shore up banks and railroads
decline of industry and agriculture could be halted, unemployment reversed
and purchasing power restored
(this approach had met with some success during the Great War)
Both houses of congress pass a Bill -- January 15, 1932
that created the Reconstruction Finance Corporation (RFC)
RFC was funded with \$500 million and was empowered to borrow up to \$2 billion
to in aid to state and local governments
and to assure the survival of large banks, railroads, farm mortgage associations,
savings and loan associations and life insurance companies
no money was made available for the relief of American citizens

ALEXANDER SCOTT BULLITT IS A LEADER IN THE FRANKLIN ROOSEVELT CAMPAIGN

Washington State Democratic Party leader Scott Bullitt
moved into Franklin Delano Roosevelt Hyde Park residence
there the campaign strategy was plotted in the race for the presidency -- January 1932
Scott Bullitt was selected to address the delegates of the Chicago Democratic National Convention
he was to place FDR's name in nomination
(after Roosevelt's election he was to be appointed National Chairman of the Democratic Party)

REPUBLICANS LACK ANY CONSTRUCTIVE PROGRAM TO ADDRESS THE DEPRESSION

Farms were vacated and factories were shut down
penniless, unemployed and displaced people arrived in cities in legions
from lumber camps, industrial plants, fishing fleets, offices, government positions, schools
and a myriad of other places that no longer provided work
these were not just the "welfare class"

but included professionals such as lawyers, medical doctors, barbers, bricklayers, carpenters and bank clerks
many searched skidroad hiring halls looking for work
others gathered scrap metal, bottles and rags or bundled up old newspapers to be sold for cash

RADICAL IDEAS BECOME POPULAR AMONG DESPERATE PEOPLE

Relief, unemployment compensation, and old age pensions
joined the private power versus public power debate as a major issue of state politics
Layoffs caused men to lose their self confidence
some lost faith in the American capitalist economic system
some turned to Communism (state ownership of property and the means of production) as the solution to the crisis
Radical ideas were widespread in the nation and a few demagogues arose
who gained power by appealing to people's emotions, instincts, and prejudices in manipulative and dangerous ways

TWENTIETH AMENDMENT TO THE U.S. CONSTITUTION PASSES CONGRESS

National and state political leaders had long discussed extending the length of time between the election of the president and the inauguration of the president
[November to March 4]
this was known as the "Lame Duck" period as the nation waited for the president to exit
Additional concerns were expressed regarding the constitutional requirement that congress meet in [December] after the [[November] general election
this was known as the "Lame Duck" session of Congress as retiring and defeated congressmen were included in the [December] session although they would be gone in [January]
An Amendment to the United States Constitution passed Congress -- March 2, 1932
among other things, the "Lame Duck" Amendment reduced the amount of time between Election Day and the beginning of Presidential, Vice Presidential and Congressional terms as stated in Section One: **"The terms of the President and Vice President shall end at noon on the 20th day of January** (rather than [March 4] as previously stated), **and the terms of Senators and Representatives at noon on the 3d day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin."**
This proposed Twentieth Amendment was sent to state legislatures for ratification
agreement of three-fourths of the states was necessary to implement the amendment

VICTOR ALOYSIUS MEYERS IS THE "CLOWN PRINCE OF POLITICS"

Born in Minnesota the fifteenth of sixteen children
Vic Meyers grew up to play drums professionally at a Seaside, Oregon hotel
at age twenty-one he put together a ten-piece band and recorded for Brunswick Records
they toured nationally before settling in Seattle where Meyers played on the radio
Vic Meyers' band first took up residency at Seattle's Trianon Ballroom
in the Belltown/Denny Regrade area north of downtown
Meyers' popular band played for many years at the Rose Room at the Butler Hotel

Seattle's leading dancehall was known equally well for flouting Prohibition laws
Vic Meyers left the Butler Hotel and opened the *Club Victor* back in the Regrade area of town
he was one of the city's best-known figures
still his musical popularity left him with little money
and federal "Revenuers" constantly harassed him for violating Prohibition laws
Seattle Times newspaper urged Meyers to enter the nonpartisan Seattle mayor race -- spring 1932
city editor Doug Welch saw Meyers as a joke candidate
whom he could use for satiric stories about the candidates
Times trumpeted Meyers' entry into the race with an eight-column page one headline
it also gave him daily coverage -- Meyers was happy to have the publicity
Seattle Mayor candidate Vic Meyers
chose a meaningless campaign slogan "Watch 'er Click with Vic"
to prove he was not a representative of the vested interests he campaigned in shirt sleeves
later to prove he was not anti-upper class he campaigned in a tuxedo, silk scarf, top hat,
velvet lapelled overcoat, and kid gloves
he drove a beer wagon around town, although Prohibition was still the law of the land,
as his band played *Happy Days Are Here Again*
his speeches were often parodies of his opponent's campaign talks
he came out in favor of graft
his answer to the problems of Seattle's failing streetcar system was to add hostesses
he appeared at a Shriners' candidate forum at the Olympic Hotel dressed as Mahatma Gandhi
wearing gold-rimmed eyeglasses, leading a goat, sipping goat's milk
all the while munching raw carrots
In the course of the campaign Meyers discovered his ideas were as good the other candidates'
he also got tired of complaints from the *Times's* rivals, the *Post-Intelligencer* and the *Star*
that he was degrading the electoral process
Increasingly, he ignored the *Times's* joke writers and began to campaign seriously
John F. Dore was elected Seattle's mayor -- March 8, 1932
Vic Meyer finished sixth in a field of ten -- but he was even better known in the city

SEATTLE MAYOR JOHN F. DORE TAKES OFFICE

Before his election to office Dore tried to straddle the political fence
declaring Dave Beck and Harry Bridges were "the two greatest friends I ever had"
When he took office, Mayor Dore said Seattle Teamster leader Dave Beck
had been the most important factor in his election
(When issues became more volatile Dore was forced
to join with the American Federation of Labor (AFL) forces
he stated that he was going to pay Beck back if it was the last thing he ever did
as Beck's tactics became more and more high-handed
it was evident that Mayor Dore's decision might well put an end to his political career)

YELLOW DOG CONTRACTS STOP UNION RECRUITING

Before they were hired, employees were forced to sign "Yellow Dog" contracts
which stipulated they would not join a union or they would be fired

(Federal courts upheld the legality of yellow dog contracts and frequently struck down state laws that attempted to outlaw them during the [1920s])

Congress enacted the Norris-LaGuardia Anti-Injunction Act -- March 8, 1932

this declared Yellow Dog contracts contrary to public policy and unenforceable in federal courts

this act also gave labor unions the right to organize, strike, and use other forms of leverage against management without interference from federal courts

MORE DISASTEROUS CONDITIONS FACE MIDWEST FARMERS

Because of the late planting, lack of moisture and early frost experienced the year before [1931]

much of the wheat crop was small and weak when the winds began to blow -- spring 1932

Wheat was also beaten down by dirt from neighboring abandoned fields -- March

there were twenty-two days of dirt storms -- drifts began to build along the fence rows

UNEMPLOYED CITIZENS LEAGUE FIGHTS FOR ECONOMIC AND SOCIAL JUSTICE

Members planted, harvested and distributed food through their commissaries

when county commissioners attempted to employ a paid county manager

to take over UCL commissaries, members came together to stop their attempt

With the Unemployed Citizens League central federation established and membership increasing

UCL was well on its way to becoming the nation's premiere model for similar organization

UCL branches sprang up in Tacoma, Bellingham and Spokane

as more UCL branches sprouted up the need for a central federation

to represent the entire league became apparent

UNEMPLOYED CITIZENS LEAGUE ENTERS THE POLITICAL ARENA

Democratic Governor Hartley and conservatives believed that relief for the poor and unemployed was the responsibility of the family and community and any able-bodied man could find work

One of UCL's political efforts involved supporting John F. Dore for Seattle mayor -- March 1932

when he won the office UCL proved it had become a political force

Communist Party members began to gain influence in the Unemployed Citizens' League

damaging the UCL's credibility and causing an ebbing of members

CONGRESS FOCUSES ATTENTION ON THE POTENTIAL OF THE COLUMBIA RIVER

U.S. Army Engineers "308 Report" [1926] declared that the Columbia River had the potential

to be **"...the greatest system for water power to be found anywhere in the United**

States...."¹²⁷

further, the river could be controlled and managed as one system

Board of Engineers of the U.S. Army expanded the "308 Report"

from eight hydroelectric dams in the Pacific Northwest to ten

¹²⁷ Bonneville Power Administration, *Fish and Wildlife Implementation Plan: Final Environmental Impact Statement*, Vol. 1, P.2-19.

for the purpose of “...**improving the Columbia River and minor tributaries for the purposes of navigation and efficient development of water-power, the control of floods and the needs of irrigation....**”¹²⁸

these proposed dams could electrify cities and rural areas,
create reservoirs for navigation
and bring a measure of control to the Columbia River’s periodic rampaging floods
This was good news for a country in the throes of the Depression
in fact, the demand for power at the time was far below the potential output of ten large dams
but the construction projects would put people to work
and hydropower would transform the nation

ALEXANDER SCOTT BULLITT DIES OF CANCER

Scott Bullitt became ill with what was announced to be the flu
but it was cancer of the liver and gall bladder
Alexander Scott Bullitt, attended by his wife Dorothy (Simpson) Bullitt
died at his home in Seattle -- April 10, 1932

Bullitt’s death was an enormous setback for the state and national Democratic Party

It was a staggering blow to his party; a death that shattered any hope for cohesion and stability in the Democratic organization; there was no other figure of comparable stature.”¹²⁹

State Democratic Party leadership was taken over by organized labor

WASHINGTON STATE FARMERS GRANGE WORKS FOR A STATE INCOME TAX

Grange members turned to the initiative ballot process to bypass the legislature and the governor
and to provide a means of sound taxation policy for the state

Washington State Grange had a membership of nearly 30,000 throughout the state
it was confident that it had the ability to collect the 60,000 signatures needed
to qualify an income tax measure for the 1932 election

Grange attorneys carefully drafted the language of the initiative:

“An act relating to and requiring the payment of a graduated income tax on the incomes of persons, firms, corporations, associations, joint stock companies, and common law trusts, the proceeds therefrom to be placed in the state current school fund and other state funds, as a means of reducing or eliminating the annual tax on general property which now provides revenues for such funds; providing penalties for violation; and making an appropriation from the general fund of the state treasury for paying expenses of administration of the act.”

GERMAN REPUBLIC ELECTS ITS SECOND PRESIDENT

(Still suffering economically under the terms imposed by the Treaty of Versailles

Paul Ludwig von Hindenburg was elected the second president of the Weimar Republic [1925]
constant political squabbling among the numerous political parties in the German Reichstag
resulted in an ineffective government)

¹²⁸ Bonneville Power Administration, *Fish and Wildlife Implementation Plan: Final Environmental Impact Statement*, Vol. 1, P. 5-116.

¹²⁹ Fayette Florent Krause, “Democratic Party Politics in the State of Washington during the New Deal” (Ph.D. diss., U of W , 1971) P. 20, 23, 39.

German President Paul Ludwig Hans Anton von Beneckendorff und von Hindenburg was persuaded to run for re-election -- 1932
although he was eighty-four years old and in poor health
he was considered the only candidate who could defeat Adolf Hitler
who advocated the right-wing Fascist political theory that an authoritarian government better served the needs of a nation than did democracy or a liberal philosophy
Hitler exalted nation and race above the rights of the individual
Hindenburg won the election, but Hitler received 37% of the vote
Germany's government remained on the brink of collapse
right-wing gangs of "brownshirts" about 400,000 strong were a part of daily street violence
Germany's economy was still in crisis
In an effort to save the government from Hitler's fascist ambitions
von Hindenburg dissolve parliament twice --1932
(eventually he appointed Adolf Hitler as Chancellor of Germany [January 1933])

EUROPE FEARS THE RISE OF FACIASM IN GERMANY

Threat of totalitarian enslavement and war loomed more and more ominously
appeasement culminated in the Munich Pact which, rather than checking events,
encouraged new waves of blackmail, treaty-breaking, and aggression
During this time as Melvin Rader noted in his book *False Witness*, "...Maxim Litvinov as the spokesman of Soviet foreign policy, eloquently denounced the policy of appeasement and insisted, time and again, that only a united force could halt the Fascists."¹³⁰
Political factions were formed in European nations to resist the growth of Fascists in Germany
France developed a Popular Front" aimed at resisting Fascism in Germany
Communist Soviet Union initiated a "United Front" strategy to oppose Fascism
this effort was focused in Central and Eastern Europe and in the United States
Depression and threat of the Fascist-Nazi movement
stirred many political philosophies to join together to take action against these threats -- 1932
if unity was imperative in domestic politics, it seemed even more necessary in foreign policy
United Front Movement was a drive to forge a wider bond of unity
to get millions of people to act together in the face of the extreme emergency
even if they belonged to different political camps and held different creeds
this belief was especially attractive to intellectuals
who felt this was the only way to prevent a second world war

FEAR SWEEPS ACROSS AMERICA AS THE ECONOMIC REALITY OF DEPRESSION HITS

Total unemployment nationwide was estimated at between twenty-five and thirty per cent
"working stiffs" were accustomed to losing their jobs
for the unskilled, jobs had always been only temporary
"white collar" workers and professionals expected much greater job security
they attached their status as well as income to their employment
in addition to investments lost in the stock market crash, money vanished as banks failed

¹³⁰ Melvin Rader, *False Witness*. P. 29.

many middle class families faced hunger for the first time
Lumbering suffered the greatest loss of income of any industry during the Great Depression
significant job losses were felt in Tacoma, Bellingham, Hoquiam, Aberdeen, and Vancouver
Other industries suffered only slightly less
shipbuilding, flour milling, grain production, meat packing, printing and publishing,
fruit and vegetable canning all suffered decline
There were no safety nets to catch laid-off workers in the economic free fall
and yet there was no violent revolution in the streets of America

AMERICA'S MIDWEST CROPLAND BECOMES A "DUST BOWL"

Many crops were damaged by deficient rainfall, high temperatures and high winds
as well as insect infestations and dust storms that accompanied these conditions
"Dust Bowl" drought of the 1930s was THE environmental disaster of the Twentieth Century
it caused crops to fail leaving the plowed fields exposed to wind erosion
fine soil of the Great Plains was easily eroded and carried east by strong continental winds
although records focus on other problems, lack of precipitation affected wildlife and plant life
and created water shortages for animal and domestic needs
Pervasive drought conditions resulted in a rural economic agricultural depression
that was even more devastating than the crash of the stock market
which had caused bank closures, business losses, increased unemployment
and other physical and emotional hardships that rocked the nation's farmland
when normal cattle feed crops failed in Oklahoma, thistles were harvested
when thistles failed, farmers dug up soap weed to be chopped in a feed mill or by hand
to be fed to the stock -- this was disheartening, backbreaking work
Drought was of such proportions that many could not even pay their mortgages, taxes or other debts
they had to sell their farms for no profit to themselves or lose them to foreclosure
destitute farm families moved into the city looking for work that did not exist
(during the 1930s, three million people left their farms on the Great Plains
half a million of these migrated to other states -- almost all to the West)
for the poor, under-educated and unskilled, life became a humiliating experience
with no hope

REPUBLICANS LACK ANY CONSTRUCTIVE PROGRAM TO ADDRESS THE DEPRESSION

Farms were vacated and factories were shut down
penniless, unemployed and displaced people arrived in cities in legions
from lumber camps, industrial plants, fishing fleets, offices, government positions, schools
and a myriad of other places that no longer provided work
these were not the "welfare class"
but included professions as lawyers, medical doctors, barbers, bricklayers, carpenters
and bank clerks
many searched skidroad hiring halls looking for work
others gathered scrap metal, bottles and rags or bundled up old newspapers to be sold for cash

EFFORTS TO RESTORE THE HALIBUT RUN ARE SUCCESSFUL

Study of the fish (begun in [1924] when sixteen thousand halibut were tagged and released) had demonstrated that halibut are divided into “races” and each race stayed within an accustomed habitat blanket regulations covering the whole industry would, therefore, be of little value, rather each area would have to be managed as an individual entity

Restrictions on the fishery were first imposed -- 1932
these rules were adjusted as subsequent scientific studies continued and made new discoveries
increases in the Halibut population began at once

REPUBLICAN NATIONAL CONVENTION MEETS IN CHICAGO

In the depths of the Great Depression with more than thirteen million Americans were out of work spirits were not high as President Hoover was re-nominated without enthusiasm -- June 1932
Republican Party Platform reflected Hoover’s desire to “stay the course”
and rely primarily on voluntarism to solve the nation’s ills

Republicans proposed:

- sharp cutbacks in federal expenditures;
- continued support for high tariffs to protect American business;
- strict observance to the gold standard;
- restricting immigration;
- payment of pensions to war veterans;
- U.S. participation in an international monetary conference which was already scheduled;
- regarding prohibition, no meaningful direction was provided

Republicans realized that the Eighteenth Amendment was not working as intended,
but the platform did not endorse repeal

DEMOCRATIC NATIONAL CONVENTION MEETS IN CHICAGO

When Democrats assembled in Chicago to nominate a presidential candidate there was an entirely different mood than that displayed in the Republican Convention
Democratic Platform avoided specifics, but presented a sharp contrast to Republicans calling for:

- “competitive” tariff designed to generate revenue -- not to protect business;
- “sound” currency but no mention was made of adhering to the gold standard;
- extensive banking and financial reform, including regulation of stock exchanges;
- support a pension for veterans of the Great War;
- aid programs for farmers;
- reduction of federal expenditures and a balanced budget

Franklin Delano Roosevelt, then governor of New York, was the frontrunner for the nomination thanks to skillful planning by the now-deceased Scott Bullitt and maneuvering by campaign manager James A. Farley

Roosevelt had entered politics by capitalizing on his distant relationship with Theodore Roosevelt he gained further attention by marrying the former president’s favorite niece, Eleanor
In an effort to create an air of urgency at the convention, Roosevelt broke with tradition he did not wait for formal notification of his nomination from the convention
instead, he boarded an airplane and flew from Albany to Chicago before being nominated
Roosevelt managed to gain the nomination on the convention’s fourth ballot

he delivered an acceptance speech in person -- this was the first time this is done - July 2, 1932

“I pledge you, I pledge myself, to a new deal for the American people”

it was no coincidence that thirty year before

Teddy Roosevelt had called his reform effort the “Square Deal”

Roosevelt’s legislative agenda became known as the “New Deal”

his Vice President candidate was John Nance “Cactus Jack” Garner

U.S. representative from Texas and Speaker of the U.S. House of Representatives

(Garner would later remark that the office “...wasn't worth a bucket of warm spit.”)

WASHINGTON STATE FARMERS GRANGE INCOME TAX INITIATIVE QUALIFIES

Enough signatures were gathered to bring an Income Tax proposal before the voters -- July 1932

this proposal became Initiative 69

Campaigning began in earnest as the issue brought together a coalition of New Deal Democrats

in a state that had never had a Democratic Party majority in its legislature

Grange leaders knew that the rural vote alone would not be enough to pass I-69

they set out to educate voters about the initiative

and to gather signatures to win placement on the ballot

they worked to build support in the cities

Grange gained the support of the Unemployed Citizens League, Seattle Labor Council,

Washington Education Association, Parent-Teacher Association,

and the High School Teachers’ League

(I-69 qualified for the November General Election ballot)

TWO OTHER INITIATIVES TO THE VOTERS ARE SOUGHT

Initiative 61 sought to remove most of the state’s prohibition laws (blue laws) from the books

I-61 was filed in an effort to send a message to the state’s congressional delegation

to repeal the nation’s prohibition laws and the Volstead Act that provided enforcement

(I-61 was successfully placed on the ballot)

Initiative 64 to the voters was an effort to cap property tax rates

Washington Farmers Grange took a neutral position on the matter

however, many of their urban allies like labor and education groups opposed the measure,

they feared it would strangle schools and government with no replacement for lost revenue

(I-64 received enough signatures and was placed on the ballot)

VICTOR MEYERS HAS POLITICAL AMBITIONS

After his loss in the race for Seattle mayor, Meyers briefly went back to being a full-time bandleader before he decided to run for the position of governor -- summer 1932

this time without the “help” of the Seattle *Times* or city editor Doug Welch

however, he did not have \$60 for the necessary filing fee

Vic Meyers decided to run for lieutenant governor because the filing fee was only \$12

Vic continued to use humor and music during his campaign

he repeated the Gandhi bit

he played the saxophone at his own campaign appearances

Meyer also campaigned more seriously

he appeared on an Indian reservation talking about how Indians were not allowed to vote
he spoke often and loudly in favor of pensions, child welfare and unemployment compensation

JOHN C. STEVENSON STORMS ONTO THE SEATTLE SCENE

Stevenson was a husky, baldheaded mystery man who first attracted attention in the Northwest
as the advertising voice of the Painless Parker chain of dentists

his salary was reported to be \$1000 a week and he lived up to it
his house was one of the finest in town,
he flew a \$20,000 plane,
he piloted a cabin cruiser on Puget Sound

Stevenson built up a large radio audience -- he viewed himself as a political oracle

his performance was to criticize specific wrongs and to propose vague remedies

Stevenson filed in the Democratic primary for King County commissioner -- 1932

right-wing Democrats tried to confuse voters by running a candidate with the same last name
so the radio announcer ran as "Radio Speaker John C. Stevenson"
and was listed as such on the ballot

Stevenson was radical enough to appeal to Seattle's great mass of unemployed and underpaid

he was believable enough to appeal to the farmers who normally shunned liberal soothsayers

When he won election he was immediately the most important commissioner in the state ever
at least in his own mind -- but there were questions regarding his past

he had materialized out of nowhere and there were odd rumors about where he got his wealth

When he was about to be sworn in as county commissioner,

a citizen protested that Stevenson was not a citizen

it was said he had flown in the Royal Canadian Air Force and was a Canadian

Stevenson admitted he had flown for Canada but denied that he was a Canadian

he refused, on grounds of possible self-incrimination, to reveal the he used name in Canada
he was allowed to take office anyway

HOMER T. BONE RUNS FOR THE UNITED STATES SENATE -- THIS TIME AS A DEMOCRAT

State Representative Homer T. Bone stumped the state for support

during the campaign, Bone pushed for public utilities

he noted that Tacoma municipal electric company sold electricity for less than any other city
(and still boasts the lowest electricity rates in the nation)

Bone also focused on the global arms race under way

he charged that in the event of war the Olympic Peninsula was "glaringly unprotected"

an isolationist who wanted to avoid European involvement, he delivered the slogan:

"Keep to America but Keep America Safe"

Newspapers at that time made no pretense of fairness or balance

most of the state's papers, including *The Seattle Times*, viewed public power

as Socialist nonsense and Homer T. Bone as a radical or worse

however, Hearst-owned *Seattle Post-Intelligencer* and Scripps papers, including the *Seattle Star*
were Senator Bone champions

two weeks before the election, the *P-I* ran a gushing, five-part series,

Life Story of Homer T. Bone, Career Marked By Battles for People

accompanied by sidebars liberally quoting the candidate on the campaign issues
Gushing stories by the media were no accident -- Saul Haas was Bone's campaign manager
Haas was a well-known Democratic political activist and was a newspaperman
who worked for the Scripps Newspaper Company
his former colleagues joined him in the political battle
as did the perpetual rival of the *Seattle Post-Intelligencer* -- the *Seattle Times*
Saul Haas had also dabbled in the new communications craze of radio
which was revolutionizing culture and politics -- Haas saw its potential
(Seattle radio station KJR declared bankruptcy at the start of the Great Depression
Haas was appointed as receiver for the radio station)
Haas envisioned a regional radio network anchored by KJR
but the plan fizzled and the station was sold to National Broadcasting Company
however, the experience hooked him on radio as an agent of reform

CAMPAIGNING FOR THE PRESIDENCY WAS VIGOROUS

Although Franklin Roosevelt had contracted polio at age thirty-nine [1921]
and was paralyzed from the waist down, he waged a vigorous campaign
he traveled more than 25,000 miles by train across the nation
in an effort to remove any concerns about his health
crowds gathered in towns and villages to greet the ever-smiling and optimistic candidate
brass bands played *Happy Days Are Here Again* at nearly every stop
Roosevelt gradually and sketchily developed the basic form of the New Deal -- summer and fall
using the ideas of his closest advisors -- dubbed the "brains trust" by reporters
one recurring theme was Roosevelt's pledge
to help the **"forgotten man at the bottom of the economic pyramid"**
President Herbert Hoover began his campaign convinced that the return of prosperity was at hand
he was content to allow others to take his message to the voters -- summer and fall
but as fall approached and the economy remained in the doldrums
Hoover took to the stump
he was sharply critical of Roosevelt's idea to have the federal government
act to solve the nation's problems
he viewed such solutions as contrary to American tradition
he believed that only free enterprise would restore prosperity

RADIO BECAME A CAMPAIGN TOOL

Both candidates used radio to reach the voters during the 1932 campaign
Hoover's addresses were logical and competently delivered, but lacked enthusiasm
Roosevelt had a magnificent radio voice
he was able to convey a sense of competence and hope to the listeners
Democrats focused on relief, implementing a social security system and old age issues

ECONOMIC DEPRESSION DEEPENS

Dow Jones Industrial Average of the New York Stock Exchange dropped from a high of 381 [1929]
to an average of 38 -- summer 1932

Prices fell as the supply of money evaporated:

- five dollars a day provided a comfortable living;
- good apartment rented for twenty dollars a month;
- Firestone tires were \$3.49 apiece -- inner tubes 59¢ each;
- used 1929 Model A sold for \$164

But even at these prices financial survival was difficult

unemployment soared to twenty-two per cent -- most of these were the male head of families
another twenty-one per cent worked only part time

It was a time of anguish for Washington lumber

Northwest became one of the hardest hit areas for unemployment in the nation
in three years production dropped from 7.3 billion board foot to 2.2 billion

loss of lumber markets spelled disaster for corporate owners, loggers and mill hands alike
80% of the state's mills were closed -- 1932

Washington wheat price fell from \$1.83 per bushel [1920] to 67¢ [1929] to 38¢ -- 1932

308 REPORT TO DEVELOP THE COLUMBIA RIVER IS ADVOCATED BY ROOSEVELT

While campaigning for the presidency, Franklin Roosevelt gave his vision for the Columbia River
he stated in a speech in Portland the Northwest's future was tied to hydropower -- September 21

“Where a community, a city, or county, or a district, is not satisfied with the service rendered or the rates charged by the private utility, it has the undeniable right as one of its functions of government...to set up...its own governmentally owned and operated service.”¹³¹

in that speech he went on to say, **“We have, as all of you in this section of the country know, the vast possibilities of power development on the Columbia River. And I state, in definite and certain terms, that the next great hydroelectric development to be undertaken by the federal government must be that on the Columbia River. This vast water power can be of incalculable value to this whole section of the country. It means cheap manufacturing production, economy and comfort on the farm and in the household.”** (Portland, Oregon)

However, in the minds of many people

it is one thing for the federal government to generate electricity
and quite another to distribute that power to customers

CANDIDATES HOOVER AND ROOSEVELT AGREE ON LESS AND LESS

Relations between Hoover and Roosevelt remained chilly

several times during the campaign, Hoover asked for public reassurances from Roosevelt
that, if elected, he would not undertake untraditional initiatives

Hoover believed the business community needed to be reassured
when Roosevelt refused to commit himself,

Hoover believed his opponent was undermining the nation's chances for recovery

Shortly before Election Day, Hoover warned that if Roosevelt were elected, then **“the grass will grow in the streets of a hundred cities, a thousand towns; the weeds will overrun the fields of a thousand farms....”**¹³²

¹³¹ Oscar Osburn Winther, *The Great Northwest* P. 376-377.

¹³² William Safire, *Safire's Political Dictionary*, P, 290.

In the end, President Hoover had the impossible task of defending failed policies and strategies

CAMPAIGNING IN WASHINGTON STATE SHOWED PARTY DIFFERENCES

Pacific Northwest had been hit very hard by the Great Depression

lumber production dropped to less than half

voters in Washington, like the rest of the nation, experiences mortgage foreclosures,
delinquent taxes, and sharply rising unemployment

years of drought brought thousands from the Mid-west into the state

Republican-controlled legislature and the governor failed to come to agreement on an income tax
citizens and corporations organized to defeat Republicans at the polls

(Governor Roland Hartley had run for re-election in the 1932 gubernatorial race

but was defeated in the Republican primary and did not make the general election ballot
largely due to his inability to adequately deal with the Depression and tax crisis)

Democrats focused their campaigns on relief, social security and old age issues

NATIONAL ELECTION IS HELD AT THE BOTTOM OF THE DEPRESSION

Last three presidents, Harding, Coolidge, and Hoover, had been Republicans

Republicans Party had also controlled Congress

Democrats won an historic landslide as national and state voters changed to the Democratic Party
composed of labor, progressives, liberals, Populists, Socialists, Communists and radicals

Democrat Franklin Delano Roosevelt became the President-elect -- November 8, 1932

he received 57% of the national vote

double the returns of four years earlier for Democratic candidate Al Smith

when he ran for president [1928] Herbert Hoover won every county in Washington

running for reelection 1932 Hoover lost every county in the state

Democratic candidates won huge victories as expected in the "Solid South" of the Old Confederacy
but "riding on his coattails" major urban areas and the West voted Democrat

Democrats achieved sizable majorities in both houses of Congress

as they were elected to Congress in record numbers

Governors' mansions across the nation were filled with new, Democratic, residents

state legislatures swung to the Democrats

Democratic victories changed the political landscape

America's electorate had clearly provided the president-elect with a mandate for change

ELECTION RESULTS IN WASHINGTON STATE

In Washington State there was a kind of revolution -- November 8, 1932

Democrats for the first time in history wrestled control of Washington's State government
from Republicans by electing a Democratic Governor, Clarence Martin

and by electing Democratic majorities in both houses of the legislature

new liberal and radical Democrats were swept in into power

old familiar Republican officials were swept out of office

Washington State was viewed nationally a ultra-Liberal

one commentator remarked on Washington's "Political Circus" noting: "A smart promoter could now put the entire state under a tent, charge admission, and get it."¹³³

State-wide election results:

almost any Democrat who ran for office in Washington was elected:

Governor Clarence D. Martin, Democrat, carried every county and was elected governor
(Republican Governor Roland H. Hartley failed even to receive the Republican nomination)
Clarence Martin served two terms as governor

Lieutenant-Governor Victor (Vic) Meyers was a popular band leader in Seattle

two years before the *Seattle P.I.* had talked the popular band leader and wit in Seattle
into running for mayor of Seattle -- Meyers was unsuccessful

Meyers went to Olympia to file for the governor's race but discovered the filing fee was \$60
he dug into his pocket and found he only had \$20

since the filing for Lieutenant-Governor was only \$12 he decided to run for that office
to the amazement of all, name familiarity carried him to victory -- November 8, 1932

Meyers served five terms as Lieutenant Governor and two more terms as Secretary of State
Democratic Attorney General G.W. Hamilton had not practiced law in fifteen years
once elected he held office for five terms (twenty years)

U.S. Senator Homer T. Bone, Tacoma Democrat

carried the progressive's hopes for a new U.S. Senator
in the race against Republican U.S. Senator Wesley L. Jones

Senator Bone will serve almost two terms in the U.S. Senate before he resigned [1944]

U.S. Senator Clarence C. Dill, Spokane Democrat, was not up for reelection

Regional election resulted in all of the state's Congressmen representing the Democratic Party:

Congress -- Democrat majority from Washington

Congressman Martin F. Smith, Hoquiam Democrat
served five terms -- [1933-1943]

Congressman Knute Hill, Democrat from Prosser
served five terms -- [1933-1943]

Congressman Monrad C. Wallgren, Democrat of Everett
served four terms -- (1933-1940 resigned)

Congressman Wesley Lloyd, Democrat from Tacoma
elected from the new Sixth Congressional District
served one and a half terms -- [1933-died 1936]

Congressman Marion A. Zioncheck, Seattle Democrat
he served one and a half terms -- [1933-died 1936]

CLARENCE D. MARTIN BECOMES WASHINGTON'S ELEVENTH GOVERNOR

He was the first native-born governor of the state

born in Cheney [1886], he grew up on a wheat farm there

he graduated from Cheney Normal School and the University of Washington

"C.D." as he was known to friends, was a conservative Democrat

he probably won office, in part, due to a Republican split into pro- and anti-Hartley groups

¹³³ Carlos Arnaldo Schwantes, *The Pacific Northwest: An Interpretive History*. P. 388.

Governor Martin recognized the value of the state's abundant resources
he was determined these should be developed and used for the good of the people
he was especially anxious that electric power resources not be exploited by private interests

Governor Martin's program also stressed:

- giving every man a chance to earn his own living
- restoring confidence in banks and reforming the banking system to protect savings
- reconstruction of the tax system by taking some of the burden off property owners
- setting up a large-scale public works program to be paid for by state government
- studying the interests of farmers

PEARL WANAMAKER RUNS AGAIN FOR THE STATE HOUSE OF REPRESENTATIVES¹³⁴

Pearl Wanamaker was elected to the 38th District seat in the 1932 Democratic landslide
given a Democratic majority in the legislature and Democrat Governor Clarence D. Martin
she was able to pass the Deception Pass Bridge Bill and get it funded without tolls
(Pearl Wanamaker presided over its dedication [1935])

NEWLY-ELECTED CONGRESSMAN MARION ZIONCHEK IS UNIQUE FROM THE START

(Born Mantoni Zajaczekm he was brought to the United States as a small boy
his Polish immigrant parents raised him in a Seattle First Avenue neighborhood
where he grew up to be a fish monger
Marion Zioncheck went to the University of Washington Law School
where he was elected president of the student body
he was known as a comedian
several college escapades ensured his reputation as a prankster
but he was so confrontational, quarrelsome and difficult that some of his fellow students
shaved his head and dumped him into Lake Washington
Zioncheck began his legal career by being fined \$25 for contempt of court
after calling a witness a "scab"
in another case he successfully defended his mother against a charge of kidnapping)
Zioncheck received the Democratic nomination for Congressman from Washington at age thirty-one
he became involved in the local Democratic Party
and the pro-labor Washington Commonwealth Builders
he campaigned for massive federal appropriations and a five-day work week
devoted to the "common man," he was swept into office
to represent Seattle's liberal First Congressional District
during Franklin Roosevelt's landslide election [1932]
Washington Commonwealth Builders, the radical left-wing of the Democratic Party,
helped elect Zioncheck to Congress

WASHINGTON STATE LEGISLATURE IS DOMINATED BY DEMOCRATS

State's House of Representatives became 3/4 Democrat
an increase from eight Democratic seats to seventy overnight

¹³⁴ Michael Hood, HistoryLink.org, Essay 9171, September 26, 2009.

one newly elected legislator from Whatcom County could not afford a train ticket to Olympia up to the time of his election another new legislator was housed in a county jail
Milton (Pierce County) Democrats crossed party lines
elected Boston Curtis, a mule, as Republican precinct committeeman
(Democrats controlled both houses of Congress and the state legislature for the remainder of the decade)

THREE INITIATIVES TO THE STATE'S VOTERS WERE APPROVED

Income tax Initiative I-69, passed by seventy per cent of the vote -- Yes: 322,919; No: 136,983

Initiative-64, a limit on property tax passed by a slightly smaller margin

Yes: 303,384; No: 190,619

Initiative 61 removed most of the state's prohibition laws ("Blue laws") from the law books it was passed YES: 341,450; NO: 208,211, a sixth-two percent margin -- a landslide victory however, some restrictions on conduct and consumption remained in place

women patrons in drinking establishments were not allowed to sit at the bar or carry a drink from table to table [until 1969]

(Washington still retains a monopoly on the sales of hard liquor)

WINNING IS NOT NECESSARILY THE END OF THE DEBATE

Overwhelming support by voters for the income tax initiative did not ensure its implementation as the State Tax Commission began working out an administrative plan for the new law and began mailing out tax forms

opponents of the income tax filed lawsuits against the new law

FIGHT FOR PUBLIC UTILITIES DISTRICTS IN SNOHOMISH COUNTY

In the minds of business people it was one thing for the federal government to generate electricity and quite another to distribute that power to customers

With the passage of the Grange Power Bill [1929], rural residents throughout the state began the process of organizing Public Utilities Districts -- 1932

As voters swept Franklin D. Roosevelt into the White House

and public power advocate Homer T. Bone crushed long-time U.S. Senator Wesley Jones

Senator Bone was a pragmatic Populist who loudly praised public ownership of utilities while damning big business -- especially utility trusts

Bone had closely followed the advice of his campaign manager Saul Haas

who served eighteen months as the senator's secretary and studied the ways of Congress

(he also found time to roam the Federal Radio Commission (FRC) which licensed stations further grounding himself for the future)

Public Utilities Districts (PUDs) were approved by the state's voters

residents in Grant County and in Spokane County also voted to create public utilities districts

public power advocates in Snohomish County managed to get a measure on the 1932 ballot to create a public utilities district -- but the opposition was aggressive

those against to the idea feared the law would give PUD commissioners power to raise taxes and condemn private property

an organization that called itself the Snohomish County Tax Reduction Association

said the effort “**simply another raid on tax-spenders and visionaries seeking public payroll jobs or personal gain.**”¹³⁵

mayors of ten Snohomish County communities expressed concern
that the law would allow the confiscation of property
and cause them to lose the tax revenue they received from the private utility
In the end, the measure was defeated by a two-to-one margin

TROUBLES CONTINUE FOR KING COUNTY COUNCILMAN JOHN C. STEVENSON

After a few months in office, New York Governor Herbert H. Lehman informed Olympia authorities
that Stevenson was known back in New York as John P. Stockman
he was wanted for fraud in connection with a fake stock sale
Stevenson admitted he was Stockman but that he was innocent of the charges
he fought extradition putting Governor Clarence Martin was in an uncomfortable spot
should he turn over to New York a man who was an influential Democrat and a serious rival
Martin refused extradition and eventually the charges against Stevenson were dropped

CONGRESS INITIATES THE PROCESS TO AGAIN AMEND THE U.S. CONSTITUTION

Eighteenth Amendment to the United States Constitution establishing Prohibition
was seen as a failure corruption and lawlessness was increased instead of decreased
there was widespread support for the return of legalized liquor and related jobs and dollars
Washington state’s Initiative 61 gave a clear mandate to the state’s Congressional Representatives
to repeal Eighteen Amendment and the Volstead Act which provided enforcement powers
Twenty-first Amendment to the U.S. Constitution repealing Prohibition
was introduced into Congress -- December 6, 1932
(it was adopted and was sent to the states for ratification [February 1933])

NEW U.S. SENATOR FROM WASHINGTON STATE IS APPOINTED

Long-term Republican U.S. Senator Wesley L. Jones died in office -- December 19, 1932
eleven days after losing his election to Homer T. Bone
Elijah S. Grammer, Seattle Republican was appointed by lame duck Governor Hartley
to fill the remainder of Senator Jones’ term [expiring March 4, 1933]
Elijah Grammer will remain in office for seventy-seven days until Senator Bone was sworn in

WASHINGTON’S NEW GOVERNOR IS SWORN IN

Governor Clarence Martin, “C.D.” as he was known to friends,
was a fiscally conservative Democrat
he was the first “native son” governor of the state
(born in Cheney [1886] and grew up on a wheat ranch there
he graduated from Cheney Normal School [teacher’s college]
and the University of Washington)

¹³⁵ Public Power in Snohomish County, *The fight in Snohomish County*,
www.snopud.com/AboutUs/history/pubpower.ashx?p=1349

Governor Martin recognized the value of the state's abundant resources
he was determined these should be developed and used for the good of the people
he was especially anxious that electric power resources not be exploited by private interests

Governor Martin's legislative program also stressed:

- giving every man a chance to earn his own living;
- restoring confidence in banks and reforming the banking system to protect savings;
- reconstruction of the tax system by taking some of the burden off property owners;
- setting up a large-scale public works program to be paid for by state government;
- studying the interests of farmers;
- passing special laws to protect children and the unemployed;
- implementing old-age insurance

In his inaugural address, Governor Martin pointed out most of the burden of relief
had been carried by the counties, towns, and charitable societies
he said that now the burden must fall on the legislature to provide unemployment relief
Governor Martin advocated passage of a state Sales Tax to meet the critical need

WASHINGTON STATE LEGISLATIVE SESSION GOES INTO SESSION

Opening ceremonies were held -- January 9, 1933

extent of the political revolution in the state became apparent
in the State Senate, Democrats leapt from one seat to twenty-five
Republicans fell from forty-one seats to twenty-one
in the State House of Representatives Republicans dropped from eighty-nine to twenty-nine
while Democrats exploded in number from eight to seventy

So abrupt was the switch from a Republican majority to Democratic
that only a few legislators had any previous experience at all
this became the most turbulent legislative session in the history of the state

LIEUTENANT-GOVERNOR VICTOR MEYERS TAKES OFFICE

Seattle's popular speak-easy band leader was sworn into office -- January 9, 1933

he had been elected in the Democratic landslide
he had run for the office without even being clear on the duties of the position
including presiding over the sessions of the State Senate and making parliamentary rulings
and, if necessary, possessing the tie-breaking vote

Despite his quirks, Vic Meyers capably ran the state's volatile Senate

he presided over the most rabid session in state history -- 1933

Victor Meyers soon became adept as the President of the Senate
he established himself as a very capable leader

Vic Meyers also became known as a leader of the left wing of the state Democratic Party
this often put him at odds with the more conservative Governor Martin

WARREN G. MAGNUSON ENTERS THE STATE HOUSE OF REPRESENTATIVES

Freshman Democratic Representative (37th Legislative District) with a Populist agenda
pushed the "Bone Bill" named for its prime sponsor (now U.S. Senator-elect Homer T. Bone)
which proposed to give municipal utilities power to seize private property (eminent domain)

to acquire power systems owned by private power companies
he was a strong advocate for expansion of the state Utilities and Transportation Commission
which protected consumers by setting maximum rates for gas, electric power, and telephones

U.S. SENATOR HOMER T. BONE IS SWORN INTO OFFICE

Liberal political leader from Washington was sworn into office as a Democrat -- January 12, 1933
although he at one time campaigned for the Socialist, Farmer-Labor, and Republican parties
he remained loyal to Democrats once elected under the label
He described the G.O.P. as the party of Grand Old Promises
he also was reported to have said God couldn't be everywhere
and He made up the Republican Party to be where He didn't want to be
Physically small -- 5 foot 6 inches and 135 pounds
he was nicknamed the "Mightiest Atom" in the Senate
Senator Bone served almost two terms in the national Senate
(Senator Bone was also the Creator of National Cancer Institute before he resigned [1944])

CONSTITUTIONAL AMENDMENT XX ESTABLISHES FEDERAL TERMS OF OFFICE

Amendment XX to the Federal Constitution was passed by Congress
and approved by the required three-quarters of the states -- January 23, 1933
Article I, Section 4, of the U.S. Constitution was modified by section 2 of this amendment
and addition, a portion of the 12th Amendment was superseded by section 3
Section 1 states: **"The terms of the President and the Vice President shall end at noon on the 20th day of January, and the terms of Senators and Representatives at noon on the 3d day of January, of the years in which such terms would have ended if this article had not been ratified; and the terms of their successors shall then begin."**
Section 2: **"The Congress shall assemble at least once in every year, and such meeting shall begin at noon on the 3d day of January, unless they shall by law appoint a different day."**
Section 3 sought to resolve some ambiguity in the Constitution regarding what to do
if the winner of a presidential election died before inauguration day,
or if no candidate won the presidency
Section 4 required the federal House of Representatives choose a President if all else failed
and the federal Senate to choose a Vice President in a parallel situation
Sections 5 and 6 identified effective dates of the Amendment

LEGISLATURE CREATED NEW TAX FRAMEWORK TO HELP SENIOR CITIZENS

House Bill 14 proposed a pension of \$30 a month for Washington citizens over age sixty
however, cash-poor counties were unable to fund the pensions
forced by Initiative 64 [1932] to limit property taxes
legislators put a lid on the amount of money that could be raised from taxes on property
State Representative Warren G. Magnuson championed the cause of seniors
he noted the state was having a difficult time generating adequate taxes to fund the proposal
as a partial solution, he proposed a temporary Business and Occupation (B&O) tax
for the privilege of engaging in business in the state

his legislation passed both the state House and Senate with no dissenting votes
and still remains a staple of the state's tax base
Additional revenue brought in by the B&O tax
along with the Income Tax that Initiative 62 [1932] had imposed
provided Washington seniors retirement income
(even before federal Social Security was law)

LEGISLATORS PASS A SALES TAX

Forced by Initiative 64 [1932] to limit property taxes
legislators put a lid on the amount of money that could be raised from taxes on property
Governor Martin secured passage of the most regressive tax
a state Sales Tax of 2% on all items except a few food products
this tax is regressive because low income people pay proportionally higher taxes
than do the wealthy
Result of this regressive tax program
was that while most other states doubled their tax revenues in the 1930s
Washington only held even
federal government cushioned the state from the worst blows of the Great Depression

HUNGER MARCHES ON OLYMPIA TAKE PLACE

Olympia barricaded itself against what appeared to be a revolution
Unemployed Citizens League led a hunger march on the capital -- January 16, 1933
over a thousand men, women and children, most from Western Washington,
marched to confront newly-inaugurated Governor Clarence Martin
they demanded unemployment insurance be provided
These marches were supported by newly-inaugurated Lieutenant-Governor Victor Meyers
who opened his home to the marchers
instead of the expected revolution an organized committee of marchers
met with legislative leaders
Governor Martin was completely unsympathetic to the plight of the marchers
a second hunger march of several more thousands was diverted to Priest's Point Park in Olympia
by law enforcement officers

STATE HOUSE BILL 263 (UNEMPLOYMENT RELIEF FUND ACT) PASSES

Members of the Washington House of Representatives introduced legislation
to relieve the people of the state from hardships and suffering created by unemployment
State Representative Warren G. Magnuson spoke strongly in favor of passage
however, the state constitution strictly limited bonded indebtedness
unless state was faced with the threat of insurrection
Magnuson argued the protest marches demonstrated the threat of an insurrection
he achieved passage of the nation's first unemployment relief act when State House Bill 263,
the Unemployment Relief Act, shattered the constitutional debt limit
it provided \$10 million to relieve unemployed workers
and a commission to be named by the governor to administer the funds -- January 1933

(State Supreme Court later took into consideration the massive hunger marches when it decided HB 263 met the constitutional requirements of a potential insurrection)

WASHINGTON'S STATES RELIEF PROGRAM GETS UNDER WAY

Democratic Governor Clarence D. Martin appointed the Harvard-educated, Republican Charles Ernst as leader of the Washington State relief program
to coordinate state depression relief efforts for those in need of public assistance
this was the beginning of state Welfare Program
and helped to shape the modern economy of the state -- 1933
Commissioners, who were appointed by the governor, faced a huge task
but Director Ernst led them to become a model of timely, professional
and efficient social services

STATE REPRESENTATIVE WARREN MAGNUSON FUNDS STATE RELIEF PROJECTS

Representative Magnuson introduced a bill to divert \$200,000
from the newly-created state Unemployment Relief Act fund
for dam construction on the Columbia River at Grand Coulee

In addition to providing seed money for the construction of a Grand Coulee Dam and other projects
these funds provided seed money for the Roza irrigation project to transform the Yakima Valley;
Deception Pass Bridge that tied Whidbey Island with mainland Skagit County was funded;
Seattle's Washington Park Arboretum was included in the funding

as Mrs. Dorothy Bullitt, who sat on the Unemployment Relief committee later explained:
"The bridge, the dam, and the irrigation projects were necessities. The arboretum wasn't, but we needed some project in the densest population area of the state.... We chose the arboretum not for growing plants and trees, but to employ untrained men who could live at home and work in the city."¹³⁶

(in two years the total spent on state relief, both public and private donations, was \$46,054,595)

STATE RECLAMATION FUNDS ARE USED TO ENHANCE THE STATE BUDGET

Federal Reclamation Funds had come to Washington for more than thirty years
Reclamation Fund had been established by Congress [1902] to gather funds:

- from the sale of public lands;
- from the sale of public timber;
- proceeds from mining leases;
- payments from some water users on federal projects;
- and other sources

Washington's funds had been lying idle until it had accumulated to \$1,250,000 -- 1933
legislature began to use this fund to refinance and rebuild properties
belonging to bankrupt irrigation, drainage, and diking districts

DUST STORMS SWEEP ACROSS THE NATION'S HEARTLAND

Midwest was hit by a gigantic dust storm which killed much of the winter wheat crop -- January 1933

¹³⁶ Shelby Scates, *Warren G. Magnuson*. P. 38.

thermometer readings dropped seventy-four degrees in eighteen hours to record lows
temperatures stayed below freezing for several days until another dust storm hit the region
(Before the year was over, 139 dirty days were recorded)

TWENTIETH AMENDMENT TO THE U.S. CONSTITUTION IS RATIFIED

(As required in the U.S. Constitution, three-fourths of the state legislatures
ratified all six sections of the Twentieth Constitutional Amendment [January 23, 1933])
Congress ratified the Amendment placing it into effect -- February 6, 1933
Under the original U.S. Constitution, Congress was required to convene at least once each year
in [December] in a mandatory “Lame Duck” session following the election
under the new Amendment new sessions of Congress began at noon on [January 3]
unless changed by Congress
Inauguration day for the newly-elected president was moved from [March 4] to [January 20]
Among other things, succession to the presidency was redefined
(only to be redefined again in the Twenty-fifth Amendment [1967])
Because it was ratified seventeen days after [January 20],
President Roosevelt’s inauguration could not be held as required
(Franklin D. Roosevelt was inaugurated on March 4, 1933 as previously required)
he and Vice President Garner were the first to be sworn into office on January 20 [1937])
(since Congress meets in a session that lasts for a two-year period,
the first Congress to be sworn in on [January 3] was in [1935])

PRESIDENT HOOVER ASKS PRESIDENT-ELECT ROOSEVELT FOR RESTRAINT

President Herbert Hoover renewed his requests for a pledge to “stay the course”
during the so-called “lame duck” period before Roosevelt’s inauguration
Hoover was most concerned about a major banking crisis which had developed,
but Roosevelt again declined to detail his plans for the future

ROOSEVELT CONTEMPLATES DAMS ON THE COLUMBIA RIVER

Another survey of the Columbia River Basin was completed
its results called for construction of a hydroelectric dam across the Columbia River
at the upper bend directly north of the dry canyon located there
During his campaign for the presidency FDR had promised the Northwest two high-level dams
however, the president-elect was concerned about spending federal dollars
on two large public works projects located in a region with a relatively small population

UNITED AIRCRAFT AND TRANSPORT CORPORATION REVOLUTIONIZES AIRPLANES

Bill Boeing’s company built the Model 247 which first flew -- February 8, 1933
this first modern passenger airliner was an all-metal, twin-engine airplane
was capable of carrying ten passengers plus a crew of three and 400 pounds of mail
up to 745 miles at 189 mph
loaded with innovations, it had a gyro panel for instrument flying, a variable-pitch propeller,
an autopilot, pneumatically operated de-icing equipment, and retractable landing gear
Model 247 became United Airlines first fleet airplane

Cross-country flights were now possible
flying between New York and Los Angeles took twenty hours with seven stops
this was seven and a half hours shorter than that made by any previous airlines
Boeing built seventy-five 247s
Boeing Air Transport flew sixty Model 247s,
United Aircraft Corporation flew ten,
four went to Deutsche Lufthansa and one to a private owner in China

NORTHWEST AIRLINES BEGINS TO PROVIDE SERVICE

Northwest Air approached State Representative and attorney Warren G. Magnuson
seeking his help in extending the airmail route from Seattle to Billings, Montana
lobbyists were needed to acquire funds for construction of airports and navigation beacons
Magnuson was quoted as saying,

“All I want for Northwest Airlines is a fair advantage.”¹³⁷

In addition to acquiring funding for airmail routes

Magnuson also was hired by Northwest Airlines to delay or stop a state tax on aviation gasoline

SEATTLE ART MUSEUM BECOMES A REALITY

Seattle Art Museum was a most influential institution

it was the brain-child of Richard E. Fuller who was a wealthy businessman and art collector

Fuller had a keen interest in Asian art

Fuller raised money for a city museum building to be constructed -- 1933

he donated his art collection and served as director for many years

his collection broadened from Asian art to a wider variety

that in time encompassed a small but representative collection of world art

DESPERATE PEOPLE GIVE RISE TO RADICAL IDEAS

Relief, unemployment compensation, and old age pensions

joined the private power versus power debate as major issues of state politics

Layoffs caused men to lose their self confidence

some lost faith in the American capitalist economic system

some turned to communism (state ownership of property and production)

as the solution to the crisis

Radical ideas were widespread in the nation and a few demagogues arose

who gained power by appealing to people's emotions, instincts, and prejudices

in manipulative and dangerous ways

SENIOR CITIZENS' PENSION FUND PASSES THE STATE LEGISLATURE

State Representative Warren Magnuson sponsored a proposal

to allow pari-mutuel betting on horse races

(winners divide the total amount bet in proportion to the amount they wagered individually
after deducting management expenses)

¹³⁷ Shelby Scates, *Warren G. Magnuson*. P. 87.

Section Nine of the bill stipulated that five percent of the gross handle (amount wagered) must be collected as a tax, and that eighty percent of this tax would be used to support the old age pension fund in the state treasury
Representative Magnuson's legislation passed -- February 23, 1933
he then located the land on which to build Longacres Race Track and became an investor
Washington's horse breeding and racing industries were under way

WASHINGTON'S GOVERNOR CLARENCE MARTIN CLOSES BANKS

In the United States at the time, all U.S. currency was backed by gold
across the country hundreds of thousands of people demanded gold for their bank deposits
increasing numbers of bank customers in Washington State
closed their accounts and completely withdrew their funds demanding gold
this "run on banks" could not be met with the amount of gold in the U.S. treasury
Washington State Senate Bill Number 185 was introduced -- March 2, 1933
this authorized the governor to declare a bank holiday
to force the temporary closure of all banks in the state
reflecting the crisis at hand, Senate Bill 185 passed both houses before the end of the day
Governor Martin immediately declared statewide "bank holiday"
for Friday, Saturday, and Monday [March 3-6]
Each of the forty-eight states of the union declared a statewide "bank holiday" -- Saturday, March 4

WASHINGTON STATE'S CONGRESSIONAL DELEGATION IS SWORN IN

Incumbent Fifth Congressional District Democratic Congressman Samuel B. Hill
was joined by the five newly-elected Democrats of Washington's congressional delegation

- Marion A. Zioncheck -- Seattle attorney and leader of the left-wing of Seattle Democrats represented the First Congressional District
- Monrad C. (Mon) Wallgren -- businessman and member of the Washington National Guard represented the Second Congressional District, Everett
- Martin F. Smith -- Hoquiam attorney and municipal judge represented the Third Congressional District
- Knut Hill was a Benton County teacher and founding member of the State Grange he was elected to represent the Fourth Congressional District centered in Prosser
- Wesley Lloyd -- Tacoma newspaperman, attorney and National Guardsman who represented the Sixth Congressional District

NEWLY ELECTED CONGRESS CONVENES

Congress met in session -- March 4, 1933
including newly-elected Democratic U.S. Senator Homer T. Bone
and five newly elected Democratic Congressmen from the state
People in the nation demanded action, almost any action, to counter the Great Depression

FRANKLIN DELANO ROOSEVELT IS INAUGURATED

President Herbert Hoover and President-elect Franklin D. Roosevelt
rode together down Pennsylvania Avenue in stony silence to the swearing-in ceremony

Roosevelt waved enthusiastically to the crowds

Hoover, convinced a national disaster was about to occur, stared straight ahead

FDR (as he came to be known) called for collective action in his inaugural speech -- March 4, 1933

“I favor as a practical policy the putting of first things first. ... Our greatest primary task is to put people to work.... We do not distrust the future of essential democracy. The people of the United States have not failed....

He borrowed from the words of Henry David Thoreau: **“Let me assert my firm belief that the only thing we have to fear is fear itself.”**

President Roosevelt with an overwhelming mandate and a supportive Congress

outlined his political agenda which he called the “New Deal”

he called for sweeping social change to lift the country out of the worst Depression in its history:

- tax supported welfare,
- Social Security,
- unemployment insurance,
- minimum wage,
- regulation of banks and protection of deposits,
- federal farm supports,
- massive public construction

That evening the inaugural ball featured a band from Washington State

Lieutenant Governor Vic Meyers led his musicians late into the night

PRESIDENT FRANKLIN ROOSEVELT DECLARES A BANK HOLIDAY

Exactly what that New Deal entailed, neither President Roosevelt nor anyone else could say

after the president-elect took office, each day brought dramatic new developments

beginning with his proclamation of a bank holiday

to halt the general collapse of the nation’s banking system

Supporting the action previously taken by of all forty-eight states,

FDR declared a national “bank holiday” -- March 5, 1933

(originally to end [March 9] it was subsequently extended through Monday [March 13])

HITLER RISES TO POWER WITHIN TWENTY-FOUR HOURS OF FDR’S INAUGURATION

(Germany had suffered from an economic depression imposed on them in large part

by the term of the Treaty of Versailles which ended the Great War)

(Adolf Hitler ran against elderly German President Hindenburg and came in second

(Fire destroyed the German Reichstag (government) Building [February 27, 1933]

crippling the legislative branch of Germany’s government

Hitler blamed the fire on Communists)

(Hitler induced a confused and frightened President Hindenburg to sign a decree [February 28, 1933]

entitled *For the Protection of the People and State*, that suspended all of the basic rights

and imposed a death sentence for arson, sabotage, resistance to the decree

and disturbances to public order

arrests could be made on suspicion alone

people could be sentenced to prison without trial or the right of counsel)

Last German federation election in the Weimar Republic during Hitler’s lifetime was held -- March 5

Nationalists (Nazi Party) gain fifty-two seats in the Reichstag (parliament)
for a total of 288 of 647 -- not enough to establish a dictatorship
but enough to pass the Enabling Act which effectively gave Hitler the power of a dictator

ADOLF HITLER RISES TO POWER IN GERMANY

Germany's Reichstag conferred absolute power upon Adolph Hitler as Chancellor of the Reich
within twenty-four hours of FDR's inauguration
any effective control over Hitler was eliminated
Adolf Hitler's grip over the German people tightened -- Germany's Third Reich was born
within a week Dachau concentration camp on the grounds of an abandoned munitions factory
received the first of thousands of critics of The Third Reich
book burnings became commonplace in pre-war Germany [beginning May 10, 1933]
works of world-class authors as well as those of Jewish writers were burned in huge bonfires)

BANKS ATTEMPT TO GENERATE CASH

Banking's Clearing House Association was a regional association of banks throughout the U.S.
this association's primary function was to process and route checks and money between banks
in response to the closing of banks across the country,
Clearing Houses decided to issue "certificates" to temporarily replace U.S. currency
Seattle's Clearing House was located at the Alaska Building in Downtown Seattle
(southeast corner 2nd Avenue and Cherry Street)
Seattle's Clearing House immediately started printing 2,275,000 certificates
in denominations of \$20 (printed in orange), \$10 (printed in brown), \$5 (printed in green),
and \$1 (printed in blue)
(2,275,000 certificates were printed totaling \$15,000,000 -- Monday March 6, 1933
these certificates were never issued)

SOME BANKS IN WASHINGTON OPEN THEIR DOORS

Six days after the banks in Washington had locked their doors
some King County banks opened for business -- Wednesday March 8, 1933
they allowed access to safety deposit boxes,
they allowed stores to exchange currency for change,
they allowed customers to make deposits,
customers also were finally allowed to cash personal or payroll checks
but only if there was an urgent need and then they could not exceed \$25

SEVENTY-THIRD CONGRESS GOES INTO SESSION

Fully one-quarter of Americans who needed jobs were unemployed -- many had been for two years
this was at a time when loss of a job usually meant the loss of all means of existence
there was no "safety net" to provide necessary services or support for families in need
after years of relentless downward pressure on wages, millions of those who were still employed
could earn a wage far short of meeting minimal family budget requirements
what were needed were jobs -- the work was not important, the income was
significant or insignificant, necessary or unnecessary, meaningful or menial -- any job

relief was the issue even if the job was superfluous
FDR began to initiate action to address the expanding financial crisis
this became known as Roosevelt's "Hundred Days" -- March 9 [to June 16], 1933
federal programs which resulted became known as the "New Deal"
these will fundamentally change the role of government and the life of every American

BANKS IN THE NATION CLOSE THEIR DOORS

On its first day in session, Congress passed the Banking Act of 1933 -- March 9
which established the Federal Deposit Insurance Corporation (FDIC)
this virtually assured an end to bank failures in America

All banks locked their doors -- March 9, 1933

to stop the "run on banks" in which depositors withdrew their money
for fear of losing it through bank closures
customers could not even get access to their safety deposit boxes
only the Post Office would cash checks -- and only federal paychecks
or checks drawn from the United States Treasury

In King County, company checks replaced cash for most transactions
almost all of the larger retail establishments accepted most payroll checks
and checks from known companies as payment for purchases -- but not personal checks
change was given by writing store checks
many small stores operated on a cash only basis

PRESIDENT ROOSEVELT ATTEMPTS TO CALM THE FEARS OF THE NATION

FDR broadcast the first of thirty evening radio speeches given between 1933 [and 1944] -- March 12
these broadcasts to the American people attempted to reassure them
and offered his hopes and plans for the country
he sometimes began his "fireside chats" with "Good evening, friends"
in his first chat he emphasized that "we only had fear itself to fear"
Roosevelt's fireside chats made extremely effective use of radio in reaching the public
they were enormously successful and attracted more listeners
than did the most popular radio shows during this "Golden Age of Radio"
(To this day every president, and a member of the opposition party,
offer a radio speech to the nation every Saturday)

U.S. SENATOR HOMER T. BONE BECOMES A COMMITTEE CHAIR

Washington Senator Bone became chair of the Senate Committee on Patents
which was a low-profile position but he readily shifted his public power fight to the national stage
he enjoyed the enthusiastic support of President Roosevelt
Bone saw the Columbia River as a mighty public resource

"BANK HOLIDAY" ENDS AS BANKS BEGAN TO REOPEN

Federal government allowed banks to conduct business -- Tuesday, March 14, 1933
Seattle, Tacoma, and Spokane banks opened for regular business
Banks in the rest of the state, including rural King County, opened the next day

CIVILIAN CONSERVATION CORPS (“CCC”) IS CREATED BY CONGRESS

Congress passed the *Reforestation Relief Act* -- March 31, 1933

which established the *Civilian Conservation Corps (CCC)*

Urban poor and unskilled aged eighteen to twenty-five were put to work in state forests and parks

these were mostly single men or men with dependent families

workers planted trees; constructed dams and roads, and installed telephone lines

more than forty camps were constructed in the state -- 2,500 men were employed

they became known as “dollar-a-day men” for their earnings -- \$30 a month

with \$25 from their pay to be sent home to their families

all learned to be responsible employees who showed up for work each day

many learned a trade

ATOMIC THEORY IDENTIFIES AN ENORMOUS NEW SOURCE OF ENERGY

Work was being conducted in Europe by physicists based on the theories of Dr. Albert Einstein

applying his famous equation defining the equivalence of mass and energy ($E=mc^2$)

It was theorized that nuclear energy is possible because some elements in nature can be split

by a process called “fission” (splitting an atom)

in that process energy would be released as heat

it was also theorized that elements could be exploded with an enormous burst of energy

estimates were offered that changing the hydrogen atoms in a single glass of water into helium

“would release enough energy to drive the *Queen Mary* across the Atlantic and back at full speed.”¹³⁸

During the [1920] and [1930s] European nuclear physicists uncovered the secrets of the atom

led by such scientific pioneers as Dr. Albert Einstein, Dr. Leo Szilard and Dr. Enrico Fermi

NOTED PHYSICIST DR. ALBERT EINSTEIN COMES TO AMERICA

Albert Einstein was German-born [March 14, 1879] to a family of non-observant Jews

he enrolled in the four year mathematics and physics teaching diploma program

at Polytechnic in Zurich, Switzerland [1896]

he completed his thesis and was awarded a PhD from the University of Zurich [1905]

and was appointed director of the Kaiser Wilhelm Institute for Physics

before becoming a professor at the Berlin Academy of Sciences

Dr. Albert Einstein, a theoretical physicist, developed the theory of general relativity

unleashing a revolution in physics -- he is often regarded as the father of modern physics

and is considered to be one of the most prolific intellects in human history

While visiting American universities -- April 1933

Einstein learned that the new German government had passed a law barring Jews

from holding any official positions including teaching at universities

Dr. Einstein decided to immigrate to the United States because of the rise to power of the Nazis

under Germany’s new chancellor, Adolf Hitler [October 17, 1933]

he did not go back to Germany

¹³⁸ David M. Kennedy, *Freedom From Fear*. P. 656.

(Dr. Albert Einstein settled in the U.S. and became an American citizen [1940])
Other Jewish scientists also fled to America
among them were Nobel laureates and professors of theoretical physics
with so many scientists now forced by circumstances to live in America
great scientific advances loomed on the horizon

FIRST ELECTRIC GUITAR IS INVENTED ¹³⁹

(Paul H. Tutmarc [born May 29, 1896] was earning money
by singing and playing the guitar and banjo by the age of twelve
he started playing Hawaiian-style steel guitar when he was fifteen,
and eventually hit the road traveling with a vaudeville troupe on the Chautauqua circuit
Tutmarc was touted on Tacoma's KMO radio as the "Silver Toned Tenor"
and he began making appearances at Tacoma's Broadway Theater [1926]
after moving to Seattle [1928], Tutmarc began to perform on KJR radio
and on the Orpheum and Pantages theatrical circuits
Paul Tutmarc worked the Seattle theaters as a tenor soloist with a number of top dance orchestras
including the town's premiere bandleader, Vic Meyers [1929]
Tutmarc began experimenting in his basement workshop with his partner Arthur "Art" J. Stimson
on a secret project that resulted in his Spanish-style guitar being amplified
both were surprised by the beautiful tone the amplifier produced [winter 1930-1931]
Both Tutmarc and Stimson soon realized the importance of their discovery
but they were told they could not get a patent for their invention
because the telephone company had already patented similar devices
disappointed, Tutmarc put his electric guitar dreams on hold while Stimson, apparently,
headed off to Los Angeles where he said he intended to try to interest others in the idea
Dobro Manufacturing Co. patented an All-Electric model of electrified Spanish-style guitar
Art Stimson had sold the company the patent for the measly sum of \$600
Dobro Manufacturing Co. began marketing their electric guitar -- spring 1933
Casting caution aside, Tutmarc forged ahead marketing his own brand of superior electric guitars
he vastly improved his on his old design through experimentation

UNIONS CONTINUE TO SUFFER DUE TO THE DEPRESSION

Great Depression ate into companies' profits
in response many corporations reduced wages and laid-off workers
union benefit plans were reduced
assembly lines were speeded up causing exhaustion and accidents
fewer men working resulted in declining union membership numbers -- April 1933
Great Depression maintained a tight grip on the American, and now the world, economy
those men who held a job could not afford to pay union dues
Longshoremen unions languished as their membership numbers remained low -- April
Seattle had 110 paid-up International Longshoremen's Association members
Grays Harbor and Everett struggled to hold their union charters

¹³⁹ Peter Blecha, HistoryLink.org, Essay 7479, September 18, 2005.

along the Pacific Coast employers used the “shape-up system”
in which companies hired only workers of their choice -- and then only for the day
Union leaders looked anxiously for an upsurge indicated by increasing numbers of workers

FDR REMOVES THE GOLD STANDARD AS A BACK STOP FOR AMERICAN MONEY

President Roosevelt’s administration announced the United States would go off the gold standard
FDR issued Executive Order 6102 making private ownership of gold illegal
with the exception of jewelers, dentists and coin collectors
private owners could not redeem gold certificates (former money) for gold
Federal government started printing Federal Reserve Bank notes for its currency -- April 19, 1933
Federal Reserve Notes became the new (some said “funny”) money
value of the dollar declined in the world market while silver, commodities, and stocks climbed
net effect was to stimulate the domestic economy and make more goods available
inflation began to lift the nation’s economy

CONGRESS PASSES TWO HUGE RELIEF MEASURES THAT ARE SIGNED BY THE PRESIDENT

At FDR’s request the *Federal Emergency Relief Act* is enacted
unemployment reached fourteen million -- over one quarter of the nation’s work force
Federal Emergency Relief Administration (FERA) was established by Congress -- May 12, 1933
\$500 million was appropriated for relief to support those in need
with half to be given immediately as direct relief to those unable to obtain jobs
other half was to be distributed to state and city governments for local relief projects
to be matched at \$1 of federal money for every \$3 of local money spent
President Roosevelt appointed Harry Hopkins as the Federal Relief Administrator
Congress also enacted the *Agricultural Adjustment Act (AAA)* to provide immediate relief to farmers
by establishing farm subsidies for some agricultural products
this paid farmers to not grow specific crops and to leave their ground fallow
it was designed to raise farm prices by cutting production
and paid farmers for reducing acreage in the hopes that diminished supply
it would provide farmers with higher market prices
it also provided funds for loans to farmers to meet their mortgage payments
AAA was enthusiastically hailed by wheat farmers
many of whom stayed in business solely because of government support

CONGRESS ESTABLISHED THE TENNESSEE VALLEY AUTHORITY (TVA)

This publicly-owned corporation was authorized to build dams and provide cheap public power
to promote economic development in the impoverished Tennessee River Valley -- May 18, 1933
TVA was to construct and operate dams and power plants along the Tennessee River
to generate and sell electricity, establish flood control, provide for irrigation,
develop navigation and begin the manufacture and sale of fertilizer products
(six dams were completed before the United States became involved another World War)
This project was strongly opposed by private power companies
who saw the competition as unfair, socialistic and even Communist
(TVA became the forerunner of the Bonneville Power Administration in the Pacific Northwest)

CONGRESS PASSES THE *FEDERAL SECURITIES ACT*

Federal Government became responsible to register and approve all issues of stocks and bonds
issuers of these securities were forced to make a full disclosure
of all pertinent information about an issuing company
for the first time the federal government regulated Wall Street -- May 27, 1933

OYMPUS NATIONAL MONUMENT BECOMES OYLMPIC NATIONAL PARK

President Franklin Roosevelt transferred Olympus National Monument
to the National Park Service -- June 10, 1933
Washington Congressman Mon C. Wallgren worked to add 800,000 acres to the park
logging companies, chambers of commerce, and Governor Clarence D. Martin
thought the park was much too large -- if it was needed at all

CONGRESS PASSES THE *HOME OWNERS REFINANCING ACT*

This act established the Home Owners Loan Corporation (HOLC) -- June 13, 1933
to provide money for mortgages and other aid to home owners for expenses
such as taxes, and money for maintenance and repairs to their property
(more than one million homeowners had been served when HOLC was dismantled [1936])

CONGRESS PASSES THE *NATIONAL INDUSTRIAL RECOVERY ACT* (NIRA)

This last piece of New Deal legislation was passed on the last day of the one hundred day
special Congressional Session
National Industrial Recovery Act (NIRA), the signature piece of legislation of the New Deal,
came into effect to lift the industrial economy out of economic depression -- June 16, 1933
this was the president's principal weapon against the Great Depression
this law authorized the president to regulate industry and permitted cartels and monopolies
in an attempt to stimulate economic recovery and establish a public works program
NIRA permitted corporations in each industry to establish production quotas
it allowed individual industries to legally control production and prices
it also set a floor under wages and limited hours of work
NIRA had two main sections (or "titles") and established two new relief agencies
which Congress funded with \$3.3 billion:

- National Recovery Administration (NRA)
- Public Works Administration (PWA)

NIRA Title I created the *National Recovery Administration (NRA)*
this was devoted to industrial recovery, fair competition and trade union rights
it also permitted regulation of working standards
Section 7(a) of the bill protected collective bargaining rights for unions
NIRA Title II created the *Public Works Administration (PWA)*
this was established to identify projects and funding opportunities
and funded the National Industrial Recovery Act (NIRA)
NIRA was to expire [June 1935]

TITLE I: NATIONAL RECOVERY ADMINISTRATION (NRA) ASSISTS BUSINESS AND LABOR

General Hugh Johnson was named Director of the National Recovery Administration (NRA)

NRA was to stimulate competition for the benefit of both producers and consumers

and reduce unemployment by implementing various codes and establishing fair trade agreements

individual industries were allowed to legally control production and prices

as anti-trust laws were suspended in favor of codes demanding fair competition for business

National Industrial Recovery Act (NIRA) recognized that the trade-union movement

had been weakened by the Great Depression

contract negotiations seemed useless and strikes appeared to be suicidal

Section 7(a) of the National Industrial Recovery Act (NIRA) encouraged the growth of unions

it stated that **“employees shall have the right to organize and bargain collectively through representatives of their own choosing”**

however, nothing compelled employers to sign a labor agreement (Code) in the first place

employers and employees did not negotiate labor provisions as equals

unions might submit proposed labor codes

and government representatives might even recommend their adoption,

but employers did not have to sign any code that did not please them

while the NIRA Code Section 7(a) encouraged union organizing,

the Act had no mechanism for resolving labor problems

compliance by business was voluntary

those who cooperated with the NRA received the Blue Eagle **“seal of approval”**

(NRA was declared unconstitutional by the U.S. Supreme Court [May 1935])

TITLE II: PUBLIC WORKS ADMINISTRATION (PWA) DIRECTS BUILDING PROJECTS

Secretary of the Interior Harold Ickes was appointed Public Works Administration (PWA) Director

PWA’s goal was to provide employment, stabilize purchasing power

and contribute to a revival of American industry

This agency supervised the building of new roads, trails through national forests, public buildings,

concrete sidewalks, picnic shelters, low income housing, wildlife refuges and wildlife ranges,

highway bridges, post office murals and the Federal Writer’s Project,

this novel program put unemployed writers to work producing a series of state guidebooks

and other projects which provided employment

“HUNDRED DAYS CONGRESS” CHANGES AMERICA

President Franklin Roosevelt had entered office with enormous support from the voters

Americans of all political persuasions demanded immediate action

Roosevelt responded by a special session of Congress

FDR proposed a remarkable series of new programs

When the “Hundred Days Congress” adjourned from its special session

it had passed all fifteen bills requested by President Roosevelt

(Except during the “Great War” the federal government had never been so involved

in so many aspects of American life as during the era of FDR and the New Deal)

Ever since, presidents have been judged against FDR for what they accomplish in their first 100 days

AMERICAN FEDERATION OF LABOR (AFL) REPRESENTS PRIMARILY CRAFT UNIONS

As a result of federal National Industrial Recovery Act (NIRA) pro-labor legislation
American labor movement was encouraged by protections guaranteed under the NIRA
labor undertook a wave of union organizing not seen in almost two decades
Ranks of organized workers expanded rapidly
but this nearly totally unrestrained growth resulted in friction
between advocates of craft unions and industry-wide unions
American Federation of Labor (AFL) attempted to defend their jurisdiction over craft workers
as it sought to enforce work rules, maintain control over apprenticeship programs
and exclude fewer skilled workers from union membership
craft unionists were opposed to organizing workers industry-wide, that is,
representing all of the production workers in a particular industry
rather than organizing into separate unions divided along craft lines
thus AFL's focus was placed on representing craft unions of skilled workers organized by skill
this was believed to be the most effective way to represent workers
and to defend the advantages union members had secured through their skills
unrepresented semi-skilled were being organized by the AFL only slowly
American Federation of Labor leaders were opposed to granting semi-skilled production workers
equal status with skilled workers
or representing unskilled workers in the AFL at all
idea of "one big union" as advocated by the Industrial Workers of the World was unthinkable

COMPANIES FORM THEIR OWN UNIONS FOR THEIR EMPLOYEES

Employers reacted to the labor rules established by National Industrial Recovery Act Section 7(a)
company unions under the control of company management were quickly established
businesses announced that these were the only proper representatives of their workers
American Federation of Labor (AFL) craft unions responded by holding strikes
as they demanded to be recognized as the organization of the workers' choosing
who would represent them in negotiations with the company
Large numbers of workers were summarily fired for striking

INTERNATIONAL SEAMEN'S UNION CLAIMS ALL SEAMEN IN THE UNITED STATES

International Seamen's Union (ISU) during its forty-year existence [1899-1937]
was a federation of affiliated self-governing unions
that were divided into Atlantic, Great Lakes and Pacific regions
Throughout its existence, ISU remained under the control of its longtime president, Andrew Furuseth
ISU's decline must be attributed to the nineteenth-century sailing ship mentality
Furuseth imposed and to his rejection of alliances with any other worker's groups

PACIFIC COAST LONGSHOREMEN FEEL THE NEED TO ORGANIZE

Pacific Coast longshoremen had long suffered from unsafe working conditions
long hours and split shifts magnified their dangerous task of handling heavy cargo
they had only an ineffective organization to represent them
or to handle their grievances against employers

worst of all, they had no fair chance to secure what few jobs were available
employers hired those who were willing to pay bribes or were relatives or were favorites
those who favored unions most definitely were not hired
Since the early [1920's], company unions had dominated the maritime and dock industries
then worker militancy, led in Washington State by William T. Paddy Morris, asserted itself
International Longshoremen Association (ILA) locals were chartered
(in Everett and Grays Harbor [1929], Portland [1931] and Seattle [1932]
when San Francisco, the key to the coast, was organized -- 1933
longshoremen were ready to move
Fink halls kept shipping companies in control of labor in the longshore and maritime industries
on the Pacific Coast only Tacoma ILA Locals 38-3 and 38-30
maintained a closed shop (where only union members were employed)
With passage of National Industrial Recovery Act (NIRA) union organizing encouragement
there was a possibility of establishing a new employer-employee relationship

LONGSHOREMEN ORGANIZE UNDER THE NATIONAL INDUSTRIAL RECOVERY ACT (NIRA)

After passage of the National Industrial Recovery Act (NIRA) Section 7(a)
International Longshoremen's Association (ILA) renewed its efforts
to reestablish itself on the West Coast by chartering new local union affiliates
Pacific Coast International Longshoremen's Association (ILA) took on new life
Pacific Coast District ILA delegates met in a special district conference in Seattle -- July 2 through 5
fifty-six delegates from Washington and Oregon ports were in attendance
to review the tentative Shipping Code proposed by the Tacoma longshoremen
delegates added or eliminated, as they saw fit, various clauses or conditions
affecting practically every line of work on the waterfront
they prepared a tentative "Shipping Code" of operation of their own to address methods
to stimulate local economic recovery and meet the needs of working people
Proposed Shipping Code with their revisions was then sent to the various Northwest locals
for their acceptance, modification or rejection
in a referendum vote, the Proposed Shipping Code was overwhelmingly approved
by the Pacific Coast International Longshoremen's Association (ILA) members
to be presented to waterfront employers
Longshoremen, warehousemen, salmon canning workers and inland boatmen
became actively involved in organizing the docks along the Pacific coast waterfronts

COMMUNISM INFILTRATES ORGANIZED LABOR

Influence of communism within the American labor movement
significantly altered the course of labor history
two men stand out as unique figures on the West Coast: Harry Bridges and Harold Pritchett
Bridges led the San Francisco International Longshoremen's Association (ILA)
Harold Pritchett led the British Columbia Shingle Weavers' Union
both men played an integral role in shaping the labor movement during the Great Depression
Bridges and Pritchett were aliens -- non-citizens of the United States
both were heavily influenced by the Communist Party

they formed their unions into militant protectors of labor
both faced persecution from anti-union red-baiters who fought labor's every move
both faced intense scrutiny by the U.S. Government
Both were tried before the anti-communist tribunals of the time
both faced deportation

LONGSHOREMEN IN SAN FRANCISCO TAKE A DIFFERENT TRACK

One group of longshoremen who came to be known as the "Albion Hall group"
(named after their meeting place) attracted ILA union members from a variety of backgrounds:

- former Industrial Workers of the World (IWW) members,
- members of the Communist Party,
- and others with no clearly defined politics

Communist Party members in San Francisco also were trying to organize an alternative
to the International Longshoremen's Association (ILA) and American Federation of Labor (AFL)
they attempted to organize longshoremen, sailors and other maritime workers

into an all-inclusive union: the Maritime Workers Industrial Union (MWIU)

a revolutionary industry-wide alternate to the International Longshoremen's Association
and other American Federation of Labor (AFL) unions

Albion Hall group was sympathetic to the Communist's MWIU effort

International Longshoremen's Association organizer Harry Bridges

also was sympathetic to much of the MWIU's program

but he chose to join the new San Francisco Longshore and Warehouse Union

HARRY BRIDGES IS ACTIVE IN THE SAN FRANCISCO ILA UNION MOVEMENT

Born Alfred Renton Bridges in Melbourne, Australia

Bridges went to sea at age sixteen as a merchant seaman and joined the Australian sailor's union

Bridges entered the United States [1920] and joined the Industrial Workers of the World [1921]

he participated in an unsuccessful nationwide seamen's strike

Bridges left the sea for longshore work in San Francisco [1922]

Harry Bridges was a member of the "Albion Hall group"

(federal government later spent more than a decade trying to deport or convict Harry Bridges
on the ground that he was a member of the Communist Party

but they were never able to produce any hard evidence that he was)

When International Longshoremen's Association (ILA) elections were held in San Francisco,

Harry Bridges and fellow members of the Albion Hall group

held two of the three business agents positions

they also made up a majority of the San Francisco ILA executive board

San Francisco ILA organizer Harry Bridges was a militant, allegedly Communist, radical

HAROLD PRITCHETT JOINS THE TIMBER UNION MOVEMENT IN CANADA

Pritchett initially worked in the Canadian sawmills when he joined the labor movement

he immersed himself in the writings and doctrine of Communist authors

lumber camps proved to be fertile ground for the ripening of Communist ideals

Harold Pritchett joined the communist movement [1924]

encouraged by discussions with fellow workers and regular reading of the writings of Karl Marx

Pritchett became a politically astute union activist

Pritchett left the sawmills and moved on to become a shingle weaver

first as a shingle packer -- then as a shingle sawyer

It did not take long for him to attain a position of union leadership -- he rose quickly in the ranks

three years after joining the labor fight,

Pritchett became an official in the Shingle Weavers' Union [1927]

Pritchett quickly became a leading figure in the Northwest's union community

he rose to prominence when he chaired the Fraser Mills Strike Committee [1931]

Pritchett was elected president of the Vancouver, B.C. Shingle Weavers local [1932]

Harold Pritchett's actions and those of the Communists

added militant vitality to the American Federation of Labor (AFL) movement

UNION STRATEGY FOR ORGANIZING TO REPRESENT THE INTEREST OF MEMBERS

Working people have three basic economic weapons:

- "primary economic strike" usually occurs to protest wages, hours, or working conditions
- "sympathy strike" (secondary boycott)
 - is a refusal to cross another union's picket line or handle a "scab" (nonunion) product
- "general strike" is labor's ultimate weapon as all workers in an area walked off the job
 - this demonstrates the supreme act of solidarity

Union activists could be divided into three categories:

- "conservatives:" are those who have been worn down by many defeats
 - they are cautious, sticklers for contractual obligations or fearful of rank and file members
 - they are often undemocratic in their paternalism toward the company
- "militants:" may have suffered defeats which taught a lesson
 - but the lesson was of better and stronger preparation and not retreat
- "radicals:" such as the Industrial Workers of the World (IWW) and Communists
 - who have their own agenda which might or might not coincide with other activists

PACIFIC COAST SHIPPING INDUSTRY IS NOT INTERESTED IN UNION MOVEMENTS

Government stimulus efforts had allowed for financial gains in the shipping industry

shipping companies saw an increase in the volume of goods distributed throughout the nation

longshoremen had not shared in the increased profits generated for shipping companies

Shipping industry was already permitted under the Shipping Act of [1916]

to organize and negotiate agreements of their own regulating competition among ship owners

they had little to gain from the labor rights granted to other industries under NIRA code

Maritime industry leaders were asked by the federal government

to voluntarily prepare codes of operation which would stimulate economic recovery

and at the same time recognize the needs of working people

REPUBLICANS DID NOT SIT IDLY BY AND WATCH A "WELFARE STATE" BEGIN

Some Republican Seattle community leaders took a pledge

to rid their city of political corruption, labor unions, vice and gambling which flourished there

they formed the New Order of Cincinnatus (NOOC)¹⁴⁰
named for the legendary Roman hero who was called from his plow
to lead his people against the enemy (circa 500 BC)
after conquering the Aequians and making the country safe, he returned to the plow
NOOC was composed mostly of middle-class professional supporters
they restricted their membership to men ages twenty-one to thirty-five
they called for a **“rebirth of political idealism among the younger citizens of America ...
Cincinnatus advocates a Spartan-like devotion to honesty, efficiency, and ability in government.”**
Organized along military lines the group advocated a vastly increased state-level police force
which consisted entirely of men under age forty trained by a state police school
who enlisted for a military-style four-year term rather than being free to resign at any time

ROCK ISLAND DAM IS THE FIRST HYDROELECTIC PLANT ON THE COLUMBIA RIVER

(While politicians debated, construction began [1929] by Chelan County Public Utilities District
Puget Sound Power and Light Company took over the project)

building the first dam on the Columbia River at Rock Island was completed in 1933
about twelve miles downstream from Wenatchee near the geographic center of the state
This was to be the first dam on the mainstem of the Columbia River
it was not a multiple-purpose dam -- its sole purpose was to generate electricity
four generators were placed on line -- reservoir behind the dam is called Rock Island Pool
three fish ladders formed pools ten by twenty feet
each step is about one foot higher than the one below

FEDERAL INVOLVEMENT IN HYDROELECTRIC POWER

Impressive as the private and municipal power developments had been
Army Corps of Engineers' [1926] 308 Report had been revised several times
these studies concluded it was feasible to construct dams on the Columbia River
308 Reports stated there was room for the federal government in power generation
United States Bureau of Reclamation was at first interested in irrigating arid lands
they soon developed a vital interest in hydroelectric power production
this paved the way for the federal government to develop hydroelectric power
President Roosevelt saw these huge projects as opportunities
public works projects would put people to work and raise America from the Great Depression
FDR wanted hydroelectric dams built
he committed the federal government to completing Boulder (later Hoover) Dam
on the Colorado River near the Nevada-Arizona border begun under Hoover's Administration
Columbia River contained forty percent of the nation's potential for hydroelectric generation
this enormous potential did not escape President Roosevelt's attention
U.S. Senator Homer T. Bone was instrumental in promoting construction of dams
on the Columbia River

PRESIDENT ROOSEVELT PROPOSES A LOW DAM ON THE COLUMBIA RIVER

¹⁴⁰ Dryden, Cecil. *History of Washington*. P.279.

President Franklin D. Roosevelt conceived of the low dam first as a work relief project
he believed the high Grand Coulee Dam's estimated cost of four hundred million dollars
would overburden the shrunken national economy
irrigation also would bring too much additional cropland into production
at the very time the New Deal was spending money to destroy agricultural surpluses
Public Works Board appropriated \$63 million for a 290-foot dam
it would furnish considerable electric power but would have little value for irrigation
plans for developing the Columbia Basin were put on hold since a low dam
would not support the kind of irrigation system that had been envisioned
Washington State had previously provided \$377,000 toward the construction project
Department of the Interior's Bureau of Reclamation was given the task of building a low level dam
rather than the rather than to the Army Corps of Engineers
this decision increased the likelihood that high level dam could be completed at some point.
Engineer Frank A. Banks was placed in charge of the low level 290-foot dam project

PROCESS OF PURCHASING LAND FOR THE LOW LEVEL GRAND COULEE DAM BEGINS

Grand Coulee is located in central Washington 597 miles from the mouth of the Columbia River
about ninety miles northwest of Spokane
near the place where an ice floe dammed the river during the last Ice Age
ice had forced the river to rise from its historic channel and flow to the south,
where it carved a giant canyon -- the Grand Coulee
eventually the ice retreated and the river returned to its old channel
Bureau of Reclamation undertook purchasing land for the proposed low level dam site
as far as 151 miles upstream (almost to the Canadian border) for use as the future reservoir zone
Within the zone were eleven towns and cemeteries, two railroads, four sawmills,
three state highways and about one hundred and fifty miles of country roads, fourteen bridges,
and four telegraph and telephone systems along with power lines
all of this infrastructure had to be purchased or relocated along with a total of 3,000 residents
Government appraisers valued the land and offered to purchase it from the effected residents
many refused to accept the offers and Reclamation filed condemnation suits
Relocation of the Colville Confederated Tribe and Spokane Tribe members occurred as well
although by treaty they possessed year-round and seasonal settlements within the reservoir zone

WORKERS IN NON-SKILLED INDUSTRIES ALSO WANT UNION REPRESENTATION

Industrial unionists believed that organizing by craft was unworkable in many industries
steel and automobile workers had developed skill and expertise in their work, but no craft
dividing workers into a number of different crafts represented by separate organizations
would weaken the workers' bargaining power within the industry
and leave the majority, who had few traditional craft skills, completely unrepresented
woodworkers, for instance, were an eclectic group comprised of loggers, shingle weavers,
lumber and sawmill workers, plywood and veneer workers, pile drivers, coopers,
furniture workers, boommen and rafters
they were all shunned by the elitist attitude of the American Federation of Labor
most found themselves unrepresented in any union

AFL ALMOST TOTALLY IGNORES UNSKILLED LABORERS

Skilled workers “craft unions” were claimed by the American Federation of Labor (AFL)
many union activists criticized the policy of delaying the organization of semi-skilled workers
they demanded new International Unions be started immediately
to accept unrepresented loggers and saw mill hands

LOGGERS AND MILL HANDS CANNOT ACHIEVE STABILITY FOR THEIR INDUSTRY

Partly because of their lack of restraint under the Industrial Workers of the World (IWW)
unionism throughout the Northwest timber industry languished since the end of the Great War
as a result Industrial Workers of the World disappeared -- 1933
this left unprotected many unrepresented logging and lumber employees
National Industrial Recovery Act (NIRA) was, in fact, a glaring failure
in the Pacific Northwest’s largest industry -- timber
lumber management wrote their own codes which had the force of law
as the antitrust laws were set aside companies were allowed to set prices
and to regulate production in a cooperative arrangement
there was some difficulty in getting the labor codes established
but this task was simple compared to seeing them observed
lumber management had always been fiercely individualistic
now they produced what they wished regardless of the agreed upon code

PUSH IS MADE TO ORGANIZE LABOR BY INDUSTRIAL UNIONS

American Federation of Labor (AFL) had long permitted
formation of a few industry-wide “federated” unions
which were affiliated directly with the AFL
while the AFL included a number of industrial unions,
such as the United Mine Workers and the Brewery Workers, craft unionists held the power
they used that power to forcefully stop any drive toward industrial organizing
Advancing economic depression demanded industrial union membership be organized
John L. Lewis, United Mine Workers president, and a number of other labor leaders
came to the conclusion that their own unions would not survive
if the great majority of workers in their industries remained nonunion
they started to press the AFL to change its policies and organize by industry
It was proposed to use federated unions to organize workers on an industry-wide basis --1933
these labor locals would pay dues and have bargaining representation
but not have voting status in the AFL
AFL did not promise to allow those unions to maintain a separate identity indefinitely
industrial unions could be broken up later and their members redistributed
among the craft unions that claimed jurisdiction over their workers
Organizing drives were confused and bitter as embattled union factions sought new members
no agreement regarding aims or methods used in recruiting existed among the leaders or workers
It was obvious that unions were growing but no strong coordinated leadership had yet developed

DAVE BECK ORGANIZES SEATTLE TEAMSTERS UNION MEMBERS

Dave Beck organized everything on wheels in Seattle
under the loose organization of the American Federation of Labor
this alliance coincided with the AFL plan to maintain “craft unions”
under its national leadership

Beck’s technique was to organize the businessman by convincing them
that they could make more profit by paying higher wages and thereby creating labor stability
he successfully convinced hotels to contract only with unionized laundry services
this forced Seattle laundry companies to unionize to win business

TEAMSTERS UNION IS SUCCESSFULLY ORGANIZED IN WASHINGTON STATE

Dave Beck’s Seattle Teamsters became one of the craft unions in the American Federation of Labor
Beck was determined to work within the framework of capitalism
as he rose through the ranks of the Teamsters union

he became convinced both employers and unions would benefit from a closed “union” shop
Benefits, to Beck’s mind, would flow both directions -- all would gain:

- union advances provided to members by a closed shop were obvious;
- employers, too, would profit as they could be assured that labor contracts would be honored
and the industry could charge higher prices to offset cost of doing business with the unions

Militancy marked the rise of Dave Beck’s Teamsters Union

employers who did not sign union contracts with the Teamsters Union
saw their businesses die as truck drivers refused to deliver to them

Beck used strong arm methods against those companies which survived the boycotts
Beck’s Teamsters fought against not only corporate bosses
they easily drove out the Communist influence in their union

Dave Beck was on the way to becoming one of the most powerful men in America

Beck’s efforts were so successful and his public stature so great
that he was offered the position of Secretary of Labor
by President Roosevelt (and later Truman and Eisenhower)
(he declined all three offers to remain part of the labor movement)

TEAMSTERS UNION EXPANDS BEYOND TRUCKING

Dave Beck organized many businesses that had little to do with trucking
his labor empire extended to include not only truckers but department-store workers,
automobile salesmen, cannery workers, undertakers, cowboys, dry cleaners,
and filling-station operators to name only a few

Beck consolidated many previously independent local unions and members of other unions
by inducing them to join the Teamsters Union

MARITIME INDUSTRY LEADERS HOLD A MEETING IN WASHINGTON, D.C.

Pacific Coast District ILA leaders, including Tacoma Longshore organizer Paddy Morris
went to Washington, D.C. with the membership’s Shipping Code recommendations
as proposed under the National Industrial Recovery Act (NIRA) Section 7(a)

When the ILA men arrived in the nation's capital city they discovered maritime employers

already had prepared their own version of the Shipping Code
and refused to even meet with longshore representatives
Attempts by the National Recovery Administration (NRA) bureaucracy
to bring the shipping companies to the conference table
to discuss the Shipping Code with the union men were futile
Shock of the employers' attitude toward them at the Shipping Code hearings
added to the hostile attitude of longshoremen

CEREMONIES ARE HELD AT THE GRAND COULEE CONSTRUCTION SITE

As a crowd of 3,000 watched Governor Clarence D. Martin drove the ceremonial first stake
for the project at the base of the dam site -- July 16, 1933
this stake was held by Chief Jim James of the San Poil Tribe
while a few members of the Colville tribe looked on
Washington's U.S. Senator Clarence Dill, often called the "Father of Grand Coulee,"
turned the first spade full of dirt
Job hunters began to line up at the employment agencies

EASTERN WASHINGTON RESIDENTS WANTED A HIGH LEVEL DAM

Work was begun on the low-level dam project -- July 17, 1933
Residents living in the dry Big Bend region wanted to develop farmland
they were not satisfied with the low dam being built
even though U.S. Senator Dill promised that the dam's foundations
were being laid in such a way that the structure's height could be increased
in the vague future they would get their water -- maybe

OPPOSITION TO ANY HYDROELECTRIC DAM ON THE COLUMBIA RIVER STIFFENS

Washington Water Power, a private company, noted there was already a surplus of Northwest power
they believed the money could be better spent on irrigation projects in Eastern Washington
Private power interests tried to kill the high dam
Washington Post called its construction a misuse of federal power
Bellingham Herald called it a "folly" as there was no industry to use the power

POLITICAL LEADER SAUL HAAS RETURNS TO SEATTLE -- AND STATE POLITICS

Saul Haas had accompanied newly-elected U.S. Senator Homer T. Bone to Washington, D.C.
there he served as the senator's chief-of-staff
and orchestrated the senator's position as Chairman of the Senate Committee on Patents
into a platform for conducting a national fight in support of public power
Saul Haas left his position in Senator Bone's office
he took an appointment as Collector of Customs for the Pacific Northwest -- July 1933
Hass became a powerful figure in Washington State Democratic politics
he served as state director for the Democratic National Campaign Committee
both he and Senator Bone took an interest in a Democratic rising star: Warren G. Magnuson

LONGACRES HORSE RACING TRACK OPENS

Washington Jockey Club was issued a permit to own and operate a one-mile track [June 20, 1933]

3,000 men were hired to work around the clock constructing the facility

Longacres racetrack, racing strip, red and silver grandstand, clubhouse, thirty-three barns,

a judges' stand, and pari-mutuel windows were all completed in only twenty-eight days

Longacres boasted the latest in racing equipment -- a Bahr starting gate

which kept each horse in a separate stall at the start

Opening day at Longacres -- August 3, 1933

drew a crowd of crowd estimated at 11,000 to the mile-long track

they paid \$1.10 each for a place in the stands

eight races were scheduled and the sunny weather provided fans a full view of Mt. Rainier

first race was a claiming event for two-year-olds carrying the track's minimum purse of \$400

Governor Clarence Martin was there for the first "parade to post"

Racing season lasted forty days through [September 17, 1933]

new racetrack was an escape and diversion during the Great Depression,

and it generated much needed tax revenue for the state's funding of the old age pension

Longacres was the first track on the Pacific Coast to successfully operate

under the pari-mutuel system of betting

NATIONAL LABOR BOARD (NLB) IS ESTABLISHED TO HANDLE LABOR DISPUTES

General Hugh Johnson, director of the National Recovery Administration (NRA)

saw that his hope for a self-policing system to enhance business competition did not work

clearly, formal governmental machinery was needed to handle the sudden wave of labor activity

Johnson created the National Labor Board (NLB) and FDR announced its formation -- August 5

Roosevelt issued no executive order defining the Board's powers, duties or procedures

but he did assert that the board should

"consider, adjust, and settle differences and controversies" arising in labor disputes

National Labor Board consisted of seven members

three members represented labor

three members represented industry

chairman of the NLB was United States Senator Robert F. Wagner of New York

Although NLB's mandate was vague, its procedures undefined and enforcement powers nonexistent

Senator Wagner, one of the primary authors of the National Industrial Recovery Act (NIRA)

was determined to make the board work along self-policing lines

previously announced by General Johnson

National Labor Board quickly settled on a strategy of suggesting elections

as a way of determining majority status and breaking the representation deadlock

SHIP OWNERS REFUSE TO RECOGNIZE THE SEAMEN'S UNION

International Seamen's Union (ISU) gathered signatures of 12,000 organized and unorganized sailors

who indicated the union was to represent them

many of the signers pledged to join the union as soon as they were financially able

International Seamen's Union presented the pledges to the National Recovery Administration (NRA)

as proof of their legitimacy

Then, without waiting for a ruling from the NRA to force the ship owners to negotiate,

Pacific District maritime unions made up of the International Seamen's Union, Sailors' Union of the Pacific, Marine Firemen's Union, Marine Cooks and Stewards Union presented their demands to Pacific Coast ship owners -- August 31, 1933 they received no response from management

STATE SUPREME COURT RULES THE INCOME TAX UNCONSTITUTIONAL

By a five to four decision the State Supreme Court ruled in *Culliton v. Chase* **“a flat (income) tax would be permissible in Washington, a graduated net income tax would violate the constitution's new uniformity provision because ‘income’ was ‘property’ and property was to be taxed uniformly.”** -- September 8, 1933

in effect, an income tax itself was not illegal -- it was a *progressive* income tax that was illegal thus “income” became equivalent to “property,” the poorest farmer's land was seen as equally taxable as a wealthy person's bank account Washington State Grange was outraged at the decision

Grange News editorialized that **“The courts are ruling America. The fact is that a government of the people, by the people, for the people has perished from this state if such a decision as that invalidating Initiative No. 69 is allowed to stand.”**

CONSTRUCTION BEGINS ON THE LOW LEVEL GRAND COULEE DAM

Work was begun on the low level dam -- a much smaller project than the proposed high dam it would help to control floods and provide water for irrigation but only on a small scale hydroelectricity would be produced but at a reduced capacity significantly, it would not raise its reservoir high enough to allow for irrigation of the Grand Coulee plateau but the dam's design provided the it to be raised and upgraded in the future Construction began at the base of the dam site -- September 9, 1933

LONGSHOREMEN REBEL AGAINST MANAGERMENTS' HIRING PRACTICES

Fink Halls had long been an issue for the International Longshoremen's Association (ILA) members of the union's fink hall committee met with ship owner representatives -- September 13 union members asked for a wage increase, an ILA agreement, and control of dispatching jobs employers refused the proposal they insisted that any new agreement must come from New York they also repeated their determination not to deal with ILA at all fink hall hiring was still used to keep the old Industrial Workers of the World (IWW) members from longshore hiring lists

After implementation of the National Industrial Recovery Act (NIRA), ex-Wobblies began to join the ILA bringing with them the conviction that militant economic action was the surest way to gain union demands Communists, especially at the port of San Francisco, also became active in the ILA

SAN FRANCISCO BECOMES THE KEY PORT CITY ON THE PACIFIC COAST

Fanned by the fiery rhetoric and actions of Harry Bridges and the Communist sympathizer of the Albion Hall group

International Longshoremen's Association (ILA) in San Francisco
rapidly expanded their membership -- fall 1933
San Francisco longshoremen resented their employers' attitude
regarding labor's proposed Shipping Code
longshoremen demonstrated their fighting mood

SAN FRANCISCO LONGSHOREMEN HAVE THEIR OWN BEEF (DISPUTE)

Harry Bridges organized and led a successful five-day strike -- October 1933
to force Matson Line to reinstate four longshoremen who had been fired
for wearing International Longshoremen's Association (ILA) buttons on the job
threats that unless the company rehired the four men
longshoremen locals at other ports would refuse to handle Matson Line cargo

U.S. GOVERNMENT INTERVENES IN THE LONGSHORE-SHIPOWNER DISPUTE

Pacific Coast shipping owners refused to respond to demands to define working conditions
from the International Longshoremen's Association (ILA)
Pacific Coast ILA, at the request of the federal government, sent a delegation
to shipping code hearings held in Washington, D.C.
At the Washington, D.C. meeting -- November 4, 1933
ship owners proposed wages be increased by 30¢ to 40¢ an hour -- up from 75¢
and a forty-eight work-week averaged over four weeks be imposed
Pacific Coast ILA representatives asked \$1.00 and \$1.50 overtime,
and a thirty-four hour week consisting of six hours for week days and four hours on Saturday
since wage amounts offered were relatively close
differences between the two proposals centered on the number of hours worked per week
Pacific Coast ILA's proposal was supported by the U.S. Department of Labor
and the department also proposed government hiring halls to replace the hated fink halls
Shipping owners refused to even accept the Pacific Coast ILA as the bargaining agent for labor
since management could not be forced to negotiate with labor
even pressure from the U.S. government could not bring a successful resolution

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION (ILA) MEMBERS ARE FRUSTRATED

Shipping management's refusal to accept the Pacific Coast International Longshoremen's Association
as the bargaining agent for longshoremen tried the patience of union leaders and members
Maritime managers refused to meet with longshore representatives
employers would not discuss a proposed union Shipping Code
because maritime employers already had prepared their own version of the code
and would not even discuss possible changes

CONGRESS CREATED THE *CIVIL WORKS ADMINISTRATION* (CWA) TO PROVIDE JOBS

President Roosevelt unveiled the temporary relief agency -- November 8, 1933
this was the New Deal's first dramatic expansion of public employment
Civil Works Administration coordinated a system of district directors and county boards
which administered a number of federally instituted and financed programs including

Civilian Conservation Corps, National Re-employment Service, Migrant Services, Surplus Commodity Distribution and Projects of the Civil Works Administration it operated a Rural Rehabilitation Division as well as commodity production and work centers projects were implemented primarily by local government agencies which took several million relief recipients off of the federal "dole" (Approximately three and a half million workers were on the job by [December 15, 1933])

DUST STORMS BEGIN IN AMERICA

South Dakota experiences the nation's first very strong dust storm -- November 11, 1933 violent winds striped the topsoil from drought affected farms within two days, dust from the storm had reached all the way to Albany, New York this is the just one of a series of bad dust storms that year (and the number and severity of dust storms increased over the next two years)

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION ORGANIZES UNION MEMBERS

Following labor's loss of face in the failed shipping code hearings held in Washington, D.C., International Longshoremen's Association (ILA) leaders displayed a fighting mood Pacific Coast District ILA held a special convention in Portland -- November 22-25, 1933 to discuss Shipping Code proposals of the Labor Department and to plan strategy Longshoremen condemned the Department of Labor proposal to implement government hiring halls as a simple renaming of the fink halls Delegates instructed the district secretary to invite the employers in the five major west coast ports to meet and bargain collectively with the Pacific Coast ILA as a single unit if they refused to negotiate as a coastwide unit [by December 10], Pacific Coast ILA would send out a referendum ballot on whether or not to strike Seattle ship owners replied to this threat was that an election would first be necessary to determine who actually represented their employees Pacific Coast ILA complied with management's demand in a representation vote of more than 8,000 union and nonunion longshoremen over ninety percent of the ballots cast identified the ILA as their representative that should have proved conclusively that the ILA represented Pacific Coast longshoremen

CITY OF SEATTLE WANTS INTO THE LIQUOR BUSINESS

Ratification of the Twenty-first Amendment to the U.S. Constitution ending prohibition was assured even before the last state necessary could approve the amendment Seattle City Council prepared an emergency ordinance council members provided for the sale of beer and wines of up to sixteen percent alcohol content sale was prohibited within two miles of the University of Washington and within 500 feet of any grade or high school Police Chief L. L. Norton stated his officers would enforce the ban around the University as soon as the City Engineer determined the boundaries of the "dry" area this boundary was apparently hard to define as the ban was not enforced Not provided for in the ordinance was the sale of beverages of more than sixteen percent alcohol city leaders received a ruling that an old state law

would still allow drug stores to sell liquor of all descriptions
for medicinal or scientific purposes without a prescription
some drug stores began to construct elaborate displays
domestic wine was priced at \$1.25 to \$1.75 a bottle
sixteen-year-old whiskey sold for \$3.00

In Vancouver, B.C., an estimated 4.5 million gallons of liquor, mostly bourbon and rye whiskey, were stored in warehouses awaiting official permission to ship to Seattle and San Francisco

WORK ON THE LOW LEVEL GRAND COULEE DAM CONTINUES

Federal government awarded an excavation contract
to David H. Ryan Company for \$534,000 -- November 30, 1933
Ryan subcontracted the west side excavation to Goodfellow Brothers of Wenatchee
Roland Construction Company of Seattle worked on the east side
First a coffer dam was built on the west side to hold the Columbia River away from its bank
after that was completed the project was undertaken on the east bank

STATE LEGISLATURE GOES INTO SPECIAL SESSION

Washington's legislature convened to regulate alcohol in the state -- December 4, 1933
legislators quickly approved a state monopoly on liquor sales -- the Steele Act
it established a comprehensive structure for state regulation of the sale of liquor
and created a three-member state Liquor Control Board
besides regulating the manufacture and distribution of all alcoholic beverages,
liquor Board could license restaurants and hotels to sell beer and wine by the glass
State Liquor Control Board quickly established a code of laws (sometimes called "Blue Laws")
regulations were adopted that included a specific prohibition:

- on Sunday sales of any kind of alcoholic beverage,
- previously-sold drinks be picked up at midnight on Saturday night
- beer with an alcohol content of 3.2 percent could be sold in stores, restaurants, and taverns within two miles of the University since it was believed that this was not intoxicating

CONSTITUTIONAL AMENDMENT XXI REPEALS AMENDMENT'S XVIII ON PROHIBITION

Prohibition, failing fully to enforce sobriety and costing billions, had rapidly lost popular support
Pennsylvania and Ohio ratified the proposed Twenty-first Amendment earlier in the day
when Utah became the thirty-sixth state to ratify the Amendment
this met the requirement of the approval by three-fourths of the states' legislatures
Eighteenth Amendment to the United States Constitution was officially voided -- December 5, 1933
considering the measure in congress for a final time
some old-line "dry" U.S. Senators attempt to filibuster the bill
House members invade the Senate chamber, chanting "Vote! Vote! We want beer!"
Amendment XXI to the Federal Constitution was passed by Congress
and approved by the required three-quarters of the states -- December 5, 1933

Section 1 states: **"The eighteenth article of amendment to the Constitution of the United States is hereby repealed."**

Section 2 kept all other liquor laws ("Blue Laws") in force

PROHIBITION COMES TO AN END

Franklin D. Roosevelt signed the proclamation ending fourteen years of federal prohibition

Washington, along with other states had already, passed laws to control sale and use of liquor

there seemed to be little effect in Seattle when liquor became legal as the first night was quiet

Seattle Post-Intelligencer noted in a front page article December 6, 1933: **“You walked into a bar on lower 3rd Ave. There were nine people in the place. A venerable bartender stood with folded arms, looking at the wallpaper. ‘Brandy and soda? Yessir. No, the crowd's nothing extra tonight. In fact,’ he says confidentially, ‘it's very slow tonight. Must be the rain’.”**

STATE REPRESENTATIVE WARREN G. MAGNUSON RECEIVED SPECIAL ATTENTION

At the end of the Special Legislative Session, House of Representatives Speaker George Yantis made note of twenty-eight-year-old State Representative Warren G. Magnuson

“You remember I told you I was going to have to count on you for a lot of work related to revenue and taxation and also on the unemployment problems. You were a very important factor in the session and delivered the goods every time.... I extend my personal appreciation [and] I wish you every success.... You have the ability and the character to deliver at all times.”¹⁴¹

WASHINGTON STATE RELIEF PROGRAM RECEIVES A HUGE BOOST

Civil Works Administration (CWA) projects were sponsored primarily by state governments

it was intended to be a short term program designed to carry the nation over a critical winter

every attempt was made to fit the projects to the local people in need of work

Civil Works Administration (CWA) funds provided by the federal government

put some people to work as National Forests received attention -- December 1933

crews developed a ski park at Snoqualmie Pass

(currently the Snoqualmie Pass ski areas that exist today)

three crews of CWA workers made improvements to Mt. Rainier National Park

first crew of sixty-eight men and one woman worked in the Ohanapecosh District

(employed from December 8, 1933, to [April 6, 1934])

they developed the campground and built an approach road

they lived in facilities belonging to the road contractor

and the Ohanapecosh Hot Springs Company

second crew organized river bar cleanup and construction for flood control

and made improvements to the Carbon River Road

(this crew of 108 men worked from December 15, 1933 to March 31, 1934]

and lived at the Manley-Moore Lumber Company facilities near Fairfax)

third crew of about 174 men and six women worked in the Longmire area

about forty-two of those (including the women) lived in towns or on farms

near the Nisqually entrance to Mt. Rainier National Park

remainder lived in existing facilities at Longmire

this group was divided up into more than a dozen work crews,

¹⁴¹ Shelby Scates, *Warren G. Magnuson*. P. 40.

they were employed on diverse projects such as
lumber milling, building construction and repair work
total expenditure of CWA monies at Mt. Rainier National Park came to \$80,292.23
three-quarters of that money was spent on the salaries for the workers
One of the most successful cooperative efforts funded by CWA
was the development of the United Producers of Washington cannery
an affiliate of the Unemployed Citizens League
Additional projects involved a joint effort by CWA and Washington State University
to survey part-time farming in Lewis, Thurston, Douglas, Spokane, Chelan, Walla Walla,
Clallam, Mason, Cowlitz and Pierce counties

PRESIDENT FRANKLIN ROOSEVELT DELIVERS HIS STATE OF THE UNION ADDRESS

FDR broke with tradition

he delivered his speech orally before a joint session of congress -- January 4, 1934

he was capitalizing on his popularity with congressmen and United States senators
as many had ridden to office on his coattails [1932]

he utilized radio to broadcast his speech across the nation

Roosevelt's proposed legislation went beyond the [1933] National Industrial Recovery Act
which had proven inadequate in relieving the suffering caused by the Great Depression
as millions were still unemployed

he asked congress for ten and a half billion dollars

to advance recovery programs over the next eighteen months

Roosevelt hoped to create some 3,500,000 "emergency public employment" jobs

his work projects targeted **"the greatest unemployment needs as shown by present relief rolls"**

he proposed these job would be **"useful" work...not just for a day, or a year, but useful in the sense that it affords permanent improvement in living conditions or that it creates future new wealth for the Nation.**"¹⁴²

WASHINGTON STATE RELIEF PROGRAM REORGANIZES

With the infusion of federal support and money from the Civil Works Administration (CWA)
relief director Charles Ernst reorganized his commission

into the Washington State Emergency Relief Commission -- January 1934

while the Director and Commissioners were responsible to the state legislature and the governor,
most of the funds were derived from federal sources

to which federal policies, regulations and procedures applied

Ernst was quick to create the infrastructure necessary to take advantage of federal funding
for new programs and benefits provided by the Roosevelt Administration

Washington State Emergency Relief Commission using Civil Works Administration funds
hired professionals in a variety of fields

"white collar" professionals produced surveys of coastlines, harbors, and public buildings
engineers, surveyors and draftsmen developed a topographic survey of King County

¹⁴² Congressional Record, January 4, 1934, P. 96.

for improvements in sewer and drainage systems
records in the City of Seattle Archives include field notes, correspondence, computations,
resumes of project staff, budgets and progress reports
labor relations experts and efficiency professionals
made the program appear more like public employment than work relief
Civil Works Administration funds also employed artists, musicians and actors
women taught classes in modeling and decorative design
they also were employed in primitive workshops sewing garments for the needy unemployed
crews of CWA workers maintained and improved the University of Washington campus
in fact, the annual Campus Day events,
which involved students and staff in campus improvement projects,
were cancelled because so much work had been done by CWA staff
CWA also helped develop Lincoln Park in Seattle
by clearing underbrush and building trails, seawalls, playgrounds and tennis courts
Civil Works Administration funds administered by Washington State Emergency Relief Commission
also employed construction workers
crews repaired roads, made concrete slabs for street paving and built bridges
and repaired trolley cars
they organized flood repair work on the Cedar River and helped construct airports

NEW ORDER OF CINCINNATUS (NOOC) EXPANDS BEYOND SEATTLE

New Order of Cincinnatus had built the NOOC into an organization
with seventeen divisions in Washington State each headed by a “captain”
statewide officers were “majors” and “colonels”
Fifty Cincinnatans marched to city hall -- early 1934
to file for three candidate petitions on the Seattle city council
all of them were dressed in white shirts and green and yellow headpieces
(the colors of Seattle's Roosevelt High School)
they used a slightly rewritten version of *Stout Hearted Men* as their anthem
This obvious “proto-fascist” style of the march created tension within the organization
Seattle NOOC Councilman Frederick Hamley’s diary indicated
that he and his fellow councilman David Lockwood
generally disliked this aspect of the group and focused mainly on local municipal issues
some NOOC members proposed that members routinely stand and salute their leader
when he entered the room
this was successfully defeated by Hamley and others

WORKING CONDITIONS ON THE PACIFIC COAST DOCKS ARE TERRIBLE

Loading and unloading ships was physically exhausting and dangerous work
there was no drinking water or plumbing provided on the waterfront
one major purpose of forming a union is to look after the welfare of the membership

INTERNATIONAL LONGSHOREMEN’S ASSOCIATION (ILA) ARE IN DISARRAY

Efforts to organize the Pacific Coast longshoremen continually led to no positive result

with the exception of Tacoma where ILA Locals 38-3 and 38-30 were respected
by both the ILA international office and other Pacific Coast longshoremen
John Bjorklund and Paddy Morris led Tacoma's efforts to organize the ILA

JOHN C. "JACK" BJORKLUND IS ELECTED NORTHWEST DISTRICT ILA SECRETARY

Bjorklund had quickly become something of a legend on the waterfront
as a member of Tacoma's International Longshoremen's Association Local 38-3
"Big Jack" was the brawniest, and some say smartest, cargo longshoreman in Tacoma history
(Bjorklund had served as a member of Tacoma's "flying squad" in the [1916] strike
his specialty was going up against the employers' thugs)
his physical feats in the holds of ships where he broke out cargo were legendary
so, too, were his bartending skills which combined mixing drinks and keeping order
Throughout all of his working years Jack Bjorklund had shown unswerving loyalty
to the International Longshoremen's Association and its men

INTERNATIONAL SEAMEN'S UNION (ISU) DEMANDS A RESPONSE FROM SHIP OWNERS

Delegates representing several maritime unions met in Seattle
International Seamen's Union (ISU), Sailors' Union of the Pacific (SUP) chartered by the ISU,
Marine Firemen, Oilers and Watertenders and Wipers Union (MFOW)
and Marine Cooks and Stewards Union
at the meeting about 7,500 union members were represented -- January 11, 1934
it was decided to establish an umbrella union to represent maritime industry
this amalgamation was known as the Pacific District International Seamen's Union
Union leaders' efforts to negotiate a labor code for the Pacific District International Seamen's Union
ended in failure as employers simply refused to recognize the longshoremen, maritime employees
or maritime officers' unions
Pacific District International Seamen's Union appealed to the National Labor Board (NLB)
to compel the employers to recognize the union
National Labor Board (NLB) replied that it had no jurisdiction over the shipping industry
until a shipping code was signed with the ship owners -- an impossible requirement
Pacific District International Seamen's Union disappeared

PUBLIC WORKS ADMINISTRATION (PWA) BECOMES A REALITY

Public Works Administration gave contracts to private firms who did all the hiring of every worker
for every man hired on a PWA project
nearly two additional workers were employed indirectly
Public Works Administration concentrated on the construction of large-scale public works projects
PWA funded and administered the construction of more than 34,000 ventures
such as highways, roads and streets, canals, tunnels, bridges, sewage systems, airports,
housing areas, public buildings, universities, warships for the Navy
and 70% of the new schools and one-third of the hospitals built between 1933 -[1939]
PWA accomplished the electrification of rural America
by constructing large electricity-generating dams
Every year PWA consumed roughly half of the concrete and a third of the steel of the entire nation

PWA spent over \$6 billion and helped to bring industry back toward pre-Depression levels
it lowered unemployment and created an infrastructure that resulted in elevating American pride

CONGRESS PASSES *THE GOLD RESERVE ACT*

(Executive Order 6102 [April 5, 1933] had made owning or trading in gold illegal)
Gold Reserve Act passed -- January 30, 1934 required that all gold and gold certificates
held by the Federal Reserve be surrendered
and become the property of the United States Department of the Treasury
to be stored in Fort Knox and other locations
this act also changed the price of gold from \$20.67 per troy ounce to \$35

CONGRESS PASSES *THE FARM MORTGAGE REFINANCING ACT*

This law established the Federal Farm Mortgage Corporation -- January 31, 1934
to oversee the dispersal of \$2 billion to assist farmers in refinancing their mortgages

HARRY BRIDGES AND THE SAN FRANCISCO ILA PROPOSES BARGAINING TALKS

ILA leader and alleged Communist Harry Bridges established a negotiating committee
for the San Francisco International Longshoremen's Association (ILA)
to hold talks with employers along the Pacific Coast
this committee gave an ultimatum to employers -- February 1, 1934
ILA would be in control of all talks between the two parties
no government intervention was to take place

CONGRESS ATTEMPTS TO DEAL WITH ONGOING LABOR DISPUTES

National Labor Board had been created to implement National Industrial Recovery Act Section 7(a)
however, the only power the NLB had to achieve successful labor relations
was to withdraw an employer's privilege to display the Blue Eagle Emblem
given to show cooperation with the agency
Frustrated with the inability of National Industrial Recovery Act Section 7(a) to resolve labor crises
U.S. Senator Robert Wagner, National Labor Board chairman, introduced a bill -- February 1934
to set up a permanent agency to mediate labor disputes
this new board would be empowered to conduct representation elections
and to stop "unfair labor practices" by issuing cease-and-desist orders
purpose of this bill was to encourage collective bargaining
and prohibit employers from interfering with the right of employees to organize
Congress passed Public Resolution No. 44 which authorized the President
to establish a new board as part of the [1933] National Industrial Recovery Act

LABOR ATTEMPTS TO UNIFY ITS FORCES

Delegates from eight coastwide organizations met in San Francisco -- February 18, 1934
Masters Mates and Pilots; Marine Engineers; Sailors Union of the Pacific; Radio Telegraphists;
Marine Firemen, Oilers and Watertenders and Wipers Union (MFWO);
Marine Cooks and Stewards; and the Ferryboatmen's Union,
Five delegates represented the International Longshoremen's Association also were in attendance

three from Washington state unions -- Art Will: Puget Sound;
Ed Krumholz; Grays Harbor and Willapa Bay; and M.D. Rogers: Columbia River
E.B. O'Grady represented Southern California
Harry Bridges, who represented Northern California,
was the principal organizer of the Federation
Teamsters did not accept an invitation to participate

U.S. AIR MAIL CONTRACT IS CANCELLED

U.S. Post Office had organized the nation into four regions each with its own airmail delivery service
four regional carriers, including Boeing's United Air Lines and Transport Corporation,
operated regional monopolies
members of the public and politicians resented what they viewed as corporate profiteering
Postmaster General Jim Farley became concerned that airmail companies
were getting together to set prices they would charge the government to carry mail -- 1934
Because of the apparent lack of competitive bidding FDR, over the protests of his Postmaster General
ordered the Post Office Department to cancel all airmail contracts -- February 19, 1934

WILLIAM BOEING RETIRES TO PURSUE OTHER INTERESTS

William Boeing stepped down as head of the Boeing Company -- 1934
he was an accomplished horseman, pleasure sailor, and deep-sea fisherman
he donated his former home in Seattle to the Orthopedic Hospital
Boeing moved to a farm in Fall City, Washington and to other business pursuits
including real estate, Wall Street, and horse breeding and racing
he and his wife became regulars at the nation's race courses
their horse, Air Chute won the Premier Handicap at Hollywood Park [1938]
(Slide Rule took third in the 1943 Kentucky Derby)
Bill Boeing supported charitable organizations like Children's Orthopedic Hospital in Seattle
during the Great Depression, more than ninety percent of the care Children's delivered was free
this practice left the hospital in the red
each of those years, a committee of the women trustees went to Boeing
who wrote a personal check for the deficit
on the condition that his involvement remained anonymous
(his contributions were not revealed until more than fifty years after his death
by then Children's Hospital and Regional Medical Center
had become one of the top pediatric institutions in the nation)
(William Boeing died September 28, 1956 just three days before his 75th birthday
he was pronounced dead on arrival at the Seattle Yacht Club,
having had a heart attack aboard his yacht)

U.S. ARMY FLIES THE AIRMAIL

As a temporary measure, the President directed the Army Air Corps
to take over all U.S. airmail operations using military airplanes and pilots
Army Air Corps made its first airmail flight -- February 20, 1934
in the first five weeks, twelve inexperienced and ill-equipped Army pilots died

CONGRESS PASSES THE *CROP LOAN ACT* TO HELP FARMERS PUT IN CROPS

Farm Credit Administration was funded with \$40 million -- February 23, 1934
to extend credit for planting and harvesting
farmers used about 95 percent of the money for the 1934 crop

PACIFIC DISTRICT INTERNATIONAL LONGSHOREMEN'S ASSOCIATION IS FORMED

Longshoremen were ready to press their influence all along the Pacific Coast
forty-four ILA locals held charters in the Pacific Coast District -- March 1934
from San Diego, California, to Juneau, Alaska
Invitations were sent to all Pacific Coast District International Longshoremen's Association locals
to attend a convention in San Francisco
International Brotherhood of Teamsters did not accept the invitation to participate
Fifty-four International Longshoremen's Association delegates from seventeen West coast ports
assembled in San Francisco to organize the Pacific coast -- February 25, 1934
in addition six small longshore locals, five in the Pacific Northwest, sent proxy votes
These delegates represented 35,000 union workers along the Pacific coast
Harry Bridges, principal organizer of the convention, represented Northern California
E.B. O'Grady represented Southern California
three delegates were from Washington state unions:
Art Will represented Puget Sound;
Ed Krumholz represented Grays Harbor and Willapa Bay;
M.D. Rogers represented the Columbia River area
William "Bill" Lewis was elected president of the Pacific District ILA
John C. "Jack" Bjorklund was elected Pacific Coast District ILA Secretary
Discussions centered on efforts to gain higher wages, union hiring halls, shorter working hours,
better working conditions and enforcement of closed-shop (union only employment) laws
Delegates to the convention formed the Pacific District International Longshoremen's Association
they were determined to force their employers, the ship owners, to bargain with them
Convention delegates immediately elected seven men by area to negotiate with waterfront employers
Tacoma Local 38-3's John (Jack) Bjorklund was named head of the ILA negotiation team
and the lead negotiator for the longshoremen

PACIFIC COAST WATERFRONT EMPLOYERS FORM AN ORGANIZATION OF THEIR OWN

Waterfront Employers Union of San Francisco was created by ship owners to represent them
Thomas G. Plant was named chairman of the employers' organization and its chief negotiator
however, only employers from San Francisco were represented -- not other Pacific coast ports

UNIONS MAKE THEIR DEMANDS KNOWN TO THE SHIPPING INDUSTRY

International Longshoremen's Association (ILA) in San Francisco
presented their proposed shipping code
to the Waterfront Employers Union of San Francisco -- March 1934
most important was demand was for a single labor contract for the entire Pacific Coast
almost as important were changes in hiring (fink) halls

that up until then had been controlled by employers
longshoremen demanded hiring halls be controlled by the unions
jobs were to be allocated by seniority and only to union members (closed shop)

WORK BEGINS ON THE LOW LEVEL GRAND COULEE DAM

To mile long conveyer belt -- at that time the longest in the world
was built to haul away excavated earth and rocks at the construction site -- March 1934
this innovation was faster and more efficient than using trucks
To secure the foundation to the river bottom, workers drilled 660-foot to 880-foot holes
into the granite and filled any fissures with grout, creating a grout curtain
Excavated areas would sometimes collapse from overburden
to secure these areas from further shirting and continue excavation, 3-inch diameter pipes
were inserted into the mass and chilled with cold liquid from a refrigeration plant
this froze the earth and secured it so construction could continue

LONGSHOREMEN ATTEMPT TO NEGOTIATE WITH SHIIPING EMPLOYERS

When the Pacific District International Longshoremen's Association seven-man negotiating team
met with representatives of the Waterfront Employees Union of San Francisco -- March 5, 1934
ILA negotiation team Chairman Jack Bjorklund spoke first
he told the bosses that the coast was 100 per cent organized
and they demanded to bargain collectively as a single unit
Thomas Plant, President and chief negotiator for the Waterfront Employers Union of San Francisco,
kept continually stalled any meeting with the longshoremen's negotiating team
finally, Tom Plant sent word that they would discuss only San Francisco issues
with the ILA negotiation committee
ILA Chief Negotiator Jack Bjorklund responded that every time Pacific Coast longshoremen
tried to make any advances in wages, or improve hours or working conditions
they were told **"that was entirely a matter for San Francisco to decide"**¹⁴³
Finally, management negotiator Tom Plant indicated a willingness
to discuss wage and working conditions but no other issues
When Bjorklund again demanded district-wide recognition and a coast wide closed shop
waterfront employers adamantly refused to bargain coast wide
Tom Plant told the ILA negotiator "that was absolutely out of the question"
Plant then assaulted the longshore negotiators with a half hour speech about radicalism
he claimed sixteen of the convention delegates were Communists

ILA NEGOTIONS TEAM REPORTS BACK TO THE ILA CONVENTION

ILA negotiators returned to the ILA Convention where they made a final report
negotiation Chairman Jack Bjorklund reported the Waterfront Employers Union of San Francisco
was willing to talk about wages and working conditions,
but would not address the closed shop issue or a coastwide agreement
ILA convention delegates instructed their negotiating committee to demand

¹⁴³ Ronald E. Magden, *The Working Longshoreman*. P. 130.

recognition of the whole ILA Pacific District as labor's official collective bargaining agent or the convention would take a strike vote

SEATTLE'S MAYOR DORE RESORTS TO "RED BAITING" TO GATHER VOTES

As Election Day approached, Seattle Mayor John F. Dore's supporters used the "Red scare" tactic Harry H. Lewis, former American Legion commander and strike-breaker charged that Lieutenant Governor "Vic" Meyers was receiving the support of **"Communists scheming to seize control of the city government"**

Lewis continued: **"It is difficult for Seattle citizens, good Americans, to believe, but it is true that these Communist termites already have bored into some labor unions, into your schools, your churches, and even your homes. Their policy is the sitdown strike, the picketing of hospitals and cemeteries. Do you want to turn the city government over to their ghoulishness, or retain a loyal American, Mayor Dore?"**¹⁴⁴

But this red herring had been so overworked that it did Dore little good members of the voting public, knowing his record, could not take him seriously as a crusader for Americanism chief effect of this propaganda was to disgust the average Democratic and Republican voters alike Mayor Dore was defeated by Charles L. Smith (62,185 to 46,469)

BARGAINING IS GOING NOWHERE

Paddy Morris, Acting Chairman of the Convention, became so upset with management's dallying that he stepped down from the podium to advise the delegates: **"You want to be sure that you do this one thing, and that is that you get every damned member in the local to vote if you think the time has come to strike, try and educate your fellow member to that effect also. FOR IF WE DO TAKE A STRIKE VOTE, FOR GOD'S SAKE MAKE IT A BIG REPRESENTATIVE VOTE. DO THE JOB WELL AND NOT HALFHEARTEDLY."**¹⁴⁵

To demonstrate their intention to negotiate, convention delegates set a date for a strike vote to be taken [March 23, 1934]

Jack Bjorklund instructed local affiliates to return home and poll their memberships to analyze support for authorizing the calling of a strike

ILA Convention leaders sent a telegram to President Roosevelt: **"We have today passed resolutions giving the shipowners and operators until March 7, 1934 to meet with us."**¹⁴⁶

Jack Bjorklund informed the employers of the ILA Convention's [March 7] deadline Pacific District International Longshoremen's Association Convention adjourned -- March 6, 1934 delegates traveled to their home ports to prepare for the strike that seemed inevitable

LONGSHORE UNION ATTEMPTS ONE FINAL EFFORT TO NEGOTIATE

Final negotiation session was held -- March 7, 1934

Waterfront Employers Union of San Francisco refused once again to bargain Pacific District International Longshoremen's Association put out a strike ballot

¹⁴⁴ *The Nation*, March 26, 1938 Vol. 146, No. 13, p. 354-355.

¹⁴⁵ Markholt Otilie, *Maritime Solidarity*. P. 69.

¹⁴⁶ Ronald E. Magden, *The Working Longshoreman*. P. 129.

longshoremen would use their strongest weapon: economic action
they had shared no part of the economic recovery in the shipping industry
rising cost of living threatened their average wage of \$40 a month -- a bare subsistence
mechanization decreased jobs as much as thirty percent on some docks
larger loads and work speedups increased accidents and injuries
Maritime union members and nonunion sailors watched intently as the strike threat developed
there was a great deal of speculation regarding the longshoremen's chances of success
and many wondered how the sailors would respond to ILA picket lines

PACIFIC DISTRICT INTERNATIONAL LONGSHOREMEN'S ASSOCIATION IS PREPARED

With the longshoremen ready to strike the next morning,
Chairman of the National Labor Board Senator Robert Wagner
appealed to the San Francisco ILA District not to strike -- March 22, 1934
International Longshoremen Association President Joseph P. (Joe) Ryan sent a telegram
directing West Coast Locals to comply with the National Labor Board chairman's request

PRESIDENT ROOSEVELT INTERVENES IN THE ILA STRIKE EFFORT

President Roosevelt wired ILA Pacific District President William (Bill) Lewis -- March 22, 1934
urging him to call off the strike until an impartial board could be appointed
to conduct hearings and make a recommendation for settlement of the controversy

With the deadline only hours away,

Bill Lewis polled district executive board members up and down the coast

Lewis wired Roosevelt: **"Strike order by virtually unanimous vote of longshoremen of the Pacific Coast represent the deepest conviction of 12,000 workers that justice could not be had except by showing our economic strength.**

"In compliance with your request, however, we are postponing strike action at this time under your pledge to appoint an impartial commission to conduct hearings and make recommendations, believing that the evidence of the justice of our cause is bound to change present unbearable conditions."¹⁴⁷

Bill Lewis received a great deal of criticism from his membership for postponing the strike
most adamant were the Communist longshoremen from San Francisco
who tried to exploit the situation: "LONGSHORE STIKE BETRAYED!"
their newspaper, the *Voice of America*, proclaimed in a banner headline

MEDIATION BOARD IS APPOINTED BY PRESIDENT FRANKLIN ROOSEVELT

In an effort to resolve labor disputes between West Coast shipping employers and longshoremen
FDR appointed a Mediation Board to hold hearings in Washington, D.C. -- March 28, 1934
representatives of waterfront employers from Seattle, San Francisco and Portland attended
San Pedro (Los Angeles) employers refused to attend

FEDERAL MEDIATION BOARD ISSUES ITS RULING ON THE LONGSHORE DISPUTE

After meetings in Washington, D.C. concluded -- March 31, 1934

¹⁴⁷ Otilie Markholt, *Maritime Solidarity*. P. 74.

Federal Mediation Board made three recommendations:

- that Regional Labor Boards hold representation elections;
- that joint hiring halls be operated in each port;
- that an arbitration board would determine wages and hours for the entire coast

FEDERAL CIVIL WORKS ADMINISTRATION (CWA) PROGRAM COMES TO AN END

Some New Deal officials feared that public employment would become an expensive “habit” and place an impossible drain on the federal treasury

over the course of its existence, CWA spent over a billion dollars

although initial plans projected a maximum cost of \$400,000,000

Civil Works Administration came to an end -- March 31, 1934

however, four million unemployed workers had been placed on hastily begun federal projects and were paid regular wages

they had, among other projects,

built or improved 500,000 miles of road, laid twelve million feet of sewer pipe

and constructed nearly 40,000 schools; 3,700 playgrounds and 1,000 airports

all of this in less than five months

FEDERAL MEDIATION BOARD PROPOSALS ARE REJECTED BY EMPLOYERS

Waterfront Employers Union of San Francisco rejected

all of the recommendations of the Federal Mediation Board -- April 3, 1934

they reiterated their position that each port must be treated separately

they did agree to recognize and bargain with the ILA, but only for San Francisco

they also proposed establishing a joint hiring hall for that port

AGRICULTURAL ADJUSTMENT ADMINISTRATION IS EXPANDED BY CONGRESS

In an effort to further stabilize farm prices for commodities, the Jones-Connally Farm Relief Act was passed -- April 7, 1934

beef, dairy cattle, rye, grain sorghum, flax, peanuts and barley

were added to the list of basic farm products covered by the Agricultural Adjustment Act

UNEMPLOYED CITIZENS' LEAGUE EXPANDS ITS REACH

Non-Communist members of the Unemployed Citizens' League (founded in Seattle [1931])

broadened the organization's goals to attract new members

and distance itself from the Communist Party

Rev. Fred Shorter served as pastor of Plymouth Congregational Church in Seattle -- 1934

he gathered together like-minded Christians, Socialists, former Fusionists (Populists) and liberals including Congressman Marion Zioncheck

Rev. Shorter, Congressman Zioncheck and other independent liberals and radicals

changed the Unemployed Citizen's League name to the Commonwealth Builders, Inc. (CBI)

FEDERAL PRISON INDUSTRIES ARE INCORPORATED

Federal government incorporated the Federal Prison Industries as a wholly owned enterprise -- 1934

Federal Prison Industries ran more than thirty types of industrial operations¹⁴⁸

products were sold only to other government agencies

they did not compete with private enterprise on the open market

intent of the program was to provide employment and vocational training, as well as income,
for federal inmates

profits were used to pay prisoners' hourly wages

plus monetary awards for performance and good conduct

this money was usually held until the prisoner's release

or it was given to needy family members

Honor farm housing for 200 inmates was added to the facility -- 1934

along with all the necessary buildings and equipment for livestock and a dairy operation

First dial telephone arrived on McNeil Island --1934

(but there was no phone service to the prison employee's private residences until [June 1957])

COMMONWEALTH BUILDERS, INC. (CBI) FOCUS ON SOCIAL CHANGE

This organization was inspired by writer, journalist and political activist Upton Sinclair

who campaigned for the governorship of California

Sinclair had proposed the California-based EPIC (End Poverty in California) program

Sinclair's beliefs centered on the old utopian ideals

Commonwealth Builders, Inc. (CBI) was dedicated to ending the Great Depression

to accomplish their goal they began working with state and federal Democratic leaders

advocating socialist remedies to end economic woes

LONGSHORE UNION MEDIATION BOARD TALKS ARE MOVED

After the failure of the Washington, D.C. talks to resolve the longshoremen's dispute

Federal Mediation Board reopened talks in San Francisco -- April 16, 1934

Waterfront Employers Union of San Francisco was unwilling to meet the wage demand

moreover, the employers wanted assurance that there would be no interruption of work

from the longshoremen before they agreed to reopen talks

Because of the stalemate, negotiations were once again broken off

labor's loss of face in the Washington, D.C. [March] meeting and San Francisco [April] meeting

increased the fighting mood of the International Longshoremen's Association membership

LONGSHORE UNION MEDIATION BOARD TALKS REOPEN IN SAN FRANCISCO

Mediation sessions held in San Francisco produced very little result between May 2 and May 5

during discussions, minimal gains were achieved at best

such issues as hiring halls and wages and hours remained deadlocked

Longshoremen notified the Waterfront Employers Union of San Francisco

"that unless something definite shall have been arrived at"¹⁴⁹ by [Monday evening May 7]

negotiations would be discontinued

ILA Chief Negotiator Jack Bjorklund asked ILA Pacific District President Bill Lewis

¹⁴⁸ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

¹⁴⁹ Otilie Markholt, *Maritime Solidarity*. P. 75.

to contact west coast locals and instruct them to vote immediately on whether to strike

LONGSHOREMEN ARE NOTIFIED THEY ARE NOT TO STRIKE

United States Postal Service delivered letters to every registered longshoreman in the Puget Sound area -- May 6 and 7, 1934
from International Longshoremen's Association President Joseph P. (Joe) Ryan
each union member was notified that if he did not report for work [May],
he would be deregistered by the American Federation of Labor (AFL)

STRIKES ARE AUTHORIZED BY THE PACIFIC COAST LONGSHOREMEN

San Francisco ILA members went ahead with their strike authorization vote -- May 7, 1934
San Francisco's 1,500 union members voted to strike beginning at [8:00 a.m. May 9]
Tacoma was the only "closed shop" (union only) port on the Pacific Coast
there was no fink hall at the Port of Tacoma as the International Longshoremen's Association
had successfully maintained a longshoremen's union hiring hall
Tacoma longshoremen voted to authorize calling a strike
as in San Francisco the strike was to begin [8:00 a.m. May 9]
Joint Northwest Strike Committee composed of Jack Bjorklund, Joe Ryan and Dave Beck

PACIFIC COAST ILA MEMBERSHIP POLLING RESULTS

Vote to authorize calling a strike was reported from the Pacific Coast longshore locals
International Longshoremen's Association Chief Negotiator Jack Bjorklund
had the strike vote results from every ILA local on the Pacific coast
except Seattle and San Pedro
votes cast showed strike authorization was approved by a 6,633 to 633 vote -- morning May 8
Authorization to strike had been granted by the members of the Longshoremen's union
San Francisco, Tacoma, Portland, San Diego, Everett and Aberdeen
reported overwhelming majorities supported a walkout

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION NATIONAL POLICY OPPOSES STRIKE

National organization of the ILA was in conflict with the West Coast longshoremen's efforts
Senator Robert F. Wagner, chairman of the National Labor Board, sent a telegram
to ILA Pacific Coast District Secretary and Chief Negotiator Jack Bjorklund
asking that the strike be deferred -- May 8, 1934
International Longshoremen's Association (ILA) President Joseph P. (Joe) Ryan
ordered that the strike be cancelled
Pacific District ILA President Bill Lewis sent a cryptic telegram to Jack Bjorklund
expressing his frustration: **"IMPOSSIBLE TO DEFER TOMORROW'S ACTION
(STOP) THIS IS THE SENTIMENT OF THE ENTIRE COAST."**¹⁵⁰

PACIFIC COAST LONGSHOREMEN'S ASSOCIATION STRIKE PLAN IS DELIVERED

ILA's plan was to shut down all ports on the West Coast for as long as it took to achieve their goals

¹⁵⁰ Ronald E. Magden, *The Working Longshoreman*. P. 132.

union recognition, union hiring halls, and a coast wide agreement were the major issues
hours and wages were not “deal making” issues
When he announced the strike authorization vote results,
Negotiation Committee Chairman Jack Bjorklund advised the locals
to select strike committees and to not attempt individual settlements on their own
Shipping employers concentrated on keeping open San Pedro, San Francisco, Portland and Seattle
Tacoma cargo would be diverted to Seattle where no strike vote had yet been taken

ILA UNION MEMBERS GEAR UP FOR THE IMPENDING STRIKE

Longshoremen called on other labor unions to boycott firms using struck ships to carry their freight
Tacoma’s ILA warned members not to buy major items on monthly installments
and advised them to establish credit at a grocery store and butcher shop

EMPLOYERS ALSO GEAR UP FOR THE IMPENDING STRIKE

All along the coast stevedore bosses worked their gangs extra hours
to finish loading and clearing vessels before the strike began
Shipping employers published a full-page newspaper ad
addressed to the longshoremen of the San Francisco area
Waterfront Employers Union of San Francisco again warned against the strike

SEATTLE LONGSHOREMEN’S STRIKE VOTE MEETING IS HELD

ILA leaders were determined to paralyze shipping in the Seattle harbor
until employers met their demands

Seattle ILA called a union meeting for the evening of May 8, 1934

Local 38-12 President Pete Erickson called Seattle longshoremen to order

“About 1,500 men attended the meeting, including many nonmembers. Delegations from Everett and Tacoma urged the Seattle longshoremen to strike. By eight o’clock people began to drift away, not wanting to be counted. ‘Bolt the door!’ (Seattle local ILA) President Erickson shouted, and the meeting continued. Sentiment wavered. Some wanted to wait for strike authorization from (ILA) President Ryan, who had urged postponement. A wire from Senator Homer T. Bone, former labor attorney, also pleaded for delay.”

The first vote showed 60 percent against striking, but the local president kept the meeting in session while waiting for news from San Pedro (the port for Los Angeles). Near midnight (Chief Negotiator) Jack Bjorklund arrived with a wire that a meeting of 1,000 men in San Pedro voted to strike. The crowd cheered the news. Then someone asked if the telegram was a true copy. Bjorklund replied that they would have to take his word. After more discussion, at one o’clock in the morning, by voice vote the meeting reconsidered the previous action and voted to strike. On the docks nearby, gangs worked all night to finish loading vessels.

With this shaky support in the largest Northwest port, the strike was on.”¹⁵¹

DUST STORMS SWEEP ACROSS THE MIDWEST PLAINS

Extremely dry conditions were recorded over almost eighty percent of the United States -- 1934

¹⁵¹ Otilie Markholt, *Maritime Solidarity*. P. 76

Dust storms lasting for two days removed massive amounts topsoil
in one of the worst such storms of the “Dust Bowl” -- May 9, 1934
dust clouds blew all the way to Chicago where dirt fell like snow
rural people were homeless, dirty, and without food or water
they needed to go to where they could be safe
(Two days later the same storm reached the eastern seaboard
depositing dirt on Buffalo, Boston, Cleveland, New York City, Washington, D.C. and others
that winter [1934-1935] “red snow” fell on New England
[1935] was another dry year and [1936] was a record drought year as were [1939] and 1940))

PACIFIC DISTRICT INTERNATIONAL LONGSHOREMEN’S ASSOCIATION STRIKE BEGINS

Pacific Coast ports from Bellingham to San Diego were struck -- 8:00 a.m. Wednesday, May 9, 1934
beginning one of the first and one of the largest industry-wide strikes in U.S. history
along the Pacific Coast more 12,500 longshoremen failed to return to work at the start of the day
almost 1,700 miles of coastline was laid under siege by labor
in Portland 1,100 failed to report to work
in San Francisco 3,000,
in San Pedro 1,800
in Washington state:

2,000 in Seattle including nonunion men, and 700 in Tacoma
small ports also struck solidly:

250 in Grays Harbor and Everett, 150 in Olympia, and so on
this was a defining moment in the longshoremen’s union movement
(in all, nearly 35,000 union members over the period of the strike were off the job,
hundreds were injured, and eight were killed during the strike)

Unlike the five previous longshoremen’s strikes
this time replacement workers (scabs) were driven away from the docks
in the effort to keep the job sites closed to shipping

Union newspaper the *Labor Advocate* summed up the crisis faced by unionized labor:

“They listened to the promises of the NRA [National Recovery Administration]; they harkened to the pleading of Senator Wagner; they obeyed the request as a command of President Roosevelt and they got in return -- nothing.

“The end had been reached at last. The patience they had so enduringly shown, the control they had so determinedly manifested had reached the end. The strike became not merely a necessity. It had become the only step that manhood could take against oppression, repression and industrial serfdom.”¹⁵²

Struck waterfronts remained relatively quiet the first day
in Seattle the union put out a token force of 300 pickets
encouraged by the reluctant vote, Seattle Waterfront Employers believed the longshoremen
would change their minds about striking
in Portland ILA placed members into squads and shifts as they prepared to picket in force

¹⁵² *Labor Advocate*, May 11, 1936.

STRIKE IN TACOMA CLOSES THE PORT

Tacoma Longshoremen had long maintained a union hiring hall when they refused to put workers on the job the Port of Tacoma was tied up -- May 9, 1934 Large groups of longshoremen peacefully picketed three idle ships in the Tacoma harbor another 300 men assembled at the ILA union hall at 2:30 p.m. to hear reports on the closures all along the Pacific Coast Tacoma longshoremen held daily meetings and maintained four-hour picket watches Waterfront employers in Tacoma made no move to recruit scabs to work the five idle vessels there nor did they request extra police

TACOMA LONGSHOREMEN GET THEIR MESSAGE OUT

Tacoma ILA Press Committee was composed of Paddy Morris, Robert Hardin, Ernest Tanner and T.A. "Tiny" Thronson throughout the strike, KVI radio featured Tiny Thronson who presented *Longshoremen on the Air* every Thursday, Friday and Saturday evening Tiny stressed the efficiency of Tacoma longshoremen which had brought millions of dollars of business to the community, **"If by any chance the union should be broken, its members will be scattered over the country, inexperienced men will take their places, ships will be diverted elsewhere, and grass will grow on the Tacoma docks."**¹⁵³

TACOMA NEWSPAPERS ADVOCATE THEIR OWN EDITORIAL POSITION

Tacoma News Tribune emphasized the impact of the strike on lumber mill and industrial workers it claimed 700 Tacomans and 16,000 Pacific Northwest workers were laid off during the first week of the strike Weekly *Tacoma Labor Advocate* newspaper contrasted the **"'Forbearance, patience, tolerance and eagerness for peace by the men,' with the 'truculence, evasion, stalling and delays by the waterfront employers'."** and also **"...declared the bosses drove the men 'to strike in the hope that the unemployed will rally to take the places of the men and defeat the strike'."**¹⁵⁴

TACOMA LONGSHOREMEN DO NOT TRUST THEIR EMPLOYERS

When the steam schooner *Lake Francis* docked at the Defiance Mill in Tacoma -- May 10, 1934 seven of her crew members struck, leaving only the Masters, Mates and Pilots union members to move the vessel to Seattle Tacoma strikers feared the National Guard would be called out to open the port and end the strike Tacoma's Central Labor Council called for an immediate General Strike if the National Guard was called out Governor Clarence D. Martin refused to use troops Tacoma employers gave up any attempt to open the Tacoma port with scabs it was decided to close the port and let the strike pursue its course Tacoma's port stood idle and quiet

¹⁵³ Ronald E. Magden, *The Working Longshoreman*. P. 137.

¹⁵⁴ Ronald E. Magden, *The Working Longshoreman*. P. 138.

WATERFRONT EMPLOYERS RECRUIT STRIKE-BREAKERS IN SEATTLE

Seattle ship owners met little opposition as they recruited strikebreakers (scabs)
to work the fourteen vessels tied to three piers in port -- May 10, 1934
employers towed a laid-up vessel to dock to serve as "floating boarding houses"
Many Tacoma longshoremen considered Seattle the weakest link on the coast

SEATTLE LONGSHOREMEN RECEIVE SUPPORT FROM OTHER UNIONS

Masters, Mates and Pilots Union served notice they would refuse to handle barges in Seattle
Employers were again stunned and longshoremen heartened
when Dave Beck, Secretary of the Joint Council of Teamsters, announced
that eight Seattle Teamster locals would not cross ILA picket lines
to pick up or deliver merchandise at the docks while the strike was in progress
Longshoremen, although skeptical, very much appreciated the support
as it greatly bolstered the strength of the longshoremen

NO SOLUTION TO THE STRIKE IS FORTHCOMING

While ship owners and strikers battled for ascendancy on the waterfront,
politicians scurried around frantically trying to get the strikers back to work
this strike presented a painful dilemma for elected officials who wanted to please everyone
Roosevelt Administration had to make good on vague promises or lose needed labor support
unwilling to exert any real pressure on the shipping industry to bargain with its employees,
federal officials resumed the mediation shuffle
National Labor Board telegraphed a request that ILA President Joseph P. Ryan -- May 11
to come to San Francisco immediately
Northwest representatives of the ship owners
acting on instructions from the Waterfront Employers Union of San Francisco
delivered an ultimatum to Washington and Oregon mayors and governors
their firms would discontinue service to Seattle and Portland
unless they received adequate protection for their property

TACOMA'S AND SEATTLE'S STRIKE SITUATION DIFFER

Strikers controlled the port of Tacoma
as the port was completely shut down (or locked out depending on the perspective)
Port of Seattle continued to be a problem for the ILA as 200 scabs worked six vessels
tied-up at three Piers -- May 11, 1934
Sheriff Claude Bannick claimed that radicals had threatened to burn the dock
he deputized 100 guards to provide protection for ship owners' property
Recruiters employed about 100 students, most from University of Washington fraternity houses,
to scab the strike at five cents an hour over the regular union scale
University student body members demanded the scabs be suspended from school

and the U. of W. *Daily* noted editorially: “**Judas sold his soul for thirty pieces of silver, according to the Bible, and the university students today are offered the chance to sell their self-respect and the good will of the university for ninety cents an hour.**”¹⁵⁵

SMALLER PORTS IN WASHINGTON MAINTAIN THEIR STRIKE EFFORT

Everett longshoremen came out solidly for the strike

At Grays Harbor employers tried unsuccessfully to load three vessels

One nonunion gang worked at Port Angeles

Anacortes longshoremen refused to cross ILA picket lines of strikers brought in from Bellingham

PACIFIC DISTRICT ILA STRIKE EFFORT IN SEATTLE IS ENHANCED

Although Tacoma strikers controlled their port, ominous news came from the rest of the coast where disaster threatened the strike -- especially in Seattle

Tacoma’s International Longshoremen’s Association held a special meeting chaired by

Tacoma Strike Committee Chairman Paddy Morris -- 5:00 a.m. Saturday May 12, 1934

ILA members recalled bitter memories of the [1916] defeat

they believed that if they could close Seattle the strike had a chance of success

Paddy Morris along with his old friend in Everett Tom Mason were the likely organizers

of a “Flying Squad” raid on the Seattle docks to firm-up the strike there

Morris organized 600 Tacoma members into Flying Squads

Henry Brown, Victor Olson, Fred Sellers and George Soule led the groups of men

Tom Mason recruited 150 Everett ILA men

Secrecy was considered essential to the success of the raid and staying out of jail

even the Tacoma Strike Committee did not know what the Flying Squad was doing

TACOMA AND EVERETT FLYING SQUAD RAID ON THE PORT OF SEATTLE

When the 1934 ILA strike was only three days old, the Tacoma and Everett Flying Squads participated in a “scab-clearing” raid on the Seattle docks

Six hundred Tacoma ILA members piled into trucks and headed for Seattle -- May 12, 1934

where 150 Everett longshoremen joined them

George Soule of the Tacoma Flying Squad led his men onto the Seattle docks -- about 8:30 a.m.

raiders stormed and wrecked wooden barriers that blocked access to the piers

and rushed McCormick Piers 6 and 7

where the steamers *Lake Francis* and *Silverado* were loading

Flying Squad split into two groups one led by Soule and the other by “Big” Ed Harris

they rushed to the steamers *Lake Francis* and *Silverado*

where they throng boarded the vessels and hauled off scabs

in the ensuing fight they smashed several nonunion heads

and threw the foreman of Pier 7 into the water when he resisted

Groups of strikers moved south along the waterfront leap-frogging from dock to dock

driving scabs away from the employer’s piers from Nelson Dock to the Bell Street Terminal

sympathetic seamen, teamsters, loggers and other workers swelled the ILA ranks

¹⁵⁵ Otilie Markholt, *Maritime Solidarity*. P. 81.

Seattle Post-Intelligencer headlined the action May 12, 1934: “**2,000 Longshore Strikers Raid 12 Ships; Stop Work ‘No Troops Now,’ -- [Governor] Martin**”

in the accompanying story, the *P-I* reported: “**The raiding mob struck at twelve ships in the harbor during the day and halted work on all but one of them. In most cases the mob was orderly, giving the workers a chance to leave their jobs voluntarily. A committee of strikers would board a ship and request the strike-breakers to leave. When they agreed the strikers would form two lines and the workers would have to walk a gauntlet while the mob jeered and shouted imprecations....**

There was no police interference at any dock while the raids progressed, the officers on duty mingling with the mob and marching with the members from dock to dock. The mob was too large for the officers to check.”¹⁵⁶

Raiders moved through the port of Seattle

P-I continued: “**From the McCormick docks the raiders went to the *Cadretta* of Nelson Line and the *Kirkpatrick* of the Northwestern Company. After a long argument on the *Dorothy Luckenbach* and *Moldanger*, the scabs left voluntarily. At the Pacific Steamship terminal, sixteen armed guards fell back when they saw the size of the crowd and allowed the strikers to take twenty-five scabs off the *Ruth Alexander*, which sailed for California partially loaded. Scabs on the *Kansan* at the American-Hawaiian dock left readily, and the Isthmian steamer *Steel Maker* discharged her scabs before the raiders arrived. The captain of the *Steel Mariner* threatened to kill the first man who set foot on his ship. The ship had no scabs on board. Scabs working the *Europa* in the East Waterway quit without resistance.**

“At Alaska Steamship’s Pier 2, where the *Yukon* had finished loading that afternoon, the raiders demanded that the eighty-five scabs housed on the *Redondo* come ashore threatening to break down the gates to get them. After the company finally agreed to discharge the scabs, the strikers sent them through the crowd with a warning not to return to the waterfront. Finally, the raiders headed for the Grace Line *Santa Rosa*, loading at the Bell Street terminal. As the strikers arrived, the big steel door began to roll down. Boosted up by his fellows, a Tacoma longshoreman held the door on his shoulders while the raiders scrambled under into the covered dock area. A handful of police tried unsuccessfully to stop them as they battered down two doors with heavy timbers and fought their way to the ship’s side. The scabs fled through the port opening in the liner. Hearing the uproar, the mates appeared with drawn guns and threatened to shoot anyone who attempted to follow the scabs. The strikers retreated without their quarry. Cases of citrus fruit broke and scattered in the melee, and police arrested two men during the raid.”¹⁵⁷

Tacoma Flying Squad spent a great deal of time in Seattle and visited other Washington ports as well to fortify the ranks of their coworkers whenever employers threatened to open a port with scabs

RESPONSE TO THE FLYING SQUAD RAID IN SEATTLE

Seattle Waterfront employers held an emergency meeting during the raid -- May 12, 1934

they decided to suspend work until their scabs could be protected

Seattle Waterfront employers met with Seattle Mayor Charles L. Smith

and King County Sheriff Claude G. Bannick -- afternoon, May 12, 1934

waterfront bosses demanded assurances of protection for their property

¹⁵⁶ *Labor Advocate* May 18, 1934.

¹⁵⁷ Otilie Markholt, *Maritime Solidarity*. P. 82-84.

Mayor Smith wired Governor Clarence Martin to send National Guardsmen instead Governor Martin met with Seattle and Tacoma waterfront officials and Chamber of Commerce officials from both cities
governor announced he had, along with the governors California and Oregon,
sent a joint appeal to President Roosevelt asking him to “intervene and arbitrate”
Governor Martin invited five of the waterfront employers to accompany him to a session with interested labor leaders later that afternoon

GOVERNOR MARTIN AND SHIP OWNERS MEETS WITH LABOR AND MANAGEMENT

At the governor’s meeting with union leaders -- late afternoon, May 12, 1934
shipping bosses announced they were shutting down the Port of Seattle until police could make the docks safe
employers again urged the governor to use National Guardsmen to open Washington’s ports
union representatives asked the governor not to take sides

SUPPLIES FOR ALASKA PRESENT A PROBLEM FOR THE ILA

Water transportation was the only link between the United States and Alaska
Alaska Steamship Manager Thomas B. Wilson brought up the issue of food supplies for Alaskans
ILA leader Paddy Morris rejected Wilson’s plea to have longshoremen load ships
he believed other shipping companies would take advantage of the opening
but strikers had to find a way to feed Alaska without giving in to the employers

COASTWIDE ILA STRIKE SPILLED OVER INTO CANADA

Pacific District Waterfront Worker’s Association Vancouver, B.C. members voted to strike -- May 12
if negotiations with the British Columbia Shipping Federation did not yield a satisfactory agreement
Plugging a loophole in the strike across the border Vancouver and Victoria longshoremen voted to refuse to “**handle trans-shipments from Seattle or to Seattle from struck ships**”¹⁵⁸

PRESSURE BUILDS IN THE SEATTLE STRIKE

Seattle’s Mayor Charles L. Smith declared a state of emergency in the city
he ordered 100 extra police officers be sworn in for waterfront duty
once again Mayor Smith asked Governor Martin to call out the National Guard
he also wired Interior Secretary Harold L. Ickes asking for federal troops
to assure shipping to Alaska would continue
Mayor Frank H. Richmond of Walla Walla offered to send scabs from eastern Washington to load shipments of wheat
Labor won a victory when Governor Martin decided not to interfere until all efforts to reach a peaceful settlement had been exhausted

SUPPLYING ALASKA CAUSES PROBLEMS FOR THE UNIONS

Special meeting of Seattle Longshoremen’s Local 38-12 was held -- evening of May 12, 1934

¹⁵⁸ *Labor Advocate* May 18, 1934.

members voted to load the steamer *Victoria* with supplies bound for Alaska
longshoremen would work a six-hour day at a rate to be agreed upon at the end of the strike
Seattle International Seamen's Association (ISU) agreed to sail the vessel to Alaska
under union conditions

TEAMSTERS TURN THEIR BACKS ON THE ILA STRIKE EFFORT

Dave Beck's Seattle Brotherhood of Teamsters had refused to cross ILA picket lines to handle freight
U.S. Senator and National Labor Board Chairman Robert Wagner
requested Seattle Teamsters returned to work
Beck and the Teamsters' leadership agreed to cross the ILA picket lines
in spite of the membership's commitment to honor the picket lines -- May 14, 1934

ANOTHER FEDERAL GOVERNMENT EFFORT IS MADE TO RESOLVE THE ILA STRIKE

As reported by the *San Francisco Examiner* -- May 15, 1934

“for the first time in history not a freighter left a Pacific Coast port”

Governors of Washington, Oregon and California appealed to FDR to intervene in the strike
their plea brought Assistant Secretary of Labor Edward F. McCrady to San Francisco
to settle the strike

McGrady, after meeting with both sides declared, **“Communists are throwing a monkey wrench into the situation.... There is an element among the longshoremen that lives on strike and does not want a settlement.”**¹⁵⁹

there was more than a little truth in the observation: **“The Communists had hoped to use the strike to recruit members and gain control of the maritime unions. To that end their shrill propaganda saturated the waterfront, supporting the strikers but attacking all elected officials and activists who did not submit to their direction.”**¹⁶⁰

EFFECTIVENESS OF THE STRIKE EFFORT IN SEATTLE WAS FRAGILE

In the Port of Seattle the effectiveness of the strike call varied from ship to ship
twenty-five-man crews of the Associated Oil tanker *H.M. Whittier* quit
Steel Maker sailed for San Francisco after the crew refused to strike
American-Hawaiian *Columbian* sailed when the crew chose to stay aboard

LOADING OF THE STEAMSHIP *VICTORIA* IN SEATTLE

Seattle Mayor Charles L. Smith attempted to restore law and order on the docks -- May 15, 1934
he dispatched sixty-five police officers to Alaska Steamship Company's Pier 2
where the *Victoria*, bound for Alaska, would load with food and necessary supplies
About 2,000 strikers allowed all military and mail trucks to pass
but Teamsters Union members delivering cargo to the pier were turned around
they would not cross the ILA picket lines and police made no effort to interfere
Employers stopped the loading effort aboard the *Victoria*

¹⁵⁹ *San Francisco News*, May 19, 1934.

¹⁶⁰ Otilie Markolt, *Maritime Solidarity*. P. 102

STRIKERS IN SEATTLE FACE A DILEMMA

Alaska survived on goods brought by ship from Seattle

ILA had demonstrated the *Victoria* could not be loaded using scabs

if the strikers allowed the ship to load they would lose control of the docks

if they stopped the ship from being loaded they would be accused of letting Alaskans starve

Shipping employers were forced to admit the situation was hopeless

for a second time an agreement was reached to allow the *Victoria*

to load food and necessary supplies

watching the mercy shipment being loaded one union member stated, **“We saw 7 ton steel girders, a ten ton ore screen, and a hundred dredge buckets.... They were loading bricks, cement, coal, drilling mach[inery] steel rails, hay, chain, wood pipe, cable, lumber, and many other things that would be hard to digest.”**¹⁶¹

TACOMA CENTRAL LABOR COUNCIL RESISTS EFFORTS TO USE THE NATIONAL GUARD

Tacoma’s Central Labor Council held a meeting -- May 16, 1934

to discuss how to deal with the National Guard if they were called out

minutes of the meeting noted: **“Moved and seconded that if troops are used to beat**

Longshoremen’s strike, Council call general strike, and that letter be addressed to Chamber of Commerce notifying that if they are successful in their efforts to have troops called out to try to break strike, Labor Movement will retaliate with general strike. Motion carried unanimously.”¹⁶²

Dave Beck’s Teamster majority on the Seattle Central Labor Council defeated a similar resolution for a general strike in Seattle

MARITIME UNIONS JOIN IN THE PACIFIC COAST STRIKE

International Seamen’s Union ((ISU), Sailors Union of the Pacific (SUP)

and Marine Firemen, Oilers and Watertenders and Wipers Union (MFWO)

along with Marine Firemen, Oilers and Watertenders and Wipers Union (MFWO)

voted to strike -- May 16, 1934

Sailors and other maritime union members walked off the job

4,000 seamen and officers struck all noncontract ships

striking maritime union members demanded union preference in hiring

and employer recognition of their respective unions

As quickly as a union meeting could be held to authorize that action

Pacific coast maritime workers tied up vessels up and down the coast

Not all sailors struck

in Bellingham seamen did not tie up the Pacific American Fisheries fleet

or the steam schooner *Lumberman*

Seattle Marine Engineers refused to strike, however, regardless of the association’s official stand engineers sailing out of Seattle left their vessels along with unlicensed seamen

PACIFIC COAST SHIP OWNERS MAINTAIN A POLICY OF SEGREGATION

¹⁶¹ Otilie Markolt, *Maritime Solidarity*, P. 85.

¹⁶² Otilie Markholt, *Maritime Solidarity*. P. 85.

International Seamen's Union ((ISU) demanded those aboard ship be treated as equal participants
Contrary to International Seaman's Union (ISU) practice in other districts

Pacific Marine Cooks and Stewards Union was segregated into black and white stewards
qualified white crewmen joined the Pacific Coast Marine Cooks and Stewards
qualified black crewmen had a choice of two unions to join:

- Colored Maritime Employees Benevolent Association of the Pacific
- Admiral Line's own company union of African American members

this practice resulted in a virtually all-white Marine Cooks and Stewards Association
on the Pacific Coast

At the beginning of the strike, Pacific Coast Marine Cooks and Stewards
proposed to the Admiral Line's black stewards that they join the walkout

Pacific Coast Marine Cooks and Stewards promised equal shipping rights
and a minimum of two official black leadership positions if the union won

Admiral Line's company union of black stewards split into factions

some black members remained loyal to the company union -- a few scabbed the strike
most black workers, however, chose to leave the company union

they joined the Pacific Coast Marine Cooks and Stewards

(by the end of the strike some 300 black stewards had joined the union)

Newly admitted black members of the Pacific Coast Marine Cooks and Stewards
took a militant role on the waterfront during the strike as did white unionists

LICENSED OFFICERS JOIN WITH OTHER STRIKING MARITIME UNION MEMBERS

Licensed officers, Masters, Mates and Pilots, formed the last link in the chain of maritime solidarity
many officers shared the union convictions of unlicensed seamen

others realized that if they did not support the strike and sailed with scabs

they would immediately face unsympathetic seas with untrained sailors under their command
and the deadly hostility of union ship crews after the strike ended

both motives induced them to walk out -- May 17, 1934

Masters, Mates and Pilots in San Francisco voted to strike for recognition, better wages
and improved working conditions

MARITIME UNION STRIKE TIGHTENES ITS GRIP ON PUGET SOUND SHIPPING

In Seattle seamen and engineers struck the *Alaska*, the Sunset Pacific tanker *Brandywine*
and the Grace liner *Charcas* -- May 17, 1934

Striking seamen rushed the Todd Dry Dock gates when a truck entered

they swarmed over three Luckenbach vessels, the *Edward*, *Florence*, and *Jacob*,
and persuaded the crews to quit

At Tacoma, crews of the tanker *Topila* and *S.S. Golden Cloud* struck

MARITIME STRIKE IS PAINTED WITH A "RED" BRUSH

Reporters blamed "Reds" (Communists) for everything -- May 18, 1934

employers, reported the newspapers, held out to save the country from revolution

one paper operated by the shippers stated the union demands **"merely cloak an attempt on the part of labor captains of a radical complexion to seize prestige and power, if not to undermine the**

social order, the operators gave little if any consideration to an acquiescence to the strike demands, despite the straits to which the industry was reduced.”¹⁶³

SEATTLE MAYOR CHARLES L. SMITH ELEVATES STRIKE HYSTERIA

He declared Seattle was “**ruled by a Soviet of longshoremen**”¹⁶⁴ -- May 18, 1934

He invoked forty Washington cities to confer on a united course of action to break the strike
mayors of Wenatchee, Ellensburg, Colfax, and Mount Vernon attended

they duly resolved to urge the governor to call out the National Guard

this dismal response to the Mayor Charles L. Smith’s invitation was another victory for labor
most public officials would not be panicked

SUPPLIES SAIL OUT OF SEATTLE BOUND FOR ALASKA

Victoria sailed for Alaska without the help of the National Guard -- May 18, 1934

her cargo appeared to be supplies for all occasions

SOUP KITCHENS AND SUPPORT FOR STRIKING UNION MEMBERS

Ship owners had money, political influence, and the power to award or withhold jobs

Strikers had numbers, skills that transformed ships and cargo into profits,

and support that took form in each community

Labor unions had little financing for the strike effort:

- maritime unions had no strike funds built up;

- most longshoremen’s locals were less than a year old

their treasuries were pinched by the conferences and conventions that proceeded the strike;

- seagoing unions, with their few dues paying members, had lived from hand to mouth for years
just to keep their halls open;

- Sailors’ Union of the Pacific voted at the outset to pay no strike benefits to their members

Most trade unions of the American Federation of Labor could offer only limited help to members

depression had depleted their membership and drained their resources, also

After two weeks of meal tickets in restaurants, Central Labor Councils in Seattle and Tacoma

mobilized a relief and support effort

Seattle International Longshoremen’s Association -- May 23, 1934

opened a commissary for groceries for those with families

and a soup kitchen in the union hall to feed 400 to 500 unmarried strikers

fish donated by the Alaska Fishermen’s Union became a mainstay

black cooks and stewards from the Admiral Line helped in the soup kitchen

Longshoremen slept in their own beds at night, but most seamen and sailors were single transients

who lived between voyages in waterfront hotels

they, too, must have a place to sleep as well as food

Strike relief for maritime workers centered on the Seattle Sailors’ Union of the Pacific Building

at the foot of Seneca Street

where a range and gas stoves were installed on the vacant third floor

¹⁶³ *Pacific Shipper* May 21, 1934.

¹⁶⁴ Otilie Markholt, *Maritime Solidarity*. P. 85

cooks and stewards solicited contributions and prepared the food
which sailors transported to the picket lines
some strikers ate at relief station for the unemployed
some fortunate sailors kept their hotel rooms on credit
but almost 100 slept in the union building on the third floor on paper or sacks
another fifty slept downstairs in the main hall on benches or four chairs pulled together
only a few had blankets or cots
many maritime workers slept in cars

Although the Teamsters union continued to block use of the ultimate weapon, a general strike,
they donated \$1,000 a month to the striking longshoremen
other unions also contributed generously

ILA UNIONS ESTABLISHES THE JOINT NORTHWEST STRIKE COMMITTEE

Alaska Fisheries Company's cannery ships were preparing for the fishing season
Seattle's ILA Local 38-12 refused to work loading the fishing fleet
Tacoma asked all ILA locals in the Pacific Northwest to meet to discuss
releasing the Pacific Alaska Fisheries Company's cannery ships
Joint Northwest Strike Committee was formed -- May 24, 1934
it was comprised of sixty-six delegates representing twelve ILA Locals in Washington State
and the Columbia River basin
its initial purpose was to figure out what to do with Alaska cargo
but it came to serve as a strategy board for Northern ILA Locals

INTERNATIONAL LONGSHOREMEN ASSOCIATION (ILA) PRESIDENT JOE RYAN COMES WEST

Faced with a strike on the Pacific Coast that he did not support, President Ryan invited himself west
en route to San Francisco, he stopped in Tacoma and Seattle
where he complimented the men for putting up a "magnificent fight"
Employers, feeling pressured by the federal government's National Recovery Administration (NRA),
negotiated with Joe Ryan and ILA Pacific Coast District representatives

TENTATIVE OFFER FROM WATERFRONT EMPLOYERS IS PRESENTED TO THE ILA

International Longshoremen's Association President Ryan's negotiations
with the Waterfront Employers Union of San Francisco resulted in a tentative agreement
being reached -- May 28, 1934
employers in Seattle, Portland, San Francisco, and Los Angeles had all agreed:
•to recognize the International Longshoremen's Association (ILA)
for collective bargaining purposes;
•to establish a committee in each port to operate a joint hiring hall;
•there would be no discrimination against union or nonunion men;
•employers would be free to select the men and the men were free to select their jobs
"and within those principles the employers would cooperate in spreading work"¹⁶⁵
This offer fell far short of the ILA's demands:

¹⁶⁵ Otilie Markholt, *Maritime Solidarity*. P. 106.

- it did not provide for a coastwide agreement,
- it did not provide for a union hiring hall,
- it completely ignored all of the Maritime Unions that had joined in the strike effort

LONGSHOREMEN REJECT AN OFFER FROM EMPLOYERS TO END THE STRIKE

When the tentative agreement was sent to the ILA locals for ratification

longshoremens decisively rejected the proposal

Tacoma's Jack Bjorklund, Pacific Coast ILA Secretary, returned to Tacoma from San Francisco

for a meeting with Joint Northwest Strike Committee members -- May 29, 1934

ILA President Ryan's proposal outraged the members of the Tacoma local

after hearing the report of the negotiators

strike committee members voted unanimously to reject the offer

and, further, to concur in the action of the Tacoma ILA local which had gone on record

“as being absolutely opposed to any proposition being even entertained ...which first does not recognize our original demand...[an] absolutely ‘closed’ or ‘Union Shop’...and FURTHERMORE- that this Conference go on record as standing 100 per cent behind our original demands.”¹⁶⁶

PACIFIC COAST DISTRICT ILA MEMBERS SELECT A NEGOTIATING COMMITTEE

Joint Northwest Strike Committee representing Washington and Columbia River ports

selected Seattle delegates George R. Clark, Robert Collins, and William Craft

to carry out the day-to-day responsibilities regarding the strike

they served as the Joint Northwest Strike Committee bargaining team

WASHINGTON COMMONWEALTH BUILDERS, INC. (CBI) BECOMES POLITICALLY ACTIVE

Commonwealth Builders Inc., (CBI) was the Left-wing branch of the state Democratic Party

they believed that each worker should produce the equivalent of what he or she consumed

they pledged to end poverty by having the state take over idle farms and factories

these progressives supported plans to establish cooperative farms and factories

employees would produce goods to be sold in state-owned stores

in turn employees could exchange script for these same goods

people would be involved in “production for use” instead of “production for profit”

Commonwealth Builders, Inc. (CBI) sought to elect state officials

they recruited candidates to run in the Democratic Party primary election

their campaign slogan read: “Production for Use”

However, the success of the Commonwealth Builders, Inc, attracted the attention

of Northwest Communist Party leaders Morris Raport and Howard Costigan

both took on an ever-increasing role in CBI's leadership

PROPOSAL TO BUILD BONNEVILLE DAM IS APPROVED

(U.S. Army Corps of Engineers published the 308 Report [1929]

which recommended ten dams on the Columbia River but no action was taken

until the Franklin D. Roosevelt's administration and the initiated the New Deal)

¹⁶⁶ Otilie Markholt, *Maritime Solidarity*. P. 106.

this proposal to build dams was supported by public power advocate U.S. Senator Homer T. Bone
Congress appropriated f \$51 million to construct a hydroelectric dam and lock to raise ships
United States Army Corps of Engineers supervised construction of Bonneville Dam
located forty miles east of Portland
Bonneville Lock and Dam was named in honor of French-born
U.S. Army Captain Benjamin Louis Eulalie de Bonneville [April 14, 1796-June 12, 1878]
an early fur trapper, and explorer in the American West Army (from [1832] to [1835])

BONNEVILLE DAM IS ONE OF THE WORLD'S MOST AMBITIOUS ENGINEERING PROJECTS

Construction work began at the Lower Cascades of the Columbia River
concrete dam stretched across the Oregon side of Bradford Island
and connected to a piece of bedrock called "Bonny Rock" -- June 1934
coffer dams were to be built in order to block half of the river and clear a construction site
where the foundation could be located
Spillway Dam for the powerhouse to be constructed is located on the Washington side
it features eighteen gates stretching 1,450 feet long and sits 197 feet above bedrock
these gates hold back water fifty-nine feet above the water below the spillway
total length of the concrete dam (three structures) is 3,463 feet
U.S. Army Corps of Engineers began construction on Bonneville Dam and Lock -- June 1934-[1938]
first powerhouse 1,027 feet long and seventy-seven feet in height
was located near Bradford Island on the Oregon side
its ten generators had a capacity of producing 526,700 kilowatts of electricity
In addition to the dam and powerhouse, the Bonneville Dam project
featured a ship lock seventy-six feet wide and 500 feet long to lift boat traffic above the dam
with a vertical lift of fifty-nine feet -- the greatest lock lift in the world at that time
using this lock, ocean-going ships could reach The Dalles, Oregon (beginning in [1938])
Two types of fish ladders were installed
one is a fishpool ladder
another is a fishlock which works like a ship lock
More than 17,000 men working around-the-clock tamed the roaring Columbia River
construction provided jobs and other economic benefits to the Pacific Northwest
these workers reshaped the Pacific Northwest's economy
by ensuring an abundant supply of inexpensive hydroelectricity
Roosevelt's New Deal even paid folk singer Woody Guthrie to pay homage to the dam
that turned the region's "**darkness into dawn,**" in the song *Roll On, Columbia*

HIGH LEVEL GRAND COULEE DAM (BIG BEND) PROJECT IS CONSIDERED

Public power advocates urged construction of a high dam on the Columbia River at Grand Coulee
national interest in the larger proposed project began to increase
FDR authorized a high dam to replace the approved low dam -- June 1934
a master plan was developed that called for a hydroelectric and irrigation project
it called for construction of a multipurpose dam across the Columbia River
at the upper bend directly north of the dry canyon that was intended
to provide hydroelectric power, irrigation, flood control, navigation and recreation

this labor-intensive project would provide cheap hydroelectric power for heavy industry and for consumers

President Franklin Roosevelt avoided having to obtain congressional approval for the project by financing it through the Public Works Administration (PWA)

(this strategy backfired [1935] when the U.S. Supreme Court ruled that only Congress could authorize the construction of dams across navigable rivers)

ISSUE OF ALASKA SHIPPING IS DISCUSSED

Joint Northwest Strike Committee bargaining team convened in Seattle Mayor Charles Smith's office to discuss with representatives of the ship owners

the problem of supplying Alaska -- June 5, 1934

These negotiations were stormy which reflected the seriousness of the issue

however, power conflicts within the longshore locals also added to the difficulties

Seattle and Communist-laced Everett locals refused to let their negotiators sign an agreement without first reporting to the members of their locals

To complicate negotiations, Dave Beck's Teamsters threatened to cross the ILA's picket lines

CONGRESS PASSES THE *SECURITIES EXCHANGE ACT* OF 1934

This was a sweeping piece of legislation which extended the government regulation of securities "primary market" securities (stocks, bonds, and debentures [promissory notes])

had been regulated by the *Securities Act* [of 1933]

Newly-passed *Securities Exchange Act* regulated "secondary trading" -- June 6, 1934

frequently securities are traded between persons unknown to the issuer through brokers or dealers trillions of dollars are made and lost each year through trading in the secondary market

Securities Exchange Act also created the *Securities Exchange Commission* to regulate the industry

Joseph Kennedy was named the first chairman of the commission

TENTATIVE AGREEMENT TO SUPPLY ALASKA IS REACHED WITH THE ILA

Joint Northwest Strike Committee successfully concluded contract negotiations to supply Alaska -- June 8, 1934

Representatives of Alaska steamship, Northland Transportation, Wills Navigation, Santa Anna Steamship, and Arctic Transportation signed for the employers

International Longshoremen's Association President Joe Ryan

and Pacific Coast ILA Secretary Jack Bjorklund

signed for the International Longshoremen's Association

Seattle Mayor Charles L. Smith signed as a witness

This agreement granted the International Longshoremen's Association a closed (union only) shop

and further provided that all longshore crews would be dispatched from ILA halls

wages were set at the Tacoma pre-strike scale (the highest in the state)

with any increase resulting from the strike to be paid retroactively

longshoremen would not be required to handle any unfair cargo

or any cargo transshipped from any unfair vessel or dock

hours were established as demanded by the ILA shipping code:

six-hour day, thirty-four-hour week

this agreement applied only to **“vessels and cargo to and from Alaska direct, or to local products from British Columbia”**¹⁶⁷

Owners, in turn, received assurances that if they conformed to the terms of the agreement their ships would be granted safe passage

However, the sailors’ unions still needed to sign an agreement before ships could sail for Alaska or return to Pacific Northwest ports

marine unions demanded a wage increase from Alaska operators before they would sign
Sailors’ Union of the Pacific (SUP) pickets promised to keep the ships tied up
until the last maritime union penned the agreement

ALASKA AGREEMENT IS SETTLED

Finally Seattle ILA Local 38-12 followed by Everett ILA Local 38-76 relented and signed this agreement covered only about 1,200 of the 35,000 strikers on the coast -- June 9, 1934

500 longshoremen, 600 unlicensed seamen, 125 licensed officers
many strikers resented the Alaska agreement

because it breached their demand for a coastwide settlement
others, with equally strong convictions, approved of it

Communists were especially opposed to the agreement

Seattle longshoremen were told in a Communist leaflet: **“Ryan, Lewis, Morton, Morris and the rest of the misleaders have succeeded to split the mighty united front of the longshoremen and seamen... Their action has already proved that they intend to ‘settle’ the strike by signing separate agreements with each company, by calling on Mayor Smith of Seattle to intimidate the men, and finally by accepting the old wage scale, and leaving the final settlement to an arbitration board set up by Roosevelt’s strikebreaking NRA machine.”**¹⁶⁸

MEETING IN TACOMA ATTEMPTS TO SETTLE THE STRIKE THERE

Tacoma Mayor George A. Smitley and the city council

formed the Tacoma Citizens Emergency Committee to support the waterfront employers
and force the port open

Smitley invited ILA President Joe Ryan, Pacific Coast District Secretary Jack Bjorklund
and Paddy Morris to an executive session of the city council -- June 11, 1934

City officials offered their good offices to settle the strike

but after the meeting Ryan told the *Tacoma News Tribune*

there was nothing the mayor or council could do: **“It must be done from San Francisco.”**¹⁶⁹

ILA JOINT NORTHWEST STRIKE COMMITTEE CONTACTS SEATTLE MAYOR SMITH

Seattle Mayor Charles Smith had tried to interest San Francisco Mayor Angelo Rossi
in a summit conference of Pacific Coast mayors to discuss common action

Mayor Rossi was not interested

Motion was passed by the Joint Northwest Strike Committee informing the Seattle mayor

¹⁶⁷ Otilie Markholt, *Maritime Solidarity*. P. 116.

¹⁶⁸ Otilie Markholt, *Maritime Solidarity*. P. 117.

¹⁶⁹ Ronald E. Magden, *The Working Longshoreman*. P. 142.

he must stop interfering in the strike or the agreement to ship supplies to Alaska was in jeopardy
this motion was temporarily suspended until the mayor had an opportunity to respond

TACOMA WATERFRONT EMPLOYERS PLOT TO OPEN THEIR PORTS

Waterfront employers met and generated a plan in “strictest secrecy” to open their waterfront
Tacoma’s Chambers of Commerce created the Tacoma Citizens Emergency Committee
to be ready to act when the mayor opened the port
this became an additional voice raised in opposition to labor’s efforts

FEDERAL INTERVENTION IN AIR MAIL CONTRACTS

U.S. Senator Hugo Black gained a reputation as a tenacious investigator
he chaired a senate committee that looked into contracts awarded to air mail carriers
he uncovered what he termed abuses of “fraud and collusion”
in an effort to correct these problems Senator Black introduced the Air Mail Act of 1934
Air Mail Act of 1934 passed congress -- June 12, 1934
its main provision broke up the aviation holding companies
these were large corporations that owned both aircraft manufacturing companies and airlines
this act also stated the federal government would set airmail contracts, routes, and schedules
fix subsidy rates and airmail payments;
and regulate the airways and license pilots
furthermore, the temporary, low bids to carry airmail that had been accepted from the airlines
were locked in place
all of the airmail carriers began to lose money -- still, airline service grew quickly

SEVERAL MARITIME UNIONS TAKE A STRIKE VOTE

Sailor’s Union of the Pacific (SUP) sent two delegates
to a San Francisco Labor Council meeting -- June 13
where the mood in opposition to accepting arbitration as a solution to the strike
grew increasingly heated
Coast wide organized labor leaders at the meeting originally expressed no desire for a General Strike
but sentiment in support of that effort grew rapidly

STRIKING ILA AND MARITIME UNION MEMBERS UNITE

At the invitation of International Longshoremen’s Association (ILA) locals
delegates from the International Seamen’s Union (ISU), Sailors Union of the Pacific (SUP),
Marine Firemen, Oilers and Watertenders and Wipers Union (MFW)
and Marine Cooks and Stewards met with the ILA
to organize and coordinate the strike effort all along the Pacific Coast
Striking International Longshoremen’s Association and Maritime union members on the West coast
formed the Joint Marine Strike Committee -- June 13, 1934
which was comprised of seven unions -- each striking for their own demands:
•International Longshoremen’s Association (ILA);
•Masters, Mates and Pilots (MMP);
•Marine Engineers Beneficial Association (MEBA);

- Sailors Union of the Pacific (SUP);
- Marine Firemen, Oilers, Watertenders and Wiper's Association (MFOW);
- Boilermakers Local 6 of San Francisco;
- Machinists Local 68 of San Francisco and Machinists Local 234 of Oakland

In a five-to-four vote the Joint Marine Strike Committee elected charismatic, pro-Communist ILA leader Harry Bridges of San Francisco as Permanent Chair

HARRY BRIDGES LEADS THE JOINT STRIKE EFFORT

Joint Marine Strike Committee composed of longshoremen and maritime union members coordinated their efforts under the leadership of Harry Bridges
 Longshore organizer Harry Bridges was a militant, left-wing, pro-Communist radical Australian he had organized work slow-downs to stop "shape-up" practices (hiring men from those who showed up each morning at one of the pier heads) he also led disputes over handling "hot" (non-union) cargo
 Bridges was well known and proud of his radical left-wing philosophy although he claimed he was never a member of the Communist Party

ANOTHER ATTEMPT IS MADE TO OPEN THE PORT OF SEATTLE

Seattle Mayor Charles L. Smith announced an effort to open the port -- this time by force if necessary he decreed a "state of emergency"
 Seattle Police Chief L. L. Norton was replaced by George F. Howard -- June 15
 Mayor Smith announced he would guarantee police protection to anyone loading or discharging cargo in Seattle
 International Longshoremen's Association (ILA) Pickets met the police effort confrontations turned increasingly violent as Seattle strikers battled with police and strikebreakers

TALKS OPEN ON AN ILA-MANAGEMENT COASTWIDE AGREEMENT

Undaunted by the failure of his first tentative agreement to end the strike
 International Longshoremen Association (ILA) President Joe Ryan -- June 16, 1934
 traveled to San Francisco Ryan where he entered into a new round of talks with employers but this time with the assistance of two Brotherhood of Teamsters leaders
 Seattle Teamsters President Dave Beck, and Mike Casey, San Francisco's president
 Everyone knew this would be a last-ditch effort to end the strike before force would be used to open the West Coast ports
 Both Beck and Casey thought the strike had lasted too long they believed the strikers should take what they could get from the employers
 Ryan emerged from his meeting with Waterfront Employers Union President Tom Plant with another settlement -- this one was very similar to Ryan's [May 28] agreement but this time Beck and Casey guaranteed Teamsters unions would cross the ILA picket lines if any longshoreman failed to return to work under the provisions of the new settlement

PROPOSED COASTWIDE CONTRACT IS REJECTED BY THE LONGSHOREMEN

ILA President Joseph P. Ryan called on the San Francisco ILA locals to ratify the agreement but the strikers turned him down

Ryan immediately flew to Portland, Oregon and met with longshoremen there
ILA members listened quietly -- and then shouted down his proposal
Ryan next traveled to Tacoma where he met with the Joint Northwest Strike Committee
he pleaded with the committee to ratify his second settlement
strike committee members listened politely like the San Francisco and Portland strikers
Ryan's proposal was voted down without a single vote in favor
Up and down the Pacific Coast sailors expressed indignation that they had been left out the proposal
in port after port longshoremen and striking maritime unions formally pledged to each other
they would not to settle the strike separately
When the Teamsters failed to carry out their threat to cross longshore picket lines,
ILA President Ryan declared he would no longer be involved in any further negotiations
by necessity, the initiative passed to Joint Northwest Strike Committee

BIDDING ON THE LOW LEVEL GRAND COULEE DAM PROJECT BEGINS

Finding companies to bid on the construction project was difficult
because of the size of the undertaking even various parts were too large for most companies:

- Native American graves had to be relocated;
- temporary fish ladders had to be constructed;
- landslides posed disastrous threats;
- protecting and cooling concrete both were formidable problems

businesses were forced to consolidate to make reasonable bids
Final contract bidding for construction of the low level dam began in Spokane -- June 18, 1934
four bids were submitted
one bid was received from a lawyer with no financial backing
another bid was from actress Mae West
it consisted of nothing more than a poem and promise to divert the river
Six Companies, Inc, then building Hoover Dam submitted a bid of \$34.5 million
lowest bid was from a consortium of three companies known as MWAK:

- Silas Mason Company of New York,
- Walsh Construction Company of Davenport, Iowa
- Atkinson-Kier Company of San Francisco,

this was known by the acronym MWAK (Mason-Walsh-Atkinson Kier) Company
they had submitted a low bid of \$29.39 million
which was fifteen percent lower than Six Companies, Inc. had proposed
MWAK was given the project -- June 18, 1934

INDIAN REORGANIZATION ACT PASSES CONGRESS

Indian Reorganization Act (Wheeler-Howard Act) was the most important turning point
in federal policy toward American Indians since the early nineteenth century
former policy was based on the principle of providing tribes limited control over their affairs
through a government-chartered corporation: Bureau of Indian Affairs (BIA)
this law assumed that Indians traditions were as much communal as individual
Wheeler-Howard Act was the keystone of the "Indian New Deal" -- June 18, 1934
Indians who wished to organize into tribes could obtain a Charter from the federal government

this Charter gave tribes limited powers of self-government through tribal councils
and entitled them to a variety of health and economic benefits
from the federal government
it provided a \$10 million fund to run indefinitely for the purpose of making loans to Indian tribes
to provide for the purchase of millions of acres of land to permit Indians
to attain a standard of living equal to that of non-Indian rural people
purchases were to be made from the tribe but belonged to the individual,
yet the title to the land was held by the federal government
further allotments were prohibited and restricted lands remained restricted
it provided a scholarship loan fund of \$250,000 a year be established
it provided for employment of qualified Indians in the Indian Service
regardless of any civil service status
Tribes accepting the act could exercise veto power over the spending of their own tribal funds
these tribes were given the authority to incorporate for business purposes to buy up inherited land
and to arrange for voluntary exchanges and consolidations of land among tribal members
Bureau of Indians Affairs (BIA) was responsible for administering the Charter
but the Charter would not be applied to any group without its consent
reservation economic development and social programs fell outside the control of the BIA
this reversed BIA land policy
for the first time in living memory BIA reservation superintendents
began to lose their positions as de facto colonial administrators
with almost total power over their charges
While the restoration of tribal autonomy gave new life to Indians institutions
it led to confusion concerning rights and responsibilities
although Indians were entitled to vote in federal, state and local elections
technically in certain cases they were exempt from local taxation
and on their reservations natives were exempt from state laws
Wisdom of reorganization was bitterly debated by Native Americans
not all of the tribes that accepted the terms of the Indians Reorganization Act
saw striking changes
some, however, made progress in educational and health benefits
and in an improved standard of living
Yakima, Umatilla and Klamath Indians of the Pacific Northwest rejected the new act
their opposition was based upon a tradition of distrust of the federal government
many Indians hated the federal Bureau of Indian Affairs and wanted to abolish it
not give the agency control over their tribal identity
Colvilles, Nez Perce, and Spokanes rejected the Charter as well
many Indians who voted negatively believed that a chartered tribe
would have fewer rights than a treaty tribe
if the federal government could ever be persuaded to live up to its treaty obligations
Result of these objections was that tribal land continued to slip away from the Indians
into the hands of white owners

LONGSHOREMEN AND MARITIME UNIONS FORM A PACT

Harry Bridges' Joint Marine Strike Committee

was composed of ILA members and Maritime union members on the West coast

Both groups signed and exchanged pledges of mutual support in any strike effort -- June 18, 1934

“We, the undersigned organizations, individually and severally, hereby agree to refuse to return to work until such time as a satisfactory agreement is arrived at between employers of labor in the marine industries as the organizations signatory to this agreement. We also direct that a joint committee from each of the organizations signatory to this agreement shall become the negotiation committee, who shall institute and complete negotiations between employers of labor in the marine industry and the organizations signatory to this agreement, subject to ratification of all crafts and strikers involved.”¹⁷⁰

PACIFIC COAST DISTRICT JOINT STRIKE COMMITTEE FORMS ITS BARGAINING TEAM

Pacific Coast District Joint Strike Committee members were named

Tacoma's Paddy Morris and Jack Bjorklund, Cliff Thurston from Portland

and William J. Lewis of San Francisco made up the new negotiating team

Frustrated ILA and maritime union members, however, passed a referendum instructing the new team

to add to the original demands of ILA recognition, closed shops and union hiring halls,

a new proviso that employers must also reach a satisfactory settlement

with other maritime unions

Employers emphatically rejected the latest ILA Pacific Coast District proposal

LEGISLATION TO RESOLVE LABOR DISPUTES IS PASSED BY CONGRESS

This new law empowered the President to establish investigation and arbitration boards

during labor disputes -- June 19, 1934

National Longshoremen's Board (NLB) was the first of these

it was created to bring the contesting sides together and settle the strike

HARRY BRIDGES BECOMES A LEADER IN THE SAN FRANCISCO STRIKE

San Francisco ILA members rejected a second contract offer

from the Waterfront Employers Union of San Francisco

that had been negotiated by their leadership

Harry Bridges became the chief spokesperson in negotiations for the Joint Marine Strike Committee

however, Bridges was not the controlling leader of the strike

STRUGGLE TO OPEN WASHINGTON'S PORTS CONTINUES

Up and down the Pacific coast employers were adamantly determined

to break the strike, International Longshoremen's Association (ILA) and the Maritime unions

Tacoma Citizen's Emergency Committee and Mayor Charles Smith of Seattle

tried to open their respective ports

efforts were concentrated on Milwaukee Dock in Tacoma and Smith Cove's Pier 40 in Seattle

Tacoma Citizen's Emergency Committee placed an advertisement in the *News Tribune*

promising 5,000 workers who had lost their jobs because of the strike

¹⁷⁰ Otilie Markholt, *Maritime Solidarity*. P. 127-128.

that they would be able to work again when the Port of Tacoma reopened
this ad concluded: **“600 TACOMA LONGSHOREMEN HAVE NO RIGHT NOR WILL
THEY BE PERMITTED TO DICTATE THE FUTURE TO 106,000 PEOPLE.”**¹⁷¹

CLASH AT SEATTLE’S SMITH COVE

Eighteen ships were waiting to be unloaded at Piers 40 and 41 (today’s Pier 90 and 91)
at Smith Cove (located where cruise ships tie up today in Seattle)
unlike his counterparts in Oregon and California,

Governor Clarence Martin refused to mobilize the National Guard
Seattle Mayor Charles L. Smith decided to force open the Seattle waterfront -- June 20, 1934
Seattle Post Intelligencer headlined that **“POLICE WILL OPEN PORT TODAY!”**

Seattle shipping owners made their move

Seattle Police Chief George F. Howard addressed 560 assembled peace officers
(300 city police, 200 deputies, 60 members of the Washington State Patrol)

**“We are not looking for trouble, but we are prepared for it.... See that your guns are in
good shape. But use them only in the last extremity for the protection of life and property...A strike
council was appointed in this city weeks ago. The man at the head of it is one of the most prominent
communists on the Pacific Coast. That’s all.”**¹⁷²

Strike breakers appeared at Smith Cove’s Pier 40 -- 8:00 a.m., June 20

in a long caravan of cabs, trucks, and busses as police and armed guards escorted 200 scabs
employers also brought in forty-eight scabs from West Seattle

on an old steamer, the *Admiral Rogers*, guarded by two coast guard cutters

when she arrived, the *Admiral Rogers* tied up in Smith Cove at the end of Pier 40
one fire engine company stood by with hoses at the ready

Mounted police charged with clubs and teargas and broke through the striker’s picket lines

about 200 pickets were routed from the entrances to the piers and warehouses

Crew of sailors hired by shipping owners shifted the *Admiral Rogers*

from Pier 40 to Pier 41 to serve as mess hall and lodging for scabs

TOWARD NOON PICKETS AGAIN GATHERED AT SEATTLE’S SMITH COVE

Approximately 100 pickets turned back trucks loaded with food and supplies for police and scabs

longshoremen persuaded a City Light line crew not to install a flood light for the police

Sailor’s Union of the Pacific (SUP) sent stew, buns and coffee for the pickets

More than 600 unarmed pickers moved toward Pier 40 and 41

100 of the strikers sat down in front of a Great Northern switch engine headed onto the pier
to shift freight cars so scabs could unload the cargo of silk aboard the *President Grant*
after talking with strikers the engineer returned to the switch yard

Two hundred police protected company property along Pier 40

while fifty officers guarded the scabs at the end of the dock two blocks away

employers expressed satisfaction with the day’s work

¹⁷¹ Ronald E. Magden, *The Working Longshoreman*. P. 144.

¹⁷² Otilie Markholt, *Maritime Solidarity*. P. 133.

TACOMA SHIPPING OWNERS ARE DEDICATED TO OPENING THE PORT

Efforts to open the port of Tacoma had failed

Tacoma Citizens' Emergency Committee issued a statement -- afternoon June 20, 1934

“The frustration this morning of our initial effort to open the port has not caused us to change our minds in the least. The port must open.”¹⁷³

MEETINGS TAKE PLACE IN TACOMA AND SEATTLE

Seattle Central Labor Council met -- evening of June 20, 1934

Seattle longshoremen Local 38-12 sent a delegation to the council meeting

they asked the Seattle labor council to **“go on record favoring a general strike if police and armed guards were not withdrawn in twenty-four hours”¹⁷⁴**

Teamster leader Dave Beck urged Seattle longshoremen to break ranks with their union and negotiate “their own best deal” with Seattle shippers

after a long debate, Seattle Central Labor Council adjourned without a vote on the motion

Teamsters and other conservative labor leaders had defeated the general strike proposal

Tacoma Central Labor Council also held a meeting -- evening of June 20, 1934

labor council members condemned the Tacoma Citizens' Emergency Committee's “advocacy of violence and lawlessness”

they recommended using the Alaska Agreement as the best solution to the waterfront strike

TACOMA SENDS REINFORCEMENTS TO SEATTLE'S SMITH COVE

Overnight, Tacoma longshoremen arrived at the Seattle docks

to reinforce the Seattle picket line at Smith Cove -- June 21, 1934

Strikers succeeded in turning a train away from the docks before 8:00 a.m.

and a second train around 11:00 a.m.

Seattle Mayor Charles Smith and Police Chief George F. Howard visited the scene

pickets sat down on the railroad tracks once again

sixteen mounted officers rode into the strikers swinging clubs -- three strikers were injured

Cars with supplies for police went onto the dock

someone had mixed salt with sugar and delivered it to police spoiling their coffee

Several men selling magazines refused to stop walking along the pier

pickets began to beat them up before the salesman convinced the pickets they were not scabs

Coast Guard cutter and harbor patrol boat kept two of the picket's launches away from the docks

UNION LEADERS DECIDE TO STOP LOADING SHIPS BOUND FOR ALASKA

Outraged by Seattle Mayor Charles Smith's betrayal of his promise of “neutrality” in the dispute,

Joint Northwest Strike Committee asked the Seattle Central Labor Council

to inform city officials that if police were not removed from Smith Cove

all work would stop on the Alaska ships at 4:00 p.m. June 21, 1934

Seattle Mayor Smith refused to remove the police

Joint Northwest Strike Committee pulled men off the Alaska ships ending loading operations

¹⁷³ Ronald E. Magden, *The Working Longshoreman*. P. 144.

¹⁷⁴ Ronald E. Magden, *The Working Longshoreman*. P. 144.

however, they were not able to shut down the entire port
as some cargo began to move in fits and starts

EFFORT TO KEEP PORT OF TACOMA CLOSED

Tacoma Mayor George A. Smitely and Public Safety Commissioner Frank T. Callender received a written request from Tacoma Port Commissioners asking that police remove striking longshoremen from port property -- June 21
Port commissioners also asked for police protection for steamships which needed to load or unload
There was an additional effort by Commissioner Callender to obtain state patrol officers to guard the docks but this effort was blocked by Governor Martin

CONFRONTATION ON THE TACOMA DOCKS

Tacoma's mayor and the Tacoma Citizen's Emergency Committee tried to force open the waterfront
Strikers were alerted by a sympathetic Tacoma policeman, who warned them that a Greyhound bus filled with scabs was coming from Seattle to Tacoma -- about 5 a.m., June 22, 1934
also, the mortarship *India* loaded with scabs circled Tacoma's Commencement Bay expecting to receive a signal to land

When a Greyhound bus from Seattle pulled into the Tacoma bus depot at Fifteenth and Pacific Avenue

a dozen strikers watched thirty-one special deputies disembark -- 4:30 a.m.
These strikebreakers were transferred to waiting trucks already loaded with bedding and food and other supplies such as guns, baseball bats, hand grenades and tear gas bombs all purchased by the Tacoma Citizen's Emergency Committee
longshoremen inside the union hall did not challenge the scabs

Tacoma police escorted the special deputies together with some local recruits through a foggy murk to the Milwaukee Dock

waiting at the pier to meet the strike breakers were a Flying Squad and 400 Tacoma strikers
Special deputies climbed out of trucks into the waiting crowd of strikers -- 5:00 a.m.

Milwaukee Dock gates were nailed shut so that scabs could not pass through to the piers
After a brief tense but firm meeting of unarmed Tacoma strikers, Seattle scabs, and local police took place beside the trucks

law officers disarmed the scabs of an assortment of guns, clubs, baseball bats, blackjacks, tear gas canisters and hand grenades
all of the special deputies decided to give up -- they discarded their arm bands and badges

Tacoma police escorted the strikebreakers back to the Greyhound depot where they boarded a charter bus for the return trip to Seattle

Port of Tacoma remained closed as demanded by the strikers

NATIONAL GUARDSMEN MOVE INTO TACOMA

While the Tacoma docks remained under siege,
Tacoma Saw mills were operated with scabs protected by armed guards
Concentrating on the regional strike in Tacoma
Weyerhaeuser executives convinced Governor Clarence Martin that only intimidation by union radicals kept workers off their jobs

governor was told by lumber company owners that the labor agitators were from the outside

AGREEMENT REACHED AT THE PORT OF TACOMA

Longshore pickets suddenly disappeared from Port of Tacoma docks -- 8:00 a.m. Sunday June 24
Tacoma port commissioners and longshore leaders had met secretly [Saturday afternoon]
this meeting had resulted in a closely guarded pact between the two sides
Tacoma Police Chief Harold Bird told newspaper reporters that port commissioners
did not seem to be interested in having additional protection anymore
Tacoma Citizens' Emergency Committee thought the Tacoma Port
had successfully evicted the pickets
Citizens Committee asked about using the docks at the regular port commissioner meeting
however, this request was ignored

NEGOTIATIONS ON A NEW ALASKA AGREEMENT

When the confrontation moved uptown
strikers tussled with police and special deputies near the Smith Tower
Many public officials as well as several newspapers
decried the longshoremen's embargo of food and medicine destined for the Alaskans
Federal mediator Charles A. Reynolds, a member of the President's Mediation Board,
told longshoremen and Alaska shipping line owners -- June 25, 1934
that a new agreement covering Northern Territory vessels
must be reached soon or government troops would load chartered ships

COMMUNISTS IN SEATTLE DEMAND A GENERAL STRIKE

Communist Party members tried to take advantage of ILA strikers' anger and frustration
they staged a demonstration across the street from the longshoremen's union hall -- June 26
San Francisco's Communist longshore union, Marine Workers International Union (MWIU),
Secretary Roy Hudson addressed the crowd
Communists called for a demonstration at Pier 40 [for June 29] to be followed by a general strike
Joint Northwest Strike Committee passed a motion opposing activities orchestrated from outside

FEDERAL GOVERNMENT ESTABLISHES MEDIATION BOARDS TO RESOLVE THE STRIKES

President Roosevelt implemented legislation passed by Congress the week before [June 19]
empowering the president to establish investigation and intervention boards for labor disputes
National Longshoremen's Board (NLB) was the first of these
it was created to was bring the contesting sides together and settle the strike
National Longshoremen's Board (NLB) members were appointed by FDR -- June 26, 1934
Archbishop Edward Hanna of the Catholic Diocese of San Francisco served as chair
San Francisco attorney Oscar K. Cushing and Assistant Secretary of Labor Edward F. McGrady
served as members
NLB was to investigate the ILA strike, take testimony and attempt to bring about a settlement
newspapers which demanded the government force the strikers back to work
hailed these appointments as the solution to the conflict
unions greeted the development with silence or suspicion

CONGRESS PASSES THREE PIECES OF LEGISLATION EASE THE GRIP OF DEPRESSION

National Housing Act of 1934 was intended to regulate the rate of interest and the terms of mortgages insured by the federal government -- June 28, 1934

Federal Housing Administration (FHA) was the agency charged with overseeing mortgages

goals of the FHA included:

- improving housing standards and conditions;
- providing an adequate home financing system through insurance of mortgage loans;
- stabilizing the mortgage market

these new lending practices increased the number of people

who could afford a down payment on a house and monthly payments on a mortgage

thus, the size of the market for single-family homes increased

Taylor Grazing Act set aside eighty million acres of public land for grazing -- June 28, 1934

purchase of a grazing permit was required

maximum length of time for a permit is ten years but it is renewable

also permits can be given to build fences, reservoirs and other improvements

vacant, non-appropriated and unreserved public lands became available for a grazing fee

with the exception of all of Alaska, national forests, parks, monuments, Indian reservations, and railroad grant lands

neighboring land owners may be granted a right of passage over these districts

seventy-five per cent of the fees collected were returned to the local community

for range improvements such as increasing the water supply, reseeding, or fighting rodents

Federal Farm Bankruptcy Act -- June 28, 1934

delayed foreclosure of a bankrupt farmer's property for five years

during that time the farmer could make rental payments and remain on the farm

after the rental period, the farmer could buy back the property at its appraised value

over six years at one percent interest or remain on the farm as a paying tenant

NATIONAL LABOR RELATIONS BOARD (NLRB) IS ESTABLISHED BY EXECUTIVE ORDER

National Labor Relations Board (NLRB) was established by Executive Order 6763 -- June 29, 1934

NLRB was charged with conducting labor union representation elections

NLRB was also charged with investigating and remedying unfair labor practices

unfair labor practices could involve union-related situations or employer retaliation

SHIPPING AT SEATTLE'S SMITH COVE IS OPERATED BY SCABS

Waterfront Employers of Seattle continued to hire strikebreakers to work the docks at Smith Cove

with warehouses filled to overflowing, cargo lay strewn about the docks

and against the walls of overstuffed warehouses

Scabs, mostly University of Washington students, had unloaded seven vessels at Pier 40 -- June 29

they grumbled because they were charged \$1.00 a day for poor food

and exorbitant prices for cigarette

SUGGESTED COMMUNIST RALLY IS HELD AT SMITH COVE

According to newspaper accounts 750 demonstrators arrived at Smith Cove -- June 29

The Labor Advocate reported: “[Eighty scabs quit work] **upon being assured of not being molested by the pickets and they said to the longshoremen that more would quit if they thought they could get away without being attacked by union men.**

“Pier 40...is made over into a regular fort, with an amazing array of arms and ammunition ready to repel any attack of the pickets. It takes about 600 armed men to protect 120 at work and costs to the city and county are enormous. The strikers have made no attempt to molest anyone and content themselves with jeering at the scabs trying to do work they don’t understand. Half the number of regular union longshoremen would handle all the work the scabs are doing in much less than one-twentieth of the time.”¹⁷⁵

CLASHES EXPAND BEYOND THE SEATTLE DOCKS

In response to a rumor that Standard Oil planned to dispatch a tanker with a scab crew, longshoremen and sailors tried to enter the company’s gates at Point Wells (Richmond Beach) as union men and guards clashed, a sniper opened fire from across the road
Seattle ILA Local 38-12 member Shelvy Daffron dropped -- fatally shot in the back
Quickly a crowd of 750 striking workers rushed to the area to prevent scabs from servicing tankers they were met by armed guards at the fence -- June 30, 1934
one of the guards shouted “Let’s give it to them.”
shots rang out and strike leader Shelvy Daffron fell mortally wounded -- shot in the back
he died the following day (a Snohomish County inquest jury was later unable to fix blame)

ORDERS TO SUPPLY ALASKA ARRIVE IN SEATTLE

Secretary of the Interior Harold Ickes requested ships be chartered by the federal government to take food and supplies to Alaska -- June 30, 1934
President Roosevelt quietly signed an executive order to charter ships to supply Alaska -- July 1

PREPARATIONS ARE MADE TO BREAK THE STRIKE IN SAN FRANCISCO

California authorities, both local and state, decided that they were not going to stand around and let the strikers disrupt all of the nation’s needed West Coast cargo flow
In San Francisco the police department had thousands of dollars’ worth of tear gas and other non-lethal equipment that they were more than willing to use against the strikers
San Francisco Mayor Angelo Rossi declared that he was going to reopen the port -- July 2, 1934
he announced he would force old trucks past the picket line
in order to start the movement of cargo that teamsters had refused to move

UNION CONFRONTATION HEIGHTENS IN SAN FRANCISCO

Clash to open the port of San Francisco began at Pier 38 -- July 3, 1934
San Francisco Maritime Strike Committee appealed to all unions
to send unemployed members to the waterfront
Early in the morning strikers and sympathizers began to gather
swelling to a crowd of over 5,000 -- many carried rocks and railroad spikes
Police Chief William Quinn had almost 700 police ready

¹⁷⁵ Otilie Markholt, *Maritime Solidarity*. P. 138.

police cars blocked the Embarcadero (San Francisco's main waterfront road) on the north
Belt Line train crewmen attempted to move a string of empty boxcars to a siding
in an effort to block the Embarcadero on the south
Although San Francisco Mayor Rossi issued widespread warnings
that the waterfront should be avoided, many people ignored the request

HOSTILITY LEADS TO CONFRONTATION

Strikers broke through police lines to stop the train cars from closing access to the docks
toward noon police moved the strikers back to clear the area between Pier 38
and the Atlas company warehouse two blocks away on King Street
Mayor Rossi ordered three Atlas trucks loaded with cargo to drive to the warehouse
by the time that the drivers were ready to get the trucks moving
a massive crowd had gathered around the trucks on Pier 38
Atlas trucks exited the pier and moved slowly toward the warehouse
at first there were high hopes that the mayor's strategy would indeed work well
however, strikers moved to a vacant lot across the street from the rear entrance of the warehouse
where thousands of stacked bricks from a demolished building provided ammunition
strikers opened a barrage of bricks on the lead truck
Mounted police wielding nightsticks rode into the crowd
followed by foot police who fired several shots into the air
then drove the crowd back with tear gas and riot clubs
rocks shattered the windshields of several police cars, including Chief Quinn's
San Francisco *Chronicle* described explosions of tear gas, the sounds of firearms
including sawed-off-shotguns being fired and the sight of heads being smashed in by clubs
even if a striker was able to drag a police man off his horse,
it was not long before he was brought down by police and soundly beat into submission
Fighting between small detachments of police and strikers continued
police forced pickets back from the waterfront:
waves of teargas engulfed the entire district and bricks and stones littered the streets
thousands of spectators watched the hours-long battle
Fighting ended at 5:00 p.m. when the Atlas trucks stopped hauling cargo from the pier
reports of injuries listed thirteen police officers, sixteen strikers, several scabs and one bystander
away from the battle zone, police clubbed and arrested
Sailors' Union Picket Captain Frank Webb

CONFRONTATIONS ALSO ERUPT ON THE SEATTLE DOCKS

Seattle waterfront simmered on the verge of violence -- July 3, 1934
police moved picket lines to an area behind the railroad tracks at Smith Cove
only three pickets from each organization were permitted near the gates to the piers
police kept the tracks clear with a cordon of officers
Police Chief George F. Howard fired two officers
for failure to aid the son-in-law of a steamship official being beaten by strikers
he suspended two others for failure to arrest pickets beating a scab

ALTERCATION CONTINUES IN SAN FRANCISCO

Attention during the Pacific Coast strike was focused once again on San Francisco -- July 5, 1934
five thousand strikers responded to an appeal for pickets at Pier 38 by the union

some, in defiance of the longshoremen's leaders, carried guns instead of rocks
nearly 800 police officers stood ready to protect life and property

One of the most vicious days of the strike was "Bloody Thursday" -- July 5

five Atlas trucks began moving cargo from Pier 38 to the company warehouse -- before 6:00 a.m.
strikers knew this was only a symbolic effort to break the strike
cargo moving across other piers were a more ominous threat

An attempt was made by employers to shift several rail cars at about 8:00 a.m.

this action took on great meaning in the minds of strikers

who believed this was an attempt to break their morale and to bring troops into the strike

Once again the fight was on

so much tear gas was used that police had to send for a fresh supply

new, long riot sticks bashed head leaving a wake of still forms on the street

as the riot reached its conclusion, rifles and riot guns were taken to the scene

these were distributed among police plainclothesmen

officers with shotguns were posted to see no striker advanced beyond the police barricade

first round of the fight drew to an end -- 10:30 a.m., July 5

six strikers were taken to the hospital -- three hit by police bullets

"BLOODY THURSDAY" CONTINUES IN SAN FRANCISCO

Word spread among the strikers that the California governor

had called out the National Guard -- shortly after 3:00 p.m.

this renewed their fury and triggered the final conflict of the day

Striking waterfront workers again surged forward toward the docks

an eyewitness described the scene: **"They came from everywhere with fresh loads of iron and stone. They swarmed onto the Embarcadero outnumbering the police by enormous odds. The police answer to this was gas, and still more gas. These bombs appeared to have longer range than those used in the morning, and exploded on impact. Volley after volley of these crashed into the closely packed mob, searing flesh, blinding, and choking. Where the ranks broke, mounted officers dove in with clubs, trampling those who could not get out of the way. Again the sirens screamed, and carload after carload of officers and plainclothesmen armed with more tear gas and shotguns swung into action. Many were especially equipped with gas masks.**

"The congregation at the foot of Market Street was becoming fantastic. The spectators were standing so thickly on the bridge of the under-pass that the structure was in danger of collapse. Automobiles were packed in the subway below, stopping all traffic.... And all the while, ferry-loads of commuters were being emptied into the Ferry building and ferryloads of automobiles from Oakland and Alameda were being dumped at the auto entrance....

At the height of this confusion, the battle reached white heat. More and more gun-fire came into play. Bullets crashed into windows.... Police vainly tried to drive the masses of spectators back

from the combat zone, but they were thrust into it by the discharging auto ferries and street-cars.”¹⁷⁶

FINAL PHASE OF THE SAN FRANCISCO RIOT

Melee continued until the strikers gave up and were driven off the waterfront -- by 5:00 p.m. July 5 official casualty figure reported two dead by police gunfire, Nicholas Bordoio and Howard Sperry and 109 injured -- thirty-two by police bullets others had been gassed, clubbed, or hit by flying missiles only a few police officers and bystanders were injured

Early in the evening the first one hundred National Guardsmen arrived in army trucks they began to occupy the waterfront with rifles and bayonets showing during the night the number increased to 2,000 National Guardsmen

Bloody Thursday was reported in the *San Francisco News*: **“Police decided to clear the Embarcadero. The crowd fought back, hurling rocks. In the midst of the fight, smoke began curling up from the two box cars, standing on a sidetrack about a block away. The cars were surrounded by milling, fighting strikers.**

“Fire engines arrived. According to police, strikers hurled rocks at the apparatus. The call went out for tear gas.

“A tear gas squad...swung into action. Flanking them were police with riot guns. Gas pistols popped and grenades flew through the air.

“Men were felled by police clubs. Others ran, cursing and clawing at their eyes, out of the clouds of stinging gas.

“Radio cars sped to the scene. The crowd gave back. Soon it was on the run, radio cars in pursuit. The strikers ran north to Harrison street. Police continued to herd them along. The crowd was driven back to Bryant street from Beale to Main streets, but here it grew menacing again. Rioters hid behind materials intended for the bay bridge and hurled rocks.

“The main battle veered onto Rincon Hill. It started when a gang of 500 men rushed down the Harrison street bridge toward the melee below. They were cursing, hurling rocks. Police said at least one man was firing a revolver.

“The fight raged up the bridge and into the streets. The situation had grown so serious that police were abandoning any attempt to herd the rioters along. The long nightsticks were rising and falling like pistons. When a man went down he stayed there until radio cars had a chance to pick him up....

“The police cars took a terrific beating from stones hurled by rioters. Hardly a machine in the war zone did not have a broken top, smashed window or dented fender.

“Bullets from police revolvers spattered against houses on Rincon Hill, imperiling women and children inside. Police claimed the strikers returned their fire, blamed the wounding of at least one man to the rioter’s guns....”¹⁷⁷

Bloody Thursday evoked a nationwide protest from union people

California’s governor sent in the National Guard to prevent further violence

¹⁷⁶ Otilie Markholt, *Maritime Solidarity*. P. 159-160.

¹⁷⁷ Otilie Markholt, *Maritime Solidarity*. P. 151.

SHIPS IN SEATTLE BOUND FOR ALASKA NEED TO BE LOADED

Alaska Steamship Company was concerned business would be lost to government-chartered ships company agreed to demands laid down by the Joint Northwest Strike Committee -- July 5, 1934 by Seattle negotiators Joe Ryan, Jack Bjorklund, and Dave Beck ships would be loaded in any port where no armed guards were located Joint Northwest Strike Committee agreed to load Alaskan ships under the terms of the previous Alaska agreement it was understood by both sides that no effort would be made to open the Port of Seattle Tacoma Port Commissioners then authorized use of their docks for Alaska shipping this new contract ended the Tacoma Citizens' Emergency Committee campaign to force open the Port of Tacoma

SAN FRANCISCO LABOR RESPONDS TO "BLOODY THURSDAY"

When the rioting was over, sixty-four union men were injured two men, Nicholas Bordois and Howard Sperry, had been killed Thousand strikers, families and sympathizers took part in a funeral procession -- July 6, 1934 which stretched more than a mile and a half along Market Street police were completely absent from the scene International Longshoremen's Association (ILA) called for a general strike in support of dockworkers Harry Bridges, president of the San Francisco ILA delivered a fiery speech in support of labor and established himself as a charismatic rank and file labor leader

ALASKA SHIPS ARE LOADED IN TACOMA

As a result of the Joint Northwest Strike Committee's victory over Alaska ship owners four Alaska steamers arrived at the Tacoma piers with union crews -- July 6, 1934 Cargo was moved from Seattle to Tacoma for transshipment to Alaska lines of trucks in front of Tacoma's Pier 2 extended for half a mile longshoremen from several Pacific Northwest ports traveled to Tacoma where they were dispatched from the union hall to work the ships half of the wages earned was paid directly to the men one-fourth was sent to their local strike committee and the final fourth went to the Joint Northwest Strike Committee which sent \$2,000 to the San Pedro strikers, \$300 to San Francisco, and various amounts to other California locals

PORT OF BELLINGHAM SHIPS LUMBER USING STRIKE BREAKERS

First scab-loaded ship sailed from Bellingham -- July 9, 1934 she was loaded by loggers employed as strike breakers by the mill company they worked behind a sixteen-foot fence and were protected by special deputies

TACOMA SHOWS ITS SUPPORT FOR THE STRIKE

Meeting in Tacoma sponsored by the Central Labor Council -- July 9, 1934 drew a crowd of 5,000 union supporters to the docks

FUNERAL IS HELD FOR THE DEAD SAN FRANCISCO STRIKERS

Funeral service was conducted for Nicholas Bordoio and Howard Sperry -- July 9, 1934
both had been killed in the riots on "Bloody Thursday"
40,000 strikers, families and sympathizers solemnly took part in a funeral procession
that stretched for more than a mile and a half down Market Street
police were absent from the scene
This march had an enormous impact on San Franciscans
talk of a general strike had been promoted by only the most radical workers
now this seemed to be a practical solution to the labor crisis

SPECIAL DEPUTY IS KILLED IN SEATTLE

Pickets stopped Steven S. Watson's car-- July 9, 1934
he was a Smith Cove guard who ventured uptown near the scab hiring hall
his car was overturned and he was hauled out and beaten
As a shot rang out Mr. Watson was fatally wounded
Sheriff Bannick ordered all special deputies to remain on the docks

SEATTLE STRIKE SUPPORTERS RALLY

Rally in support of the strike was held that night at the Seattle Civic Auditorium
3,000 labor supporters demonstrated their approval for the strikers -- July 9, 1934
Headlines in the evening newspapers blamed "Reds" for the death of Steven S. Watson
but a coroner's jury found that the bullet came from Watson's own gun
as he tried to draw it during the scuffle

AN ATTEMPT IS MADE TO RESOLVE THE SAN FRANCISCO STRIKE

In an effort to resolve the ILA strike, three days of talks were scheduled in San Francisco
by the National Longshoremen's Board (NLB) -- July 9-[11], 1934
At the first meeting called to order by Chairman Catholic Archbishop Edward Hanna
bargaining positions were reiterated by each side
International Longshoremen's Association Executive Board member A.H. Peterson pointed out
that the men wanted a coastwide wage scale of \$1.00 an hour straight time and \$1.50 overtime
they wanted work to be distributed evenly and a six hour work day should be instituted
Harry Bridges, spokesman for the San Francisco ILA strike committee, stressed the necessity
of union control of hiring halls to eliminate discrimination and favoritism
Paul Scharrenberg of the maritime unions demanded union recognition, wage increases,
and an end to maritime employer's fink halls
Thomas Plant, speaking for San Francisco ship owners and waterfront employers emphasized "**A jointly operated hiring hall as provided in the June 16 agreement is fair and gives all that any fair-minded longshoreman can reasonably ask.**"
as for the maritime union, Tom Plant told NLB that "**It is utterly beyond the power [of the Waterfront Employers Union of San Francisco] to settle a controversy involving wages and working conditions of seafaring personnel.**"¹⁷⁸

¹⁷⁸ Ronald E. Magden, *The Working Longshoreman*. P. 147-148.

A pattern of disagreement soon became apparent to the National Longshoremen's Board members attorney Oscar K. Cushing, who defended the employer's view, was usually in conflict with Chairman Hanna and Assistant Labor Secretary Edward F. McGrady

WORK CONTINUES ON THE LOW LEVEL GRAND COULEE DAM

Considerable earth-moving began as the two mile long conveyer was carrying 52,000 cubic yards of material a day -- July 1934
removal of 22,000,000 cubic yards of dirt and rock was required for the dam's foundation alone
At times the excavated areas would collapse from the massive weight placed on them
landslides became a serious problem as more and more material was excavated from the site
one landslide dumped 1.5 million cubic yards back into the excavation -- July 1934
(slides would be a continuing problem throughout the construction period
forcing the relocation of roads and railroads)
to secure these areas from further movement and continue excavation
three-inch diameter pipes were inserted into the mass
these were filled with cold liquid from a refrigeration plant
which froze the earth and secured it so construction could continue

LABOR IN SAN FRANCISCO DEMANDS A GENERAL STRIKE THERE

Dozens of Bay Area unions had voted for a general strike
over the days following "Bloody Thursday"
already 32,000 members of thirteen unions were on strike
(San Francisco Brotherhood of Teamsters voted 1,220 to 271 for a complete walkout [July 12])
San Francisco Central Labor Council met to act on the growing demand for a General Strike
in the Bay City -- Saturday morning July 14, 1934
delegates from 115 unions representing 65,000 of San Francisco's 75,000 organized workers
attended the meeting
Delegates elected Edward Vandeleur to chair the San Francisco General Strike Committee
George Kidwell of the Bakery Wagon Drivers was unopposed for secretary
From the beginning a clear division represented by the vote for vice chair appeared
radical maritime union members and other militants led by Harry Bridges
wanted to shut down everything
thus causing as much havoc as possible for as long as possible
to bring and bear pressure on employers and generate a pro-union settlement
Clyde W. Deal represented conservative unionists who controlled San Francisco's Labor Council
they wanted to confine the strike and exempt employers essential customer services
to avoid antagonizing the public
conservatives feared employers would use the General Strike as leverage
to break the unions and thus weaken organized labor
Harry Bridges was defeated for the vice-presidency
and he was smothered as the only maritime representative
to be appointed to the General Strike Committee of twenty-five
even so, Bridges became a spokesperson of San Francisco longshoremen in negotiations
By a vote of 315 to 15 (with 245 additional votes not authorized)

San Francisco's Central Labor Council **“all Unions that have taken strike action to call out their members, Monday, July 16th at 8 a.m., and that all other Unions that have not acted be asked to take action at once.”**¹⁷⁹

SAN FRANCISCO GENERAL STRIKE BEGINS

San Francisco General Strike officially began as the city shut down -- 8 a.m. Monday, July 16, 1934 over 30,000 workers went out on strike including teamsters, butchers and laundry workers twenty-one unions had voted, most of them unanimously, to strike non-union truck drivers joined the first day movie theaters and night clubs closed down food deliveries continued with the permission of the strike committee but many small businesses closed, posting signs in support of the strikers (eventually involving around 150,000 workers around the Bay)

It was a peaceful and effective effort although most of the California newspapers editorialized that the general strike was led by Communists

International Longshoremen's Association Pacific District President Bill Lewis later reported **“...when these unions went on strike, they (radicals) immediately took over the direction of the strike to the almost total exclusion of the longshoremen who had very little to say concerning the policies of the strike.”**¹⁸⁰

even so, the general populace remained sympathetic to the strikers Calling a general strike had an unexpected result: it gave the General Strike Committee (whose makeup was far less militant than the longshoremen's strike committee) effective control over the strike by maritime union members as well as the ILA union radicals like Harry Bridges did not control the San Francisco General Strike Reports were received that unions in Portland and Seattle would also begin general strikes

EFFORT TO END THE SAN FRANCISCO GENERAL STRIKE

Federal government's National Longshoremen's Board (NLB) deplored the San Francisco General Strike it urged both sides to accept unconditional arbitration -- July 17, 1934 San Francisco Labor Council declared the General Strike would end after ship owners and employers of the striking maritime workers accepted the terms laid out by National Longshoremen's Board's Chairman Catholic Archbishop Edward Hanna However, with the influence of Communist agitators diminished, San Francisco's General Strike Committee changed its previous position it now agreed with Chairman Hanna's call for unconditional arbitration George Kidwell, San Francisco General Strike Committee secretary, introduced a resolution calling for the governors of the Pacific Coast states and mayors of all the affected cities to appeal to President Roosevelt to request waterfront employers and unions agree to unconditional arbitration at the time over 100,000 people were on strike in the bay area

¹⁷⁹ Otilie Markholt, *Maritime Solidarity*. P. 174.

¹⁸⁰ Otilie Markholt, *Maritime Solidarity*. P. 174.

and another 470,000 unorganized San Francisco workers were indirectly involved
Hearst newspaper chain bellowed: **“There are many thousands of honest, upright, god-fearing, hard-working union men now part of the so-called general strike.**

“The total of these against the handful of Communistic radicals, who have gotten them into this mess, is so overwhelming as to make us wonder how they have permitted themselves to be led from wise leadership into this revolt against their very selves....

“Communists--an amazingly small number of them--but an amazingly skillful number of them--are in the saddle today.”¹⁸¹

SEATTLE RAILROAD UNION BROTHERHOOD REFUSES TO HONOR THE ILA PICKET LINE

Port of Seattle continued to operate by using scabs

Strikers at Seattle’s Smith Cove tried to persuade the four-man union railroad crew
to honor the striker’s picket lines

railroad brotherhood train crew hesitated as contracts would be violated and men could be fired
if the railroad unions announced they would not honor the picket lines

CLASH AT SEATTLE’S PIER 41

Strikers took the offensive to regain their former location on piers 40 and 41-- morning July 18, 1934
ILA members from Tacoma, Everett, and other Puget Sound ports went to Seattle
all day long the struggle continued to control the Railroad Avenue and Madison railroad crossing
strikers accused the railroads of picking train crews for their long years of service
to guarantee obedience to orders

While scabs worked the *President Grant* and a tanker,

1,500 Puget Sound longshoremen and their sympathizers charged Pier 41
police drove them back with clubs and nausea gas

Pickets fought with police at Smith Cove using rocks and clubs

fifty strikers slipped past police lines to the dock near the *President Grant*
they were joined by the bulk of the pickets

a dozen strikers had their heads broken and six gas victims received medical attention
at the International Longshoremen’s Association hall nearby

At the foot of Madison Street, fifty pickets attacked eight county deputies who were returning
from escorting special deputies to a boat headed for Smith Cove -- July 18, 1934

CALL FOR A GENERAL STRIKE IN SEATTLE

With the Port of Seattle doing business by using strikebreakers,

Seattle Central Labor Council heard that labor had won a victory at Smith Cove -- July 18, 1934

Seattle Central Labor Council meeting addressed a motion for a General Strike in the city

“they had regained ground that was lost and everything was peaceable now. The reason for this move was to stop freight cars moving.”¹⁸²

this proposal was tabled thanks in part to Dave Beck and Teamster control of the labor council

¹⁸¹ Otilie Markholt, *Maritime Solidarity*. P. 176.

¹⁸² Otilie Markholt, *Maritime Solidarity*. P. 184.

ACTIONS OF TACOMA CITY OFFICIALS COME UNDER ATTACK

Labor crisis came to a head in Tacoma -- July 18, 1934

actions of the Tacoma city officials and the state's National Guard [on June 23] were investigated by the Seattle branch of the American Civil Liberties Union they issued a report that **“no justification has existed at any time for the extreme measures taken by the Governor of the State in assigning state patrolmen and national guardsmen to Tacoma...not a single arrest has been made by either city or county police authorities in connection with the strike activities...neither city nor county police authorities requested the use of troops.”** (*Seattle Post-Intelligencer*, [July 18, 1934])

PRESSURE BUILDS ON THE SEATTLE DOCKS

Seattle Police Chief George F. Howard resigned after Mayor Charles Smith went over his head to take personal command of the forces at Pier 41

George H. Comstock was appointed by Mayor Charles Smith to serve as the new chief

Five hundred pickets camped at the entrance to Pier 40 and 41

vowing to prevent trains from moving -- night of July 18, 1934

Three hundred police officers guarded the docks

armed with riot clubs, revolvers, teargas guns, shotguns, submachine guns, and grenades

Strikers attempted to erect a barricade to stop a switch engine from reaching the pier

train proceeded to Smith Cove while police waited

PORTS OF SEATTLE AND PORTLAND, OREGON RECEIVE REINFORCEMENTS

Reinforcements arrived at Seattle's Smith Cove from Aberdeen, Bellingham, Everett, and Tacoma union members marched military fashion onto the piers -- July 19, 1934

Kelso-Longview International Longshoremen's Association (ILA)

was ready to join the strike standing beside Portland

POSTMASTER GENERAL JAMES A. FARLEY THREATENS SHIPPERS

Postmaster General James Farley arrived in San Francisco

to review maritime shipping contracts to carry ocean-going mail

He believed reductions were warranted to cut federal government subsidies to shippers from \$26 million per year to \$3 million

since all three of the big shipping companies involved in the San Francisco strike received these subsidies, Farley's threat intimidated the companies

Postmaster General James A. Farley's threat to maritime shipping companies had an impact shipping company owners were forced to offer settlement terms to labor

or face the loss of huge federal mail subsidies

Waterfront Employers of San Francisco accepted the National Longshoremen's Board proposal submitted by chairman Archbishop Edward Hanna

which required unconditional arbitration -- July 19, 1934

SAN FRANCISCO GENERAL STRIKE COMMITTEE CONSIDERS THE NLB'S PROPOSAL

With the Waterfront Employers of San Francisco having accepted the NLB agreement

imposing unconditional arbitration as the means to resolve labor disputes in the industry

ILA's Pacific District Executive Board recommended ending San Francisco's General Strike
San Francisco General Strike Committee Secretary George Kidwell introduced a resolution **"That this General Strike Committee...now proposes that upon acceptance by the shipowners, employers of the striking maritime workers, of the terms of the President's Longshoremen's Board for settlement of this strike, that this General Strike Committee will accept such a basis for the immediate termination of the strike."**¹⁸³

Charles Derry of the Typographical Union added an amendment: **"That this General Strike Committee hereby advises all those unions that are now out on strike out in sympathy with the maritime workers and longshoremen to immediately resume work, and that we pledge every resource, moral and financial, for the continued prosecution and the successful termination of the maritime workers and longshoremen's strike."**¹⁸⁴

After an hour's debate, Denny's amendment was passed
next the resolution as amended was considered by the General Strike Committee
with little discussion the resolution was passed by a narrow vote
over the objections of Committee Chairman Harry Bridges passed 191 to 174
San Francisco's General Strike Committee had agreed to terminate the four days of general strike
meeting was adjourned -- 1:15 p.m. Saturday July 20, 1934

INTERNATIONAL SEAMEN'S UNION (ISU) LOSES BECOMES CONCERNED ABOUT THE ILA

ISU had been involved in the forming of the Joint Marine Strike Committee
these union members steadfastly refused to ship (hire on) through fink halls
International Seamen's Union leaders now saw that longshoremen were ready to return to work
but the ISU members still hoped to win better terms
they wanted guarantees against discrimination

SAN FRANCISCO COMES BACK TO LIFE WHEN THE STRIKE ENDS

International Longshoremen's Association (ILA) Local 38-79 members
were called to a special meeting -- evening Saturday July 20, 1934
Resolution passed by the San Francisco General Strike Committee was read
discussion of the proposal included a description of working conditions
all regular gangs, and those not working in steady gangs, were instructed
to report to the union hall for assignment;
no gang could work more than fifteen hours, including meal breaks, without a rest break;
no gang could work more than forty-eight hours in a week
ILA Local 38-79 members, over the strong objection of Strike Committee Chairman Harry Bridges,
voted to accept unconditional arbitration and end the strike
(however, Harry Bridges was later elevated in San Francisco union leadership
he was elected president of the San Francisco ILA [1935])
San Francisco's General Strike, which had lasted four days, came to an end
but San Francisco's General Strike Committee did not speak for the Pacific Coast
or for the International Longshoremen's Association

¹⁸³ Otilie Markholt, *Maritime Solidarity*. P. 178.

¹⁸⁴ Otilie Markholt, *Maritime Solidarity*. P. 178.

SAN FRANCISCO AGREEMENT IS ONLY A RESOLUTION PROCESS -- NOT A RESOLUTION

What had been agreed to in San Francisco was only a dispute resolution process

Shipowners' Association of the Pacific Coast had proposed unconditional arbitration
as a process to reach settlement

longshoremen had only agreed to use that process to resolve their disputes

with the Shipowners' Association of the Pacific Coast -- not to end their strike

While National Longshoremen's Board pressed ILA locals for a date to end their strike

longshoremen worked frantically to persuade the maritime unions to go back to work

With the San Francisco General Strike at an end

International Longshoremen's Association Joint Northwest Strike Committee met in Seattle
they were determined to remain on strike

PACIFIC COAST STRIKE CONTINUES

With the federal government's National Longshoremen's Board (NLB) agreement
in place in San Francisco

many expected the strike to end within a few days

but confrontations continued along the coast

Seattle scabs worked ten ships at Smith Cove:

- strikers beat scabs and police arrested three of the strikers;
- pickets threw rocks at two tugboats;
- thirty strikers attacked fifteen scabs loading the *Emma Alexander*
at the Pacific Steamship terminal

In Tacoma the Grace liner *Cuzco* had been anchored for over a week

she finally pulled alongside the smelter

when a scab jumped to the dock to make the lines fast, striking seamen beat him severely

ILA pickets rescued the man and put him back aboard the vessel

which moved out into the harbor again -- its cargo untouched

EFFORTS FOCUS ON ENDING THE PACIFIC COAST STRIKE BEYOND SAN FRANCISCO

Union members in San Francisco had conducted and ended a successful four day General Strike
now attention was once more focused on the waterfront conflict along the Pacific coast

Joint Northwest Strike Committee sent twenty-seven delegates

to an ILA Joint Strike Committee meeting in San Francisco -- July 20, 1934

Pacific Northwest was represented by, among others, Paddy Morris of Tacoma,

William Veaux and William Craft of Seattle, Joe Sumption of Olympia

and Ed Krumholz of Grays Harbor

BATTLE AT SEATTLE'S PIER 41

Seattle Mayor Charles Smith ordered pickets driven from Smith Cove -- July 20, 1934

morning's conflict began with police using teargas to disperse 700 strikers

Seattle *P-I* described the confrontation: **"Police gas bomb squads were established at regular intervals along the Garfield Street Bridge, while at particular vantage points snipers were placed with long-range gas guns capable of hurling 37 millimeter gas shells at a distance of 450 feet**

or more. Behind the bridge the mounted police squad was mobilized to keep the mob out of the railroad yards, while platoons of foot police with riot guns were assembled on the docks at places where they would be least likely to get the effects of their comrades' gas bombs.

"When everything was in readiness Captains Comstock and Olmstead, accompanied by Sergeant John H. Harrington, began circulating quietly among the mobs on the docks.

"Better get moving,' the officers advised the men. 'If you don't we'll have to move you.'

"One strike leader, who identified himself as a marine fireman, heeded their warning. 'I think the best thing to do is to leave peaceably,' he exhorted his followers. 'We can't do anything against the police.'

"Possibly a hundred strikers heeded his advice and followed him out. But the remaining 600, emboldened by their success two days before, elected to stand their ground. Not knowing that the police had only a small supply of gas equipment on hand at the time of the first battle, they had the impression that they had nothing worse to expect--and they boasted they 'could take it.'

"We're ready for your perfume!' one of the strikers jeered, and there was an echo of catcalls.

"All right,' one of the officers replied, grim-lipped. 'Let 'em have it.'

"As he spoke the squad stationed farther west on the Garfield Street Bridge went into action, tossing a barrage of gas grenades into the crowd below.

"At first the bombs had no effect. In some instances, when the policemen had not held the grenades long enough before dropping them, the rioters picked them up and hurled them back at the officers on the bridge. But as the nauseating, blinding fumes spread the fight went out of the mob and they broke and ran.

"Some of the men made for the railroad yards north of the terminals, as had been anticipated, but they were met the mounted squad and more gas bombs, and they headed for Elliott Avenue and safety....

"When the mob tried to make a stand at the east end of the dock the long distance gas bombs went into play. End over end the projectiles hurled, most of them exploding directly over the heads of the strikers and showering them with gas....

"The rioters were bewildered by the long-range bombs. They couldn't understand where they were coming from and some of them, in terror of the unknown, plunged headlong into the water, to be fished out a few minutes later by their comrades or policemen."¹⁸⁵

Gates were opened and the entire dock was cleared -- by eight o'clock a.m. July 20

trains moved along the dock once again

Police had gassed hundreds, including some of the attackers

six pickets and three officers were hospitalized

a gas bomb hit Sailors' Union member Olaf Helland in the temple [he died August 6]

battle on Seattle's waterfront had lasted twenty minutes

Police with submachine guns stood guard at barricades of bales of wool from the terminal

anticipating another attack that did not come

SECRET MEETING IS HELD IN SAN FRANCISCO BY WATERFRONT EMPLOYERS

Shipowners' Association of the Pacific Coast was made up principally of steamship operators

who represented twenty of forty-two coastal shipping companies employing about 1,200 seamen

¹⁸⁵ Otilie Markholt, *Maritime Solidarity*. P. 184-185.

Shipowners and newspaper publishers met in private in a San Francisco suburb -- July 20, 1934
after the meeting, newspapers carried feature stories announcing
employers would accept arbitration if the International Longshoremen's Association (ILA)
also submitted all differences to the government's
National Longshoremen's Board (NLB)
Shipowners Association also agreed to elections on all vessels to determine union recognition
if a majority of the seamen voted for the same union

STEAMSHIP *PRESIDENT GRANT* LOADS TO SAIL FOR ALASKA

Under the second Alaska Agreement, cargo was loaded aboard the ship by Tacoma longshoremen
but owners could find few sailors to scab as crew members

Saul Haas, collector of customs, refused to clear the *President Grant* for Alaska
because she lacked eleven of the nineteen able seamen required by law -- July 21, 1934
she also listed to starboard because scabs stowed the cargo improperly

As reported in a Seattle International Seamen's Union dispatch: "***President Grant* was supposed to sail on Saturday noon but she got away on Sunday at noon. The Collector of Customs talked over the radio and said that the reason that the ship could not sail was because her crew consisted of high school kids and bindle stiffs [hoboes who carry their own bed roll], and of the eight alleged certificated [Able Bodied Seamen], only three knew the Port side from the Starboard side, and that the ship was in the hands of a decidedly incompetent crew.**"

Union members noted: "...The coast Guards and the Steamboat Inspectors were all under fire. There were big headlines in the papers here Saturday saying that the liner could not sail because of inexperienced seamen. That made the public realize that the seaman is supposed to be an experienced man and not just anybody the shipowners pickup here and there from schools and skidroads."¹⁸⁶

SHIPOWNERS ASSOCIATION MAKES AN OFFER TO THE LONGSHOREMEN

ILA Joint Strike Committee meeting in San Francisco -- July 21, 1934
received an offer from the Shipowners' Association of the Pacific Coast
they proposed unconditional arbitration by the National Longshoremen's Board (NLB)
to resolve the issues in dispute during the strike
and an agreement that both sides be bound by whatever decision was made
terms of the agreement would expire [September 30, 1935]

Shipowners' Association of the Pacific Coast
informed ILA Pacific District President William (Bill) Lewis
that if the longshoremen accepted their dispute resolution offer
all strikebreakers would have to be removed from the San Francisco docks
and owners would meet with Maritime labor leaders to work out negotiation schedules

NATIONAL LONGSHOREMEN'S BOARD (NLB) PRESSURES LONGSHOREMEN TO ACCEPT

Federal government's National Longshoremen's Board (NLB) wanted to get the men back to work
even if it required overlooking all of the various unions' pledges of solidarity made to each other

¹⁸⁶ Otilie Markholt, *Maritime Solidarity*. P. 186.

Award presented by the National Longshoremen's Board set basic wage rates and hour provisions and provided for the establishment of jointly operated hiring halls
this award was to be binding on all parties until [September 30, 1935]
and was to be automatically renewed from year to year
unless written notice to terminate or modify the Award was given
forty days prior to the expiration date

National Longshoremen's Board agreed to conduct balloting on the question: **“Will the I.L.A. agree to submit to arbitration by the President's Board the issues in dispute in the Longshoremen's strike, and be bound by the decision of the Board?”**¹⁸⁷

International Longshoremen's Association Pacific District President Bill Lewis sent a telegram to ILA Pacific District Secretary Jack Bjorklund -- July 21, 1934 instructing that leadership be polled on the question of whether or not to have a vote on submitting all matters in the dispute with employers for arbitration

In notifying the locals, Secretary Bjorklund recommended unions accept the proposal

“We have put up too good a fight and our membership has gone through considerable hardship, and I feel that this governmental board will at least render a decision where by we can retain our organization.”¹⁸⁸

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION VOTES ON ARBITRATION PROPOSAL

In every ILA local on the Pacific Coast International Longshoremen's Association voting began on whether to submit their differences with the employers to the federal government's National Longshoremen's Board (NLB) -- Saturday July 22, 1934

Balloting was conducted by representatives of the NLB

in San Francisco, National Guard permitted longshoremen to patrol the waterfront and pick up members to be taken to the ILA hall to vote

Harry Bridges urged members not to return to work

until longshoremen and seamen had both had gained union hiring halls

ILA PICKET LINES ARE MAINTAINED DURING VOTING

Outside of San Francisco, pickets on the docks remained in place around the clock -- July 23

Strike bulletins warned against rumors and lies in the daily newspapers

Maritime strikers of the International Seamen's Union and Sailors Union of the Pacific (SUP)

faced a major question: if the longshoremen's vote carried

would they return to work before the sailors could reach an agreement

maritime union members insisted they would not work through fink halls

National Longshoremen's Board (NLB) insisted that was a matter for arbitration

ILA Joint Strike Committee in San Francisco sent a delegation of ten members to interview the NLB

NLB recommended that voting continue and if the ILA accepted the agreement

they would ask the longshoremen to return to work as soon as possible

maritime union members would have to ship through the fink hall

ILA delegation saw immediately they would be forced to scab the sailor's strike

¹⁸⁷ Otilie Markholt, *Maritime Solidarity*. P. 191.

¹⁸⁸ Ronald E. Magden, *The Working Longshoreman*. P. 150.

MANY LONGSHOREMEN FEEL THEY ABANDONED THE MARITIME UNION MEMBERS

Many of the International Longshoremen's Association (ILA) locals stalled their return to work until maritime union members had an opportunity to vote on a proposal

International Longshoremen's Association (ILA) President Joe Ryan

had disagreed with the strike policy all along

he charged that sailors rode on the ILA's shoulders

ILA Joint Strike Committee replied to President Ryan -- July 24, 1934

“It is the unalterable conviction of the longshoremen of the Northwest that without the aid of the marine crafts, the strike would have been broken within the first two weeks.... The employers can get all the scabs they want for longshore work, but they cannot get sufficient licensed officers and seamen to do them much good unless the organized marine crafts break ranks. They will not break ranks as long as they have the support of the longshoremen. The longshoremen having solicited the help of the marine crafts do not feel that they are riding on our shoulders, as you say, and we are in duty bound to support the marine crafts until a settlement for all can be made....

“While your statement that the marine crafts have not helped the longshoremen in the past is undoubtedly true; it is also true that the longshoremen have not helped them either. We live and learn and hope to profit by our mistakes. We hope and expect that all the striking crafts will return to work at the same time as organized bodies with agreements satisfactory to them, and not as demoralized hungry individuals.

“We hope the above statements will convince you...that the organization of the Pacific Coast Marine Federation is a vital necessity to the workers in the entire industry. With such a federation, we believe strikes would seldom be resorted to, but when strikes are unavoidable, they would be 100% effective.”¹⁸⁹

ILA SHOWS ITS SOLIDARITY WITH MARITIME UNION MEMBERS

Achieving unconditional arbitration to resolve disputes was a victory for labor employers' arbitrary powers had been reduced

This achievement encouraged more workers to organize

black longshoremen experienced added gains

they were admitted to the Pacific Coast Marine Cooks and Stewards Union as equal members

unorganized workers flocked to unions -- membership sky rocketed

Unions remained determined to use their newly experienced solidarity to accomplish their goals:

- to achieve union recognition;
- to establish a coastwide agreement;
- to achieve closed-shop hiring halls (union only employment);
- to improve wages, hours and working conditions;
- and to implement the newly-won tools of unconditional arbitration to resolve unpredictable demands in the future

ISU HELD AN ENTHUSIASTIC MEETING IN SEATTLE

¹⁸⁹ Otilie Markholt, *Maritime Solidarity*. P. 190.

Over 2,000 International Seamen's Union (ISU) strikers gathered -- July 26, 1934
as reported in the *Joint Marine Journal*: **“All doubts about the solidarity of the waterfront workers were completely removed. We KNOW now that seamen and longshoremen are SOLIDLY together in one fighting unit that will not be broken. Brothers Paddy Morris, Craft, Bill Veaux, Krumholz and Joe Simpson from the northwest carried this message to the seamen. Then Brother Harry Bridges confirmed the position of the San Francisco Longshoremen and the meeting adjourned with three cheers....”**¹⁹⁰

ILA VOTE IGNORES THE MARITIME UNIONS AND THEIR STRIKE EFFORTS

International Longshoremen's Association (ILA) members voted to end their strike
this constituted a big victory for FDR's National Longshoremen's Board (NLB)
it revealed the longshoremen's willingness to settle regardless of the impact on the sailors
Communist Party line, in opposition to the voting results, attributed the negative vote to its followers
all of the blame for accepting unconditional arbitration a walking away from maritime unions
was placed on Communist critics
Communist Party newspapers trumpeted: **“The strike reached its highest point in San Francisco because the influence of the Communist Party in the waterfront unions was strong enough to defeat the reactionary leadership.”**¹⁹¹

In fact, unconditional arbitration proved to be a long and arduous process

CONTINUING MARITIME UNION TALKS RESULT IN FRUSTRATION

Arbitration talks between shipping employers and maritime union representatives continued
Shipowners' Association of the Pacific Coast used these negotiation sessions
to confuse and divide the unions
sometimes giving in on some points of contention with one union
but maintaining a firm stand against the others,
sometimes one port would be pitted against other ports,
sometimes promises were made with no thought of keeping them
One Maritime Union strike bulletin made the point -- July 27
“The shipowners are playing checkers with us now. They make a phony move -- and then wait for us to make the next move. They have placed an ad in the papers which says, ‘Longshoremen and winchdrivers wanted.’ After promising to fire all scabs before we return to work, they now advertise for more scabs. This, of course, is being done in an attempt to demoralize us.”¹⁹²

SHIPOWNERS MAKE AN OFFER TO THE MARINE UNIONS ON THE PACIFIC COAST

Shipowners' Association of the Pacific Coast proposal was identical to the offer
made to the International Longshoremen's Association (ILA)
unconditional arbitration as a method to resolve disputes
terms of the agreement would expire [September 30, 1935]

¹⁹⁰ Otilie Markholt, *Maritime Solidarity*, P. 193-194.

¹⁹¹ Otilie Markholt, *Maritime Solidarity*, P. 202.

¹⁹² Otilie Markholt, *Maritime Solidarity*. P. 195.

International Seamen's Union (ISU), its West Coast affiliate the Sailors' Union of the Pacific (SUP) and other maritime unions would hold an election
to be conducted by the National Longshoremen's Board (NLB)
to accept or reject unconditional arbitration (the proposed dispute resolution process)
they would agree to be bound by the decision of the National Longshoremen's Board
Ballots to be distributed to maritime union members read: **"By what person, persons, or organizations do you wish to be represented for purposes of collective bargaining with your employer."**¹⁹³
to be entitled to vote a seaman had to have a discharge from a voyage made after [May 8, 1933]

INTERNATIONAL SEAMEN'S UNION (ISU) GAINS RECOGNITION

Even before the results of the International Seamen's Union (ISU) balloting could be tabulated
Shipowners' Association of the Pacific Coast suddenly agreed to recognize the ISU -- July 28
Seamen received several concessions to their demands
increased pay, better living conditions and a three-watch system

INTERNATIONAL SEAMEN'S UNION (ISU) MEETING TO CONSIDER THE PROPOSAL

ISU held a mass meeting in San Francisco -- late Sunday morning July 28, 1934
this meeting was attended by a delegation from the International Longshoremen's Association
ISU member Stephen Schwartz described the delegation's visit: **"Paddy Morris, I.L.A. official from Tacoma, argued that the general strike had failed, that the dockworkers had been forced to vote for arbitration, and that even removal of the fink halls would be made dependent on arbitration. Although the government had promised to do away with the fink halls pending the arbitrators' decision, the federal authorities had then reversed themselves and declared that the halls could continue to function under the stewardship of a federal representative. 'The labor unions are tired of the fight.' said Morris. 'The return (to work) of the teamsters has weakened our position.... We don't feel the fight is over--it has just begun. This is merely a truce. The shipowners have lined up all capital on their side, and it is a battle between Labor and Capital."**¹⁹⁴

After the longshore delegation left the meeting,
those International Seamen's Union (ISU) members in attendance
considered the proposal offered by the Shipowners' Association of the Pacific Coast
ISU members would be forced to go back to work through the fink halls
with a union observer present during hiring
although it seemed likely the ISU would end their strike
members simply could not agree to a settlement with the hated fink halls intact

COAST WIDE ILA LEADERSHIP SUPPORTS THE PROPOSED TENTATIVE AGREEMENT

International Longshoremen's Association (ILA) Pacific District Joint Strike Committee
called on all ILA unions to vote to end the strike -- July 28, 1934
by accepting the federal government's National Longshoremen's Board (NLB)
arbitration proposal for returning to work

¹⁹³ Otilie Markholt, *Maritime Solidarity*. P. 195.

¹⁹⁴ Otilie Markholt, *Maritime Solidarity*. P. 199.

Representatives of the Masters, Mates and Pilots Union
pleaded in vain to delay the return to work until an agreement could be reached
by the maritime unions

MARITIME UNIONS BEGIN TO VOTE ON THE NLB'S PROPOSAL

Members of the various maritime unions began voting -- July 28, 1934
but only in San Francisco International Longshoremen's Association (ILA) union halls
all other ports were to begin voting the next day
As the balloting started, Shipowners' Association of the Pacific Coast pointed out
that the use of a single polling place would exclude men currently at sea (scabs) from voting
National Longshoremen's Board decided to keep the polling places open until [October 22]
to enable crews at sea to vote

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION (ILA) VOTES ARE COUNTED

California and Oregon union Locals reported their results -- July 29, 1934:

- San Francisco voted 2,014 for arbitration and 722 against -- 74% favorable;
- San Pedro (Los Angeles) reported an 89% favorable vote for arbitration
thirteen of their members voted while still in jail;
- Oakland reported 302 for and 37 against -- 89% for arbitration;
- Portland announced 96% for arbitration

Portland saw groups of pickets leave their posts and march to vote; then return to picket
In Washington State the ILA Joint Northwest Strike Committee's twenty-seven members
considered the shipping companies' proposal to accept unconditional arbitration
seventeen of these delegates voted in favor, including:

- Seattle which counted 88% in favor of unconditional arbitration;
- Tacoma declared 84% for unconditional arbitration (464 favored 87 opposed)

ten of the Joint Northwest Strike Committeemen voted "NO"
four unions, all former Industrial Workers of the World (IWW) strongholds,
voted to reject including Grays Harbor by a vote of 53% opposed
six of the ten "no" votes came from the Communist-dominated ports
including Bellingham and Everett with a vote of 110 to 109 against,
and Raymond (61 for to 37 against -- 62% unfavorable)

Coast wide, the longshoremen voted for unconditional arbitration 6,504 to 1,525 -- 81% favorable
ILA leaders provided the official results of the longshoremen's vote
to maritime union leaders -- noon July 30, 1934
it had been an obvious majority vote to return to work

MARITIME UNIONS STRIKE COMES TO AN END

Another San Francisco International Seamen's Union (ISU) meeting was held
to take an official vote of members to accept the ship owners' proposal -- noon, July 30, 1934
those in attendance voted 4,305 to 509 to endorse unconditional arbitration
and the ship owners' terms to return to work
Andrew Furuseth, head of the International Seamen's Union (ISU), proposed that members
burn their fink books -- the despised gray books which noted their works records

this dramatic action would, at least, destroy the symbol
of the hated practices of intimidation and blacklisting practiced by owners
with the strike over, it was with mixed emotions that members burned their fink cards
What did the maritime unions have to show for their strike?
no union hiring halls, no improved wages and working and living conditions remained the same
but the real gains they made were psychological
they had organized and stuck together thus proving they were willing to strike if necessary
seamen and sailors knew they had strength in unity
this strike was a watershed of their union movement
union recognition, the right to negotiate and to arbitrate grievances had been won
unorganized workers flocked to the maritime unions

LICENSED SHIPS' OFFICERS COULD NOT HOLD OUT ALONE

Masters, Mates, Pilots and Marine Engineers notified the National Longshoremen's Board (NLB)
in a joint statement: **“As other striking unions have declared their intentions of returning to work, and in a sincere desire to continue the unity which has been established during this strike between all the unions.**

“We are pleased to notify you at this time that all licensed personnel of the West Coast have been directed to return to their respective positions on Tuesday, July 31, at 6 a.m., and that the strike now in force will terminate as of that date and time.”¹⁹⁵

INTERNATIONAL LONGSHOREMEN'S ASSOCIATION (ILA) STRIKE IS OVER

Pacific Coast strike was over as men reported to work -- 8:00 a.m. Monday July 31, 1934
after lying dormant for fourteen years the ILA had survived an eighty-three day strike
there was nothing for union members to do now but fight to maintain their few gains
and wait for a ruling from the National Longshoremen's Board [delivered October 12]
which would be binding on longshoremen, maritime unions and ship owners
Strike effort had handed Dave Beck's Teamsters a rare setback
while enhancing the leadership position of Harry Bridges
who had chaired the West Coast Joint Strike Committee

SETTLEMENT DID NOT RESOLVE ALL OF THE ISSUES

Amid a steady barrage of complaints from both sides, the National Longshoremen's Board
held hearings in San Francisco, San Pedro, Portland and Seattle
employers complained of twenty-one strikes and work stoppages August 1 to [October 12]
most of them caused by failure to discharge scabs or reinstate strikers
longshoremen and seamen and lodged 448 complaints of discrimination and denial of jobs
during that same period of time

PRESIDENT ROOSEVELT VISITS THE COLUMBIA RIVER CONSTRUCTION SITES

President Franklin D. Roosevelt, his family, Secretary of Interior Harold Ickes
and Washington Governor Clarence D. Martin -- August 3, 1934

¹⁹⁵ Otilie Markholt, *Maritime Solidarity*. P. 200.

visited the Bonneville Dam construction project on the Columbia River from there, they traveled by train through Spokane and on to Ephrata, before continuing in automobiles to Grand Coulee witness construction underway there Roosevelt's motor caravan route to Grand Coulee was lined with people displaying banners crying, **"We want the high dam"**

Roosevelt and his companions arrived at the low level public works project -- 11:05 a.m. August 3 more than 20,000 people were waiting -- all demanding a high dam be built at Grand Coulee Eleanor Roosevelt, the president's wife, looked around and reportedly said **"It was a good salesman who sold this to Franklin."**

FDR was impressed by the project and its purpose -- and by the public sentiment on display he gave a brief speech which he closed by saying **"I leave here today with the feeling that this work is well undertaken; that we are going ahead with a useful project, and we are going to see it through for the benefit of our country."**¹⁹⁶

supporters of the high dam continued to lobby Roosevelt during his visit to the dam site Along the president's route back to Ephrata even more signs were in place pleading for support for the high dam and the irrigation project

Interior Secretary Ickes recorded in the diary: **"It was perfectly astounding to see so many people in a desert country. Some of them must have driven two or three hundred miles to see and hear the president."**

(President Roosevelt wrote later, **"When I got to Ephrata, I was committed in my own mind to the high dam."**)

CONTROVERSY OVER THE HIGH GRAND COULEE DAM CONTINUES

Much of the support for the proposed dam was hesitant for instance, Washington Governor Clarence Martin supported the high dam but he only reluctantly agreed that it should be a federal project

However, some support was enthusiastic

staunch Public Power advocates helped convince the president to build the high dam State Representative Warren G. Magnuson introduced a bill to divert \$200,000 from the state Unemployment Relief Act fund to the Grand Coulee construction project

Opposition to the high dam stiffened

Washington Water Power, a private power company, noted there was already a surplus of Northwest electric power they said money could be better spent on irrigation projects in Eastern Washington other private power interests also tried to kill the high dam

The Washington Post newspaper called its construction a misuse of federal power *Bellingham Herald* called it a "folly" as there was no industry to use the power Ephrata attorney James O'Sullivan and Wenatchee *Daily World's* Rufus Woods and their Republican colleagues choked on the idea of a Democratic administration taking over "their" dam as a federal project but they had to accept the inevitable in reality Washington State was not authorized nor could it afford

¹⁹⁶ L. Vaughn Downs, *The Mightiest of Them All: Memories of Grand Coulee Dam*, P. 14

to acquire the land needed to construct the huge project

HIGH GRAND COULEE DAM FITS WITH FDR'S NEW DEAL PROGRAM

Franklin Roosevelt's New Deal policies supported the concept of multiple purpose dams
dams that generated hydroelectric power and provided water for irrigation and other uses
low level dam at Grand Coulee, which would only produce electricity,
did not fit the pattern, but the high dam did
Roosevelt turned his attention to become a champion of Grand Coulee as a reclamation project
he believed water pumped from the dam's reservoir could be used to open up lands
that could be worked by "thousands" of farmers relocated from other parts of the country
FDR's vision was never fully realized, but Grand Coulee Dam did become
the nation's powerhouse, producing more electricity than any other dam in the United States
(as of 2005, it was eclipsed by only two other dams in the world)

FDR envisioned how the dam would fit into his New Deal under the Public Works Administration:

- high dam's labor intensive project would provide cheap hydroelectric power
for heavy industry and consumers
- it would pay for itself through the sale of electric power
- it would create jobs and farming opportunities
- water for irrigation would bring life to the Eastern Washington desert
- in addition, Roosevelt wanted to keep electricity prices low
by limiting private ownership of utility companies which could charge high prices for energy
and reap huge profits at public expense

FDR, THE MASTER POLITICIAN, FINDS A WAY TO PAY FOR THE HIGH DAM

FDR authorized a high dam at Grand Coulee to replace the already approved low dam -- August 1934
federal government's new master plan called for a multipurpose project
intended to provide hydroelectric power and to provide water for irrigation, recreation,
navigation and flood control

Washington State Columbia Basin Commission had been created
to direct state construction of the Grand Coulee Dam -- low or high
commissioners agreed to the federal takeover after finding they were hamstrung
by state law requirements regulating such an undertaking -- and by their own infighting
after negotiating with the Department of the Interior

Washington State Columbia Basin Commissioners agreed to federal construction
they satisfied themselves with salvaging consultation rights
and permission to keep commission representatives at the construction site

BUREAU OF RECLAMATION TAKES CHARGE OF THE GRAND COULEE DAM PROJECT

Soon after work was completed on the low level Grand Coulee Dam
United States Bureau of Reclamation was allowed to proceed with the high dam
Bureau of Reclamation now had to transition the design
and negotiate an altered contract with MWAK Company,
a consortium of three companies (Mason-Walsh-Atkinson Kier) constructing the dam,
new contracts permitted work to begin on a high structure

Proposed high dam (the largest dam in the world at that time)
would be 550 feet tall from its foundation in solid granite
(approximately 350 feet from the downstream river surface to the top of the dam)
it would be 5,223 feet long -- just fifty-seven feet short of a mile
Grand Coulee Dam would be 500 feet thick at the base and thirty feet thick at the top
11.975 million cubic yards of concrete were to be poured
enough to make a pyramid three times the size of the Great Pyramid of Cheops
or a two-lane highway from Seattle to Miami with three foot wide sidewalk
with more than a million cubic yards of concrete left over
electric power generated by the high dam, eight times more than the low dam, would be sold
net revenues from power sales would help to repay the cost of the project
\$63 million was allotted for the federal construction project
it was understood the amount would be repaid

One quarter of all government expenditures on water projects in the nation went to Washington State
millions of dollars were pumped into the state's economy
these immense public works projects on the Columbia River
were a triumph of coordinated, basin-wide planning:

- dams for hydropower and flood control,
- navigation locks and fish ladders,
- high-voltage transmission system that linked the dams to electric utilities,
- distribution grid that brought electricity to rural areas

for a price equal to the cost of its generation and transmission

NOT ALL OF THE EFFECTS OF THE HIGH GRAND COULEE DAM ARE POSITIVE

Upper Columbia River salmon runs had been declining for years
annual spawning needs of migrating salmon and steelhead were ignored above the dam
without a fish ladder Grand Coulee Dam permanently blocked fish migration
and removed a thousand miles of spawning grounds
these fish would be brought to extinction for a distance of 645 river miles above the dam
when additional miles of tributaries where salmon spawned are added into the picture
the number of river miles lost to salmon was nearly doubled
(wild salmon and steelhead are now extinct above the Grand Coulee Dam)

(By largely eliminating native fish above the Okanogan River

Grand Coulee Dam also set the stage for the subsequent decision not to provide for fish passage
at Chief Joseph Dam [built in 1953])

Chinook, Steelhead, Sockeye and Coho salmon

as well as other important species including Lamprey would be unable to spawn
in the reaches of the Upper Columbia Basin)

Bureau of Reclamation knew the impact Grand Coulee Dam would have on salmon and steelhead
steps were taken to compensate for these losses through the construction of hatcheries downriver

GRAND COULEE DAM CONSTRUCTION SITE IS PREPARED TO BUILD A HIGH DAM

To prepare for construction, housing for workers needed to be built
along with four bridges downstream of the dam site (Grand Coulee Bridge still exists today)

Project supervisors arrived at the construction site

Frank A. Banks served as the chief construction engineer,

Bert A. Hall was the chief inspector who would accept the dam from the contractors

Orin G. Patch served as supervisor of the concrete pouring phase

Crews were mainly pulled from Grant, Lincoln, Douglas and Okanogan counties

about 8,800 people who worked on the project received an average of eighty cents an hour

women were only allowed to work at the dorms and the cookhouses

payroll for the dam was the largest in the nation at that time

seventy-seven men died during the construction phase

HOUSING IS CONSTRUCTED FOR CONSTRUCTION WORKERS

Bureau of Reclamation provided housing

their administrative building was located at Engineer's Town

placed directly downstream from the construction site on the west side of the river

Mason City with a population of 3,000 was constructed by MWAK opposite Engineer's Town

three -bedroom houses in the city were rented for \$32 a month

Mason City contained a hospital, post office, electricity and other amenities

(MWAK [Mason-Walsh-Atkinson Kier companies] eventually sold Mason City

to the Bureau of Reclamation prior to their contract being completed [1938])

of the two cities, Engineer's City was considered to have the better housing

(Eventually both Mason City and Engineer's Town combined to form the city of Coulee Dam

which was incorporated as an independent city [February 1959])

Several other towns formed around the construction site

Coulee, Elmer City, Delano, Osborne, Grand Coulee Heights, Rim Rock, Government Town,

Basin City and Electric City

another area known as Shack Town did not have reliable access to electricity

or the same amenities as the other towns

City of Grand Coulee (incorporated [1935] supported workers as well

it was located just west of the dam on the plateau

WAREHOUSEMEN ORGANIZE IN SAN FRANCISCO

Warehousemen working near the docks handled cargo brought on and off the ships by longshoremen

they were involved in storage, processing and distribution of goods,

and sometimes manufacturing

Warehouse workers suffered low wages, high level of job insecurity and frequent work speed-ups

but the American Federation of Labor (AFL) craft unions

never considered organizing these men and women who earned a precarious living

in the distribution centers up and down the Pacific Coast

After the maritime strike San Francisco Warehousemen's and Cereal Workers Union Local 38-44

reactivated its International Longshoremen's Association charter (inactive since (1923))

they immediately started a vigorous organizing campaign -- August 1934

DIRECT PRIMARY ELECTIONS ARE HELD IN WASHINGTON STATE

Primary Elections are political party elections

held to narrow the number of candidates running for office
to one candidate from each qualifying political party
these selected candidates then face-off for the office in the General Election [in November]
Washington State functioned under its [1906] “Direct Primary” Election laws
Primary Elections were held on the third Tuesday [in August]
only candidates from “major” political parties could participate
(those parties that received more than ten percent of the vote for an office
in the last General Election)
voters received a ballot that listed only candidates for the political party chosen by the voter
(for example, the voter could pick from several Fusionist candidates for governor, etc.
but Democrat, Republican, or other party candidates would not be listed on the ballot)
In the [November] General Election voters made their choice from the candidates
of all major political parties or could write in an unnamed candidate

WASHINGTON LIBERALS SEEK A MORE PROGRESSIVE PRIMARY ELECTION

“Direct Primary” process then in use forced voters to select a political party to get a ballot
for several years liberals in the state agitated for a more progressive nominating Primary Election
to assure more democracy in Washington state politics
Washington voters proposed Initiative 2 to change to a “Blanket Primary” process -- August 21, 1934
this would allow: **“all properly registered voters to vote for their choice at any primary
election for any candidate for each office, regardless of political affiliation and without a
declaration of political faith or adherence on the part of the voter.”**

this was a call for a “Blanket Primary” election process
where names of all the candidates for all offices for all the parties were listed on one ballot
voters may pick one candidate for each office without regard to party affiliation
(with the exception of the presidential and vice-presidential candidates who are chosen
by delegates selected by state conventions that also write political party platforms)
Under the proposal Washington voters could select from all of the candidates for all parties
listed for each position
Blanket Primary elections are less restrictive for voters
because voters are not limited to selecting from only one political party’s candidates
voters could engage in “cross-over” voting or “ticket splitting” during the primary election
where a candidate for one political party could be picked for one office
and a candidate for a different party picked for the next office

U.S. ARMY AIR CORPS WANTS A MULTI-ENGINED BOMBER

Air Corps was looking for a bomber capable of reinforcing
air force bases in Hawaii, Panama and Alaska
requirements were that it would carry a “useful bombload” at an altitude of 10,000 feet
for ten hours with a top speed of at least 200 miles per hour
also desired, but not required, was a range of 2,000 miles and a speed of 250 miles per hour
Competition for the U.S. Army Air Corps contract would be decided by a “fly-off”
at Wright Field in Dayton, Ohio

STONE & WEBSTER INTERURBAN COMPANY COMES UNDER FEDERAL INVESTIGATION

Federal Trade Commission conducted eighty general inquiries or fact-finding investigations to uncover anti-trust violations

one of the utility companies investigated was Stone & Webster -- 1934
as a result, federal anti-trust regulators ended Stone & Webster's national utility cartel
Stone & Webster interurban transportation company was reorganized
under a local board of directors

(Anticipating removal of local streetcar tracks, Stone & Webster finally abandoned its Seattle-Everett railway on [February 20, 1939])

FEDERAL GOVERNMENT BREAKS UP AIRPLANE MANUFACTURERS

Depression gave Boeing's United Air Lines and Transport Corporation an opportunity to gain control of additional airplane companies and cut the cost of manufacturing
Under the terms of the Air Mail Act Boeing's United Air Lines and Transport Corporation was broken into divisions

Boeing's passenger service company was not involved in the airmail contract dispute
Seattle-based Boeing Airplane Company emerged with a sole focus on manufacturing

U.S. SENATOR HOMER T. BONE ATTACKS THE BOEING AIRCRAFT COMPANY

Liberal political leader from Washington, Senator Bone was an isolationist -- though not a pacifist
he made known his anti-military feelings on the Senate floor --1934,
Boeing was the state's largest employer with 1,000 on its payroll
none-the-less he criticized early manifestations of the military-industrial complex
citing Boeing by name

Consistent with his position on public power and to prevent profiteering
Bone wanted military wares to be produced by government-owned facilities
he charged that Boeing had made sixty-eight percent profit on Navy business
and ninety percent on Army contracts
he also railed against Boeing's new \$25,000-a-year executive hired to lobby for federal business

PAUL TUTMARC BEGINS THE AUDIOVOX MANUFACTURING COMPANY

Paul Tutmarc relocated his shop to the Western Laboratories Building (806 Pine Street in Seattle)¹⁹⁷
he soon formalized his guitar building enterprise
as the Audiovox Manufacturing Company -- 1934
Audiovox line of electric lap steel guitars earned a remarkable reputation among musicians
Tutmarc next invented the #736 Electronic Bass Fiddle
but he failed to focus on promoting his invention

AN ARBITRATION RULING IS PRESENTED IN THE LONGSHOREMEN'S STRIKE

National Longshoremen's Board (NLB) issued its arbitration ruling -- October 12, 1934
this ruling provided the longshoremen with no great victories:
•West Coast longshore workers gained recognition coast wide from Bellingham to San Diego

¹⁹⁷ Peter Blecha, HistoryLink.org, , Essay 7479, September 18, 2005.

as members of the International Longshoremen's Association (ILA);

- shipping industry must with labor;

- arbitration would settle unresolved labor disputes;

- joint control of hiring halls which would dispatch workers

labor picked the dispatchers thus they received control of hiring in fact if not by contract

fairness in job descriptions were assured

discrimination union longshoremen had previously faced in the fink halls was eliminated

and the disparity of the distribution of power altered in favor of organized labor

- no discrimination against any man for membership or non-membership in a labor union

could be used in the reemployment of strikers;

- wages and hours would be arbitrated after the men returned to work

settled at 95¢ an hour -- \$1.40 an hour for overtime

and a fifty-hour work week of six days

however, losses had been suffered by labor also:

ship owners and dock managers gained the power to introduce labor saving devices

and to institute such methods of discharging and loading cargo

as they considered best for the conduct of their businesses

Thomas G. Plant signed for the Washington State ports of Tacoma, Bellingham, Anacortes,

Everett, Olympia, Grays Harbor, Ludlow-Gamble, Port Angeles

and the California port of Los Angeles

along with Portland and other smaller Oregon ports

and the dock companies doing business in those ports

Signing for the International Longshoremen's Association (ILA) were

Executive Board members J.J. Finnegan and A.H. Peterson

International Longshoremen's Association President Joseph P. (Joe) Ryan refused to sign

Pacific District President William (Bill) Lewis,

Pacific Coast District Joint Strike Committee member Cliff Thurston,

Joint Northwest Strike Committee members William G. Craft, and Ed. Krumholz,

Tacoma Strike Committee Chairman William T. (Paddy) Morris

only the Communist-dominated port of Everett refused to endorse the agreement

SHIPPING OWNERS RETALIATE AGAINST THE ILA AND MARITIME UNIONS

Union victories, compromised as they were, did not deter employers from retaliation

waterfront employers responded with union-smashing tools

spies, strikebreakers, hired gunmen and private arsenals

citizens committees organized to turn public opinion against unions

employers tried to undercut the arbitration results by arguing that the unions violated the terms

shipping companies attempted to regain total control of hiring halls

which the unions, despite an agreement of joint control, had refused to accept

TWO PHILOSOPHIES REGARDING LABOR UNION PURPOSE AND ORGANIZATION EMERGE

Surge of unionism among workers reflected the desire to organize for protection

initially, the American Federation of Labor granted federal charters to workers industry-wide

in the mining, automobile, rubber, radio and a few other industries

Within the union movement a debate arose regarding what form of unionism could best serve unorganized workers representing hundreds of thousands of potential members in mass production industries became a critical issue craft union leaders wanted to divide new members among the existing unions industrial unionists wanted to organize federal locals within each industry without regard to the jurisdiction of craft unions AFL's 1934 Convention was held in San Francisco -- October 1934 delegates proposed a compromise that the AFL would charter new unions in cement, and aluminum while protecting the rights of craft unions

AMERICAN FEDERATION OF LABOR (AFL) REACHES INTO INDUSTRY FOR MEMBERS

Leadership of the AFL was unable to win strikes in the craft unions of skilled workers however, three victorious strikes suddenly exploded in the industrial-based unions -- 1934 Minneapolis Teamsters Strike led by the Trotskyist Communist League of America, West Coast Longshore Strike with some leaders who were members of the Communist Party, Toledo Auto-Lite Strike led by the American Workers Party

GREAT NORTHERN RAILWAY ATTACHES SILK CARS TO OTHER TRAINS

Price of silk continued to fall from \$3.56 per pound [1930] to \$1.30 --1934 Great Northern Railway ran no silk trains instead between thirty-five and fifty cars of silk were attached to the eastbound Empire Builder running to St. Paul no more did crowds of on-lookers gather to catch a glimpse of a Silk Train as she flashed by

STATE AND REGIONAL ELECTIONS MAINTAIN A DEMOCRATIC HOLD ON GOVERNMENT

Elections were held -- November 6, 1934 Democratic U.S. Senator Clarence C. Dill, who retired from office, decided not to seek reelection Senator Dill had been under constant attack from private utility companies such as the Washington Water Power Company that feared federal takeover of their industry Senator Dill stated, **"...they spread the craziest rumors about me. Water power put up all the money -- they will never forgive me for the Grand Coulee Dam. It compelled them to lower their [power] rates."**¹⁹⁸

Senator Dill was replaced by Democrat Seattle attorney Senator Lewis B. Schwollenbach (who served in the national senate until [December 16, 1940] when he appointed United States district judge for the eastern district of Washington he resigned from that position when he was appointed Secretary of Labor by President Harry S. Truman and served [1945])

State Representative Warren G. Magnuson left the state legislature as he ran for King County Prosecutor he was easily elected based on his work as a Seattle legislator -- November 6, 1934 Washington Commonwealth Builders' Inc. (CBI) met with some success for their election efforts as they delivered voters to the Democratic Party

¹⁹⁸ Shelby Scates. *Warren G. Magnuson*. P. 106.

state senate Democrats increased from twenty-five to thirty-seven
as Republican seats shrank from twenty-one to nine
state House of Representatives increased from seventy to ninety-one
across the aisle seats Republicans fell from twenty-nine to eight

MASON COUNTY PUBLIC UTILITIES DISTRICT (PUD) DELIVERS ELECTRICITY

Public dissatisfaction with corporate monopolies led to the public power movement in the [1920s]
Mason County Public Utilities District (PUD) No. 1 in the Hoodport (Hoods Canal) area
became the first PUD in Washington to go into the electricity generating business
when voters approved a proposition -- November 6, 1934
Mason County PUD No. 1 took over the assets of a private rural electric cooperative
power was purchased first from Simpson Logging Company

WASHINGTON'S POLITICS ARE PROGRESSIVE -- EVEN RADICAL

Voters were unwilling, and sometimes unable, to pay for many social measures
as the tax rate in Washington remained low
Voters lowered the property tax
and defeated a state constitutional amendment to implement an income tax -- 1934
(after passing an income tax initiative two years earlier)

PACIFIC DISTRICT ILA ELECTS A NEW SECRETARY

William T. "Paddy" Morris replaced John Bjorklund
as Secretary of the Pacific Coast District International Longshoremen's Association (ILA)
when Bjorklund became Pierce County sheriff -- November 1934
Secretary Morris suggested representatives of four waterfront labor organizations
be invited to meet in San Francisco to plan a West coast wide federation
International Seamen's Union (ISU), Sailors' Union of the Pacific (SUP),
Marine Firemen, Oilers and Watertenders and Wipers Union (MFWU)
and Marine Cooks and the Stewards Union were each contacted

UNIONS ENJOY THEIR VICTORIES FOR WORKING PEOPLE

During the months following the 1934 strike the maritime workers had been occupied
with arbitrations, negotiations, and cleaning up the ships and docks
they had achieved a working relationship with all of their employers except the tanker operations
that included union hiring halls

Talk of creating a coast-wide federation of maritime unions becomes serious -- November 1934

"More than any other single event, the maritime workers' victory in 1934 propelled the union upsurge forward among working people on the entire Pacific Coast. In Washington and Oregon the organizing drive among loggers and lumber mill workers gathered momentum. Farther north, British Columbia longshoremen, who had suffered the same exploitation during the open-shop years as their southern brothers, began to organize. In the San Francisco Bay area the union fever infected men who workers next to the triumphant longshoremen for much lower wages.

Packers, warehouse workers, and bargemen organized and demanded better pay and working conditions.¹⁹⁹

EMPLOYERS CONCERN REGARDING UNION ORGANIZING ALONG THE COAST INCREASES

During the months following the 1934 strike, employers watched with increasing alarm as Pacific Coast union longshoremen increased their control over the waterfronts
Seattle longshoremen voted that their local attempt to form a Marine Federation -- December 6, 1934 and asked the Pacific District to cooperate in that effort
T. G. Plant (dubbed “tear gas” for his initials), president of the San Francisco Waterfront Employers met with his Seattle counterpart, Frank Foisie, in Seattle -- December 1934
they concluded the employers must unite coastwide
to confront the organizing efforts of the longshoremen

SEATTLE MAYOR CHARLES SMITH TAKES OVER THE POLICE DEPARTMENT

Police Chief George H. Comstock during his five month tenure had not managed the city police force well enough to meet the expectations of the mayor
Mayor Smith, having fired chiefs L.L. Norton, and George F. Howard, now fired Chief Comstock all in a matter of less than eighteen months
Unable to find a candidate to meet his expectations,
Mayor Smith assumed control of the city police -- December 1934

WASHINGTON STATE’S RELIEF EFFORTS ARE SUCCESSFUL

Washington’s relief programs had spent both public and private donations amounting to a total \$46,054,595
Governor Clarence Martin and Director Charles Ernst re-organized the state’s relief agency into the Washington Emergency Relief Administration (WERA) -- 1934

CONSTRUCTION ON GRAND COULEE DAM IS PROGRESSING WELL

There were 7,789 construction workers were on the job site carrying out multiple tasks
two small cofferdams were to be placed parallel to one another along the west and east river bank
these dams did not straddle the width of the river but rather they provided access
to a stable surface along the dry portions of the riverbed
so construction on the ends of the great dam could begin
and drilling into the canyon walls was not required
Work was begun by almost 1,200 men on a cofferdam on the west side of the river -- January 1, 1935
this dam was 2,000 feet long and fifty feet thick and reached 110 feet above the bedrock
(it was completed [early April] -- a parallel east cofferdam was completed [December 1935])

SECOND PHASE OF PRESIDENT ROOSEVELT’S NEW DEAL IS EXPLAINED TO CONGRESS

FDR delivered the second stage of his New Deal
in his Annual Address to Congress -- January 4, 1935
he outlined phase two of the New Deal which established the modern welfare system:

¹⁹⁹ Otilie Markholt, *Maritime Solidarity*, P. 227.

- president insisted the federal government “Blanket Primary” elections and focus on long-range goals
 - relief would be left to state and local governments
 - however, some national works programs would continue to absorb the unemployed;
 - his proposed social reforms including social security for the aged, ill, and unemployed, a program of slum clearance and better housing;
 - his reform of the tax program was to assure protection for the poor
- chief beneficiaries of the New Deal’s second phase were small farmers and laborers

JACK BJORKLUND IS ELECTED SHERIFF OF PIERCE COUNTY

He resigned as Pacific Coast District International Longshoremen’s Association Secretary
 ILA executive board members appointed William T. “Paddy” Morris to the vacant seat
 Paddy Morris continued to push his liberal position and continued to disagree passionately with more conservative ILA leaders

TWENTY-FOURTH ANNUAL LEGISLATIVE GOES INTO SESSION

Washington State’s regular legislative session opened -- January 14, 1935
 this legislature included a number of Commonwealth Builders, Inc. (CBI) law makers
 although not enough to enact the organization’s “Production for Use” program
 Progressives faced increasing legislative troubles -- many came from Governor Clarence Martin
 who became less progressive as his term in office progressed
 Governor Martin balked at raising old age pensions to the level desired by many progressives
 he increasingly attacked Franklin Roosevelt’s New Deal as spendthrift
 Martin’s politics and attitudes helped raise a potent opposition to progressives
 Commonwealth Builders, Inc. (CBI) began to seek ways to enlarged its outreach to liberals

UNIONS EXPERIENCE TREMENDOUS GROWTH ALONG THE PACIFIC COAST

More than any other single event, the longshoremen’s success in the [1934] strike
 propelled a union upsurge along the Pacific Coast
 Momentum gathered in Washington and Oregon
 as organizing drives among loggers and lumber mill workers proved to be successful
 Farther north, British Columbia longshoremen began to organize
 they had suffered from the same exploitation as their southern brothers
 during the open-shop years when hiring took place in management-run fink halls
 In the San Francisco Bay area union fever infected men
 who worked next to triumphant longshoremen -- but for much lower wages

MARITIME FEDERATION OF WASHINGTON STATE UNIONS IS PROPOSED

Seattle Sailors Union of the Pacific (SUP) and other maritime unions proposed an effort be made
 to unite the various waterfront unions in the region
 Secretary of the Pacific Coast District International Longshoremen’s Association (ILA)
 William T. “Paddy” Morris drew up a proposed draft constitution for such an organization

SEATTLE MARITIME WORKERS HOLD A CONFERENCE

Seattle sailors, longshoremen Teamsters and other unions gathered together to discuss mutual concerns -- January 1935
enough interest was generated to warrant proceeding with plans to attempt to form an organization to represent maritime workers

INDUSTRIES EXPERIENCE LABOR UNREST

Struggles over the rights of organized workers continued in various industries
it was obvious that unions were growing, but no strong coordinated leadership had developed
Several strikes had occurred along the Pacific coast throughout [1934]
some American Federation of Labor (AFL) locals assisted longshoremen and maritime unions in their famous coastwide strike of that year creating a close liaison between them

LABOR UNREST IN SEATTLE GIVES HOPE TO WORKERS

Strikes occur only when there is hope
San Juan Fish Company Locals 174 and 353 of Seattle went on strike -- January 16, 1935
company was picketed -- only one shipment, escorted by police, was able to move
two day strike ended in victory for the workers who received a twenty percent wage increase

SEATTLE DRESSMAKERS FEEL THE NEED TO ORGANIZE AGAINST MANAGEMENT

About a thousand Seattle women were employed making housedresses and cotton dresses
these workers, acting on their own, held a meeting -- January 18, 1935
to demonstrate their interest in organizing
this is the first of many labor organizing events sponsored by the dressmakers
Dressmakers were visited by an American Federation of Labor (AFL) organizer
these women decided to establish a union to present their demands to management
Dressmakers Union Local 184 was organized
and was accepted into Seattle's Central Labor Council

PACIFIC COAST INTERNATIONAL SEAMEN'S UNION (ISU) DISPUTE

Tanker owners were adamantly opposed to unions on their ships
Pacific Coast ISU represented unlicensed seamen in negotiations
with all tanker companies except Standard Oil
Negotiations to resolve the labor issue began -- January 25, 1935
operators refused preferential hiring of ISU members
although this proposal had previously been agreed to on both the East and West coasts

WASHINGTON STATE COMMUNIST PARTY DEVELOPS POLITICAL STRENGTH

U.S. Communist Party had been small and isolated before the Great Depression
highly disciplined and scornful of other radical groups, the Party attracted a great deal of attention
communists feared events in Europe and especially the changing political climate in Germany
they were adamantly anti-Fascist and strongly pro-New Deal
Communist Party in Washington State was never a mass organization
Party membership in the state rarely exceeded 2,000
but they played a significant role in promoting civil rights activism in the 1930s

as they attempted to follow the political twists of their national Communist Party uniquely, Washington State's Communist Party in dedicated itself to building a "Popular Front" by developing relationships with reform organizations

communist members sometimes took leadership roles in emerging labor unions --1935 this involvement reflected an important shift in strategy away from advocating revolution which was the ultimate goal of their national organization

FEBRUARY SEES AN INCREASE IN LABOR ACTIVITY

Seattle Electrical Workers Local 77 attempted to negotiate wages and working conditions power company management refused to even acknowledge the union -- February 1, 1935

because they did not believe the union represented the majority of workers

although no documentation proved their assertion

union members called on their friends to refuse to sign any light and power contracts

Retail Clerks Local 174 forced Nordstrom Shoe Store to enter into good faith collective bargaining negotiations with the Teamsters Union began -- February 1

(when the company failed to comply with the eventual agreement

they were forced to deal with the National Labor Relations Board)

Several Seattle unions conducted meetings to organize and prepare to modify terms

provided under the [1934] National Industrial Recovery Act Section 7(a) -- February 1, 1935

some of the issues discussed included:

- minimum wage structure and level;
- inequities in wages above the minimum wage;
- geographic population distribution and other wage differentials;
- general hour and wage provisions of the code;
- maximum length of the work day;
- protection of the workers in the competition among industries;
- securing re-employment after a strike

PUGET SOUND FEDERATION IS FORMED IN SEATTLE

Seattle longshoremen and sailors, both militant and conservative, met in Seattle -- February 18, 1935 as a result of this meeting, in spite of many difficult unresolved organizational issues,

the Puget Sound Federation was formed to represent local maritime workers

For ten days the delegates wrestled with Paddy Morris' draft constitution

this re-written proposed constitution was sent to the parent organizations

with a call for a founding convention to be held in Seattle [April 15, 1935]

Communist newspaper, *Voice of America* condemned the proposed constitution

because it barred from participation

San Francisco's Communist-backed Marine Workers Industrial Union (MWIU)

In response to this complaint, Pacific District International Longshoremen's Association (ILA)

Secretary Paddy Morris suggested that representatives of other organizations be invited

to meet in San Francisco to plan a coastwide marine federation

Pacific Coast District International Longshoremen's Association (ILA) made plans for a convention

BLANKET PRIMARIES BECOME THE LAW IN WASHINGTON

Voters approved Initiative 2 to change to a more open “Blanket Primary” process
As directed by the state constitution legislators had three options in dealing with Initiative 2:

- they could pass the initiative into law as written,
- they could not act on the initiative and submit it as written to the voters for their approval,
- they could pass alternative language and submit both proposals to the voters for their approval

Washington State Legislature passed Initiative 2 as written -- February 21, 1935
Blanket Primary proposal, became Chapter 26, Laws of 1935
Washington became the only state to give voters complete freedom in Primary Elections
to choose from among all of the candidates for all political parties for all elective offices
(except president and vice-president) without regard to party affiliation
Although Primary Elections are elections to choose each political party’s candidates for office
in Washington political parties played no role
leaders of both the Republican and Democratic parties immediately challenged the new law
constitutionality of the new Blanket Primary law in the state courts

RADIO COMPETITION DEVELOPS IN THE SEATTLE LISTENING MARKET

Depression was hitting bottom --1935
in Seattle small, daytime-only 100-watt KPCB was one of several struggling radio stations
U.S. Customs Collector Saul Haas shifted his interests to newspapers and radio
Haas, one of the most powerful Democrats in the state, bought out the KPCB shares
of owner Moritz Thomsen’s son, Charles, for about \$20,000
Haas friend, Louis K. Lear, president of Green Lake State Bank,
helped bankroll the station and became its president cementing a long friendship with Haas
he welcomed King County Prosecutor Warren G. Magnuson as an investor
both men developed a mutual life-long friendship
Saul Haas took over KPCB and began operating as Queen City Broadcasting Company -- 1935
he started his new radio venture with a couple of ex-KOMO employees
Harold J. “Tubby” Quilliam and Loren Stone
also Jim Hatfield, a recent Washington State University engineering graduate, was involved
Haas petitioned the Federal Communications Commission to change the call letters
from KPCB to KIRO and to switch the frequency from 650 on the AM dial to 710
he wanted a simple, pronounceable, and recognizable word for his new station’s call letters
Controversy and rumor dogged the KPCB license transfer,
in those days arguments and rumors fueled the whole radio industry
opportunistic alliances and sometimes bitter family feuds ebbed and flowed
big-ticket lawsuits were common
licenses, turf, extremely valuable network affiliations, or just plain theft wound up in court
KIRO was in competition with the Fisher flour family’s KOMO radio station: 1000 on the radio dial
at the time Seattle’s National Broadcasting Company (NBC) affiliate
Saul Hass progressively stepped power up from 100 watts to 1,000 watts

WASHINGTON CONGRESSMAN SUPPORTS A NEW MT. OLYMPUS NATIONAL PARK

First Congressional District U.S. Representative Marion Zioncheck of Seattle
spoke out loudly against “bloated capitalists” and “vested interests”

in support of the proposed new Mt. Olympus National Park
Pulp mill owners, foresters from University of Washington and state government officials
charged that park proponents wanted to sacrifice jobs and the fortunes of peninsula residents

SAWMILL AND TIMBER WORKERS REMAIN FRUSTRATED

They were fed-up with their meager wages, miserable working conditions and the lack of job security
for a job that was a physically strenuous and often dangerous
Furthermore, the industry was thriving and the majority of workers felt
they deserved more of the wealth they were helping to create
Northwest sawmills, shingle mills and logging camps were seething with discontent
strike talk was prevalent in the logging camps and sawmills of Washington and Oregon
Newspapers and magazines, which depend very heavily on wood products,
followed the activities of timber worker very closely
with almost daily coverage, articles covering strike developments took on a biased tone
depending on point of view of the paper and its reporter

AMERICAN FEDERATION OF LABOR (AFL) REPRESENTS THE LUMBER INDUSTRY

National Executive Board of the American Federation of Labor (AFL)
gave jurisdiction over the semi-skilled and unskilled forest workers
to the United Brotherhood of Carpenters and Joiners of America
John Hutchinson, president of the AFL United Brotherhood of Carpenters and Joiners of America,
sent Abraham W. "Abe" Muir an executive board member of UBC J
from San Francisco to Washington State to serve as union district representative
he was accompanied by a number of union organizers

WILDCAT STRIKE IN A TANKER DISPUTE

Without a vote of members Paul Scharrenberg, a leading Sailor's Union of the Pacific (SUP) official
called a "Wildcat" (unauthorized) strike on the tankers
demanding union preference in employment -- March 9, 1935
Taken by surprise, SUP members struck the tanker ships as they arrived in port
(within a few days five tankers lay idle in San Francisco Bay, three at Portland, one at Seattle,
and others at San Diego and Long Beach)
Besides tanker sailors other maritime workers walked off their jobs
Secretary of Labor Frances Perkins appointed a mediation board in an effort to resolve the dispute

WASHINGTON LEGISLATURE PASSES A COMPREHENSIVE TAX BILL

Depression woes deepened in Washington State
legislators launched a massive overhaul of the tax system: the Revenue Act of 1935 -- March 14
under this law the state's principal form of taxation shifted from property taxes
to excise taxation -- a category of taxes that are generally imposed on the selling price
this legislation contained many of the taxes which still forms the basis of our tax system:

- retail sales tax;
- compensating (use) tax;
- business and occupation tax (which replaced the [1933] "B&O" tax);

- public utility tax;
- liquor sales tax;
- cigarette tax

additional taxes were either vetoed by the governor, rule unconstitutional, or repealed:

- stock transfer tax (which was vetoed);
- radio tax (overturned by court decision);
- real estate conveyance tax (incorporated with real estate excise tax in [1987]);
- admissions tax (became a local tax in [1951]);
- fuel oil tax (repealed in [1947]);
- toiletries and medicines tax (which was vetoed);
- store license tax (which was vetoed);
- gift tax (which was vetoed and re-imposed in [1941]);
- corporate income tax (overturned by court decision)

WOMEN PARTICIPATE IN THE AMERICAN FEDERATION OF LABOR (AFL) MOVEMENT

About a thousand women in Seattle were employed making housedresses and cotton dresses

Dressmakers Union Local 184 attempted to negotiate a working agreement
with the garment manufacturers broke down

Women of Local 184 struck the garment industry and a picket line was put up -- March 15, 1935
there was a great deal of public moral and financial support for the effort by women employees
however, no progress was made in resolving the dispute

MILK WAGON DRIVERS GO ON STRIKE

Arlington Dairy Milk Wagon Drivers became members of Dave Beck's Brotherhood of Teamsters
they protested the refusal of the dairy to pay union scale wages

Seattle Central Labor Council endorsed a strike by Arlington Dairy Milk Wagon Drivers -- March 22
requests to the public to stop purchases of the dairy's products went out

Arlington Dairy requested a court restraining order complaining that the union interfered
with business and should be kept from "molesting the retail trade of Arlington Dairy, Inc."²⁰⁰

Some milk from the dairy continued to be delivered by the Golden Rule Dairy and Bakery
but many customers boycotted the Arlington Dairy products

Arlington Dairy requested and received a restraining order in Superior Court
demanding the dairy's drivers cease their activities

AMERICAN FEDERATION OF LABOR ORGANIZES SAWMILL AND TIMBER WORKERS

Sawmill and timber workers met in a convention in Aberdeen -- March 23, 1935
to form the Sawmill and Timber Workers Union (STW)

Sawmill workers were lumped in with the United Brotherhood of Carpenters and Joiners of America
one of the most conservative unions in the American Federation of Labor (AFL)
this made some sort of sense in the AFL's craft-based worldview
but in the real world these two groups had little in common

²⁰⁰ Andie Erhart, The Great Depression in Washington State Labor Events Yearbook: 1935, Civil Rights and Labor History Consortium' University of Washington.

Surprisingly, the Sawmill and Timber Workers Union convention delegates approved the action of the AFL without any pronounced objection they accepted the leadership of District Representative A. W. "Abe" Muir who had been sent to take charge of the timber industry unions To assist in recruiting new members, dues for the Sawmill and Timber Workers Union (STW) was set at 25 cents a month -- one-third of the usual dues paid to the union since these dues were less than those paid by regular Carpenter members, lumber workers were given "non-beneficial" status they were not entitled to all of the retirement, death, and disability benefits derived from the regular 75-cents Carpenter dues and were not entitled to vote in the Carpenter conventions

AFL'S SAWMILL AND TIMBER UNION (STW) WORKERS FORM A STRIKE COMMITTEE

STW union members firmly believed that the timber industry could afford to pay more Northwest Council of Sawmill and Timber Workers formed itself into a strike committee to develop and direct a united strike effort under the leadership of STW District Representative Abraham W. "Abe" Muir Assistance obtained from the Federal Emergency Relief Administration and the support of the American Federation of Labor United Brotherhood of Carpenters and Joiners, International Longshoremen's Association and other labor groups gave timber industry workers unanticipated power to engage in a prolonged struggle

BREWING INDUSTRY BECOMES ORGANIZED BY LABOR

Beer industry in Washington and Oregon became completely unionized -- March 29, 1935 brewers, distributors and contract haulers employed only union men in good standing Pacific Northwest was one of only a few industries throughout America to accomplish that feat

ARLINGTON DAIRY STRIKERS WIN A VICTORY IN COURT

Arlington Dairy drivers challenged the court restraining order protecting the dairy a new ruling noted the union members were breaking no laws by striking or by being members of organized labor -- March 29, 1935 picketing of the dairy's operations by the striking workers was a protected right guaranteed to the workers by law Dairy drivers also experienced added support when customers increasing numbers of customers refused to purchase or accept any deliveries of the dairy's goods made by non-union workers

NEW WAREHOUSEMEN UNION IN SAN FRANCISCO ATTEMPTS TO GAIN NEW MEMBERS

San Francisco Warehousemen's Local 38-44 was firmly established -- spring 1935 warehousemen moved uptown and began "marching inland" seeking new union memberships these organizing efforts were brutally opposed by the ILA warehouse employers and by AFL officials who insisted uptown warehouses, as well as those on the waterfront, were their exclusive jurisdiction San Francisco Bay Area employers, police and AFL vigilantes waged pitched battles against these organizing efforts all through 1935

PUGET SOUND FEDERATION HOLDS ITS CONVENTION

Seattle sailors, longshoremen and other unions met in Seattle -- April 1, 1935
conferees discussed formation of an umbrella organization composed of
longshoremen (which was still East coast dominated), International Seamen's Union (ISU),
Masters, Mates and Pilots, and the West coast Sailors' Union of the Pacific (SUP)
in spite of their difficult unresolved issues, the Puget Sound Federation was formed
as a direct result of this meeting
This successful planning session resulted in calling for a convention of maritime employees

TANKER COMPANIES OFFER A SETTLEMENT IN THE SUP DISPUTE

In response to the federal mediation board, tanker shipowners offered a settlement -- April 5, 1935
but it did not contain preferential hiring for Sailors' Union of the Pacific (SUP) members
Sailor's Union of the Pacific (SUP), the West Coast affiliate of International Seamen's Union (ISU)
rejected the offer

SAWMILL AND TIMBER WORKERS UNION (STW) GENERATES THEIR STRIKE DEMANDS

Sawmill and Timber Worker Union (STW) members were already on strike in several locations
agitation for better wages and working conditions in the timber industry
were sparked by the successful [1934] coast-wide strike of longshoremen
many American Federation of Labor (AFL) affiliated timber locals
had assisted longshoremen and maritime workers
now it was time to achieve gains for their own industry

After a series of meetings by the Northwest Council of Sawmill and Timber Workers
a list of demands was drawn up in a working agreement to be presented to the industry:

- that union representation and recognition (closed shop) be in effect
STW would be the sole collective bargaining agency in each plant or camp;
- that the workday be six hours and the work week thirty hours per week;
- that there be a 75¢ hourly minimum wage with overtime and holiday pay provisions;
- that no strikes or lockouts occur during the life of the agreement
until all mediation and conciliation had failed;
- that a system of modified seniority be established;
- that vacations with pay according to length of service be introduced;
- that a base wage be set at seventy-five cents per hour
and proportionate increases for higher classifications be set;
- that thirty days' written notice of desire to terminate the agreement be given

CONGRESS PASSES THE EMERGENCY RELIEF APPROPRIATIONS ACT

(Congress had previously authorized [1933] the Public Works Administration (PWA)
to supervise construction of roads, schools, hospitals, post offices, bridges, parks
and public buildings

Congress now enacted the *Emergency Relief Appropriations Act*
they funded the enterprise with 1.4 Billion dollars which provided work
for three million "employables" at the time

however there were an estimated ten million unemployed persons at this time
FDR began to implement the second phase of his New Deal
Congress authorized almost \$5 billion in additional money for immediate relief -- April 8, 1935

RAILROADS ATTEMPT TO COMPETE WITH AUTOMOBILES, BUSES AND AIRPLANES

Union Pacific Railroad introduced streamliner passenger trains
that featured air-conditioned cars and clean-burning internal-combustion locomotives
Union Pacific's *City of Portland* brought several historical innovations to the industry
it was the very first transcontinental streamliner passenger train to operate,
she was the first streamliner passenger train in the Northwest and one of the first in the nation
City of Portland was the first to offer dining and sleeping services
Travel time between Chicago and the Portland, Oregon was reduced from fifty-eight to forty hours

GREYHOUND BUS COMPANY ENJOYS GREAT SUCCESS

Carl Wickman's business, like all others, had suffered during the Great Depression
he had acquired a debt of over \$1 million [1931]
however, with improvement in the economy, the Greyhound Corporation began to prosper
Wickman was able to announce record profits of \$8 million -- 1935
(By the outbreak of World War II the company had 4,750 stations and nearly 10,000 employees
Wickman retired as president of Greyhound Corporation [1946]
he was replaced by his long-time partner, Orville Caesar
Carl Wickman died at the age of sixty-seven [1954])

DUST STORMS SWEEP ACROSS THE MIDWEST

Severe drought continued turning 100,000,000 acres of previously fertile farming land into dust bowls
forcing farmers and their families to leave their land
Oklahoma, Texas, New Mexico, Colorado, South Dakota and Kansas were hardest hit
Weather in the Dust Bowl again made the national headlines -- April 14, 1935
it was Palm Sunday and the sun came up in a clear sky -- the beginning of a beautiful day
warm and pleasant, a gentle breeze blew lightly out of the southwest
by noon the weather suddenly changed as a violent wind began to blow
birds flew swiftly ahead of it, but not swift enough for a cloud traveling sixty miles per hour
a large black cloud appeared on the horizon from the north and the sky grew dark with dust
that day twenty of the worst "Black Blizzards" on record occurred throughout the Dust Bowl
causing extensive damage and turning the day to night
witnesses reported that they could not see five feet in front of them at certain points
in the middle of the day people had to use flashlights to get from place to place
temperatures in Oklahoma dropped forty degrees Fahrenheit within an hour
this day was etched in the minds of witnesses as "Black Sunday"
(This storm was followed by another and yet another in rapid succession
(in late [March]) a severe storm lashed Boise City so hard
that many people were stranded for hours
no one dared to leave a store and head for home although it might be less than a block away)

LIVING CONDITIONS BECOME MORE DESPERATE IN THE MIDWEST

It seemed to Midwesterners that wind and dirt had been blowing for an eternity
rain occurred only in conversations or dreams
intensive dirt storms and gale winds mixed with economic depression, sickness and disaster
The year 1935 was a time of extreme hardship as the unusual became the usual
extreme became the normal, and the exception became the routine
but surprisingly, the vast majority of the people stayed on attempting to make a living

SOME DID BECOME DUST BOWL ESCAPEES

Hard times compounded a heritage of attempting to work land better left in grass
Depression, drought, and dust storms
victimized the farmers of the northern and southern Great Plains
they endured Depression for as long as possible in their old homes
finally they had to give up
they attempted to escape the Great Depression by moving to the west
Depression migrants came from Nebraska, North Dakota, Montana, South Dakota and Kansas
about one-half were farmers and the other half were from towns and cities of the region
great majority of them journeyed to the Pacific Northwest -- 1935-[1937]
They, like other migrants before them, were seeking new economic opportunities
unlike the first pioneers they found poverty rather than abundance
most were denied the agricultural opportunities they sought
those who did find farmland had to take it in the cut-over regions formerly covered by forests
first abandoned by lumbermen followed by early farmers who failed
they struggled with poor soil and uncertain markets
Other migrants tried lumber camps and sawmills or whatever the cities could offer work
many went on relief -- others became migrant agricultural workers

AN EFFORT IS MADE TO UNITE MARITIME TRANSPORTATION UNIONS

Acting on the suggestion of Paddy Morris, International Longshoremen's Association (ILA)
invited the Brotherhood of Teamsters, International Seamen's Union (ISU), Marine Engineers,
Masters, Mates and Pilots, and American Radio Telegraphists to the conference
Teamsters did not choose to attend the planning meeting but three additional unions did attend:
Marine Cooks and Stewards, Ferryboatmen's Union,
and Marine Firemen, Oilers and Watertenders and Wipers Union (MFOW)
seventeen thousand longshoremen would be joined with seventeen thousand members
of eight seagoing unions
Maritime employees' conference was held in Seattle -- April 15, 1935
E.B. O'Grady of the San Francisco Masters, Mates and Pilots chaired the conference
Roy Pile of the Radio Telegraphists was secretary
pro-Communist labor leader Harry Bridges represented the politically radical
Pacific Coast District International Longshoremen's Association (ILA)

COMMUNIST-RUN NATIONAL LUMBER WORKERS UNION IS DISBANDED

National Lumber Workers Union (NLWU) had been founded under Communist leadership [1929]

radical organizational goals which reflected its Industrial Workers of the World (Wobbly) base
 appealed to the timber industry workers but proved ineffective in dealing with management
Communist led NLWU held a conference in Tacoma -- April 15, 1935
National Lumber Workers Union officially disbanded
 its leaders proposed that the entire membership join the American Federation of Labor (AFL)
 Sawmill and Timber Workers Union
 in an effort to radicalize the union despite the AFL administration
Shortly thereafter a surge of militancy ensued in the Northwest labor scene
James Murphy, an active member of the Communist Party,
 and former president of the National Lumber Workers Union
 joined the Sawmill and Timber Workers Union (STW)
 and began exercising considerable influence in their deliberations
working under cover, Communists contributed to obstructionist tactics
 carried out by radical Sawmill and Timber Workers members and longshoremen

SAWMILL AND TIMBER WORKERS UNION (STW) PROPOSES A WORKING AGREEMENT

Longview union leaders submitted its proposed uniform working agreement
 to the management of both Long-Bell and Weyerhaeuser companies
Longview union leaders promised that if actual negotiations were started
 sufficient time would be given to complete the process before an actual walkout began
Other STW locals throughout the Douglas fir region placed similar demands
 in the hands of their employers represented by the West Coast Lumbermen's Association
 an Associated Press dispatch from Olympia announced formal demands had been served
 to six Olympia lumber and plywood companies
Efforts at labor negotiations by the Sawmill and Timber Workers Union locals were chaotic
 some owners refused to negotiate -- other operators did negotiate
 some workers awaited the results of negotiations -- others walked off the job before talks began

CONFERENCE TO UNITE MARITIME WORKERS IS HELD

For ten days the delegates wrestled with a constitution to submit to the unions that would participate
 longshore leader Harry Bridges chaired the committee that drew up a draft constitution
 delegates provided for two full-time officers: president and secretary-treasure
 Bridges began to expand his role as a serious player on the West Coast
 he merged his seventeen thousand longshoremen
 with seventeen thousand members of nine seagoing unions
Disagreements quickly surfaced over who should participate in the federation
 most of the non-communists tried to limit the federation to basic crafts engaged in shipping
 they strongly hoped the Brotherhood of Teamsters would affiliate
 but their leadership adamantly refused
Communist Party members fought fiercely for an expanded membership list
 which would include unskilled laborers whose votes they controlled
 however, delegates determined the Federation would be an affiliate of the AFL
Harry Bridges proposed a proportional method of representation for voting
 based on the number of workers in each union

it was decided to institute a proportional vote:

- one to 250 members, three votes;
- 251-500 members, six votes;
- 501-750 members, eight votes;
- 751-1,000 members ten votes;
- one additional vote for each 250 members to 10,000;
- and one for each 350 above that

seafaring unions, many of whose members might not be available to vote,
received equal voice with shoreside unions

this method of voting would be used by the Federation to determine if and when to strike
but fearing domination by the numerically superior longshoremen,
smaller craft unions insisted on equal representation for each affiliate
and autonomy for each union regarding the right to strike
thus delegates rejected raw numbers of members in a union in favor of recognition
that the interests of key small crafts, such as licensed officers, must be protected

Delegates decided District Councils would be formed

each to select one member for the executive committee:

- Seattle federation became District No. 1 with 8,754 members
- San Francisco federation District No. 2 with 15,456 members
- Columbia River unions organized District No. 3 with 4,252 members
- San Pedro organized District No. 4 with 5,436 members
- the hoped-for District No. 5 composed of British Columbia ports did not materialize

Out of this conference the Maritime Federation of the Pacific (MFP) was born

Puget Sound Federation was expanded into the Maritime Federation of the Pacific (MFP)
an umbrella organization for the longshoremen and maritime union members

MARITIME FEDERATION OF THE PACIFIC (MFP) IS CREATED

Although radicals provided the drive for the organization,

composition of the Maritime Federation of the Pacific (MFP) membership was a perpetual issue
several additional shoreside organizations joined the Federation
including warehousemen affiliated with the International Longshoremen's Association
and machinists and other shipyard craft unions

Elected officers for the Marine Federation of the Pacific (MFP) were:

- President Harry Lundeberg from the Seattle Sailors' Union of the Pacific (SUP)
- Vice President Fred W. Feiedl, a rabidly anti-Communist San Pedro Marine Fireman
(he was replaced in [June 1935] when San Pedro police shot him by mistake
Lundeberg appointed William Fischer, ex-Wobbly logger and Portland ILA dispatcher)
- Secretary-Treasurer Fred Kelley of the Marine Engineers

Marine Federation of the Pacific (MFP) was composed of two distinct groups
members who supported the Communist bloc including Harry Bridges
Anti-Communists: including Seattle and Tacoma longshoremen's locals
and the Sailor's Union of the Pacific (SUP) headquartered in Seattle

HARRY LUNDEBERG SERVES AS PRESIDENT OF THE MFP

(At the port of Oakland, California Third Mate Harry Lundeberg walked off the SS *James W. Griffiths* in support of the [1934] strike effort
he had left his home in Oslo, Norway at age fourteen and joined the Seamen's Union of Australia for twenty-one years he had crewed on sailing ships and steamers of a variety of flags before he transferred into the Sailors' Union of the Pacific (SUP) in Seattle [1923] (he eventually he became an American citizen)
Sailors' Union of the Pacific (SUP) member Harry Lundeberg was chosen president of the Maritime Federation of the Pacific (MFP) although sailors were a minority in the federation
Lundeberg was strongly supported by San Francisco longshore organizer Harry Bridges at the time Lundeberg was clearly seen as a progressive by left-wing forces some believed the principal Federation organizer and Communist sympathizer Bridges offered his support to gain Lundeberg's allegiance other critics believed Lundeberg's election was arranged by Bridges to destroy the International Seamen's Union (ISU) to benefit the Communist Party by driving a wedge between the International Seamen's Union (ISU) and the Sailors' Union of the Pacific (SUP)
at any rate, a long-standing feud between Bridges and Lundeberg was beginning

MARITIME FEDERATION OF THE PACIFIC MEMBERSHIP IS DIVERSE

Organizing and unifying affiliated unions and managing the actions of individuals was very difficult maritime union men were still irritated by the deliberate slowness of shipowners in living up to their part of the working agreement since the [1934] strike these frustrations of the rank and file erupted weekly into spontaneous picket lines at a number of ports and on different ships perpetual disruptions made it difficult for anyone to get a full weeks' work any day a union worker could be confronted by some union's picket job

MARINE FEDERATION OF THE PACIFIC (MFP) PROVIDES A UNIFIED VOICE

MFP had as its goal a single coastwise maritime contract with a single expiration date so union members could continue to present their employers with the kind of common front that had proven effective in the [1934] strike united, these unionists followed the IWW slogan: "An injury to one is an injury to all" this was the ideal that had been championed by former unions such as the Knights of Labor and the Industrial Workers of the World (IWW) this was not simply a demand for solidarity it was an acknowledgment that an advance achieved by one sector of the working class could be preserved only if all other sectors were organized -- longshoremen led the way

TENSIONS MOUNT IN THE TIMBER INDUSTRY

In the midst of strike threats and countercharges that men did not want to strike members of the Longview Sawmill and Timber Workers Union decided the issue its members ballots to determine the wishes of the men this vote represented one of the largest organized groups

and Longview formerly had been an important center of 4-L activity
results overwhelmingly called for a strike provided the demands were not met (by [May 6]
Over protests of United Brotherhood of Carpenters and Joiners union Representative Abe Muir
if the contract proposal was not accepted by the West Coast Lumbermen's Association
STW would call for a regional strike to take place [May 6, 1935]

SOME TIMBER WORKERS WALK OFF THE JOB

Preparations for negotiations by the Northwest Council of Sawmill and Timber Workers
were going on in a businesslike manner in many localities,
but some men were restless and unwilling to wait for the [May 6] deadline
Weeks before the deadline, as negotiations began to break down,
lumber workers began leaving the woods and mills

TANKER COMPANIES ISSUE AN UNTIMATUM

Oil companies announced that fifteen of their thirty-two tankers operated on the Pacific Coast
using scab crews -- April 16, 1935
An ultimatum was presented to unions that if they did not accept the [April 5] proposal by [April 26]
that offer would be withdraw and tankers would be closed to union members
Unions reaffirmed their rejection

WEST COAST LUMBERMEN'S ASSOCIATION REFUSES TO NEGOTIATE WITH STW

Employers were very worried about the absorption of the Sawmill and Timber Workers Unions
by the AFL's United Brotherhood of Carpenters and Joiners
and by the organizing efforts of Abe Muir
Timber industry employers were not willing to negotiate
most of the operators were for riding the storm out by playing a waiting game
because of the meager resources of the strikers
operators were unwilling to meet wage and other demands constructively
they threatened to simply close down the industry and stay closed
moreover, operators wanted assurance that there would be no further interruption
from the longshoremen before they agreed to reopen negotiations

INDEPENDENT STRIKES TAKE PLACE IN THE TIMBER INDUSTRY

First actual work stoppage came at Vernonia, Oregon
(where there had been a two week stoppage the year before)
Vernonia loggers of the Clark-Wilson Company voted to strike -- April 19, 1935
although no demands had been presented to management
When Clark-Wilson Company continued to remain in operation
Sawmill and Timber Workers declared fifty union men had been replaced by non-union men

MARITIME FEDERATION OF THE PACIFIC (MFP) SUPPORTS THE TANKER STRIKE

MFP Convention delegates resolved -- April 24, 1935
that if all other means to settle the tanker strike failed the federation would take a strike vote
of its 35,000 members

MARINE FEDERATION OF THE PACIFIC STAKES OUT ITS POSITION ON HIRING HALLS

Maritime Federation of the Pacific Convention declared its vigorous opposition to the U. S. Maritime Commission's intention to establish government non-union hiring halls to furnish crews for government-subsidized vessels in Seattle
After meeting for twenty-five days, the Maritime Federation of the Pacific (MFP) closed its Seattle convention -- April 25, 1935

SHIPOWNERS ARE VERY CONCERNED ABOUT THE MFP

While the Maritime Federation of the Pacific (MFP) did help to stabilize the shipping industry for the employers, they hated the idea of a federation because chaos in the industries' unions was to their advantage
more disruptions on the waterfront made it easier for employers to dominate labor
shipowners feared stabilization and screamed for Washington, D.C. to do something

TIMBER INDUSTRY MAINTAINS ITS OWN COMPANY UNION: THE 4-L

Loyal Legion of Loggers and Lumberman (4-L founded in 1917 to supply the Great War) continued to represent the interests of employers by organizing workers into a company union
Company union leaders complained that: **“part of the Northwest press unwittingly played into the hands of the lumber unionizers ... by giving prominence to a threatened strike in logging camps and sawmills.”**²⁰¹

Publicity made groups which were hesitant about striking alone anxious to go along with the crowd and unprecedented requests came from the men in the woods to be enrolled in the unions
At the same time, high 4-L officials announced the results of a two weeks' survey, claiming that **“90 per cent of the men did not want to strike”**²⁰²
and emphasized that such a move would produce nothing but hatred and suffering for the employer, employee, and the public
This was the usual 4-L cry, but to the workers only a strike seemed likely to bring beneficial results

MORE SAWMILL AND TIMBER WORKERS UNION (STW) “PULLOUTS” TAKE PLACE

Second early walkout occurred at Bellingham when 1,000 men walked off their jobs -- April 26 because of the alleged discharge of union men -- again, no demands had been presented
Other camps and mills were soon closed by local action ahead of the date set for the strike
some declared that this early action was designed to prevent the timber already cut in the woods from being moved to sawmills and shingle mills
Playing a part in the hastening developments was the existence among these workers was the old Industrial Workers of the World (Wobbly) tradition: direct, vigorous action
this was the case elsewhere in the lower Columbia River area
where the men also would not hold back
Communist activists, former members of the National Lumber Workers Union (NLWU),

²⁰¹ John Rogers Commons, *Industrial Government (American Labor, from Conspiracy to Collective Bargaining)*. P. 165.

²⁰² John Rogers Commons, *Industrial Government (American Labor, from Conspiracy to Collective Bargaining)*. P. 165.

also took part in the direct action against their employers

SOIL CONSERVATION SERVICE IS CREATED BY CONGRESS

Midwest dust storm of the previous year [1934] had worked their way to the Atlantic Ocean obscuring the sun and leaving a dusty film in their wake

these weather catastrophes convinced Congress

that soil erosion caused by conditions in the Dust Bowl truly did pose a menace to the national welfare

Congress responded by implementing the *Soil Conservation and Domestic Allotment Act* as a division within the Department of Agriculture to promote better use of farmlands

by countering the dual threats of soil erosion

and agricultural overproduction -- April 27, 1935

As passed, the act stated that its ultimate goal was **“to provide permanently for the control and prevention of soil erosion and thereby to preserve natural resources, control floods, prevent impairment of reservoirs, and maintain the navigability of rivers and harbors, protect public health, public lands and relieve unemployment.”**

to accomplish this proposal the act authorized the secretary of agriculture:

- to survey and research soil erosion and methods for its prevention;
- to carry out preventive measures;
- to cooperate with state agencies or individuals;
- to acquire any lands necessary to carry out the purpose of the act

to limit governmental interference in private actions, the act the landowner’s consent before the secretary could act on private land

and prohibited actions that would interfere with the general production of food and fibers for ordinary domestic consumption

TIMBER INDUSTRY WORK STOPPAGES ARE CALLED LOCK-OUTS

American Federation of Labor (AFL) union organizer Abe Muir

identified the work stoppages to be lock-out because the timber companies

had brought in non-union workers as replacement employees

Muir focused on the Clark-Wilson and Weyerhaeuser companies

as being industry leading negotiating opportunities

because they were large enough businesses to influence the timber industry

Meanwhile, union members in other camps and mills were walking off the job

even before demands could be represented by the Sawmill and Timber Workers Union

FDR ESTABLISHES THE RESETTLEMENT ADMINISTRATION (RA) TO HELP FARMERS

Resettlement Administration was created to help farm families

relocate and to furnish them with loans -- May 1, 1935

goals for the program included:

- to improve the condition of sharecroppers, tenant farmers or farm laborers who might become unemployed who had not benefited from the [1933] Agricultural Adjustment Act;
- to prevent waste by unprofitable farming operations or improper land use;

- to fund projects such as reforestation and flood control

about 4,500 farm families whose land was unproductive because of the extended drought
were relocated to more productive land

Resettlement Administration also resettled destitute families in subsistence homestead areas
and constructed new suburbs for poor city workers

low income city workers were relocated in “Greenbelt Towns”
Greenbelt near Washington D.C.; Greenhills near Cincinnati Ohio;
and Greendale near Milwaukee, Wisconsin

TIMBER INDUSTRY NEGOTIATIONS CONTINUE IN SPITE OF WORK STOPPAGES

AFL United Brotherhood of Carpenters and Joiners organizer Abe Muir
spent most of his time conferring with the operators of the West Coast Lumbermen’s Association
in an effort to establish a solid front -- even if as yet not authorized by the AFL
at the same time, rank and file members of various local unions “pulled out” of mills
Muir apparently tried to break the Northwest Council of Sawmill and Timber Workers strike
he encouraged the McCormick mills in Port Ludlow and in Oregon to continue operating
even though they had granted merely a five-cent raise in pay without real union recognition
these mills worked day and night shifts for weeks supplying their own orders
and those of other members of the West Coast Lumbermen’s Association

At one mill near Seattle, non-union workers led chiefly by rank and file longshoremen “pulled out”
strikers had to wait days for the Sawmill and Timber Workers Union (STW)
to send out someone to sign them up for union membership

TIMBER INDUSTRY RELATIONS DECLINE

Things began to move fast as both labor and management sparred for an advantage
logging camps and mills were being closed by local action ahead of the [May 6] strike date
out on strike were 2,000 mill workers and 1,500 logging camp workers in Washington
and 1,775 mill workers and 850 logging camp workers in Oregon -- May 3, 1935
Communist union newspaper *Voice of Action* demanded A. W. “Abe” Muir’s resignation
in some regions management’s Loyal Legion of Loggers and Lumbermen (4-L)
attempted to seize control of timber industry workers

TIMBER MANAGEMENT’S 4-L UNION TRIES TO CANVASS WORKERS ABOUT THE STRIKE

West Coast Lumbermen’s Association’s Loyal Legion of Loggers and Lumbermen (4-L)
tried to gain control in Everett and Tacoma

4-L leaders advocated a secret ballot to determine the desires of the workers
Everett Sawmill and Timber Workers Union (STW) refused to participate
union members were ordered to turn in any ballot they received to union headquarters

4-L was very strong in Tacoma and the local leaders took the initiative
they sent out a letter and a postcard “ballot” to get an opinion
on the question of returning to work on the basis of the 4-L wage increase -- May 3, 1935
these postcards were to mailed to a special post office box -- postal authorities kept the only key
postcards were to be held until a committee of the 4-L could count them

LABOR ACTIVITIES CONTINUE TO ESCALATE

Seattle Dressmakers Local 184 presented its case before the Regional Labor Board -- May 3, 1935
their effort proved to be successful and a decision was returned favorable for the strikers
however, garment manufacturers refused to accept the proposed working agreement
dressmakers remained on strike

Northwest Brewing Company repeatedly violated the terms of their working agreement
by refusing to pay overtime and adjust back pay claims
after months of unproductive talks the Teamsters Union struck Breweries -- May 3, 1935
picket lines went up at the brewery

Brewery Worker's strike proved to be one of the most violent strikes of the year
Milk Wagon Drivers continued to picket to protest unfair conditions at Arlington Dairy -- May 3
strike-breakers shouted murderous threats and assaults were reported
but there were no immediate consequences for those making the threats

PACIFIC COAST DISTRICT LONGSHOREMEN STAND UP TO THEIR EMPLOYERS

Since the [1934] strike a modified form of the "shape-up system" had been used to hire employees
management hired only workers of their choice and then only for the day
Longshoremen, warehousemen, salmon canning workers and inland boatmen
were involved in organizing the docks along the various port waterfronts -- May 1935
San Francisco longshore organizer Harry Bridges was a militant left-wing radical
who organized work slow-downs to stop the shape-up practices
he also led disputes over the handling of "hot" (non-union) cargo
he was not a just a "Communist bloc" henchman, but a successful consensus builder
who did a great deal to establish the MFP as a broad-based confederation
composed of several diverse marine labor organizations

PACIFIC COAST DISTRICT INTERNATIONAL LONGSHOREMEN'S ASSOCIATION MEETS

Pacific Coast District longshoremen assembled in convention in Portland -- May 5, 1935
12,000 members were represented by forty-eight local unions
only seventeen of them had been chartered before the [1934] strike
by the American Federation of Labor (AFL)
San Francisco alone had almost one-third of the ILA union membership
Over the objections of the San Francisco delegates, the convention voted to authorize
an executive board to negotiate a new agreement to replace the contract
expiring [September 30, 1935]
they also voted to include checkers and clerks, under separate awards, in the longshore agreement
Pacific Coast District ILA convention delegates addressed deteriorating labor conditions
delegates voted to support the Sawmill and Timber Worker's (STW) strike
and refused to handle "hot" logs and lumber
they also voted that if the Maritime Federation of the Pacific (MFP) decided to strike all vessels
longshoremen would then ballot on coastwide support for that strike
Pacific Coast ILA Delegates elected officers for the coming year Office
William (Bill) Lewis was reelected ILA Pacific District President
Lewis of San Francisco Local 38-79 also defeated Harry Bridges of the same local

for the position of district ILA president
Cliff Thurston of Portland was reelected vice-president
as was Tacoma's Paddy Morris for the position of secretary
Pacific Coast District voted to send five delegates to the ILA international convention
to be held in New York City in [July]

DAVE BECK EXPANDS THE REACH OF THE BROTHERHOOD OF TEAMSTERS

Brotherhood of Teamsters attempted to organize the Pacific Coast waterfronts
Beck began to incorporate warehousemen and freight handlers into the Teamsters Union
in opposition to both the International Longshoremen's Association (ILA) and Harry Bridges
an intense power struggle for the right to represent various workers was under way

SAWMILL AND TIMBER WORKERS UNION (STW) SUFFERS FROM INTERNAL STRIFE

In Everett, Leo P. Flynn of the Seattle United Brotherhood of Carpenters and Joiners
threatened to remove the Charter of the Sawmill and Timber Workers Union (STW)
from the AFL unless it opposed the proposed strike action -- night of May 5
he was escorted from the Everett Labor Temple

NORTHWEST LABOR COUNCIL CALLS FOR A TIMBER INDUSTRY-WIDE STRIKE

Northwest Council of Sawmill and Timber Workers strike committee noted that
West Coast Lumbermen's Association had failed to meet the demands of the union
when the target date was reached
Eighteen hundred rank and file Sawmill and Timber Workers members and unorganized workers
walked off their jobs -- Monday, May 6, 1935
although United Brotherhood of Carpenters and Joiners leaders protested the strike
as did STW District Representative to the Northwest Council Abe Muir
because talks were underway at several locations and progress was being made
Pickets took up their posts and the strike got under way in earnest
at the outset of the strike there was earnest hope for a quick resolution and labor peace
At the local level, the strike brought to the surface the divergent interests of workers
who were divided by skill level and political orientation
this strike became the pivotal event that united and solidified divisions among timber workers

HOWEVER HOPE FOR LABOR PEACE WAS NOT ENTIRELY GONE

Large Weyerhaeuser and Long-Bell mills continued to operate in Longview -- May 6
as did large McCormick mills at St. Helens, Port Gamble, and Port Ludlow
same was true in Aberdeen where a number of mills remained in operation
numerous small mills, especially in southern Oregon, were not closed
10,000 men were still on the job by the close of the day but only because
United Brotherhood of Carpenters and Joiners Executive Board member Abe W. Muir
continued to negotiate with the West Coast Lumbermen's Association
STW District Representative Abe Muir hoped to negotiate a uniform working agreement
with the major Longview lumber operators
that could be applied to the entire timber industry in the Pacific Northwest

FEDERAL WORKS PROGRESS ADMINISTRATION (WPA) EMPLOYS MEN

Works Progress Administration (WPA) was the best known of the New Deal programs

Harry Hopkins administered the Works Progress Administration (WPA)

which commenced to function -- May 6, 1935

WPA soon put to work millions of Americans at reasonable wages

projects involved manual labor to build public buildings, schools, airfields, parks and post offices

but many projects involved writers, artists, scholars, musicians, actors and musicians

such as folksinger Woody Guthrie

Federal Theater Project and Federal Art Project were two examples

in Spokane Guy Anderson and Hilda Deutsch were at the federal Arts Center

Carl Morris was the director

in Seattle William Cumming, Paul Horiuchi, Mark Tobey and Morris Graves

received federal subsidies in support of their art

later, Grave's paintings were represented in the Museum of Modern Art in New York

in an exhibition of Works Progress Administration (WPA) artwork [1939]

WPA spent \$11 billion and employed over 8½ million men

in over 1,410,000 projects beginning 1935

(this agency's name was changed to the Works Projects Administration [1939]

but it will continue to function until its termination [June 30, 1943])

Critics charged that the WPA was inefficient, wasteful and politically corrupt

but it did increase the national purchasing power that generated funds for millions of other jobs

SAWMILL AND TIMBER WORKERS UNION (STW) STRIKE EXPANDS

Negotiations at Aberdeen were broken off by the Northwest Council of Sawmill and Timber Workers

between 4,000 and 5,000 additional workers did not report for work -- May 7, 1935

even members affiliated with AFL United Brotherhood of Carpenters and Joiners joined the strike

Without disorder an estimated 15,000 men were on strike

this was slightly less than 50% of the men then employed in the timber industry

in the Douglas fir belt

most sawmills in the state were closed

TIMBER INDUSTRY COMES TO AN AGREEMENT

Negotiations at Longview between STW District Representative Abe Muir

and representatives of management at the Long-Bell and Weyerhaeuser companies

resulted in a tentative agreement -- May 9, 1935

subject to ratification by Sawmill and Timber Workers Union (STW) members

Muir's proposed contract provided a base wage of fifty cents an hour, forty-hour work week,

union recognition as the bargaining agent and time and a half for overtime

but not a "closed shop" (only union members hired)

Communist Party members active in the union were dedicated to continuing the strike

Communist union newspaper *Voice of Action* estimated that 30,000 workers were on strike

Voting by union loggers to accept or reject the proposed contract took place -- night May 9, 1935

Muir's contract was rejected by a nine-to-one vote

loggers accused Muir of selling them out and informed sawmill workers of their disgust

WEYERHAEUSER MILL IN LONGVIEW GOES ON STRIKE

Longview STW union leaders and members saw Abe Muir as an outsider who had been sent by the American Federation of Labor's Carpenters and Joiners Union to direct them
Sawmill workers learned the details of the proposed contract from loggers who had rejected it
Abe Muir's tentative agreement with the Long-Bell and Weyerhaeuser managements
was presented to Sawmill and Timber Workers Union members for a ratification vote
about 900 Long-Bell and Weyerhaeuser Lumber Company employees in Longview
walked out of a Longview union meeting -- May 10
before they had even cast their votes for the proposal, they went on strike
without bothering to get authorization from their own strike committee
This action was due partly to member restlessness and partly to rumors
but the most important cause of the walkout
was the advance disclosure of the terms of the agreement by loggers
who had voted on the proposed agreement the night before

NORTHWEST BREWING COMPANY ATTEMPTS TO REMOVE UNION TEAMSTERS

Peter Marinoff, president of the Northwest Brewing Company, resisted Teamster efforts
to keep the brewery unionized
Northwest Brewing Company picket Silver Vitro suffered an injury to the knee -- May 10, 1935
from a gunshot fired by an armed guard believed hired as a strikebreaker
this is only the first of many attacks on the brewery's picket lines

RURAL ELECTRIFICATION ADMINISTRATION EXTENDS ELECTRICITY AVAILABILITY

FDR created the *Rural Electrification Administration* by Executive Order -- May 11, 1935
to extend power to the vast majority of rural American farms that still lack electricity
it was to oversee the distribution of financial aid to anticipated public utility districts
it provided low interest, long-term loans for the entire cost
for constructing power plants and electric lines to bring electricity into those areas
where private utility companies had not found it practical to provide service
Distribution of low cost hydroelectric power revolutionized farm life
milking machines, refrigeration units, water pumps for homes, cream separators,
irrigation system pumps for the land, incubators and brooders, fodder choppers,
dairy ventilating fans, bottle washers, and other devices were all made possible
for housewives electric lights and appliances were a great boon

SAWMILL AND TIMBER WORKERS (STW) COMMUNIST LEADERS STEP FORWARD

Communists took credit for the Longview workers' walking out even before the vote was taken
strength of the Communists at this time, however, should not be overemphasized
Communists, after having stirred slightly in the industry for a number of years,
were actually caught unprepared by the swift movement to vote
which had been implemented by STW District Representative Abe Muir

One key to the situation at Longview was a genuine dislike for Muir's leadership particularly among the rank and file loggers who did not relish an outsider directing them

SAWMILL AND TIMBER WORKERS UNION (STW) RECEIVES ANOTHER OFFER

It was estimated that ninety percent of all operations in the Douglas fir region were at a standstill agents of the West Coast Lumbermen's Association and the Sawmill and Timber Workers Union conferred once again in another effort to find grounds for a settlement -- May 12, 1935

Long-Bell and Weyerhaeuser companies made a second offer to Abe Muir that covered their Longview plants and logging camps which provided:

- a minimum wage of 55 cents per hour in all pay brackets (5¢ an hour more),
- time-and-a-half for overtime,
- an eight-hour day with a forty-hour week,
- with recognition of the union as the collective bargaining agency

for its members only -- not a closed shop,

this proposal was subject to a vote of the Sawmill and Timber Workers membership Militant unionists and Communists on the Northwest Council of Sawmill and Timber Workers soon referred to this proposal as the "sell-out" or "Muir Compromise"

SECOND VOTE ON A LONGVIEW PROPOSAL IS HELD

Approximately 2,100 Long-Bell and Weyerhaeuser Lumber Company loggers and sawmill workers voted once again in Longview -- May 13, 1935 again they rejected the proposal

Negotiations between the West Coast Lumbermen's Association and the Sawmill and Timber Workers Union were broken off

This second effort at the Longview negotiation table served only to confirm members' dissatisfaction with STW District Representative A. W. "Abe" Muir because of the "sell-out" or "Muir Compromise"

Abe Muir faced even greater opposition

as even non-Communists joined in the attack on his leadership

No effort was made by management to operate the closed plants

ABE MUIR CONTINUES TO ATTEMPT TO REACH A CONTRACT SETTLEMENT

Although constantly under fire, Abe Muir

continued contract talks with the West Coast Lumbermen's Association

this time he represented the local unions of St. Helens, Oregon, Port Gamble, and Port Ludlow in negotiations with McCormick Lumber Company

a new tentative agreement was reached -- May 16, 1935

BATTLE FOR PUBLIC OPINION BEGINS IN THE STRIKE EFFORTS

Employers blamed strikers for the closure of lumber mills, shingle mills, flour mills and other Pacific Northwest companies

Local newspapers reported:

- over 1,000 workers idled by the strike in Tacoma;
- South Bend and Raymond Chamber of Commerce

- claimed the strike of 110 longshoremen affected the jobs of 1,500 other workers;
- Weyerhaeuser closed two sawmills in Everett
and planned to shut down operations in Longview
affecting between 2,500 and 3,000 workers;
 - two sawmills at Coos Bay, Oregon closed as did two more in Portland employing 600 men;
 - three Aberdeen sawmills closed throwing nearly 1,000 out of work;
 - five sawmills and one logging camp at Olympia shut down adding 525 men to the jobless army
- Associated Press estimated there were over 5,800 men idled in Washington and Oregon
as an indirect result of the strikes -- May 17, 1935

In fact, some plants were closed because of filled production quotas -- others for lack of orders
also, supposed strike casualties included a lumber mill that shipped almost exclusively by rail
two Tacoma flour mills had shut down for their annual cleaning
as required by insurance companies to prevent dust explosions
Newspapers told of “dire threats” to dynamite piers and punish the families of steamship officials
strikebreakers also were threatened with violence

SEATTLE CAB DRIVERS WALK OFF THE JOB

Company officials refused to honor agreed-to conditions -- the best in the nation:

- working no more than one nine hour shift a day;
- hiring only union drivers;
- drivers must be paid on a weekly basis

Fifty-five Seattle cab drivers struck to protest this failure to meet contract terms -- May 17, 1935

ABE W. MUIR SUCCESSFULLY NEGOTIATES YET ANOTHER CONTRACT

Employees at Port Gamble, and Port Ludlow voted overwhelmingly to accept the proposed agreement
at St. Helens mass picketing by outsiders closed the mill before the vote was taken -- May 19
Abe Muir’s leadership was again under attack

SAWMILL AND TIMBER WORKERS (STW) UNION FACES THREATS FROM THE OUTSIDE

While the union was being torn apart internally, various groups were endeavoring to break the strike
worried farmers threatened to use vigilante tactics

if they were denied ample shipping crates for their ripening berry crop
Oregon Governor Charles Martin threatened to take action to protect individuals
who returned to work in the mills

Seattle Mayor Charles L. Smith, as reported in the *Seattle Star*, declared that non-union workers
brought in by employers to keep the mills running, **“will be protected from any lawlessness in
which (striking millmen’s) pickets may engage”**

Seattle Police Chief W.B. Kirtley was informed he and his department would carry out the order

TIMBER INDUSTRY RESUMES CONTRACT NEGOTIATIONS

West Coast Lumbermen’s Association let A.W. “Abe” Muir know their willingness
to deal with the Sawmill and Timber Workers Union (STW)
provided the membership could follow the laws and policies
of the AFL’s United Brotherhood of Carpenters and Joiners

Lumber operators also joined with Muir and the AFL officials
to denounce the Communists and left-wingers who encouraged workers
to hold out for their original strike demands
Some radical employee representatives were ready to break off negotiations
but they capitulated when Muir faced them with the alternative of being dropped
by the AFL United Brotherhood of Carpenters and Joiners
if they did not accept the offer to negotiate

LUMBER BARON JOHN PHILLIP (J.P.) WEYERHAEUSER'S SON GEORGE IS KIDNAPPED

Nine-year-old George Weyerhaeuser disappeared while on his way home
from Lowell School in Tacoma -- May 24, 1935
Students had been released for lunch earlier than usual but George followed his regular practice
he walked to the nearby Annie Wright Seminary to meet his sister Ann
Weyerhaeuser family chauffeur generally met George and Ann at the Seminary
to drive them home for lunch at noon
on this day George arrived at the seminary ten or fifteen minutes early
so he apparently decided to walk home rather than wait for his sister
following an overgrown path that bordered the Tacoma Lawn Tennis Club grounds
When George emerged onto Borough Road, he encountered two men in a green 1927 Buick sedan
car's passenger exited the vehicle and approached George asking for directions to Stadium Way
suddenly he seized the boy, pulled him into the back seat of the car
and covered him with an old blanket as the automobile sped away

WEYERHAEUSER FAMILY RECEIVES A RANSOME NOTE

When the Weyerhaeuser family realized that George was missing, they searched for him
after a brief search, Tacoma Police was notified of his disappearance
Weyerhaeuser residence was visited by a postal carrier carrying a special delivery letter
addressed "To Whom it May Concern"
this long, typewritten ransom note contained twenty-one points
and gave the family five days to raise \$200,000
in unmarked twenty-, ten-, and five-dollar bills in exchange for the boy
to authenticate the demand, the kidnappers had George sign the back of the envelope
ransom note said the family would be notified regarding the ransom's delivery
and was signed "Egoist"

WEYERHAEUSER KIDNAPPING BECOMES A FEDERAL CASE

Weyerhaeuser kidnapping became a federal case (the first ever) -- May 25
when the Federal Bureau of Investigation (FBI) was advised of the kidnapping
it was determined that the Federal Kidnapping Act and a statute that made it a felony
to send extortion threats through the postal service had been violated
more than a dozen FBI agents were sent to Tacoma to investigate leads

WEYERHAEUSER FOLLOWS THE KIDNAPPERS' INSTRUCTIONS

As ordered, two advertisements were published in the *Seattle Post-Intelligencer* personals column

both indicated the family would comply with the ransom demands -- Saturday May 25, 1935
first read: **“Expect to be ready to come Monday. Answer. Percy Minnie.”**
second read: **“Due to publicity beyond our control, please indicate another method of reaching you. Hurry, relieve anguished mother. Percy Minnie.”**

WEYERHAEUSER FAMILY RAISES THE RANSOME MONEY

After the ransom money had been collected, agents compiled the serial numbers of the 20,000 bills
this list was sent to FBI Headquarters in Washington, D.C.,
where a ten-page list was prepared -- May 27
it was intended for publication and distribution to post offices, banks, hotels, railway depots
and other commercial centers where money was exchanged

U.S. SUPREME COURT STRIKES DOWN PORTIONS OF THE [1933] NIRA ACT

National Industrial Recovery Act (NIRA) had been passed by Congress [June 16, 1933]
this law authorized the president to regulate industry and permit cartels and monopolies
in an attempt to stimulate economic recovery, and established a public works program
lower federal courts had previously overturned this New Deal legislation as being overreaching
U.S. Supreme Court in *A.L.A. Schechter Poultry Corp. v. United States*
ruled in a 5-4 decision that Title One of the NIRA was unconstitutional -- May 27, 1935
including Section 7(a) which stated that **“employees shall have the right to organize and bargain collectively through representatives of their own choosing”**

Franklin D. Roosevelt’s principal weapon against the Great Depression was lost
Chief Justice Charles Evans Hughes wrote the Supreme Court decision
which held the Act violated the U.S. Constitution’s separation of powers demands
NIRA provisions went beyond the power granted to Congress
under the terms of the “Commerce Clause” (Article I, Section 8, Clause 3)
delegation of authority to the executive branch was unconstitutionally overbroad
also, NIRA was unconstitutional because the critical term in the law “fair competition”
was too vague

other justices spoke to the additional areas of concern:

- NIRA endorsed monopolies;
- NIRA lacked support from the business community and thus was doomed to failure;
- NIRA was poorly administered as the law purposefully brought together competing interests (labor and business, big business and small business, etc.)

into a single coalition in an effort to support passage of the legislation,
but these competing interests soon fought one another over the Act’s implementation
Supreme Court’s decision helped make a confused situation in the timber industry still more confused
this action by the court encouraged logging and mill operators while the workers felt weakened
U.S. Supreme Court decision was a major setback to President Franklin Roosevelt’s New Deal
and the first of many Supreme Court decisions that will go against FDR

Workers in industries who were engaged in interstate commerce

lost their right to organize into a union and to collectively bargain a working agreement
companies were no longer forced to bargain in good faith with union representatives
Labor-Management relations once again was undirected

few industrial leaders mourned the passing of the National Industrial Recovery Act (NIRA)

EFFECT OF THE LOSS OF THE NATIONAL INDUSTRIAL RECOVERY ACT (NIRA)

Management vs. labor disputes were very bitter and combative -- working people wanted unions they were willing to strike for union recognition and for workers' demands
employers refused to recognize unions as legitimate organizing tools for labor
they fought strikers to the bitter end

U.S. Supreme Court ruled the National Industrial Recovery Act unconstitutional [May 27, 1935]
cherished (or despised) Section 7(a) had offered a method for workers to secure union recognition
it had upheld the right of employees to join labor organizations to bargain collectively
through representatives of their own choosing

WEYERHAEUSER ATTEMPTS TO CONTACT THE KIDNAPPERS OF HIS SON GEORGE

One day before the kidnapper's deadline, J.P. Weyerhaeuser placed another classified ad in the *Seattle P-I*, that read: "We are ready. Percy Minnie." -- May 28
Family members kept the ransom negotiations secret and the press received no further information
Law enforcement authorities agreed to refrain from any interference until George was released

U.S. SUPREME COURT DECISION AFFECTS SAWMILL AND TIMBER WORKERS STRIKE

When the U.S. Supreme Court struck down the National Industrial Recovery Act (NIRA)
workers' fears about what would happen to them now reached a fever pitch
now that federal support for collective bargaining had been set aside
it became much easier to convince many workers that more militant, direct action
such as that proposed by Communist members, was necessary
Sawmill and Timber Worker Union District Representative Abe Muir called for a union meeting
in Longview where another STW member contract vote would be taken
About a thousand men issued an almost unanimous vote in favor of the agreement -- night of May 28
(disregarding the fact a similar offer had been rejected less than two week earlier)
Despite the outcome of the vote, the vast majority of Longview workers remained off the job
and there was evidence that industry workers in general would ignore the Longview agreement

J.P. WEYERHAEUSER FAMILY HEARS FROM GEORGE'S KIDNAPPERS

A letter from the kidnappers arrived at the Weyerhaeuser home -- May 29, 1935
they were instructed to register as James Paul Jones at the Ambassador Hotel in Seattle
and wait for further contact
also enclosed with the kidnappers' letter was a short note from George stating that he was safe
J.P. Weyerhaeuser followed the instructions
at ten o'clock that night, a taxicab driver delivered another letter to him at the hotel
Once again complying with directions given in the note, Weyerhaeuser drove to a designated point,
where he found two sticks driven into the ground with a piece of white cloth attached
there he also found a message directing him to another signal cloth further down the road
but when he reached the second signal cloth he found no message
he waited there for two hours before returning to the hotel

J.P. WEYERHAEUSER RECEIVED AN ANONYMOUS TELEPHONE CALL

When he answered the telephone at the Ambassador Hotel -- 11:30 a.m. May 30
he was told he had not followed the instructions in the note
George's father assured the caller that he wanted to cooperate but he could not find the last note
Weyerhaeuser was then told that he would be contacted with new instructions
and this would be the last chance to save his son

J.P. WEYERHAEUSER RECEIVES ADDITIONAL INSTRUCTIONS

A male voice affecting a European accent telephoned the Weyerhaeuser home -- 9:45 p.m., May 30
he advised John Phillip to proceed to an address where he would find a note in a tin can
after that, he proceeded from one point to another, following directions he found at each place
On a dirt road off the main highway between Seattle and Tacoma, he found a flag and another note
this one advised him to wait for five minutes with the interior light of his car turned on
and then to go to another white sign on the same road
there he was told him to leave his car and walk back toward Seattle
if the money was in order, George would be released within thirty hours
John Phillip Weyerhaeuser had walked about 100 yards when he heard a loud noise from the bushes
as a man ran out, got in the car and drove away with the \$200,000 ransom money
Weyerhaeuser walked back to the highway and caught a ride to Tacoma to await word

MORE VIOLENCE ON THE TEAMSTER PICKET LINE IN SEATTLE

In a drive-by shooting Seattle Teamster William Usitalo was hit in the head and killed -- May 31
four suspects were sought for murder
charges were filed against Peter Marinoff president of the Northwest Brewing Company

GEORGE WEYERHAEUSER IS RELEASED

George's kidnapers had moved him several times -- traveling as far as Idaho
on two occasions he was placed in a hole in the ground and given two blankets for warmth
His last stay was in a little shack near Issaquah, Washington
there his captors left him on the Issaquah-Hobart Road -- 3:30 a.m. June 1, 1935
with two dirty blankets and a dollar stuffed into his pocket
he was told to wait in a nearby shack for his father to arrive to take him home
it was raining so George started walking down the road
six miles later, he wandered onto Louis P. Bonifas' farm and announced his identity
Mrs. Willena Bonifas took George into the house, gave him an opportunity to wash,
fed him breakfast and gave him clean clothes and a pair of dry shoes and socks to wear
Bonifas family drove him toward Tacoma in their old Model-T car
they stopped in Renton at a gas station
they asked the attendant to telephone the Weyerhaeuser residence, but there was no answer
finally Bonifas called the Tacoma Police Department, to tell them George was safe
and he was driving him to Tacoma
John H. Dreher, a sports writer for *The Seattle Times*, was in Tacoma covering the kidnapping story
he received a tip from Tacoma police that George Weyerhaeuser had been released near Issaquah
and was being driven home

on a hunch, he hired a taxicab at the Hotel Winthrop and headed toward Renton
Dreher managed to intercept Bonifas's car on the Pacific Highway
approximately eighteen miles north of Tacoma
Dreher gave Bonifas the impression he was a police officer
he persuaded the farmer, with the help of a \$5 bill, to relinquish custody of the boy

JOHN H. DREHER HUSTLED GEORGE INTO HIS TAXI

As they headed toward Tacoma they stayed with back roads to avoid police cars and the press
George crouched on the back seat, below window level as Dreher sat on the rear floor
interviewing the boy and taking copious notes
George said had been treated reasonably well
but there had been some uncomfortable moments
he was kept on the floor of the kidnapper's car with a blanket over him
later he was placed in the trunk as the car was stopped at roadblocks
for a time he was chained in a hole in the ground warmed only by a kerosene lantern
he was taken into the woods, blindfolded, and was forced to walk on logs over creeks
he was certain he was to be dropped into the water
Dreher's taxi arrived at the Weyerhaeuser home and drove into the garage -- about 7:45 a.m. June 1
George unceremoniously disappeared into the house
Dreher quickly returned to the Hotel Winthrop to write an exclusive interview
with "the world's most famous kidnap victim," which ran copyrighted
on the front page of *The Seattle Times* "Extra" editions
before being sent out nationwide by The Associated Press

GEORGE WEYERHAEUSER KIDNAPPERS ARE CAUGHT

Within seven days, Harmon Metz Waley, age 23, and his wife Margaret Eldora Thulin, age 19,
were arrested in Salt Lake City passing the marked money
They confessed to the crime and identified ex-convict William Dainard, age 33,
as the "brains" behind the kidnapping
Harmon pleaded guilty and ultimately was sentenced to forty-five years in Federal prison
Margaret went to trial and was found guilty -- she received a twenty-year sentence
(After being on the run for a year Dainard (alias William Mahan) was captured in San Francisco
he was returned to Tacoma where he pleaded guilty to kidnapping charges
he was sentenced to sixty years in federal prison)
(One other accomplice, ex-convict Edward Fliss, was identified
he was arrested in San Francisco while exchanging ransom bills
he pleaded guilty to helping Dainard launder ransom money
and was ultimately sentenced to ten years imprisonment -- where he later died)
George Weyerhaeuser kidnapping was one of the most sensational crimes in Washington state history
(Harmon Metz Waley was the last of the kidnappers to be released from custody
he was paroled from the United States Penitentiary at McNeil Island [June 3, 1963]
Waley had written to his victim from prison on several occasions, apologizing for his actions
when he was released, he asked George Weyerhaeuser for a job
in an uncommon demonstration of compassion Weyerhaeuser

found a job for him at one of his Oregon plants)
George Weyerhaeuser's parents wisely refused to isolate or overprotect young George
he ultimately became the Chairman of the Board for the Weyerhaeuser Company

SAWMILL AND TIMBER WORKERS BECOME MORE RADICAL

Drastic reductions to the original demands of the Sawmill and Timber Workers
that Abe Muir's most recent agreement offered permitted radicals
to once again charge Muir and the American Federation of Labor with a sellout
Following the Supreme Court NIRA decision Abe Muir consulted with state labor officials
regarding how to end the Longview strike
it was decided a ballot was inadvisable because of the previous experience there
and the lack of discipline among the strikers
U.S. Supreme Court's invalidation of the NIRA encouraged most timber operators
to play a waiting game until the Sawmill and Timber Union members cracked
this position, however, played into the hands of Communists and left-wing union leaders
at a time when it would have been relatively easy to establish
a more-or-less uniform industry-wide settlement with the more conservative unionists
militant unionists' hand was strengthened
now that government support of collective bargaining seemed to have been laid aside
dissension in the union was increased
it was easy to convince many workers that more militant, direct action was necessary

COMMUNISTS CLAIM SAWMILL AND TIMBER WORKERS UNION (STW) LEADERSHIP

Left-wing influences in the STW became more vocal and assumed a more open and active role
Communists announced their claim to leadership of the Sawmill and Timber Workers Union
this was an exaggeration
but they actually were assuming a far more important role than ever before
It is impossible to tell how strong the Communists really were
in Everett, one of the centers of "radicalism"
it was the opinion of the usually well-informed editor of the *Everett News*
that less than two per cent of all the 3,000 strikers were Communists
other centers of Communist strength were located in Olympia and Grays Harbor
Wherever possible the Communists did everything they could
to discredit the American Federation of Labor (AFL) leadership of the STW
Many believed Communists were more concerned with keeping the dispute alive
than in securing a reasonable settlement

SAWMILL AND TIMBER WORKERS UNION (STW) LEADERSHIP IS SHATTERED

Struggle between various radical and conservative factions of the STW grew more intense each day
violence flared up -- June 3, 1935
when two officers of the Northwest Council of Sawmill and Timber Workers
(STW strike committee) were beaten by an unknown body of men
who threatened the same treatment to A.W. "Abe" Muir and other union officials

LONGSHORE DISPUTE ERRUPTS IN BRITISH COLUMBIA

British Columbia Shipping Federation locked out the Vancouver longshoremen -- June 4, 1935
for refusing to handle cargoes of paper loaded by scabs at Powell River, B.C.

employers' preparations before the lookout indicated they planned to destroy the union

Refusing to go back to work in a management imposed open shop, the B.C. longshoremen struck
other Canadian seamen joined them

When the *Point Clear* docked at Powell River to load,

union engineers refused to provide steam to power the ship a scab engineer furnished the steam,
and the vessel proceeded to San Francisco with its "Hot Cargo"

(unfair cargo that has been delivered by scabs)

TACOMA 4-L UNION VOTES ON A PROPOSED CONTRACT

Postcards had been sent by West Coast Lumbermen's Association Tacoma 4-L union leaders
to 1,752 workers at nine Tacoma sawmill, plywood, and door plants

who were certified to be on the [May 3] employment lists

these postcards had been return addressed to a special post office mailbox

whose key was in the hands of postal authorities

Ballot committee composed of Tacoma Mayor George Smitely, Reverend E. M. Hegge,

and Reverend Sidney James retrieved the key from postal authorities

they took the ballots out to count them -- June 4, 1935

Of the 1,752 ballots mailed out, 1,068 (sixty-one percent) were returned

of these, four were rejected as invalid and 925 (eighty-seven percent) favored ending the strike
in accordance with the terms specified by 4-L leaders

Although widely heralded as a seven-to-one verdict for a return to work

Communist leaders countered the 4-L argument

of the 3,369 men employed [May 3] this represented the hope of only twenty-seven percent

Sawmill and Timber Workers Union (STW) officials claimed the balloting was not fair

that men who had not been on the payroll for eight years had received ballots

West Coast Lumbermen's Association insisted that the payroll lists were correct

RADICAL LEADERS OF THE SAWMILL AND TIMBER WORKERS (STW) UNION MEET

Management and labor disputes were very bitter and combative

unauthorized strikes were long and brutal

Working people wanted union representation

they were willing to strike for recognition and to achieve their demands

Employers refused to recognize unions as representatives of their employees

they fought strikers to the bitter end using security guards, police and the National Guardsmen

It was apparent to everyone that A.W. "Abe" Muir was unwilling to lead a strike

that upheld the original demands of the union -- especially after he had accepted

two compromises' offers from the West Coast Lumbermen's Association

Two hundred forty insurgent anti-Muir delegates

met in a "rump" conference in Aberdeen -- June 5, 1935

Aberdeen, Hoquiam, Shelton, Olympia and Grays Harbor locals sent delegates

Grays Harbor members belonged to the Sawmill and Timber Workers Union (STW)

and the defunct Communist-led National Lumber Workers Union (NLWU) their purpose was to wrestle control of the strike policy from the hands of American Federation of Labor's STW District Representative Abe Muir. These radical delegates voted to renew their original strike demands; they adopted a resolution urging the removal of Abe Muir as union spokesman; this resolution was sent to Bill Hutcheson, President of the Carpenters and Joiners Union and president of the American Federation of Labor William Green; delegates also voted to form their own Northwest Joint Strike Committee to open new negotiations with the lumber operators. STW leader Abe Muir lost no time in declaring the meeting an unauthorized gathering; he noted it had been called at the instigation of "Communists and other radical groups"

RADICAL INSURGENT LEADERS ATTEMPT TO DOMINATE THE STW

Communist and former Industrial Workers of the World (IWW) STW members implemented the decisions reached during the Aberdeen "rump" conference; left-wing Northwest Joint Strike Committee opened their office in Everett and wrote their demands to be presented to the West Coast Lumbermen's Association union locals in nearly every important lumber center in the Pacific Northwest with the exception of Bellingham and Seattle were affiliated with this committee.

Northwest Joint Strike Committee went back to the original union demands:

- union representation and recognition (closed shop) be in effect
STW would be the sole collective bargaining agency in each plant or camp;
- six hours workday and a thirty-hour work week;
- base wage be set at seventy-five cents per hour at 75¢-an-hour and proportionate increases for higher classifications be set with overtime and holiday pay provisions;
- no strikes or lockouts would occur during the life of the agreement until all mediation and conciliation had failed;
- modified seniority system would be established for hiring a job selection;
- vacations with pay according to length of service would be introduced;
- thirty days' written notice of any desire to terminate the agreement must be given
- rank and file vote on any settlement must be supervised by the Northwest Joint Strike Committee

LEADERSHIP OF THE SAWMILL AND TIMBER WORKERS UNION REMAINS IN DISPUTE

AFL-affiliated strike committee, the Northwest Council of the Sawmill and Timber Workers, led by Abe Muir met in Longview to discuss how to eliminate opposing leadership of the STW directed by the radical Northwest Joint Strike Committee. Muir's strike committee had no doubt a showdown over control of union policy would take place. Tacoma STW Local President Norman Lange who also served as vice-president of the Northwest Council of Sawmill and Timber Workers (AFL strike committee), with having caused rejection of the Longview agreements, Muir, using his "authority," removed the insurgent leader from office.

STRUGGLE FOR CONTROL OF THE STW CONTINUES

Control of union policy inside the Sawmill and Timber Workers Union (STW) was in dispute
American Federation of Labor's Carpenters and Joiners claimed Abe W. Muir was the leader
local Sawmill and Timber Workers insurgent members fanned by Communist members
claimed Northwest Joint Strike Committee control over STW policies
Sawmill and Timber Workers Union (STW) District Representative Abe Muir
realized that confrontation with the newly-formed Northwest Joint Strike Committee
threatened the future of the Sawmill and Timber Workers Union
Abe Muir issued statements calling the Northwest Joint Strike Committee
a dual organization dominated by "Reds"

TACOMA'S STW MEMBERS REACT TO THEIR PRESIDENT'S FIRING

Norman Lange's firing by Abe Muir forced Tacoma into a position of either repudiating its president
or facing expulsion from the AFL's Sawmill and Timber Workers Union (STW)
Enraged Tacoma's Sawmill and Timber Workers rank and file voted to support their president
this added more heat to the conflict

ABE MUIR'S STRIKE COMMITTEE IS DIVIDED

Northwest Council of Sawmill and Timber Workers (AFL strike committee) members
questioned bitterly whether or not Abe Muir had the authority to remove
Tacoma STW President and Northwest Council vice-president Norman Lange from office
When Abe Muir appeared at the Northwest Council of Sawmill and Timber Workers meeting
he emphasized the authority of the American Federation of Labor to expel individuals or locals
and the United Brotherhood of Carpenters and Joiners' power to withhold assistance
Muir prevailed in the struggle as conservative leadership maintained control over the strike committee
Northwest Council of Sawmill and Timber Workers acted to replace Lange

SAWMILL AND TIMBER WORKERS UNION (STW) NOT UNIFIED

Widespread split in the Sawmill and Timber Union (STW) ranks deepened
larger units such as those in Bellingham and Port Ludlow, Washington,
and Coos Bay, Oregon remained loyal to Abe Muir
more conservative strike leaders in some small Locals were willing to go along with his stand
powerful and conservative locals in Raymond and Portland were also his consistent supporters
However, many union Locals continued to reject Abe Muir's leadership
radical insurgents continued their dominance over many of the individual local affiliates
it was the Communists who took control of the strike and set it on a course
that would lead to a break with the American Federation of Labor (AFL)

FIGHT TO CONTROL THE SAWMILL AND TIMBER WORKERS UNION (STW) CONTINUES

An insurgent group at Longview accepted the actions of the radical "rump" Aberdeen Convention
and succeeded in preventing Longview employees from going to work
they re-closed the mills by massing a huge throng of pickets -- June 6, 1935
from this date on Abe Muir's chief fight was directed
against the radical Northwest Joint Strike Committee
as his job and salary were threatened by them

While these events were transpiring
manage-dominated 4-L Union was trying to gain control of the situation at Everett and Tacoma
by enforcing the ballot results of the questionable polling of Tacoma mill workers
many Tacoma Sawmill and Timber Workers Union members
had refused to participate in the West Coast Lumbermen's Association 4-L effort

COMMUNIST LEADERSHIP OF THE SAWMILL AND TIMBER WORKERS (STW) UNION

Communists placed Party members on the picket lines whenever possible
they distributed leaflets to persuade union members
to support the radical Northwest Joint Strike Committee and the original union demands
Almost every night and on weekends Northwest Joint Strike Committee members met
to discuss strategy and to establish the evening's "roving committee"
roving committees were special groups within the larger Northwest Joint Strike Committee
they were charged with the responsibility of bolstering picket line discipline
and preventing a back-to-work movement
under cover of night, carloads of men moved into mill towns
from Portland to Aberdeen and north to Everett
with only a few mimeograph machines and little access to radio
it was imperative that the roving strikers meet with other rank and filers
to combat Abe Muir's steady stream of "compromise propaganda"

SAWMILL OPERATORS GO AHEAD WITH PLANS TO OPEN THE MILLS

Attempts to open the sawmills in various places created a tense situation
because only a few of the operators had entered into negotiated agreements
Violence occurred where mills opened without the sanction of union leaders
additional violence seemed certain as preparations were made to open additional mills
Both Governor Clarence Martin of Washington and Governor Charles Martin of Oregon
guaranteed state protection to men who returned to work
Tension on both sides of the strike leaped to an even higher level

COMMONWEALTH BUILDERS, INC. PUSH THEIR POLITICAL AGENDA

Commonwealth Builders, Inc. (CBI), wished to push the state Democratic Party to the liberal "Left"
they sought to expand their progressive base in representing the working class
and pushing for large-scale political and social reforms
Commonwealth Builders, Inc. reorganized to develop a statewide employment campaign -- 1935
based on the Utopian ideas of popular author and California governor candidate Upton Sinclair
which centered on the notion of "production for use" instead of "production for profit"
similar to Upton Sinclair's "EPIC" movement in California
Commonwealth Builders, Inc. (CBI) proposed socialist remedies to economic woes:
government ownership of banks, utilities, and natural resources
their program called for large-scale government intervention in the economy
designed primarily to aid the unemployed and the elderly
Both the Commonwealth Builders, Inc. and Upton Sinclair pledged to end poverty
by having the state take over idle farms and factories

and turn them into cooperatives of the unemployed
Commonwealth Builders, Inc. (CBI) drew its strength from labor unions
organized labor became politically active in the Democratic Party
they recruited candidates and delivered voters to the party

WASHINGTON COMMONWEALTH FEDERATION REPRESENTS PROGRESSIVE AGENDA

Washington Commonwealth Federation was established in Seattle -- June 8, 1935
it had been organized to implement a political agenda of reform
that extended beyond Franklin Roosevelt's New Deal
WCF was a loose coalition of liberals and radical left-wing Democrats
members included the State Grange, farmers, trade unionists, liberal Democratic Party Clubs,
Liberty Party members, United Producers, Socialists, Continental Committee Technocrats,
reformers and organized labor
Cyrus Woodward served as president of the Washington Commonwealth Federation
Communist Party organizer Howard Costigan was executive secretary
WCF's goals included protecting labor rights and providing support for unions,
enhancing social programs, supporting farm policy improvements, consumer protection,
old age pensions, public health and housing for the poor

COMMONWEALTH BUILDERS, INC. CHOOSES TO BE ABSORBED

Communists recognized the Washington Commonwealth Federation (WCF) in Washington State
would be a strong ally for carrying out anti-fascist collaboration
at the motivation of Communist organizers Morris Raport and Howard Costigan
Commonwealth Builders, Inc. (CBI) was absorbed
into the Washington Commonwealth Federation
WCF quickly proved to be a more effective delegate body than the Commonwealth Builders, Inc.
Communist leadership was critical to the formation of the WCF
but it was never a front for Stalin's doctrine -- rather it was anti-Fascist and pro-New Deal
(Over the next ten years the WCF was instrumental in the passage of important social policy
for Washington residents)

WASHINGTON COMMONWEALTH FEDERATION SPEAKS FOR LIBERAL DEMOCRATS

WCF with the addition of the Commonwealth Builders, Inc. (CBI) was an organization
composed of radical left-wing Democrats
its goals included protecting labor rights and providing support for unions,
enhancing social programs, supporting farm policy improvements, consumer protection,
old age pensions, public health and housing for the poor
WCF was a force in Washington Democratic politics [until 1944]
its strengths were composed of its energy and its appeal for change
its weaknesses lied in its diversity of beliefs and its radical components
WCF welcomed all apostles of change
ranging from public power advocates to old age pensioners to communists

STATE REPUBLICANS EXPLOIT THE TENSIONS AMONG DEMOCRATIC PARTY FACTONS

With so many partisan factions and elected officials active in the State Democratic Party various attitudes and ideas, approaches and goals, core beliefs and expectations inevitably clashed Will Rogers, the noted comic of the Great Depression, was alleged to have said:

“I don't belong to an organized political party. I'm a Democrat.”

No one was better at exploiting these clashes than Republican Arthur Langlie, he got his start in politics with the conservative group “New Order of Cincinnatus” that pledged to lower taxes and promote moral uplift

Langlie was elected to the Seattle City Council --1935

(with the Order's backing, Langlie became Seattle's mayor [1938] in a complicated three-way race)

(Langlie capitalized again on Democratic divisions

he narrowly won election as state governor [1940]

politically adept, the moderate Langlie proved receptive to some reform measures

he worked well the Roosevelt Administration during his four year term)

SAWMILL AND TIMBER WORKERS (STW) STRIKERS ARE DISRUPTED AT TWO LOCATIONS

State police at Whites, Washington ordered STW pickets to keep clear of the White Star Lumber Company's mills -- June 10, 1935 these pickets disbanded

Violence occurred at Bellingham as a strong-arm gang from Seattle challenged the picket lines after engaging in a fight the intruders were incarcerated in the county jail -- June 10 arrested men included the head of a strikebreaking agency and four associates who implicated the management of the Bloedell-Donovan Company while denying responsibility, the Bellingham company agreed to proceed with negotiations with its workers

SAWMILL AND TIMBER WORKERS (STW) BARGAINING IN BELLINGHAM

Negotiations were opened with the Bloedell-Donovan Company, third largest producer in the region Pat Keily, of the Washington State Department of Labor and Industries, and Commissioner Marsh acting as intermediaries

An agreement was reached -- June 14, 1935

tentative agreement that recognized the Bellingham local of the STW

as the union collective bargaining agency was presented at a mass union meeting

union members voted decisively in favor of the agreement -- subsequently the mill opened

At other places mills resumed work or prepared to open

one former 4-L plant along with two other lower Columbia River operations

signed Sawmill and Timber Workers Union (STW) agreements

PLANS ARE LAID TO INCREASE THE SIZE OF THE GRAND COULEE DAM PROJECT

Secretary of the Interior Harold Ickes signed the first change order of the construction project he directed the contractors to build a base for a dam that would top off at 550 feet -- June however, he stopped short of authorizing the irrigation project

(approval for that would not come until [1943]

and work would not begin on it for several more years)

INTERNATIONAL SEAMEN'S UNION (ISU) TERMINATES THE TANKER STRIKE

International Seamen's Union (ISU) members

voted to terminate the Wildcat tanker strike 1,232 to 66 -- June 17, 1935

loss of the strike set back organization on the tankers for years

especially among licensed deck officers

UNION VIOLENCE CONTINUES ON SEVERAL FRONTS

Arlington Dairy Milk Wagon Drivers walking picket lines suffered almost constant attack

one scab driver was arrested for throwing milk bottles at a crowd of pickets -- June 21, 1935

he had previously thrown a tear gas bomb into a car belonging to a picket

Dressmakers Union 184 ended its strike when a contract was negotiated with Schoenfeld Brothers

two major accomplishments were celebrated by the women of the union

wages were increased by twenty percent

thirty-six-hour work week was put into effect

TIMBER STRIKE ESCALATES IN TACOMA

Tacoma was the greatest lumber center in the Pacific Northwest

however, all but three mills in Tacoma began operation using strikebreakers

as state police and sheriff's deputies gave protection to the non-union workers -- June 21,

ADDITIONAL PUGET SOUND MILLS OPENED USING SCABS

Frank Foisie, Seattle Waterfront Employer president,

demanding longshoremen begin immediately to load "hot" (nonunion) lumber

Paddy Morris and the several longshoremen's union executive board members traveled to Seattle

to meet with Foisie who delivered an ultimatum that longshoremen must work the hot cargo

or the Shipowners' Association of the Pacific Coast would break with the union coastwide

Morris called Frank Foisie's bluff and employers did not carry out their threat

EMPLOYERS DEMAND PROTECTION FOR THEIR TACOMA PROPERTY

Saw mills in Tacoma operated with scabs protected by armed private guards

mass picketing at Tacoma sawmills over the use of scabs continued

increasing numbers of Sawmill and Timber Worker Union (STW) supporters took part

Concentrating on the STW strike in Tacoma

Weyerhaeuser executives convinced Governor Clarence Martin that the labor agitators

were from the outside -- only intimidation by union radicals kept workers off the job

CANADIAN LONGSHORE DISPUTE COMES SOUTH

When the *Point Clear* from Powell River, B.C. arrived in San Francisco -- June 22, 1935

Sailors' Union of the Pacific (SUP) Marine Engineers walked off the job

they demanded the scab be fired and threw up a picket line across the dock

After longshoremen refused to cross the picket line, the company paid off the *Point Clear* crew

Labor relations in San Francisco deteriorated as the Sailors' Union of the Pacific (SUP)

voted to refuse to handle cargo from British Columbia or any port on strike [June 24]

WASHINGTON NATIONAL GUARD TRAINS AT CAMP MURRAY NEAR FORT LEWIS

Washington's Governor, Clarence D. Martin stood at attention at Camp Murray near Tacoma while 7,600 National Guardsmen attending their summer encampment passed in review Governor Martin said that he stood ready to approve Weyerhaeuser executives request for troops if local government authorities felt unable to control the situation

NATIONAL GUARD TROOPS ARRIVE IN TACOMA

Swelling mobs of angry people in Tacoma resulted in Governor Clarence Martin ordering the National Guard and State Patrol to move into Tacoma to protect mill owner's property

Without preliminaries National Guardsmen went into action to remove the strikers and their allies -- seven o'clock a.m. Sunday June 23, 1934 about seventy-five soldiers, carrying rifles with fixed bayonets and tear gas canisters were taken by a circuitous route to the east end of Tacoma's Eleventh Street bridge between the industrial and business sections of Tacoma to clear the way to the mills for strike breakers this was the principal point where pickets assembled to harass the returning night shift

About two or three hundred protesters were at the bridge without preliminaries, soldiers methodically began "walking" the crowd away from the bridge although the strikers took their time, troops were not in a hurry and did not rush the strikers After the crowd was cleared from the bridge, strikers stood in A Street and jeered at the soldiers they were answered by an occasional canister of teargas beyond this, no further effort was made to disperse the people

USE OF THE NATIONAL GUARD IN TACOMA IS QUESTIONED

Governor Clarence D. Martin asserted that Tacoma Mayor Smitely had informed him that local authorities were unable to cope with the situation and that Tacoma and Seattle lumber operators had requested him to send troops governor stated troops were assisting state police in preserving law and order Technically Tacoma was not under martial law Governor Martin had never bothered to declare it to be so

STATE PATROL REMAINS INVOLVED IN THE LABOR STRIFE IN TACOMA

Patrolmen had previously been used to protect the loading and shipping of unfair lumber in Tacoma onto trucks without visible license plates

According to Hubert K. Spahr, president of the Tacoma Sawmill and Timber Workers' Union, state patrolmen arrested two pickets at a logging camp at Vale, near Tacoma, where they were picketing peacefully these men were forced to run ahead of the patrol car for nearly two miles when they fell to the ground they were beaten until they stumbled to their feet again one Tacoma labor attorney filed suit against the state government in support of these workers As a result of these and other incidents, state police were cordially hated by the strikers, who merely expressed contempt for the National Guard

STW ATTEMPT TO HAVE THE NATIONAL GUARD REMOVED FROM TACOMA

Tacoma Central Labor Council denied that Mayor Smitely
had appealed to the governor for assistance
they protested the actions of the governor on the grounds that troops caused disorder
where none had existed before
Both Tacoma and Seattle Sawmill and Timber Worker locals sent delegations to Olympia
to persuade the governor to withdraw the soldiers -- they were unsuccessful

TACOMA'S CENTRAL LABOR COUNCIL HOLDS A GENERAL UNION MEETING

Insurgent leaders of the Sawmill and Timber Workers Union were still controlling the Tacoma strike
they were irate over the use of state troops
unionists from other locals also were hostile toward the governor's attempt to break the strike
Every union local in Tacoma was represented at a meeting of the Tacoma Central Labor Council
but it was decided not to call a general strike -- June 23, 1935
however, Tacoma Longshoremen's Association who were sympathetic to the insurgents
voted not to return to work so long as armed troops remained in the city
this threat to Pacific Coast maritime peace made the Tacoma situation even more tense

WASHINGTON NATIONAL GUARD GENERAL PENNINGTON ARRIVES IN TACOMA

Additional guardsmen arrived with General Carlos Pennington -- Monday, June 24
he immediately began issuing orders to deal with the union supporters
There had been no formal declaration of martial law
but the rights of citizens were restrained and arrests were made without charges
picketing was prohibiting as long as the National Guard was in charge of the situation
no more than three persons were permitted to congregate at any one place
soldiers even entered stores and ordered people who were looking out the windows
to make their purchases and leave

Tacoma Times editorially declared that those arrested: **"...have been denied counsel, refused bail and prohibited from notifying family or friends of their predicament.... Civil liberties have been flouted. Right of trial, of knowledge of accusers, of information about charges has been scorned. The right of peaceful picketing has been thrust aside."**

NATIONAL GUARDSMEN IN TACOMA BECOME AGGRESSIVE

"State Troopers Gas Tacoma Mill Pickets—300 National Guardsmen on Duty in City"
was the banner headline of the *Seattle Star* -- June 24, 1935
an article described the spraying of tear gas on peaceful picketers in downtown Tacoma,
which resulted in seven mills reopening in the downtown area
"Little violence [was] reported," according to the *Everett News* -- June 24
it completely ignored the violence of the tear gas used against nonviolent picketers
Everett News report continued by announcing the National Guard was sent in
to **"protect workers in lumber mills and factories,"**
although it was evident they were defending the business owners and scab laborers
not the union men

this paper also reported approvingly that all picket gangs larger than three people were outlawed and that a form of martial law was in effect for the city of Tacoma without mentioning this action was an obstruction of the Constitution's First Amendment and National Labor Relations Act legislation that gave unions legal standing

NATIONAL GUARD PRESENCE INCREASES IN TACOMA

Brigadier General Carlos Pennington of the National Guard returned to Tacoma bringing double the number of troops stationed there to 600 -- Tuesday, June 25
Portland *Oregonian* [June 26] informed readers that strikers had completely retreated after 300 more National Guardsmen were brought into Tacoma
four more "troublemakers" were arrested bringing the total arrests there to twenty-one
members of the National Guard had violently forced an end to the Tacoma showdown

FEDERAL GOVERNMENT BECOME INVOLVED IN THE STW STRIKE

Inability of either the strikers or the employers to win an outright victory opened the way for federal mediation
FDR's Secretary of Labor Frances Perkins at the request of the United States Conciliation Service appointed a three-member Federal Mediation Board -- Wednesday June 26, 1935
Judge Roscoe R. Smith of Seattle
Judson W. Shorett, a Seattle attorney
Father G. E. Thompson, a Portland Catholic priest

OPPOSITION TO FEDERAL MEDIATION IS RAISED BY MILL OPERATORS

Strikers in most places have adopted a policy of refusing to arbitrate since such a step would mean that demands would be lost or hopelessly compromised
However, sawmill operators with their eyes still on Tacoma opposed any arbitration
"there is no occasion for a mediation board-there is nothing to mediate"
in a telegram, operators declared that **"the appointment of a mediation board will only prolong the trouble, postponing the return of the men because naturally they will hesitate to go back pending the long process of mediation"** (Tacoma *Times* [June 26, 1935])
Compromises inherent in the process were acceptable to the lumber workers but not to the employers or to Governor Clarence Martin -- who was elected as a Democrat but expressed opposition to arbitration, except "in certain cases"

CONTROL OF THE MEDIA IS CAPTURED BY MILL OPERATORS

It was becoming clear to the strikers that mill owners had the power to control governmental policies and the avenues of publicity -- June 26, 1935
Daily press actually stated that troops were called out at the request of the lumber operators, against the wishes of the mayor of Tacoma
Tacoma and Seattle police were said by the newspapers to be cooperating in getting the names of any "radicals" coming in from towns to "agitate"
Governor Clarence Martin in a radio address to the people of the state -- June 26 noted troops would not be withdrawn from Tacoma until industrial peace had been established

“I insist on respect for collective bargaining, for peaceful picketing, for the right to strike, even for the privilege to quit...and I don't admire nor support that employer who would take advantage of the situation to beat down wages...but also I shall continue the right to work.”

he went even further to indicate he would give the same protection to other communities provided a majority of both the employers and workers presented sworn petitions showing they had a satisfactory wage and hour agreement

UNION LEADERSHIP EVALUATES THE SITUATION IN TACOMA

Sawmill and Timber Workers leadership believed that if a military drive to break the strike succeeded a new series of “Red raids” was to be expected

Already signs of Fascism by the government were apparent in Tacoma -- Wednesday, June 26, 1935
all picketing is prohibited by military order,
pedestrians are not allowed to stop in certain areas of town
city council voted to allow strikers to stage a tag (rummage) sale to support the strike
but Brigadier General Carlos Pennington of the National Guard
refused to allow the tags to be sold on the streets

GOVERNOR CLARENCE MARTIN COMES UNDER ATTACK

Seattle branch of the American Civil Liberties Union responded to the radio address:

“...no justification has existed at any time for the extreme measures taken by the Governor of the State in assigning state patrolmen and national guardsmen to Tacoma...not a single arrest has been made by either city or county police authorities in connection with the strike activities... neither city nor county police authorities requested the use of troops.”

NATIONAL GUARD OPPOSES LABOR IN TACOMA

Several left-wing groups called for a meeting in Tacoma's Firemen's Park
more than 500 people were in attendance -- Wednesday, June 27, 1935
this gathering was dispersed by National Guard troops generously supplied with tear gas
Homes of strikebreakers were protected at night by Guardsmen
President Hubert K. Spahr of the Tacoma Sawmill and Timber Workers Union
and several other strikers were arrested by the National Guard -- June 27
they were held in the armory for several hours without charges
Seattle branch of the American Civil Liberties Union investigated
but could find no record of the arrests
Spahr filed suit against the National Guard commander for false imprisonment

CONDITIONS IN TACOMA ARE REPORTED LOCALLY AND ACROSS THE NATION

Tacoma *Times* editorially declared that those arrested **“have been denied council, refused bail and prohibited from notifying family or friends of their predicament.... Civil liberties have been flouted. Right of trial, of knowledge of accusers, of information about charges, has been scorned. The right of peaceful picketing has been thrust aside.”** (Tacoma *Times* [June 28, 1935])

The Seattle Star shifted its coverage to be less and less supportive of the strikers
as the events became more controversial and threatening to businesses and the local government
the newspaper migrated toward the support of business

SEATTLE DRESSMAKERS UNION 184 ENDS ITS STRIKE

When a contract was negotiated with Schoenfeld Brothers -- June 28, 1935
two major accomplishments were celebrated by the women of Seattle Dressmakers Local 184
wages were increased by twenty percent
and a thirty-six work week was put into effect
picketing and the strike had made the changes possible

SAWMILL AND TIMBER WORKERS UNION (STW) MORALE REMAINS HIGH

Morale of the strikers was holding up well as they noted that because loggers were also out
mills could operate only as long as the logs on hand lasted
Longshoremen in all ports refused to handle lumber which was picketed by the mill workers
Protest messages by the thousands had been sent by trade unions and other organizations
to Governor Martin and President Franklin Roosevelt

TACOMA MAYOR GEORGE SMITELY ATTEMPTS TO SETTLE THE STRIKE IN TACOMA

Mayor Smitely, with the city council concurring, offered mediation to both sides
union members accepted but the lumber operators spurned the offer
on the grounds that the city officials had previously said
they were incapable of offering protection to the men who wished to return to work
management declared that any meeting would only complicate the situation
in their opinion, matters were already in the best hands -- those of the governor

AFL ORGANIZER ABE MUIR APPLIES PRESSURE ON UNION INSURGENTS

Struggle between the union factions for control of the STW strike continued
by now the situation was so tense that it was practically impossible
for the Federal Mediation Board to intervene
largest obstacle to a complete settlement in Longview was the intra-union fight
radical Northwest Joint Strike Committee leaders continued to side with the anti-Muir faction
Abe W. Muir endeavored to break the hold of the insurgents at various mills
he sent a sharp letter to the still striking men at the Longview mills
he announced new locals were being set up without the striking employees
of the Weyerhaeuser and Long-Bell plants
he commanded the men to go back to work
Muir, in an effort to reestablish control of the Sawmill and Timber Workers strike situation
requested the American Federation of Labor send a letter to defiant AFL Central Labor Councils
threatening to revoke the Charters of locals opposed to his strike committee
the Northwest Council of Sawmill and Timber Workers
American Federation of Labor leadership responded immediately with the requested letters
it was becoming evident the conservative element among the workers was gaining control
even at Longview there was a great deal of dissatisfaction
with the failure of the insurgent leaders to open negotiations on the original demands
in some places preparations were made for opening the mills without granting recognition

AMERICAN FEDERATION OF LABOR (AFL) INTERVENES IN THE STW STRIKE

C. C. Young, general representative of the AFL, addressed a letter to all Central Labor Councils in an effort to bring obstinate Sawmill and Timber Workers Union locals back into line -- July 1 he stated in effect that aid given to the radical Northwest Joint Strike Committee was in violation of Article XI of the AFL constitution those bodies giving aid were subject to revocation of their Charters; United Brotherhood of Carpenters and Joiners had full jurisdiction and an attack on the legitimate strike leadership was an attack on the Brotherhood

SAWMILLS OPEN IN LONGVIEW

Responding to the written threat by Abe Muir and AFL general representative C.C. Young, to create new AFL unions if the strikers did not comply Long-Bell and Weyerhaeuser mills began operations with only 700 men -- July 1, 1935 In addition to Tacoma, guardsmen were sent to Longview Governor Clarence Martin ordered the guardsmen to be ready to move in if violence occurred Longview Central Labor Council (AFL) sided with the anti-Muir faction they decided to send a telegram to Secretary of Labor, Frances Perkins asking for the appointment of a special investigator from the Federal Mediation Board Secretary Perkins did not comply with the request because it was apparent the biggest obstacle to complete settlement was the intra-union fight and had to be dealt with by trade union officials -- not the government

WEST COAST LUMBERMEN'S ASSOCIATION TRYS TO BREAK THE ABERDEEN STRIKE

Federal Mediation Board had established friendly contacts with some Aberdeen union members small steps toward progress were being made but the effort was handicapped by the non-cooperative attitude of the leading employers An attempt was made to open the mills at Aberdeen -- July 1 but this effort was frustrated by an enormous picket line of almost 2,000 men Police clashed with pickets when it was discovered that a gravel road near one of the mills had been strewn with roofing nails pickets were forced to gather them up under threat of immediate removal from the area if they refused, but when another handful was thrown from the crowd the street was cleared of workers by the use of teargas In addition to Tacoma and Longview, National Guardsmen were also sent to Aberdeen

STW NORTHWEST JOINT STRIKE COMMITTEE VOTES TO WALK OUT OF EVERETT

Sawmill and Timber Workers had forty locals were affiliated with the left-wing strike committee which was headquartered in Everett Everett lumber workers rejected a back to work offer -- July 1, 1935 they turned down the "Muir plan" by a vote of 1,500 to 3

MEDIA INFLUENCES THE STW STRIKE IN FAVOR OF MANAGEMENT

All of the daily papers adopted a policy of referring strike breakers as "workers"

as opposed to the “agitators, strikers, and pickets”
One headline read: “Mill Operators Watching Tacoma”
in the story Governor Clarence Martin was reported to have said
mill operators in other sections of the state were cheered by the events in Tacoma
and are contemplating reopening their own plants
Newspapers told of 1,300 “workers” functioning in fourteen mills -- July 2, 1935
but the official count of men entering the mills that same day
was only about one-sixth of the normal crew

SAWMILL AND TIMBER WORKERS UNION (STW) SHOWDOWN IN EVERETT

Center of the insurgent storm was located in the Communist stronghold of Everett
where extremists on both sides continued to make federal mediation difficult
Everett, at this time, was the only place where level of operations had not yet resumed
West Coast Lumbermen’s Association made an attempt to open one mill -- July 5, 1935
this was met with mass picketing which gave rise to the use of tear gas
by state and city police
West Coast Lumbermen’s Association was convinced that “radical” groups controlled the STW
to such an extent that union recognition in any form was impossible there
operators continued to exert pressure on the governor to send troops to Everett
Everett Central Labor Council threatened a general strike if this occurred
Weyerhaeuser Company which employed nearly half of the total workers in the Everett area
stated that it would not join in a request for troops or attempt to operate under military rule

NATIONAL LABOR RELATIONS ACT (NLRA OR WAGNER ACT) PASSES CONGRESS

Congress, sympathetic to labor unions, attempted to achieve labor peace
with passage of the *National Labor Relations Act (NLRA)*
employers were encouraged to bargain with their unions
National Labor Relations Act (NLRA) was also known as the Wagner Act
named after its prime sponsor: U.S. Senator Robert Wagner from New York
Wagner Act was one of the most sweeping social reforms of the Twentieth Century
NLRA reaffirmed the promises offered in the [1933] National Industrial Recovery Act (NIRA)
that had been thrown out by the U.S. Supreme Court [May 27, 1935]
National Labor Relations Act (NLRA) was signed into law by President Roosevelt -- July 5, 1935
at the heart of the National Labor Relations Act (NLRA) was Section 7
which offered a method to secure union recognition
Section 7 guaranteed employees **“the right to self-organization, to form, join, or assist
labor organizations, to bargain collectively through representatives of their own choosing, and to
engage in concerted activities for the purpose of collective bargaining or other mutual aid and
protection”**
NLRA offered a method to secure union recognition -- “company unions” were outlawed
it allowed the labor movement to democratize the American workplace
to a degree that employers found quite horrifying
employees could choose their union representation in a free secret ballot election
by a majority vote of the employees

NLRA Section 8 broadened and prohibited unfair union labor practices on the part of the employer which included failure to provide fair representation to all parties of the bargaining unit

- employers could no longer stop workers from joining a union;
- employers could not fire or discriminate against workers because of their interest in forming unions or union activity;
- employers could not foster or control company unions;
- employers could not blacklist or otherwise retaliate against an employee for testifying under this act;
- employers could not refuse to bargain in good faith

No restrictions were placed on labor practices thus broadening union's rights before National Labor Relations Act (NLRA) became law, employers could and often did spy upon, question, punish, blacklist, and fire union members

To give teeth to the new right to collective bargaining, the act established the National Labor Relations Board (NLRB)

NATIONAL LABOR RELATIONS BOARD (NLRB) ENFORCES THE NLRA

Wagner Act set up a National Labor Relations Board (NLRB) to administer the Wagner Act
NLRB is charged with several responsibilities:

- it was to take testimony about unfair labor practices committed by employers or unions to do this the NLRB can issue "cease and desist" orders against unethical practices including pressuring employees, bias against union members and refusal to meet at the bargaining table with employees;
- when requested, NLRB was authorized to conduct elections to determine the employee representatives for collective bargaining purposes secret ballot elections for union representation were to be conducted employees could choose their union in a free election by a majority vote
- NLRB also could request that the federal courts sanction its board rulings by obtaining court cease and desist orders against both labor and management

UNION ORGANIZING UNIONS BECAME MUCH EASIER UNDER THE WAGNER ACT

Companies were forced to recognize unions elected to represent their members and were forced to bargain in good faith with union representatives

No restrictions were placed on labor -- thus union's rights were broadened this unleashed a wave of union organizing and a rash of internal conflicts within labor

Some employers disregarded the Wagner Act as being less than strident the unconstitutional NIRA at best this law, too, might be declared unconstitutional

at worst, light penalties were not a harsh burden for unions or their members

Even so, the new power given to labor was a major New Deal accomplishment companies were forced to bargain in good faith with union representatives union membership increased by a third within a year

AN ATTEMPT IS MADE TO CONTROL UNION STW INSURGENTS

Sawmill and Timber Workers Union District Representative Abe Muir endeavored to break the hold of the insurgents at various places

and to punish Locals which still rejected his leadership
He embarked on a Charter-pulling campaign
some were issued peremptory orders to reorganize their strike committees
to conform to United Brotherhood of Carpenters and Joiners of America policy
or suffer expulsion from the American Federation of Labor (AFL)
some had their local union Charters revoked
and were summarily placed in separate AFL Locals under his jurisdiction
Muir encouraged strike-breaking in Longview
he sent a sharp letter to the men at Longview
announcing that new locals were being set up separately
for employees of the Weyerhaeuser and Long-Bell plants
and commanding the men to go back to work
one new union Charter was hung in the company dining room of the Long-Bell plant
but only a few men returned to work as members of new Carpenters and Joiners local

NATIONAL GUARD IS SENT TO GRAYS HARBOR

Aberdeen, Hoquiam and Raymond on the coast
were STW locals which had remained under radical control by the rank and file union members
Several thousand people -- mill workers, wives, children, and labor sympathizers
marched from Aberdeen to Hoquiam and back to show their unity
and to demonstrate against the opening of the mills and the presence of troops
Police in Aberdeen and Hoquiam had already clashed several times with the two thousand pickets
who were blocking attempts by employers to open mills there
disorder continued there in spite of police efforts
National Guardsmen were sent to Grays Harbor for guard duty -- July 7, 1935
Governor Clarence Martin claimed the mayors the of Aberdeen and Hoquiam
and the sheriff of Grays Harbor County had asked for them
although martial law had not been declared, guardsmen were stationed around the mills
to permit the return to work for those men who so desired
Aberdeen was a stronghold of the radical Northwest Joint Strike Committee
workers stood solidly against the back-to-work movement,
with the result that the situation in the Grays Harbor area remained deadlocked

STW PICKETS IN ABERDEEN AND HOQUIAM

At Aberdeen 9,000 men and women paraded along the streets -- July 8, 1935
as a protest against the strikebreaking tactics of the "Cossacks" (Russian peasants)
and the "tin soldiers" or "boy scouts" (National Guard and the state patrol)
With the National Guard gone from Tacoma, Aberdeen and Hoquiam were also the only locals
where mass picket lines several hundred strong were formed daily
to face three companies of National Guardsmen

GOVERNOR CLARENCE MARTIN BLAMES COMMUNISTS FOR THE STW STRIKE

Six to ten thousand demonstrators marched through Aberdeen and Hoquiam -- July 9, 1935
to protest Governor Martin's use of troops and police to provide protection for the strikebreakers

Rumors circulated that a general strike would be called if the soldiers were not withdrawn
but the governor was steadfast
mills would be reopened for those who wanted to work
he continued to profess that the strike was mostly the work of Communists
Even in Aberdeen and Hoquiam the strike lines weakened at the end of the tenth week of the strike

NATIONAL LABOR RELATIONS BOARD (NLRB) RULING IN FAVOR OF THE STRIKING STW

In a case involving the Long-Bell and Weyerhaeuser companies at Longview,
federal National Labor Relations Board (NLRB) ruled
that the majority labor group, as determined in elections, should represent all the workers
for collective bargaining purposes

Strikers were heartened by the federal decision

however, hope for labor peace dimmed as the West Coast Lumbermen's Association announced
that it would resist the ruling of the National Labor Relations Board

Charles Hope, regional director for the National Labor Relations Board,
declared that all attempts to put a damper on the general strike movement had failed

SITUATION IN TACOMA REMAINS TENSE

Sawmills operated with scabs protected by private security agents
some scabs left the sawmills at the end of their shift and joined the STW union
Tacoma continued to remain tense

Occasional acts of violence and disorder by timber workers continued to occur -- July 10, 1935
Brigadier General Carlos Pennington and his National Guardsmen were called upon
once again to dispersed an attempted parade of Tacoma strikers and sympathizers
resentment among the protesters continued to escalate

SITUATION IN TACOMA RAPIDLY DETERIORATES

Tacoma city council members, concerned for the safety of their municipality,
wired the Federal Mediation Board and the U.S. Department of Conciliation
requesting intervention -- July 11, 1935

before the federal government could respond another outbreak occurred

Strikers were in an ugly mood all day -- trouble started shortly before four o'clock p.m. July 11
large crowd assembled outside of the federal building at the intersection of Eleventh and A streets
they started marching around and around using the four crosswalks at the intersection
they believed this relieved them of the necessity of having a parade permit
leader of each squad of union supporters carried an American flag
site of the march had been chosen because it was adjacent to the Eleventh Street Bridge
which connected the city center with the port and industrial section of town
this was the bridge that strikebreakers had to pass over every day
on the way to and from work
although traffic was blocked, city police made no attempt to disperse them
National Guard troops made no attempt to interfere in the march
but maintained a line of men with fixed bayonets across the Eleventh Street Bridge
Scabbing lumber workers began to return across the bridge from the mills -- about 4:30 p.m.

they were jeered by the hostile crowd of strikers and marchers
a few gas bombs were released at intervals, but no determined effort was made by either side
as the shift change of scabs dispersed, the rowdy crowd diminished

WESTERN UNION TELEGRAPH COMPANY IS STRUCK

Western Union Telegraph Company was charged with exploitation of its workers -- July 12, 1935
boys who were minors worked long hours delivering telegrams for very little pay
they received twenty cents for each delivery, but only five cents in commission
union members called for a boycott of Western Union

TIMBER INDUSTRY UNION AGREEMENTS ARE BEING SIGNED AT SOME MILLS

Between 25,000 and 30,000 Sawmill and Timber Worker Union men across the state were working
under union agreements with the West Coast Lumbermen's Association -- July 12, 1935
three mills were operating in Seattle under new contracts
union members, in spite of threats and violence, were making gains at the bargaining table

PICKET LINES REMAIN IN PLACE IN TACOMA

Seven thousand union men and strike sympathizers once again marched peacefully in a large circle
at the downtown intersection of Eleventh and A Streets -- 4:00 p.m. July 12, 1935
strike leaders once again carried American flags
although the marchers used the crosswalks, traffic was blocked
National Guard troops had received orders to prohibit picketing -- July 12, 1935
and to prevent demonstrators from assembling in the industrial part of the city
guardsmen in Tacoma were mainly young men -- many of them seventeen years old
demonstrators called the militia "Governor Martin's tin soldiers"
these troops had been recruits from agricultural regions east of the Cascade Mountains
guardsmen from the Puget Sound Region had many friends on strike
some of them had union cards of their own
one story is told in Tacoma that a guardsman who was unused to handling a bayonet
swung sharply and cut the cheek of a Guardsman next to him who burst into tears
Ready for trouble, Tacoma police officers stood by and guardsmen fixed their bayonets
like the day before they established a line across the Eleventh Street Bridge

PICKETS AND GUARDSMEN CLASH IN TACOMA

As they crossed the Eleventh Street Bridge, taunts and jeers greeted the shift-changing scabs
going to and from the mills -- 4:00 p.m. July 12, 1935
Strikers clashed repeatedly with guardsmen who protected the movement of strikebreakers
women and children joined in the booing and helped pelt the guardsmen with rocks and sticks
Guardsmen lobbed tear gas bombs into the crowds
but just as quickly, the wind blew the smoke back into their own faces
other tear gas canisters were picked up by the marchers and hurled back amid the guardsmen
only a few of the militiamen were equipped with gas masks
Tacoma police called in heavier equipment
a military vehicle which expelled tear gas through its exhaust pipe was sent into the crowd

but its driver was pulled from the cab and attacked before the truck was overturned
it caught fire and burned in the middle of Eleventh Street
Troops abandoned the bridge as last significant battle with the guardsmen in Tacoma was over
demonstrators soon dispersed -- but arrests followed

TACOMA SAWMILL AND TIMBER WORKERS (STW) GENERAL UNION MEETING

At a Tacoma Central Labor Council meeting at which every local in the city was represented
it was decided not to call a general strike -- Evening, July 12, 1935
but the Tacoma International Longshoremen's Association (ILA)
voted not to work so long as armed troops remained in the city

TACOMA SAWMILL AND TIMBER WORKERS UNION (STW) BECOME MORE RADICAL

As a result of Governor Clarence Martin's military strategy
strikers became more radical than they were before
they blamed the governor; not the guardsmen
many of the strikers and their supporters had lost what little confidence they previously had
in the impartiality of the government or an arbitration board
when that government allowed troops to be used against them
public sympathy had also been fanned in support the strikers
Governor Martin's use of National Guard troops during the strike caused labor to solidify against him
labor forces began to demand his recall from office

SAWMILL AND TIMBER WORKERS UNION (STW) REEMERGE IN TACOMA

Sawmill and Timber Workers Union Tacoma headquarters showed the strikers' solidarity
strikers were organized into picket lines
three STW men appeared at each gate of every mill -- 8:30 a.m. Wednesday, July 13, 1935
pickets functioned like clockwork until the return of the troops that evening
Strike membership in Tacoma grew to 2,800 participants
similar displays of force were seen in the Northwest Joint Strike Committee
strongholds of Everett, Longview and Grays Harbor

INTERNAL STRUGGLES OF THE STW UNION CONTINUES

While State Police and guardsmen confronted strikers on the outside,
Abe Muir was busy sowing union dissension on the inside
previously tested strikebreaking tactics were again applied in Aberdeen and Everett
where Muir revoked the Charters of the union Locals
which continued to support the radical Northwest Joint Strike Committee
Muir granted new Charters to Locals under new leadership that did not support
the efforts of the Northwest Joint Strike Committee

ABE MUIR ISSUES A NEW CHARTER FOR THE EVERETT STW LOCAL

Communist-backed Northwest Joint Strike Committee in Everett
had struck six milling companies putting a working force of 2,000 union members on strike
Abe Muir removed the Sawmill and Timber Workers (STW) Charter of the radical Everett Local

he called the workers in the six largest Everett plants to six meetings
to issue them separate Charters from the United Brotherhood of Carpenters and Joiners Union
on a plant-by-plant basis

Muir considered revocation of the Everett STW Charter and installing a new local
as the only way to get rid of the insurgent leadership and bring about a peaceful settlement
Everett Sawmill and Timber Workers (STW) voted in a secret ballot-- July 13, 1935
against the Communist-backed Northwest Joint Strike Committee 328 to 272
this represented the support of 16% of the daily Everett STW workforce
however, Everett's radical leadership now faced a conservative challenge
Northwest Joint Strike Committee appeared to have lost control of the strike
as they had been undercut by both A.W. "Abe" Muir and Governor Clarence Martin

CONFUSION REIGNS IN EVERETT

Considerable responsibility for the turmoil in Everett must rest on the employers
who refused to begin negotiation talks with the newly organized conservative leadership
West Coast Lumbermen's Association insisted on opening mills under armed protection
Everett's situation was further complicated when four mills opened without union recognition
left-wing insurgents tried to stop the back-to-work movement
open-air demonstrations and a march on city hall were started
but the marchers were routed by riot clubs and gas bombs in the hands of state patrolmen
These aggressive actions by the State Patrol changed public opinion to favor the insurgent group
an insurgent crowd of 2,500 people stormed the Everett Labor Temple
and prevented the newly formed conservative unions from meeting -- afternoon July 13, 1935

EVERETT MILLS OPEN

STW District Representative Abe Muir and West Coast Lumbermen's Association negotiators
reached an agreement and six Everett mills opened at the same time -- July 15, 1935
West Coast Lumbermen's Association called in sixty state police who broke up all picket lines
standing with the police a "Muir man" would point out the STW leaders who were then arrested
Abe. W. Muir thus further confused the labor situation in Everett

CONFRONTATION ALSO TOOK PLACE IN TACOMA

Tacoma City Council passed an anti-picket ordinance -- July 15, 1935
National Guardsmen clashed with International Longshoremen Association (ILA) pickets
who were marching in support of Sawmill and Timber Workers strike

EVERETT RADICAL SAWMILL AND TIMBER WORKER MEMBERS PROTEST

Insurgent Northwest Joint Strike Committee leaders
organized a protest parade of 2,000 strikers and sympathizers
Everett march began with an American flag at the head -- afternoon July 15, 1935
Police broke up the marchers and arrested twenty-four Sawmill and Timber Workers' leaders
including Max Barnett the secretary of the Communist-backed Northwest Joint Strike Committee
Civil rights were suspended in the Everett mill district
home-owners were chased from their own front yards

one man, waiting for a bus, was struck by police when he refused to move on
Several hundred demonstrators stormed the jail that night in protest of the police action

EVERETT STW STRIKE IS BROKEN

Everett Sawmill and Timber Workers Union (STW) men were released from jail -- July 16, 1935
but the strike was broken

in the end labor unions were forced to accept the opening of the Everett mills
because they wished to stay in the American Federation of Labor
and this was possible only under the leadership of A. W. "Abe" Muir
West Coast Lumbermen's Association had brought the strike to an end
with help from the state police and National Guardsmen
West Coast Lumbermen's Association no doubt heaved a sigh of relief when the day was over
Everett marked the turning-point in the Sawmill and Timber Workers Union strike

WASHINGTON COMMONWEALTH FEDERATION EXERTS ITS POLITICAL INFLUENCE

Washington Commonwealth Federation (WCF) quickly became the most influential
of the left-wing pressure groups that operated within the Democratic Party in Washington
WCF claimed thirty thousand members across the state
they supported a program of advocating production for use -- rather than production for profit
WCF ran left-wing candidates from inside the Democratic Party
WCF popularized reforms such as support for unions, social programs and old-age pensions
Communist Party members played a central role in the Washington Commonwealth Federation
Party members were in WCF key positions and turned the state Democratic Party to the left
at times the communists dominated the state Democratic Party
they used that power to rewrite state laws and social policy
they supported candidates and issues that advocated a diverse agenda of reform
activists and supporters wrote initiatives for voters to sign and pass

STATE INITIATIVE 119 PETITIONS FOR A SOCIALIST WASHINGTON STATE

Washington Commonwealth Federation (WCF) attempted to gather signatures for a ballot proposal
that asked for the creation of a Socialist state with state-owned factories, farms, banks,
insurance companies, electricity and state-operated medical clinics
Because of the Communist Party influence in the Washington Commonwealth Federation
this proposal ignited the most radical and riotous Democratic Party Conventions in state history
This campaign failed to gather enough signatures to make the ballot
however, it did give rise to Franklin Roosevelt's campaign manager and later Postmaster General
James A. Farley one occasion offering the toast: **"To the 47 States of the Union
and the Soviet of Washington."**²⁰³

BOEING BUILDS A NEW FACTORY TO CONSTRUCT A NEW AIRPLANE

Boeing Airplane Company was originally located in the Northwest because Bill Boeing lived here

²⁰³ Note: The story may be apocryphal: Farley denied ever making such a statement, but it's attributed to him in countless books.

location of the factories had little to do with geography or resources
after wooden airplanes were no longer built
plants could be built anywhere in the nation
as airplanes could be delivered under their own power
William Boeing had struggled through periods of slow growth
Boeing Company developed the prototype of a bomber airplane to generate business
prototype was built at company expense in an effort to gain the U.S. Army Air Corps contact
for a heavy bomber
Boeing's Model 299 was built at company expense with features that exceeded all requirements
armament consisted of up to 4,800 pounds of bombs
located on two bomb racks in the bomb bay behind the cockpit
it was powered by four Pratt & Whitney R-1690 "Hornet" radial engines
each producing 750 horsepower at 7,000 feet
When the Model 299 was rolled out for public inspection
Richard Williams, a reporter for the *Seattle Times* coined the name "Flying Fortress"
it was bristling with multiple machine guns -- the most unique being the nose installation
which allowed the single machine gun to be fired at about any angle
an approaching enemy fighter would take to attack the bomber

END OF THE SAWMILL AND TIMBER WORKERS UNION (STW) STRIKE

Many STW locals sat down individually with plant owners to work out their various agreements
in some cases, men went back to work with slightly higher wages, somewhat better conditions
and sometimes, even union recognition -- late July 1935
Mills in Seattle, Bellingham, Aberdeen, Portland, Longview and Olympia
were soon working under these terms
Sawmill and Timber Workers Union (STW) strike had, for all practical purposes, collapsed
even though employers continued to exaggerate the numbers of workers willing to return to work
Disagreements and scattered clashes throughout the Douglas fir region continued periodically
especially where lumber operators failed to rehire former radical unionists
militant locals were not above calling a "quickie" strike
to insure that a strike activist was reemployed

TACOMA SAWMILL AND TIMBER WORKERS UNION (STW) REJECTS THE NEW CONTRACT

In Tacoma, only 51 out of 1,157 workers voted to accept A.W. "Abe" Muir's proposal -- July 28
two days later [July 30] the same workers refused to even reconsider a similar proposal

EXPIRATION OF THE PACIFIC COAST WORKING AGREEMENTS LOOMS EVER CLOSER

While the longshoremen continued to boycott Northwest and British Columbia "hot" lumber
expiration date [September 30] of their working agreement with shipowners ever approached
Waterfront Employers of Seattle, Portland, San Francisco and Los Angeles
notified the Pacific District International Longshoremen's Association (ILA) -- end of July
that they would renew the award for a year provided the ILA would guarantee
that strikes, work stoppages, and violations would cease

COMMUNISTS IN THE SOVIET UNION EXPRESS CONCERNS ABOUT HITLER IN GERMANY

Meeting of the Seventh Communist Party Congress in Moscow, Union of Soviet Socialist Republics
refocused on the threats facing the movement

former challenges from White Russians, Russian dissidents, and European Empires
were no longer relevant

Communists shifted their attention to the rise of Fascism in Germany

they addressed the Fascist threat by aligning with the “Popular Front” movement

Joseph Stalin, the Premier of the USSR, announced through agents

who were involved with the anti-Fascist “Popular Front” movement

that Communists would become allied with Socialists in Western democracies

new Communist policy stated Party members should form coalitions

with all parties that opposed Fascism -- not just labor

it was ordered that the “Popular Front” movement would once again “bore from within”

to infiltrate liberal organizations around the globe

Communists allied with Socialists in European and North American democracies

GRAYS HARBOR SAWMILL AND TIMBER WORKERS UNION (STW) LOCALS HOLD OUT

Grays Harbor militants held firm -- state police continued to confront the pickets there

Raymond, Washington lumber workers voted nearly two to one

to reject Abe Muir’s agreement -- August 1, 1935

this vote clearly belied the media’s portrayal of the strike as the work of a handful of radicals
controlled by the Communist-led Northwest Joint Strike Committee

TIMBER INDUSTRY REACHES A PACIFIC NORTHWEST-WIDE AGREEMENT

West Coast Lumbermen’s Association and STW District Representative A. W. “Abe” Muir
reached a compromise negotiated agreement -- August 2, 1935

- Sawmill and Timber Workers (STW) Union men who struck would be reemployed
- members would work for an hourly minimum of fifty cents for a forty-hour work week
- instead of strict union recognition and a “closed shop”

Sawmill and Timber Workers Union representation would apply

only to current union members -- there would be no closed shops

- employers agreed to acknowledge committees of union members

who were authorized to bargain over safety and working conditions in camps and mills

TACOMA STW VOTES TO ACCEPT THE LATEST PROPOSED WORKING AGREEMENT

STW strike virtually ended when the Tacoma Local finally weakened

they voted 1,391 to 97 to accept the third offer submitted by Abe Muir

and the West Coast Lumbermen’s Association -- August 3, 1935

This agreement called for reemployment of all union men without discrimination within thirty days
at a minimum wage of fifty cents an hour and the old forty-hour work week

WASHINGTON, D.C. CONFERENCE IS HELD TO RESOLVE PACIFIC COAST LABOR ISSUES

Longshoremen continued to boycott scab cargo “hot” logs and lumber from British Columbia

To increase the pressure on union leaders, U. S. Assistant Secretary of Labor Edward F. McGrady

called union representatives to Washington, D.C. for a conference regarding the British Columbia tie-ups
Pacific Coast District International Longshoremen's Association sent Paddy Morris from Washington, Cliff Thurston from Oregon and Harry Bridges from California
Sailors' Union of the Pacific sent Harry Lundeberg and two other representatives
Masters, Mates and Pilots sent two captains
During the federal conference it became evident the Maritime Federation of the Pacific (MFP) was under attack by employers
shipowners hoped to split the organization over the issue of British Columbia cargo by insisting voting be conducted by separate craft conferences and crafts
federation members attending the conference rejected the employers' demand
At the close of the meeting Harry Lundeberg reported that the conference proved to be the severest test to date for the Maritime Federation of the Pacific (MFP)
shipowners hoped to split the organization by insisting on separate craft conferences and craft votes on British Columbia cargo
Washington, D.C. conference demonstrated that the federal government could not compel union members to handle hot cargo

TWO AMERICAN HEROES FLY OUT OF RENTON, WASHINGTON AIRPORT

Wiley Post, age 35, was a rakish pilot who wore an eye-patch
he was the nation's top long distance flyer -- twice he had circled the earth alone
he was also a good friend of Will Rogers
Entertainer Will Rogers, age 56, with tousled hair and deft jabs at the establishment, was the nation's top humorist
he was the highest paid film star in America
After leaving Renton, Washington the men arrived in Juneau, Alaska following an eight hour flight -- August 7, 1935
Bad weather forced them to remain in Juneau longer than expected
after a few days they continued on to Fairbanks, Alaska

GRAYS HARBOR SAWMILL AND TIMBER WORKERS REMAIN ON STRIKE

Mass demonstration of 800 Aberdeen pickets -- August 12, 1935
led to Governor Clarence Martin appointing National Guard Brigadier General Carlos Pennington to serve as an "arbitrator" to resolve the strike there -- August 13, 1935

FEDERAL SOCIAL SECURITY ACT IS SIGNED INTO LAW

Franklin D. Roosevelt signs the *Social Security Act* -- August 14, 1935
this is the signature piece of legislation and the most far-reaching of the entire New Deal era
it permanently changed the relationship between the American people, their government, and the free market by guaranteeing pensions to those retiring at age sixty-five
Social Security Act levied a tax (1% in [1937]) to be paid equally between employee and employer with guaranteed pensions to those retiring at age sixty-five [beginning January 1942]
who would receive monthly checks of between ten and eighty-five dollars

it also established a cooperative federal-state system of unemployment compensation by levying a federal tax on total payrolls of those employing eight or more persons (1% in 1936, 2% in 1937, 3% thereafter)

In addition, the Federal government offered matching funds to any state that made proper application and submitted plans for administering one or more of the established services: vocational rehabilitation, aid to the needy blind, old age assistance, aid to dependent children, child welfare, services for crippled children, maternal and child health aids, and public health

FINAL SAWMILL AND TIMBER WORKERS UNION (STW) SETTLES

Settlement was reached in the last area to hold out against the West Coast Lumbermen's Association discouraged strikers in the harbor towns of Aberdeen and Hoquiam voted to accept the operators' terms and the strike was over -- August 14, 1935 new American Federation of Labor (AFL) local chartered by Abraham W. Muir in Aberdeen and Hoquiam was recognized for collective bargaining purposes Original strike demands had been drawn up by radicals at a conference in Aberdeen these were reduced by the "Longview agreement" negotiated by Abe Muir eight-hour day and forty-hour week with a base rate of fifty cents an hour however, any change in base pay or hours was to apply to all employees (these were the same terms earlier opposed by union members who prolonged the strike) for collective bargaining purposes operators reserved the right to negotiate with any individual, committee, or committees of employees who represented the employees Contract terms were accepted out of necessity as by then most lumber workers were back in the mills or they were on their way to the logging camps

SAWMILL AND TIMBER WORKERS (STW) REFLECT ON THEIR EFFORT

Sawmill and Timber Workers (STW) strike had lasted for three months strikers were not close to acquiring the goals which they had set for the strike greatest benefit derived from the strike was the education of the strikers Rank and file union members knew the strike had been broken -- and why operators could not have smashed the militancy of strikers by their own efforts alone Governor Clarence Martin, General Carlos Pennington and the National Guard, state police and American Federation of Labor Abraham W. "Abe" Muir had all played a role In the early stages of the strike, management attacked the union they openly threatened vigilante violence through full-page newspaper ads sponsored by the "Committee of 500" -- Seattle Chamber of Commerce in disguise these ads ceased after an exposure of one of the committee's meetings in the Left-wing labor paper *Voice of Action* Since picketing by the Sawmill and Timber Workers Union (STW) was forbidden many acts of violence were committed daily by desperate individuals there were street fights against known "scabs" and bombing of their homes and cars as well as of mill property military and police violence bred labor violence Strike-breaking was kept to minimum as unions were able to obtain injunctions against the stopping of picketing in Aberdeen, Longview and Chehalis

however, state police often paid little attention to court orders
West Coast Lumbermen's Association, even with the state armed forces state under their control,
were not strong enough to break the strike
use of the state's military forces in the attempt to break the strike
influenced public opinion in favor of the strikers
Another decisive factor was the splitting of the union ranks by the union officials themselves
workers lost their faith in the old-line conservative AFL union leadership
and they lost their illusions about the impartiality of state government

STRUGGLES WITHIN THE LABOR MOVEMENT HEAT UP

While the strike was over, labor peace had not been achieved
during the ensuing months, minor skirmishes with employers broke out sporadically
within the unions dissension and unrest still continued
memory of internal union conflict which marked the strike could not be easily excised
Craft-based AFL United Brotherhood of Carpenters and Joiners (UBCJ)
gained the reputation in the industrial Northwest woods of being high-handed, haughty
and a little superior for the taste of Sawmill and Timber Workers Union (STW) men
stage was being set for a showdown between the powerful American Federation of Labor
and respected Communist organizers
UBCJ made several mistakes while dealing with the timber industry workers
first of all, Abe Muir failed to win any significant concessions during the strike
also, AFL blatantly exhibited its elitism by only allowing the timber workers fraternal status
which did not include full voting rights, or retirement benefits
despite the fact that the UBCJ collected dues
this was seen as an undeserved insult to the integrity of the timber workers
Violent STW outbreaks were still reported as the men disagreed on the direction of the union
breach in worker solidarity, which had surfaced during the strike,
ultimately pushed the timber workers away from the American Federation of Labor (AFL)
and into the newly forming Committee for Industrial Organization (CIO)
which sought to unite all of the workers into unions by industry
More militant sawmill workers chafed under the yoke of the conservative AFL
they saw the limitations of conservative craft unionism
they saw the need for their own labor-centered newspapers to reflect how they viewed the world
Sawmill and Timber Workers Union founded a newspaper of their own: *The Timber Worker*
they also printed countless other union-related and radical newsletters
that would function as a voice for labor and their demands
Harold Pritchett, sometime president of the British Columbia Shingle Weavers
continued to make his presence known as did other Communist activists in the STW
they felt United Brotherhood of Carpenters and Joiners (UBCJ) President Bill Hutcheson
and AFL leader A. W. "Abe" Muir showed the lumber workers no respect

TRAGEDY STRIKES TWO AMERICAN HEROES

Wiley Post and Will Rogers set out from Fairbanks, Alaska bound for Barrow, Alaska -- August 15
Post became lost in a fog and set down with engine trouble at Walakpa, an Eskimo hunting camp

located twelve miles southwest of Barrow near the Arctic Ocean
Post and Rogers got directions to Barrow from an Eskimo family
Wiley Post made repairs on the engine
Clair Okpeaha, one of the Eskimos living in the camp, watched them take off -- 8:15 p.m.
he noted the airplane attempted to take off but the engine stalled as the floats cleared the water
it slammed nose-first and flipped onto its back
Okpeaha found Rogers and Post dead
he got into his kayak and paddled to Barrow to relay the news
Bodies of Wiley Post and Will Rogers were flown to Seattle
(today, a plaque honors them at the Will Rogers-Wiley Post Memorial Seaplane Base
at Renton Airport)

FIRST ALL AFRICAN AMERICAN UNION IN THE NATION IS FORMED

For years black workers had dominated Pullman sleeping car porter jobs on long-distance trains
conditions under which the porters labored were abominable
overtime pay was granted only if porters worked 11,000 miles or 400 hours per month
to overcome these conditions
A. Phillip Randolph organized the Brotherhood of Sleeping Car Porters [1925]
black union members of the Brotherhood of Sleeping Car Porters
were granted an American Federation of Labor Federation (AFL) charter -- August 16, 1935
this was the first all- black union to gain admission to the AFL
(however, it took until [1937] to gain an increase in pay
and a reduction in working hours for the members)

BOEING AIRPLANE COMPANY WINS THE U.S. ARMY AIR CORPS COMPETITION

Model 299 flew from Seattle to the “flyoff” competition at Wright Field in Dayton, Ohio
this flight was made in nine hours and three minutes -- August 20, 1935
at an average cruising speed of 252 miles per hour -- much faster than the competition
also in the competition were a Douglas DB-1, and a Martin Model 146
Boeing’s four-engine Model 299 easily bested its twin-engine competition

BANKING ACT OF 1935 IS PASSED BY CONGRESS

This law revised the operation of the Federal Reserve System -- August 23, 1935
it introduced banking reforms designed to control speculation
and to make banks responsible and responsive to the public
it also established the *Federal Deposit Insurance Corporation (FDIC)* in the United States

PUBLIC UTILITIES ACT IS SIGNED INTO LAW

Public Utilities Act (sometimes known as the Wheeler-Rayburn Act)
was signed by President Roosevelt -- August 26, 1935
This law gave federal agencies new powers to regulate gas and electric companies
it required public utility holding companies
to register with the Securities and Exchange Commission

SAILOR'S UNION OF THE PACIFIC CHARTER IS REVOKED

Officers of the International Seamen's Union (ISU) made plans to discipline their defiant Pacific District unions which belonged to Maritime Federation of the Pacific (MFP) an organization not authorized by the ISU
Pacific District unions tried to eliminate the international from their collective bargaining agreements
Sailor's Union of the Pacific (SUP) led the rebellion as they persisted in giving shipping books to former members of the Communist Marine Workers Industrial Union (MWIU)

WATERFRONT EMPLOYERS CHANGE TACTICS

Pacific Coast shipowners saw a possible opportunity to split the seamen similar to their efforts with the longshoremen
Since the federal government proved to be ineffective in forcing union members to load hot cargoes it was decided to smash the maritime unions

CONGRESS PASSES THE *REVENUE ACT*

FDR's "wealth tax" increased taxes on the income of the wealthiest Americans -- August 30, 1935
tax rate on individual incomes over \$50,000 was increased
taxes on individual incomes over \$1 million were steeply graduated
top rate was set at seventy-nine percent for those making in excess of \$5 million a year
estate taxes on individual estates over \$40,000 were increased
this was a largely symbolic measure -- over 95% of American families paid no income tax at all even so, it was a particularly upsetting tax to wealthy conservatives
Business taxes were also adjusted
small corporations saw their tax bill increase to a rate increase to twelve percent
while corporations earning in excess of \$15,000 saw their tax rate increase to fifteen percent
some excess profits (those over ten percent) were taxed at a six percent rate
profits in excess of fifteen percent were taxed at twelve percent
and profits in excess of fifteen percent were taxed at a twelve percent rate

FDR DEVELOPS A FINANCING SCHEME FOR GRAND COULEE DAM AND OTHER PROJECTS

(President Franklin Roosevelt had visited the Grand Coulee Dam site while construction on the low dam project was still under way
he returned to Washington, D.C. where he got Congress to approve the high dam
his plan to use millions of dollars appropriated to the Public Works Administration was challenged by the U.S. Supreme Court which ruled that only Congress could authorize construction of dams across navigable rivers -- FDR financing scheme failed)
Scrambling to legitimize the more than twenty federal dams that were already being built using money appropriated to the Public Works including Grand Coulee
President Franklin Roosevelt was helped by a second U.S. Supreme Court decision which allowed for the acquisition of public land and Indian Reservations
Roosevelt's administration pushed a new *Rivers and Harbors Bill* through Congress -- August 30 that authorized construction of a dam at Grand Coulee but made no provision for irrigation
however, the fact that the project was assigned to the Bureau of Reclamation, rather than the Corps of Engineers,

guaranteed that it would include an irrigation system at some point
Congress authorized funding for the upgraded high dam
now the most significant legislative hurdle for the high dam had been overcome

SHIPOWNERS ATTEMPT TO BREAK THE PACIFIC COAST STRIKE

After the failure of the Washington, D.C. conference to break the coastal strike
shipowners sought other ways to coerce longshoremen and maritime workers into compliance
as they turned to their uptown allies
over 200 representatives of chambers of commerce and industrial associations
from principal Pacific Coast port cities met -- early September
this secret conclave sponsored by San Francisco Waterfront Employers' Thomas G. Plant
was interpreted by maritime workers as a strategy session to smash their unions
Alfred Lundin, president of the Seattle Chamber of Commerce, warned: **"Further progress of the maritime worker unions under their present leaders bodes disaster. The shipowners and commercial interests cannot win their fight without public support."**²⁰⁴

CONDITIONS IN GERMANY SPREAD CONCERN AROUND THE WORLD

(Adolph Hitler became the Head of State with the death of President Hindenburg [August 2, 1934]
he issued a new law combining the offices of Chancellor and President,
and pronounced himself Reichsführer [Leader of the Third Reich -- German Empire])
Hitler imposes comprehensive new laws codified the racial policies -- September 15, 1935
German citizenship was granted only to those
belonging to "a national of German or related blood"

SEATTLE JEWISH SETTLERS BECOME ALARMED ABOUT EVENTS IN EUROPE

Both Ashkenazim (central or eastern European) and Sephardim (Spanish) Jews
had become more prosperous in America -- each developed new cultural institutions
Ashkenazic newspaper, the *Jewish Transcript* (had been founded [1924])
Sephardic Brotherhood Cultural Society was founded -- 1935
Seattle Conservative Jews formed their first congregation -- 1935
but the solidarity of the Jewish community was never complete
because no one was able to bridge effectively the gulf
between the Ashkenazim and Sephardim traditions
Difficulties which greatly worried Jews were happening thousands of miles away
as the Nazis government began its campaign against Jews
Pacific Northwest Jews helped those who could escape
Emigree Bureau in Seattle locally lead the efforts in resettlement
it extended financial, housing and social contact opportunities to new arrivals
Sephardic Jews was particularly active in raising money for Jews
who were victims of Italian Fascism

CONSTRUCTION OF BOULDER (HOOVER) DAM ON THE COLORADO RIVER IS COMPLETED

²⁰⁴ Otilie Markholt, *Maritime Solidarity*. P. 339.

Construction of Hoover Dam by Six Companies, Inc. led by contractor Henry J. Kaiser was the result of a massive effort involving thousands of workers at a cost over one hundred lives even at that, it was completed two years ahead of schedule

President Franklin D. Roosevelt dedicated the dam -- September 30, 1935

(power plant wings were completed and the first generator began operation [October 1936] seventeenth and final generator went into commercial operation [1961])

PACIFIC COAST AGREEMENT EXPIRES -- LONGSHOREMEN ACCEPT A NEW AGREEMENT

In the middle of the Pacific Coast "hot" cargo confrontation all awards and agreements with longshoremen and the maritime unions expired on the same date -- September 30, 1935

Longshoremen voted to independently renew their 1934 strike arbitration award for a year without considering the interests of the Sailors' Union of the Pacific (SUP)

Harry Bridges protested his membership's decision,

but as a supporter of union democracy he adhered to it

his decision had a good deal to do with self-interest but nothing to do with Communism

this was one of the earliest rifts in the Maritime Federation of the Pacific's united front

MARINE FEDERATION OF THE PACIFIC (MFP) IS TESTED

Maritime unions wanted to negotiate improvements in their wages and working conditions

however, after ratification by the longshoremen, the agreement was renewed

by virtue of the automatic renewal clause

Pacific Coast federation members attempted to adhere

to the Industrial Workers of the World principal that "An injury to one is an injury to all"

under this premise Pacific Coast maritime workers, and particularly unlicensed seamen,

greatly improved their working and living conditions with job actions during 1935

however, this principal required mutual cooperation and sacrifice to succeed

as any union that tied up a vessel expected and received support from other unions

union people would not scab on each other

Debate over the right of one union to decide unilaterally on policies of job action and hot cargo

without consulting other unions brought together delegates from affiliated unions

in an emergency convention of the Maritime Federation of the Pacific (MFP) -- October

Seattle, Tacoma and most of Washington's ILA did not bother to attend the San Francisco conference

as this appeared to be a conflict between the Sailor's Union of the Pacific (SUP)

and the San Francisco Communist dominated Marine Workers Industrial Union (MWIU)

FISHER FLOUR EMPLOYEES GO ON STRIKE IN SEATTLE

Fisher Flour Mills Company refused to recognize the two unions operating in their mills

Fisher Mills employees were pressured to join the company union

union men also felt they were discriminated against in several other ways

two months of futile talks and delays faced by the two unions working at the mill

had produced no results

Fisher Flour Mills Company was shut down by striking workers -- October 11, 1935

union members called for a boycott of all feed and flour sold by Fisher Flouring

during the strike trucks that left the mill were escorted by police

when products failed to sell in any market these trucks had to be brought back fully loaded
Boycott of Fisher Mills products was one of the most effective in labor history
bakery workers struck as far away as Richmond, Virginia
in Gulf cities, loggers shut down their camps
longshore gangs and ships' crews all over the world
walked off ships rather than handle Fisher flour
Fisher Flouring Company went so far as to run advertisements stating the strike was over
and the men had returned to work as usual -- these ads were false
(After four months of hardship and suffering the warehousemen's strike and boycott
produced an outstanding victory for the unions)

GRAND COULEE DAM IS TOO LARGE A PROJECT FOR ONE COMPANY

Six Companies, Inc. was nearing completion on the lower Colorado River's Boulder (Hoover) Dam
Six Companies, Inc. agreed to join together as Consolidated Builders, Inc.
and construct the high dam at Grand Coulee as a cooperative effort -- October 1935
MWAK, a consortium of three companies, served as the primary contractor
on the Grand Coulee Dam project
New design, chosen and approved by the Bureau of Reclamation office in Denver
included several obvious improvements,
one of which was for the pumping plant for irrigation water
an additional \$7 million was added to the contract

GRAND COULEE CONSTRUCTION PROJECT WAS ENORMOUS

Ahead lay the largest building project to that time
forty-five million cubic yards of rock and soil were excavated
Grand Coulee Dam would be 4,300 feet long at the crest and 550 feet above lowest bedrock
it stretched 5232 feet across the Columbia River's channel
thickness at base.....500 feet
thickness at top..... 30 feet
11.975 million cubic yards of concrete
would make a pyramid three times the size of the Great Pyramid of Cheops
or a two-lane highway from Seattle to Miami with three foot wide side walk
with a million cubic yards of concrete remaining unused

In addition to the two cofferdams, more small dams were constructed
to divert the Columbia River around the dam sites
then construction teams went to work on the high dam itself
To carry water to the hydroelectric generators a huge pipe eighteen feet in diameter was installed
this was large enough for a train to pass through
this pipe carried enough water to supply one gallon per hour to every person on earth

U.S. Senator Richard L. Neuberger of Oregon wrote of the project: **"...It is nearly a mile long and as thick as two city blocks at the base. Already it towers thirty stories above bedrock, and soon it will be higher. Its bulk is three times that of the Great Pyramid; it contains enough concrete to pave a roadway around the globe. Behind it there is filling up an enormous reservoir that will be almost as long as Lake Ontario.**

“This is the Grand Coulee Dam, started in 1933 and to be finished by the end of this year [1940] ... Grand Coulee will irrigate and reclaim 1,200,000 acres of land. This is an area equal in size to the whole state of Delaware. It is not much less than the acreage of all the farms in New Jersey....”²⁰⁵

“Not all Grand Coulee’s fabulous supply of power will brighten farmhouses and move the wheels of factories. Five of the eighteen generators will operate a dozen stupendous pumps, one of which could pump enough water for New York City. Each pump can lift fifty tons of water a second. And here is what the pumps will do. Grand Coulee Dam will raise the level of the Columbia River approximately 250 feet. The pumps will hoist part of the river another 250 feet, through great tunnels and conduits, from which it will flow into a deep chasm a mile wide and from twenty-five to thirty miles in length. This chasm, with walls as precipitous as the front of a safe, is the Grand Coulee of the Columbia River. It was carved ages ago when the river was diverted from its course by the Pleistocene ice sheet. The dam and pumps will duplicate the job the ice sheet did.”²⁰⁶

GRAND COULEE DAM IS A MASSIVE PUBLIC WORKS PROJECT

More than 8,800 workers at the peak lived in nearby towns or settlements:

Grand Coulee, Electric City, Coulee, Coulee City, Elmer City, Delano, Osborne,
Grand Coulee Heights, Rim Rock, Government Town, Basin City, Mason City,
Engineer’s Town and Coulee Dam

preference was given to hiring people from Grant, Lincoln, Douglas, and Okanogan counties

which suffered from high unemployment and were located close to the construction site

women were hired to work at dorms and the cookhouse but not on the rest of the dam site

payroll was about \$120,000 per week -- the largest in the state

construction crews worked thirty-six hours in a seven day week

at an average wage was eighty cents an hour

One quarter of all government expenditures spent on water projects went to Washington

millions of dollars were pumped into the state’s economy

Eighteen turbines develop 2.7 million horse power

horsepower rating of each turbine.....150,000

final capacity in kilowatts..... 108,000

combined capacity of the generators was rated at 2,280,000 kilowatts

Immense pumping plant capable of lifting 500 tons of water per second

raised water from the lake behind the dam 280 feet to be dumped into the dry canyon

(Grand Coulee Reservoir) blocked by two dikes (one dike ninety feet high)

this water would supply water to the Big Bend irrigation district

several thousand miles of canals, waterways and ditches were constructed

Total cost of project.....\$435,743,000

lack of fish ladders blocked the annual salmon migration to half the Columbia drainage area

seventy-seven lives were lost during construction

Benefit to the state’s economy was enormous:

homes and work for 100,000 employees

population in the Pacific Northwest increased to 1,403,000

²⁰⁵ W. Storrs Lee. *Washington State*. P. 459-460.

²⁰⁶ W. Storrs Lee. *Washington State*. P. 461.

taxable wealth in the Pacific Northwest increased by \$3,000,000,000

COLUMBIA BASIN PROJECT FEATURES TWO LAKES

Grand Coulee Dam formed 151-mile-long Lake Roosevelt

water from the lake was released to sixteen generators in the powerhouses

excess water flowed over the 320-foot tall and 1,650-foot-wide spillway

to continue on as the Columbia River

Another lake twenty-seven miles long was created when water was pumped from Lake Roosevelt

uphill 283 feet above the dam into the Grand Coulee

this lake was named after Frank Banks, chief engineer for the Bureau of Reclamation

it provided irrigation water for more than 500,000 acres of arid Eastern Washington

within the Columbia Basin Irrigation District

(According to the federal Bureau of Reclamation the yearly value of the Columbia Basin Project is

\$950 million in power production, \$630 million in irrigated crops, \$50 million in recreation

and \$20 million in flood damage prevention

DISASTER HITS THE BOEING AIRPLANE COMPANY'S MODEL 299 HEAVY BOMBER

When Army Air Corps pilot Major Ployer Peter Hill and Boeing employee Les Tower

took the Model 299 on a second evaluation flight -- October 30, 1935

crew forgot to disengage the airplane's "gust lock" which held the bomber in place

while the aircraft was parked on the ground

Model 299 entered a steep climb, stalled, nosed over and crashed, killing Hill and Tower

crashed airplane could not finish the evaluation

Boeing was legally disqualified from the consideration for the contract

None-the-less, through a legal loophole U.S. government ordered

production of thirteen of the heavy bombers

DEMOCRATS CONTINUE TO DOMINATE NATIONAL AND STATE POLITICS

Election results showed strong continued support FDR and the New Deal -- November 5, 1935

Washington's Congressional delegation remained solidly Democratic

Washington Commonwealth Federation Democrat candidates met with great success

twelve additional State Senate seats went to Democrats bringing the total to thirty-seven

State House of Representatives added twenty-one Democrats for a total of ninety-one

Washington Commonwealth Federation members had won positions in the legislature and Congress

WCF became a broadly successful political organization with a great deal of political influence

WCF united support for New Deal programs in the state and in the legislature

Washington had some of the most liberal and comprehensive pension and welfare policies

in the nation (by the end of the [1930s])

CHINESE CULTURAL CHANGES LEAD TO ADVANCES FOR THE YOUNGER GENERATION

In spite of the long pattern of discrimination against them in this country

Chinese settlers in the Pacific Northwest made some gains -- at least the younger generation did

young people demanded freedom to date and some even married Caucasian spouses

younger generation broke away from the Chinatown ghettos

(by the end of the [1930s]) Chinese people were distributed throughout residential areas
many of their parents begrudged their children's rather rapid departure from ancestral ways
children rebelled against Chinese language schools
which were conducted daily after public school and also on weekends
however, the traditional Chinese work ethic remained undiluted in later generations
second and third generation Chinese moved upward in the professions and in business

INTERNATIONAL AMERICAN FEDERATION OF LABOR (AFL) CONVENTION IS HELD

AFL Convention convened in Atlantic City, New Jersey -- early November 1935

Task of organizing steelworkers drove a wedge between convention delegates

AFL was controlled by craft unionists

who looked down on both industrial workers and industrial unions as unskilled laborers
Organizing drives in the automobile, rubber and steel industries had been authorized [1934]

but the AFL gave little financial support or effective leadership to the new industry-wide unions
AFL's timid organizing effort discouraged workers in unorganized industries

where, at great personal risk, they had already achieved some organizing success

in fact, the AFL dissolved hundreds of industry-wide federations (non-voting) unions

John L. Lewis, United Mine Workers President and vice-president of the AFL

was presiding over the convention when one craft union president made a demeaning remark
about an unskilled worker delivering an organizing speech on the convention floor

John L. Lewis walked over and knocked the offender to the floor

Lewis then relit his cigar and returned to the rostrum to again lead the meeting

Lewis' image as someone willing to fight for workers' right to organize was established

John L. Lewis, United Mine Workers President and vice-president of the AFL

called for a new organizing strategy

unions should be organized industry-wide rather than on a craft basis

this, he reasoned, would allow for more inclusive organization

especially of nonwhite workers, women workers and unskilled workers

when the proposal was voted down by the convention delegates 18,024 to 10,933,

John L. Lewis set out to accomplish the task on his own

LABOR'S CIVIL WAR BEGINS

Shortly after the AFL Atlantic City, New Jersey United Mine Workers President John L. Lewis

called together eight other industrial union presidents to discuss formation of a new group

within the American Federation of Labor to carry on the fight for industry-wide organization

Lewis and eight other union presidents formed the Committee for Industrial Organization (CIO)

within the AFL with the purpose of organizing workers on an industry-wide basis

CONGRESS FOR INDUSTRIAL ORGANIZATION (CIO) IS ELECTED CHAIRMAN OF THE CIO

John L. Lewis, President of the United Mine Workers was elected chairman

of the newly formed Committee for Industrial Organization (CIO)

organized within the American Federation of Labor (AFL) -- November 9, 1935

Lewis tenaciously set out on his mission to organize the unorganized

he focused on organizing semi-skilled and unskilled workers in the mass production industries

under industrial union protection and representation
CIO gathered up unions as fast as possible
it quickly gained legitimacy and became a thorn in the AFL's side
as there was now a competitor to the AFL's monopoly on union dues
even so, the CIO was not opposed to the AFL itself

COMMITTEE FOR INDUSTRIAL ORGANIZATION (CIO) GROWS IN NUMBERS

Committee for Industrial Organization (CIO) affiliated with the American Federation of Labor
efforts to organize unskilled workers was supported by Communist Party members
thousands of workers joined unions and went on strike as picket lines moved uptown
Initially, the CIO paid little attention to the timber industry because of their organized status
Sawmill and Timber Workers preferred the industry-wide organization of the CIO
to Abe W. Muir's United Brotherhood of Carpenters and Joiners Union of the AFL
however, the Sawmill and Timber Workers Union relationship with the CIO soon blossomed
Committee for Industrial Organization also gained control
of the Pacific Coast District International Longshoremen's Association
except in the Port of Tacoma which remained loyal to the American Federation of Labor

MARITIME STRIKE EXPANDS IN WASHINGTON STATE

Nearly 500 ferry and freight boat employees of the Masters, Mates and Pilots and the Ferry Boatmen
tied up shipping on Puget Sound -- November 15, 1935
Negotiations to achieve an eight hour work day and "decent living wages" remained deadlocked
this strike involved six companies
Forty-seven vessels remained tied up
while eight others operated under special permission from the unions
and one company has signed an agreement with the two unions

CONCRETE POUR ON THE HIGH GRAND COULEE DAM BEGINS

Rock at the end of the high dam had to be polished so concrete would adhere to when it was poured
teams of tombstone polishers used brushes, soap and water to accomplish this task
Other teams of workers began to pour concrete -- December 6, 1935
bulk concrete was delivered on site by rail-cars
where it was further processed by eight large mixers
concrete was poured into fifty-square-foot columns by crane-lifted buckets
each bucket supported eight tons of concrete
concrete was poured at the rate of more than twenty tons a minute
until ten and a half million cubic yards of it shone whitely between the sun-scorched hills
Engineers faced a major crisis within Grand Coulee Dam itself
drying concrete produced heat, but the dam had to cool off to be strong
some engineers estimated that the work would be delayed more than 100 years
before the dam would be strong enough to hold back the Columbia River
to cool the concrete and facilitate contraction,
about 2,000 miles of pipe was inserted into the drying mass
cold water from the river was then pumped into the pipes

reducing core temperatures that exceeded 105°F down to 45°F
this caused the dam to contract about eight inches in length
gaps where filled with grout
work progressed on schedule
(*Wenatchee Daily World* announced that the river was diverted [December 15, 1936]
by early the next year people arrived in mass to the see the exposed river bed)

SEATTLE POST-INTELLIGENCER (P-I) WRITERS JOIN THE NEWSPAPER GUILD

Newspaper writers were some of the earliest private sector white-collar workers
to recognize the effectiveness of unionization
Thirty-five *Post-Intelligencer* writers after four months of effort successfully organized
a Committee for Industrial Organization (CIO) Newspaper Guild chapter -- December 1935
despite owner William Randolph Hearst telling them they were too professional for unionism
(Hearst proved to be a first class red baiter, witch hunter, and union hater)
P-I joined in the *Seattle Times*' battle against Dave Beck and his AFL Teamsters
newspapers, and radio called Beck an outlaw
Beck sued for libel again and again the case was settled out of court
Hearst writers shifted the attack
they argued their freedom of the press was endangered by Beck's lawsuits

FERRY WORKERS STRIKE COMES TO AN END

Masters, Mates and Pilots and the Ferry Boatmen refused all proposals brought to them
finally the union workers won a significant victory -- December 13, 1935
as Governor Clarence Martin agreed to appoint an arbitration board to resolve discrepancies
in hours, wages and overtime December 13, 1935
labor troubles were resolved and the boats returned to their normal schedules

DOUGLAS AIRCRAFT COMPANY DELIVERS A VERY POPULAR AIRPLANE

California competitor to Boeing produced the DC-3
more than 10,000 planes were produced by Douglas for commercial and military use
this plane was capable of carrying freight only up to 1,495 miles at 192 mph
Production of the DC-3 was begun and the first successful flight was taken -- December 17, 1935

HARRY LUNDEBERG RESIGNS AS PRESIDENT OF THE MFP

Lundeberg left his position with the Maritime Federation of the Pacific (MFP)
when he was elected Secretary-Treasurer of the International Seamen's Union (ISU)
succeeding long-time ISU leader Andrew Furuseth
William Fischer, the man Lundeberg had appointed vice president,
became president of the MFP -- December 1935
Through this succession Harry Lundeberg maintained considerable influence in the MFP

SAILORS' UNION OF THE PACIFIC (SUP) FACES A CRISIS

Steam schooner sailors in a resolution signed by 300 men demanded a six-hour day in port
Sailors' Union of the Pacific (SUP) passed the resolution -- December 16, 1935

Meanwhile, rumors of the International Seamen's Union (ISU) threatening to revoke Sailors' Union of the Pacific (SUP) charter continued to circulate on San Francisco's waterfront. New rumors that indicated the ISU would announce the opening of an office in San Francisco to "safeguard the interest of the international union" surfaced -- end of December 1935. Sailor's Union of the Pacific Secretary-Treasurer Harry Lundeberg warned that the action was **"probably a move to be ready to LIFT THE CHARTER of the Sailors' Union of the Pacific"**²⁰⁷

CONGRESSMAN MARION ZIONCHECK DISPLAYS BIZARRE BEHAVIOR

First District Congressman Marion Zioncheck had always fought hard and at times brilliantly, for progressive causes as far back as his student days at the University of Washington. Congressman Zioncheck was an ardent supporter of Franklin Roosevelt's New Deal. He spent his first three years in congress as a sober, hard-working, dedicated legislator. Who was little known outside of Washington state however, after three years in congress, his tireless work in behalf of the president's agenda he began to show signs of cracking up due to alcoholism and mental illness. His hard work in congress was overshadowed by out of control escapades. Zioncheck entered the lobby of a posh Washington, D.C apartment house in the early hours of the New Year -- January 1, 1936. He pushed the switchboard operator aside and merrily plugged in every telephone in the building then wished all of the tenants a Happy New Year. Four husky policemen testified in court that Congressman Zioncheck was so drunk that they had to support him when they removed him from the building. Congressman Zioncheck was convicted of drunken and disorderly conduct. He took a copy of the court proceedings to the U.S. House of Representatives and asked for unanimous consent to have the report printed in the Congressional Record.

VANCOUVER, WASHINGTON EXPANDS ITS PORT

(Port of Vancouver, Washington added storage facilities and railroad spurs to accommodate increased cargo handling [between 1933] and 1936. It purchased twenty-two acres of property downriver from the railroad bridge [May 1935]). Port of Vancouver received a \$136,000 grant from the federal Public Works Administration (WPA) --January 1936. This was used to develop Terminal 2 which had an 860-foot dock and a warehouse enclosing 88,000 square feet. Additional dredging was completed and the turning basins were enlarged.

COMMUNISTS ARE ATTACKED BY VETERANS OF FOREIGN WARS (VFW)

In Seattle VFW members stormed a meeting sponsored the Communist Party -- early January 1936. Veterans entered the room it fiercely violated both property and civil rights. King County prosecutor's office filed charges against two of the raiders. Rae Miller and John Garvin.

²⁰⁷ Otilie Markholt, Maritime Solidarity, P. 252.

In spite of great political furor in opposition to the charges,
Prosecuting Attorney Warren G. Magnuson proceeded with the case
those who feared Communists even more than the loss of their own constitutional rights
targeted Magnuson as an enemy (then and for the rest of his political career)

U.S. SUPREME COURT ABOLISHES THE AGRICULTURAL ADJUSTMENT ACT

In *U.S. v. Butler* the Supreme Court ruled 6-3 the *Agricultural Adjustment Act* was unconstitutional
on the grounds that the act did not levy a tax but rather tried to control production
and thus exceeded government responsibilities -- January 6, 1936
this [1933] law restricted agricultural production by paying farmers subsidies
not to plant part of their land (that is, to let a portion of their fields lie fallow)
and to kill excess livestock
its purpose was to reduce crop surplus and therefore effectively raise the value of crops

INTERNATIONAL SEAMEN'S UNION (ISU) FACES THE PROSPECT OF CHANGE

ISU primarily represented maritime employees along the Eastern seaboard and Gulf coast
on the west coast its main affiliation was with the Sailors Union of the Pacific (SUP)
whose charter was held by the ISU
ISU's only president, Andrew Furuseth had led the sailor's union since [1892]
it was apparent that after the [1934] labor struggles a new generation of labor leaders
had taken over making changes in union goals and tactics
that were sweeping across the nation
it was possible that no change within the old ISU structure would have satisfied the activists
who wanted new leaders and a more aggressive program in tune with the times

MARITIME FEDERATION OF THE PACIFIC (MFP) REPRESENTS MARITIME WORKERS

Maritime Federation of the Pacific (MFP) represented a new form of union organizational thinking
it was composed of West coast International Seamen's Union (ISU) locals
principally the Sailors Union of the Pacific (SUP) headed by MFP President Harry Lundeberg
plus longshoremen and other groups of skilled AFL maritime workers
Along the West Coast, the unions of the Maritime Federation of the Pacific had a unique labor unity
after the [1934] strike it had been agreed by the Pacific Coast maritime unions
that there would be one overall labor body to coordinate the actions the unions undertook
this would be the Maritime Federation of the Pacific (MFP)
each union elected delegates to meet weekly and review all impending actions against shipowners
once an agreement on a course of action was reached by the MFP,
all unions were then notified of the proposed activities
thus the Federation strengthened all AFL craft unions in the maritime industry

SAN FRANCISCO LONGSHOREMEN IGNORE THE NEEDS OF THE MFP

Harry Bridges' San Francisco International Longshoremen's Association gave notice of its desire
to modify the terms of the of its agreement with the Shipowners' Association of the Pacific
not only did they want to changes some aspects of their labor contract
but they also wanted to be able to act jointly with the other maritime unions

if those organizations decided they wanted to change any of their working conditions
Maritime Federation of the Pacific (MFP) union members elected a joint strike committee
members of the MFP and International Longshoremen's Association (ILA) were represented
Maritime Federation of the Pacific Coast Negotiating Committee was to bargain a new agreement
with the Shipowners' Association of the Pacific
Preparations were begun for a showdown

SAILORS' UNION OF THE PACIFIC (SUP) IS BEING ATTACKED FROM THE OUTSIDE

Sailor's Union of the Pacific (SUP) came under attack from the outside
SUP President Harry Lundeberg claimed that San Francisco longshore leader Harry Bridges
was attempting to take over the Sailors Union of the Pacific from the outside
in an effort to destroy the International Seamen's Union (ISU)

SAILORS' UNION OF THE PACIFIC (SUP) IS BEING ATTACKED FROM THE INSIDE

Thirty-third annual convention of the International Seamen's Union (ISU) met -- January 1936
ISU executive board members pushed through a constitutional amendment
giving themselves the power to revoke the charter of any local union at any time
Leaders in the ISU charged that Sailors' Union of the Pacific (SUP) officials
were not holding their required elections
they also had admitted into the union
former members of the Communist-backed Maritime Workers Industrial Union (MWIU)
further they had negotiated contracts with shipowners without the approval of the ISU
ISU reactionaries demanded that Harry Lundeberg and other SUP leaders be removed from office

SAILORS' UNION OF THE PACIFIC (SUP) HAS ITS CHARTER REVOKED

Failing in their effort to have SUP President Harry Lundberg removed as the SUP president
International Seamen's Union (ISU) executive board members revoked the charter
of the Sailors' Union of the Pacific (SUP) -- January 12, 1936
they then expelled the Sailors' Union of the Pacific (SUP) from the ISU
claiming it had been taken over by the Industrial Workers of the World (IWW),
Communists and other radicals
With the expulsion of the SUP from the International Seamen's Union (ISU)
ISU's decay in leadership could no longer be denied
ISU President Andrew Furuseth's philosophy was obsolete
in the face of the new and more modern spirit alive in the rank and file membership
When the International Seamen's Union (ISU) expelled the Sailors' Union of the Pacific (SUP)
it was, in effect, the death certificate of the Maritime Federation of the Pacific (MFP) and the ISU

SAILORS' UNION OF THE PACIFIC FORMS AN INDEPENDENT LABOR UNION

Harry Lundeberg and other West Coast militants replied to the revocation of the SUP charter
by putting the union on an "emergency program" footing
Substitute membership books were printed, in which each member signed a pledge
to support the expelled union's elected officers
Thousands of sailors responded to the emergency call, and the now-independent SUP

was able to maintain its strength as the representative of the West Coast sailors
After the loss of the Sailor's Union of the Pacific (SUP) members
International Seamen's Union (ISU) went into a rapid decline

WATERFRONT EMPLOYERS PREPARE FOR A FIGHT WITH LABOR

Negotiations between the Shipowners' Association of the Pacific Coast and maritime unions
loomed in the future and a strike would be necessary to achieve their bargaining goals
ships would be tied up along the entire West Coast from Alaska to Mexico
Shipowners' Association of the Pacific Coast wanted to break the Maritime Federation of the Pacific
waterfront unions were informed that shipowners were dissatisfied with the existing contracts
they did not want to renew them but rather would return to [1934] working conditions
San Francisco's waterfront was alive with activity
longshoremen were working day and night shifts as employers stepped up the pace
to get as much cargo moving as fast as possible and their ships out to sea

SAILORS' UNION OF THE PACIFIC (SUP) ISSUES DEMANDS TO EMPLOYERS

Fifty-nine steam schooners are tied up
as the men refused to work more than a six hour day -- January 18, 1936
these ships ply coastwise between the northern lumber regions of Canada and San Francisco
Steam schooner *Pennsylvania* was tied up for several days as the east coast ISU seamen
refused to man her unless they received the same rate of pay as west coast SUP crews

SHIPOWNERS' ASSOCIATION OF THE PACIFIC COAST TAKES A STAND

Shipowners' Association of the Pacific instead of negotiating tied up their vessels
when steam schooner crews refused to work more than six hours
Sailors' Union of the Pacific President Harry Lundeberg described the situation
in a letter -- January 22, 1936: **"The shipowners tied the steam-schooners up for lack of
business, they said they didn't lock the men out, the Sailors didn't strike.... The steam-schooner
situation is ready to break anytime now.... The only thing that holds it back right now is the
shipowners are waiting for the I.S.U. Convention to yank the West Coast charter."**²⁰⁸

BOEING AIRPLANE COMPANY CONTINUES DEVELOPMENT OF ITS MODEL 299 BOMBER

More powerful Wright R-1820-39 "Cyclone" engines replace the original Pratt & Whitney engines
Boeing adopted a checklist to avoid accidents like the [October 30, 1935] Model 299 disaster
Boeing's Model 299 was officially designated the "B-17" -- January 1936
and was nicknamed the "Flying Fortress"
As the danger of global conflict grew, Boeing opened Plant 2 between Boeing Field
and south Seattle's Duwamish River to build the prototype for the B-17 Flying Fortress
(Boeing made additional improvements with larger flaps, rudder and a Plexiglas nose [1937])

COLUMBIA RIVER IS GRAND COULEE DAM PROJECT IS WELL UNDER WAY

Powerhouse and pump station foundations were finished

²⁰⁸ Otilie Markholt, *Maritime Solidarity*, P. 252.

Grand Coulee Bridge was completed -- January 24, 1936
three additional temporary bridges downstream also were also constructed
to move sand and gravel across the river for cement mixing
along with vehicles and construction workers

POWER COMPANIES ATTEMPT TO EXPAND IN WASHIGTON STATE

Public power advocates tried once again to build a dam in Snohomish County
opponents brought up the need for tax increases and condemnation of private property
The Everett Herald was against the idea, as was nearly every mayor in the county
proponents argued that a publicly owned utility
would give citizens an active voice in policies affecting service and operations
rates would be lower because they would not be driven by the need to make a profit,
financial benefits of the utility would stay in the community
rather than go to stockholders throughout the nation

FEDERAL GOVERNMENT TAKES OVER ALL OF McNEIL ISLAND

U.S. Government acquired the entire island either by purchasing the land outright
or by using *eminent domain* (taking private property for public use) to acquire the land
Biggest problem for the penitentiary was the water supply²⁰⁹
wells and springs were inadequate and unreliable
prisoners were detailed every day to pump water by hand into a reservoir on top of the cellblock
bathing facilities consisted of water heated in a barrel with hot bricks
when the water supply ran low, prisoners bathed in the frigid salt water of Puget Sound
Work was begun to finally solve the water supply problem by damming Eden Creek,
creating a substantial reservoir named Butterworth Lake, and piping water to the prison -- 1936
with the addition of a water filtration plant,
the penitentiary now had its own adequate water supply system²¹⁰

WASHINGTON COMMONWEALTH FEDERATION FORMS ITS OWN TICKET OF CANDIDATES

WCF was composed of a mixture of farmers, labor, liberals, Socialists and Communists
Their desire to extend relief to poverty-stricken groups led the WCF to form its own political party
WCF hoped to generate campaign support by running Progressive candidates
and publicizing a comprehensive platform of social insurance, work programs, labor rights,
and taxation of businesses and the wealthy in order to fund education and social programs
Washington Commonwealth Federation's Election Committee
was chaired by the Executive Director of the WCF -- Communist leader Howard Costigan
he had the responsibility of overseeing the selection of candidates to strengthen the slate
Costigan received letters from districts voicing their opinions about who should be endorsed
and who might mistakenly split the WCF vote
Costigan's goal was to place one candidate per office in each legislative district

²⁰⁹ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

²¹⁰ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

WASHINGTON COMMONWEALTH FEDERATION (WCF) SPONCERS SOCIAL REFORM

Both WCF members and Communists wanted to take Washington State's economy out of the hands of Wall Street and put it back in the hands of Washington residents

Social policies of the WCF centered on questions of labor rights:

- WCF supported the right of every worker to join a union,
- WCF called for the abolition of "yellow-dog" contracts, (agreements workers were forced to sign guaranteeing that they would never join a union)
- WCF discouraged company-run unions,
- unlike Governor Clarence Martin, WCF was not in favor of using state or police to break strikes

To the Washington Commonwealth Federation education was a primary hope for social advancement they felt a need for increased taxation to fund improved school conditions and teachers' salaries, and advocated for cooperation with the federal government

to establish a permanent adult education program

among other proposals security of tenure and substantial pensions for educators

were two attempts at keeping teachers in school and educating promising youth

Economic and social reform were focal points in the WCF's Progressive agenda

they pushed for a corporation franchise tax and increasing taxes on businesses and the wealthy to support federal social programs

they proposed a "production-for-use" initiative to be distributed to the voters

WASHINGTON COMMONWEALTH FEDERATION TURNS AWAY FROM COMMUNISTS

Washington Commonwealth Federation (WCF) ended its relationship with the Communist Party because such an affiliation raised fears in the public

that WCF was being directed from the Soviet Union

to avoid even the appearance of Communist influence the WCF at first refused to seat

"suspected Communists" at their conventions

However, the political reality of Progressives organizing to work against European Fascists

and obstinate politicians like Governor Martin justified some cooperation with the Communists

WCF agreed to allow Communist seats at their convention and a voice within their federation

WASHINGTON COMMONWEALTH FEDERATION (WCF) RECEIVES OUTSIDE SUPPORT

WCF gained outside encouragement from the federal Works Progress Administration (WPA)

which supported a WCF effort to survey the unemployment situation in the Northwest

and demonstrated the need for mass relief for the unemployed to doubtful federal officials

WPA hoped to acquire a two billion dollar grant from the United States Treasury

for work projects, including slum clearance, street improvement, flood control,

and park and school maintenance in working-class neighborhoods

WASHINGTON COMMONWEALTH FEDERATION LEADS THE STATE'S DEMOCRATS

WCF filled the void in its membership from the loss of Communist supporters

by turning to the Washington State Democratic Party -- February 1936

as the base for putting their political agenda into action

Washington Commonwealth Federation was the radical left-wing of the state Democratic Party

WCF successfully gained control of the political party

Critics said WCF members were also Communist Party members
in fact, Communist Party leadership was critical to the formation of the WCF's agenda
but it was never a front for Stalin's doctrine
rather, WFC Communists were strong advocates of anti-Fascist and pro-New Deal ideals

DAVE BECK LEADS THE SEATTLE BROTHERHOOD OF TEAMSTERS UNION

Beck positioned himself to gain good contracts with Seattle businesses
his genius in organizing workers came from skillful negotiations with companies
his respectable approach to negotiations emphasized common interests with management
after all, higher costs could be passed on to consumer through higher prices
Beck had no time for labor radicals -- he was quick to adjust his leadership style
when positive negotiations with business owners proved to be more fruitful
he dropped his former strong-arm and goon-squad tactics
critics called his bargaining success labor price-fixing -- others said it was collusion with business
Beck believed it provided good wages and working conditions for his members
Dave Beck defended capitalism
better wages and working conditions guaranteed a stable, reliable work force
Seattle became a conservative labor town with Dave Beck as its most potent leader

SOIL CONSERVATION AND DOMESTIC ALLOTMENT ACT PASSES CONGRESS

Soil Conservation and Domestic Allotment Act was enacted by Congress -- February 29, 1936
this law replaced the Agricultural Adjustment Act
(that had been declared unconstitutional by the U.S. Supreme Court [January 6, 1936])
Farmers were to be paid for withdrawing land planted with soil-depleting crops
and for their efforts to control erosion and soil wastage

WILDCAT (UNAUTHORIZED) STRIKE ABOARD THE *SS CALIFORNIA*

Joseph Curran was a seaman aboard the Panama Pacific Line's ocean liner *SS California*
which was then tied up at San Pedro (port for Los Angeles)
although he had joined the International Seamen's Union (ISU),
Curran did not participate in union activities
At sailing time, Joe Curran and the crew of the *SS California* went on strike
they refused to cast off the lines unless West Coast wage scale and overtime wages were paid
Curran and the crew also refused to leave the ship
as they knew the owners would simply replace them with strikebreakers
their strike was essentially a sit-down strike -- March 1- 3, 1936
(sitting down on the job was a new type of action that was to become common)
Finally, United States Secretary of Labor Frances Perkins personally intervened in the dispute
speaking to the strikers by telephone, Perkins agreed to arrange a grievance hearing
once the ship docked at its destination in New York City
she said there would be no reprisals by the company or the government against the strikers

JOHN F. DORE IS REELECTED MAYOR OF SEATTLE

After being defeated as Seattle Mayor by Charles L. Smith [March 6, 1934]

John F. Dore ran for reelection
Before his election to office he tried to straddle the political fence
declaring Dave Beck and Harry Bridges were “the two greatest friends I ever had”
When he took office, Mayor Dore said
Dave Beck had been the most important factor in his election
he continued to enjoy the solid, continued support of Dave Beck and the Teamsters Union
As political issues became increasingly volatile
Mayor Dore was forced to join with the American Federation of Labor (AFL) forces
he stated that he was going to pay Dave Beck back if it was the last thing he ever did
As Beck’s aggressive recruiting tactics became more and more high-handed
it was evident that Mayor Dore’s choice of friends might well put an end to his political career

SECOND STAGE OF THE SKAGIT RIVER HYDROELECTRIC PROJECT IS COMPLETED

The project, privately owned and operated by Seattle City Light, provided electric power
for the City of Seattle and surrounding communities
(first construction effort in the project was Gorge Dam [1921-1924])
Construction of Diablo Dam on the Skagit River, the second of three dams, was begun [1927]
at 389 feet this was the tallest dam in the world at that time
however, due to political issues, the dam produced no electricity for Seattle until 1936
when the first of two massive 78,000-kilowatt generators was installed
(Skagit River Project Superintendent James Ross
had been dismissed by Seattle Mayor Charles L. Smith who was, himself, recalled)
newly-elected Seattle Mayor John F. Dore reinstated Superintendent Ross
(Final construction effort in the Skagit Project was Ruby Dam [1937-1940])
Ruby Dam was renamed Ross Dam in honor of James Delmage Ross [1872–1939],
Superintendent of the Skagit River Project
second and third stages of Ross Dam were completed [1953]
when the dam was built to its final height of 540 feet)

WAREHAEUSER EXPERIENCES A BOOM IN PLYWOOD PRODUCTION

Plywood operations at Weyerhaeuser Timber Company’s Longview plant
proved to be so successful that a second mill was opened in Everett -- 1936

DAVE BECK RISES IN POWER IN THE PACIFIC NORTHWEST TEAMSTERS’ UNION

Dave Beck was easily the Brotherhood of Teamsters most powerful regional leader in Washington
and a dominant personality in Pacific coast labor
Capitalizing on the revolution taking place in motor transportation,
Dave Beck moved rapidly up the ranks of the Brotherhood of Teamsters
Beck’s Teamsters forced many trucking industry drivers to accept the union and its contract
or be denied access to pick up or deliver goods in unionized cities
Structurally, the Brotherhood of Teamsters locals were strong, autonomous, and independent
they organized, provided benefits and negotiated bargaining agreements for union members
who worked in a specific trade in a specific city
such as the bakery truck drivers in Tacoma or the laundry truck drivers in Seattle

Teamsters Union bargained with the employer or employers
only in the cities where members worked

WASHINGTON COMMONWEALTH FEDERATION PROPOSES RADICAL CHANGES

WCF opposed America's involvement in the war brewing in Europe
compulsory military training was viewed as a violation of civil rights
when the American Student Union of the University of Washington
submitted a petition for making military training optional in Washington State,
WCF listened and adopted the proposal in their political platform
Farmers lost a lot of revenue because private enterprise distributed their goods in the open market
for those farmers who still struggled, the WCF endorsed a plan that would provide assistance
by initiating state-owned corporations to distribute farm products
WCF was instrumental in working for passage of important social policy for Washington residents
WCF continued its push for a ballot proposal to be sent to the voters
that asked for the creation of a socialist state

WCF'S INITIATIVE 119 PROPOSES WASHINGTON BECOME A SOCIALIST STATE

Socialism had risen out of the ghost of the Utopian Colonies [1900-1910]
this proposal would have created state-owned factories, farms, insurance companies,
public electric utility companies and state-operated medicine
WCF's "production for use" rather than "production for profit" plan
Initiative 119 proposed to take idle factories and farmland and turn them into cooperatives
it was suggested this plan would assure adequate funds for farms to remain in operation
this plan was designed to employ the jobless as well as eliminate the market middle-man
four districts would be set up where factories would be operated by employed city workers
they would receive either a wage or commodities for their labor
because not contributing to the state's debt was an obvious goal of financing the project
funds essential to this program were to be acquired from a small tax and federal aid

TEMPERS FLARE ON THE U.S. HOUSE OF REPRESENTATIVES' FLOOR

Congressman Marion Zioncheck and Congressman Thomas Blanton (D-Texas)
had long been at odds and exchanged bitter remarks frequently during house debate
Zioncheck criticized what he termed "innuendoes" against members of the house
he referred to the fact that Blanton "Once said I was doped."
Congressman Zioncheck stated on the U.S. House Floor,
"I am going to put into the record that Blanton is the son of a Texan" -- April 14, 1936
Zioncheck then he said he would revise his remark to leave a "blank" for the offensive word
Blanton jumped out his chair as Zioncheck, who was much younger, stood up to meet Blanton
they tried to swing at each other with their fists on the floor of the house
but they were prevented by other members from engaging in a fist fight

CONGRESSMAN ZIONCHECK GOES ON THE ATTACK

On again on the Floor of the U.S. House of Representatives,
Washington's Congressman Marion Zioncheck launched into a defamatory attack

on U.S. Representative Tom Blanton (D-Texas) regarding his political activities
and his stand against Communism -- April 19, 1936
Congressman Blanton the Congressional Record be expunged of the attack

CONGRESSMAN MARION ZIONCHECK IS REBUKED BY HOUSE MEMBERS

After yet another verbal assault on Texas Congressman Blanton,
House members soundly rebuked Zioncheck by voting 274 to 0
to expunge from the Congressional record a page and a half of remarks
Zioncheck had inserted [April 19] about Representative Blanton (D-Texas)
After the vote to expunge the record was taken Congressman Zioncheck in the angry speech
declared Director of the FBI J. Edgar Hoover “may know the answer to the Hauptmann murder”
Zioncheck denounced Hoover as a “dictator” and “master of fiction” -- April 21, 1936
Zioncheck began to show signs of psychological difficulties due to alcoholism and mental illness
the congressman built such a record of outlandish behavior both on and off the House floor
that even Congressmen who liked a little eccentricity to enliven the legislative atmosphere
had begun to regard him as the capitol’s number one problem child

CONGRESSMAN MARION ZIONCHECK GETS MARRIED

Secretary of the Interior Harold Ickes stated Zioncheck asked him to officiate in his marriage
to twenty-one-year-old stenographer Miss Rubye Louise Nix
Ickes was unwilling and informed the congressman he had no authority to perform marriages
After a twenty-four-hour courtship, or perhaps no romance at all,
Zioncheck went to Annapolis, Maryland where he borrowed \$2 to buy a marriage license
Rubye Louise Nix became the congressman’s wife

WCF IS OPPOSED TO GOVERNOR MARTIN’S POLITICAL AGENDA

Governor Martin’s conservative Democratic political agenda was not well received by the WCF
according to Communist Party and WCF leader Howard Costigan:

- Martin refused to tax the rich;
- Martin approved the misuse of approximately \$30,000,000 worth of funding
that was intended for the impoverished and unemployed
but, in fact, only increased the gap between the working and upper classes;
- Martin also deflected a “free education” proposal as well as increased salaries for teachers;
- as a representative of President Franklin Delano Roosevelt’s New Deal Democratic Party,
Governor Martin was supposed to have labor’s best interest in mind
but his management of union strikes showed quite the opposite;
- Martin’s plan for old age pensions was inadequate to the needs of most working citizens
he claimed to have administered 25,000 pensions but the number barely reached 20,000
and the benefit sent was only twenty dollars a month

TEAMSTERS FORM JOINT COUNCILS TO COORDINATE THE UNION’S EFFORTS

Over-the-road truck drivers did not live and work in one place but rather drove long-haul assignments
Dave Beck realized how important it was to develop a means to negotiate region-wide contracts
to ensure consistency in wages and benefits

if that did not occur, trucking company owners could easily move a terminal
to an area where negotiated wages were low
Teamster Joint Councils were established to further the members' influence across a broader area
where there were three or more Teamster locals in one location
Dave Beck negotiated the first area-wide trucking agreement -- 1936
covering over-the-road drivers in Washington, Oregon, Idaho, and Montana
Teamster Joint Councils coordinated Teamster activities
they focused on recruiting new members and organizing new locals
they decided jurisdictional matters with in the region
Dave Beck's Teamsters controlled truck drivers in Seattle, San Francisco, Oakland and Fresno

STATE DEMOCRATIC CONVENTION IS EXTREMELY CONTENTIOUS

Washington Commonwealth Federation (WCF) shaped Washington state politics
during the 1936 State Democratic Convention held at the Morck Hotel in Aberdeen -- May 23
3000 delegates composed of a mixture of farmers, labor, liberals, Socialists and Communists
wore colored arm bands: yellow for conservatives and orange for liberals
King County Prosecutor Warren G. Magnuson was elected as permanent chairman of the convention
since the death of Scott Bullitt [April 10, 1932] Magnuson carried on the task
of holding together the Democratic Party's liberal and conservative wings
Progressives discontent with Governor Martin led to a revolt against him during the convention
however, WCF Convention Delegates and other progressives
were unable to deny Governor Martin's re-nomination (and subsequent reelection) -- 1936
Initiative 119 ignited the most radical and riotous Democratic Party Convention in state history
WCF had a majority of the convention delegates and pushed through a radical plank
calling for state ownership of basic industries and other Progressive measures
at 1:00 a.m., Magnuson left the platform for a backroom meeting
with liberal and conservative leaders
when he returned to the rostrum, Magnuson brought with him a compromise
(this type of result became a signature for Magnuson)
convention endorsed state Socialism as envisioned in Initiative 119 "in principal"
liberals of the Washington Commonwealth Federation had won enforcement of I-119
conservatives had saved face by avoiding the specific demands of the Initiative

WASHINGTON COMMONWEALTH FEDERATION PUSHES ITS LIBERAL AGENDA

Petitions in support of Washington Commonwealth Federation's Initiative 119 were drawn up
voters were asked to sign petitions in support of the proposal
to bring the issue to the general election ballot
campaign headquarters were established in every legislative district
WCF argued that continued farm production would boost Washington State's economy of as a whole

WCF RUNS ITS OWN CANDIDATE AGAINST GOVERNOR CLARENCE MARTIN

Washington Commonwealth Federation was delighted to support
King County Commissioner and radical radio personality John C. Stevens
in a Primary election race against Democratic Governor Clarence Martin

State voters were faced with a complicated choice

between the rich, honest, unimaginative, conservative incumbent
and his rich, opportunistic, brilliant, radical opponent

John Stevens' platform was a complete reverse of that of Governor Martin's administration
with the timber workers' strike in mind, Stevenson encouraged passing a six-hour work day
as well as higher wages

John Stevens' political agenda was straight from the Progressive menu:

- Stevens offered a program for fair taxation based on property holdings;
- he strived to increase educational funding and provide better salaries for teachers;
- he advocated for an old age pension for the elderly;
- heading Stevenson's ticket, and marking him as a radical, was his support for Initiative 119

WASHINGTON COMMONWEALTH FEDERATION RUNS A WELL ORGANIZED CAMPAIGN

Since WCF was not a financial powerhouse, it relied on its members and candidates
to help pay campaign expenditures

candidates for state office were expected to pay ten percent of the cost

to operate a campaign headquarters while county commissioners paid twenty percent

WCF worked hard to spread its campaign, and especially its radical pro-reform message,
throughout the state and to finance the effort properly

WCF used every advertising outlet at their disposal

including a sound truck donated by the Commonwealth Builders, Inc. for public speeches

most valuable source of advertisement, other than WCF's own newspaper, *The Sunday News*
was Saul Haas' KIRO radio station which featured installments of political news
in its normal programming

in addition to speeches, newspapers, radio, and print propaganda,

committees were formed to supervise all aspects of the election campaign

and to make the WCF's electoral slate attractive throughout all regions of the Washington

MIDWEST FARMERS CONTINUE TO FACE IMPOSSIBLE ODDS

Those who stayed on the land during the depression and drought faced an environmental nightmare
dust storms came in spring (and summer) when farmers had to be out on the land planting seed
after a hard day's work, dust would have sifted under their goggles and through their clothes,
often wind would lift the soil and the newly planted seed, destroying all of the day's work

Midwest farmers also faced an infestation of grasshoppers and a weed called Russian thistle
swarms of grasshoppers in the millions descended from the north like a plague

they would darken the skies as they approached, only distinguishable from a dust storm
by the unique glittering appearance of their translucent silvery wings

wherever they landed they ate the crops and pastures that had survived the drought
and left destruction in their wake

they were so thick they often clogged the radiators of cars and made the roads slippery
chickens and turkeys ate the insects giving a foul taste to meat and eggs

there was no pesticide and no way to control the infestations

Russian thistle piled up against fences and barns, often to a depth of twenty feet

at the peak of the thistle crisis there was not even hay to feed starving livestock

this caused the price of cattle to drop to three-and-a-half to four cents per animal

CHALLENGE TO WASHINGTON'S BLANKET PRIMARY ELECTION LAW IS DECIDED

(Washington State voters had successfully petitioned the legislature
to change the state's Primary Election law in Initiative 2 in a "Blanket Primary" system
that allowed voters to cross political party lines and vote for any candidate of any office
Washington State Legislature passed Initiative 2 as written [February 21, 1935]
both Democrat and Republican Party leaders challenged the new law in court)
Washington's Supreme Court upheld the blanket primary statutes (*Anderson v. Millikin*) -- June 1936
representing the state in the case against the political party leaders
was Seattle Prosecuting Attorney General Warren G. Magnuson

WASHINGTON CONGRESSMAN MARION ZIONCHECK CONTINUES TO ACT STRANGELY

Zioncheck exhibited an erratic personality by carrying out bizarre exploits
he and his wife Rubye Louise were arrested by Capitol police
for cavorting late at night in the fountain pool on the capital grounds
and driving on the White House lawn
they were charged with being drunk and disorderly
he was placed in the Baltimore mental hospital from which he shortly escaped
vacationing in Puerto Rico, and again drunk, Zioncheck wrecked a car
when confronted by the local police he demanded U.S. Marine protection
back in New York, he and Rubye again made news after an all-night drinking party
in a midtown nightclub
Closely watched by the national media, Congressman Marion Zioncheck responded to the publicity
by announcing he was considering running for governor

DROUGHT CONDITIONS CONTINUE TO SWEEP ACROSS THE MIDWEST

Number of dirt storms increased and spread out of the Plains states and across most of the nation
One very pleasant day the ground began to tremble -- June 19, 1936
an earthquake tore open the hard Oklahoma soil
from Kenton to Perryton and from Liberal to Stratford
at the same time, temperatures broke the [1934] record high by soaring above 120 degrees
(extreme temperatures would continue into the fall)
Other earthquakes followed throughout the Plains states -- June 21

CONGRESS MANDATES THE CONTINUOUS DISCHARGE ("FINK") BOOK

Congress passed the *Merchant Marine Act* of 1936 which required sailors
to carry a permanent identification booklet in lieu of discharge certificates for each voyage
in it a man's entire record of voyages and conduct would be revealed to each new employer
this was an obvious effort to reinstitute blacklisting of known labor militants
This requirement to carry a "fink book" was met by deep resentment and anger among sailors
throughout the U.S. over 50,000 signed pledge cards refusing to take the book -- June 29, 1936
Although the Communists at first supported the fight against the fink books, it became apparent
they were not happy opposing something that FDR and his administration supported

rank books became the basis of a new conflict between the Sailors Union of the Pacific leaders and Communist union activists who wished to support Roosevelt in an anticipated war against Fascist uprisings in Europe rank and file sailors did not support the Communist position on European issues

CONGRESSMAN ZIONCHECK ADDS TO HIS RECORD OF UNACCEPTABLE BEHAVIOR

He exhibited an erratic personality accompanied by bizarre exploits each incident was reported in newspaper headlines:

“Zioncheck Wades in Rockefeller Center Pool”

“Zioncheck Delivers Satchel full of Beer Bottles to White House”

“Zioncheck Charges Vice President with Kidnapping His Wife”

Beset by the press and by critics of Roosevelt’s policies, Zioncheck became depressed he hinted that he might not seek reelection to a third term in Congress Emotionally and physically drained and publicly ridiculed Zioncheck left Washington, D.C to visit his sick mother in Seattle and campaign for reelection

HARRY BRIDGES IS ELECTED PRESIDENT OF THE PACIFIC COAST DISTRICT ILA

Collective success during the San Francisco longshore strike and the general strike [1934] led to Harry Bridges becoming President of the Pacific Coast District International Longshoremen’s Association (ILA) pro-Communist Harry Bridges took up the leadership reins -- July 9, 1936 Harry Bridges’ goal to unite the Pacific Coast labor force of longshoremen and sailor unions began to take place as he developed plans to bring solidarity to the unions of the waterfront

HARRY BRIDGES BEGINS IN “MARCH INLAND”

Cargo which arrived by ship had to be unloaded onto the docks Pacific Coast International Longshoremen’s Association President Harry Bridges claimed jurisdiction over these workers Cargo was next moved to warehouses on the docks for storage warehouse workers had been placed under the International Longshoremen’s Association [1917] but they had been largely ignored by the international union Finally, goods were trucked from port warehouses to various parts of the city for storage in uptown warehouses to be trucked to all parts of the nation these workers had been placed under the International Longshoremen’s Association (ILA) [1917] but they had been largely ignored by the international union Warehousemen’s Union had recruited, at most, 300 new members Pacific Coast District International Longshoremen’s Association (ILA) President Harry Bridges led his (AFL) longshoremen on a “March Inland” to recruit new union members he focused on unorganized and Teamster warehousemen he set out in San Francisco to recruit the warehousemen into the ILA Harry Bridges aggressively organized nearby nonunion warehouses all wholesale coffee houses, wholesale grocery, hardware, drug stores, cold storage plants as well as hay, fuel and feed firms and the general warehouses were organized Bridges entered into competition with anti-Communist ILA President Joe Ryan

who adhered to craft unionism
this conflict was sharpened by their ideological differences
and AFL's refusal to ally itself with unskilled workers
or to represent unskilled workers in negotiating bargaining agreements
(Bridges ended up almost doubling San Francisco Local 38-44's membership
which included more than 4,500 warehousemen inland from the docks [end of 1936])
Portland, Los Angeles and other port cities also saw successful organizing drives

WARREN G. MAGNUSON ANNOUNCES HIS RUN FOR CONGRESS

Warren Magnuson was first elected to the state legislature at age twenty-seven -- [November, 1932]
next he was elected King County Prosecutor [1934]
Magnuson began talking openly with Governor Clarence Martin and U.S. Senator Homer T. Bone
about his congressional ambitions
he joined the Left-wing Washington Commonwealth Federation
After informing U.S. Representative Marion Zioncheck of his intentions
Magnuson filed against his college classmate
for the First Congressional District office -- August 1, 1936

CONGRESSMAN MARION ZIONCHECK CHOOSES NOT TO RUN FOR REELECTION

He announced he would not seek office for a third term because of the ill health of his mother
(or, perhaps, because Warren Magnuson had entered the race two days before) -- August 3, 1936
In fact, Zioncheck's political allies were abandoning him as his reelection drew closer
Washington Commonwealth Federation leaders promised only to support no candidate
they would provide an endorsement to Zioncheck

CONGRESSMAN MARION ZIONCHECK'S SHOCKING DEATH

Congressman Zioncheck accompanied by his wife Rubye Louise and brother-in-law William Nadeau
were on their way to a to a meeting of postal workers
who had supported him in his bids for office
they stopped in front of Seattle's Arctic Club in the downtown Arctic Building
where Marion's campaign headquarters was located on the fifth floor
Congressman Zioncheck told his wife he was going upstairs for a minute
but after a considerable time he still had not returned
William Nadeau went to the fifth floor to check on the congressman
Nadeau found the congressman seated at his desk writing and encouraged him to hurry
Marion Zioncheck put on his coat as if to leave
then he suddenly whirled and bolted across the room
he rushed to the open window and plunged out headfirst
Marion Zioncheck died after plummeting to the sidewalk at 3rd Avenue and Cherry Street
he struck the pavement directly in front of the car occupied by his wife Rubye
she screamed and fainted
Congressman Zioncheck was dead at the age of thirty-five -- late afternoon August 7, 1936

William Nadeau found a hastily written note on Zioncheck's desk which read: **"My only hope in life was to improve the condition of an unfair economic system that held no promise ... (or) even a decent chance to survive let alone live."**

Marion Zioncheck's suicide cleared the way for a First Congressional District seat to a bid by King County Prosecutor Warren G. Magnuson (who was elected the following [November]) (There are still some members of Zioncheck's family who believe that he was pushed out of the window and that the note left was not written by him they point to several run-ins that Zioncheck had with FBI Director J. Edgar Hoover once Zioncheck sent a truckload of manure to Hoover's front steps and had it dumped

CONGRESSMAN MARION ZIONCHECK IS MOURNED IN DEATH

Both the University of Washington and Boeing closed down for half a day in his honor

Perhaps feeling no small amount of guilt over the death of his college friend and associate

Magnuson noted in a speech, **"[Congressman Marion Zioncheck] was the most brilliant of our young Democrats, passionately devoted to the idea of leadership. He felt the corporate structure must be made amenable to community spirit. He was opposed to the application of forces by an armed minority. He believed the days of Cain and the exploitation of neighbors must give way to the Golden Rule.**

Marion felt too profoundly and too intensely, a heavy responsibility to his fellow man. There are many impression and recollections of our dead comrade. I give them to you with only one hope - that we shall continue together where he left off."²¹¹

(Congressman Zioncheck is buried in Evergreen-Washelli Cemetery in Seattle)

WARREN G. MAGNUSON'S CONGRESSIONAL CAMPAIGN

Warren Magnuson promised his friend Sal Haas (Roosevelt's state reelection campaign manager) he would run on the programs proposed by FDR and the New Deal

Magnuson strongly supported Franklin D. Roosevelt as the savior of capitalism

Maggy's speeches promised **"water power for the benefit of people -- without profit"**²¹²

he also demanded federal money for further development of the Bremerton Naval Shipyard

he said Social Security and Unemployment Insurance should be provided to all workers

he noted the Civilian Conservation Corps must continue to shore up the free-falling economy business could survive only if people had jobs which paid sufficient wages

to allow for the purchase of their industrial products

in a radio address, Magnuson stated: **"A democracy survives only when it adjusts itself to economic change. The world faces a machine age, fast moving progress that necessitates alertness to its consequence. Some countries fail.... The result is dictatorships and monarchies. Scandinavians faced the same problems and adjusted with unemployment insurance, public utilities, cooperative enterprises -- far sighted reforms while we slept."**²¹³

SEATTLE POST-INTELLINGERCER (P-I) EXPERIENCES LABOR PROBLEMS

²¹¹ Scates, Shelby. *Warren G. Magnuson*. P. 58.

²¹² Scates, Shelby. *Warren G. Magnuson*. P. 67

²¹³ Scates, Shelby. *Warren G. Magnuson*. P. 52.

Seattle had three daily newspapers: *Seattle Times*, *Post-Intelligencer*, and the *Seattle Star*
P-I workers attempted to organize a Chapter of the newly-created American Newspaper Guild
affiliated with the American Federation of Labor (AFL) -- 1936

P-I owner William Randolph Hearst refused to even discuss the matter with the union
Hearst's editorial writers argued that freedom of the press was endangered by unionization
he did not understand how much his anti-FDR positions and other anti-labor writings
offended the working community of Seattle

Two longtime editorial employees of the *P-I* were fired -- August 14, 1936
management cited their inefficiency and gross insubordination,
but the men claimed the action was because they had joined the American Newspaper Guild
although tiny, with a local membership of only thirty-five, the Guild threatened a strike
unless the two men were reinstated
Guild members gained the support of the Seattle Central Labor Council
whose most influential member was Dave Beck

CONSTRUCTION CONTINUES ON THE GRAND COULEE DAM PROJECT

MWAK, the primary construction company, had begun constructing cofferdams [January 1, 1935]
Columbia River's entire channel between the east and west cofferdams
had been diverted as the foundations were constructed

Once the west foundation of the dam was complete, portions of the cofferdam could be dismantled
allowing water to flow through part of the dam's new foundation on the west end -- August 1936
(Construction of the east coffer dam was dismantled in early [December]))

WASHINGTON'S FIRST "BLANKET" PRIMARY ELECTION IS HELD

Former governor Roland H. Hartley was the lone Republican in the primary race
Six candidates filed for the governor's office as Democrats -- 1936

Governor Clarence Martin, at the end of his first term, found his political party divided
Martin faced opposition from five candidates within his own Democratic Party
his strongest Primary Election opposition was from John C. Stevenson
liberal leader of the Washington Commonwealth Federation

John C. Stevenson maintained a radically liberal philosophy
he was a strong advocate of "production for use" economics

Nobody trusted the public opinion polls very much
but when gamblers started giving odds of two-to-one in favor of Governor Martin
Washington Commonwealth Federation bosses decided it was time to quit
at the last possible moment they held a quick caucus meeting

Commonwealth Federation leaders announced they were leaving the Democratic Party
and would file their own ticket of candidates for the upcoming election

Communist Howard Costigan who left his position as Federation executive secretary
had been selected at the caucus meeting to be their candidate for governor
this infuriated Stevenson and his supporters and it helped to split the Federation

Under the newly-implemented election system, voters could vote for one candidate for each office
no matter the candidate's political party affiliation
many conservative Republicans voted for Governor Martin in the Democratic primary

they happily took the opportunity to select a conservative Democrat to run against Hartley they “crossed over” party lines to assure Martin became the Democratic candidate running as a supporter of the New Deal -- but in fact an economic conservative

PEARL WANAMAKER SEEKS HIGHER OFFICE²¹⁴

State Representative Pearl Wanamaker challenged incumbent Mon Wallgren for the 2nd Congressional District seat in the 1936 Democratic primary election -- August 18 she lost badly
Pearl took a job as a lobbyist job for the Washington Education Association (WEA) -- 1936 in the upcoming [1937-1938] legislative session

POST-INTELLIGENCER NEWSPAPER GUILD MEMBERS STRIKE

Wearing AFL armbands and “Hearst is Unfair” signs a few American Newspaper Guild members began marching meekly in front of the *P-I* Building -- morning August 19, 1936
they were joined by hundreds of local citizens who were either pro-union or anti-*P-I* warehousemen from Seattle’s busy waterfront dropped their hooks and joined the line creating a crowd that completely circled the newspapers’ building
Newspaper Guild members received an outpouring of support
American Federation of Labor’s International Longshoremen’s Association (ILA) in Seattle joined the picket line of the striking *P-I* union members
Dave Beck ordered his AFL affiliated Teamsters to participate in support of the Newspaper Guild when Teamsters refused to cross the *P-I* picket lines, it became difficult to print the paper, much less deliver the newspaper to readers and advertisers
P-I writers declared that Sawmill and Timber Union (STW) workers also joined the Newspaper Guild picket line effectively cutting off the supply of newsprint to the paper
P-I management asked the *Seattle Star* to print its morning edition -- the *Star* agreed
Seattle Times joined the struggle against the union and published anti-Beck editorials
Beck sued the *Times* for defamation of character and liable
but the issue was settled out of court
Hearst writers shifted the attack as they now argued their freedom of the press was endangered by Dave Beck’s lawsuits
Violence erupted when several non-striking employees were beaten as they tried to sneak through the strikers’ blockade
P-I was forced to suspend operations

NEGOTIATIONS IN THE MARITIME INDUSTRY ARE AT A STANDSTILL

During contract talks with the Maritime Federation of the Pacific Coast Negotiating Committee shipowners insisted they wanted to restore the [pre-1934] strike conditions
they demanded that unions give up control of the hiring halls
and that the Maritime Federation of the Pacific (MFP) give up the six-hour day they had won in [1934]

²¹⁴ Michael Hood, HistoryLink.org, Essay 9171, September 26, 2009.

At the same time the sea-going unions demanded an eight-hour day aboard ship with paid overtime along with many other long-sought conditions and improvements
shipowners replied that the whole matter must be resubmitted to arbitration
and, in the meantime, [pre-1934] conditions would be re-imposed
It was apparent that shipowners were intent on a lock-out of their union employees
in a effort to destroy unions' solidarity along the Pacific coast
shipowners were well-prepared
they had assessed all their members a tonnage tax [since 1934] that was put into a fund
to "take on the unions" -- the fund amounted to well over \$200 million
on-the-other-hand, the ships' Firemen's Union bank account amounted to less than \$2,000
most maritime unions had even less in their treasuries
International Longshoremen's Association (ILA) unions were less the two years old -
thus they had little money either

SHIPOWNERS' ASSOCIATION OF THE PACIFIC HAS UNION LEADERS ARRESTED

With only thirty-three days left to negotiate before time ran out
in San Francisco, five gold-braided lieutenants, captains and an inspector all in police uniforms
charged through the Marine Federation of the Pacific's (MFP) main office
and into the office of Marine Firemen's Union spokesman Earl King
King came out of the office handcuffed and was hauled off to jail -- August 29, 1936
it was a shocking occurrence that rocked the waterfront
Afternoon's newspapers carried the headlines: "Union Leader Arrested in Murder Conspiracy"
an article told of a ship's chief engineer who was stabbed to death on board the SS *Point Lobos*
while it was tied up in Alameda, California and how the killers got away
(all of this had taken place some five months earlier)
police had tracked down one of the killers and arrested him in Texas
he was supposed to have confessed and named not only Earl King,
but Ernest Ramsay, a minor union official, and Frank Connor, a ship's union delegate
newspapers played up the story as the murder of an anti-union engineer by a union goon squad
Those who knew the three men also were aware that they were incapable of such an act
if the maritime employers thought their arrests would divide the ranks, they were mistaken
rank and file union members became more closely united than they had ever been
they believed shipowners had something to do with this plot
to remove progressive union leaders during negotiations
and a strike-threatening situation

Negotiations continued with the Maritime Federation of the Pacific Coast Negotiating Committee

PACIFIC COAST DISTRICT INTERNATIONAL LONGSHORE ASSOCIATION (ILA)

Entered into negotiations with the Shipowners' Association of the Pacific Coast
no agreement could be reached -- even on how to proceed in the effort to achieve a settlement
longshoremen held fast for negotiation -- employers demanded arbitration
As the old contract was running out both, sides prepared for a showdown -- September 1936

MOST PACIFIC NEWSPAPERS SUPPORT MANAGEMENT OVER THE MARITIME UNIONS

Newspapers along the coast, with the exception of the *San Francisco News*,
blasted away daily with scare stories of the impending disaster
that unions intended to “let loose on the people”
Red-baiting stories of “Communist conspiracies” were being “uncovered” daily
President Franklin D. Roosevelt was the man most hated by shipowners
he was referred to as “that Red in the White House,” and he was coming up for reelection
maritime employers hoped Alf Landon, the Republican candidate, would beat Roosevelt
Employers were also counting on rifts in the ranks of labor
like the one Harry Lundeberg, head of the Sailors’ Union of the Pacific (SUP), was generating
Lundeberg and Harry Bridges were feuding over union policy
employers intended to take advantage of this rift and widen it into a chasm

SEATTLE *POST-INTELLIGENCER* STRIKE CONTINUES ON

Seattle’s newspaper establishment was irate
Hearst’s *P-I* issued a statement that “radical racketeers” were threatening the community
Seattle Times publisher C.B. Blethen, usually the archenemy of Hearst, joined in
he loudly condemning the strike -- and above all, Dave Beck
“Seattle is now the plaything of a dictator,”

Blethen wrote indignantly in a bold front-page editorial which noted: **“The suspension of The Post-Intelligencer is more likely than not to mark the place where Seattle lies -- dead. How do you like the look of Dave Beck’s gun? The shame of it!”**

Industrial workers rallied to the support of the American Newspaper Guild in Seattle

OTHER UNORGANIZED WORKERS LOOK TO UNIONS FOR PROTECTION

Inspired by the solidarity on the waterfront,
bakery wagon drivers in various parts of California unified their locals
retail clerks, affected by the upsurge of militancy in other unions,
organized unions which invaded department and chain stores
striking lettuce pickers in Salinas, California one hundred miles south of San Francisco,
turned to the International Longshoremen’s Association (ILA) for financial aid
when vigilantes attempted forcibly to break their union
even organizations representing the unemployed received longshoremen’s backing
in their opposition to efforts to lower or curtail relief wages and benefits
In the Northwest, lumber workers set up an alliance similar to the Maritime Federation
they pledged to cooperate with the waterfront unions
Management bargained with whatever union was on top at the time
competition between unions was hard for employees and employers alike
only time healed some jurisdictional disputes

AMERICAN FEDERATION OF LABOR (AFL) EXPELLS CIO UNIONS

John L. Lewis’ Committee for Industrial Organizations (CIO) continually challenged
the more conservative American Federation of Labor (AFL)
pressure mounted on the West Coast AFL longshoremen to join the CIO
along with the newly organized warehouse industry affiliates

Ignoring the AFL's continued protests and threats,

CIO helped workers in the steel, automobile, rubber, and other industries to organize and bargain
Labor victories on the West Coast and the expansion of union protection to unskilled workers

led the International AFL Executive Council to denounced as illegal

all ten Committee for Industrial Organizations (CIO) unions and their four million members

AFL Executive Council ordered state federations and cities' central labor councils

to begin to expel Committee for Industrial Organization (CIO) unions

from the American Federation of Labor

CIO unions were expelled from the American Federation of Labor -- September 10, 1936

CIO executive officers countered with a resolution authorizing their Executive Board **"to issue certificates of affiliation to national, international, state, regional, city central bodies and local groups whenever it is deemed such action is advisable."**²¹⁵

however, no action to charter new CIO affiliates was taken

as the debate raged inside the American Federation of Labor

COMMITTEE FOR INDUSTRIAL ORGANIZATIONS (CIO) RECRUITS NEW MEMBERS

Under the leadership of John L. Lewis the Committee for Industrial Organizations (CIO)

stressed industrial unionism and the organization of unskilled and semiskilled workers

on an industry-wide basis

After being expelled from the American Federation of Labor (AFL)

Committee for Industrial Organizations (CIO) undertook a major organizing effort

Lewis and his followers continually challenged the more conservative

American Federation of Labor (AFL) to represent an ever-increasing number of members

AFL responded with its own massive organizing drive

SAWMILL AND TIMBER WORKERS REBEL FROM THE AMERICAN FEDERATION OF LABOR

American Federation of Labor (AFL) arrogance was not compatible with the rough timber workers

who felt discounted because they were designated "unskilled" workers

AFL put little effort and money into organizing the timber industry

Sawmill and Timber Workers Union members continued to be disappointed

with the American Federation of Labor (AFL)

and, more specifically, with the United Brotherhood of Carpenters and Joiners (UBCJ)

which represented their interests in the AFL

Radical leaders of the Sawmill and Timber Workers called for a secret convention

woodworkers of the Northwest gathered in Portland -- September 18, 1936

to add heat to the smoldering fire, Communist Harold Pritchett once again stepped into power

(he had been the president of the Sawmill and Timber Workers local in British Columbia

now, after a three year break, Pritchett chaired the "rump" convention

Convention delegates formed a new union, the Federation of Woodworkers

this was an independent union unaffiliated with the American Federation of Labor (AFL)

AMERICAN FEDERATION OF WOODWORKERS REPRESENTS RADICAL WOODWORKERS

²¹⁵ Otilie Markholt, *Maritime Solidarity*. P. 318

American Federation of Woodworkers asserted its power as an independent labor union
70,000 woodsmen of the Northwest were now well on their way to building their own identity
Communist Harold Pritchett was elected the president of the Federation of Woodworkers
this was a result of Communists being seen as the leading the opposition to AFL elitism
Communists were once again “boring from within”
other Communist CIO members resisted American Federation of Woodworkers’ organizing effort
they exposed the weak position of the International Woodworkers of America
and exploited grievances against United Brotherhood of Carpenters and Joiners (UBCJ)
However, in reality the Federation of Woodworkers was weak and foundationless
this new Federation was not chartered by United Brotherhood of Carpenters and Joiners (AFL)
and was officially unaffiliated with any of the major union organizations of the time
UBCJ President Maurice Hutcheson and AFL leader Abe Muir
made no attempt to mend the relationship and hostilities loomed ahead the timber workers

COMPETITION FOR UNION TIMBER INDUSTRY MEMBERSHIP IS INTENSE

Weak and without foundation though it was, the independent Federation of Woodworkers
set out to recruit new members with unprecedented vigor
To compete with this onslaught, John L. Lewis’ Committee for Industrial Organization (CIO)
chartered the International Woodworkers of America (IWA)
International Woodworkers of America (IWA) and American Federation of Woodworkers
fought each other bitterly
disputed strikes, challenged elections, boycotts, plant shutdowns
and standoffs with employers arose from this mutually destructive wrangling
Competition for union members in the timber industry
was hard for both employees and employers alike
management bargained with whatever union was on top at the time
(only time healed some jurisdictional disputes)

SHIPOWNERS’ NEGOTIATIONS CONTINUE WITH MARITIME FEDERATION OF THE PACIFIC

Shipowners’ Association of the Pacific Coast was becoming increasingly more confident
to them it was just a matter of waiting out the time until the maritime labor contracts expired
however, maritime unions did not want to give the employers any excuse
to say that a lockout was provoked
In the middle of a round of negotiations -- September 23, 1936
shipowners informed the Maritime Federation of the Pacific that when the old contract expired
they would no longer accept ships’ crew replacements from union halls
here was still another week to go before the ran out [September 30]
It was common knowledge that a number of smaller shipowners had a strong desire to avoid a strike
they were willing to meet the demands of unions, but three main companies on the Pacific Coast,
Matson Line, Dollar Line, American and Hawaiian Line held the smaller companies in check
seeds of discontent among the Shipowners’ Association of the Pacific Coast were sown
unions set out to take advantage of the rift

FEDERAL GOVERNMENT DEMANDS AGREEMENT NEGOTIATIONS CONTINUE

With only a few more days to go before the men would officially come off the ships,
word came from the federal government to continue negotiations [until October 15]
both sides agreed -- the charade of negotiations went on
Not a single union member on the entire Pacific waterfront believed the shipowners would cave in
each maritime union organized a strike committee

PACIFIC COAST MARITIME LABOR AGREEMENT RUNS OUT

Maritime Federation of the Pacific Coast Negotiating Committee,
failing to arrive at an agreement through collective bargaining,
recommended to member each union that a referendum of their membership be taken
to empower their representatives on the Pacific Coast Negotiating Committee
to take strike action on [October 28, 1936]
On the East Coast International Seamen's Union (ISU) officials resisted efforts
to call a general sympathy strike in support of the Maritime Federation of the Pacific
this incited more unrest among the Sailors' Union of the Pacific (SUP) rank and file
numerous unauthorized sympathy strikes took place anyway

HARRY BRIDGES MEETS WITH ILA PRESIDENT JOSEPH RYAN

Pacific Coast International Longshoremen's Association President Harry Bridges
and Mat Meehan, editor of the *Pacific Coast Longshoreman*, the official publication
of the Pacific Coast International Longshoremen's Association
were sent to New York to solicit support
from the International Longshoremen's Association
they met with ILA International President Joe Ryan
and Atlantic and Gulf District ILA officers

It was reported on the West coast that President Ryan **“has assured the Pacific Coast that there will be complete co-operation between all Districts in support of the Pacific Coast should a lockout be forced by shipowners. The time has finally arrived when the Longshoremen of the United States are in complete agreement for their mutual benefit.”**²¹⁶

DAVE BECK EXTENDS HIS INFLUENCE BEYOND SEATTLE

In Washington State and parts of Oregon and California the International Brotherhood of Teamsters anchored the American Federation of Labor (AFL) labor efforts
Death of San Francisco's Teamster International Vice-President Mike Casey
caused Dave Beck to move from a statewide power into a larger labor role on the West Coast
when the West Coast's American Federation of Labor (AFL) leadership position
was handed over to Dave Beck instead of his rival, Harry Bridges
Dave Beck, West Coast leader of the Teamsters Union. was very concerned about Bridge's efforts
Teamsters were ordered to cross International Longshoremen's Association (ILA) picket lines
in an attempt to acquire ILA members for membership in the Teamsters Union
but the Teamster Joint Councils in Los Angeles and other California ports remained unworried

²¹⁶ Otilie Markholt, *Maritime Solidarity*, P. 307

MARITIME NEGOTIATIONS CONTINUE

Federal government again requested that negotiations be extended -- October 13, 1936
an investigation would be conducted into the process and arbitration would resolve the issues
Along the Pacific Coast, Maritime Federation of the Pacific (MFP) members were polled
to discover if negotiation should be extended to [October 29]
or would members strike immediately
Resulting vote was overwhelming -- MFP members voted to extend the cut-off date
unions knew it was important to keep the blame for the strike on management
to keep the public on their side

SS CALIFORNIA DOCKS IN NEW YORK

Panama Pacific Line ocean liner *SS California* docked in New York
United States Secretary of Labor Frances Perkins was unable to keep her promises
to Joseph Curran and the International Seamen's Union (ISU) crew of the *SS California*
United States Secretary of Commerce Daniel Roper and the Panama Pacific Line
declared Curran and the strikers to be mutineers
Federal Bureau of Investigation agents met the ship
they began an investigation into the charge of mutiny
Panama Pacific Line took out national advertising attacking Joe Curran for his actions
Curran and other strike leaders were fined two day's pay, fired and blacklisted
Labor Secretary Frances Perkins was able to keep the strikers from being prosecuted for mutiny

WILDCAT STRIKES TAKE PLACE ON THE EASTERN SEABOARD AND GULF COAST

International Seamen's Union (ISU) all along the East Coast struck
in protest of the treatment of union members aboard the *SS California* -- October
ISU officials called on the men to live up to their agreements and crew the ships with labor contracts
they also threatened to expel those who refused -- but these threats had little effect
Joseph Curran became a leader in the unauthorized ten-week strike
Curran was aggressive, articulate and ambitious -- and the times suited him well
he was willing to front for the strong cadre of left-wingers in the ISU
Many International Seamen's Union (ISU) men blamed their union officials
for not backing up the crew in this labor "beef" -- leadership of the ISU was further weakened

RADICAL POLITICAL AND LABOR LEADER ANNA LOUISE STRONG LEAVES THE USSR

Distressed with developments in the USSR, Dr. Strong returned to the United States -- 1936
she had grown disenchanted with the starvation conditions she encountered
which were imposed on the land owning peasant (kulaks) by Premier Joseph Stalin
she made several return trips to the United States but was unable to find solace
in either the Soviet Union or the United States
(Anna Louise Strong was arrested in Russia as a spy and banished from the country [1949]
she moved back to Seattle but was not greeted with acceptance
Dr. Strong moved to the Peoples Republic of China at age 72 [1958]
she was one of few Westerners to gain the admiration of Mao Zedong
she made several return trips to the United States

Dr. Anna Louise Strong remained in Peking (Beijing), China until her death [1970])

FASCISM SPREADS IN EUROPE

World as it had been structured at the end of the Great War was at an end

Treaty of Versailles was a mistake

it had imposed geographic losses on the Austrian Empire and Germany
arms restrictions had also been forced on Germany

Adolph Hitler had reoccupied the Rhineland defying the English, French and his own generals

he sent troops, planes, and equipment to the aid of Spanish dictator General Francisco Franco

Hitler needed a like-minded European ally to offset the two-front threat to Nazi Germany

from the United Kingdom (England, Scotland, Wales, Northern Ireland) and France

Italian dictator Benito Mussolini supported Hitler's expansionist plans for Eastern Europe

Hitler and Mussolini signed an "anti-Communist pact" -- October 23, 1936

aimed at preventing the spread of Communism from the USSR

this had the additional effect of bolstering anti-Communist efforts in the United States
(inadequacies and unreliability of Italy's military forces eventually all but negated

Benito Mussolini's value as Adolf Hitler's ally despite their shared Fascist ideologies)

LEAGUE OF NATIONS IS COMPLETELY INEFFECTIVE IN MAINTAINING WORLD PEACE

League of Nations along with individual democratic nations helplessly watched

as the Fascist army warred against the democratic republic of Spain

in an effort to place Spanish dictator General Francisco Franco into power

League of Nations was being undermined by its inability to exert pressure

democracies watched as fascist army warred against democratic republics

in Spain, Germany, and Italy

rise of Fascist dictators in Germany (Adolf Hitler) and Italy (Benito Mussolini)

defeated all efforts at meaningful diplomacy

Although the League of Nations ultimately failed, it did lay the groundwork for the United Nations

it helped make the idea of collective security a firm principle of mainstream liberal thinking

MARITIME FEDERATION OF THE PACIFIC (MFP) GOES ON STRIKE

Maritime Federation of the Pacific talks with Shipowners' Association of the Pacific Coast ended
all MFP unions simultaneously walked off the job -- midnight October 28, 1936

Maritime Federation of the Pacific Coast Negotiating Committee

was designated the Coast Policy Committee

International Seamen's Union (ISU) member Joseph Curran (famous for the *SS California* beef)

called a second sit-down strike of east coast International Seamen's Union (ISU) members

against orders he received from union officials

this demonstration was, in part, to improve working conditions for ISU members

but Curran also wanted to embarrass the ISU

for earlier abandoning him and his shipmates

(this four-month strike idled 50,000 seamen and 300 ships)

To keep the plight of sailors before the public Joe Curran formed the Seamen's Defense Committee

SAN FRANCISCO PREPARED FOR A CONVULSIVE STRIKE ON THE SCALE OF [1934]

Pacific Coast International Longshoremen's Association President Harry Bridges led San Francisco Bay Area ILA Local 38-44 as they walked off the job on strike in support of the Maritime Federation of the Pacific (MFP) -- October 30, 1936
Bridges used the time off the job to expand recruiting efforts to unionize additional industries
San Francisco Local 38-44 rapidly expanded its membership by at least a thousand new members as bargemen and workers in sugar refineries received aid from the longshoremen

PACIFIC COAST SHIPPING IS SHUT DOWN

Every facet of West Coast maritime transportation stopped -- November 1, 1936
unlike the great battle of [1934], this was a peaceful effort
with the exception of a few steam schooners working under separate contracts
hundreds of firemen, engineers, mates, cooks, stewards, sailors, longshoremen
and warehousemen stopped work up and down the Pacific coast
From the very first, union members were well aware that it could be a long strike
all of the maritime unions settled down for a war of attrition
paid union officials were immediately cut off the payroll
strike leaders ate at the soup kitchen like the other union members
requests for funds from the MFP treasury were closely scrutinized before being fulfilled
Along the waterfront the word was, "An injury to one is an injury to all"
and "Watch out for provocateurs"

MANAGING SUCH A LARGE STRIKE WAS DIFFICULT

Many obstacles had to be overcome -- in San Francisco for instance:

- feeding and housing thousands of sailors away from their homes was a major concern,
- discipline had to be maintained,
- health-and-welfare plans for strikers had to be organized,
- committees on nearly all facets of life were established as volunteers accepted responsibility:
 - a huge empty loft on the Embarcadero, was rented to provide living space,
 - members of the Marine Cooks and Stewards Union
 - took over the job of cooking thousands of meals for the strikers
 - (for three months, Progressive farmers and ranchers near San Francisco
 - donated a large part of the food needed to feed the strikers -- no strikers went hungry)

In other struck port cities:

committees dealing with housing contacted landlords to ask for their cooperation
in allowing the strikers to stay housed in their hotels and apartments
without the pressure of meeting rent deadlines
written guarantees were made stating that rents would be paid
when the men were again earning paychecks
this satisfied the landlords and hotel keepers and alleviated pressure on the men
doctors and nurses were asked to donate time to care for the men's medical needs
they responded with enthusiasm
strikers needing clothing were assisted by a committee which solicited donations
from many of the clothing shops near the waterfront that catered to seamen in good times

committee members responsible for security appeared in the ports
their job was to keep drunks off the waterfront and to maintain order and discipline
if someone became inebriated and showed signs of disorientation,
he was escorted back to his hotel by the union patrol
if he persisted in threatening the tranquility of the waterfront,
his fink book was taken from him
and he faced a disciplinary committee of his union peers
union men came down hard on the offender
two weeks of peeling potatoes or onions or washing pots and pans
encouraged most to stay sober and out of trouble

ILA PRESIDENT JOSEPH RYAN SUPPORTS ONLY A PORTION OF THE PACIFIC STRIKE

After the Pacific Coast tie-up began strikers learned
what International Longshoremen's Association President Joe Ryan meant by "support"
he recognized as unfair only those companies that had rejected ILA contract demands
he excluded from his support the twenty-six inter-coastal and foreign lines
that had signed agreements with the ILA just before the strike
Ryan also sided with International Seamen's Union (ISU) officials
as they attempted to break the East Coast seamen's Wildcat strikes in support of the SUP

NATIONAL ELECTION RESULTS AGAIN FAVORED DEMOCRATS

Franklin Delano Roosevelt was reelected to a second term as president -- November 3, 1936
FDR defeated Republican Alfred M. "Alf" Landon in a presidential landslide victory
Franklin Roosevelt swept the electoral votes: 523-8
Roosevelt won every state but Maine and Vermont
popular vote margin favored Roosevelt by more than eleven million votes
Democrats also continued to control the U.S. House of Representatives and the U.S. Senate

STATE ELECTION RESULTS ALSO SHOWED STRONG DEMOCRATIC SUPPORT

Democrat Clarence Martin was returned to a second term as Washington governor
although Radio Speaker John C. Stevenson and other leading WCF candidates
lost in their attempt to achieve office
WCF had become an influential player in Washington politics
it had established a reputation as a Progressive leader
with favorable appeal in future elections
it had made radical social and economic reform a legitimate topic of public politics

Three incumbent Congressmen were elected:

- Second District Congressman Monrad C. "Mon" Wallgren, Democrat
- Third District Congressman Martin F. Smith, Democrat
- Fourth District Congressman Knute Hill, Democrat

Three Congressional seats from Washington State changed:

- First Congressional District Congressman Warren G. Magnuson, Seattle Democrat
replaced U.S. Representative Marion A. Zioncheck
Magnuson became one of the youngest members of Congress at age thirty-one

- to be carried in by Roosevelt's popular coat tails
- all of his life he considered himself a New Deal Democrat
- (he will serve in U.S. House of Representatives until his resignation [1937-1944])
- Fifth District Congressman Charles H. Leavy, Spokane Democrat
- filled the seat left vacant when Samuel B. Hill was appointed
- United States District Court judge for Eastern Washington
- (Charles Leavy served until his resignation from office [1937-1942] when he was appointed
- United States district judge of the western district of Washington)
- Sixth District Congressman John M. Coffee, Tacoma Democrat
- replaced Democrat U.S. Representative Wesley Lloyd who died in office)
- (he will serve five terms in office [1937-1947])

State Initiatives to the voters meet with mixed success:

- thirty counties had the proposal for Public Utility Districts (PUDs) on the ballot
- by this time there was another reason to vote in favor of a public utility
- as the federal government had started construction
- on the Grand Coulee Dam in Eastern Washington
- and Bonneville Dam east of Portland
- as the laws were written, publicly owned utilities had preference
- to the electricity generated by those two huge facilities
- idea of getting some of that power was just too enticing
- Snohomish County voters the Snohomish County Public Utility District Number One
- by a vote of 13,850 in favor and 10,463 against -- November 3, 1936
- fourteen other county-wide Public Utility Districts also were formed that year alone
- Initiative 119 to create a Socialist state
- was supported by the Washington Commonwealth Federation (WCF) and liberal Democrats
- this Initiative had asked for Washington to become a Socialist state by imposing
- a "production for use" rather than "production for profit" economic system
- Washington voters handed Washington Commonwealth Federation's Initiative 119
- a resounding defeat 370,140 votes to 97,329 votes -- more than a three-to-one margin
- production-for-use Initiative was the peak of the WCF's radicalism

Due in large part to the efforts of the Washington Commonwealth Federation Washington State was considered to be a stronghold of unionism and radical politics in the 1930s (and [1940s]) on one occasion Democratic National Party Chairman James Farley allegedly quipped, "There are forty-seven states in the Union and the Soviet of Washington."

COMMITTEE FOR INDUSTRIAL ORGANIZATION (CIO) GROWS IN STRENGTH

Franklin D. Roosevelt won a smashing reelection victory

union membership exploded across the nation and labor militancy expanded in proportion

John L. Lewis' Committee for Industrial Organizations (CIO) represented a collection of unions within the American Federation of Labor (AFL) that gathered to support industrial unionism

John L. Lewis continually denounced the AFL's policies as the CIO offered organizing support to workers in the rubber industry who went on strike in defiance of the AFL's leadership

this opposition only increased the stature of the CIO and John L. Lewis

in the eyes of those industrial workers set on organizing

because they were disillusioned with the AFL's ineffective past performance
AFL leaders from the outset, however, treated the CIO as an enemy
they refused to deal with the new organization and demanded that it be dissolved
(CIO proved to be very successful as within a few years in addition to the rubber industry
big steel, automobile, and other major industries had been organized
this intensified the division within the AFL which refused to accept the new unions
because they saw both industrial workers and industrial unions as unskilled laborers)

AMERICAN FEDERATION OF LABOR (AFL) FACES INTERNAL STRIFE

East Coast-based International Longshoremen Association (ILA) President Joseph Ryan
was facing an internal civil war
AFL and John L. Lewis' Committee for Industrial Organizations competed for members
both offered rival visions of labor union organization and what unions should accomplish
Under the leadership of John L. Lewis, Committee for Industrial Organizations (CIO)
stressed industrial unionism and the organization of unskilled and semiskilled workers
while the AFL had historically be organized by crafts
CIO tenaciously set out on its mission to organize the unorganized
unions were gathered up as fast as possible
CIO attempted to expand to include Longshoremen and Warehousemen, lumbermen,
fur workers, and members of American Newspaper Guild
CIO criticized the AFL for excluding nonwhite workers and frequently women
AFL's modest if not actually conservative goals were pointed out to groups being recruited
AFL claimed that CIO unions were dominated by Communists interested only in radical ideas
and that their rival labor organization weakened
what should have been a single united labor front
on the other hand, most of the CIO unions practiced "social movement unionism"
which advocated a variety of social justice programs including expanding economic rights
along with equal political and social rights for minorities
In truth, while the organizing principals were vastly different, the political differences were not
both AFL and CIO supported the Democratic Party and worked together on political campaigns
both pushed for reforms to strengthen the social safety net supporting those in need
neither was actually conservative nor Communist controlled
At the same time that unions were fighting over philosophy and membership
ALF and CIO was preparing to negotiate new contracts with a variety of maritime employers

MFP FACES INTERNAL AND EXTERNAL CONFLICT

It appeared the on-going West Coast strike was well on its way to being won by the labor unions
when political differences in the Maritime Federation of the Pacific (MFP) came into the open
Leadership of the maritime movement split over a number of issues
first, Pacific Coast International Longshoremen's Association Harry Bridges declared
if the strike could not be settled without sailors accepting the "fink book,"
they should take the book
ship owners also played their role in fragmenting the MFP
having failed thus far to break the unions, ship owners tried a new tack

if they negotiated contracts with only one or two unions they could divide the workers
Harry Lundeberg was on the verge of taking the Sailors' Union of the Pacific (SUP)
out of the strike because he had already reached a long-term agreement with ship owners
who no longer attacked him
since Harry Lundeberg of the Sailor's Union of the Pacific (SUP) was anti-Bridges,
ship owners were inclined to favor him
Lundeberg lured John Ferguson of the Marine Firemen's Union (MFU) over to his camp
because Ferguson was drawn over to Lundeberg's position
ship owners were happy to play ball with him
Lundeberg decided not to abandon the strike as the longshoremen had done in [1934]
Harry Lundeberg of the SUP and John Ferguson of the Marine Firemen's Union (MFU)
were called to a conference with the Shipowners' Association of the Pacific Coast

JOE CURRAN EXPANDS THE INTERNATIONAL SEAMEN'S UNION (ISU) STRIKE

East coast International Seamen's Union (ISU) men used the sit-down technique
aboard the *SS American Trader* in New York
other ISU men in Boston struck in support of the Maritime Federation of the Pacific -- November
daily mimeographed strike bulletins were printed denouncing employers
and ISU officials who did not support the wildcat strikes
ISU rebel Joseph Curran negotiated contracts with two small companies: Prudential and Transoceanic
this was made possible by support from the Marine Engineers Beneficial Association,
the American Radio Telegraphers Association, and the Masters, Mates and Pilots
all of whom were striking these companies at the time

PACIFIC COAST STRIKE IS NOT ABLE TO EXPAND

International Seamen's Union (ISU) held authorized strikes, Wildcat strikes and sit-down strikes
all in support of the Maritime Federation of the Pacific (MFP)
and most in opposition to the leadership of the ISU
However, attempts to widen the Pacific Coast maritime strike into a national action
by extending it to the East and Gulf Coasts, resulted only in violence on the Atlantic seaboard
ISU leaders refused to expand the strike effort

JOSEPH CURRAN RECRUITS FOR HIS OWN UNION

Curran believed it was time to abandon the conservative International Seamen's Union (ISU)
he began to sign up members for a new, rival union
organizing was so intense that hundreds of East coast ships delayed their sailing time
as seamen listened to organizers and signed union card

PACIFIC MARITIME ASSOCIATION REACHES SOME AGREEMENTS

Harry Lundeberg had a simple approach to bargaining: "Come across with a good contract for my
sailors or the Communists will take control of the union."
his method paid off when good contracts for the SUP and MFU were reached
working conditions were unequalled by any of the other seagoing unions
tiny cracks in union solidarity started to appear

SUP AND MFU MEMBERS REJECT THE AGREEMENT OFFER

Marine Firemen's Union (MFU) members held a special meeting to discuss the proposed agreement
John Ferguson made his report about the deal offered
while the terms were favorable to the union, the rank and file demanded they stick together
union members recognized this maneuvering for what it was,
a way of playing one union against another
MFU had pledged before the strike: "We all came out together; we'll all go back together."
Marine Firemen's Union members would not go back on their word
they would not return to work while the other unions lacked contracts
Rank and file members of the SUP, over Lundeborg's objection, took this same position
shipowners were rebuffed in their union-busting effort

SHIPOWNERS ALSO FEEL INTERIOR STRIFE

While things looked peaceful in the Pacific Maritime Association shipowners' ranks,
the opposite was actually true
since all the major policies were engineered and pushed through by the "Big Three"
Matson Line, Dollar Line, and American and Hawaiian Line
smaller operators who wanted to settle and get their ships to sea expressed their discontent

SEATTLE POST-INTELLIGENCER ACHIEVES A SETTLEMENT IN FAVOR OF THE UNION

After a strike lasting four months, an American Newspaper Guild Chapter was accepted by the
Seattle Post-Intelligencer over William Randolph Hearst's objection -- November 29, 1936
Success of the *Post-Intelligencer* Newspaper Guild strike
caused every major newspaper in the San Francisco region
to enter into agreements with their news writers
even Los Angeles, stronghold of the open shop on the Pacific Coast,
was invaded by unions with increasing success

PORT OF VANCOUVER, WASHINGTON BECOMES A MAJOR SHIPPING LINK

Port of Vancouver Terminal No. 2 was dedicated -- December 3, 1936
this was a huge port facility that offered an unobstructed path to the Pacific Ocean
good highway, railroad connections, and improved dock facilities
made Vancouver, Washington a major port on the west coast

SEATTLE POST-INTELLIGENCE LAUNCHES AN ATTACK ON DAVE BECK

P-I joined the *Seattle Times* in battle against Dave Beck and his AFL Brotherhood of Teamsters
newspapers, and radio called Beck an outlaw
Dave Beck again sued for defamation of character and liable-- again the issue was settled out of court
William Randolph Hearst's editorial writers shifted the attack
they argued their freedom of the press was endangered by Beck's lawsuits
however, Hearst's unconcealed negative attitude toward organized labor
advanced respect and affection for Dave Beck

CHANGES IN THE LOGGING INDUSTRY

Workers in the timber industry saw advances ranging from high-lead to truck-and-tractor logging
newer logging techniques relied far more heavily on truckers

unresolved was the question of who should represent these truckers
Squabbling between labor organizations
was based on the on-going issue of craft versus industrial unions: AFL versus CIO
timber workers preferred the industry-wide organization
of the Committee for Industrial Organization (CIO)
many mill hands and loggers fell in with the more aggressive tactics and militant goals of the CIO

UNITED BROTHERHOOD OF CARPENTERS AND JOINERS HOLDS THEIR CONVENTION

AFL's United Brotherhood of Carpenters and Joiners (UBCJ) leadership
had earned a reputation for doing nothing to protect Pacific Northwest timber workers
Even John L. Lewis' Committee for Industrial Organization (CIO) had paid them little attention
while the Communists within the International Woodworkers of America (IWA) organization
solidly held the respect of their fellow workers with Harold Pritchett safely at the helm
Lakeland, Florida was the location of the UBCJ Convention -- December 7-15, 1936
Sawmill and Timber Workers Union delegates from the Northwest who were still in the AFL
traveled across the entire continent to attend the meeting
they were designated as "non-beneficial" members by the UBCJ
and were forced to observe the proceedings without a vote
quickly the familiar cry of "No taxation without representation"
resounded throughout the Northwest woods and sawmills
Rift between the American Federation of Labor (AFL) and CIO was apparent
(but the coming complete split was held at bay)

MARITIME UNION STRIKES CONTINUE TO TIE UP PACIFIC COAST SHIPPING TRAFFIC

In Pacific Coast ports 234 vessels lay strikebound -- December 1936
141 deep-water vessels, sixty-one steam schooners and thirty-two foreign ships
of these, seventy-six lay idle at San Pedro, seventy-three in San Francisco Bay,
twenty-four at Portland, forty-two at Seattle, seven at Vancouver, B.C.
and twelve at other Pacific Coast and Hawaiian ports

Associated Press reports marveled that the strikers had **"been molded into a social and economic unit without parallel in the history of industrial labor."**

newspaper wire stories related:

"Forty thousand men on strike but none of them idle.

"Nearly 250 ships tied up...business losses estimated at \$7,000,000 a day---foreign trade badly affected...thousands of families tightening their belts as they await Christmas.

"But nobody killed...no disorder...no arrests for picketing...no extra police needed...union police who maintain perfect order."²¹⁷

But appearances could often be deceiving

²¹⁷ Otlle Markholt, *Maritime Solidarity*, P. 311.

PERISHABLE CARGO ISSUE SPLITS THE MARITIME FEDERATION OF THE PACIFIC (MFP)

One sharp difference of opinion between Harry Lundeberg and the rest of the maritime unions was related to the issue of releasing perishable cargo from struck ships
Shipowners called perishable cargo still lying in the ships' holds
cargo that was "vitally needed by the people"
it was a gimmick that owners felt would arouse anger against the unions
in fact many members of the public, not realizing it was a ruse,
did react favorably to the shipowners' propaganda
they urged the unions to reconsider their policy of leaving the cargo in the holds
actually, there was not that much perishable cargo remaining strike-bound
but public irritation against the strike was beginning to be felt
Issue of perishable cargo was presented to the MFP Coast Policy Committee
it was debated for several hours
representatives from the Sailors Union of the Pacific (SUP)
argued for Lundeberg's policy of not moving one ounce of the cargo
but others on the strike committee urged that the cargo be worked
so that one more argument of the shipowners could be deflated
majority of Maritime Federation of the Pacific Coast Policy Committee
were in agreement with delivering perishable cargo

SUP UNION LEADERS FIND THEMSELVES BEING OPPOSED BY THEIR MEMBERS

Harry Lundeberg, Sailors Union of the Pacific, and John Ferguson, Marine Firemen's Union, traveled to Washington, D.C. presumably to consult with some pro-labor congressmen
After a series of meetings, they wired back that several congressmen urged
that unless the strike were ended anti-labor legislation would be forthcoming from Congress
Lundeberg and Ferguson urged their rank and file to make immediate peace with the shipowners
when these telegrams were read, enraged Marine Firemen's Union (MFU) members
called for Ferguson's resignation -- Ferguson got the message and returned to San Francisco
his Washington, D.C. visit was never mentioned again
Lundeberg was not sure what position the Sailor's Union of the Pacific should take in the strike
however, he decided not to abandon the effort (as the longshoremen had done in [1934])

CIO UNITED AUTO WORKERS GO OUT ON STRIKE

Members of the United Auto Workers conducted a sit-down strike at General Motors
Fisher Body plant in Flint, Michigan was struck -- beginning December 30, 1936
idling 112,000 Committee for Industrial Organizations (CIO) workers
in a conventional strike the union takes its members outside the plant
and attempts to prevent the employer from operating
by discouraging other employees from entering the factory
in a sit-down strike, workers physically occupy the plant keeping management and others out

LAST OF THE INTERURBAN TRAINS CEASES OPERATION

Independent Seattle & Rainier Valley Railway (Renton interurban)
struggled to survive under incompetent management

Weary of accidents and unsafe tracks, the City of Seattle revoked they company's franchise and the line folded -- January 1, 1937

NEWLY-ELECTED CONGRESSMEN TAKE OFFICE

Because of the Twentieth Amendment to the U.S. Constitution [January 23, 1933] members of Congress were for the first time sworn into office on January 3, 1937 Democratic U.S. Senators Homer T. Bone and Lewis B. Schwellenbach continued in office Incumbent national representatives who were reelected were:

Second District Congressman Monrad C. ("Mon") Wallgren, Democrat

Third District Congressman Martin F. Smith, Democrat

Fourth District Congressman Knute Hill, Democrat

Newly elected national representatives from Washington were:

First Congressional District Congressman Warren G. Magnuson, Seattle Democrat

Fifth District Congressman Charles H. Leavy, Spokane Democrat

Sixth District Congressman John M. Coffee, Tacoma Democrat

HARRY BRIDGES' SAN FRANCISCO LONGSHOREMEN END THEIR STRIKE

After a sixty-seven day strike, Pacific Coast International Longshoremen's Association Local 38-44 settled their strike against the Shipowners' Association of the Pacific Coast

Pacific Coast longshoremen returned to work with mixed results -- January 5, 1937

18,000 International Longshoremen's Association (ILA) members

gained union hiring preference and union hiring halls,

but wages and hours remained to be negotiated or arbitrated

Harry Bridges blamed the discouraging result

on International Longshoremen's Association (ILA) President Joseph Ryan

and his lack of support

Ryan responded by calling Bridges a puppet of the international Communist conspiracy

WAREHOUSEMEN MADE GREAT GAINS DURING THE STRIKE

Newly organized warehousemen returned to work with significant gains

Harry Bridges' American Federation of Labor (AFL) warehousemen

had obtained a closed-shop agreement, substantial wage increases

and a forty hour work week

additionally, they had won union hiring halls, paid vacations and seniority rights

in place of the continuous turnover that previously resulted from former hiring practices

This victory in the San Francisco Bay Area inspired warehousemen up and down the coast

new AFL warehouse unions spread quickly and widely to nearly every port city

(and later in many key communities in the interior of the United States

and on the East and Gulf Coasts as well)

PEARL WANAMAKER BECOMES A STATE SENATOR²¹⁸

State Senator L.E. Tewksbury resigned his 38th District seat -- January 8, 1937

²¹⁸ Michael Hood, HistoryLink.org, Essay 9171, September 26, 2009.

Island County Commissioners appointed Wanamaker to the state senate position
As a state senator, Pearl Wanamaker hit her stride as an innovative and skillful legislator
she developed her interest and knowledge of education policy and honed her political insight
she built a power base among her peers and developed a strong, statewide constituency
who became known (sometimes negatively) as the “school forces”
public school interests, Parent-Teacher Associations (PTA), higher education advocates,
teachers’ unions and other professional educators’ groups
she made enemies in the legislative and political arena
particularly with conservative Republicans

MARITIME FEDERATION OF THE PACIFIC (MFP) MEMBERS REMAINED ON STRIKE

In a demonstration of union solidarity, the San Francisco Bay Area warehousemen
contributed \$1,000 each week to the joint strike fund until the maritime strike ended
Harry Bridges, in an effort to solidify the Maritime Federation of the Pacific (MFP),
made his first bid for West Coast union leadership

PACIFIC MARITIME ASSOCIATION IS FORMED BY SHIP OPERATORS

Following the lead of the Matson Navigation Company and American President Lines,
shipping operators formed a new confederation of employers: the Pacific Maritime Association
Pacific Maritime Association was a vehicle through which the Pacific Coast ship operators
dealt with sea and waterfront unions
In a complete reversal of previous employer policy, the new association
decided to pursue a conciliatory relationship with the International Longshoremen’s Association
and its Pacific Coast leader Harry Bridges

STATE LEGISLATURE GOES INTO REGULAR SESSION

Twenty-fifth session of the legislature was called to order in Olympia -- January 11, 1937
Democrats again controlled both houses of the legislature by large majorities
forty-one to five Republicans in the State Senate
ninety-three to six Republicans in the State House of Representatives
Governor Clarence Martin considered his reelection to be a mandate to move the state to the right
When the legislature met the governor recommended two proposals that antagonized Progressives
one was an increase in old age pensions which was smaller
than organizations representing the elderly wanted
this proposal passed the legislature with ease
second was a bill that would severely restrict recently won rights of labor:
•limitations would be placed on picketing;
•compulsory arbitration would be required in labor disputes
this bill was too conservative for passage by legislators
legislators also had enough Progressive spirit to block efforts
to weaken labor’s relationship with business
Progressives, in their bitter disappointment about Governor Martin’s pension bill,
determined to establish a lobbying organization of their own
Communist activist Howard Costigan formed the Washington Old Age Pension Union

as an auxiliary to the Washington Commonwealth Federation (WCF)

FRANKLIN DELANO ROOSEVELT IS INAUGURATED FOR A SECOND TERM

Passage of the Twentieth Amendment to the U.S. Constitution [1933]

changed the inauguration date from [from March 4] to January 20

In his Inaugural Address President Roosevelt promised further reform to improve conditions for “one-third of a nation ill-housed, ill-clad, ill-nourished.” -- January 20, 1937

SAUL HAAS' KIRO RADIO RECEIVES A NATIONAL AFFILIATION

Columbia Broadcasting System (CBS) became affiliated KIRO radio-- 1937

known as “The Friendly Station,” KIRO personalities broke from the formal announcing style that was commonplace during the early days of radio

Saul Haas' life style occasionally ruffled Seattle's leaders -- his Jewish heritage didn't help he was barred from establishment clubs in town,

he refreshed himself at the more hospitable Harbor Club in the Norton Building

NEWLY-ELECTED CONGRESSMAN WARREN MAGNUSON EFFECTIVELY USES RADIO

Like President Franklin Roosevelt, Representative Magnuson pioneered the successful use of radio his speeches were straight from the Populist agenda

he supported the Civilian Conservation Corps (CCC) and higher wages for workers

“Business prosperity depends on wages.... Unemployment means no business, economic destruction. There is high pressure propaganda circulated by so-called civic organizations who use their puppets in public office to knock down wages. Public, beware! We're in a new era in our history. By 1930 we were near the destruction of the American system.... Business failed to revive the system.... Democrats saved the time with Franklin Roosevelt and the New Deal.... Future historians will point to the New Deal as being responsible for the greatest single advance in economic progress -- shorter work weeks, better working conditions, better hours and more leisure time and happiness for our people.”²¹⁹

MARITIME FEDERATION OF THE PACIFIC (MFP) CONTINUES BARGAINING TALKS

Because of the unity of the strikers, smaller the Pacific Maritime Association (PMA) shippers began to exert pressure on the “Big Three” shipping companies,

Matson Line, Dollar Line, and American and Hawaiian Line, for an end to the strike still being carried on by the Maritime Federation of the Pacific (MFP)

Finally, the “Big Three” shipping companies relented

negotiations with the sailors began in earnest -- February 1, 1937

MARITIME FEDERATION OF THE PACIFIC (MFP) STRIKE ENDS

The Pacific Maritime Association (PMA) quickly worked out agreements with all maritime unions after ninety days of being on strike, the solidarity of the MFP strikers still was not broken

Maritime Federation of the Pacific (MFP) unions accepted an offer

from the Pacific Maritime Association (PMA) -- February 4, 1937

²¹⁹ *Magnuson Papers* University of Washington, 3181-1. 10/4.

concessions proposed to the maritime unions included a six hour work day
and union control of hiring halls, wage advances and overtime pay
licensed officers also won a wage increase

PRESIDENT FRANKLIN ROOSEVELT IS FRUSTRATED BY THE U.S. SUPREME COURT

During FDR's first term, the U.S. Supreme Court struck down several New Deal measures
that were intended to bolster economic recovery during the Great Depression
There were four justices leading the way toward declaring New Deal programs unconstitutional:
George Sutherland, Willis Van Devanter, Pierce Butler, and James Clark McReynolds
they became known as the "Four Horsemen"
sometimes decisions declaring a New Deal program unconstitutional were five-to-four
with a justice Owen Roberts joining the Four Horsemen
New Deal supporters charged that a narrow majority of the court was obstructionist and political
they said the court was composed of nine men -- all over sixty and generally conservative
FDR felt they were "thwarting the will of the nation"

PRESIDENT ROOSEVELT PROPOSES TO EXPAND THE U.S. SUPREME COURT

Since the U.S. Constitution does not limit the size of the Supreme Court,
Roosevelt sought to counter the entrenched opposition to his political agenda
by expanding the number of justices in order to create a pro-New Deal majority
Roosevelt proposed adding more justices to the Supreme Court
one new justice would be added for every justice who refused to retire after the age of seventy
FDR could then appoint as many as six friendly justices
enough justices to uphold his New Deal agenda
Roosevelt's sweeping victory in the previous election emboldened the president
he told his cabinet members at a special meeting -- February 5, 1937
that he would send Congress a message proposing to reorganize the federal judiciary system
Opponents viewed the legislation as an attempt to stack the court in favor of the administration
and labeled the idea the "Court-packing Plan"

MEMBERS OF THE MARITIME FEDERATION OF THE PACIFIC VOTE ON A NEW CONTRACT

Terms of the proposed contract between the Pacific Maritime Association (PMA) shipowners
and the Maritime Federation of the Pacific (MFP)
were put to a vote by the Pacific Coast sailors' unions -- February 7, 1937
Overall, union members viewed the results of their strike as positive
especially when it was remembered that ship owners initially had offered nothing
However, not all of the unions in the Pacific Maritime Association were pleased:

- 7,000 sailors had gained an eight-hour day, increased wages and overtime pay;
- 4,000 Cooks and Stewards settled for nine hour work days on passenger vessels;
- 3,000 Maritime Firemen, Oilers, Watertenders and Wipers gained increased pay,
control of hiring and an eight-hour day -- but they did not like their new work rules;
- 3,000 Marine Engineers achieved union recognition, pay increases, and overtime pay;
- 3,000 Masters, Mates and Pilots also achieved union recognition, pay increases,
and overtime pay but they did not receive union preference in hiring;

- 2,000 Telegraphists acquired hiring control, eight-hour day, and an increase in pay

Even so, the strikers prepared to make the best of their bargains and returned to work although the maritime unions had won little of significance regarding specific demands the strike was successful in forcing employers to recognize that unions were there to stay

LAST GREAT NORTHERN RAILWAY SILK TRAIN LEAVES SEATTLE

Great Northern Railway continued to compete with the Northern Pacific and Union Pacific railroads to be the leading rail line handling silk -- 1937

However due to an increasing number of factors shipping continued to decline for U.S. railroads:

- decreasing silk prices,
- lower freight rates on the all-water routes,
- competition from “artificial silk” (rayon and nylon),
- deteriorating political relations with Japan

Great Northern Railway ran its last Silk Train composed of four baggage cars and a coach which left Seattle -- February 7, 1937

for three decades the famous Great Northern Railway silk trains

had captured the public’s imagination and satisfied its yearning for romance in their rush across the continent, these trains generated publicity, excitement, and revenue (Demise of the silk trains did not mean a decline in the demand for silk in the United States, however despite strained political relations and threatened boycotts against Japanese products,

America imported fifty-four million pounds of silk [1938]

more than ninety percent of it was used to produce the 564 million pairs of silk stockings that American women purchased that year)

More than ninety percent of the silk transported passed through the Panama Canal almost all of it on new, fast Japanese ships

SEVERAL UNIONS ACROSS THE NATION GO OUT ON STRIKE

Striking United Auto Workers in Flint, Michigan elected their own “Mayor” and other civic officials United Auto Workers kept a regular supply of food coming to the strikers inside while sympathizers marched in support outside

General Motors and the United Auto Workers settled the strike -- February 11, 1937

General Motors surrendered as a result of the Flint sit-down strike

during which CIO leader John L. Lewis negotiated with company executives,

Governor Frank Murphy of Michigan, and President Franklin Roosevelt

U.S. Steel, facing a similar situation, conceded to the steelworkers without a strike

John L. Lewis and Myron Taylor, chairman of the U.S. Steel Corporation, secretly negotiated an agreement between the CIO Steelworkers Organizing Committee and the company

SOME MEMBERS OF CONGRESS BEGIN TO OBJECT TO ROOSEVELT’S NEW DEAL

In addition to the conservative U.S. Supreme Court

Roosevelt’s New Deal reform program was slowed by an increasingly obstinate Congress including some isolationist Democrats

Washington Senator Homer T. Bone was among those

he did not fully support FDR’s controversial effort to reorganize the Supreme Court

DETROIT IS HIT BY A WAVE OF SIT-DOWN STRIKES

Only days after the new contract was ratified by United Auto Worker members,

Detroit was hit by a wave of strikes

laundry workers, cleaning women, high school students working as delivery workers,
and other sit-down strikes were held

More than a hundred young women workers at one of the forty Woolworth stores in the city
stopped work, ushered the customers out, shut the doors

they called the manager to come to a conference with all of them -- February 27, 1937
they demanded raises, time and a half for working more than forty hours week, lunch allowances,
breaks, company pay for uniforms and recognition of the Waiters and Waitresses Union
hiring would take place only through the union

Waiters and Waitresses Union had only one staff person there

none of the striking women had ever been in a union before

audacity of the strikers was apparent as they were up against the largest retailer in the era

Woolworth's had more than 2,000 stores in the U.S., Canada and Cuba

it had 737 stores in Great Britain and eighty-two in Germany

Woolworth's employed 65,000 workers -- almost all young women

it was viciously anti-union and had a racist, white-only hiring policy

United Auto Workers Union (UAW) head Homer Martin came to Woolworth's to pledge his support

head of the Detroit and Wayne County American Federation of Labor (AFL)

showed up at the strike the first day -- he provided union solidarity and donated money

Five hours after the strike began, Kresge, Woolworth's biggest competitor,

raised its workers' wages from \$14 a day to \$17 a day

all over downtown Detroit, bosses were giving their workers raises

in an attempt to stave off similar sit-downs

WOOLWORTH STRIKE SPREADS

Waiters and Waitresses Union shut down a second store with a sit-down strike

they threatened to spread the strike to all forty Woolworth stores in the Detroit area

Hotel and Restaurant Employees' Union was called in by the Woolworth strikers

during the strike the cook's union supplied meals

musician's union supplied entertainment

hotel workers from all around the city came to the strike location to picket and show solidarity

Sit-downs spread among thousands of local workers in Detroit itself

from waitresses to kitchen workers to cafeteria, hotel, and factory workers

STORE CLERKS NATIONWIDE ARE SUCCESSFUL IN THEIR ORGANIZING EFFORTS

News of the Woolworth strike broke in the national media during the next few days

support flowed in from around the country

Retail Clerks in New York started a solidarity campaign

As a result of the Woolworth strike, variety stores, grocery stores and department stores

were organized in St. Paul and Duluth, Minnesota; Superior, Wisconsin; and San Francisco

Tacoma and Centralia, Washington

In Seattle, three thousand clerks in twenty-three stores, including Sears, J.C. Penney, Frederick & Nelson, the Bon Marche (Macys), and Lerner's won not only a forty-hour week but a pay increases for employees totaled at least one half-million dollars

WOOLWORTH RETAIL CLERKS WIN A LABOR VICTORY

Woolworth, the biggest retail giant in the world at that time, caved in -- March 5, 1937 striking workers in Detroit won all of their demands including a union shop
Waiters and Waitresses Union imposed a uniform contract which covered 2,500 workers in all forty stores in Detroit
Effects of the strike rippled for a year
(in Detroit alone, there were sit-downs at Lerner's, at Federated Department Stores, and numerous other downtown stores)

LABOR-MANAGEMENT STRIFE IN TACOMA

All AFL craft unions in Tacoma were represented by Tacoma Central Labor Council
it was agreed by the Labor Council that no craft union would settle proposed contracts separately
Employers formed the Industrial Conference Board to stop union organization and advances
this Conference Board offered the services of bargaining experts and labor consultants to Tacoma businesses
After long negotiations between the Industrial Conference Board and Peoples Store in Tacoma
Peoples Store employees in Tacoma went on strike -- 1937
nine other department and variety stores in Tacoma (700 employees) were locked out
Soon, direct negotiations with between labor and company management
without use of the Industrial Conference Board
resulted in a Blanket Agreement covering all stores affected by the strike and lock out
wages were increased and paid vacations were won by union members

PRESIDENT FRANKLIN D. ROOSEVELT ANNOUNCES HIS COURT REFORM TO THE PUBLIC

FDR unveiled his plan to add members to the U.S. Supreme Court in a Fireside Chat -- March 9, 1937
opponents, even some Congressional Democrats, were appalled by the proposal
But just as the opposition was gaining strength, an unexpected turn of events occurred
U.S. Supreme Court upheld as constitutional
both the [1935] Wagner Act and the [1935] Social Security Act

MT. OLYMPUS NATIONAL PARK IS EXPANDED

(President Grover Cleveland designated the area as the Olympic Forest Preserve [1897]
President Theodore Roosevelt created Mount Olympus National Monument [1909])
U.S. Forest Service announced plans to log off vast stands of hemlock in the Olympic National Forest for pulp and paper use -- March 1935
Second Congressional District U.S. Representative Mon Wallgren of Everett responded
he introduced legislation to add 400,000 acres of National Forest
in a proposed 648,000 Mt. Olympus National Park
U.S. Forest Service was not satisfied with the plan to expand the protected area
neither was President Franklin Roosevelt who wanted even more acreage protected

U.S. SUPREME COURT AGAIN UPHOLDS A NEW DEAL LAW

In *West Coast Hotel v. Parrish*, the U.S. Supreme Court upheld a Washington state minimum-wage law conservative justice Owen Roberts, who previously sided with the court's anti-New Deal bloc, voted with the majority creating a new pro-New Deal majority this shift ensured that government intervention to improve the economy would no longer be overturned as unconstitutional

DAVE BECK FORMS THE WESTERN CONFERENCE OF TEAMSTERS

Dave Beck rose to a leadership position in the Seattle Brotherhood of Teamsters Beck's Teamster truck drivers used wrenches and jack handles to organize as they brought into their Union milkmen, brewery workers, and department store clerks Dave Beck's ability to organize was legendary having worked, and in some cases bullied, his way through the Northwest labor scene one employee and one employer at a time Beck used Teamsters Union success to create the Western Conference of Teamsters International to counter Bridges' effort to expand his Pacific Coast International Longshoremen's Association Beck's regional organization served him as a brilliant and powerful organizing device -- 1937

DAVE BECK ELECTED PRESIDENT OF AFL TEAMSTERS WESTERN CONFERENCE

Dave Beck was elected president of the Western Conference of the Teamsters International which gave him more control over Teamster forces throughout the Western United States he used his union members to engage in fierce organizing battles and membership raids Dan Tobin, International Brotherhood of Teamsters' President for thirty years, began to feel Dave Beck was a potential rival for his position

NATIONAL LABOR RELATIONS ACT IS DECLARED CONSTITUTIONAL

(Title I of the National Industrial Recovery Act [NIRA, Wagner Act, or Wagner-Connery-Act] had been found to be unconstitutional in a 5-4 U.S. Supreme Court ruling [May 27, 1935] Congress responded by passing the National Labor Relations Act [NLRA] [July 5, 1935] this act also was challenged in court)

U.S. Supreme Court in *National Labor Relations Board v. Jones & Laughlin Steel Corporation* ruled 5-4 the National Labor Relations Act (NLRA or Wagner Act) was constitutional -- April 12 Congress, indeed, had the power under the Commerce Clause to regulate labor relations

DAVE BECK EXPANDS THE REACH OF THE TEAMSTERS UNION

Once the Western Conference was established and Dave Beck was in place as its president he worked his way south he organized Teamsters Union locals in Oregon and then in northern California in places like Stockton, Fresno, Oakland and San Francisco Dave Beck next focused on Los Angeles Merchants and Manufacturers Association of Los Angeles had for twenty years kept most unions out of the city he strode into the L.A. office of the president of United Parcel Service (UPS)

and told the CEO that he would organize Los Angeles
UPS' CEO informed Beck that United Parcel had millions of dollars to use in a labor dispute
therefore, there was no way that Beck would get a foothold in L.A.
Dave Beck reminded the businessman that contracts were already in place all along the coast,
those contracts would be honored but, Beck said, but when those contracts ran out
not even a get well package would make its way out of Los Angeles Beck warned him
if UPS had millions to fight with in L.A., Beck noted, they better have more millions
to fight with in every other major city along the coast
Within a few days United Parcel Service signed a contract with the Teamsters in Los Angeles
Beck moved on using the same tactics successfully with other trucking firms throughout the city
however, the lesson was not yet learned by all businesses

DUST BOWL STATES CONTINUE TO SUFFER

Another year of unprecedented dirt storms hit the Midwest -- 1937
day after day, Dust Bowl farmers unwillingly traded fields as the land moved back and forth
between Texas and Kansas
and of course there were the usual floods in some areas -- which only added variety to the misery

TEAMSTERS STRIKE PACIFIC FREIGHT LINES OF LOS ANGELES

Dave Beck's Teamsters Union Joint Councils had expanded
from Seattle, San Francisco, Oakland, Stockton and Fresno
to include Denver, Phoenix, Salt Lake City with inroads into Los Angeles
Beck began to direct the organizational effort in Los Angeles -- long an anti-union stronghold
his target was Pacific Freight Lines which dominated the motor freight business in California
When Pacific Freight Lines refused to accept Dave Beck's demands,
Beck's Teamsters struck the company -- May 1937
confrontations between thousands of Teamsters and hundreds of police officers took place
both sides used clubs, knives and guns in one of the bloodiest strikes in Teamster history
Teamster strike in Los Angeles was accompanied
by a boycott of Pacific Freight Lines' "hot cargo" in other cities along the Pacific Coast
diversions and tie-ups of Pacific Freight terminals in California, Oregon and Washington
stopped all shipping by the company
Dave Beck's Brotherhood of Teamsters were successful and Los Angeles was organized
Beck expanded his California effort
when he organized the Teamsters' Highway Drivers Council of California

DAVE BECK JOINS FORCES WITH ILA PRESIDENT JOE RYAN

Dave Beck and the AFL began to rapidly expand their membership
this resulted in a push to connect, through an alliance, Beck's west coast Teamsters
with Joe Ryan's East Coast AFL longshoremen
Joe Ryan gave Dave Beck's Pacific Coast Teamsters Union jurisdiction over uptown warehouses
whose workers were to be delivered to Beck's Teamsters Union -- May 1937
this alliance with Harry Bridges' rival was intended to force Bridges
out of power with the International Longshoremen's Association

thus allowing Ryan and Beck to take over representation of the longshoremen on the West Coast as well as on the East Coast
Dave Beck leading his AFL Teamsters expanded his organizing effort to include truck drivers on the waterfronts
in opposition to Harry Bridges and his International Longshoremen's Association members
Beck initiated fierce organizing battles utilizing club-swinging squads of hired thugs to convince rival Committee for Industrial Organization (CIO) to leave warehousemen alone
Beck also conducted membership raids on warehouses that had joined Bridges' CIO International Longshoremen's Association (ILA)

AMERICAN FEDERATION OF LABOR CLASHES WITH HARRY BRIDGES

Dave Beck and the AFL escalated the violent conflict with Harry Bridges' longshoremen
Beck became an AFL point man in labor disputes involving Harry Bridges
Beck also led the AFL fight against CIO industrial unionism along the Pacific coast
In addition AFL leaders reaffirmed their conservative position on social programs including opposition to federal unemployment insurance, old age pensions and minimum wage laws
they imposed a dollar-a-member assessment on AFL locals to finance the fight against the CIO

HARRY BRIDGES BREAKS WITH THE AMERICAN FEDERATION OF LABOR (AFL)

Pacific Coast International Longshoremen's Association (ILA) President Harry Bridges fought back
longshoremen recognized that the loss of the warehousemen would not only weaken their waterfront unions
but would end effective union organization in the industry as well
Growing ideological hostility, coupled with opposing trade union philosophies, prompted the Bridges-led Pacific Coast International Longshoremen's Association (ILA) to break with ILA President Joseph Ryan
Bridges supported by Committee for Industrial Organizations (CIO) Communist labor leaders began to call for a vote to select who would bargain for longshoremen -- May 1937
Bridges' Pacific Coast International Longshoremen's Association (ILA) or Dave Beck's AFL Pacific Coast International Brotherhood of Teamsters

DAVE BECK'S POWER SUFFERED A DIRECT ATTACK

Seattle Star newspaper served as an active voice for labor in the city
Seattle's American Newspaper Guild entered into negotiations with the *Star* and *Seattle Times* for recognition of the Guild as the sole collective bargaining agent for both newspapers
Dave Beck's support for management's position against the Newspaper Guild -- May 8, 1937 was not appreciated by American Federation of Labor (AFL) union members including Seattle's International Longshoremen's Association (ILA)

JOSEPH CURRAN AND HIS FOLLOWERS BREAK AWAY FROM THE ISU

International Sailors Union (ISU) labor activist Joseph Curran changed the name of his Seaman's Defense Committee to the National Maritime Union (NMU)
Joe Curran began to sign former ISU members to his new, left-wing rival union -- May 1937

he proceeded to lead the progressive labor union out of the American Federation of Labor's ISU

NATIONAL MARITIME UNION (NMU) IS COURTED BY THE CIO

Joe Curran and other seamen's union leaders were invited by John L. Lewis to come to Washington, D.C. to form a major organizing drive among ship and port workers
Lewis favored Harry Bridges
president of the Pacific Coast District of the International Longshoremen's Association to lead the new maritime industrial union but Joe Curran and other NMU leaders balked
Joe Curran agreed to affiliate his National Maritime Union (NMU) with John L. Lewis' Committee for Industrial Organization (CIO) but Curran refused to let Harry Bridges or anyone else control his union
plans were made for a National Maritime Union (NMU) convention to give members an opportunity to confirm their affiliation with the CIO

U.S. SUPREME COURT JUSTICE WILLIS VAN DEVANTER RETIRES

After Congress voted full pay for justices over seventy who retired [March 1, 1837]
Willis Van Devanter retired as a Supreme Court Justice -- May 18, 1937
he acknowledged that he might have retired five years earlier due to illness if he did not have so many concerns regarding New Deal legislation
in addition, was he dependent on his salary to maintain his life style
Roosevelt's opportunity to appoint a new Justice took the steam out of the court packing plan

BEMIS BAG COMPANY IS STRUCK IN THE AFL-CIO JURISDICTIONAL DISPUTE

Weigher's, Warehousemen and Cereal Workers Union (WW&CWU) employed by the Seattle division of the nation-wide Bemis Bag Company were members of the Seattle AFL International Longshoremen's Association (ILA)
AFL leaders demanded the dollar-a-day assessment to resist the CIO be paid and further insisted that jurisdiction over the Seattle WW&CWU be given to the Brotherhood of Teamsters
WW&CWU leaders and members refused to comply
AFL President William Green demanded the WW&CWU tie to the Seattle Central Labor Council be severed
Teamsters Union members set up a picket line at the Seattle Bemis Bag plant -- May 22, 1937 in an attempt to force the WW&CWU workers into the Teamsters Union
Teamster pickets remained in place until one hundred longshoremen arrived at the company and established a picket line of their own
Teamster pickets were driven off and the Bemis Bag Company opened for business
After the Teamster pickets were gone a sedan allegedly belonging to a well known Teamster official drove down the sidewalk at a high speed through the longshoremen's picket line then turned around and once again drove along the sidewalk
many of the AFL pickets had to be hospitalized with one in serious condition

SEATTLE INTERNATIONAL LONGSHOREMEN'S ASSOCIATION (ILA) DEFIES THE AFL

After the Bemis Bag Company incident Seattle International Longshoremen's Association (ILA) released a statement in support of the Committee for Industrial Organizations (CIO)

they refused to pay the AFL dollar-a-member assessment to fight the CIO

U.S. SUPREME COURT UPHOLDS MORE NEW DEAL LAWS

Rulings were made on two significant pieces of reform legislation -- May 24, 1937
two separate U.S. Supreme Court cases validated unemployment compensation
Steward Machine Co v Davis by a five-to-four ruling
Carmichael v Southern Coal & Coke Co. and Gulf States Paper by six-to-three
old age benefits provisions (Social Security) was upheld
Helvering v Davis by seven-to-two
President Roosevelt's court packing plan was allowed to die in committee

COLUMBIA BASIN ANTI-SPECULATION ACT SLOWS MIGRATION TO THE AREA

Because Bonneville Dam was being constructed
federal government was worried about a flood of potential farmers
To prevent speculative windfalls
Congress adopted the *Columbia Basin Anti-Speculation Act* -- May 27, 1937
which limited the amount of land that any one person could own
qualifications were set so that only experienced farmers with sufficient capital
would be permitted to buy land served by the project

COMMUNISTS ATTEMPT TO LEAD SOME CIO UNIONS

Standing of the Committee for Industrial Organization (CIO) remained only a distraction
for the American Federation of Labor (AFL)
until the Communist Party decided to capture the CIO movement -- end of May 1937
Suddenly lumber unions faced a bitter internal struggle over affiliation
Woodworkers Federation, an independent union with almost 100,000 members,
voted to affiliate with the CIO

PACIFIC FREIGHT LINES STRIKE ENDS IN LOS ANGELES

After an eight week strike, the company settled with the Brotherhood of Teamsters -- June 2, 1937
this effort led to the establishment of many new Teamster locals in the shipping industry
and the organization of tens of thousands of new members
for the American Federation of Labor (AFL)
Dave Beck and his Western Conference of Teamsters emerged significantly stronger from the battles

THIRD ANNUAL MARITIME FEDERATION OF THE PACIFIC (MFP) CONVENTION IS HELD

Portland's Labor Temple hosted the Third annual MFP convention -- June 7-[July 9], 1937
representatives of the Pacific Coast maritime unions assembled
to deliberate and legislate the future of their Federation
this was a marathon affair which lasted five weeks
All of the same old insoluble problems confronted the delegates:
•they must balance power between the large and small unions;
•they must preserve the autonomy of each organization while maximizing Federation strength;
•they must develop a consistent and unified collective plan of action;

- they must present a solid front to their employers
 - whether the dispute was on a single vessel or dock, or the whole coast

But this year delegates faced a new challenge that overshadowed their perennial problems: whether or not to affiliate their individual unions or even the Federation itself with the Committee for Industrial Organization (CIO)

International Longshoremen's Association (ILA) President Joseph Ryan offered a traditional form of unionism that West Coast longshoremen found repulsive

Committee for Industrial Organization (CIO) under the leadership of John L. Lewis continually challenged the more conservative AFL and appealed to radical MFP members

During the MFP Convention there was continuous bickering between the Pacific Coast Sailors' Union of the Pacific (SUP) and the supporters of the International Longshoremen's Association (ILA)

many Maritime Federation of the Pacific (MFP) union affiliates seemed more open to the idea of industrial unionism

for other unions industrial unionism was an unknown and elusive issue still needing to be defined

Sailors Union of the Pacific (SUP) delegates to the 1937 Maritime Federation Convention listened with growing alarm as CIO representatives evaded their questions

Ten delegates presented credentials from a new coastwide union

Inland Boatmen's Union (IBU) members operated tugs, barges, passenger ferries and other vessels along the Pacific Coast

they had formerly been part of the ILA's International Seamen's Union (ISU)

Communist-backed IBU delegates asked to be included in the Maritime Federation of the Pacific

COMMUNIST PARTY MEMBERS ATTEMPT TO INFLUENCE THE MFP CONVENTION

Communist Party members in the Maritime Federation were active in both AFL and CIO unions, Communist leaders supported the CIO industrial union program but advocated remaining with the AFL

from the outset of the Marine Federation of the Pacific (MFP) Convention members of the Communist bloc appeared were determined to control the convention

During the debate unions back home instructed their delegates on issues and candidates streams of wires and letters poured in from locals and ships' crews urging support for the Communist bloc positions

MARINE FEDERATION OF THE PACIFIC (MFP) FACES A COMMUNIST TAKEOVER

MFP Convention delegates represented two lines of thought:

- American Federation of Labor (AFL) versus Committee for Industrial Organization (CIO)
- Communist versus. Anti-Communist

No single faction had a majority of votes on the convention floor

forty of the 180 convention delegates seemed to be uncommitted

seventy-nine of the delegate votes were spread among the sailors' unions

two unions, Telegraphists and Inland Boatmen, voted solid Communist bloc with some Communist support among the other sailors' union

AFL International Longshoremen's Association delegates held sixty-one votes

of those sixty-one votes, the Communist bloc controlled forty-seven anti-Communists controlled fourteen ILA votes

At the same time, Washington's delegation was also of two minds:

Seattle split between Communist bloc and uncommitted delegates;
Tacoma, Grays Harbor, and Olympia voted strongly anti-Communist;
Everett, Bellingham and Raymond identified with the Communist bloc

FEUD CONTINUES IN THE AMERICAN FEDERATION OF LABOR (AFL)

Maritime Federation of the Pacific (MFP) Convention overwhelmingly supported Harry Bridges in his stand to withdraw from the International Longshoremen's Association (ILA) and the American Federation of Labor (AFL)

all maritime unions were instructed to hold immediate referendums on the question of leaving the American Federation of Labor (AFL) for the Committee for Industrial Organization (CIO)

HARRY LUNDEBERG STEERED HIS SUP INTO TURBELENT WATERS

International Seamen's Union (ISU) rapidly lost members to Joe Curran's Committee for Industrial Organization (CIO) National Maritime Union (NMU) American Federation of Labor President William Green hoped to rebuild the ISU under AFL control he assigned Harry Lundeberg, head of the Sailors Union of the Pacific (SUP), to the task rebuilding AFL membership

Lundeberg attempted to keep his Sailors Union of the Pacific (SUP) on an independent course that avoided both the American Federation of Labor and Committee for Industrial Organization and the conflicts both were encountering he declared the SUP to be a "principled advocate" for industrial unionism in contrast to what he now characterized as the "spurious pretenses" of the CIO this, he believed, was the only honorable and intelligent course of action the SUP could take Lundeberg also jealously guarded the jurisdictional claims of West Coast sailors protecting his union against the East Coast and Gulf Coast sailors especially the CIO's National Maritime Union (NMU)

SAILORS' UNION OF THE PACIFIC CONVENTION VOTES ON AFL OR CIO AFFILIATION

Harry Lundeberg, President of the Sailors' Union of the Pacific (SUP) discussed with CIO leader John L. Lewis the possibility of acquiring a CIO Charter Lundeberg also held talks with International Seamen's Union (ISU) President Andrew Furuseth based on these discussions Harry Lundeberg understood from Furuseth that members of the SUP would retain their own constitution, treasury and property with full autonomy to conduct their own affairs within the American Federation of Labor Harry Lundeberg decided to send a referendum ballot out to all SUP members on the question of affiliation with the AFL or CIO -- voting began June 9, 1937

AMERICAN FEDERATION OF LABOR (AFL) SLOWLY REACTS TO THE CIO THREAT

Joe Ryan moved cautiously leaders of the Pacific Coast District AFL International Longshoremen's Association

were slow to react to organizing efforts of the Committee for Industrial Organization (CIO)
full discussions up and down the coast regarding membership status were insisted upon

AFL'S JOE RYAN RULES THAT WAREHOUSEMEN BELONG IN THE TEAMSTERS' UNION

Once the CIO threat to the AFL's International Longshoremen's Association was realized
AFL leaders fought back as they began assigning the newly-organized CIO warehouse workers
to Dave Beck's Teamsters in an effort to force Harry Bridges Pacific Coast District ILA
to abandon the representation of warehousemen
Dave Beck had up to now ignored dockside warehousemen as had all other Teamster bosses
Beck, leader of the West Coast Teamsters, was alarmed by Harry Bridges radical politics
he was even more concerned that Bridges' International Longshoremen's Association (ILA)
would encroach on newly-acquired uptown warehouses now under Teamster jurisdiction
Beck declared he would enforce his AFL jurisdictional claims over workers recruited by Bridges
foundation of Beck's argument relied on the fact that these workers
were not in the shipping labor force
but rather transported the goods from the ships to be distributed on land
thus these laborers should be classified as land-based and not marine or port work
actually, organizing the warehousemen under *his* jurisdiction became absolutely necessary
for the preservation of Dave Beck's bargaining power
All warehousemen now faced bitter union fighting to organize, to win members and to survive
these battles occurred in every area where warehouse workers organized their unions

HARRY BRIDGES EXPANDS HIS "MARCH INLAND"

Harry Bridges defied Joe Ryan and the AFL's ruling awarding uptown warehousemen to Teamsters
Pacific Coast International Longshoremen's Association (ILA) "march inland" was expanded
Bridges intensified his organizing drive among all warehousemen in Pacific coast cities
to bring members into the American Federation of Labor's ILA
this recruiting drive included both marine and uptown warehouses
Bridges also recruited farm laborers and other unorganized shore-side workers into his union
as he frequently stated,
"scabs come from agriculture and colleges -- union men don't scab strikes"
American Federation of Labor (AFL) and Committee for Industrial Organization (CIO)
spent much of their energy fighting each other
especially in meatpacking, textiles and electrical industries and in local Democratic politics

PACIFIC COAST ILA ATTEMPTS TO AVOID CRISIS WITH THE AFL

Harry Bridges' Pacific Coast District International Longshoremen's Association (ILA)
tried to resolve their differences with the AFL without a formal split
Harry Bridges, believing strongly in labor democracy, called for a referendum
on the question of membership affiliation -- June 17, 1937
but the international longshoremen's leadership refused to approve the ballot proposal

SPOKANE WORKING PEOPLE SUFFERED BADLY DURING THE GREAT DEPRESSION

many flocked to unions during the organizing surge

Fierce struggles erupted when laundry workers, mostly women, organized a union which represented eighty-five percent of Spokane's laundry workers: 400 members -- June 1937
Owners raised wages voluntarily, but that did not meet the worker's needs
laundry workers forced the Davenport Hotel to provide twenty more jobs
by reducing the workday from ten hours to the legal minimum for women of eight hours
laundry workers union also collected checks of from \$48.00 to \$65.00
for back pay for wages below the [1935] state legal minimum pay for workers

HISTORY OF THE CHINESE GOVERNMENT IN TURMOIL

Last of the ruling Chinese dynasties collapsed after a reign of almost 300 years [1911]
China, especially Northern China, fell under the control of several major and lesser War Lords
In an effort to defeat these warlords Sun Yat-sen, president of the Republic of China, sought the help of foreign powers -- Western democracies ignored the request
Sun Yat-sen turned to the Union of Soviet Socialist Republics (USSR)
Communists provided assistance to China on two fronts [1921]:

- Sun Yat-sen received assistance in his effort to defeat China's War Lords;
- newly established Communist Party of China along with its army also received assistance thus the struggle for power in China began

between the Nationalist Chinese government and the Chinese Communist Party
Republic of China President Sun Yat-sen died [March 12, 1925]
his office was taken over by one his lieutenants, Chiang Kai-shek
Republic of China President Chiang Kai-shek turned on the Chinese Communist Army under the command of Mao Zedong [April 12, 1927]
Chiang's Nationalist Chinese government was purged of Communists
arrests and executions of hundreds of Chinese Communists took place
Chinese Communist activists retreated to the countryside (literally) or underground (figuratively) where they fomented a military revolt
Mao Zedong launched an attack on the Nationalist government: Nanchang Uprising [August 1, 1927]
Mao had combined his forces with remnants of peasant rebels
and established control over several areas in southern China
Civil War had erupted in China
Infrequent battles for control of portions of China continued for several years
Chiang Kai-shek's Nationalist government made an all-out effort, the Central Plains War [1930]
Chiang's military plan was to root out remaining pockets of Communist activity in a series of encirclement campaigns
Chiang launched his fifth encirclement campaign [1933]
Mao Zedong took advantage of gaps in the ring and his army escaped [October 1934]
Mao's Communist army was in full retreat toward Northern China [1934-1935]
along the way, they confiscated property and weapons from local landlords and warlords all the while recruiting peasants and the poor, solidifying their appeal to the masses of 90,000-100,000 people who began the "Long March" with Mao
only about 30,000 survived the 8,000-mile trek through mountainous terrain
but Mao Zedong had strengthened his control over the Communist army
and the Chinese Communist Party

NATIONAL MARITIME UNION (NMU) COMES INTO EXISTENCE

More than 35,000 seamen had switched their membership

from the AFL International Seamen's Union (ISU) to the CIO's National Maritime Union (NMU)

National Maritime Union (NMU) held its first convention in New York City -- July 6, 1937

Joe Curran ran the convention

delegates approved affiliation with the Committee for Industrial Organization (CIO)

Curran was elected president of the NMU by the delegates

Jamaican-born Negro Ferdinand Smith was elected as the union's secretary-treasurer

thus, from its inception NMU was racially integrated

Curran and his followers filed a petition with the National Labor Relations Board to hold an election

to determine what union should be declared the bargaining agent with

more than seventy shipping lines operating out of the East Coast and the Gulf of Mexico

Organizing was so intense that hundreds of ships delayed their sailing times

as seamen listened to organizers and signed new union cards

(within a year, the NMU had more than 50,000 members

and most American shippers were under contract)

(within six years, nearly all racial discrimination was eliminated

in maritime hiring, wages, living accommodations and work assignments)

HISTORY OF THE RISE OF IMPERIAL JAPAN

Japan consists of several thousands of islands, however the vast majority of the population

occupies the four largest: Honshu, Hokkaido, Kyushu and Shikoku

Sea of Japan separates Japan's closest neighbors from Japan

Korea, USSR and China are all on the Asian continent

Japan needed to import raw materials such as iron, rubber and oil

to maintain its economic growth [1920s] and [1930s]

most of these resources came from the United States through the silk trade

Japanese leaders felt the grip of world-wide economic depression

however, lack of natural resources stymied any potential growth

Japan looked toward East Asia, specifically Manchuria with its many resources,

as the solution to their dilemma

With little resistance, Japan invaded and conquered Manchuria [1931]

Japan claimed that this invasion liberated the Manchurian people from the Chinese government

although the majority of Manchuria's population were Han Chinese

Japan then established the puppet regime of Manchukuo

and installed the former Emperor of China as the official head of state

JAPAN BECOMES INVOLVED IN WAR WITH CHINA

Chinese and Japanese soldiers fought in a minor skirmish in Peiping (Beijing), China -- July 7, 1937

this fight quickly escalated as the Second Sino-Japanese War erupted in China

(this war lasted until [September 9, 1945])

Unprepared for a sustained conflict, the Chinese army could do little to stop the Japanese advance

initially, Japan's objective was the overthrow of the Nationalist government of Chiang Kai-shek,

(in less than a year, Japanese invaders destroyed China's best fighting units
and controlled northern China, the industrial heart of the nation
but its advance stalled as China's resistance stiffened)
Japanese shipping companies relied on their close association with American silk-trading firms
Japanese shippers continued their domination in the Japan-New York silk trade
decline in the price of silk had facilitated the shift to the cheaper all-water route
Japan needed silk sales to the United States to finance purchases vital to its war with China
China was aided by economic assistance from the Soviet Union and the United States

MARITIME FEDERATION OF THE PACIFIC (MFP) CONVENTION COMES TO AN END

Thirty-three day long MFP Convention had opened [June 7] and concluded -- July 9, 1937
Maritime Federation of the Pacific had survived another acrimonious convention
an attempted invasion by the Committee for Industrial Organization (CIO)
had polarized Federation members but conservatives and militants had declared a truce
long enough to prevent the Communists from capturing the organization
Breakup of the MFP spawned an extremely bitter rivalry
between Harry Lundeberg's Sailors Union of the Pacific (SUP) and ILWU's Harry Bridges
who supported Joe Curran's CIO National Maritime Union (NMU)
(this personal animosity did not decrease in intensity until Lundeberg's death [1957])

ANTI-COMMUNIST ELEMENTS IN THE PACIFIC COAST MFP CLOSE RANKS

Following adjournment of the Maritime Federation of the Pacific (MFP) convention
and faced with the prospect of new and unpredictable alignments
Anti-Communists in the seafaring unions drew together
Delegates from the Sailors' Union of the Pacific, Maritime Firemen, Marine Cooks and Stewards,
Masters, Mates and Pilots and Marine Engineers met in Portland -- July 10, 1937
they agreed to ban together to resist CIO efforts to take over the Federation

SEATTLE STAR NEWSPAPER GUILD MEMBERS WALK OUT ON STRIKE

American Newspaper Guild expanded its membership to include non-editorial departments
the Guild left the American Federation of Labor (AFL)
for the Committee of Industrial Organization (CIO)
Seattle Star newspaper laid off nineteen American Newspaper Guild members
in the labor-supporting newspaper's circulation department
Guild members went on strike supported by the CIO -- July 10, 1937
Seattle Mayor John F. Dore used police officers to break up the AFL strike claiming it was illegal

PACIFIC COAST LONGSHORE LEADER HARRY BRIDGES JOINS THE CIO

When it became obvious that the executive council of the AFL had no interest in unity
Bridges made a deal with Committee for Industrial Organization (CIO) leader John L. Lewis
in return for bringing Pacific Coast longshoremen and warehousemen into the CIO
Lewis appointed Harry Bridges his West Coast CIO Director -- July 12, 1937
(he remained the leader of the West Coast CIO for thirty-nine years -- 1937 to [1976]
this had an immense repercussion on Pacific Coast labor)

Harry Bridges took over leadership of the progressives who advocated the longshoremen and maritime unions join the Committee for Industrial Organizations (CIO)

HARRY BRIDGES CALLS FOR A REPRESENTATION ELECTION

Bridges and his Pacific Coast District ILA leaders addressed the issue of affiliation head-on they began distributing ballots that addressed whether longshoremen and warehousemen would be represented by the AFL or the CIO

Bridges contended that only by exercising their political power could workers preserve the economic gains won in strikes or negotiations and coerce favorable legislation only by developing an ever-expanding the base of the labor movement could solidarity, already partially achieved, be fully attained

Harry Bridges Pacific Coast District CIO organizing successes thrust the coastal leadership into a decisive role in the campaign for industrial unionism

INTERNATIONAL WOODWORKERS OF AMERICA (IWA) IS FORMED

Communist leaders in the Committee for Industrial Organizations (CIO) Federation of Woodworkers under British Columbia Communist union leader Harold Pritchett exploited grievances AFL's Sawmill and Timber Workers Union (STW) members had against their old labor union the United Brotherhood of Carpenters and Joiners of America Communists demanded a thirty-six hour work week, minimum wage of seventy cents an hour and paid vacations

Sawmill and Timber Workers (STW) Union members left the American Federation of Labor (AFL) they adopted a new name: International Woodworkers of America (IWA) -- July 15, 1937 and affiliated with the Committee for Industrial Organizations (CIO)

International Woodworkers of America (IWA) was an industry-wide union composed of lumbermen, sawmill workers, timber transportation workers and others Harold Pritchett was elected president of the CIO's International Woodworkers of America (IWA) (he held this position until [1940] when he resigned as a result of being denied an entry visa into the United States because of his Communist affiliation)

LONGSHOREMEN (ILA) VOTE COASTWIDE ON UNION AFFILIATION

Results of the Pacific Coast longshoremen's balloting conducted by Harry Bridges was announced -- July 16, 1937

(this announcement had been postponed for two weeks because the Grays Harbor longshoremen's union refused at first to vote)

Seattle 850 CIO to 235 AFL;

Portland 734 CIO to 169 AFL;

San Pedro 1,500 CIO to 444 AFL

San Francisco longshoremen 2,220 CIO to 703 AFL;

San Francisco warehousemen 2,334 CIO to 411 AFL;

late returns brought the totals to join the CIO 12,079 to 3,479

Pacific coast longshoremen and warehousemen had voted overwhelmingly to disaffiliate from the Pacific Coast District International Longshoremen's Association (ILA) and join Harry Bridges' Pacific Coast District Committee for Industrial Organization (CIO)

but the vote for disaffiliation was not unanimous

Pacific Coast International Longshoremen's Association Union (ILA) supporters fought against the CIO blitz carried out by Bridges and Communist labor leaders
ILA union activist T.A. "Tiny" Thronson of the Tacoma ILA noted:
"Twenty-eight locals voted not to go. Tacoma was one."²²⁰

AMERICAN FEDERATION OF LABOR (AFL) TAKES OVER THE ISU

Devastating raids on the AFL's International Seamen's Union (ISU) by Joe Curran's National Maritime Union (NMU) led to the end of the ISU
AFL President William Green took over the ISU with the goal of rebuilding it with Sailors' Union of the Pacific (SUP) President Harry Lundeberg leading the reorganization
Washington and Oregon American Federation of Labor (AFL) unions denounced the threatened raid by the CIO
in a joint statement the Tacoma Central Labor Council and Building Trades Council vowed to **"rigorously oppose all forms of dual unionism (AFL and CIO)"** and to **"do everything in our power to eradicate all organizations that would destroy our movement."**²²¹

INTERNATIONAL SAILORS' UNION (ISU) HAS A CONTRACT WITH SHEPARD LINE

ISU's labor agreement with Shepard Line beginning in [1935] maintained a closed shop for the union
Sailors' Union of the Pacific (SUP) signed an agreement with Shepard Line [April 28, 1937] (without notice of termination the agreement would extend to [September 30, 1938])
Joe Curran's CIO National Maritime Union (NMU) challenged the validity of the agreement
National Labor Relations Board (NLRB) conducted a representation election on all East Coast shipping routes
Joe Curran's National Maritime Union (NMU) routed the ISU in the Shepard Line vote
NLRB ruled the East Coast labor agreement belonged to the MNU
AFL's Sailors' Union of the Pacific (SUP) felt they held all contracts for the West Coast and the NLRB ruling was in error -- SUP had not even appeared on the ballot
Shepard Line began hiring MNU sailors for its ships
SUP declared the cargo aboard Shepard Line ships to be "hot"

AMERICAN FEDERATION OF LABOR (AFL) ATTEMPTS TO KEEP THE TIMBER INDUSTRY

With unprecedented vigor AFL's United Brotherhood of Carpenters and Joiners of America (UBCJ), set up the Oregon and Washington Council of Lumber and Sawmill Workers in a effort to absorb the CIO's International Woodworkers of America (IWA) back into the American Federation of Labor (AFL)
Only a small minority of the old Sawmill and Timber Workers Union (STW) membership remained loyal to the American Federation of Labor (AFL) leadership of the United Brotherhood of Carpenters and Joiners of America
this minority formed the Federation of Woodworkers (AFL) to replace what little remained of the old AFL Sawmill and Timber Workers union

²²⁰ Ronald Magden and A.D. Martinson. *The Working Waterfront*. P. 124.

²²¹ Otilie Markholt, *Maritime Solidarity*. P. 335.

DAVE BECK EXPANDS HIS INFLUENCE IN THE TEAMSTERS UNION

Death of San Francisco's Teamster International Vice-President Mike Casey -- July 1937
caused Dave Beck to move from a statewide power to hold a much larger role on the West Coast
Dave Beck took over the West Coast's American Federation of Labor (AFL) leadership position

FARM SECURITY ADMINISTRATION HELPS THE RURAL POOR

National government stepped in to help migrant agricultural workers
Congress created the *Farm Security Administration* -- July 22, 1937
workers contributed two hours of labor per week on camp projects in place of rent
they also had a self-governing camp council, subject to the veto of the camp manager,
which levied a twenty-five cent weekly contribution on each family for camp projects
migrants who found no government camps were forced into the shelters provided by growers
which were usually filthy camps without running water
among other improvements this agency created
sanitary mobile and permanent camps for migrant workers were provided
federal government provided nurseries and kindergartens for preschool children
Migrants regardless of their economic condition were almost all united in one respect
they were the first group of white American citizens not welcomed to the Pacific Northwest
old residents were afraid that they would steal their jobs
they would require higher taxes to pay for relief measures to assist them
and that, at worst, they would become riotous or radical
given these fears it is not surprising older residents denied migrants work relief,
old age assistance and medical services on the grounds that they were nonresidents

SUP MEMBERS' REFERRENDUM BALLOTS WERE RETURNED TO THE UNION

Sailors' Union of the Pacific (SUP) President Harry Lundeberg
had sent ballots to SUP members on the question of affiliation with the AFL or CIO
these ballots were returned to the union headquarters for tabulation
By this time the debate in the SUP had shifted from the merits of industrial unionism
to the desirability of joining a Communist-dominated national maritime organization
SUP officials including Lundeberg knew the referendum count would probably overwhelmingly favor
Joseph Curran's CIO National Maritime Union (NMU) for affiliation
this was counter Lundeberg's goals for the SUP as it appeared likely
the East Coast's and Gulf States' NMU majority would dominate the union
SUP President Harry Lundeberg stifled union democracy within the SUP
to a degree never imagined by a democratic leader like Communist-backed Harry Bridges
Sailors' Union of the Pacific (SUP) ballots were never counted
because an overwhelming majority of those in attendance
at headquarters and branch SUP meetings voted to burn the ballots -- August 2, 1937
Maritime Firemen's Union also voted to destroy their members' ballots
CIO supporters denounced the destruction of the ballots as arbitrary and dictatorial

SPOKANE BUSINESSMEN ATTEMPT TO STOP UNION ORGANIZING THERE

Open-shop Citizens' Protective Association led by Spokane business owners
was opposed to unions organizing in the city
they began an active campaign to stop the union drive
Citizens' Protective Association threatened to boycott employers who signed union agreements
Spokane laundry workers' unions in retaliation
considered a boycott of all Citizen's Protective Association members' businesses
Spokane's Central Labor Council urged its 6,000 union members to wear union buttons
in an effort to make labor visible in the community -- early August

INTERNATIONAL LONGSHOREMEN'S AND WAREHOUSEMEN'S UNION IS CHARTERED

It was apparent the AFL's Pacific Coast District International Longshoremen's Association (ILA)
was shattered because of the efforts of Harry Bridges and Communist labor leaders
Several members of the ILA Pacific Coast District Executive Board including Harry Bridges
met in a "rump session" -- August 3, 1937
these leaders realized that longshoremen and warehousemen
had to remain in a single organization for their mutual benefit and protection
Without holding an election, adopting a constitution or electing officers
these executive board leaders decided to drop their affiliation
with the American Federation of Labor (AFL)
and to form the International Longshoremen's and Warehousemen's Union (ILWU)
they simply declared themselves the ILWU
Harry Bridges had engineered the longshoremen's departure from the American Federation of Labor

INTERNATIONAL LONGSHOREMEN'S AND WAREHOUSEMEN'S UNION (ILWU) BEGINS

Committee of Industrial Organization (CIO) chartered the ILWU -- August 11, 1937
CIO's program of industrial unionism, opposition to discrimination,
and genuine nonpartisan political action on behalf of working people
more exactly matched the ideals of Pacific Coast longshoremen and warehousemen
Harry Bridges was elected president of the CIO's ILWU
separation from the AFL Pacific Coast International Longshoremen's Association was finalized
In addition to fighting the American Federation of Labor (AFL),
Committee for Industrial Organizations (CIO) affiliation was also necessary
for the International Longshoremen's and Warehousemen's Union (ILWU)
because the Maritime Federation of the Pacific (MFP) was disintegrating

SOME ILA LONGSHORE UNIONS FIGHT THE ILWU

Harry Bridges was not popular in Tacoma as Tacoma's longshoremen remained with the rival AFL
(in Tacoma, for example, longshoremen did not vote to become ILWU Local 23 until [1958]
when shrinking work opportunities motivated them to affiliate
so they could travel to nearby ILWU ports for additional work)
last Pacific Coast outpost of the ILA, Grainliners' Local 1892 near Longview, Washington
did not vote to join ILWU's Local 21 until [1981]
To protect their treasuries AFL International Longshoremen's Association (ILA) locals
that were destined to become ILWU locals

divided their funds among members who then deposited them in benevolent associations

HARRY BRIDGES EXPANDS HIS ILWU ON THE PACIFIC COAST

Although Bridges' decision to organize the ILWU increased his position of power on the West Coast it also became the spark in the controversy between Bridges' affiliation representing the CIO and the Seattle Teamsters with Dave Beck representing the AFL

Five days after receiving the Committee of Industrial Organization (CIO) charter West Coast CIO Director Harry Bridges declared war on the Pacific Coast District International Longshoremen's Association (ILA) -- August 16, 1937

fifty ILWU organizers were distributed to recruit former AFL longshoremen and warehousemen

Harry Bridges' aggressive recruiting campaign to bring warehousemen, farm workers and other unorganized shore-side laborers into his ILWU resulted in membership leaping from 1,800 to 9,000

this was a great victory for Harry Bridges and the CIO

San Francisco ILWU Local 6 became the largest local in the CIO's International Longshoremen's and Warehousemen's Association

CIO's International Longshoremen's and Warehousemen's Union represented almost all Pacific Coast port dock workers

Harry Bridges expanded the political influence of his ILWU

he was often at polar extremes from the policies of the United States government

he advocated a one-day shutdown of the port of San Francisco to protest America's policy of non-support for the elected government of Spain

International Longshoremen's and Warehousemen's Union was a prototype of racial integration

members also earned prime wages and enjoyed excellent working conditions

BONNEVILLE DAM BEGINS TO GENERATE ELECTRICITY

Bonneville Dam's initial phase of construction was completed -- 1937

both the Cascades (rapids) and the old lock were submerged by the reservoir that formed behind the dam

this reservoir, known as Bonneville Reservoir or Lake Bonneville, extends for forty-eight miles up the Columbia River

(a second Bonneville Lock was constructed [1987 to 1993] at a cost of \$341 million; 85 feet wide and 676 feet long, this lock replaced the earlier smaller lock [built in 1938])

Bonneville Dam construction provided jobs and other economic benefits to the Pacific Northwest through the production of inexpensive hydroelectricity

production of hydroelectricity was begun -- 1937

even before the infrastructure to deliver electricity was not in place

BONNEVILLE POWER ADMINISTRATION (BPA) IS CREATED BY CONGRESS

Washington, Oregon, Idaho and Montana contain 40% of the nation's water power resources

generating electricity was a sensitive issue when Bonneville and Grand Coulee dams were being built with federal dollars

Franklin D. Roosevelt's Administration wanted the electricity to be a public source of power and to prevent energy monopolies

advocates for private sale of the electricity were opposed to this plan
as they did not want the government to interfere in their profitable business
Bonneville Power Act was signed into law by FDR -- August 20, 1937
it was patterned, in part, after the Tennessee Valley Authority (TVA) legislation
this law resolved the feud between Army Corps of Engineers and the Bureau of Reclamation
regarding who had ultimate jurisdiction over the construction project

BONNEVILLE POWER ADMINISTRATION (BPA) IS ALSO ESTABLISHED BY CONGRESS

Bonneville Power Administration (BPA) was established under the *Bonneville Power Act*
to deal with generation, transmission and marketing of hydroelectric power
for all federal projects within and outside the Columbia Basin -- 1937
most of the responsibility for development of these vast resources fell on the federal government
while responsibility for marketing and distributing the energy on the retail level
fell to the publicly and privately owned light and power utility companies
BPA distributed hydroelectric power wholesale in large amounts to buyers patched into the grid
municipally owned utilities resold electricity to customers:

- state-controlled Private Utilities Districts (PUDs) distributed electricity to customers;
- cooperatives, usually rural in nature and widely scattered, also sold BPA power;
- private manufacturing companies purchased electric power
such as Hanford and ALCOA (Aluminum Company of America)
(Bonneville Power provided the power for manufacturing aluminum -- a new industry)

(Commercial electricity began its transfer from the dam over BPA power lines [1938])

NEW PUBLIC UTILITY DISTRICTS ARE FORMED IN THE STATE OF WASHINGTON

Creation of *Bonneville Power Administration* made Public Utility Districts even more important
(in all, out of thirty-nine counties in Washington, thirty-two PUDs were eventually formed
twenty-nine were county-wide
seventeen operated electric systems and twelve distributed Columbia River power)
Public Utility Districts operated electric systems that changed the lives of residents:

- progressive rate reductions were implemented;
- nearly a million dollars in local taxes were paid by PUDs;
- thousands of farm families received electric service for the first time

distribution of low cost hydroelectric power revolutionized farm life
milking machines, refrigeration units, water pumps for home, cream separators,
irrigation system pumps for the land, incubators and brooders, fodder choppers,
dairy ventilating fans, bottle washers, and other devices were all made possible
for housewives, electric lights and electric appliances were a great boon
as electric revenue bonds were steadily retired,
people earned an equity in their public electric system
people acquired millions of dollars' worth of debt-free PUD property in Washington

PRESIDENT ROOSEVELT SIGNS THE JUDICIAL PROCEDURES REFORM ACT

Judicial Procedures Reform Act was compromise legislation passed by Congress
as a replacement for Roosevelt's "**court packing**" scheme of adding justices

to the U.S. Supreme Court
Judicial Procedures Reform Act instead incorporated some of FDR's recommendations
but left the number of federal justices unchanged
President Roosevelt signed the Bill into law -- August 26, 1937
(Over the next four years a combination of deaths and retirements
enabled Roosevelt to make seven appointments to the Supreme Court)

SPOKANE LAUNDRY WORKERS GO ON STRIKE

Spokane's business-backed Citizen's Protective Association continued to ignore the laundry union
500 laundry workers struck demanding union recognition and wage increases
striking Spokane laundry workers requested Spokane's Central Labor Council
organize a General Strike in their support
Spokane's Central Labor Council of 300 delegates from fifty-three unions
rejected the request by laundry workers for a General Strike
Labor World headlined -- August 27, 1937
"UNION DELEGATES VOTE TO DELAY GENERAL STRIKE"
instead of a General Strike to support laundry workers
male union members were asked for \$2.00 a month; female members \$1.00
first week of the strike, six unions contributed \$2,700

CONGRESS CREATED A PUBLIC UTILITY HOLDING COMPANY

Following a financial collapse, a number of utility companies were threatened with bankruptcy
Roosevelt compared the problem to a "96-inch dog being wagged by a 4-inch tail"
companies with a small amount of capital that held controlling amounts of utility stock
were now to be regulated -- August 28, 1937
electric and gas holding companies were restricted to a single and concentrated system
in a single location

CONFRONTATIONS TAKE PLACE ALONG PACIFIC COAST DOCKS

In addition to drivers, uptown warehousemen were under the control of the AFL Teamsters
Beck's Brotherhood of Teamsters Union set out to acquire the dock warehousemen
over the objections of Harry Bridges and his CIO-supported
Pacific Coast International Longshoremen's Association
As a way to combat Teamster expansion efforts Harry Bridges conducted membership raids
this raid on Teamster warehousemen became the spark
on the Teamster uptown warehousemen
one instant result was that International Longshoremen's and Warehousemen's Union (ILWU)
membership among warehouse workers increased more than eight-fold
that ignited the fight between Harry Bridges and Dave Beck
question of who would represent the warehousemen became a top priority for the AFL and CIO
with Bridges and Beck battling for control of warehouses

CONGRESS CREATED THE U.S. HOUSING AUTHORITY

National Housing Act was passed by Congress -- September 1, 1937

U.S. Housing Authority was created to administer low-interest sixty-year loans to small communities for slum clearance and construction projects and to grant subsidies for setting rents geared to low-income levels where local agencies were able to provide twenty-five percent of the federal grant

TEAMSTERS MOVE ON THE PORT OF SAN FRANCISCO

Dave Beck's AFL Teamsters had jurisdiction over uptown warehouses but Harry Bridges' CIO International Longshoremen's and Warehousemen's Union (ILWU) continued to maintain their organization of dock warehousemen Dave Beck moved to San Francisco where his goal was to secure the union membership of warehousemen in the city Beck's Teamsters Union attempted to force longshoremen and warehousemen back into the American Federation of Labor (AFL) Beck's plan snowballed into a labor battle that threatened Harry Bridges' hold on San Francisco and ultimately the whole Pacific Coast Battles for new members between rival unions led by Harry Bridges and Dave Beck took place in the form of raids, picketing and fights between the AFL Pacific Coast International Brotherhood of Teamsters and the CIO International Longshoremen's and Warehousemen's Union (ILWU)

ILWU MAKES GAINS FOR ITS MEMBERS

Communist-bloc organizational strength supported the longshoremen and warehousemen led by militant, pro-Communist union organizer Harry Bridges Bridges' CIO Warehouse workers continued their struggles in the months following CIO affiliation they fought time and time again to preserve their unions against raids by the Teamsters and other AFL unions and to maintain their close relationship with the CIO longshoremen ILWU conducted work slow-downs to stop employer's "shape-up" practices Bridges also led disputes over handling "hot" (non-union) cargo -- September 20, 1937

PACIFIC COAST INTERNATIONAL LONGSHOREMEN'S ASSOCIATION LOCAL 38 IS FORMED

In some ports, the CIO blitz by ILWU recruiters was resisted by AFL longshoremen An emergency convention of dissident AFL-International Longshoremen's Association members was held in San Francisco to oppose the CIO's creation of the International Longshoremen's and Warehousemen's Union -- September 20, 1937 dissidents from the ILA ports of Portland, Astoria, San Francisco, and San Pedro joined delegates from Tacoma and Olympia This convention reconstituted itself as AFL Pacific Coast District ILA Local 38 William "Bill" Lewis was elected president ILA Local 38-97 was composed of Tacoma longshoremen and several small Washington locals Harry Bridges was not popular in Tacoma in the 1930s (Tacoma Longshoremen remained with the rival AFL until [1958]) in addition to a handful of dissidents in a few CIO ports became known as the "dirty dozen" and the "lost battalion" by the CIO majority

This desperate effort to form a rival union was probably a large tactical mistake not only did it fail to split the CIO ports as hoped but as was pointed out by longshore dissident T.A. "Tiny" Thronson not only did it fail to split the CIO ports, but ILA members were removed from longshore CIO locals thus isolated, the articulate and effective opponents of the communist-bloc were silenced in the major ports

TEAMSTERS MOVE ON THE PORT OF SAN FRANCISCO

Dave Beck moved to San Francisco where he announced that Teamsters would remove the goods stored in ILWU warehouses Harry Bridges retorted this would be theft Dave Beck threatened to blockade the whole San Francisco Bay in order to stop the movement of all freight, except those freights that carried perishable foods, to force the CIO longshoremen to give up their warehouse members Beck's original goal to secure the union membership of warehousemen snowballed into a labor battle that threatened Harry Bridges' hold on San Francisco and ultimately the whole Pacific Coast Beck, as quoted in *Time Magazine*, left nothing to the imagination or to be misunderstood he announced:

"We'll close every port on the Pacific Coast where warehousemen are not teamsters."

Bridges replied in a statement to *Time magazine*:

"These gentlemen not only want a labor war but demand it."

DAVE BECK BLOCKADES SAN FRANCISCO BAY

Teamster leader Dave Beck joined forces with ship owners to establish a "blockade" -- Fall 1937 four thousand Teamsters lined up along the San Francisco waterfront to disrupt the ILWU longshoremen and other maritime union members 2000 strong marched along the waterfront hundreds of ILWU members stood up to assaults and threats by Teamster-led goon squads individual ILWU gangs moved through the Teamster pickets in flying wedges miraculously no violence occurred To rally support against the ILWU, Dave Beck and his Teamsters initiated a "Red baiting" against the Committee for Industrial Organizations (CIO) union and its leader, Harry Bridges

DAVE BECK SUFFERS A SETBACK

Dave Beck ordered his Teamsters to blockade the San Francisco waterfront until the warehousemen were handed over by the ILWU Hundreds of Harry Bridges' International Longshoremen's and Warehousemen's Union members conducted daily mobilizations to stand up to the threats made by International Brotherhood of Teamster "goon squads" First sign of a breach in Dave Beck's organization came -- September 1937 when his Teamsters' union demanded a showdown in San Francisco Beck's boycott fizzled when the ILWU longshoremen fraternized with the Teamster pickets and used loud-speakers to explain to them the silliness and futility of the whole situation Teamster rank and file members then refused to follow Dave Beck's orders

and the blockade ceased to function
this was a serious breach of Dave Beck's power

NATIONAL LABOR LEADERS ATTEMPT A RESOLUTION

AFL and CIO leaders began to conduct talks aimed at bringing the two organizations into a friendly agreement ending the war between the CIO and AFL
Employers were not interested in assisting labor to reach a resolution
they believed that if the two competing union leaders could tear each other down, there would be less pressure on the employers to make concessions during negotiations
Attempts at peace between the CIO and AFL left the question of the warehousemen unresolved with Bridges and Beck still battling for members

WILLIAM ORVILLE DOUGLAS BEGINS HIS PRODUCTIVE LIFE IN POLITICS

His itinerant Scottish Presbyterian minister father from Pictou County, Nova Scotia served several churches in Klickitat County in the small farming communities of Cleveland, Bickleton, and Dot
Douglas, the second of three children, was known throughout his childhood as Orville
he nearly died from a high fever shortly before his second birthday
he remained seriously ill for weeks
his mother, Julia, was advised by a doctor to massage his arms and legs with salt water every two hours throughout the illness to prevent atrophy of his limbs
When Orville as he was six years old Rev. William Douglas died in Portland, Oregon following stomach surgery for ulcers leaving his mother to raise her children in severe poverty and with strict discipline
she moved her children ages seven, six and one, from town to town finally settling in Yakima
Young Orville was teased because of his small size and skinny legs
he compensated by competing in neighborhood sports
he began hiking to strengthen his legs -- repeatedly walking several miles from his home to climb a 500-foot hill near Selah Gap where he hiked, climbed, fished, hunted and camped alone for days in the coulees, hills and mountains
He spent much of his youth in sight of the mountains
Orville and his high school friends often traveled to the Cascade Mountains west of Yakima to hike the forests and meadows and to fish in the mountain lakes and streams
Orville and his younger brother Art spent weeks on long treks over the rugged trails where the peace and beauty of the mountains provided an escape from problems of daily life and inspired a permanent love of wilderness in general and especially the South Cascades
wilderness hiking became and remained a central part of his life
Orville grew to become a rugged six footer -- he played center on his high school basketball team but a college education appeared to be unaffordable
as a youth, William like the rest of his family worked at odd jobs around Yakima picking cherries, Douglas later said, inspired him to a legal career

he wrote: **“I worked among the very, very poor, the migrant laborers, the Chicanos, and the I.W.W. (Industrial Workers of the World) who I saw being shot at by the police. I saw cruelty and hardness, and my impulse was to be a force in other developments in the law.”**²²²

Douglas did well enough academically in high school to earn a scholarship to Whitman College in Walla Walla, Washington where his older sister, Martha, attended classes their mother insisted that he had not only support himself but also send money home in addition to his studies Douglas worked as a janitor in the morning, at Falkenberg’s Jewelers in the afternoon, and waiting tables at a boarding house for lunch and dinner yet he found time to join a fraternity, participate on the debate team and other activities at the outbreak of the Great War he joined the Students’ Army Training Corps

William O. Douglas graduated from Whitman College [1920]

he returned to Yakima and took a job teaching high school English and coaching the debate team not happy he also took a part-time job as a reporter and copyeditor for the local newspaper he occupied himself by writing cowboy stories and novels under a pen name while teaching he dated Mildred Riddle who taught Latin at Yakima High School whom he had been dating since [1921] and they married [1923]

Not happy with teaching, Douglas decided to pursue a career in law

he rode the rails to New York City and entered Columbia University School of Law [1922] he married Mildred [1923] who continued to teach in Yakima until [1924] sending money to help her husband through law school

Douglas graduated from law school [1925] and took a job with a Wall Street law firm he quit after four months and returned to Yakima to attempt to open a law office there when this failed he took a job as a law professor at Columbia Law School

there he established a name for himself in the fields of corporate and bankruptcy law

William Douglas, his wife Millie and their two children frequently returned to the Northwest to hike and ride horses in the Cascades and in the Wallowa Mountains of northeast Oregon,

With the inauguration of President Franklin D. Roosevelt [1933],

Douglas, like many other politically ambitious lawyers and professors, looked to join Roosevelt’s New Deal administration

Securities and Exchange Commission (SEC) chose Professor Douglas to lead a committee to investigate investor protection during corporate bankruptcies and receiverships

Douglas gained publicity at hearings where he grilled corporate lawyers and trustees, including one of his old bosses from the Wall Street law firm

William O. Douglas was appointed a SEC commissioner [1936]

he was named SEC chairman -- September 21, 1937

this was just the beginning of his long, significant and controversial political career

PRESIDENT ROOSEVELT VISITS BONNEVILLE DAM IN THE PACIFIC NORTHWEST

Bonneville Dam is located forty-two miles up the Columbia River from Portland, Oregon

²²² Whitman, Alden. (1980). *Vigorous Defender of Rights*. *The New York Times*, Sunday, January 20, 1980, p. 28.

almost halfway between Portland and The Dalles
Concrete dam is 1,090 feet long and rises 170 feet above bedrock
reservoir behind the dam has a depth to seventy-two feet above where the water spills out
powerhouse, located near Bradford Island, contain ten huge generators
Another important feature of the Bonneville dam project is the ship lock
seventy-six feet wide and 500 feet long
its vertical lift of fifty-nine feet is the greatest lock lift in the world
using the locks, ocean-going ships can reach The Dalles
Bonneville Dam, lock and fish ladders were dedicated by FDR -- September 28, 1937

“Some of my friends who talk glibly of the right of any individual to do anything he wants with any of his property take the point of view that it is not the concern of federal or state or local government to interfere with what they miscall ‘the liberty of the individual.’ With them I do not agree and never have agreed, because, unlike them, I am thinking of the future of the United States. My conception of liberty does not permit an individual citizen or group of citizens to commit acts of depredation against nature in such a way as to harm their neighbors....”²²³

“Most people realize the exact opposite is the truth.... The responsibility of the federal government for the welfare of its citizens will not come from the top in the form of unplanned, hit-or-miss appropriations of money, but will progress to the national capital from the ground up -- from the communities and counties and states which lie within each of the logical geographical areas....

“The Bonneville Dam on the Columbia River...with Oregon on the south side of the river and Washington on the north, is one of the major power and navigation projects undertaken since 1933. It is 170 feet high and 1,250 feet long. It has been built by the Corps of Engineers of the War Department, and when fully completed, with part of its power installations, will cost fifty-one million dollars.

“Truly, in the construction of this dam we have had our eyes on the future of the nation. Its cost will be returned to the people of the United States many times over in the improvement of navigation and transportation, the cheapening of electric power, and the distribution of the power to hundreds of small communities within a great radius.

“As I look upon Bonneville Dam today, I cannot help the thought that instead of spending, as some nations do, half their national income in piling up armaments and more armaments for purposes of war, we in America are wiser in using our wealth on projects like this which will give us more wealth, better living and greater happiness for our children.”²²⁴

BONNEVILLE DAM PROJECT CONTINUES TO EXPAND

Electrical power generated at Bonneville is distributed by the Bonneville Power Administration
(Over the years Bonneville hydroelectric project expanded in size and purpose
a second Powerhouse was constructed [1974-1982]
using a 985-foot long dam raising the river seventy-seven feet
eight generators generate 558,200 Kilowatts of power)
Two types of fish ladders have been installed to cope with fish migration problems

²²³ W. Storrs Lee. *Washington State*. P. 456.

²²⁴ W. Storrs Lee. *Washington State*. P. 458.

one is a fish pool ladder while the other is a fish lock which works like a ship lock
both provide fish access to the river and tributaries above the dam
these have been only partially successful
Bonneville Dam blocked the migration of white sturgeon to their upstream spawning areas
sturgeon still spawn in the area below the dam where the lower Columbia River
which supports a healthy sturgeon population while very depressed populations
of white sturgeon persist in various reservoirs upstream
native salmon and steelhead on their journey upstream to spawn
get around the Bonneville Dam
during spawning season large concentrations of fish swimming upstream
are a tourist attraction

TEAMSTER BLOCKADE OF SAN FRANCISCO IS UNSUCCESSFUL

Harry Bridges smashed the Teamster effort
when he exposed the collusion between Beck and the bosses
Teamster members refused to follow their leaders into a senseless and suicidal struggle
Teamsters announced they were terminating the blockade -- September 29, 1937 the
at the request of the Associated Farmers of California in order to save the crops
In fact, their assault on the longshoremen had failed
as the ILWU remained firmly in control of the inland warehousemen

TWO GREAT WEST COAST LABOR LEADERS STRUGGLE TO EXPAND THEIR MEMBERSHIP

Harry Bridges was an alleged pro-Communist decidedly politically radical organizer
Bridges stood frankly for industrial unionism and the socialization of businesses
he insisted workers had nothing in common with the employers
Bridges led International Longshoremen Association (ILA) Local 38-44 in San Francisco
its members earned prime wages and enjoyed excellent working conditions
and this union was the prototype of racial integration within a labor movement
Dave Beck was the conservative leader of the Seattle Brotherhood of Teamsters Union
he was easily the Teamsters' most powerful regional organizer
and a dominant personality in Pacific coast labor
he was flexible in his leadership style -- he had no time for labor radicals
he had no larger concern than wages, hours and working conditions
political issues were irrelevant to him
he defended capitalism because he believed good wages and good working conditions
guaranteed a stable, reliable work force -- and benefited his union members
For Harry Bridges the road to union organization differed from Dave Beck's route
Bridges' combined multiple unions to form new, larger more powerful unions
Beck expanded the Teamsters' Union by engulfing other unions into the Teamsters
Harry Bridges and Dave Beck waged a long and violent battle to control the Pacific coast

PRESIDENT ROOSEVELT CONTINUES HIS TRIP THROUGH THE PACIFIC NORTHWEST

FDR returned to Grand Coulee -- October 2, 1937
by this time, the dam was being described as "the Eighth Wonder of the World"

it was a structure forty-six-stories tall -- just five feet less than the Washington Monument
it was destined to contain more than twelve million cubic yards of concrete
Roosevelt marveled at the progress that had been made
in the three years since his [August 1934] visit

“The easiest way to describe those figures is to say that this is the largest structure, so far as anybody knows, that has ever been undertaken by man in one place,” he said. “Superlatives do not count for anything because it is so much bigger than anything ever tried before.”²²⁵

DAVE BECK CONDUCTS AGGRESSIVE TEAMSTER MEMBERSHIP DRIVES

Seattle and Portland Teamsters began aggressively organizing drives among warehousemen
Dave Beck refused to haul cargo for companies that recognized
the International Longshoremen’s Association (ILA) as the bargaining agent for
longshoremen
although the ILWU managed to retain a few small employers, through NLRB victories,
Teamsters’ tactics proved much more effective than they had in San Francisco
Beck tried to annex brewery truck drivers into the Brotherhood of Teamsters
these drivers had traditionally belonged to the craft industry organized AFL brewery workers
Beck’s Seattle-based Teamsters Union refused to haul beer made in California
or on the East coast where the brewery workers refused to bow to Dave Beck’s rule
his boycott gave local brewers a monopoly in the Northwest market
but did not bring the Brewery workers into the Teamsters Union

DAVE BECK AND HARRY BRIDGES JOIN IN BATTLE IN SEATTLE

Pacific Coast International Brotherhood of Teamsters President Dave Beck
understood the desire of businessmen to accumulate money,
whereas Harry Bridges never seemed to care about a dollar
Dave Beck’s Teamsters had unionized much of Seattle’s work force
as he told a reporter, **“We recognize that labor cannot receive a fair wage unless business receives a just profit on its investment.”**²²⁶

Seattle Mayor Dore wanted the two unions to compromise and work together for the good of Seattle
however, if he was forced to choose between the two
Dore made it clear he would stay with the Teamsters due to his earlier loyalty to Dave Beck
Dore knew the battle over the warehousemen was rooted in the battle between the CIO and AFL
since he did not have to choose a side, he tried to remain neutral to insure his political future
Seattle AFL Central Labor Council instructed warehouse workers employed inland
not to recognize the ILSU, but rather to recognize only the Brotherhood of Teamsters
this was a striking blow to Harry Bridges’ effort to represent Seattle warehousemen
Harry Bridges defied the Seattle ruling -- September

UNION COMPETITION FOR SEATTLE MEMBERSHIP ESCALATES

²²⁵ Toni Rae Linenberger and William Joe Simonds, “Columbia Basin Project,” Bureau of Reclamation History Program, Denver, Colorado, 1998, P. 395.

²²⁶ Ross Reider, *Dave Beck (1894-1993)*: HistoryLink.org, Essay 2972, February 2, 2001.

Washington and Oregon AFL unions denounced CIO longshoremen raids on Seattle warehousemen it was charged that Harry Bridges

dominated the International Longshoremen's and Warehousemen's Union (ILWU)

"...by shouting rank-and-file while following the pattern of dictators which have arisen in other countries."²²⁷

Although the Seattle Central Labor Council attempted to keep the Teamsters in control conflicts escalated into raids, picketing, and fights between AFL Teamsters and the CIO ILWU longshore picket lines moved uptown

PRESIDENT ROOSEVELT'S ENDS HIS TOUR OF THE NORTHWEST

Time Magazine wrote of the president's travels -- October 11, 1937

"The President spent a week roving through the vast forests and high mountains of the most heroic terrain in the U.S. as though he had on [Paul] Bunyan's boots. Bonneville Dan, 170 ft. high, 1,250 ft. long is being built by War Department engineers complete with staircases as well as electric elevators for traveling salmon."²²⁸

DOCK WARS ESCALATE ALONG THE PACIFIC COAST

ILWU members, Teamsters, and warehousemen all waged a long, spectacular, violent and often bloody battle to control the Seattle and northern California waterfronts

As the all-out organizing battle rose in intensity, AFL Teamster leader Dave Beck and International Longshoremen ILWU leader Harry Bridges

both resorted to squads of "organizers" -- referred to as "goon squads"

Situation quickly escalated after Harry Bridges attacked Seattle employers and the class system in a speech addressing a Luncheon Club at the University of Washington Bridges stated: **"We take the stand that we as workers have nothing in common with the employers. We are in a class struggle, and we subscribe to the belief that if the employer is not in business his products will still be necessary and we still will be providing them when there is no employing class. We frankly believe that day is coming."**²²⁹

Dave Beck countered by once again referring to Harry Bridges as a Communist

before adding that the economic or social life of the country has no need for Communism

This exchange of attacks intensified the war between the two men

conflict between AFL Teamster leader Beck and CIO longshoremen's leader Harry Bridges escalated into a direct confrontation over warehousemen in Seattle

Beck attempted to unionize "everything on wheels"

Bridges, continuing his "inland march," moved on the uptown warehousemen

PORT OF TACOMA IS UNAFFECTED BY THE AFL DOCK WAR

Major exception to the Dave Beck-Harry Bridges battle was at the Port of Tacoma

Teamsters and longshoremen working there continued to observe their long-standing agreement which provided for Teamster control uptown and longshoremen dominance on the waterfront

²²⁷ Otilie Markholt, *Maritime Solidarity*. P. 335.

²²⁸ James A. Crutchfield, *It Happened in Washington*. P. 102.

²²⁹ Ross Reider, *Dave Beck (1894-1993)*: HistoryLink.org, Essay 2972, February 2, 2001.

SPOKANE LAUNDRY UNION CONTINUES THEIR STRIKE EFFORT

Striking workers began their own laundry operated by the union
but the struck laundries reopened using scabs -- late October 1937
(Laundry Workers Union strike was eventually lost)

INTERNATIONAL PACIFIC SALMON FISHERIES COMMISSION IS ESTABLISHED

(Great salmon runs of British Columbia's Fraser River were almost destroyed [1913]
rock slides, dam constructions, overfishing and poor environmental management practices
all contributed to such rapidly reduced numbers that both Canada and the United States
voiced alarm regarding the future of the fisheries
struggle to restore and preserve the salmon was long and difficult)
When American and Canadian fishermen saw the phenomenal restoration of halibut banks
and the positive impact of fishing restrictions in Alaska
U.S. and Canadian governments agreed to a belated treaty to improve salmon fishing
after forty-five years of negotiations both governments ratified a Convention
for protection, preservation and extension of the sockeye salmon of the Fraser River
International Pacific Salmon fisheries Commission was established -- 1937

PROGRESS IN PROTECTING SALMON SPECIES IS SLOW

Two full sockeye cycles (eight years) were studied
by the International Pacific Salmon Fisheries Commission
before the first regulations were proposed
during this time fishery experts learned that sockeyes were subdivided somewhat like halibut
there was almost no interbreeding between the various stock
this meant that once a race of fish had been exterminated it could not be replenished
by voluntary migrants from other streams
it was also discovered that different salmon races migrate at different times
determined by the need to reach their spawning grounds
when water temperatures are at a chilly optimum -- between 45° and 55° Fahrenheit
if this migration is interrupted by natural or man-made catastrophes, mortality soars

DEMOCRATS CONTINUE TO DOMINATE NATIONAL AND STATE POLITICS

State Senate Democratic seats climbed from thirty-seven to forty-one -- November 2, 1937
while Republican seats fell from eight to five
State House of Representatives Democrats rose in number from ninety-one to ninety-three
while Republican House Seats rose from five to six

TEAMSTERS CONTROL ALL TRUCKING IN CALIFORNIA

American Federation of Labor President William Green had handed Dave Beck paper jurisdiction
over all the uptown warehousemen organized by the CIO longshoremen (ILWU)
Teamsters Union won a master contract agreement in California
which brought all truck drivers in California into the Teamsters at once -- November 2, 1937
Workers won shorter hours, a wage increase, and improvements in working conditions

PRESSURE IS PUT ON GOVERNOR MARTIN TO CALL A SPECIAL LEGISLATIVE SESSION

Some political leaders wanted Governor Martin to call a Special Session of the Legislature to fund state relief for cities in financial straits -- December 1937

Governor Martin thought it was unfair for people across the state to pay to relieve any city besides, he noted, the state treasury could not afford the drain

Governor Martin refused to call for a legislative special session

JAPANESE INVASION OF NANKING, CHINA TAKES PLACE

Chinese Nationalist government's capital of Nanking surrendered to Japanese troops in the event known as the "Nanking Massacre" -- December 13, 1937

Japanese troops killed up to as many as 300,000 people including civilians who had attempted to defend their city

Nationalist China President Chiang Kai-shek and Communist Chairman Mao Tse-tung interrupted their differences to unite against the Japanese invaders

Mao remained in the rural Northern provinces of China

there he conducted guerrilla warfare against the Japanese

his army prospered as he stockpiled weapons and arms supplied by the Soviets and their allies

he also solidified his reputation among the peasants

Chiang meanwhile faced larger Japanese forces in the urban areas of the south

on-going battles weakened Chiang's army as Mao's forces grew in strength and determination

Japan's invasion of China created what was essentially a three-way war

among Japan, Chiang Kai-shek's Nationalists and Mao Tse-tung's Communists

FOUNDATION OF GRAND COULEE DAM IS COMPLETE

After three years of construction effort [began January 1, 1935]

MWAK completed the foundation of the dam across the Columbia River construction was begun on the high dam -- early 1938

Before any construction had begun on the Columbia River Dam

an estimated fifty percent of the salmon run had been lost to overfishing

now the run was decimated leaving five hundred miles of the Columbia River above the dam and thousands of miles of tributaries without migrating fish as passage ended at the dam

EVER EXPANDING RECESSION HAMPERS THE STATE

Following a number of years of successful growth by the United States economy

recession once again gripped the nation which caused unemployment to rise back to 19% -- 1938

Business groups in Washington State pushed an initiative measure

that would have limited labors' right to strike

this proposal was opposed by all progressive groups and was defeated --1938

Washington Governor Clarence Martin eliminated all state contributions for work relief

this withdrawal of state funds made counties alone responsible for necessary payments

an impossible burden for local government to carry

Labor unions organized the Old Age Pension Union to deal with the financial crisis

it was composed of thousands of citizens, union members and non-union members alike,

who pushed for a special session of the state legislature
to have the state resume its commitment to fund pensions for seniors
Governor Martin refused to call the legislature into special session

AMERICA CONTINUES TO CONSUME SILK

Despite the relative expense, the United States consumed
more than seventy-five percent of the worlds raw silk between the world wars
Silk became more affordable
low wages in Japan kept import costs down
increased purchasing power in the United States increased the market for silk
improvement allowed silk to be hand washed
better manufacturing techniques made silk more affordable than it ever had been
Silk appeared in men's suits, shirts, socks, and ties
American Women abandoned corsets and petticoats
in favor of clinging silk dresses, sports clothes, lingerie, and hosiery
women willingly denied themselves other things to have silk stockings
snubbing hosiery made from rayon, nylon, and cotton thread
Strong, richly dyed fabric found its way into ribbons, lampshades, brocades, and bedclothes

PORT OF SEATTLE REMAINED EMBROILED IN LABOR DISPUTES

Fight with Harry Bridges' CIO International Longshoremen's and Warehousemen's Union (ILWU)
and Dave Beck's AFL Brotherhood of Teamsters frustrated all efforts to settle the labor dispute
about who would represent warehousemen at the Port of Seattle -- January 8, 1938
Amid strikes, sitdowns and the shut down of four plants, citizen's arbitration committee members
conducted hearings to resolve the issue

TENSIONS BETWEEN THE AFL AND CIO ESCALATE IN THE MARITIME INDUSTRY

American Federation of Labor Sailors' Union of the Pacific (SUP)
voted in Seattle, AFL Sailors Union of the Pacific (SUP -- January 10, 1938
to Committee for Industrial Organizations (CIO) National Maritime Union (NMU)
men off **"All ships where Sailors' Union of the Pacific men have been discriminated
against by NMU crews."**²³⁰
it was anticipated a Shepard Line vessel would arrive in Seattle that night **"with a clear-cut case
of discrimination against SUP members"**²³¹

HARRY LUNDEBERG ATTEMPTS TO AVOID AFFILIATION CONFLICT FOR THE SUP

Relations between Harry Lundeberg's AFL Sailors' Union of the Pacific (SUP)
and Joe Curran's CIO National Maritime Union (NMU) deteriorated
as hostilities progressively escalated
Harry Lundeberg and the officials of the SUP made a strong effort to maintain their independence
from both the AFL and the CIO

²³⁰ Otilie Markholt, *Maritime Solidarity*, P. 362.

²³¹ Otilie Markholt, *Maritime Solidarity*, P. 362.

Lundeberg believed that was the only intelligent and principled course for them to take
Lundeberg's recommendation to the SUP membership was to **“chart a course which will keep us as far away as possible”**²³² from the jurisdictional warfare between the rival federations
But as other maritime unions aligned themselves with one side or the other,
Lundeberg discovered that the results of independence were isolation and weakness

BONNVILLE LOCKS BEGINS OPERATION ON THE COLUMBIA RIVER

First vessel to pass through the locks of the Bonneville Dam project on the Columbia River
was the sternwheeler *The Dalles* -- January 14, 1938
world's largest single lift lock at that time measured seventy-six feet wide by 500 feet long,
it took twenty to twenty-five minutes to fill and fifteen to twenty minutes to empty
this made The Dalles, Oregon a seaport

STRIKE AT THE PORT OF SEATTLE IS BROKEN

International Longshoremen and Warehousemen (ILWU) sitdown strike at the Port of Seattle ended
ILWU union members returned to work following the Port's acceptance -- January 15, 1938
of ILWU demands to represent Seattle warehousemen
and to arbitrate disputed points of the 1937 waterfront agreement
Citizen's arbitration committee members offered a compromise to resolve the issue
compromise that was accepted allowed the warehousemen to vote on representation
ultimately this seemed to be the only diplomatic, somewhat non-violent method
to end the conflict between Dave Beck's AFL Teamsters and Harry Bridges CIO-ILWU
over which union would represent the warehousemen
however, a Pacific Coast District International Longshoremen's Association (ILA) business agent
denounced the agreement as being **“more concerned with supporting Dave Beck than in reaching a permanent solution to this controversy.”**²³³

SEATTLE NEWSPAPER GUILD ENDS ITS STRIKE

Eight months after the CIO Seattle American Newspaper Guild walked off the job
at the labor-supporting *Seattle Star* paper
National Labor Relations Board issued an arbitration ruling
positive to the Seattle Newspaper Guild
during that time Teamsters had not joined the strike effort
although the newspaper was boycotted by a majority of rank-and-file Seattle labor members
Guild members voted to settle their strike on terms favorable to the union -- February 12, 1938
CIO Seattle American Newspaper Guild members were awarded:

- over \$29,000 in full back wages to the strikers;
- imposition of preferential hiring through the Guild;
- there could be no “economy firings” for at least six months;
- five-day forty-hour week was required;

²³² SUP, “To the Membership of the Sailors’ Union of the Pacific: Steady as She Goes,” in Scharrenberg papers, carton 1.

²³³ *The Seattle Times*, November 14, 1937.

•severance pay up to fifteen weeks,' wages, and other concessions were to be provided
Because of his position in support of the management of the *Seattle Star*, Dave Beck had lost face

PHASE THREE OF THE FDR'S NEW DEAL BEGINS

Federal relief roles declined from 3,184,000 to 2,122,960 by 1938

Revenue Bill extended tax cuts to corporations because of the lingering recession

Second Agricultural Adjustment Act was signed into law -- February 16, 1938

after the original Act was declared unconstitutional by the U.S. Supreme Court

a second statute of the same name was enacted by Congress -- February 16, 1938

which replaced FDR's farm subsidy policies

and reestablished the "parity payment" principle to raise crop prices

it also established the Federal Crop Insurance Corporation (FCIC)

within the Department of Agriculture

to insure only wheat crops (beginning [1939])

financing would be provided by the Federal Government

this law provided even more benefits to farmers than the original law

CONSERVATIVE POLITICIANS OPPOSE PROGRESSIVE REFORMS

It had long been a practice of some conservative politicians to refer to liberal reforms

such as child labor laws and women's suffrage as "Communist" or "Red plots"

these attacks increased in reaction to the New Deal policies of President Franklin D. Roosevelt

Many conservatives equated FDR's New Deal with socialism or Communism

they saw efforts at reform as evidence the government was being heavily influenced

by Communist policy makers in the administration who were directed from the USSR

to anti-Communist politicians, their vaguely defined danger of "Communist influence"

was an even greater threat to the nation than espionage or any other specific activity

Congress formed the House Committee on Un-American Activities -- 1938

this was the most prominent and active government committee

involved in anti-Communist investigations at the time

it became known as the House Un-American Activities Committee (HUAC)

Texas Congressman Martin Dies chaired the HUAC [until 1944]

HUAC investigated a variety of "activities"

(including those of German-American Nazis during World War II)

but Committee members soon focused on Communism beginning with an investigation

into Communists in the Federal Theatre Project -- 1938

SEATTLE WAREHOUSEMEN VOTE TO SELECT THEIR UNION

Due to the membership battles between Dave Beck and Harry Bridges

answering the question of who would represent the warehousemen became a top priority

a vote of the warehousemen seemed to be the only diplomatic, somewhat non-violent method

to end the conflict between Beck's AFL Teamsters

and Bridges' Longshoremen and Warehousemen

Warehousemen's representation election was held -- February 17, 1938

votes were cast by, and only by, warehouse company employees

CIO received the support of fifty-one warehouse companies
whereas the AFL received the support of 248 warehouse companies
this election outcome was clearly a victory for the AFL and a huge blow to the CIO
Neither the CIO nor the AFL were happy with the outcome
AFL was unsatisfied because it wanted all of the warehouses to be represented by the AFL
whereas there were a few warehouse companies that voted for the CIO
which meant that other companies could later leave the AFL
and return to the CIO via a new vote
CIO had hoped to claim all of its original warehouses
but it actually received the votes of only the two smallest warehouse companies
CIO refused to accept the vote because of the belief
that employees were coerced by Seattle Mayor John F. Dore causing the results to be skewed

SEATTLE MAYOR JOHN F. DORE CAMPAIGNS FOR REELECTION

Seattle Democrat Mayor John F. Dore enjoyed the solid, continued support
of Dave Beck and his Brotherhood of Teamsters
his Primary Election opponent was Democratic Lieutenant-Governor “Vic” Meyers
Firefighters and several other conservative unions
deserted the Teamsters to support liberal Lieutenant Governor “Vic” Meyers
and the politically radical Washington Commonwealth Federation slate
As Primary Election Day approached, Seattle Mayor John F. Dore’s supporters
used the “Red scare” tactic

Harry H. Lewis, former American Legion commander and strike-breaker
charged that “Vic” Meyers was receiving the support of
“Communists scheming to seize control of the city government”

Lewis continued: **"It is difficult for Seattle citizens, good Americans, to believe, but it is true that these Communist termites already have bored into some labor unions, into your schools, your churches, and even your homes. Their policy is the sitdown strike, the picketing of hospitals and cemeteries. Do you want to turn the city government over to their ghoulishness, or retain a loyal American, Mayor Dore?"**²³⁴

Mayor John F. Dore received enough primary votes to qualify as the Democratic candidate
in the General Election

PEOPLE OF PIERCE COUNTY FINANCE A SECOND MILITARY INSTALLATION

Pierce County voters passed a bond measure to establish an airfield just north of Camp Lewis [1927]
Tacoma Field officially opened [March 14, 1930]
It was renamed McChord Field to honor Colonel William Caldwell McChord [December 17, 1937]
who Chief of the Training and Operations Division in HQ Army Air Corps
when he was killed in a flying accident
McChord Field was officially transferred to the United States Government -- February 28, 1938

SEATTLE ELECTION FOR MAYOR

²³⁴ Sheldon C. Menefee, *The Nation Magazine*, March 26, 1938. Vol. 146, No. 13, p. 354-355.

Election Day in Seattle saw discouraged middle-class voters go the polls -- March 8, 1938
Teamster leader Dave Beck and other AFL labor leaders were labeled "racketeers"
progressive union forces were designated "Communists"
Dore's "Red scare" had been so overworked that it did the mayor little good
public, knowing his record, could not take him seriously as a crusader for Americanism
chief effect of this propaganda was to disgust the average voter with both sides
Middle-of-the-roads bolted into the camp of conservative city councilman Arthur Langlie
who promised Seattle a clean, economical city government
although he was backed by the conservative Order of Cincinnatus and the Chamber of Commerce
Langlie had at least promised to uphold the Wagner Act and to be impartial in labor disputes
Dave Beck's candidate, Seattle Mayor John F. Dore, was ingloriously defeated in his reelection bid
even though Dore had carried on a vicious red-baiting campaign
and a force of 2,000 Teamsters checked the voting books
and dragged American Federation of Labor (AFL) voters to the polls
Republican Arthur Langlie was elected mayor of Seattle
as were a number of other conservatives and reactionaries in Seattle
these results were hailed by the press of the nation as a swing toward conservatism
In a city heretofore dominated by labor, Dave Beck, and the New Deal
this represented a distinct gain in Seattle for the CIO
compared with the methods of the Beck-Dore administration
This was only the latest in a series of blows suffered by West Coast Teamster leader Dave Beck
had received in recent months and indicated a great decline in his political power
Some labor leaders hoped a few more such defeats
might completely wreck Beck's hold on the local AFL machine
then labor might once more be united

CONSTRUCTION ON THE GRAND COULEE DAM HIGH DAM BEGINS

MWAK, the major construction company composed of the Mason, Walsh, Atkinson Kier companies
completed its work on the low Grand Coulee Dam project -- March 1938
Consolidated Builders, Inc. headed by Henry J. Kaiser took over the next phase of dam construction
Consolidated Builders Inc. (CBI) consisted of MWAK; Construction Company of Seattle;
Morrison-Knudsen Company of Boise; Utah Construction Company of Ogden, Utah;
J. F. Shea Company, Inc. of San Francisco; Pacific Bridge Company of San Francisco;
McDonald and Kahn Company of San Francisco
and Seattle's General Construction Company
Consolidated Builders, Inc. constructed a new concrete mixing plant and a new railroad bridge
Bethlehem Steel built a high trestle that allowed access by cranes to all parts of the structure below
Western Pipe and Steel Co. of San Francisco built the penstocks and inlet pipes

CONTRACTOR HENRY J. KAISER ACHIEVES GREAT SUCCESS

Spokane's Henry J. Kaiser was a successful international contractor now based in Oakland, California
(he served as the head of Six Companies, Incorporated [1930-1939]
his Boulder Canyon project on the Colorado River made him internationally famous
this was the first multipurpose dam project in the world

core of the project was the immense Boulder [Hoover] Dam [1929-1937])
Kaiser's success on this effort earned him an even larger job
construction of the Grand Coulee project [July 16, 1933-June 1, 1942]
for years this was the largest dam in the world

Success bred success

Kaiser became the primary contractor on the second New Deal multipurpose project
in the Northwest: Bonneville Dam [June 1934-1938]
(in all, he constructed more than seventy large-scale projects including:
Boulder (Hoover) Dam, piers for the San Francisco-Oakland Bridge,
Bonneville Dam and Grand Coulee Dam)

ADOLF HITLER ANNEXES AUSTRIA INTO NAZI GERMANY

Austria was overwhelmingly inhabited by ethnic Germans separated from their homeland
by the Treaty of Versailles that ended the Great War [signed June 28, 1919]
Austrian Nazis conspired to seize the Austrian government by force
and unite their nation with Nazi Germany -- early 1938
Learning of the conspiracy, Austrian Chancellor Kurt von Schuschnigg, met with Adolf Hitler
in the hope of reasserting his country's independence
instead the chancellor was bullied into naming several top Austrian Nazis to his cabinet
Chancellor von Schuschnigg called for a national vote
to resolve the question of *Anschluss*, (annexation) once and for all
but before the election could be held Schuschnigg gave in to pressure from Hitler and resigned
in his resignation speech, under coercion from the Nazis, he pleaded with Austrian forces
not to resist a German advance into the country -- March 11, 1938

EDWARD R. MURROW REPORTS ON THE INVASION OF AUSTRIA

Ed Murrow gained his first glimpse of fame during the March 1938 Anschluss
while he was in Poland arranging a broadcast of children's choruses,
he received word from journalist William L. Shirer of the annexation
Shirer noted he could not get the story out through Austrian state radio facilities
Murrow immediately sent Shirer to London, where he delivered an uncensored, eyewitness account
of the events of the Austrian Anschluss
Murrow then chartered a plane to fly from Warsaw to Vienna so he could take over for Shirer
Ed Murrow himself reported live from Vienna, in his first on-the-scene news report: **"This is
Edward Murrow speaking from Vienna... It's now nearly 2:30 in the morning, and Herr Hitler has
not yet arrived."**²³⁵ -- March 13, 1938
this was the first big story for Edward R. Murrow and CBS
CBS in New York requested Murrow and Shirer put together a "European News Roundup"
which brought correspondents from various European cities
to report on reactions to the Anschluss
this program hosted by Bob Trout in New York was broadcast
broadcast was revolutionary at the time

²³⁵ Erik Barnouw, *The Golden Web: A History of Broadcasting in the United States 1933-1953*. P. 77.

live reports from various locations without the reporters being able to hear each other
came off almost flawlessly

YOUNG EGBERT R. MURROW GROWS UP IN WASHINGTON STATE

Born Egbert Roscoe Murrow to Quaker parents in North Carolina [April 25, 1908]
he was the youngest of three brothers
when Egbert was six years old the Murrow family
moved to Blanchard, Washington (Skagit County) where they homesteaded
Egbert, now nicknamed “Ed”, attended high school in nearby Edison, Washington
he became president of the student body in his senior year and excelled on the debate team
he was on the Skagit County championship basketball team
After graduation from Edison High School [1926] he entered Washington State College at Pullman
while there he changed his name from “Egbert” to “Edward”
eventually majoring in speech, Ed graduated with a Phi Beta Kappa Key [1930]
Edward R. Murrow joined the staff of the Columbia Broadcasting System (CBS)
as the “director of talks and education” [1935]
he remained with the CBS his whole broadcasting career
CBS did not have a news staff when Murrow arrived
announcer Bob Trout lined up newsmakers on the network to discuss the day’s issues
Trout gave Murrow tips on how to communicate effectively on the radio
Ed Murrow went to London [1937] to serve as the director of CBS’ European operations
Murrow’s job was persuading European figures to broadcast over the CBS network
Murrow recruited journalist William L. Shirer to take a similar position in Europe
these two men would become the forefathers of broadcast journalism

ADOLF HITLER COMPLETES THE TAKE OVER OF AUSTRIA

Hitler accompanied his Nazi troops as they entered Austria where enthusiastic crowds met them
Hitler appointed a new Nazi government and the annexation was complete -- March 13
In annexing Austria, Hitler declared that he was simply gathering the German people into one nation

DROUGHT CONTINUES IN THE MIDWEST

Continuing drought conditions in the North Eastern US caused massive crop failures and hardships
this was the year of the “snuster” -- a mixture of dirt and snow reaching blizzard proportions
these storms caused a tremendous amount of damage and suffering -- 1938
There were, of course, the usual floods at locations prone to these disasters

TACOMA LOCAL 38-97 REMAINS WITH THE AMERICAN FEDERATION OF LABOR

Local 38-97 debated for a month over whether to affiliate with
CIO’s International Longshoremen’s and Warehousemen’s Union (ILWU)
or stay with the AFL’s International Longshoremen’s Association (ILA)
Paddy Morris emerged from his work in a ship’s hold to lead the discussion
majority of the Tacoma men favored staying with the AFL-ILA because of the long tradition
of working with other AFL unions in the Tacoma Central Labor Council
to affiliate with the ILWU would mean Local 38-97

would lose its seat on the Tacoma labor council and must break
with the Sailors' Union of the Pacific (SUP), Teamsters, and other AFL unions
Local 38-97 members had strong reservations about John L. Lewis
and the motives of the Committee for Industrial Organizations (CIO)
they considered Lewis to be autocratic
they viewed the CIO as a member raiding, Communist-haven, menace
In effect Tacoma longshoremen would have been isolated
from the heart of the Tacoma labor community where they had played a leading role
for almost fifty years

INTERNATIONAL LONGSHOREMEN'S AND WAREHOUSEMEN'S UNION CONVENTION

CIO's International Longshoremen's and Warehousemen's Union (ILWU)
held its first convention in Aberdeen -- April 4-[17], 1938
in attendance were all Pacific Coast ILWU unions except Tacoma, Anacortes, and Port Angeles
CIO's ILWU went unchallenged as the official representative of its union members

SEATTLE GETS A NEW MAYOR

Seattle Mayor John F. Dore became gravely ill and was relieved of office -- April 13, 1938
although his term in office had not yet expired
Mayor Dore passed away five days later [April 18]
(Mayor-elect Arthur B. Langlie was appointed to take office early [April 27, 1938])

RACE TO CONTROL THE STATE GOVERNMENT

Democratic Governor Clarence Martin was in Washington, D.C.
to obtain financing for relief work in the state -- April 14, 1938
Democratic Lieutenant Governor Victor Meyers had gone to California on a fishing trip
Secretary of State Democrat Belle S. Reeves filled in as acting-governor
As soon as Governor Martin was safely out of the way in Washington, D.C.,
political leaders who had argued for a legislative special session to improve state pensions
got in touch with Meyers urging him to return and call a special session of the legislature
While efforts were being made to search for the lieutenant governor somewhere on his boat
Governor Martin's supporters informed him of what was happening
and urged him to return to the state
Governor promptly decided to return to the state
but since no commercial airline would get him to Olympia in time
he chartered an airplane at his own expense
Lieutenant-Governor Vic Meyers, once in Olympia, attempted to call a legislative special session
but the office of the Secretary of State was closed for the day
On the following morning, Meyers went to his office to file the call for a special session
but by then, Governor Martin's special plane had crossed the Idaho border
and touched down near Spokane -- the governor was in the state removing Meyers' authority
Governor Martin issued a proclamation forbidding the legislators to convene in special session

SHEPARD LINE BEEF INCREASES TENSION BETWEEN THE SUP AND NMU

Shepard Line's *Harpoon* arrived in San Francisco from the East Coast -- April 15, 1938
several National Maritime Union (NMU) crewmen aboard
complained of poor working conditions
they had been working under CIO NMU's contract agreement
rather than contract covering Sailors' Union of the Pacific (SUP)
which provided better working conditions and overtime pay
leaflets signed by these crew members appeared on the San Francisco waterfront
challenging Joe Curran's credentials as a democratically elected official of NMU
further, these leaflets urged East Coast sailors to join the Sailors' Union of the Pacific (SUP)

WILDCAT STRIKE TAKES PLACE AT THE PORT OF SAN FRANCISCO

Crews of the *Harpoon* and *West Wind*, also a Shepard Line vessel, struck -- April 17, 1938
demanding the AFL West Coast Sailors' Union of the Pacific (SUP) agreement be enforced
Striking sailors urged Eastern sailors to repudiate **“any political group that may be dominating you”**²³⁶

and merge with West Coast union
they demanded that all American sailors be united in
“one union, one agreement, one constitution, one book”²³⁷

With two of his ships tied up, T.H. Shepard flew out to San Francisco
San Francisco CIO longshoremen and warehousemen refused to support the striking crewmen
SUP president Harry Lundeberg said Harry Bridges threatened the owner with trouble
if the shipowner signed an agreement with the SUP
Harry Bridges, acting on authority from NMU President Joe Curran, advised NMU sailors to sit-down
to force the Sailors' Union of the Pacific (SUP) sailors off the ships
In turn, Harry Lundeberg told his SUP members to stay put
Lundeberg and other SUP leaders believed that Communist Party members
were deliberately placed West Coast ships to cause trouble

PICKET LINES ARE ESTABLISHED IN SAN FRANCISCO

Shepard Line's *Sea Thrush* arrived in San Francisco with a mixed crew of union members -- April 18
several hundred SUP pickets gathered at San Francisco's Pier 41 -- April 18, 1938
to protest the Shepard Line's ignoring the agreement it had made with the SUP
Some distance away hundreds of CIO longshoremen surrounded a car
which was equipped with a loud speaker used by an ILWU leader to urge SUP pickets to disperse
Rioting broke out
after several hours police permitted the Sailors' Union of the Pacific to restore their picket line
Sea Thrush continued on to San Pedro where she arrived -- April 23, 1938
there she was met by a picket line of 500 Sailors' Union of the Pacific (SUP) members
SUP men showed their support by striking nine other ships unloading in San Pedro harbor

SHEPARD LINE'S *TIMBER RUSH* ARRIVES AT TACOMA

²³⁶ Otilie Markholt, *Maritime Solidarity*, P. 360.

²³⁷ Otilie Markholt, *Maritime Solidarity*, P. 360.

Sailors' Union of the Pacific (SUP) member picketed the arrival of the Shepard Line vessel
Tacoma's longshoremen refused to cross the Sailors' Union of the Pacific (SUP) picket line
thus the *Timber Rush* remained tied up at Tacoma -- April 18, 1938
SUP removed twenty-one NMU crew members from the vessel and put them up in a Seattle hotel
National Maritime Union (NMU) officers charged the SUP shanghaied the crew
SUP members established a picket line on the dock

TACOMA FACES A LABOR BEEF OVER A SHEPARD LINE VESSEL

Tacoma AFL longshoremen contended that the picket line constituted an unsafe condition
and thus was not subject to arbitration under their labor agreement

Tacoma *Times* commented that employers favored the CIO: **"Although they have not said so bluntly, they were elated when CIO men refused to honor the sailor pickets and chagrined when AFL men in Tacoma took the opposite stand."**²³⁸ -- April 19, 1938

ARBITRATION IS DEMANDED TO RESOLVE THE LABOR DISPUTE IN TACOMA

At the request of Waterfront Employers, U.S. Secretary of Labor Frances Perkins
appointed Rev. M.E. Bollen of Seattle to arbitrate the Tacoma dispute

Tacoma AFL longshoremen denied **"the right of either party to request an arbitration"**
and the **"authority of the Secretary of Labor in this instance to appoint the arbitrator"**²³⁹

Tacoma's longshoremen refused to participate in the proceedings
Timber Rush had been tied up for a week when the arbitrator heard the case -- April 25, 1938
twice a day Tacoma International Longshoremen's Associations work gangs
were dispatched to work the ship before they returned to the hall when faced by SUP pickets

RULING IS DELIVERED ON THE TACOMA BEEF

Arbitrator Rev. M.E. Bollen of Seattle ruled -- April 26, 1938
that a disagreement existed between the Tacoma International Longshoremen's Association
and the Pacific Coast Waterfront Employers
further, longshoremen had failed to prove the picket line constituted an unsafe working condition
they were in violation their agreement by refusing to attend the hearing
Tacoma's AFL Longshoremen ignored the decision
they continued to honor the SUP picket line at the Shepard Line's *Timber Rush*
Crew members of the *Timber Rush* returned from Seattle in small groups with a police escort

SEATTLE MAYOR JOHN F. DORE BECOMES GRAVELY ILL

Due to his illness, Democrat Seattle Mayor Dore was removed from office [April 13, 1938]
after losing the Mayoral election to Republican Arthur B. Langlie, Dore was a **"lame duck"**
Mayor Dore died [April 18]
Mayor-elect Arthur B. Langlie was appointed to the office early -- April 27, 1938

PORT OF TACOMA IS THREATENED WITH CLOSURE

²³⁸ Otilie Markholt, *Maritime Solidarity*, P. 372.

²³⁹ Otilie Markholt, *Maritime Solidarity*, P. 372.

With the concurrence of the Pacific Coast Waterfront Employers,
Seattle CIO longshoremen threatened to close all of the port of Tacoma
Every available Tacoma longshoreman worked as shippers rushed to clear vessels
before the closure deadline which had been set for [Saturday morning April 30]
Four Tacoma AFL longshore gangs dispatched to the *Timber Rush* -- morning April 29, 1938
found themselves outnumbered three to one by SUP pickets -- the Tacoma longshoremen left
More than a dozen ships cleared the port the last day -- some leaving cargo behind on the docks

PORT OF TACOMA IS CLOSED

Longshoremen again refused to cross the Sailors' Union of the Pacific picket line -- April 30, 1938
Employers declared the Port of Tacoma closed -- 8:00 a.m. Saturday April 30, 1938
longshoremen were "locked-out" of the port
only the *Timber Rush* remained in the harbor

TACOMA CITIZENS OBJECT TO THE CLOSURE OF THEIR PORT

Representatives of the locked-out longshoremen and waterfront employers
reiterated their position in a Tacoma city council meeting -- May 2, 1938
Mayor George Smitley wired the Pacific Coast Waterfront Employers
and U.S. Labor Secretary Perkins to end the port closure immediately
Tacoma Times in a front page editorial demanded: **"Let Madam Perkins, the NLRB, and...the waterfront employers' association settle this thing at San Francisco or Boston -- not at Tacoma, at Tacoma's costly expense"**²⁴⁰
Sailors' Union of the Pacific (SUP) donated \$1,000 to the locked-out longshoremen

COOPERATION IS INCONSISTANT IN THE TACOMA BEEF

Tacoma' AFL International Longshoremen's Association (ILA)
declared all cargo diverted from Tacoma or destined for that port to be "hot"
Seattle Sailors' Union of the Pacific sailors and marine firemen honored the ban on Tacoma cargo
five vessels with hot cargo were tied up in Seattle
Tacoma ILA sent a delegation to appeal for support to Seattle's CIO ILWU
without success

AFL EXPELLS MORE CIO AFFILIATES FROM THE INTERNATIONAL UNION

Split over the industrial unionism issue resulted in seven more unions with almost a million members
being expelled from the American Federation of Labor (AFL) -- May 1938
leaders of all of the disenfranchised unions decided to meet to deal with the crisis
Seeing no future for the industrial union movement within the AF
John L. Lewis withdrew his Committee for Industrial Organizations (CIO)
which no longer existed in the American Federation of Labor

HARRY BRIDGES' ILWU "MARCH INLAND" SPREADS ACROSS THE NATION

Organizing warehousemen into the ILWU went far beyond the docks

²⁴⁰ Otilie Markholt, *Maritime Solidarity*, P. 372.

uptown warehouses and distribution centers far from the port cities of the West Coast were raided and coerced into Committee for Industrial Organizations (CIO) membership CIO's International Longshoremen's and Warehousemen's Union (ILWU) started organizing warehouse workers in the Midwest and Southeast Inland organizing drives achieved recognition of the elected ILWU stewards' authority acceptance of the steward in the workplace was key to the administration of labor contracts and played an important part in the fight for union control over working conditions However, raids by unions or by employers hampered progress and were difficult to combat far from the ILWU's West Coast base Pacific Coast longshore leverage could not be brought to bear on the distant struggles ILWU faced frequent attempted raids on their membership by other unions employer attacked workers' rights for years ever-present threats of plant closure or relocation to a nonunion setting were a constant concern

SAILORS' UNION OF THE PACIFIC (SUP) DEMANDS THE PORT OF TACOMA BE OPENED

SUP delivered an ultimatum to the Pacific Coast Waterfront Employers -- Wednesday May 11, 1938 unless the employers opened the port of Tacoma by 5:00 P.M. the next day, **"We call all our union members out of all vessels trading in and out of Seattle and in the meantime our members are not permitted to leave any vessel."**²⁴¹

This threat worked

Otis Shepard and the Pacific Coast Waterfront Employers agreed to open the port of Tacoma

AGREEMENT IS RATIFIED IN TACOMA

Eight hundred members of the Sailors' Union of the Pacific (SUP), Marine Firemen, and the Tacoma International Longshoremen's Association (ILA) accepted the terms offered by Pacific Coast Waterfront Employers at a special meeting in Seattle -- 1:00 A.M. Friday morning May 13, 1938

Shepard Line's *Timber Rush* steamed out of Tacoma headed for Seattle's Lake Union against the combined pressure of the Shepard Line, waterfront employers, federal government, Tacoma AFL longshoremen and Seattle AFL Sailors' Union of the Pacific compelled Shepard Line to recognize their agreement

Shepard Line Beef had driven the Sailors' Union of the Pacific into the American Federation of Labor Committee for Industrial Organization (CIO) was accused of a **"boss-collaboration, labor smashing crusade' in the maritime industry...as evidenced by their approval of government hiring halls, their violent picket line smashing tactics, and the attempts to establish the NMU on the West Coast."**²⁴²

INTERNAL STRUGGLES CONTINUE FOR THE MARITIME FEDERATION OF THE PACIFIC

Efforts to draw in new members conducted by the American Federation of Labor (AFL) drove a wedge into the solidarity of the Maritime Federation of the Pacific (MFP)

²⁴¹ Otilie Markholt, *Maritime Solidarity*, P. 374.

²⁴² Otilie Markholt, *Maritime Solidarity*, P. 376.

Sailors' Union of the Pacific (SUP) agreed to vote by referendum
to accept a national charter from the AFL -- May 16, 1938
Marine Firemen remained independent
with Communist members raising strong objection to the AFL efforts
Marine Cooks and Stewards, firmly dominated by the Communists, remained with the CIO
AFL and CIO longshoremen contested for possession of their bargaining agreements
with the Pacific Coast Waterfront Employers

MARINE FEDERATION OF THE PACIFIC (MFP) HOLDS ITS FOURTH CONVENTION

As international organizational struggles of the MFP reached a fever pitch

MFP delegates gathered in San Francisco -- June 6, 1938

Issue of AFL or CIO affiliation split the convention as discussions came to a head

over the of seating Tacoma's AFL International Longshoremen's Association (ILA) delegates

credential committee members voted seven to five not to seat the Tacoma delegation

because the AFL longshoremen no longer had a coastwide organization

Communist CIO Marine Firemen delegate Walter Stack warned: **"If you recognize Tacoma as a coastwise organization it means you recognize (ILA President Joseph) Ryan, (Paddy) Morris and his strike-breakers outright...you will recognize such as the 'Dirty Dozen' and the 'Lost Battalion.' Joseph P. Ryan and that gang are out publicly on record to break the Marine Federation because eighty per cent of the Marine Federation is CIO."**²⁴³

Minority members of the Credential Committee recommended seating the Tacoma ILA delegation:

"Can we as workers penalize and censure a group of workers who have been under union conditions 20 years, who are a vital link in our Federation as workers in a solid and United Front against the employer because they have failed to go CIO?"

"...for no reason other than their choice of affiliation, a loyal member local -- one whom we fought shoulder to shoulder with in the 1934 Marine strike--the 1935 Timber Workers strike--the strike in 1936 and 1937, a group of workers who have respected every picket line established by a member of the Marine Federation of the Pacific, willing at all time to strike in support of a distressed member local as was shown in the Seattle lockout this year is to be unseated because of their affiliation and not their principles."²⁴⁴

Harry Bridges made a long speech accusing the Sailors' Union of the Pacific (SUP)
and Tacoma's longshoremen of betraying the rest of the coast

END OF THE FEDERATION OF THE PACIFIC (MFP)

Rejecting the possibility of compromise, convention delegates formalized their united stand
they would remain with the Committee for Industrial Organization (CIO)

MFP Constitution was amended to read **"...even to the extent of empowering the Executive Board to expel any organization which takes action which will injure the unions affiliated and eventually destroy them and the Federation"**²⁴⁵

Delegates from the Sailors' Union (SUP) , Masters, Mates, and Pilots, and Marine Firemen

²⁴³ Otilie Markholt, *Maritime Solidarity*, P. 379.

²⁴⁴ Otilie Markholt, *Maritime Solidarity*, P. 379.

²⁴⁵ Otilie Markholt, *Maritime Solidarity*, P. 381.

walked out of the convention with the Tacoma longshore delegation -- 3:10 P.M. June 9, 1938
With the opposition driven out, the convention elected all officers by acclamation

EFFORTS ARE MADE TO REUNITE THE FEDERATION OF THE PACIFIC (MFP)

Convention leaders sent delegates to meetings of the AFL unions that had walked out
to try to persuade them to return to the MFP

Delegates who walked out of the convention issued a statement declaring that **“it was with amazement that we witnessed this deliberate attempt on the part of CIO adherents to...use the Marine Federation of the Pacific to club unions into the CIO.”**²⁴⁶

MARITIME FEDERATION OF THE PACIFIC (MFP) IS DOOMED

Sailors’ great organizational movement yielded to the destructive effect of political polarization
that divided the unionists between a “left wing” faction, controlled by the Communists
and independent groups that came together sharing nothing more than anti-Communism

In an atmosphere of war fears and unease over European Fascism,
Communist critics could easily be thrown into the “reactionary” camp
at least in the mind of the public

Sailors Union of the Pacific (SUP) in an attempt to protect its workers’ interests,
found itself at violent odds with the Communists

Although the Federation of the Pacific (MFP) perished, the individual organizations remained strong
members held fast to their unions and hiring halls

PROFESSIONAL BASEBALL IGNITES SEATTLE SPORTS FANS²⁴⁷

(After the loss of Dugdale Park in a [July 4, 1932] arson fire, baseball languished in Seattle
until the arrival of beer brewer Emil Sick the president of Associated Brewers of Canada
with the repeal of prohibition, he merged his operation with Seattle’s Rainier Brewery)

Emil Sick acquired a great deal of money even in the depth of the Great Depression
his wealth brought him in contact with many prominent local citizens
one was labor leader Dave Beck who was a baseball fanatic

he convinced Sick to purchase the Seattle Indians baseball franchise
and build a new stadium where Dugdale Park had once stood

Emil Sick hired major league pennant winning Jack Lelivelt to manage his team
he also signed well-known ballplayers Edo Vanni and Mike Budnick
but the brightest star on the team was Fred Hutchinson

an eighteen-year-old pitcher from nearby Franklin High School

Sick’s Stadium was built of concrete and steel at a cost of \$350,000

it featured choice seating and a major league quality playing field

twelve thousand fans showed up for the inaugural game -- June 15, 1938

some watched the game for free on the grassy knoll just over the left-field fence
which became known as “Tightwad Hill”

Adding to this festive atmosphere of each game was announcer Leo Lassen

²⁴⁶ Otilie Markholt, *Maritime Solidarity*, P. 382.

²⁴⁷ Alan J. Stein, HistoryLink.org, Essay 1501, July 15, 1999.

who duplicated the sound of a “hit” by striking his microphone with a pencil
he known as “Mr. Baseball” and “The Great Gabbo” for his ability to turn a phrase such as:
“Mount Rainier is a big ice-cream cone over Franklin High tonight, folks”
“Hang onto those rocking chairs”
he was also managed to work commercials into his play-by-place descriptions
“He’s as safe as a Silvertown Tire.”

PHASE THREE OF FDR’S NEW DEAL GOES INTO EFFECT

FDR signed the *Emergency Relief Appropriations Act* -- June 16, 1938
this was an extension of his previous efforts to deal with the continuing depression
by providing relief to those in need
Congress passed the *Rivers and Harbors Act* -- June 20, 1938
this brought about construction of interlocking dams and power projects
known as the Columbia Basin Project
principal purpose of the project was land reclamation,
but power generation, flood control, and improved navigation were also important aspects
Congress passed two amendments to the [1898] Federal Bankruptcy Law -- June 22, 1938
Chandler Act included substantial provisions for the reorganization of businesses
Congress also enacted *Section 60e of the Bankruptcy Act*
to create a single and separate fund concept
which was intended to minimize losses to customers
by giving them priority over the claims of general creditors
Congress enacted the *Fair Labor Standards (Wages and Hours) Act* -- June 25, 1938
businesses engaged in interstate commerce (with some exceptions)
were required to pay a minimum wage of forty cents per hour (up from twenty-five cents)
work week was limited to forty-four hours per week without overtime beginning -- 1938
children under the age of sixteen were not allowed to work where hazardous conditions existed

OLYMPIC NATIONAL PARK IS CREATED BY CONGRESS

Washington Congressman Monrad C. “Mon” Wallgren’s Bill created a 648,000 acre park
and was signed by President Franklin Roosevelt -- June 29, 1938
Olympic National Park absorbed Mount Olympus National Monument
(which had been created by President Theodore Roosevelt [1909]
President Franklin Roosevelt authorized to increase park’s size to 898,292 [January, 1940]
coastal area of the park was added [1953])
(Today, Olympic National Park can be divided into three basic regions
Pacific coastline, the Olympic Mountains and the temperate rainforest)

BONNEVILLE DAM GOES INTO SERVICE

Bonneville Dam project was completed at a cost of about \$83 million
to furnish hydroelectric power and tamed the Cascade Rapids
as navigation limits were extended up the Columbia River
first power generated at the Bonneville Powerhouse was produced [March 1938]
Bonneville Dam, Bonneville, Oregon and North Bonneville, Washington

are all named in honor of Captain (later Brigadier-General) Benjamin Louis Eulalie de Bonneville
a West Point graduate and early fur trapper who explored the west (from [1832] to [1835])
in doing so, he visited many parts of Oregon

U.S. Secretary of the Interior Harold Ickes attended the formal opening of the dam -- July 9, 1938
he tripped a switch and sent electricity to the City of Cascade Locks

First two dams on the Columbia River, Rock Island [completed 1933] and Bonneville -- 1938
were relatively low projects and could be circumvented by fishways

three ladders, or sequences of artificial cascades connecting steplike pools
were constructed at each dam -- they did not work perfectly
occasionally the salmon were badly bruised as they hurled themselves at the ladders
in their blind compulsion to reach their natives ground to create new life and then to die
on the way downstream fingerlings suffered in riding over the spillways or through the turbines
even more insidious was the delay occasioned as the fish searched for the ladders
each dam, studies indicated, held back the run for two or three days
when ready to spawn, and these slowdowns increased fish mortality

PUBLIC VERSUS PRIVATE POWER CONTROVERSY CONTINUES ON

Private power companies had served customers and resisted public utility companies with equal vigor
there were three types of public power agencies:

- municipal electric systems,
- power districts,
- electric cooperatives

all three grew rapidly and flourished when Columbia River power first became available
Congress specifically gave preference and priority in the sale of power to non-profit agencies
people demanded that power generated at cost by the federal government
should be distributed at cost to local public agencies

Public-private power fight crystallized -- 1938

public power had no better advocate
than Tacoma lawyer turned legislator then U.S. Senator Homer T. Bone
(as a state senator, Homer T. Bone pushed the "Bone Bill" through the state legislature
which gave municipal utilities power of eminent domain to acquire power systems
owned by private power companies
and gave municipal electrical utilities such as Seattle's and Tacoma's
opportunity to sell their service beyond their city limits [1933])

he called private utilities "big-dough boys"
private power interests attempted a referendum to the voters
to restrict expansion of city-owned utilities into areas served by private power
Homer T. Bone helped defeat the referendum

SEATTLE RAINIERS AND FRED HUTCHINSON KNOW HOW TO WIN

"Hutch" had an amazing season winning twenty-five games (.781% of the games he appeared in)
and held a 2.48 earned run average
more than 16,000 fans showed up on his 19th birthday to cheer him on -- August 12, 1938
as he won his 19th game

Hutch's success and that of the team drew fans in numbers that shattered previous attendance records
Seattle Rainiers finished in second place in the Pacific Coast League in its first year
(Hutch went on to the majors when Emil Sick sold him to the Detroit Tigers
for the astounding sum of \$50,000 and four players
(two years earlier Joe DiMaggio got only \$25,000 from the Yankee)
(Hutch spent ten years in the big leagues, with a 95-71 winning record and a 3.73 ERA)
(After the Seattle Rainier's three-year pennant streak, World War II intervened
many of the players were called off to fight
however, Seattle's attendance was number one in the nation for Minor League teams [1938-1952]
many fans drank Rainier Beer at the games and at home
team owner and brewer Emil Sick was a very happy man)

PHYSICIST DR. LEO SZILARD IMMIGRATES TO THE UNITED STATES

Dr. Leo Szilard was an intense, eccentric Hungarian
who had studied physics with Dr. Albert Einstein [in the 1920s]
Leo Szilard was born to an affluent Jewish family in Budapest, Hungary [February 11, 1898]
he showed an early interest in physics and a proficiency in mathematics
He enrolled as an engineering student at Budapest Technical University [1916]
in the Great War he was drafted into the Austro-Hungarian Army as an officer-candidate
before his regiment could be sent to the front lines, Szilard fell ill with Spanish flu
he was returned home for hospitalization
he later was informed that his regiment had been nearly annihilated in battle
so the sickness probably saved his life
he was discharged honorably at the end of the war
Because of the chaotic political situation and rising anti-Semitism, Szilard decided to leave Hungary
he was awarded a doctorate in physics from Humboldt University of Berlin [1923]
Deciding to leave Berlin, Dr. Leo Szilard accepted an offer to conduct research
at Columbia University New York City --1938

PHYSICIST DR. ENRICO FERMI IMMIGRATES TO THE UNITED STATES

Dr. Enrico Fermi was an Italian physicist who became known for contributions to the development
of quantum theory, nuclear and particle physics, statistical mechanics
and the development of the first nuclear reactor: Chicago Pile-1 [1942]
Enrico Fermi was born in Rome, Italy [September 29, 1901]
to Ida (de Gattis) Fermi an elementary school teacher
and Alberto Fermi, a Chief Inspector of the Ministry of Communications
when Enrico was fourteen his older brother passed away and the loss devastated him
looking for an escape from reality, Fermi happened upon two physics books [from 1840]
on subjects like mathematics, classical mechanics, astronomy, optics, and acoustics
he read them from cover to cover correcting some of the mathematical errors as he read
notes found in the books indicated that Fermi studied both books intensely
By the time Enrico was seventeen Fermi's scientific ideas and concepts were so advanced
he was able to directly enter graduate school
after four years studying at the University of Pisa, he graduated magna cum laude

with a doctorate in physics [1922]
While writing the appendix for the Italian edition of the book *The Mathematical Theory of Relativity* written by A. Kopff, Enrico Fermi pointed out, for the first time [1923] that hidden inside Einstein's famous equation ($E = mc^2$) there was an enormous amount of potential nuclear energy to be exploited
an academic career for Enrico Fermi followed in Rome
he became a professor of physics, then atomic physics
focusing on the creation of artificial isotopes through neutron bombardment
At the age of thirty-seven Dr. Enrico Fermi received the Nobel Prize in Physics --1938
after Fermi accepted the Nobel Prize in Stockholm, he, his wife Laura, and their children emigrated to New York mainly because Italian dictator Benito Mussolini instituted new laws which threatened his wife Laura and their two children who were Jewish
these new laws also put most of Fermi's research assistants out of work
soon after arriving in New York, Dr. Fermi began working at Columbia University where he took a position as a physics instructor working with Dr. Leo Szilard

COMMUNIST PARTY MAINTAINS ITS UNITED FRONT MOVEMENT

If unity was imperative in domestic politics for the Communist Party
it seemed even more necessary in foreign policy

This was a period of exhilarating Fascist aggression around the world:

Japanese armies invaded Manchuria,

Japanese troops again overran China;

Hitler denounced the Versailles Treaty and rearmed at breakneck speed

German soldiers seized Austria and mounted an assault against Czechoslovakia;

Mussolini defied the League of Nations and crushed Ethiopia

Italian and German Fascists rushed to the aid of Francisco Franco's rebellion
against the democratically elected government in Spain

During this time it was noted: **"Maxim Litvinov as the spokesman of Soviet foreign policy denounced the policy of appeasement and insisted...that only a united force could halt the Fascists."**²⁴⁸

HITLER MAKES DEMANDS ON CZECHOSLOVAKIA

Chancellor Adolf Hitler of Germany began openly to support demands for improved status
being delivered by Germans living in the Sudetenland of Czechoslovakia

Hitler made demands for self-determination for the Sudetenland -- September 1938

disorders broke out in Czechoslovakia and martial law was proclaimed

Germans living in the Sudetenland of Czechoslovakia had long demanded improved status

German Chancellor Adolf Hitler began openly to support these demands

Hitler insisted on self-determination for the Sudetenland -- September 1938

disorder and clashes broke out in Czechoslovakia

martial law was proclaimed by the Czech government

²⁴⁸ Melvin Rader, *False Witness*. P. 29.

GERMAN CHANCELLOR AND BRITISH PRIME MINISTER MEET

German Chancellor Adolf Hitler met

with the British Prime Minister Neville Chamberlain -- September 15, 1938

Hitler demanded that Czechoslovakia return the Sudetenland,

a region of Czechoslovakia with a large German population, to Nazi Germany

these talks failed to achieve a satisfactory agreement

CBS RADIO PROVIDES COVERAGE OF EVENTS IN EUROPE

Edward R. Murrow and William L. Shirer were regular participants

in CBS's coverage of the crisis over the Sudetenland in Czechoslovakia

their clear and insightful reports heightened America's appetite for radio news

listeners regularly waited for Murrow's shortwave broadcasts

introduced by analyst H.V. Kaltenborn in New York saying:

"Calling Ed Murrow...come in Ed Murrow."²⁴⁹

MUNICH PACT IS SIGNED IN MUNICH, GERMANY

After appeals by President Franklin Delano Roosevelt and Italy's Prime Minister Benito Mussolini,

a conference was held at Munich, Germany -- September 29, 1938

Nazi Germany, France, the United Kingdom and Italy were in attendance

neither Czechoslovakia nor the Soviet Union, which had offered aid to the threatened nation,

was invited to the meeting

During the Munich Conference, England and France quickly capitulated to Hitler's demands

Munich Pact was signed September 30 [but dated September 29]

this permitted immediate occupation of Czechoslovakia's Sudetenland by Germany

when Chamberlain arrived in London, he announced that he had secured "peace in our time"

Abandoned by its allies, Czechoslovakia gave in to the terms provided by Germany

Munich Pact became a symbol of appeasement and shook the confidence of Eastern Europeans

in the good faith of the Western democracies

Threat of totalitarian enslavement and war loomed more and more ominously

appeasement provided by the Munich Pact did not stop Nazi aggression

rather it encouraged new waves of blackmail, treaty-breaking, and aggression

OLYMPIC NATIONAL PARK

President Franklin D. Roosevelt visited the Olympic Peninsula -- September 30 to October 1, 1938

FDR expressed horror at "**criminal devastation by lumber interests**"²⁵⁰

Former Secretary of Interior Harold Ickes wrote of need to protect the park: "**The tree-butchers, axes on shoulders, are again on the march against some of the few remaining stands of America's glorious virgin timber.... The gluttons will pass their plates again and again for generous helpings until the despoilers will have sated their greedy appetites on what has, so far, been miraculously saved.**"²⁵¹

²⁴⁹ Ann M. Sperber, *Murrow, His Life and Times*, P. 126.

²⁵⁰ Robert E. Ficken, *The Forested Land: A History of Lumbering in Western Washington*, P. 221.

²⁵¹ Carsten Lien, *Olympic Battleground: Creating and Defending Olympic National Park*.

HITLER INVADES THE SUDENTENLAND OF CZECHOSLOVAKIA

Adolf Hitler's army marched into the former German territory -- October 1, 1938
without the support of their alleged allies France and Britain
Czechoslovakia was powerless against the Nazi army

MARITIME JURISDICTIONAL DISPUTES HAVE DEEP ROOTS

Sailors had long faced the dilemma of having two separate unions deal with their industry
West Coast sailors were members of the American Federation of Labor
Sailors' Union of the Pacific (SUP) led by Harry Lundeberg
East Coast and Gulf Coast sailors were affiliated with the Committee for Industrial Organizations
National Maritime Union (NMU) led by Joseph Curran
(NMU signed agreements with two shipping companies: Shepard Line and Union Sulfur [1935]
NMU agreed to run their ships along the Atlantic Coast [1936]
this situation was allowed to continue even during the [1936] strike
when the strike was settled NMU sailors manned these ships)
It was clear to SUP President Harry Lundeberg that he represented only a minority position
in the Maritime Federation of the Pacific (MFP)
Lundeberg pulled the Sailors' Union of the Pacific (SUP) out of the MFP
and sealed the federation's doom

SEAFARER'S INTERNATIONAL UNION (SIU) IS CHARTERED BY THE AFL

AFL President William Green wanted a new international maritime union
to replace the defunct International Seamen's Union (ISU) when successful membership raids
by Joe Curran's CIO National Maritime Union (NMU) had devastated the ISU
Green had selected Sailor's Union of the Pacific (SUP) President Harry Lundeberg to lead the task
(SUP had originally been chartered by the ISU but remained intact in spite of NMU raids)
American Federation of Labor conducted a maritime membership drive
on the Eastern Seaboard and Gulf of Mexico Coast to unite these men into one large union
about 7,000 members were organized on the East Coast and the Gulf of Mexico
Once the new union was stabilized and in firm hands,
members of the AFL executive council issued a charter to the Seafarers International Union (SIU)
this was done at the American Federation of Labor (AFL) convention in Houston, Texas
President William Green handed Harry Lundeberg the SIU charter -- October 15, 1938
(Green predicted there would soon be 30,000 members on all coasts
Harry Lundeberg served as president of SIU from 1938
(until his death from a heart attack in a San Francisco hospital [January 28, 1957])
International Seamen's Union (ISU) had been split
into the National Maritime Union (NMU) and the Seafarer's International Union (SIU)
Seafarers International Union (SIU) was an attempt by the American Federation of Labor
to stop the loss of job to the Committee for Industrial Organizations (CIO)
and its Communist faction

ORSON WELLS BROADCASTS FEAR ON THE RADIO ACROSS AMERICA

Before television people sat in front of their radios and listened to music, news reports, plays, sports and various other programs for entertainment

most popular of all radio programs was the *Chase and Sanborn Hour*

which aired on Sunday evenings at 8 p.m.

star of the show was ventriloquist Edgar Bergen and his dummy Charlie McCarthy

unfortunately for the Mercury group headed by dramatist Orson Welles

their show, *Mercury Theatre on the Air*, aired on another station at the very same time

Welles, of course, tried to think of ways to increase his audience,

hoping to take away listeners from the *Chase and Sanborn Hour*

Mercury Theatre on the Air broadcast began -- 8 p.m. Sunday, October 30, 1938

when an announcer came on the air and said, **“The Columbia Broadcasting System and its affiliated stations present Orson Welles and the Mercury Theatre on the Air in *The War of the Worlds* by H. G. Wells.”**

millions of radio listeners were shocked when radio news alerts announced the arrival of Martians

although the program had begun with the announcement that it was a story based on a novel

and there were several announcements during the program reiterating this was just a story,

many listeners did not tune in long enough to hear them

Listeners panicked as they learned of the Martians’ ferocious and clearly unstoppable attack on Earth as fake news bulletins reported the unfolding events

Nationwide thousands of people called radio stations, police and newspapers

many in the New England area ran out of their homes screaming

while others loaded up their cars and fled

many people were hysterical in other parts of the country as well as they thought the end was near

people went to churches to pray and some improvised gas masks

miscarriages and early births were reported

deaths, too, were reported but never confirmed

Hours after the program had ended and listeners had realized that the Martian invasion was not real,

people were outraged that Orson Welles had tried to fool them

many people sued and others wondered if Welles had caused the panic on purpose

WASHINGTON COMMONWEALTH FEDERATION (WCF) IS WEAKENED

Washington Commonwealth Federation was composed of radical left-wing Democrats

WCF began losing some liberal supporters because of its close ties to the Communist Party

U.S. SENATOR HOMER T. BONE MAINTAINS HIS LIBERAL POLITICAL LEANINGS

Although physically small, 5 foot 6 inches and 135 pounds, Senator Homer T. Bone

had established himself as a U.S. Senate liberal political leader

at one time or another he campaigned for the Socialist, Farmer-Labor, and Republican parties

but he remained loyal to the Democrats once he was elected under their label

Senator Bone was said to have described the Grand Old Party (G.O.P.)

as the party of “Grand Old Promises”

he was also reported to have said: “God couldn't be everywhere and He made up the Republican Party to be where He didn't want to be.”

HENRY M. JACKSON IS ELECTED SHOHOHOMISH COUNTY PROSECUTOR

Henry Jackson had lived at home before he entered the political scene
he waited tables to finish his education at the University of Washington law school [1935]
he opened a successful law practice in his home town of Everett
Jackson's first political campaign effort was seeking the position of Snohomish County prosecutor
three years after passing the bar exam he was elected at age twenty-six -- November 8, 1938

NIGHT OF TERROR FOR GERMAN AND AUSTRIAN JEWS

On a cold, rainy night Nazi-led mobs burnt to the ground or destroyed
more than 7,000 Jewish businesses and 1,350 Jewish synagogues throughout Germany
more than 30,000 were arrested and were thrown into concentration camps
more than ninety-one Jews were killed
thousands of Jewish homes were ransacked
This became known as *Kristallnacht* (Night of Broken Glass) -- night of November 9-10, 1938
adding insult to injury, Jews were charged 1 billion Deutsch Marks to pay for the damages
from this time [until May 8, 1945] Jews had no rights in Germany's Third Reich
those who did not escape became victims of the Nazi Holocaust

FOUNDING CONVENTION OF THE CONGRESS OF INDUSTRIAL ORGANIZATIONS (CIO)

John L. Lewis' industry-wide unions of the old Committee for Industrial Organizations (CIO)
formed a new rival to the American Federation of Labor (AFL)
they named themselves the Congress of Industrial Organizations (CIO)
No longer just a committee within the AFL, the Congress for Industrial Organizations (CIO)
met in convention in Pittsburg, Pennsylvania -- November 14-18, 1938
Representatives of thirty-four international unions, eight organizing committees,
twenty-three state labor councils, 116, city and county labor councils,
and 137 local industrial unions gathered
they claimed a total membership of more than three million -- roughly the same size as the AFL
Delegates elected fiery orator John L. Lewis of the United Mineworkers Union as president
Sidney Hillman of the Amalgamated Clothing Workers was voted Vice President
James Carey of the newly-formed United Electrical, Radio and Machine Workers of America
became was elected Secretary-Treasurer
Radical labor leaders believe John L. Lewis will not represent their interests
some CIO activists believed they should help form an independent Labor Party
Lewis, the former leader of the Committee for Industrial Organizations (CIO),
had been a life-long Republican
but the CIO under Lewis supported President Franklin Roosevelt's New Deal
largely because of the administration's pro-labor politics and positive social legislation
CIO's alliance with the social-liberalism of the Democrats became foundation of U.S. politics
(for many years to come CIO had a profound impact on the country's economic and political life
for many it represented not simply a way to improve wages,
but an inspiring cause dedicated to creating a better world)

COMMITTEE FOR INDUSTRIAL ORGANIZATIONS (CIO) CHARTERS ITS FIRST UNION

First major industrial union to be chartered by the Congress of Industrial Organizations was the United Electrical, Radio and Machine Workers of America also called the UE -- November 16, 1938

For the first time America witnessed two major labor federations both with millions of members competing with each other for control of the skilled and unskilled members in every section of the nation Congress of Industrial Organizations (CIO) was an independent rival to the American Federation of Labor (AFL) (the two labor federations would not untie until [1955])

All members affiliated with the Congress of Industrial Organizations (CIO) benefited from the CIO's constitutional prohibition against discrimination on the basis of race, creed, or color including black members of the Marine Cooks and Stewards Association

GROWTH OF THE CIO IS PHENOMENAL

Steel, rubber, meat, auto, glass and electrical equipment industries all became the source of new Congress of Industrial Organizations (CIO) members Rivalry between the Congress of Industrial Organizations and American Federation of Labor (AFL) was especially bitter in the Pacific Northwest, where the aggressive CIO displayed the fiery militancy of the Industrial Workers of the World (IWW) and the idealism of the Knights of Labor

Two Pacific Northwest timber unions vied to sign up timber workers:

- International Woodworkers of America (IWA) presented a proposal to join the CIO and demanded union recognition from their employers IWA battled the Congress for Industrial Organizations (CIO) in Northwest woods and mills
- Federation of Woodworkers American Federation of Labor (AFL) fell under the United Brotherhood of Carpenters and Joiners of America competition between unions was hard for employees and employers alike only time healed some jurisdictional disputes

CIO's strength in the Northwest lay in the timber and mining industries, in the fish canneries and on the waterfront

Membership of the conservative, craft-oriented AFL was less concentrated but under the leadership of fast-rising star in the Teamsters Union Dave Beck AFL unions vigorously opposed the CIO and labor radicalism

HARRY BRIDGES' "MARCH INLAND" EXPANDED TO INCLUDE SAILORS

CIO's International Longshoremen's and Warehousemen's Union (ILWU) turned to Harry Lundeberg's International Seafarers' International Union (SIU) for new members smaller unions attempted to remain independent until they were swallowed up SIU waged bitter battles to represent the smaller maritime unions on the West Coast Lundeberg cleverly manipulated anti-Communist hysteria to maneuver the smaller unions into his SIU and away from Bridges ILWU his Red Baiting was often successful because Bridges had a radical background and had at times cooperated with Communist labor leaders

although he had never been a Party member
To neutralize Bridges and the ILWU, employers and Lundeberg promoted a relentless effort
to have the Australian Harry Bridges deported from the United States
first on the grounds of improper naturalization
later on charges of having falsely denied his alleged Communist membership
(Bridges' case lasted from [1934] to [1955] and finally ended in Bridges' total vindication
although at the cost of considerable damage to the ILWU)

DAVE BECK CONTROLS LABOR IN SEATTLE

Eventually Teamsters added the Warehousemen's Union to their own organization
Dave Beck had unionized all of Seattle's working force -- 1938
with the exception of the International Longshoremen's and Warehousemen's Union (ILWU)
But the public had become disillusioned with union violence
they began to oppose the union movement
citizens wrote initiatives to limit the power of unions
AFL and CIO cooperated to defeat the initiatives
Dave Beck's leadership of the Pacific Coast Brotherhood of Teamsters was remarkable
his genius in organizing workers came from skillful negotiations with business
he dropped his strong-arm and goon-squad tactics
respectable negotiations better emphasized labor's common interests with management
Beck positioned himself to gain good contracts with Seattle business
Seattle became a conservative labor town with Beck as its most potent leader
in the minds of the Northwest business community
Beck was the lesser of two evils when compared to Harry Bridges
(Beck later rose in international leadership of the Teamsters and became International President)

ROOSEVELT'S STATE OF THE UNION SPEECH FOCUSES ON EUROPE

In his annual State of the Union address to Congress, President Franklin Roosevelt
shifted his emphasis from domestic issues to the tense international scene -- January 4, 1939
about one-sixth of his \$9 billion budget request will go to defense

HITLER DEMANDS POLAND RETURN ITS PORT CITY TO GERMANY

Adolf Hitler pressured Poland to return its principal port of Gdansk (called Danzig in German)
this was a free state run by the Nazis under the auspices of the League of Nations
Hitler insisted that the city will "sooner or later return to Germany" -- January 5, 1939

WASHINGTON STATE LEGISLATURE GOES INTO SESSION

Twenty-sixth legislature convened -- January 9, 1939
Democrats held forty Senate seats and seventy-three House seats
Republicans held six Senate seats and twenty-six House seats
Democratic Governor Clarence Martin awaited them with a plan
for a reduced budget for Social Security -- he did not get it
Progressives made it possible to fund Social Security at existing levels
by agreeing to a sales tax on food

Conservatives and Progressives in Olympia remained at each other's throats
as the decade faded away

DR. SZILARD AND DR. FERMI CONDUCT EXPERIMENTS AT COLUMBIA UNIVERSITY

After learning about a successful nuclear fission experiment conducted in Germany -- 1939

it occurred to Dr. Szilard while he was standing on a street corner

that more energy could be released than the neutron itself supplied: **“As the light changed to green and I crossed the street,”** he recalled, **“it ...suddenly occurred to me that if we could find an element which is split by neutrons and which would emit *two* neutrons when it absorbs *one* neutron, such an element, if assembled in sufficiently large mass, could sustain a nuclear chain reaction...If the [mass] is larger than the critical value,”** he concluded, **“I can produce an explosion.”**²⁵²

It was clear to a number of scientists at Columbia University that they should try

to detect the energy released in the nuclear fission of uranium from neutron bombardment

PHYSICIST LEO SZILARD AND ENRICO FERMI DEVELOP A NUCLEAR CHAIN REACTION

Nuclear fission was being investigated in physics laboratories in several countries

Dr. Szilard and Dr. Fermi concluded that uranium would be capable of sustaining a chain reaction

they conducted the first nuclear fission experiment in the United States -- January 25, 1939

where they discovered significant neutron multiplication was possible in uranium

proving it was possible to build nuclear weapons

Their research demonstrated energy could be released from the relatively rare isotope U-235

which occurs naturally in uranium U-238 in a ratio of one part in 140

But isolating enough U-235 or fabricating enough material to make a weapon

struck many scientists as next to impossible

With America's involvement in war on the horizon, all results in nuclear physics research

that might have military value were withheld from publication by American physicists

Physicists tried to interest the U.S. government in nuclear research as early as [March 1939]

first they appealed to the Navy but received only casual, passive interest

BOEING DEVELOPS THE B-17 “FLYING FORTRESS” OR “TANK OF THE SKY”

Boeing delivered the B-17 to the United States Army Air Corps -- January 31, 1939

it was known as the “Flying Fortress” or “Tank of the Sky”

B-27 was the only four-engine plane in production at that time

later to become main Allied weapon against Germany

was the most celebrated aircraft operated by during the war

one of the great weapons in history

B-17 was described: **“This four-engine giant weighs 47,500 pounds, has a top speed of 300 m.p.h., and a range of 3,500 miles. It carries a bomb load of 10,000 pounds which is double that of most German, Italian, and British bombers. Power-driven gun turrets are located in the nose, tail, and midship. Quarter-inch armor plate protects all crew positions except that of the tail gunner. Self-sealing bulletproof gasoline tanks are installed.”**²⁵³

²⁵² David M. Kennedy, *Freedom From Fear*. P. 657.

²⁵³ James A. Crutchfield, *It Happened in Washington: Remarkable Events that Shaped History*. P. 100.

BOEING BECOMES A MAJOR AIRPLANE MANUFACTURER

Anticipating events in Europe Boeing built the only four-engine plane in production at that time B-17, also known as the “Flying Fortress” and the “Tank of the Sky”

B-17 was a huge airplane that weighed 47,000 pounds:

- it was sixty-seven feet ten inches long;
- it had a wingspan of one hundred-three feet nine inches;
- nine crewmen were on board:
 - pilot, co-pilot, bombardier, navigator, radio operator, four gunners;
- bullet-proof Plexiglas gun turrets in the nose, two midship, and tail were power-driven;
- it carried a bomb load of 10,000 pounds -- double that of any other bomber in the air;
- quarter-inch armor plate protected plane and crew with the exception of the tail gunner;
- fuel tank were self-sealing and bulletproof

“Tank of the sky” lived up to its nickname

“Designed to be self-defending, it was heavily armed and armored. The models being produced by the time the United States entered the war bristled with thirteen machine guns. They were intended to be flown in tight formations of a hundred aircraft and more, whose combined firepower could spew out up to thirty tons of .50-caliber machine gun slugs per minute. That deadly curtain of fire was thought sufficient to ward off fighter attacks, while heavy steel plating and bulletproof Plexiglas windows would supposedly protect against anti-aircraft fire from the ground.”²⁵⁴

(later the B-17 was to become the main Allied weapon against Germany
one of the great weapons in history,
it was the most celebrated aircraft operated by during the war
between 1937 [and 1968] 12,731 B-17s were built)

SOIL CONSERVATION ACT PASSED BY THE STATE LEGISLATURE

(U.S. Government had authorized payments for the construction of flood control dams, terraces, re-vegetation projects and diversion ditches to local Soil Conservation Districts established by local farmers [1935])

Soil Conservation Districts also provided instruction in farming techniques designed to prevent the loss of irreplaceable topsoil due to erosion

Washington State legislators approved the establishment of Soil Conservation Districts -- 1939 when a majority vote of the landowners in any given area provided the authorization local unemployed people did most of the work

LAST OF THE INTERURBAN LINES COMES TO AN END

Interurban cars had sped commuters and shaped communities along Puget Sound since [1910]

Everett’s privately owned trolley service

ran from Colby to 41st Street down Broadway and back on Hewitt Avenue

it also went out of town southbound, (along what is now the paved interurban trail near I-5)

once it reached north Seattle it headed through the Phinney and Greenwood neighborhoods,

²⁵⁴ Kennedy, David M. *Freedom From Fear*. P. 604

along Fremont Avenue to Westlake Avenue where it ended at Westlake Center
Completion of Highway 99 ended the service

automobiles and a fleet of buses with more flexible timetables carried people to Seattle
Everett's newspaper recounted the final run from Everett to Seattle -- February 20, 1939
last car to operate was sent off by a fifty-piece Veterans of Foreign Wars band
not long afterward the line was dismantled

CORNISH SCHOOL SETS AN EDUCATIONAL TREND IN SEATTLE

Cornish School was founded [1914] by pianist and voice teacher Nellie Cornish
music was the heart of the curriculum, but where she saw talent she recruited aggressively
soon the school offered classes as diverse as choreography, French language, painting,
theater, folk dancing and ballet
within three years Cornish had enrolled over 600 students,
and was the country's largest music school west of Chicago

Cornish School was offering classes and lessons from early childhood
to the undergraduate level [by 1919]

opera and modern dance were added to the curriculum
Financial difficulties inevitably grew during the Great Depression
convinced that finances would not allow the school to do more than "tread water"
Nellie Cornish resigned her position as head of the school -- 1939
however, the school continued her tradition of serious educational work
(Today Cornish School of the Arts is nationally recognized as a premier college
for the visual and performing arts
it is one of only three fully accredited private colleges in the entire nation
dedicated to educating both performing and visual artists)

BOEING DEVELOPS ITS MOST ELEGANT AIRPLANE TO DATE

During the 1930s, transoceanic travel was beyond the capability of all but a few aircraft
giant dirigibles such as the *Graf Zeppelin* and *Hindenburg* provided service
as did ever larger "flying boats" -- multi-engine airplanes with boat-like hulls
most elegant and successful of these was Boeing's Model 314
Boeing's Model 314 was nicknamed the *Boeing Clipper* after the great oceangoing ships
it was, in fact, a flying boat -- a fixed-winged seaplane with triple vertical tails
unlike float planes, flying boats had a floating fuselage that provided buoyancy
that allowed the airplane to land on water
flying boats were stabilized by under-wing floats or by wing-like sponsons
projecting from the fuselage
Boeing Clipper first took flight in [1938] and continued in service through [World War II]
Boeing Clippers conjure up thoughts of adventure and the elegance of a bygone era
Pan American Airways flew the first trans-Pacific flight
when a Boeing Clipper left San Francisco and flew to Hong Kong -- March 29, 1939
it carried seventy-four people up to 5,200 miles at 184 mph
this airplane filled a void left by the tragic end of the pioneer Zeppelin airship service
which began in [1928], and was stopped in [1937] by the loss of the *Hindenburg*

Flying boats were some of the largest aircraft in the first half of the 20th Century
their advantage lay in using water instead of expensive land-based runways,
making them the basis for international airlines
they were also commonly used for maritime patrol and air-sea rescue
Boeing Clipper was the first to cross the Atlantic Ocean with scheduled airline service
(scheduled passenger service from New York City to Europe began [June 28, 1939])
(Last of the dozen China Clippers which were built was destroyed in [1951])

WORK CONTINUES ON THE GRAND COULEE DAM PROJECT

Consolidated Builders, Inc. (CBI) headed by Henry J. Kaiser
employed 5,500 construction workers -- April 1939
(CBI poured a record 20,684.5 cubic yards of concrete in twenty-four hours [May 25, 1939])

WILLIAM O. DOUGLAS IS APPOINTED TO THE U.S. SUPREME COURT

When Justice Louis Brandeis retired early [1939] Western U.S. Senators made it clear
they wanted President Roosevelt to appoint a replacement from their region
which was then unrepresented on the U.S. Supreme Court
leading contender was Washington U.S. Senator Lewis B. Schwollenbach
Douglas's allies took advantage of Schwollenbach's feud
with fellow Washington Senator Homer T. Bone
and the fact that U.S. Attorney General Frank Murphy disliked him
President Roosevelt announced Douglas's nomination [March 20, 1939]
U.S. Senate confirmed the appointment less than three weeks later
William O. Douglas was sworn onto the U.S. Supreme Court at the age of forty -- April 17, 1939
(he served on the court longer than anyone else -- he retired [November 12, 1975])
Douglas saw himself as a champion of the underdog against the rich and powerful
he defended as fiercely as anyone who has ever sat on the U.S. Supreme Court the rights
of the individual against government and corporate power
he protected the concept that constitutional rights to privacy
must be reflected in the law of the land

One of the most liberal justices to preside, he advocated civil rights and individual rights:

- he was a protector of the Bill of Rights -- unpopular views also need a hearing
- he believed the privacy of individual must be protected;
- he branded the War in Vietnam as unconstitutional;
- he championed the rights of school boys to wear long hair

When Justice William O. Douglas joined the Court, neither he nor anyone else
expected that he would remain there the rest of his working life
relatively young, very ambitious, and frequently feeling confined in the role of judge,
Douglas envisioned rising higher -- even to the presidency
he was a favorite of the liberal wing of the Democratic party
he was pushed as a potential successor to Franklin Roosevelt [in 1940]
until the president decided to seek an unprecedented third term
he was considered briefly as a vice presidential prospect that year
Douglas nearly realized his White House dreams four years later,

when an ailing President Roosevelt made it known privately
that Douglas was his first choice for the vice presidency
however, Democratic Party bosses led by Party Chairman Robert Hannegan
preferred Harry Truman for the position who was selected
by the [1944] Democratic Convention
Douglas was offered a vice presidential nomination by President Harry Truman [1948]
who wanted to bolster his declining standing with liberal Democrats
but Douglas chose not to give up the security of the U.S. Supreme Court
to run on a ticket that at the time appeared doomed

DIESEL TRUCKING ENHANCES LOGGING IN THE STATE

It was not profitable to bring logging railroad tracks, trains and giant steam donkeys
into small cutting areas
Articulated tractor-trailer trucks emerged [in the 1920s],
but it was not until the late 1930s that semi-trucks
specifically designed to haul logs over long distances on paved roads were perfected
Logging roads and trucks dominated the industry as forest areas diminished
first gasoline trucks and then diesel trucks were used

PETERBILT TRUCKS ARE BUILT IN TACOMA

T.A. Peterman was a logging tycoon who founded Peterbilt in Tacoma, Washington
he purchased the Fageol truck company, the Waukesha Motor Company and surplus army trucks
using this equipment and parts, he developed custom chain-driven logging trucks -- 1939
that remain the standard in logging trucking today
While Henry Ford was cranking out hundreds of trucks a day,
Peterman set his sights on building 100 trucks a year -- he concentrated on quality, not quantity
Factory records state that fourteen trucks were shipped -- 1939
(production increased to eighty-two units [1940])
Speed at which Peterbilt truck gained acceptance in the trucking industry
was a tribute to product quality
one major reason for this was that Peterman sent engineers out into the field
to find out firsthand what truckers needed and wanted
(Shortly after the outbreak of World War II,
Peterbilt began producing heavy-duty trucks to fulfill government contracts
engineering and production expertise gained from the design and production of these trucks
enabled Peterbilt to return to the commercial marketplace after the war
with the best trucks in the industry)

PUBLIC WORKS ADMINISTRATION (PWA) CHANGES ITS NAME

FDR implemented a reorganization plan for public works projects -- July 1, 1939
Public Works Administration (PWA) was transferred from the Treasury Department
it was renamed the Works Projects Administration (WPA)
and moved to the newly created Federal Works Agency
Works Projects Administration (WPA) will continue to function through [June 1943]

WORK ON THE STATE CAPITAL CAMPUS CONTINUES

Capitol Conservatory was built by the Works Progress Administration (WPA) -- 1939
state's greenhouse contained more than 500 varieties of tropical and desert flora
it also produced bedding plants for the Capitol Campus
and holiday floral crops were raised for the Governor's Mansion and conservatory displays
(It was permanently closed for financial reasons [September 5, 2008])

SELLING ATOMIC THEORY TO PRESIDENT FRANKLIN ROOSEVELT

Dr. Leo Szilard was perhaps the first scientist to conceive how an atomic bomb might work
American physicists appealed directly to the president in a letter -- August 2, 1939

Dr. Einstein signed a letter written to the President primarily by physicist Dr. Leo Szilard
regarding developing an Atomic Bomb using uranium as a fuel source

Dr. Einstein signed the letter because of his prestige in America's scientific circles
(later conversations between the president and Dr. Einstein
led to the creation of America's own Atomic program)

Dr. Szilard explained the possibility of nuclear weapons

he warned President Franklin Roosevelt of Nazi work on such weapons

and encouraged the development of a program which could result in their advance

Szilard described the creation of a nuclear chain reaction in his letter to President Roosevelt: **"We turned the switch and saw the flashes. We watched them for a little while and then we switched everything off and went home. That night, there was very little doubt in my mind that the world was headed for grief."**²⁵⁵

Dr. Szilard understood the implications and consequences of this discovery

(Dr. Szilard took great interest in public policy and possessed a strong social conscience

he started the movement for civilian control of atomic energy [1945]

eventually he became Soviet Premier Khrushchev's personal link to prevent nuclear war

between the United States and the Union of Soviet Socialist Republics

President Roosevelt asked Lyman James Briggs, director of the National Bureau of Standards,
to secretly organize the Briggs Advisory Committee on Uranium)

WAR ENGULFS THE WORLD ON TWO FRONTS

Second Sino-Japanese War continued in China -- September 1, 1939

Republic of China and the Empire of Japan were in the third year of armed conflict

(this conflict would eventually be swept up into World War II

when Japan joined the German-Italian Axis powers and China joined the Allies)

Invasion of Poland by Nazi Germany begins -- 4:45 a.m. September 1, 1939

German Air Force (Luftwaffe) attacked several targets in Poland

Krakow, Lodz, and Warsaw were each bombed

Nazi troops, still without a formal declaration of war, launched an attack

near the Polish town of Mokra -- 8:00 a.m.

In response to the Nazi invasion, Estonia, Finland, Latvia, Lithuania, Norway, and Switzerland

²⁵⁵ Richard Rhodes, *The Making of the Atomic Bomb*, P. 26.

each declared their neutrality
British government declared a general mobilization of British Armed Forces
evacuation plans were begun in anticipation of German air attacks

EUROPE RESPONDS TO THE NAZI INVASION

Germany annexed the Free City of Danzig, Poland -- September 2, 1939
United Kingdom and France issued a joint ultimatum
which required German troops to evacuate Polish territory
Italian dictator Benito Mussolini declared his nation to be neutral

UNITED KINGDOM DECLARES WAR ON NAZI GERMANY

British Prime Minister Neville Chamberlain announced
on British Broadcasting Corporation (BBC) Radio --11:15 a.m. September 3, 1939
that the deadline of the final British ultimatum for the withdrawal of German troops
from Poland expired at 11:00 a.m.
and that “consequently this nation is at war with Germany”
United Kingdom of England, Northern Ireland, Scotland and Wales
joined with British Dominion: Canada India, Australia, New Zealand, and South Africa
to form a united front against Nazi and Axis aggression
French Government delivered a similar final ultimatum at 12:30 p.m.
In his fourteenth Fireside Chat President Franklin D. Roosevelt announced
that in an effort to protect our friendly relationship with all of the combatants
and to protect the many Americans living in those places
United States would remain neutral in the war with Germany
declared by the United Kingdom, its Dominion, and France -- September 3, 1939
Soviet Union became, briefly, a comrade in arms to the United States

UNITED KINGDOM LAUNCHES AN OFFENSIVE

In the first British offensive action of the war effort, the Royal Air Force launched a raid
on the German navy fleet in the Heligoland Bight -- September 4, 1939
one of the busiest shipping lanes in the world located on the North Sea
at the mouth of the German Elbe River

CBS RADIO CONTINUES HIS BROADCASTS FROM EUROPE

Previously, war coverage had mostly been provided by newspaper reports,
along with newsreels seen in movie theatres
radio news programs simply featured an announcer in a studio reading wire service reports
When the war broke out Edward R. Murrow stayed in London,
(he later provided live radio broadcasts during the height of the bombing of London (Blitz)
his broadcasts electrified radio audiences as news programming never had before
William Shirer’s reporting from Berlin brought him national acclaim
and a commentator's position with CBS News
after he returned to the United States [December 1940]
(Shirer would describe his Berlin experiences in his best-selling book,

Berlin Diary: The Journal of a Foreign Correspondent 1934-1941[1955])

U.S. PREPARATIONS ARE MADE TO DEFEND ALASKA FROM JAPANESE ATTACK

(An investigation evaluating America's naval defenses [1938] resulted in a report that called for enlarging the naval bases at Sitka and Dutch Harbor, Alaska and building a new naval air station and military base at Kodiak)

Before construction of the naval and military bases began -- September 1939 the town of Kodiak had a population of about 400 which was served

by no telephones or electric lights, no public sewer or water systems, no bank and no hospital the only vehicle in town was an oil truck

(2,500 workers were competing for housing with military families by [1941])

POLAND IS DEFEATED BY NAZI GERMANY

Poland was occupied by German and Soviet forces -- October 6, 1939

after the defeat Poland established a government in exile in England where they continued to fight against Germany

HUGE NUMBERS OF MILITARY PERSONNEL ARE ASSIGNED TO WASHINGTON STATE

Servicemen, some with their families, brought a rush of business to cities near Army and Navy bases especially in Tacoma, Olympia, Bremerton, Seattle and smaller, nearby towns -- 1939

Fort Lewis hosted the nation's largest military exercise to date

which involved 7,500 soldiers and officers of the U.S. Third Division

Several of the officers later made headlines, among them General George C. Marshall, Major Mark Clark, and Major Dwight D. Eisenhower

Number of men at Fort Lewis and McChord Air Base rapidly increased from 7,000 to more than 26,000 00 1939

(after Pearl Harbor more than 50,000 soldiers at a time trained at Fort Lewis)

BUSINESS PICKS UP FOR AMERICANS

Seattle-Tacoma shipyards were awarded contracts for five vessels job-seekers flooded Puget Sound union halls

Unions organized and bargained for thousands of workers

who signed no-strike pledges and accepted wage and price controls imposed by the federal government

(But not until rearming the nation began in earnest did the United States escape the grip of the Great Depression)

BRIGGS ADVISORY COMMITTEE ON URANIUM HOLDS ITS FIRST MEETING

Director of the National Bureau of Standards Lyman James Briggs

conducted a very secret meeting in Washington, D.C -- October 21, 1939

it was decided to provide \$6,000 to physicists Dr. Enrico Fermi and Dr. Leo Szilard at Columbia to advance their experiments in Atomic research

BRIGGS ADVISORY COMMITTEE ON URANIUM GIVES ITS REPORT

Lyman J. Briggs' Advisory Committee on Uranium gave its report -- November 1, 1939
it specifically recommended procurement of four tons of graphite
and fifty tons of uranium oxide for measurements of the absorption of carbon
other recommendations either were of a general nature or were never carried out
U.S. Army and Navy transferred \$6,000 to the committee
for the purchase of materials for nuclear research
Government program began -- America organized science, industry, and technology
to produce an atomic bomb as quickly and secretly as possible

PUGET SOUND EXPERIENCES AN EARTHQUAKE

Damage from the Olympia earthquake -- November 12, 1939
was most severe in Centralia, Elma, and Olympia
where chimneys were broken, plaster cracked, and various objects overturned
swaying power lines caused short circuits that produced power failures in Olympia and Centralia.
in Tacoma, a 200-pound terra cotta cornice that was attached to two buildings fell
after being loosened by the differential movement between the buildings

CONSTRUCTION PROGRESSES ON GRAND COULEE DAM

West powerhouse was ready -- December 1939
Westinghouse supplied three 108,000 kilowatt generators for the powerhouse
purchased from Newport News Shipbuilding and Dry Dock Co. in Virginia
and two smaller 12,500 kilowatt generators to operate dam equipment
Sight of Grand Coulee Dam in the desert was almost beyond imagination
rushing water 850 feet wide foamed over the spillway
water was backing up toward the Canadian border to form a lake 151 miles long
publicists strained to invent comparisons which would show how big this thing was:
•four United States Capitol buildings could be placed inside the dam;
•four largest ocean liners in the world could be lined up on its top with room to spare;
•each of its generator rooms is more than twice the size of Yankee Stadium;
•with the possible exception of the Great Wall of China
Grand Coulee Dam was the largest single thing every constructed
comparisons also stretched the imagination
Grand Coulee Dam was, indeed, a gigantic monolith in the middle of the desert
critics surmised it was as useless as the pyramids of Egypt
who would ever buy all of the hydroelectric power?

LABOR WARS ADD TO UNION TROUBLES

By the end of the decade Congress for Industrial Organizations (CIO) was growing in numbers
smelter workers and city Newspaper Guilds followed their Internationals
into the Congress of Industrial Organizations
timber industry was organized, but by two rival unions:
•Federation of Woodworkers (AFL)
•stronger organization being the International Woodworkers of America (IWA-CIO)
warehousemen also maintained two rival unions:

- International Longshoremen's and Warehousemen's Union (ILWU)

- AFL's International Longshoremen's Association (ILA)

composed of those warehousemen who left the CIO or refused to join

Brotherhood of Teamsters added these members to their own AFL organization

Dave Beck had unionized all of Seattle's working force -- 1939

with the exception of waterfront laborers who remained under the CIO's

International Longshoremen's and Warehousemen's Union (ILWU) and Harry Bridges

However, the public was becoming disillusioned with union violence

some began to oppose the union movement

citizens wrote initiatives to limit the power of unions

but in these instances the AFL and CIO cooperated to defeat the initiatives

1940-1949

LOOMING WAR EFFORT FORCED CHANGES ON AMERICA

Federal government extended the income tax to virtually all Americans beginning in 1940 and began collecting the tax using the now-familiar method of continuous withholdings from paychecks rather than lump-sum payments after the fact (Americans required to pay federal taxes rose from 4 million [1939] to 43 million [1945] with such a large pool of taxpayers, the American government took in \$45 billion [1945] an enormous increase over the \$8.7 billion collected [1941] but still far short of the \$83 billion spent on the war in [1945])

UNITED STATES BEGINS PREPARATIONS FOR THE WAR

As war spread throughout Europe and Asia between [1939] and [1941], leadership for converting the nation into a war machine was undertaken by the federal government

“Preparedness,” was the national project to participate in the war by enlarging the military, and above all converting America’s industrial base to produce armaments and war materiel rather than civilian goods

“Conversion” was the key issue in American economic life in 1940-[1942] in many industries company executives resisted converting to military production because they did not want to lose consumer market share to competitors who did not convert therefore, conversion became a goal pursued by government officials and labor leaders Walter Reuther of the United Auto Workers Union provided the push for conversion by advocating that automakers convert to aircraft production though initially rejected by auto company executives and many federal officials “Reuther Plan” brought public attention to America’s lagging preparedness for war

FEDERAL GOVERNMENT TAKES CHARGE OF PREPARATIONS FOR WAR

American leaders recognized that the stakes were too high to permit the war economy to grow in a random fashion

American manufacturers could not be trusted to stop producing consumer goods and start producing materiel for the war effort

To organize the growing economy and to ensure that it produced the goods needed for war federal officials developed an array of mobilization agencies to not only purchase goods (or arranged for their purchase by the Army and Navy) but to closely direct manufacturing and heavily influence the operation of private companies and whole industries

World War II’s mobilization bureaucracy took shape as the war economy expanded unlike Britain and Germany, the United States Army and Navy were not incorporated into the civilian production apparatus nor was a supreme body created to direct the vast war economy instead, the military services expanded both their equipment and personnel almost without limit production of consumer goods and services were largely curtailed even non-military but war-related goods like textiles and clothing were limited

manufactured goods like tanks, airplanes, ships and raw materials like steel and aluminum, and even personnel became a national priority

BONNEVILLE POWER ADMINISTRATION (BPA) BEGINS SERVICE

Federal agency for marketing electricity was put into operation -- 1940

An early principal problem faced by the agency was finding customers for the inexpensive federal power

demands for high increments of power were not available

Pacific Northwest was relatively unpopulated

there were sixty-six publicly-owned utilities in Oregon and Washington -- 1940

that distributed just under one billion kilowatts-hours -- a paltry amount

National press characterized the Bonneville and Grand Coulee dams as “white elephants”

but the onset of World War II ended the problem of lack of customers

PEARL WANAMAKER DECIDES TO RUN FOR STATE SUPERINTENDENT OF SCHOOLS²⁵⁶

Then Superintendent of Public Instruction Stanley Atwood had been elected [1936]

he was considered by many, especially education professionals, to be ill-equipped for the job

this dissatisfaction caused educators and others to search for someone to oppose him

Pearl Wanamaker, a teacher and legislative stalwart for education, was a natural choice

supporters for this change formed a fifty-car caravan -- March 1940

carrying a 9,000-signature petition, they traveled to Wanamaker's Coupeville home to urge her to run -- she agreed

NAZI GERMANY DEVELOPS A NEW WAR STRATEGY

Germany quickly overran much of Europe (and continued to be victorious for more than two years)

by relying on a new military tactic called the “Blitzkrieg” (lightning war)

whose tactics required the concentration of offensive weapons

such as tanks, airplanes, and artillery along a narrow front

these forces would drive a breach in enemy defenses permitting armored tank divisions

to penetrate rapidly and roam freely behind enemy lines

causing shock and disorganization among the enemy defenses

German air power prevented the enemy from adequately resupplying or redeploying forces

thus reinforcements to seal the breaches in the front lines could not be sent

German forces would in turn encircle opposing troops and force surrender

GERMANY ADVANCES WITH BREATH-TAKING SPEED

Blitzkrieg was used to devastating effect

Germany invaded Norway and Denmark -- April 9, 1940

Denmark capitulated that day

(Norway held out until [June 9])

Nazis attacked Europe's “Low Countries” of Luxembourg, Holland and Belgium -- May 10, 1940

Luxembourg capitulated to the invaders that day

²⁵⁶ Michael Hood, HistoryLink.org, Essay 9171, September 26, 2009.

(Holland surrendered [May 14])

(Belgium fought on until [May 28])

In England Winston Churchill replaced Neville Chamberlain as Prime Minister -- May 13, 1940

British, French and Belgian troops attempting to defend the Low Countries

were cut off by Hitler's army

an evacuation of these troops from the beaches of Dunkirk began -- May 27

it took nine days to evacuate 338,226 soldiers (198,229 British and 139,997 French)

using a hastily assembled fleet of 850 boats -- around 700 merchant marine boats,

fishing boats, pleasure craft and Royal National Lifeboat Institution lifeboats

last of the defeated soldiers were removed to England -- June 4, 1940

German Army entered France -- June 10

Nazi troops simply outflanked the World War I defensive works set to stop them (Maginot Line)

Hitler's troops rapidly swept across France and entered Paris -- June 14, 1940

Italy declared war on Great Britain and France

an Italian invasion of Southern France began -- June 21

France surrendered to Adolf Hitler -- June 22, 1940

Hitler and Nazi Germany had won again capturing France in twelve days

that part of France that remained unoccupied established a new government in Vichy, France

Marshall Henri Petain, the leader of Free France, was very cooperative with the Germans

McCHORD FIELD BECOMES HOME TO THE 17th BOMBARDMENT GROUP

Douglas Aircraft Company B-18 Bolos medium bombers began to arrive -- June 24, 1940

soon after, the 89th Reconnaissance Squadron reported for duty at McChord

(official McChord Field dedication took place [July 3, 1940])

FEDERAL LAWS ENHANCE AN ATTACK ON SUPPOSED COMMUNIST AGENTS

Efforts to protect the United States from the perceived threat of Communist subversion

were particularly enabled by the Alien Registration Act or Smith Act -- June 29, 1940

which made it a criminal offense for anyone to **“knowingly or willfully advocate, abet, advise or teach the...desirability or propriety of overthrowing the Government of the United States or of any State by force or violence, or for anyone to organize any association which teaches, advises or encourages such an overthrow, or for anyone to become a member of or to affiliate with any such association.”**

(Hundreds of suspected Communists and others were prosecuted under this law [1941] to [1957])

prosecution of Communist Party members under the Smith Act

was based not on specific actions or statements by the defendants,

but on the premise that a commitment to violent overthrow of the government

was inherent in the doctrines of Marxism-Leninism

passages of the American Communist Party's constitution

that specifically rejected revolutionary violence were dismissed as deliberate deception

CONGRESS PASSED THE *ACQUISITION OF INDIAN LANDS FOR GRAND COULEE DAM ACT*

This federal legislation passed Congress -- June 29, 1940

it authorized the Secretary of the Interior to acquire 21,100 acres of land

on the Colville and Spokane Reservations
where Native Americans had been living and hunting for thousands of years
this land fell under the Columbia Basin Project
it was to be used for the lake formed by water backed up behind Grand Coulee Dam
Franklin D. Roosevelt Lake would be about a mile and a quarter in width and 151 miles long
with average depth of 475 feet
Grand Coulee Dam's Columbia Basin Project had severe negative consequences
for the local Native American tribes whose traditional way of life revolved around salmon
and the use of the as original shrub steppe habitat of the area
most important to them was the loss of the fishing grounds at Kettle Falls
once a primary Native American fishing ground, was to be inundated by water
average catch went from a historical average of over 600,000 salmon a year to none
(Indians throughout the Northwest met at Kettle Falls for a "Ceremony of Tears,"
marking the end of fishing there [June 1941] -- a month later the falls were flooded
grazing ranges for species such as whitetail and mule deer were covered with water
as was habitat for pygmy rabbits and burrowing owls
settlements had to be relocated
more than 3,000 people were forced to evacuate
federal government paid \$3,500,00 for titles to the condemned land
average farm received \$2,500
eleven towns were located below the proposed water level
some were abandoned entirely; others were dismantled and moved to higher ground
town of Kettle Falls, Washington was relocated and merged with Meyers Falls
sacred burial grounds were lost
graves were moved to new locations at considerable expense to the government
Environmental impact of the Grand Coulee Dam effectively ended the traditional Indian way of life
(federal government eventually compensated the Colville Indians [1990s]
with a lump settlement of approximately \$53 million
plus annual payments of approximately \$15 million)
however, new wetlands habitat formed in the reservoirs along the Columbia River
this brought a variety of wild life to the region

DAVE BECK RISES IN THE RANKS OF THE BROTHERHOOD OF TEAMSTERS

(During the [1930s] Teamster organizing under International President Dan Tobin
led to widespread corruption
under Tobin the Teamsters first developed the "conference" system of organization
conference organizing played an important role in shaping patters of collusion
and inviting organized crime into the union)
Dave Beck, president of the Seattle Joint Council regional conference
established the Western Conference of Teamsters
to counteract the conservative leadership of Joint Councils in San Francisco
as Dave Beck's influence rose, International Teamster President Dan Tobin
attempted to check his advancing power but failed
Beck was elected as an International vice president

and was appointed to the Teamsters International Executive Board -- 1940
he began to challenge Dan Tobin for control of the union

SHIPBUILDING INDUSTRY MOBILIZED EARLY AND EFFECTIVELY

U.S. Maritime Commission (USMC) was a New Deal agency established [1936]

to revive the dead shipbuilding industry,

USMC provided funding for the expansion of shipyards around the country
especially on the Pacific coast and Gulf of Mexico -- merchant shipbuilding took off
America's strategy for the upcoming war depended on the movement of war goods and materiel
produced in the United States to the fighting fronts in Africa, Europe, and Asia beginning
Success of this industry in meeting the demands of war reflected America's need
to transport goods to Great Britain and France in addition to other American allies
and from the Maritime Commission's ability to administer the industry

through construction contracts, shipyard inspectors and unapologetic goading of contractors
Hundred merchant shipyards overseen by the U.S. Maritime Commission (USMC)
produced 5,777 ships for the war effort -- beginning summer 1940

at a cost of about \$13 billion with additional navy shipbuilding costing another \$18 billion
Four key innovations facilitated this enormous wartime output:

- USMC allowed the federal government to direct the merchant shipbuilding industry;
- USMC funded entrepreneurs like industrialist Henry J. Kaiser who had never before built ships
but were eager to use mass-production methods in their shipyards;
- USMC facilitated mass production by choosing to build many standardized cargo vessels
like the ugly, slow, "Liberty" ships and its improvement, "Victory" ships
which were built in seemingly endless numbers;
- adapting manufacturing techniques and emphasizing easily-made merchant ships
such as welding which was substituted of for riveting to hold ship plates together
resulted in a spectacularly successful war effort;
- hundreds of thousands of women and minorities
were added to the formerly all-white and all-male shipyard workforces

BOEING LEAPS INTO WAR PRODUCTION

Boeing employed 4,000 workers and was building B-17 airplanes at a rapidly increasing rate -- 1940
Boeing workers made tremendous advances in air technology and construction practices
newly developed many-line assembly system used available floor space to its best advantage
that assured the greatest output per worker

Although the B-17 had a number of faults and it was necessary to add armaments to every model
it remained in production through World War II and served in every theatre
(when production ended, Boeing had built a total of 6,981 B-17s
with Douglas and Lockheed building another 5,745)

U.S. Army Air Corps commissioned Boeing to design a new bomber
that could fly higher and farther than its stalwart B-17 Flying Fortress
two XB-29 "Superfortress" prototypes were rushed into production

TACOMA NARROWS BRIDGE OPENS TO TRAFFIC

(Funding for the third longest suspension bridge in North America had begun [1938]
Washington Toll Bridge Authority had obtained \$6.4 million
from the Public Works Administration (PWA) and the Reconstruction Finance Corporation)
Tacoma Narrows Bridge opened -- July 1, 1940
from the start motorists crossing the bridge detected a pitch and roll when the wind blew
experts made assurances there was nothing to fear

LAKE WASHINGTON'S FIRST FLOATING BRIDGE LINKS SEATTLE WITH BELLEVUE

Lake Washington Floating Bridge carrying Interstate 90 was designed by engineer Homer Hadley
when construction of the 1.25-mile-long concrete span began [January 1, 1939]

it was a marvel of engineering

many people thought that a concrete structure of this size could never float,

let alone handle traffic

The Seattle Times called it "the biggest thing afloat"

Opening day ceremony was held -- July 2, 1940

reinforced concrete structure including approaches cost on the order of \$9,000,000

and was partially financed by a bond issue of \$4,184,000 (tolls were removed in [1949])

New Lake Washington Floating Bridge carried only (today's eastbound lanes of Interstate 90)

it was expected carry 2,000 people a day across Lake Washington from Seattle to Mercer Island

but from the start more than 5,000 people used the bridge on a daily basis

but the bridge did more than carry traffic

it turned Mercer Island from a summer resort into a suburban community

this bridge also turned Bellevue from a collection of berry patches and chicken farms

into the fourth largest city in the state

(Lake Washington Floating Bridge was re-named the Lacey V. Murrow Memorial Bridge [1967])

in honor of the state's second Director of the Washington State Highway Department

Lacey V. Murrow was a highly decorated U.S. Air Force officer who served in World War II

he also was the oldest brother of CBS news commentator Edward R. Murrow

today this portion of the bridge is usually called the Mercer Island Floating Bridge)

WASHINGTON'S U.S. SENATOR LEWIS B. SCHWELLENBACH RESIGNS FROM OFFICE

Democratic Senator Lewis B. Schwellenbach had hoped to be appointed to the U.S. Supreme Court

however, after the position went to another Washingtonian, William O. Douglas

Senator Schwellenbach was appointment by President Franklin Roosevelt

to the federal district court for the Eastern District of Washington

U.S. Representative Monrad C. "Mon" Wallgren resigned his seat in congress

to seek Senator Schwellenbach's national senate seat -- summer 1940

Snohomish County prosecutor Henry M. "Scoop" Jackson

decided to run for the Second District congressional seat vacated by Wallgren

BATTLE OF BRITAIN BRINGS THE ENGLISH TO THE BRINK OF DEFEAT

After the fall of France Adolf Hitler ordered planning begun for the invasion of Britain to begin

however, his generals were very worried about the damage to the German Army

the Royal Air Force (RAF) could inflict during the invasion

Hitler agreed to postpone until the effectiveness of the RAF could be destroyed
German Luftwaffe (air force) outnumbered the RAF four to one
however, the British had the advantage of being closer to their airfields
German fighters could only stay over England for about half an hour
before being forced to fly back to their home bases to refuel
RAF also had the benefits of two technological advances:

- an effective early warning radar system;
- ULTRA, (code name of the code-breaking device secretly stolen from the Germans by Polish resisters) -- this device also broke the Japanese code

The Battle of Britain took place in the airspace over England -- July 10-[October 31], 1940
during the first phase -- June 10 [to August 1] the German Luftwaffe
concentrated on reconnaissance missions for future larger attacks
they also launched attacks on south coast ports, radar stations
and English Channel shipping and aircraft
after heavy shipping and aircraft losses the British were forced to stop all Channel convoys
during the second phase [August 13 to September 6] the Luftwaffe shifted its attention
to destroying RAF planes in the air and on the ground -- airfields were heavily targeted
climax of the Battle of Britain came [August 30-31,1940]
British lost fifty aircraft compared to the Germany's forty-one
RAF were close to defeat but Hitler changed his tactics and ordered the Luftwaffe
to switch its attack from British airfields, factories and docks to civilian targets
during the third phase [September 7 to October 5, 1940] London and major cities were bombed
in what became known as the "Blitz" (German for lightening)

SEATTLE NAVAL AIR STATION AT SAND POINT EXPANDS

(Seattle Naval Air Station at Sand Point was the result of Seattle "Boomerism"
King County commissioners began acquiring the small farms on the site
local officials and Navy officers held a ground breaking ceremony [June 19, 1920]
eventually, five runways offered eight landing directions)
Congress authorized \$4 million to improve the Seattle Naval Air Station (NAS) -- July 1940

NAZI GERMANY BEGAN BOMBING ATTACKS AGAINST LONDON AND MAJOR CITIES

Luftwaffe launched its first major daylight raid signaling the beginning
of the London Blitz -- September 7 [to October 5, 1940]
Luftwaffe switched to night bombing after suffering heavy casualties
Heavy raids against London and other major cities continued
but raids became less frequent as winter weather made flying conditions more difficult

EDWARD R. MURROW BROADCASTS FROM LONDON

Edward R. Murrow and his wife Janet were living in London during the London Blitz
suffering the same fears and depravations faced by the English
Murrow, broadcasting from a British Broadcasting Company (BBC) radio studio,
brought the war home to Americans -- 1940
millions of listeners heard his nightly reports which began with: "This is London."

in one broadcast Ed Murrow reported: **“Tonight, as on every other night, the rooftop watchers are peering out across the fantastic forest of London's chimney pots. The anti-aircraft gunners stand ready.”**

in another broadcast he noted: **“I have been walking tonight - there is a full moon, and the dirty-gray buildings appear white. The stars, the empty windows, are hidden. It's a beautiful and lonesome city where men and women and children are trying to snatch a few hours sleep underground.”**

during the Blitz he described in detail the devastating bombing raids by the Luftwaffe as many bombs fell on the CBS' London offices in the BBC Building: **“I can tell you from personal experience that it's not pleasant to sit in a studio filled with the odor of iodine and antiseptics and talk to you at home while good friends are being carried on stretchers along the corridors outside the studio door.”**

(Throughout the war Ed Murrow and the “Murrow Boys” reported events from the European Theater a few of Edward R. Murrow's broadcasts are available on the internet:

http://www.otr.com/orch_hell.shtml)

HOLLYWOOD GOES ALL-OUT IN SUPPORT OF THE WAR EFFORT

Major stars such as Clark Gable and James Stewart enlisted for military service these and other stars created propaganda films to remind American moviegoers of their heritage many of the finest films of the era were about the war
Casablanca, *Mrs. Miniver*, and *Going My Way* are classic films of the era
Three Stooges comic trio lampooned Nazi German leadership and Nazis in general

WASHINGTON STATE PRIMARY ELECTION SPURNS THE GOVERNOR

Democratic Governor Clarence Martin wanted a third term in office friends urged him to run for the United State Senate instead Martin decided to seek a third term as governor he probably believed it was his duty to save the state from the control of radicals In the primary election -- September 1940 former U.S. Senator Clarence C. Dill received the Democratic nomination for governor Governor Clarence Martin would not hold a third term Congressional hopeful Henry Jackson and a network of volunteers embarked on a comprehensive door-to-door campaign he defeated two Democratic opponents in the September Primary Election and became the Democratic candidate in the [November] General Election

SELECTIVE TRAINING AND SERVICE ACT PROVIDES FOR A MILITARY DRAFT

Selective Training and Service Act of 1940 was passed by Congress -- September 25, 1940 this is the first peacetime conscription of men into the military in United States history (President Franklin D. Roosevelt signed the Bill into law two days later) men between the ages of 21 and 35 were required to register with local draft boards they were obligated to serve in the United States Army for one year Men could be deferred for several reasons:
•over the age of twenty-eight;

•selected occupations:

- men necessary in their civilian activity,
- men necessary to national defense,
- men necessary to farm labor,
- some elected officials,
- ministers of religion or divinity students,

•men with dependents;

•men physically, mentally or morally unfit;

(several of these criteria were dropped as the need for soldiers grew)

Women were exempt from the Draft

Induction system worked through local draft boards comprised of community leaders

who were given quotas of men necessary -- then the draft board decided how to fill the need

CONSCIENTIOUS OBJECTORS CAN PROVIDE ALTERNATIVE SERVICE TO THE NATION

National Service Board for Religious Conscientious Objectors was formed

by the three peace churches -- Quaker (Friends), Church of the Brethren and Mennonites

to resolve relations between conscientious objectors and the federal government -- October 5

Based on training and religious belief conscientious objectors were exempted

they could provide alternative service -- for the first time they could serve their country

doing "work of national importance under civilian direction"

many became unarmed battlefield medics

REGISTRATION FOR THE DRAFT BEGINS

Registration day for the first peacetime draft in American history arrived -- October 16, 1940

over sixteen million American men were sign up to be drafted

Eight Presbyterian Union Theology Seminary students in New York City

who were exempt from the draft as Conscientious Objectors refused to even register for the Draft

they were arrested (and will serve a year and a day in prison)

U.S. MILITARY DRAFT BEGINS

Compulsory conscription began -- October 30, 1940

not all of the young men who registered were accepted into the service

thirty percent of registrants across America were rejected because of physical defects

"4-F" classification was given primarily for muscular and bone malformations,

hearing or circulatory ailments, mental deficiency or disease, hernias, and syphilis

to help with the war effort, working men who has been classified 4-F

or were otherwise ineligible for the draft took second jobs

but there were consequences for receiving a 4-F rating

when a man got that classification he could be shunned or even banished as unfit company

LONDON BLITZ COMES TO AN END

During the Battle of Britain the Royal Air Force lost 792 airplanes; German Luftwaffe 1,389

those numbers could not be sustained by either side

which brought an end to the Battle of Britain -- October 31, 1940

Royal Air Force had held out against the Germany Luftwaffe
this was the first major victory for the Allies since the outbreak of the war
although German military power was not seriously threatened,
Battle of Britain was of great importance
in scoring a first and decisive defeat of the Luftwaffe
with this defeat Adolf Hitler postponed indefinitely the planned amphibious invasion of Britain
he focused his attention instead on preparing for an invasion of the Soviet Union

NOT ALL SOLDIERS SERVED IN THE MILITARY

In an effort to increase production, U.S. Army sometimes transferred soldiers
back to civilian status in the Enlisted Reserve Corps -- 1940-[194]
those transferred would return to work in an essential industry
although they could be called back to active duty if the Army needed them
others were discharged from service if their civilian work was deemed absolutely essential
teachers, police officers, and a few other occupations fell into this category
there were instances of mass releases of men to increase production in various industries

FALL ELECTION IS HELD IN WASHINGTON STATE

President Franklin Roosevelt easily won the bitterly contested 1940 election -- November 5, 1940
Wendell Willkie, the defeated GOP candidate, became a roving ambassador for FDR
Monrad C. "Mon" Wallgren abandoned his U.S. House seat to run for the U.S. Senate seat
vacated by the resignation of Senator Lewis B. Schwellenbach
who had been appointed to a federal judgeship
Wallgren defeated Republican Stephen Chadwick in the general election to gain the position
Five of the state's Democratic congressmen were reelected
Warren G. Magnuson, Martin F. Smith, Knute Hill, Charles H. Leavy and John M. Coffee
Henry M. Jackson was successful as he became Washington State's newly elected
Democratic congressman for the Second District at just twenty-eight years of age
replacing Mon Wallgren
in Congress, a Conservative coalition of U.S. Representatives maintained a tight grip
but continued attempts to roll back New Deal legislation were largely unsuccessful
State-wide, Republicans managed an election upset when Republican Seattle Mayor Arthur Langlie
defeated Democratic candidate Clarence Dill by a few hundred votes for the governorship
Democrats contested the election results
in the scheme that would allow Lieutenant Governor (Democrat) Vic Meyers to take office
legislators refused to allow the governor-elect to take office pending a vote recount
this effort failed
(Governor Arthur Langlie served one term in office)
Pearl Wanamaker won the non-partisan (no political affiliation) race handily -- November 5, 1940
in her sixteen-year tenure as Superintendent of Public Instruction
Wanamaker implemented deep and sweeping changes in education²⁵⁷
following national but controversial trends:

²⁵⁷ Michael Hood, HistoryLink.org, Essay 9171, September 26, 2009.

- she began the virtual elimination of one-room multi-grade schools;
- she installed the junior high and senior high school systems;
- she initiated the school nursing program to serve students;
- she determined the old non-system of locally controlled and funded school facilities was fiscally deficient and educationally inadequate to meet the new needs;
- she determined the narrow, self-directed curriculum was not adequate to serve student needs

Republicans made some gains in the state legislature

in the Senate six Republican seats increased to nine while Democrats held thirty-seven seats in the House of Representatives Republican seats increased from twenty-six to thirty-one as Democrats maintained sixty-eight representatives

HENRY M. “SCOOP” JACKSON BEGINS A LONG AND SUCCESSFUL POLITICAL CAREER

Henry Martin Jackson was born in the home of his parents in Everett

both of his parents, Peter and Marine (Anderson), were immigrants from Norway

Henry was the fifth and last of the Jackson children

while still a child he was nicknamed “Scoop” by his sister

after a comic strip character that she thought her younger brother resembled

“Scoop” Jackson opened a law practice in Everett

he was elected Snohomish County prosecutor [1938]

he made a name for himself prosecuting bootleggers (illegal liquor manufacturers) and gamblers

Jackson joined the Army when the United States entered World War II [1941]

but left when President Roosevelt ordered all Congressmen to return home or resign their seats

(Henry Jackson will serve in the U.S. House of Representatives for six terms [1941-1953]

before resigning to run for the U.S. Senate

Henry M. Jackson never lost any election for Congress or the U.S. Senate)

TACOMA NARROWS BRIDGE “GALLOPING GERTIE” COLLAPSES

First Narrows Bridge fell into the Narrows 129 days after it opened -- 10:00 a.m., November 7, 1940

when forty-two-mile-an-hour winds began to whip the bridge

which began rolling so hard that toll takers decided to stop traffic

Leonard Coatsworth’s car was the last one to attempt to cross

half way across the bridge Coatsworth’s car slammed against the curbing

“Galloping Gertie” seemed to tilt to a 45° angle

Coatsworth leaped from his car and was repeatedly thrown to the bridge deck

he continued across and reached solid ground -- knees bleeding, arms, legs, and back bruised

Only a few minutes after Coatsworth reached safety, the bridge began to twist -- 11:00 a.m.

suspension cables attached to main support cable snapped

loud reports were heard as each cable gave way

noise grew louder as metal twisted and chunks of concrete popped into the air

Suddenly the 2,800-foot center span broke loose

concrete and cables dropped 190 feet into the Narrows

Leonard Coatsworth’s car slowly turned end over end before it landed in the water

accompanied by several thousand feet of concrete, steel plates and girders

EXPERIMENTS DEVELOP A NEW ATOMIC FUEL SOURCE

Physicists believed a fuel source capable of changing Atomic theory to reality was near at hand

Uranium-238 is mined in the United States and many other nations in the world

U-238 is stable and not of value as a fuel source for creating energy

only 1% of the uranium in nature is enriched uranium-235 -- a useful fuel source metal

however, naturally existing Uranium-238 ore can be refined

to extract "enriched" uranium (U-235) which is a metal

enriched uranium-235 could prove to be an amazingly huge source of energy

U-235 can undergo spontaneous "fission" splitting atoms in the uranium nucleus

these atoms split neighboring atoms resulting in a "chain reaction" releasing energy

To refine U-235 from U-238 requires a conversion ratio of is 500 U-238 to one 235

(that is, 500 pounds of U-238 is required to produce one pound of U-235 for instance)

to make the task more difficult the nearly useless U-238 and the useful (and dangerous) U-235

are isotopes that are nearly identical in their chemical makeup

no ordinary chemical extraction method could separate them

only a mechanical method would work

Nuclear scientists felt the breakdown of enriched uranium (235) atoms

in an atomic pile (nuclear reactor) would give off energy like, for instance, burning coal

also like coal over time most of the uranium atoms would be used up

Early experiments demonstrated that when nearly useless uranium ore (U-238) was mixed

with enriched uranium metal (U-235) it produced a by-product

a new radioactive metal element -- 1940

it was felt this new man-made waste product of nuclear fission could perhaps be useful

as a fuel to generate nuclear energy

this new element existed in nature only in the smallest trace amounts imaginable

in fact, so little existed that it did not even have a name

potentially, this new source of energy was so powerful

that it was given the name Plutonium-239 after Pluto, the Roman God of death

Plutonium, a man-made radioactive element, quickly emerged as a second possible energy source

in addition to U-235

U.S. SENATOR MONRAD C. "MON" WALLGREN IS APPOINTED TO OFFICE EARLY

Before he left office lame-duck Democratic Governor Clarence Martin appointed

U.S. Senator Wallgren to replace U.S. Senator Lewis G. Schwellenbach -- December 19, 1940

Wallgren had been successful in his election to the U.S. Senate,

but he normally would not take office until Inauguration Day [January 3, 1941]

this appointment moved Mon Wallgren to the head of the freshman class of U.S. Senators

in seniority as the other senators would not be sworn into office until [January 3, 1941]

REPUBLICAN GOVERNOR ARTHUR B. LANGLIE IS SWORN INTO OFFICE

Governor Langlie took office -- January 13, 1941

after winning the closest gubernatorial election in state history

as a member of the Republican New Order of Cincinnati (NOOC)

he advocated clean government

this campaign pledge was received with wide public acclaim
Governor Langlie also had the support of some conservative Democrat office holders
who had been instrumental in assuring his victory during the election
in appreciation, Langlie kept many of Governor Martin's appointments in their positions

UNITED STATES ARMY AIR CORPS ESTABLISHES PAINE ARMY AIR FIELD

(United States Army Air Corps leased Everett's airport and named it Everett Army Air Field [1940]
it was felt an airfield was needed to protect Puget Sound Naval Shipyard,
Boeing's manufacturing plants and Boeing Field)
United States Army Air Corps renamed Everett Army Air Field to Paine Army Air Field -- 1941
in honor of Second Lieutenant Topliff Olin Paine, the famous Air Mail Service pilot
killed crossing the Rocky Mountains [1922]
Throughout the war Paine Field served as the home of the 465th Army Air Force Base Unit
Medium Bomber squadrons, Interceptor squadrons and Fighter Groups
also rotated through the base

U.S. NAVY NEEDS A BASE TO RE-ARM AND REFUEL SEAPLANES

Chief of Naval Operations asked the Commandant of the 13th Naval District to find a suitable location
for Navy patrol planes operating in defense of Puget Sound
Commanding officer of Naval Air Station Seattle (Sand Point) recommended a site
on Whidbey Island at Saratoga Passage on the shores of Crescent Harbor and Forbes Point
suitable for seaplane takeoffs and landings under instrument conditions -- January 17, 1941
Dredging, filling, and laying water and power lines was under way
when word was received to find a second air base -- this one on land
workers started a topographic survey to find an acceptable site for a second Naval Air Station

NORTHWEST AIRLINES SEEKS AN AIRMAIL CONTRACT

Northwest Airlines constantly appealed to Washington Congressman Warren G. Magnuson for help
Northwest needed authorization to purchase new passenger planes
and to open a new commercial route from Seattle to New York City
also, as the federal government shifted priorities in preparation for war
Northwest Airlines was feeling the pinch of restrictions on purchasing tools and equipment
U.S. Representative Magnuson went to Secretary of State Cordell Hull for help
Magnuson was later quoted as saying: "**All I want for Northwest Airlines is a fair
advantage.**"²⁵⁸
his success led to his being hired by Northwest Airlines to lobby the state legislature
to delay or stop implementation of a state tax on aviation fuel

PHYSICISTS PRODUCE PLUTONIUM IN A CALIFORNIA LABORATORY

Atoms of Plutonium-239, a great potential source of nuclear energy,
were artificially produced from atoms of nearly useless Uranium-238 ore
by a team of researchers at the University of California at Berkeley -- 1941

²⁵⁸ Shelby Scates, *Warren G. Magnuson*. P. 87.

Plutonium-239 was a by-product, or “waste product” of nuclear fission instead of being used up in generating energy like coal or gasoline, the generating process produced more fuel
Plutonium-239 could be removed and purified, and then re-used to make more nuclear energy (for national security reasons news of this discovery was not released to the world until [1946])

TO ASSIST EFFORTS TO STOP NAZI GERMANY, LEND-LEASE ACT PASSES CONGRESS

Lend-Lease Act passed Congress and was signed into law -- March 11, 1941
a year and a half after the outbreak of the European war [September 3, 1939]
Although it did not formally establish the United States as a combatant in the war this act ended the pretense of American neutrality and provided an early indication that the United States could and would shoulder a heavy economic burden in the war effort
Many of the ships built in U.S. Maritime Commission (USMC) shipyards carried American goods to the European allies as part of the “Lend-Lease” program
America supplied the United Kingdom, Soviet Union, China, France and other Allied nations with vast amounts of war materiel between 1941 and [1945]
more than \$50 billion [1941 dollars] worth of supplies were shipped:
 \$31.4 billion to Britain, \$11.3 billion to the Soviet Union, \$3.2 billion to France and \$1.6 billion to China and thirty-four other allied nations
terms of the agreement provided the material be used until their return or their destruction
in return, the United States received services (like leased air bases) which totaled \$7.8 billion, of which \$6.8 billion came from the British and the Commonwealth
America returned to work
aircraft, ships and ship-repair services, military vehicles and munitions
always ranked as the most important Lend-Lease goods
but food was also a major export to Britain
by all accounts, Lend-Lease was crucial in enabling both Great Britain and the Soviet Union to fight the Axis powers

NAZI GERMANY ADVANCES THE WAR IN EUROPE WITH THE BALKANS CAMPAIGN

German armies invaded Yugoslavia and Greece -- April 6, 1941
attack on the capital city of Yugoslavia was swift and brutal
nearby towns and villages surrounding Belgrade had emptied into the capital city to celebrate Palm Sunday
Nazi Luftwaffe (Air Force) began an intensive bombardment of Belgrade
which was followed by ground troops
these attacks resulted in the death of 17,000 civilians
 the largest number of civilian casualties in a single day since the start of the war
all of Yugoslavia’s airfields were bombed
 most of the nation’s 600 aircraft were destroyed while still on the ground
Nazi troops also invaded Greece -- April 6, 1941
as German forces bombed the Greek port city of Piraeus
combined Greek and British Commonwealth forces fought back with great tenacity
but they were vastly outnumbered and out-gunned

Greek campaign ended in a quick and complete German victory

SEATTLE'S HOOVERVILLE COMES TO AN END

Hooverville was the shantytown camp established in Seattle near the Pioneer Square District [1931] it had function as home to thousands of unemployed during the Great Depression even in 1941, the settlement of squatters continued to provide shelter for those in need
Fire ravaged the hovels of the shantytown -- April 10, 1941
as the town within a city became engulfed in flames, smoke could be seen all over Seattle
after the fire, the Seattle Port Commission condemned all shacks and other habitats in the area
America's economy had picked up with the demands of the war in Europe and Asia
this land was needed for development of port industries
where Hooverville had once stood, a new dock was built

SCHOOL FOR BARRAGE BALLOON CREWS OPENS

(Balloons had been used in combat since the Civil War [1861-1865])

United States opened its first flight and maintenance crew training school -- April 14, 1941
Barrage balloon was a bag of lighter-than-air gas attached to a steel cable anchored to the ground
balloon could be raised or lowered to the desired altitude by a winch
Balloons were huge -- averaging about 62 feet long and 25 feet in diameter
that were put up from balloon sites or from the back of trucks with a winch
their purpose was to deny access to low-level airspace to enemy aircraft

- balloons enhanced ground-based air defenses and forced airplanes to higher altitudes thereby decreasing bombing accuracy;
- they decreased the capability of fighter pilots to find their targets because intruding aircraft were limited in the altitude and direction they could travel;
- the cable presented a definite mental and material hazard to enemy pilots

Many people thought the barrage balloon system was designed to snare aircraft like a spider web
in fact, any airplanes caught in these aerial nets were a bonus
the real objective of the balloons was to deny low-altitude flight to the enemy

WAR BONDS SUPPLEMENT TAXES TO FIGHT THE WAR

Taxes provided only about \$136.8 billion to cover the \$304 billion cost of the war effort
U.S. Treasury Department expanded its war bond program to acquire the \$167.2 billion shortfall
sale of war stamps and war bonds produced the money that financed the war
War Stamps were aimed primarily at school children and were available in 10¢ and 25¢ versions
they paid interest to the stamp holder and war stamps could be converted to war bonds
War bonds were hawked by many Hollywood and radio celebrities who served
above and beyond the call of duty in the donation of their time
for everything from being Civilian Defense marshals to appearing at War Bond drives
bond drives where celebrities appeared were always very successful
public paid $\frac{3}{4}$ of the face value of a war bond and received the full face value back in ten years
after maturity the bonds returned only 2.9 percent annual interest
nonetheless, war bonds served as a valuable source of revenue for the federal government
and an extremely important investment for many Americans

however, as a hedge against inflation, they were hardly successful
war bonds could not preserve the income that was lost to inflation
people were challenged to put “at least 10% of every paycheck into Bonds”
compliance was high, with entire factories of workers earning a special “Minuteman” flag
to fly over their plant if all workers belonged to the “Ten Percent Club”
Sale of War Bonds and War Stamps help to offset the enormous cost of the war effort
War Bonds provided a crucial source of revenue for the war effort
War Bonds served a second, even more significant purpose
they sold the war itself to the people
instead of relying on American involvement in the war to sell bonds
federal government sponsored publicity stunts such as celebrity auctions
these were used to sell the war to the American public
(When war-bond sales ended [1946], eighty-five million Americans
purchased more than \$185 billion worth often through automatic deductions from their paychecks
at the war’s end banks and commercial institutions also held bonds worth \$24 billion
and other treasury paper holdings)

BROTHERHOOD OF TEAMSTERS IS NOTORIOUS FOR CORRUPTION

Teamster International President Dan Tobin vigorously defended the union against such accusations
but he also instituted many constitutional and organizational changes and practices
which made it easier for union officials to engage in criminal offenses
Teamsters Union was considered to be the most corrupt union in the United States
and the most abusive toward its own members -- 1941
Critics of union growth broadened their definition of racketeering to include a wide range of activities
so that charges of corruption expanded to indict the whole Teamster organization
rather than only those elements entangled with organized crime
Fortune Magazine produced an article written in May 1941 which reminded readers that **“in most parts of the U.S. the Teamsters’ has a stranglehold on all truck-borne commerce”** it was, therefore, **“the most powerful labor organization in the United States.”**
this article referred to rumors and accusations of racketeering, aggressive picketing tactics,
and the use of secondary boycotts and sympathy strikes

BATTLESHIP USS WASHINGTON, BB-56 IS LAUNCHED

She was the third ship in U.S. Navy history to be named for the state of Washington
although a number of other ships had been named in honor of General George Washington
USS *Washington* was the second and last of the South Carolina class battleships to be built:

- 728.8 feet long, 108.3 feet at the beam, with a draft of 33.0 feet
- she had a range of 17,450 nautical miles at 15 knots (17 miles per hour)
with a top speed of 30 mph (26½ knots)
- she was protected by a maximum of 16 inches of steel plate
- she carried a complement of 2,339 sailors (144 officers and 2,195 enlisted)
- she was armed with 9 × 16” (406 mm) guns, 20 × 53/8” (127 mm) dual-purpose guns,
16 × 1.1” machine guns;
(these were replaced by 20 mm and 40 mm rapid-fire anti-aircraft heavy machine guns)

USS *Washington* -- BB-56 was ordered built [August 1, 1937]
her keel was laid in Philadelphia Navy Yard [June 14, 1938]
she was launched [June 1, 1940] and commissioned -- May 15, 1941
with Captain Howard H.J. Benson in command

GRAND COULEE DAM GENERATES ELECTRICITY FOR LOCAL USE

Grand Coulee Dam's spillway is 1,650 feet long
more than 1,000 men installed eleven gates 115 feet long and 28 feet high across the spillway
when completed the dam had a waterfall 350 feet wide and 160 feet high -- [1940]-1941
Grand Coulee Dam had four power plants
two original power plants, the Left Power Plant and the Right Power Plant,
each housed large generators
Left Powerhouse had three small additional generators to provide power at the dam site
rated at 125 megawatts each
first small generator started producing electricity [January 21, 1941]
second small unit began generating [February 15, 1941]
Grand Coulee Dam began operation when it's first large generator
began producing power routed to Mason City and Coulee Dam -- May 22, 1941

KIRO RADIO REACHES A MUCH LARGER LISTENING AUDIENCE

Saul Haas engineered another power boost to his Seattle radio station
reaching the maximum allowable 50,000 watts -- June 1941
with a new transmitter on Maury Island, KIRO became the most powerful station
west of Salt Lake City and north of San Francisco
KIRO further established its regional dominance by absorbing KVI's CBS Tacoma affiliation
Not everyone was happy with Saul Haas
The Lakewood Log, a suburban Tacoma newspaper, criticized the licensing process -- June 13
Haas, it stated, was **"the undisputed Master of Federal politics in the Northwest"**

GERMAN MILITARY CODE IS BROKEN

Germany's high command communicated with its field commanders through coded radio messages
there were encrypted using a teleprinter (Enigma machine)
to randomly substitute one letter of the alphabet for another
messages typed on one Enigma machine were received by another
included in the message was the setting to be used to accurately convert the letters
back to their original meaning
Members of the Polish underground smuggled an Enigma machine to the British spy network
breaking of the code became known and the "Ultra Secret"
code-breakers intercepted the messages and translated them for use by the Allies
(on at least one occasion General Eisenhower knew the orders for attack
before the German field command could transcribe the coded message)
American agents used coded German-Japanese messages to break the Japanese code
in an operation known as "Magic"
Without access to "Ultra" and "Magic" many Allied leaders at the time (and later historians)

believed the outcome of the war was uncertain

MILITARY HAS A GREAT INFLUENCE ON WASHINGTON STATE

(Puget Sound Naval Shipyard in Bremerton was established as a naval station [1891]
this facility originally opened as a repair facility, then expanded in World War I
to accommodate shipbuilding -- however, shipbuilding was only a small part of its mission)
at the start of World War II, Puget Sound was the premier navy yard in the Pacific
and the only one with the facilities to handle large capital vessels such as battleships
Fort Lewis once again became a primary military training center
quickly it grew to become the second largest military encampment in the United States
Nisqually River furnished a location for troops to train in bridge-building
(Seattle Naval Air Station [Sand Point] became the home of a four month aviation service school
that turned out radiomen, aviation metal smiths and aviation machinists beginning -- June 1941
Sunset Field near Spokane was purchased by the War Department from Spokane County
it was renamed Geiger Field in honor of Major Harold Geiger
an Army aviation pioneer killed in a crash [1927]
McChord Field near Fort Lewis became the Air Force Northwest Air District headquarters [1940]
with the mission of defending the Pacific Northwest and U.S. Upper Great Plains regions
(Fort Lawton in Seattle was initially established [February 9, 1900]
to protect Puget Sound from naval attack
it was named in honor of Major General Henry Ware Lawton [February 19, 1900]
who served as inspector general, U.S. Army
he was a veteran of the U.S. Civil War and of the Indian Wars
General Lawton was killed in action at San Mateo, Philippines Islands [December 19, 1899])
during World War II Fort Lawton became part of the Port of Embarkation, San Francisco
during the war at least 20,000 troops were stationed at Fort Lawton at a time
more than a million troops passed through the installation during and after the war
Fort Lawton was also used as a Prisoner of War (POW) camp
with more than 1,000 Germans imprisoned there
and approximately 5,000 Italians passed through en route to Hawaii for imprisonment
Vancouver Barracks in Vancouver, Washington once again became a center of military activities
250 officers and 7,295 enlisted personnel were billeted at the 3,029-acre location
Harbor Defenses of Puget Sound consisted of Fort Flagler on Morrowstone Island,
Fort Casey on Whidbey Island, Fort Whitman at La Conner and Fort Townsend at Port Townsend
Some troops were taken to the Columbia River near Maryhill, Washington
where the great Columbia River became a stand-in for Germany's Rhine River
challenging soldiers to build emergency crossings
this resulted in the developed the "pilot bridge" which contained 4,000 pontoons
and was built at a cost of \$34 million
Puget Sound itself became a training ground for the U.S. Navy to practice amphibious landings
Navy also took control of Piers 90-91 and other Port of Seattle facilities

CONGRESS PASSES LEGISLATION TO RESTRICT IMMIGRATION TO THE UNITED STATES

Congress enacted a Bill to empower any American diplomatic or consular officer the right

to refuse any visa or temporary work visa to any alien who sought to enter the United States if there was reason to believe that person would engage in activities that endangered society -- June 20, 1941

HITLER LAUNCHES OPERATION BARBAROSSA -- THE INVASION OF THE SOVIET UNION

Having failed to invade England [May 1940], Adolf Hitler was determined to open an Eastern Front with an invasion of the Union of Soviet Socialist Republics -- June 22, 1941

in violation of an agreement between the leader of the Nazi Party and Joseph Stalin
Soviet forces were driven back more than 600 miles to the gates of Moscow with staggering losses
battles on the Eastern Front constituted the largest military confrontation in history

roughly three million German troops faced slightly fewer Soviet troops
on a 750-mile front between the Baltic Sea and the Carpathian Mountains
battles were characterized by unprecedented ferocity, wholesale destruction, mass deportations, and immense loss of life due to combat, massacres, starvation, exposure and disease

Eastern Front was central to the Holocaust as this was the site of nearly all extermination camps, death marches, ghettos and a majority of the campaign of persecution and extermination sanctioned by the Nazi government

Of the estimated seventy million deaths attributed to World War II

over thirty million, many of them civilians, died on the Eastern Front

(Fighting on the Eastern Front was decisive in determining the outcome of World War II

and was eventually the main reason for Germany's defeat

it resulted in the destruction of the Third Reich, the partition of Germany and the rise of the Soviet Union as a military and industrial superpower)

AMERICAN COMMUNIST PARTY REACTS TO THE GERMAN INVASION

American Communists long supported the radical left wing of the state Democratic Party's Washington Commonwealth Federation (WCF)

Regarding President Franklin Roosevelt's foreign policy

Communists strengthened their "antifascist" position

and threw even greater WCF support behind American effort to assist the Allies

LOGGING IS THE PRIMARY INDUSTRY OF GRAYS HARBOR COUNTY

(Henry McCleary had built a sawmill on the Olympic Peninsula [1897]

next he established a company town, McCleary, with two large factories

plywood and door that manufacturing continued in McCleary through the Great Depression

using fir trees purchased from the Simpson Logging Company

and shipped into town from a McCleary-owned sawmill in Shelton, Washington)

Over the years, Shelton's economy had become dependent on McCleary business

when the Simpson Logging Company learned 80-year-old Henry McCleary wanted to retire

he intended to sell his properties and holdings -- he was ready to negotiate

Simpson Logging in Shelton was interested in acquiring McCleary's door plant and plywood mill

and the sawmill he owned in Shelton -- it had no interest in the town itself

these acquisitions would enable the company to integrate its entire operation by providing options

Simpson could sell fir logs, produce lumber, or manufacture plywood and doors

Henry McCleary, however, was not interested in selling only the manufacturing facilities
he also wanted to sell the entire town -- including buildings, streets and utilities
all of which had been neglected for years and were in deplorable condition
Negotiations between McCleary and Simpson continued throughout the summer and [fall] 1941
little progress was made

RED SCARE SPREADS ACROSS AMERICA

Investigations into Communists Party members and their activities increased throughout the nation
“Red Scare” was underway -- 1941 to [1957]
(this was the second since the [1917] Bolshevik revolution
first “Red Scare” had occurred in [1919])
“Second Red Scare” was characterized by heightened fears of Communist influence
Communist agents were thought to have infiltrated and endangered American institutions
on-going investigations destroyed the careers of thousands of people
Communists and non-Communists alike

WASHINGTON IS HOME TO A U.S. NAVY AIR BASE AND ARMY AIR CORPS BASES

Seattle Naval Air Station (Sand Point) operations and staff ballooned during the war years:
daily population rose to 8,000 civilian and military personnel
men and planes from aircraft carriers, battleships, and cruisers visiting Puget Sound
stayed at the station
Seattle Naval Air Station hosted several headquarters functions, a weather center,
a communications center, and an overseas terminal for the Naval Air Transport Service
one hundred and fifty shops at the station provided necessary repairs
and modifications for fleet aircraft
it provided aviation supplies from propellers to parachutes
(U.S. Navy announced that the base would close permanently [September 1, 1950])
Geiger Field near Spokane was a major training base for heavy bombardment units
new B-17 “Flying Fortresses” were obtained from the Boeing Aircraft Company
Geiger Field was also used by Air Technical Service Command
as an aircraft maintenance and supply depot
auxiliary airfields were located at Deer Park Airport and Spokane’s Felts Field
(Geiger Field was closed in late [1945])
McChord Field near Tacoma was home to the 17th Bombardment Group (Medium)
they began a transition from Douglas B-18s to Douglas B-23s
B-18 Bolos medium bombers which were considered to be underpowered,
had inadequate defensive armament and carried too small a bomb load
B-23 medium bombers were better constructed and equipped
after the 17th Bombardment Group’s transition was complete
they were transferred to Pendleton, Oregon -- June 29, 1941
17th Bombardment Group was replaced by the 12th Bombardment Group (Medium)
(after the Japanese attack on Pearl Harbor this was the only Air Corps combat unit
on the Pacific Coast north of the San Francisco Bay area
they immediately began flying anti-submarine patrols watching for signs of an invasion)

U.S. NAVAL TORPEDO STATION AT KEYPORT, WASHINGTON EXPANDS

Keyport became a bee hive of activity almost overnight
civilian employment at the Keyport, Washington installation increased to such an extent
that a housing project of approximately 300 units was built in Poulsbo, Washington
to accommodate the new employees and their families
Stringent security measures added secrecy²⁵⁹
powerful search lights were mounted on concrete bases
and a strong link fence enclosed the station
constant patrols served as deterrents to would-be trespassers
Employees began working a seven day week with the eighth day off
women, who made up forty-two percent of the civilian workforce,
began working in the industrial shops to replace the men who went into the military
employment reached an all-time high of 2,035 civilian and 821 military
sometimes as many as 100 torpedoes were produced and tested in a single day
(peak production occurred [in 1944] when 7,000 torpedoes produced)

OTHER INDUSTRIES MEET THE DEMANDS OF WAR

Lumber was great demand
many billions of board-feet were needed to build everything from barracks to minesweepers
specialized lumber products were developed as substitutes for critically scarce metals
water-resistant plywood was produced to use in construction of training planes and barges
Washington continued as a leading agricultural state
farm products increased in value to \$250 million [1941]
improved preservation processes, such as dehydration of fruits, vegetables, milk and eggs
permitted these foods to be shipped to distant war fronts
with millions of Americans serving in the armed forces, the annual need for powdered eggs
reached 400 million pounds [1943] compared with 250 million pounds the year before
Washington's fishing industry continued as one of the most productive in the country
salmon and halibut were the major products, but various other seafoods also were harvested
during the war years, the Army and Navy purchased virtually all of the salmon
canned in Washington and Alaska

WASHINGTON'S SUBURBS DO THEIR PART FOR THE WAR

Renton gained a huge Boeing airplane factory early in the war
that turned out hundreds of B-29 Superfortresses
Bellevue's whaling dock on Meydenbauer Bay was appropriated by the Coast Guard
there whaling vessels were converted into use as part of the federal government fleet
because war workers in need of housing rented summer cabins and available Eastside shelters
Overlake Transit scheduled twenty-six bus trips a day to carry commuters
across the Mercer Island Floating Bridge (which had opened [1940])
to provide access to a stable supply of adequate houses

²⁵⁹ Lisa Poole with Dianne Robinson, *Torpedo Town U.S.A.*, P. 48.

AREA FOR LAKE ROOSEVELT BEHIND GRAND COULEE DAM IS CLEARED

(Public Works Administration started clearing the reservoir zone of trees and other plants [late 1928])

Lincoln Lumber Company gave the highest bid to purchase logs: \$2.25 per thousand board feet

more than 54,000 acres were cleared and cut timber was floated downstream

pace of clearing was accelerated [April 1941] when Roosevelt Lake

was declared a national defense project)

All of the land had been purchased at market value at a cost \$10.5 million

which included the relocation of farms, bridges, highways and railroads

Last tree fell during a ceremony conducted by Reclamation Supervising Engineer Frank A. Banks

and State WPA Administrator Carl W. Smith -- July 19, 1941

2,626 people living in five main camps along the Columbia River had worked on the project

\$4.9 million was spent on labor

SILK BECOMES A VITAL WAR MATERIAL

Vichy French government, collaborating with the Axis powers,

delivered French Indochina to the Japanese -- July 24, 1941

American and British governments froze hundreds of millions of dollars in Japanese assets

including all of the raw silk in the country to ensure an adequate supply for Allied parachutes

and powder bags for propellant charges

Panic struck the silk-stocking buying public

women "stampeded" hosiery counters at department stores

sales of silk stockings increased in some cities by 300 percent -- stores added extra sales help

Gimbel's Department Store in New York called in ten "husky detectives"

to handle stocking-crazed women

AMERICA'S MILITARY DRAFT PROVIDES MEN FOR SERVICE

(Selective Training and Service Act had passed Congress [September 25, 1940]

it was scheduled to expire in a year)

President Roosevelt asked Congress to extend the term of duty for draftees beyond twelve months

debate in congress centered on who should control the draft, the size of the army

and the need for deferments

proposed legislation changed the age of draftees from between the ages of 21 and 35

to all men 18 to 45 -- and all men aged 18 to 65 were required to register

U.S. House of Representatives approved the extension

by a single vote (201 to 200) -- August 12, 1941

as Colonel Karl R. Bendetson (later remembered for his role as architect of the internment

of American Japanese during World War II) said, "**Mr. Rayburn** (Speaker of the House)

banged the gavel at a critical moment and declared the Bill had passed."²⁶⁰

U.S. Senate approved the Bill by a wider margin, and Roosevelt signed the bill into law -- August 18

RESISTANCE TO THE DRAFT

²⁶⁰ Dan Plesch, *AMERICA, HITLER AND THE UN*, P. 21.

Many of the soldiers who had been drafted for a year of service [October 1940] threatened to desert once their original twelve months was up
many of these men in protest painted the letters “O” “H” “I” and “O” (OHIO) on the walls of their barracks -- these letters were an acronym for “Over the hill in October”

Desertions did occur, but they were not widespread

GENERAL LESLIE R. GROVES, Jr. BUILDS AMERICA’S MILITARY HEADQUARTERS

Born the third of four children to Army Chaplain Leslie Richard Groves, Sr, and his wife Gwen in Albany, New York, [August 17, 1896] Leslie, Jr. traveled to military bases with his family
Chaplain Groves at one point was ordered to return to the 14th Infantry stationed at Fort Lawton, Washington

Dick Groves entered Queen Anne High School in Seattle [1913]
after graduation he attended the University of Washington
until he received an appointment to West Point military academy
where he graduated fourth in his class [1921]

After his graduation from West Point, Leslie R. Groves, Jr. was posted to the 4th Engineers stationed at Camp Lewis, Washington
next he was posted at Fort Worden, Washington near Seattle in command of a survey detachment
in Seattle he was able to pursue his courtship with kindergarten teacher Grace Wilson
their marriage produced a son and a daughter

General Groves was assigned to construct the largest office building in the world -- August 19, 1941
at 5,100,000 square feet it was twice the size of the Empire State Building in New York City
40,000 staff members would work in the five-story, five-sided structure
which would ultimately become the Pentagon

GRAND COULEE DAM IS COMPLETED TWO YEARS AHEAD OF SCHEDULE

(Nespelem Rural Electric Association became the first commercial customer to buy power from Grand Coulee Dam -- one of Grand Coulee’s small generators [September 12, 1941])

First of the dam’s primary generators went on line
when it was set in motion by the force of the mighty Columbia River
electric power delivery from one of its large generating units first occurred -- October 4, 1941

Construction on Grand Coulee Dam, almost four times larger than Hoover Dam, officially ended one month later, nine years after it began -- two years ahead of schedule
more than 12,000 people found work on the dam at one stage or another
seventy-two died on the job -- usually from falling or from having something fall on them
contrary to myth, no one is buried in the concrete
workers were paid an average of 85 cents an hour
skilled laborers, such as carpenters and electricians, received up to \$1.20 an hour
during the Great Depression these were considered excellent wages

Grand Coulee Dam could generate 1,970,000 kilowatts of electric power

Lower plant consisted of two powerhouses with eighteen large generators

Grand Coulee Dam, the largest concrete structure on earth, stood forty-six stories tall
and as wide at the base as twelve city blocks

it was often described as the Eighth Wonder of the World

IMPERIAL JAPANESE SURPRISE ATTACK ON PEARL HARBOR

Imperial Japanese Navy conducted a surprise military strike on the U.S. navy base at Pearl Harbor, Hawaii -- 7:48 a.m. (local time) Sunday, December 7, 1941
This attack was intended as a preventative action to keep the U.S. Pacific Fleet from interfering with military actions the Empire of Japan was planning in Southeast Asia against overseas territories of the United Kingdom, the Netherlands and the United States (Five Japanese Fleet submarines had departed Kure Naval District, Japan [November 25, 1941]) each launched a miniature submarine for the attack
Six Japanese aircraft carriers launched 353 Japanese fighter planes, bombers and torpedo planes in two waves during the two-hour attack
Japanese were shockingly successful
three U.S. Navy battleships were lost
USS *Pennsylvania* (BB-38) was damaged while in dry dock
USS *Oklahoma* (BB-37) was capsized with a loss of 429 dead
USS *Arizona* (BB-39) exploded with a loss of 1,177 dead
(she remains a memorial to this day)
five additional U.S. Navy battleships were damaged but later returned to war
USS *California* (BB-44), USS *Maryland* (BB-46), USS *Nevada* (BB-36),
USS *Tennessee* (BB-43), USS *West Virginia* (BB-48)
in addition, three cruisers, four destroyers, a seaplane tender, repair ship, minelayer, tug, floating drydock and a target ship (ex-battleship) USS *Utah* (AG-16) were sunk
aircraft losses were 188 destroyed and 159 damaged -- most before they could take off
American dead numbered 2,403 including sixty-eight civilians
there were 1,178 military and civilian wounded

IMPERIAL JAPANESE FLEET STEAMED FOR HOME

They regretted their failure to catch the three Americas aircraft carriers not at Pearl Harbor
USS *Enterprise* under Rear Admiral William Halsey had been sent to deliver Marine Corps fighter planes to Wake Island
USS *Lexington* with Captain Felix Stump in command was delivering scout bombers to Midway Island
USS *Saratoga* had left Pearl Harbor for upkeep and repairs in San Diego, California

AMERICA LEARNS OF THE ATTACK

Admiral Husband E. Kimmel, Commander in Chief Pacific and ranking naval officer in Pearl Harbor sent a hurried dispatch to all major navy commands and fleet units
it said simply: **“AIR RAID ON PEARL HARBOR X THIS IS NOT DRILL”**²⁶¹
This attack came as a profound shock to the American people
little stood in the way of an enemy attack on the West coast of the United States
Boeing and Puget Sound Naval Shipyard made Seattle a prime target

²⁶¹ Library of Congress, Today in History December 7.

3000 volunteer air wardens stood guard that night in Seattle

JAPANESE AMERICANS COME UNDER SUSPICION AFTER PEARL HARBOR

New laws excluded newcomers from becoming citizens -- non-citizens could not own land
of the 112,000 Japanese in the U.S. more than 70,000 were U.S. citizens

first generation Americans were known as Issei

second generation Americans were known as Nisei

Sansei designated the grandchildren of Issei

more than 14,000 Japanese lived in Washington in -- 1941

more than 8,900 of these people were native born U.S. citizens

most had settled west of the Cascade Mountains

King and Pierce counties were home to a vast majority

more than one-half of the farmland in King County and one-third in Pierce County

was farmed by Japanese Issei, Nisei and Sansei truck farmers

(General John L. DeWitt was Western Defense Command Commanding General

was stationed in San Francisco beginning [December 5, 1939])

General John DeWitt and other military authorities

insisted the location of the Japanese posed a grave military threat

according to *The Seattle Star* newspaper Seattle Police **“rounded up 51 Japanese aliens considered dangerous by the Federal Bureau of Investigation”**

they were placed in custody

some of the Seattleites were members of the Japanese American Chamber of Commerce

BATTLESHIP USS WASHINGTON, BB-56, PREPARES FOR WAR

USS *Washington* was on her shakedown and training cruise in the Atlantic Ocean

when the Japanese Navy attacked Pearl Harbor --December 7, 1941

Washington remained in Atlantic waters, serving as the flagship for Admiral John Wilcox,

commander of the Atlantic Fleet's battleships and Task Force 39

AMERICA ENTERS WORLD WAR II

President Franklin Roosevelt addressed Congress in a speech

which was also broadcast throughout America -- December 8, 1941

he began **“Yesterday, Dec. 7, 1941 - a date which will live in infamy - the United States of America was suddenly and deliberately attacked by naval and air forces of the Empire of Japan.”**

Roosevelt's words were broadcast over radios and school loudspeakers across the nation

students and teachers were tense as the president announced the doom of many and the fate of all

high school seniors and young men over eighteen were anxious to become war heroes

Congress declared war on Japan -- December 8

with America's entry into World War II, radio technology and license trafficking were frozen

but radio flourished as a news medium

war correspondents such as Edward R. Murrow, Walter Cronkite and Eric Sevareid

became household names

WASHINGTON STATE SHIPYARDS EXPLODE WITH ACTIVITY

Puget Sound Naval Shipyard at Bremerton had five dry-docks
 that were available for construction and repair work
 Bremerton's Naval Shipyard at began the mammoth job of repairing and rebuilding
 a large portion of the bombed-out hulks from Pearl Harbor
 five of the six surviving battleships were towed to Bremerton
 USS *Nevada*, USS *Tennessee*, USS *California*, USS *Maryland*, and USS *West Virginia*
 arrived at the Naval installation for repair and modernization
 these ships became known as the "Pearl Harbor Ghosts"
 because Imperial Japan had declared them sunk
 they were rebuilt and returned to service stronger than before
 during the war, Puget Sound Naval Shipyard's workforce doubled to over 30,000
 throughout the war Bremerton's Yard repaired twenty-six battleships (some more than once),
 eighteen aircraft carriers, thirteen cruisers, and seventy-nine destroyers
 workers also overhauled, repaired, or fitted out another 400 warships
 Bremerton also launched newly-constructed warships
 U.S. Navy ordered \$10 million in new ships to be built by Puget Sound Naval Shipyard
 new ships included twenty-five submarine chasers, thirteen destroyers,
 eight destroyer escorts, seven seagoing tugs, six submarines, five aircraft carriers
 two minesweepers, two ammunition ships, as well as 1,700 small boats
 this construction program was arranged primarily by Congressman Warren G. Magnuson
 Bremerton's Shipbuilding Dock No. 3 was used for new ship construction
 instead of sliding down the traditional inclined ways (launch tracks for ships)
 new vessels were launched simply by flooding the dock
 there were also four additional new ship-building ways for the construction of escort vessels
 (Todd had bought property for a construction yard on Tacoma's Commencement Bay [1917]
 they operated for almost a decade after World War I building three cruisers
 Cincinnati, *Omaha* and *Milwaukee*
 merchant vessels had been a Todd specialty between the wars
 some of these were easily converted to escort vessels and "Victory ships" [troop carriers])
 Todd Shipyards had closed but was reactivated by Todd and Henry J. Kaiser for WWII
 this partnership became known as Seattle-Tacoma Shipbuilding
 U.S. Navy invested \$15 million in an expansion project
 its three ways were increased to eight
 33,000 men and women worked in Tacoma to build five freighters, two transports,
 thirty-seven escort carriers, five gasoline tankers and three destroyer tenders
 at the combined Todd Shipyards/Seattle-Tacoma Shipbuilding operation,
 Todd bought out Kaiser's interest in Seattle-Tacoma Shipbuilding
 and continued as Todd Pacific Shipyards headquartered in Tacoma
 this company turned out a remarkable forty-two Victory ships
 at its peak, Todd Tacoma alone employed 28,000 people
 Todd Pacific Shipyards also had a facility in Seattle
 which concentrated on repair work and built new destroyers
 (Todd Pacific Shipyards sold the yard to the Navy after the war
 U.S. Navy sold the yard to the Port of Tacoma [1959]

its site is now part of the port's Commencement Bay Industrial Development District)
(Kaiser Shipyards were owned by the Kaiser Shipbuilding Company
which was begun [1939] by American industrialist Henry J. Kaiser
to help meet the construction goals for merchant shipping
set by the United States Maritime Commission)
seven major shipbuilding yards were located on the Pacific coast
four of the Kaiser Shipyards were located in the San Francisco Bay Area
they produced 747 ships, including many "Liberty" (cargo) ships and Victory ships
more than any other complex in the United States
Kaiser Shipyards in California also produced the *Casablanca*-class escort carriers
three of their shipyards were located across the Columbia River from each other:

- at Ryan Point in Vancouver, Washington;
- at the St. Johns area of Portland, Oregon (Oregon Shipbuilding Corporation)
Oregon Kaiser Yards alone were responsible for delivering 455 ships;
- at Swan Island in the Columbia River between Washington and Oregon
this shipyard stood at the site of an old dairy farm
(only a short distance upriver from today's Interstate 5 bridge)
Swan Island shipyard completed its first ship in 253 days from keel laying to launch
Liberty ships were being constructed even before the plant was finished

Henry Kaiser recruited from across the United States for workers in his shipyards
he employed more than 200,000 workers at his shipyards
Kaiser hired more women employees than any other industry in the nation
in addition to high wages, Kaiser Shipyards provided their employees
with free housing and medical care
Kaiser constructed two company towns along the Columbia River:

- McLoughlin Heights now a suburb of Vancouver, Washington,
- Vanport on an island in the Columbia River (this was later destroyed by a flood)

Kaiser Shipyards were known for developing new methods of ship building
numerous construction records were established by Kaiser Shipyards
at the Oregon Shipbuilding Yard on the Columbia River near Portland
the SS *Joseph N. Teal* was built in ten days [fall 1942]
in a race with other shipyards, one ship was completed
in four days, fifteen hours, and twenty-six minutes
as the ship hull was prefabricated on land
Kaiser Shipyards turned out ships at record speed using women construction workers
at the start of the war it took about 300 days from keel laying to launch
soon Kaiser ships were completed in only two-thirds of that time
and at a quarter of the cost of the average of all other shipyards
Liberty ships were assembled in a little over two weeks
by end of the war, Kaiser Shipyards produced more ships than any other similar facilities
1,490 ships were built in an average construction time of twenty-three days
this was twenty-seven percent of the total U.S. Maritime Commission demand
for World War II
thirty LST (landing craft for troops) were built in one six-month period

(Kaiser Shipyards shut down at the end of the war)

Puget Sound area shipyards constructed an unbelievable number of war vessels

Seattle yards employed 22,000 at twenty-nine major shipyards

they built forty-six destroyers and three tenders for the U.S. Navy plus other vessels
in all, eighty-eight Washington State civilian shipyards around the Sound employed over 100,000
who distinguished themselves by turning out all types of crafts

patrol boats, mine-sweepers, destroyers, landing craft, tugs, barges, troopships,
escort aircraft carriers and floating dry-docks were only the most common

others were located in Vancouver, Tacoma, Hoquiam, Edmonds, Anacortes,

South Bend, Port Townsend, Cathlamet, Aberdeen, Hoquiam, Bellingham, Gig Harbor,
Friday Harbor, Olympia and Winslow (now Bainbridge Island)

Marine Division of the Bellingham Iron Works built fifty all-steel Navy tug boats

before that contract was awarded, the shipyard had built mainly mine-sweepers

Grays Harbor Shipbuilding Company built seventy-two vessels for the army and navy
fulfilling contracts valued at \$5 million between [1942 and 1944]

Puget Sound Bridge and Drydock/Associated Shipbuilders turned out thirty-eight minesweepers,
fifteen covered wooden lighters (barges), ten floating dry-dock workshops,
three seaplane tenders, three wooden tugboats, and other vessels

Lake Washington Shipyard at Houghton (now annexed to Kirkland) employed 6,000 workers
to repair dozens of merchant vessels and ferries during the war

and to build ships for the Navy

(this shipyard site is now the location of Carillon Point,
a residential-commercial development)

Shipyards in Tacoma and Vancouver, Washington produced escort aircraft carriers (CVEs)
at a rate of one every two weeks

these “baby flatops” were half the length of fleet carriers

they were slower, lightly armed and armored, and carried fewer airplanes

but they could be built quickly and cheaply

SEATTLE JAPANESE AMERICANS RECEIVE A WARNING

Seattle Mayor William “Earl” Millikin issued the following warning: **“Seattle must have tolerance toward American-born Japanese, most of whom are loyal. But I also want to warn the Japanese that they must not congregate or make any utterance that could be used as grounds for reprisals”** (*The Seattle Star* [December 8, 1941] P. 6)

Seattle Police Chief Herbert Kimsey announced that patrols would be placed
around the **“Japanese quarter”** and stated that anti-Japanese riots
would be **“crushed with force”** (*The Seattle Star*),

Rear Admiral C. S. Freeman, commander of the 13th Naval District, made the following request:
“The immediate problem for the civilian population is to be on guard for possible sabotage. The navy will appreciate any information regarding suspicious actions on the part of individuals who may seek to do harm locally. I realize that the very great majority of our people, including Japanese residents, are loyal to our country and it therefore is important to avoid unjust or unfounded suspicion. However, all information submitted will be investigated by the proper federal authorities” (*The Seattle Star* [December 8, 1941] P. 6)

Fear was also present in the American Japanese community
there were rumors that some Seattle Japanese youths had been beaten up

ITALY AND GERMANY DECLARE WAR ON THE UNITED STATES

In support of their Axis ally Japan, Italy and Germany declared war on the United States
Italian dictator, Benito Mussolini, made the declaration first -- December 11, 1941
speaking from a balcony over the Piazza Venezia in Rome
he pledged the “powers of the pact of steel” were determined to win
Adolf Hitler then made his announcement at the Reichstag (German parliament) in Berlin
he said he had tried to avoid direct conflict with the United States
but, under the Tripartite Agreement [signed September 27,1940]
Germany was obliged to join with Italy to defend their ally Japan -- December 11

PRESIDENT FRANKLIN DELANO ROOSEVELT ASKES CONGRESS TO DECLARE WAR

(A declaration of war is a formal declaration issued by a national government
indicating that a state of war exists between that nation and another)
In the United States, Article One, Section Eight paragraph Eleven of the U.S. Constitution says:
“Congress shall have power to ... declare War....”
however, the declaration provides no specific format for what form the legislation must have
Honoring the Constitution and Congress, President Roosevelt sent a message to Congress:

To the Congress:

On the morning of December eleventh, the Government of Germany, pursuing its course of world conquest, declared war against the United States.

The long known and the long expected has thus taken place. The forces endeavoring to enslave the entire world now are moving toward this hemisphere.

Never before has there been a greater challenge to life, liberty, and civilization.

Delay invites greater danger. Rapid and united effort by all of the peoples of the world who are determined to remain free will insure a world victory of the forces of justice and of righteousness over the forces of savagery and of barbarism.

Italy also has declared war against the United States.

I therefore request the Congress to recognize a state of war between the United States and Germany, and between the United States and Italy.²⁶²

UNITED STATES IS INVOLVED IN TWO WARS SIMULTANEOUSLY

One with Imperial Japan --the Pacific Theater
Another with the Axis powers: Germany, Italy, Hungary, Romania, Bulgaria
this was the European Theater
Washington State became the demarcation center for the Pacific Theater
and the West coast became a Combat Zone

UNITED STATES FACES A DILEMMA

²⁶² Department of State Bulletin Vol. V Numbers 106-131, July 3-December 27, 1941, P. 475.

When Japan attacked the United States, the war in Europe had been raging for over two years
Europeans had few resources to spare to protect their far-flung Eastern colonies
When Germany declared war on the U.S. this nation faced a decision
about how to expend its resources between two separate war theaters
on the one hand, Japan had attacked the United States directly at Pearl Harbor
and the Japanese Navy threatened America's West Coast
on the other hand, Germany was universally considered stronger and more dangerous
because only Great Britain and the Soviet Union remained unoccupied by Nazi Germany

ABLE BODIED WORKERS ARE NEEDED BY THE NATION

Men went off to war -- women went off to work
construction projects abounded in Washington State
military forts, air bases, naval bases and hospitals needed to be built
soldiers, sailors, construction and production workers were all needed
Job seekers by the hundreds of thousands rushed to Western Washington looking for work
Seattle gained 100,000 inhabitants
Spokane's population increased by 20,000
small towns found the demand for increased production changed the tempo of rural life
Eastern Washington suffered population losses as workers flocked to the coast
Adams, Pend Oreille, Okanogan, and Stevens counties experienced the greatest losses
Military Draft and the war effort consumed America's work force in the early 1940s
industry turned to teen-aged workers of both genders to fill in as replacements
congress rolled back social and economic reform legislation
many factories instigated a longer working day to boost industrial output
federal government made anti-trust legislation a low priority
to combat the labor shortage, federal inspectors ignored laws
regulating employment of women and children
Many states had to change their child-labor laws to allow these teenagers to work
patriotism, adult status and money led many youth to drop out of school and take a defense job
with very little public outcry, the number of high school dropouts increased significantly
during the war, the teenage workforce grew from one million to three million -- 1940-[1944]
number of students in public high schools dropped from 6.6 million in 1940 to 5.6 million [1944]
as a million students, and many teachers, took jobs in defense plants

PACIFIC CAR AND FOUNDRY (PACCAR) CONVERTS TO WAR PRODUCTION

Renton's diesel truck builder, PACCAR, was contracted to produce Sherman Tanks
(926 tanks were delivered during the war)
Other notable vehicles produced by PACCAR included the "T-28" super-heavy tank
an armored self-propelled gun (also called 105 mm Gun Motor Carriage T-95)
company engineers designed the "M25" Tank Transporter -- a tank recovery and transport vehicle
its tractor unit was fitted with both an armored cab and two winches
with a combined towing capacity of sixty tons
its semi-trailer could be used to haul battle damaged tanks to be repaired
(more than 1,300 of these rescue vehicles were built)

NEW ALUMINUM INDUSTRY PROVIDES WAR MATERIALS

Manufacturing of aluminum was a new wartime industry ideal for airplanes
smelting one ton of finished aluminum consumed 17,000 kilowatt hours of electricity
Grand Coulee Dam provided the necessary electricity for the power-hungry process
Grand Coulee Dam increased production to meet the huge increase in demand for electricity
so much so that water could not be spared for irrigation
farmers in the Columbia Basin had to wait until the end of the war for their water
Aluminum Corporation of America (ALCOA) of Vancouver, Washington signed a contract
to purchase 32.5 megawatts of power for a smelter [December 1939]
first transmission line from Grand Coulee was completed to Vancouver at about the same time
with that smelter completed, the Northwest aluminum industry was born
this new and expanded war industry doubled Vancouver's population
It became necessary to drastically increase aluminum production
a remote location was needed to protect a \$71 million smelting facility from foreign attack
two rural sites just outside of Spokane were chosen,
and ground was broken -- November 1941
Spokane's Travis Pattern & Foundry Inc. was placed on one of the sites
as the second site remained available
Longview's Reynolds Metal Company began production to meet the demands of war
Tacoma's Olin Corporation added aluminum smelting plants
It was estimated that electricity from Grand Coulee Dam alone provided the power
to make the aluminum used in about one-third of the airplanes built during World War II
all together aluminum production around the war years increased 565%
from 163,000 tons [1939] to 920,000 tons [1943]

BOEING'S PLANT NUMBER 2 PRODUCES B-17 FLYING FORTRESSES

Boeing was a primary customer for aluminum from Northwest smelters
Plant 2 in Seattle was located about a mile up the Duwamish River from Boeing's original Plant 1
differences between the two production facilities were striking
Plant 1 was a workshop where biplanes were stitched, glued and nailed together
Plant 2 was a modern assembly line where Boeing workers were building B-17s
at a rapidly increasing rate
metal parts fabricated in the back were transformed into aircraft
as they slowly progressed along an assembly line toward the front doors
this was where the mostly unskilled workers learned to assemble aluminum,
engines and electronics into a sophisticated flying machine
Boeing's work force was 46 per cent women in 1941
Boeing also hired retired workers and the blind

OTHER WASHINGTON CORPORATIONS SUPPLY WAR GOODS

Weyerhaeuser installed a new sawmill at Longview --1941
this was followed by a sulfide plant to produce sulfur for commercial use
Smaller industries contributed to the war effort

propellers from Seattle brass foundries were added to newly-constructed ships
galley stoves and windlasses from Everett's iron works were placed aboard newly-built war ships
Kent's garbage can plant converted to turn out rifle clips
clothing shops that previously made bathing suits and sport sweaters
converted to make blankets and mittens for soldiers

IMPACT OF WORLD WAR II ON PUGET SOUND

Traveler and writer Frederick Simpich, Sr., visited the Northwest early in the war to take inventory

he noted the conditions he encountered: **"...This Pacific Northwest, by the Great Circle route through the Aleutians, is only about 4,700 miles from Tokyo. Its army posts, naval bases, docks, airplane factories, ship and lumber yards, mines and forests, railway terminals and fishing fleets are all possible objects of enemy attacks."**

"...Great rifles and antiaircraft guns point their deadly snouts from coastal groves and hidden nooks. Destroyers, mine layers, sweepers, submarines and patrol bombers depart on mysterious missions. Soldiers afoot and in trucks patrol the roads and beaches.... Barrage balloon crews shield ... an air base by flying scores of elephantine gasbags at the end of long cables.... Barbed wire and guards hold the inquisitive public far back from busy waterfronts, where blacked-out troop trains discharge men and where Army transports load on dark, rainy nights for 'some northern port'...."²⁶³

"Mountain-high on the docks are piled the things campaigning armies use: engines, planes, extra wings, soap, flashlights, iron pipe, typewriters, kitchen ranges, tubs, pots, pans, bales of blankets, candy, cigarettes, rolls of camouflage material, big steel mats for making airplane landing floors on sandy beaches or rough fields, tents, tools, mattresses, even dog harnesses; food, too, shiploads of it. 'How much grub is here?' I asked a quartermaster colonel. 'Millions of rations,' he said. 'Perhaps enough to keep one soldier fat for 260,000 years.'

"New bombers, pursuit planes, merchant ships, long barges for landing invading troops, mine sweepers and mine layers; destroyers, seaplane tenders, crash boats, carriers and transports made by converting freighters; uniforms, sleeping bags by the thousands, knockdown houses for use in Alaska; skis, dog sleds and dog harness; gas-mask fillers, incendiary bomb casings; cartridge clips, preserved foods, propellers, marine steering engines by the hundreds -- these are but a few of the things now made here."²⁶⁴

LIFE ON THE HOME FRONT²⁶⁵

Every city, county and region in the state was involved in the war effort

every person, company and agency felt the effects of the war in dozens of ways

war was constantly on every mind and war news each day motivated citizens

to work long and often unusual hours

many companies scheduled three eight-hour shifts seven days a week

AMERICAN AND FILIPINO TROOPS TRY TO HOLD THE PHILIPPINE ISLANDS

²⁶³ W. Storrs Lee. *Washington State*. P. 465.

²⁶⁴ W. Storrs Lee. *Washington State*. P. 465-466.

²⁶⁵ James R. Warren, HistoryLink, Essay 1664, September 13, 1999.

Following the Pearl Harbor attack the Japanese invaded the Philippine Islands
an American-Filipino military force under the command of U.S. General Douglas MacArthur
was forced onto the Bataan peninsula where they carried out a delaying action at Corregidor,
a small rock-strewn island south of the Philippine province of Bataan
Japanese knew with enough forces they could take American and Filipino occupied Corregidor
which was strategically located at the entrance of Manila Bay
Corregidor meant control of one of Asia's finest natural harbors
Japanese began their attacks on Corregidor -- December 29, 1941
but the effort did little damage because the occupants had been on alert
When the Japanese began another bomber attack ordered to last at least one week
they did much more damage to the soldiers, artillery, barracks and supply depots

ARCADIA CONFERENCE SETS THE DIRECTION OF AMERICA'S WAR EFFORT

American war planners had anticipated the possibility of a two-front war
strategy meetings with U.S. allies resulted in a "Europe First" policy
President Roosevelt and British Prime Minister Winston Churchill met in Washington, D.C.
to develop military strategy -- December 22-[January 14], 1942
this meeting resulted in a "Europe First" policy being agreed upon
United States committed to sending its army and air force to fight Germany
in North Africa and Europe as soon as those forces were ready
campaign against Japan would be focused on halting Japanese expansion
until the war on Germany was complete when the full power of the United States,
United Kingdom, and eventually the Soviet Union would be unleashed on Japan
not all branches of the military agreed with this strategy
this resulted in a great deal of friction between the Army and Navy

JAPANESE SUBMARINE IS SUNK OFF THE MOUTH OF THE COLUMBIA RIVER

Following the Japanese attack on Pearl Harbor the 17th Bombardment Group from McChord Field
flew anti-submarine patrols off the west coast of the United States
they were the first unit to fly the B-25, Mitchell medium bomber
one of its Mitchells dropped four 300-pound bombs on a Japanese submarine
near the mouth of the Columbia River -- December 24, 1941

HENRY McCLEARY DRIVES A HARD BARGAIN

Henry McCleary set a deadline for the purchase of his properties at midnight, December 31, 1941
Simpson must buy it all or he would close his entire operation including the town
An agreement was reached --11:00 p.m., December 31
Henry McCleary had sold his manufacturing plants and the entire town
to the Simpson Logging Company (now Simpson Timber Company)
however, most of the region's old growth timber was completely gone

MCCLEARY, WASHINGTON ACQUIRES A NEW OWNER

Much to the town's relief, a notice was posted advising of the sale
on the McCleary Company's office door -- New Year's Day, 1942

it requested all employees continue working as usual
Simpson Logging Company instantly became eastern Grays Harbor County's largest employer
Simpson Logging Company had become the landlord of the approximately 300 families
living in ramshackle town of McCleary without sanitary or storm sewer facilities
and desperately needing improvements and repairs to water and power systems and to roads
At a town meeting, citizens of McCleary were told to incorporate
they must establish a municipal government and learn to run the city's business
Simpson Logging Company must be left alone to concentrate on manufacturing wood products
and provide community employment

BOEING IS PRESSED TO MEET THE DEMAND FOR B-17 BOMBERS

Boeing operated two main factories in Seattle and one in Renton
two additional branch plants were located in Tacoma
one plant each was located in Aberdeen, Bellingham, Everett and Chehalis
two hundred other companies served as suppliers and subcontractors for Boeing
One month after Pearl Harbor, Boeing had produced sixty B-17 Flying Fortresses -- January 1942
(by spring, the production rate had increased by fifty per cent)
Increases in production caused severe problems for the Boeing Company
training workers on the job, meeting wage competition with shipyards
providing housing for the thousands of workers all proved to be challenging issues

SPOKANE AIR DEPOT BECOMES FAIRCHILD AIR BASE

Spokane Air Depot near Spokane was renamed Fairchild Air Base
in honor of Assistant Air Corps Chief General Muir Stephen Fairchild -- January 1942
who was a graduate of Olympia High School [1913]
Location of Fairchild resulted from a three-way competition with Seattle and Everett
it was placed twelve miles west of Spokane
this location was selected for several reasons:

- it offered better weather conditions,
- 300 miles from the coast and across the Cascades Mountain range
provided a natural barrier against possible Imperial Japanese attack,
- many Spokane businesses and public-minded citizens donated \$125,000
to purchase 1,400 acres of land for the base
this provided an added incentive to the War Department
federal government designated \$14 million to purchase more land
construction of a new Spokane Army Air Depot began
to receive damaged aircraft returning from the Pacific Theater 1942-[1946]

EVERYONE FACED CHANGING CONDITIONS IN WASHINGTON

As the New Year 1942 dawned air-raid sirens shrilled during midday tests
radio stations were ordered off the air during emergency tests
except for Saul Haas' KIRO which transmitted official government announcements
federal government ordered black-outs and brown-outs plunged towns and cities into darkness
block wardens served as enforcement officers

from 10 p.m. to daybreak vehicle headlights were visored to force the light beams downward
so they could not be seen by the enemy
Puget Sound was laced with submarine nets -- coastal and inland waterways were mined
During the war years public schools were closed (in the spring and fall)
so students could assist with planting or harvesting crops
Young men and women who enlisted in various branches of the military
were shipped off for training and involvement in the war effort
everyone was aware that betraying wartime secrets or troop locations
might result in casualties for friends and relatives
patriotic creeds and slogans emphasized the message: "Loose lips sink ships,"
"Careless talk costs lives," "Defense on the sea begins on the shore"
G.I.s worried about receiving a "Dear John" letter notifying them that the girl back home
had found someone else
"Dear Jane" letters with a similar message were written to the girl back home

RATIONING OF RUBBER GOES INTO EFFECT

Tires were the first item to be rationed -- January 1942 [through 1945]
Imperial Japan had seized plantations in the Dutch East Indies (today's Indonesia)
that produced 90% of America's raw rubber -- supplies of rubber were interrupted
President Roosevelt called on citizens to help by contributing scrap rubber to be recycled
old tires, old rubber raincoats, garden hose, rubber shoes and bathing caps were all collected

PEOPLE IN WASHINGTON FACE ECONOMIC CHANGES

Farm prices went up dramatically
"victory gardens" bloomed behind homes and on empty city lots
Wartime economy brought about full employment and in doing so achieved what New Deal programs
had been unable to do
(there were eight million Americans unemployed [1940]
however, unemployment was almost non-existent [by 1941]
there were actually labor *shortages* in some industries
and severe manpower shortage [1943])
women and retired people took factory jobs
Washington State ranked twelfth in the nation in war-supply contracts
With full employment, personal income tripled
but prices rose so quickly during the war that real wages shrank

SUPERINTENDENT OF PUBLIC INSTRUCTION PEARL WANAMAKER LEADS REFORMS²⁶⁶

To meet the demands of a wartime nation experiencing a growing population
educational reformer Pearl Wanamaker reorganized and consolidated local school districts
this was a massive, costly, and politically painful task
which required legislative affirmation and gubernatorial approval
rural consolidation meant extensive school construction programs and new taxes

²⁶⁶ Michael Hood, HistoryLink.org, Essay 9171, September 26, 2009.

those school district leaders affected saw it as further deterioration of their local control
and of their power
schools were put into the transportation business with busing
bussing was always an emotional issue for parents
this generated an expensive logistical problem that meant long bus rides for students
Powerful State Grange members, fiscal conservatives and rural legislators
opposed the cries for centralization from Pearl Wanamaker and her allies
nevertheless, the number of independent school districts was reduced from 2,700 to 800 [1946]

JAPANESE FORCES SHIFT THEIR FOCUS IN THE PHILIPPINES

Japanese turned their failed effort from Corregidor to the Bataan Peninsula -- January 6, 1942
because the peninsula received so much attention, it temporarily eased the attacks on Corregidor
this allowed the Corregidor garrison to re-supply and defend the island with much better results
Corregidor became the seat of the Philippine Commonwealth government
and also the headquarters of the Allied Pacific forces

BONNEVILLE POWER ADMINISTRATION (BPA) DISTRIBUTES ELECTRICITY

Need for electricity had become so exacting that a “power pool” was established
under the Bonneville Power Administration to bring together and then efficiently distribute
every kilowatt produced between the Canadian border on the north
Puget Sound on the west, eastern Montana to the east and Salt Lake City to the south
wherever the transmission lines could reach
aircraft factories, aluminum factories and fabricators of all kinds sprang up

SEATTLE EXPERIENCES A BLACK OUT OF ELECTRICITY

Helium filled balloons were tethered by U.S. Army air defense units
around potential air attack targets
defenders expected that balloons and their trailing cables would force enemy aircraft
to fly at higher altitudes and interfere with their ability to drop bombs
hills of Seattle and other primary target areas sprouted an enormous barrage of balloons
One U.S. Army balloon drug its steel cables across power transmission lines north of Seattle
all electric power to the city was cut -- January 12, 1942
United States had been at war for only five weeks and “**a sudden fear swept the city**”
that the outage was “**a blackout presaging the appearance of enemy aircraft**” (*Seattle P-I*)
Commuters were stalled in unheated electric trackless-trolleys -- elevators stopped between floors
neighborhood outages lasted from a few minutes to several hours in parts of the city
Fear heightened as a planned test of the air raid siren on Queen Anne Hill took place as scheduled
along with an accompanying silencing of all radio stations
Following this incident, Seattle City Light launched a publicity campaign
to discourage children from playing with toy balloons near power lines
(Other balloons got loose [February 2, 1942]
one landed at Fort Lawton and another came down near Boeing Field but there was no damage)

WAR PRODUCTION BOARD (WPB) MOBILIZES FOR THE WAR

FDR established a new mobilization agency, the War Production Board -- January 1942
under the direction of former Sears Roebuck executive Donald Nelson
Nelson understood immediately that the staggeringly complex problem
of administering the war economy could be reduced to one key issue:
balancing the needs of civilians against the needs of the military
This problem proved impossible to resolve, but Nelson did achieve two key economic goals:

- he successfully resolved the “feasibility dispute”
an ongoing conflict between civilian administrators and their military counterparts
over how much of the American economy should be devoted to military needs
Nelson convinced the military to scale back its Olympian demands
- WPB created the “Controlled Materials Plan” which effectively allocated
steel, aluminum and copper to industrial users

McNEIL ISLAND FEDERAL PENITENTIARY BECAME PART OF THE WAR EFFORT²⁶⁷
Federal Prison Industries began operating a shipyard -- January
which built three sixty-four-foot wooden tugboats used by the Army Transport Service
for towing barges loaded with equipment and supplies to military bases in Alaska
Federal Prison Industries also built a cannery which supplied fruits and vegetables
to the military and the prison -- (this cannery was phased out [1958]
due to a decreasing demand for cannery workers in the civilian labor market)

JAPANESE FORCES ATTACK CORREGIDOR

Japanese artillery opened fire on Corregidor -- early February
all of the fortifications sustained damage
Bombing also continued and intensified on the Philippine government

SHOES ARE RATIONED

Availability of shoes was limited to provide for the needs of soldiers
Americans were given ration books that allowed the purchase of shoes -- February 1942
when making a purchase the customer had to present cash *and* a ration coupon

McCHORD FIELD GETS A NEW MISSION

U.S. 17th Bombardment Group was reassigned to South Carolina -- February 1942
with their departure McChord Field became the Army Air Force Training Command operation
training units, crews and individuals for bombardment, fighter and reconnaissance operations
Northwest Air Force was re-designated the Second Air Force
McChord trained B-17 Flying Fortress and B-24 “Liberator” medium bombardment crews
nearly all new heavy bomb groups organized after Pearl Harbor were trained
at the Second Air Force Bases and then were deployed
to combat commands around the world

SUSPICION TOWARD JAPANESE AMERICANS HEIGHTENS

²⁶⁷ Daryl C. McClary, HistoryLink.org, Essay 5238, April 17, 2003.

Although Western Defense Command Commanding General John L. DeWitt reported to FDR that no sabotage by American Japanese had yet been confirmed to General De Witt this only proved **“a disturbing and confirming indication that such action will be taken”**²⁶⁸ -- February 1942

In his capacity for assuring the military security of the west coast, General De Witt recommended evacuation of all Japanese from the coastal areas of California, Oregon, and Washington state

EXECUTIVE ORDER 9066

Two months after the bombing of Pearl Harbor Executive Order 9066 was issued by President Franklin Roosevelt -- February 19, 1942

this order allowed the War Department to restrict or to remove persons considered a danger to the country
Executive Order 9066 set in motion the expulsion of 110,000 from the West Coast to ten inland prison camps located inland in Arkansas, Arizona, California, Colorado, Idaho, Utah and Wyoming -- even though the camps did not yet exist at the time

FEW AMERICANS CHALLENGE THE PROPOSED INTERNMENT OF JAPANESE AMERICANS

Japanese Americans were singled out and harassed by federal government orders they were ordered to stay away from railroad tunnels, highway bridges and radio stations travel was restricted

Issei business licenses were revoked and bank accounts were frozen
After the first announcement of Executive Order 9066, the only West Coast newspaper editors to write opposed to internment were Walt and Milly Woodward of the *Bainbridge Review* in their editorial they noted their **hope that the order will not mean the removal of**

American-Japanese citizens, for it [the *Review*] still believes they have the right of every citizen: to be held innocent and loyal until proven guilty.”

GENERAL JOHN L. DE WITT DEVELOPED A PLAN TO ENFORCE EXECUTIVE ORDER 9066

General Witt began implementing a plan for classifying, rounding up, and removing “undesirables” this expulsion proceeded without due process of law as required by the U.S. Constitution in fact, no camp inmate was ever charged or convicted or even accused of any act of espionage or sabotage in the name of “military necessity” tens of thousands of people, two-thirds American citizens, were forced from their homes, businesses and neighborhoods as they were assumed to be guilty because of their ancestry

SITE FOR A NAVAL AIR STATION IS LOCATED

City of Seattle insisted that aircraft no longer carry live bombs
Office of the Chief of Naval Operations had ordered the Commandant of the 13th Naval District to find a location for the re-arming and refueling of Navy patrol planes

²⁶⁸ Tetsuden Kashima, *Judgment Without Trial: Japanese American Imprisonment During World War II*, P. 214.

operating in defense of Puget Sound [January 17, 1941]
Commanding officer of Naval Air Station Seattle recommended a site on Saratoga Passage
along the shores of Crescent Harbor and Forbes Point on Whidbey Island
as a base suitable for seaplane takeoffs and landings under instrument conditions
Actual construction on Naval Air Station Whidbey Island started -- March 1, 1942
(and was the base was commissioned to handle armed aircraft for combat [September 21, 1942])

RATIONING OF SELECTED ITEMS GOES INTO EFFECT

Consumer goods took a back seat to military production as nationwide rationing began
some items such as new automobiles and appliances were not made any longer
Federal government compelled Americans to cut back on their purchases
dog food could no longer be sold in tin cans -- March 1, 1942
manufacturers switched to dehydrated versions
anyone wishing to purchase a new toothpaste tube had to turn in an empty one [April 1, 1942]

PACIFIC COAST IS DESIGNATED A COMBAT ZONE

General John DeWitt issued "Military Proclamation No. 1" -- March 2, 1942
designating the western portions of Washington, Oregon and California as "**military area no. 1**"
which was further divided into "**prohibited zone A-1**" and "**restricted zone B**"
during the first phase of the order, a provision was included directing
that "**any person of Japanese ancestry, now resident in Military Area No. 1, who
changes his place of habitual residence must file a 'change of residence notice' at his local post
office not more than five days nor less than one day prior to moving.**"²⁶⁹

Curfew on American Japanese went into effect
all those of Japanese ancestry must remain home between the hours of 8 p.m. and 6 a.m.
Within a few days, General DeWitt announced the Army had acquired 5,800 acres of land
200 miles East of Los Angeles in Owen's Valley near Manzanar, California,
for construction of a "**reception center**"
which he said was "**to be used principally as a clearing house for the more
permanent resettlement elsewhere for persons excluded from military areas.**"²⁷⁰

SOME JAPANESE AMERICANS ARE ARRESTED IN SEATTLE

U.S. government wasted no time in clamping down on the 9,600 American Japanese in King County
FBI arrested Issei (first generation Japanese) and a few Nisei (second generation) people
including Buddhist priests, Japanese language teachers
and officials and leaders of community organizations

U.S. ARMY BEGINS THE TASK OF RELOCATING "UNDESIRABLE" JAPANESE AMERICANS

Evicting and housing over 100,000 men, women, and children was an overwhelming task
planners from the Wartime Civil Control Administration (WCCA)
headquartered in San Francisco appropriated fifteen operational public facilities

²⁶⁹ "Army To Ban Aliens From Coast," *Oakland Tribune*, March 3, 1942.

²⁷⁰ "Army Takes Over Jap Center Site," *Oakland Tribune*, March 8, 1942.

at fairground, racetrack, and livestock pavilion sites -- early March 1942
each had ample acreage and infrastructure necessary to quickly assemble the centers
twelve new sites including the Manzanar location were developed in California
and one each in Arizona, Oregon and Washington

Seattle was the home of thirty-nine-year old James Sakamoto well-respected editor
of the all-English-language *Japanese American Courier* and outspoken Seattle personality,
he was well known both inside and outside of the Japanese community
Jimmy Sakamoto was a founder of the Japanese American Citizens League (JACL)
he organized friends and other trusted Nisei (second generation Japanese and U.S. citizens)
into the Emergency Defense Council to respond to the national emergency
and to address the growing negative attitudes toward the Japanese community

GENERAL DOUGLAS MACARTHUR MOVES HIS PHILIPPINE HEADQUARTERS

Under cover of darkness General MacArthur and his staff left Corregidor, The Philippines
and moved to Brisbane, Australia
he left Lieutenant-General Jonathan M. Wainwright in overall command -- March 11, 1942
Japanese bombing and shelling continued with unrelenting ferocity
attacks on Corregidor occurred so often that soldiers cherished every break in the shelling
garrison was forced into the island's caves and tunnels
men had a very hard time keeping their spirits up
defenders of The Philippines were living on about thirty ounces of food per day
drinking water was distributed twice per day,
but bombing and shelling often interrupted the effort

SEATTLE CITY EMPLOYEES OF JAPANESE DESCENT ARE DISMISSED

Because of their Japanese ancestry, five people employed by the Department of Lighting
were fired -- March 20, 1942

At the time the ordinance was adopted one of the Seattle City Light clerks, Sumiko Haji Kuriyama,
explained **“It is difficult to admit, but at that time I felt shame and embarrassment, rather
than anger -- shame that I was of Japanese ancestry. How simple life would have been if I were a
Caucasian like so many of my friends. My parents had taught me that I was an American, that the
United States was my home chosen by them, and that I must be a loyal citizen....”**²⁷¹

(In an effort probably aimed to salve the consciences of the perpetrators more than the victims

Seattle passed an ordinance [March 5, 1942] stating that **“in the interest of fairness, justice, and
honor, The City of Seattle should make reparation (\$5,000) to City employees of Japanese ancestry
who were terminated, laid-off or dismissed from City employment pursuant to Executive Order No.
9066.”**)

CONGRESS EXPANDS PRESIDENT ROOSEVELT'S EXECUTIVE ORDER 9066

**“Be it enacted by the Senate and House of Representatives of the United States of America in
Congress assembled, That whoever shall enter, remain in, leave or commit any act in any military
area or military zone prescribed, under the authority of an Executive order of the President, by the**

²⁷¹ Robert Sadamu Shimabukuro, *Born in Seattle: The Campaign for Japanese American Redress*, P. 87-89.

Secretary of War, or by any military commander designated by the Secretary of War, contrary to the order of the Secretary of War or any such military commander, shall, if it appears that he knew or should have known of the existence and extent of the restrictions or order and that his act was in violation thereof, be guilty of a misdemeanor and upon his conviction shall be liable to a fine of not to exceed \$5,000 or to imprisonment for not more than one year, or both, for each offense.”

this Act of Congress passed -- March 21, 1942

it authorized the exclusion of people from military areas

but said nothing about confinement in internment camps

BAINBRIDGE ISLAND JAPANESE AMERICANS ARE ORDERED TO EVACUATE

President Franklin Roosevelt's Executive Order 9066 gave the military authority to intern anyone they considered "dangerous"

King and Pierce counties were designated Military Area Number One and at risk of Japanese attack at the time 14,400 Japanese and American Japanese lived in Washington State

9,600 in King County -- Japanese population of Seattle was nearly 7,000

General John DeWitt issued orders to evacuate all Japanese from Bainbridge Island -- March 22, 1942

just eight days were provided for them to make preparations

Again Walt and Milly Woodward of the *Bainbridge Review* spoke out

as they argued that was not enough time for the evacuees to settle their affairs

among the unresolved issues was the fate of an expected three-million-pound crop of strawberries farmed on Bainbridge Island mainly by American Japanese farmers

some Filipino American employees signed agreements with the evicted landowners

to harvest the crop and to manage the farms until their return

Caucasian island residents also assisted in caring for Japanese assets

CALIFORNIA JAPANESE AMERICANS RECEIVE ORDERS TO PREPARE TO LEAVE

General DeWitt issued orders to California American Japanese -- March 23, 1942

he set an 8 p.m. to 6 a.m. curfew

he banned ownership of firearms, radios, cameras, and other contraband

DeWitt stated, **"Let me warn the affected aliens and Japanese Americans that anything but strict compliance with this proclamation's provisions will bring immediate punishment."**

DeWitt declared that **"We plan to increase the tempo of the evacuation as fast as possible."**

BATTLESHIP USS WASHINGTON, BB-56, SUFFERS ITS ONLY CASUALTY

USS *Washington* set sail from Great Britain -- March 26, 1942

to reinforce the British fleet during the invasion of Madagascar in the Indian Ocean

on the first day at sea Admiral John Wilcox vanished when he went overboard

Rear Admiral Robert C. Giffen succeeded Wilcox as commander of the task force

"ASSEMBLY CENTERS" WILL RECEIVE EVICTED JAPANESE AMERICANS

Sites were determined for "assembly centers" -- end of March 1942

these were temporary prison camps to be used as holding centers for people of Japanese ancestry until they could be moved to more permanent "relocation centers"

BAINBRIDGE ISLAND JAPANESE AMERICANS ARE RELOCATED

Bainbridge Island's American Japanese residents were the first in the United States to be removed probably because of the nearness of the Bremerton Navy Yard and other military installations military trucks traveled from house to house gathering people they were allowed to bring only the belongings they could carry -- families left pets behind one Filipino American husband stayed behind as his American Japanese wife was taken away 227 American Japanese residents from Bainbridge Island walked under U.S. military guard onto a cross-sound ferry at the Eagledale dock *Bainbridge Review* reported, evacuees remained composed as they boarded the boat witnesses including some of the soldiers carrying out the order, "wept unashamed" as their Japanese neighbors obediently boarded the ferry *Kehioken* Once in Seattle the evacuees were marched from the ferry dock to the railroad station they boarded a train bound for the Manzanar Reception Center in California's Owens Valley this transport began the forced exile of 120,000 American Japanese and their immigrant elders directly from their homes in Washington, Oregon, California, and Arizona to temporary barbed-wire facilities known as "assembly centers" these people were made prisoners of war in their own country they would remain in the assembly centers for approximately 100 days until they were transferred to permanent "relocation centers" in remote regions of the American West and Arkansas which were as yet not built

Back on Bainbridge Island the sheriff boarded up the community hall windows guards were posted to protect the stored belongings the evacuees had left behind American Japanese suffered an estimated financial loss of \$400 million (and a loss to the federal government \$200 million in revenue the first year and \$70 million annually thereafter [all in 1942 dollars])

AFTERMATH JAPANESE AMERICAN CIVIL RIGHTS VIOLATIONS REMAINS

After the war only about half of Bainbridge Island's American Japanese residents returned according to the Bainbridge Island School District's Minority History Committee some stayed away because they did not want to return to start over others found new places to settle, having seen other parts of the country during the war those who returned to the island settled back into their lives largely without incident one local group that tried to prevent their return received little popular support (an internment memorial marker stands at the former site of the Eagledale dock at the end of Taylor Street -- this memorial reads: "**On the morning of March 30, 1942, 227**

Bainbridge Island men, women, and children, most of them United States Citizens, were escorted by armed soldiers to the Eagledale ferry landing. They solemnly boarded the ferry *Kehioken* and departed on a lonely journey with an unknown destination and fate. They were exiled by Presidential Executive Order 9066 and Civilian Exclusion Order No. 1 because they were Nikkei -- persons of Japanese ancestry. With only six days' notice they were forced to hastily sell, store, or make arrangements for all of their possessions, businesses and property. They were allowed to take only what they could carry or wear. They were the first of more than 120,000 Japanese Americans to be forcibly removed from their homes and experience three years of unconstitutional internment.

Not all were interned. Some were drafted into the military, some were unjustly imprisoned, and some moved away -- but all were forbidden to remain. We dedicate this site to honor those who suffered and to cherish their friends and community who stood by them and welcomed them home. May the spirit of this memorial inspire each of us to safeguard constitutional rights for all.

Nidoto Nai Yoni -- "Let It Not Happen Again."

In addition, in 2007 fifty-acre Joel Pritchard Park along the waterfront adjacent to the dock site was developed around the memorial)

NEW AIRPORT IS NEEDED FOR THE PUGET SOUND REGION

After the attack on Pearl Harbor the federal Civil Aviation Authority offered \$1 million to any local government that would build a new airport to serve the greater Seattle area City and county governments were reluctant to undertake the task, but Port of Seattle Commission chairman Horace Chapman felt duty bound to comply other Port Commissioners agreed

Lake Sammamish was an early favorite for the new field because seaplanes were used on long-range routes

but the nearby Cascade Mountains posed a navigational hazard Tacoma offered the Port of Seattle \$100,000 if the new airport was located where Tacoma would be well served, too

Seattle Port Commissioners selected a site near Bow Lake about equidistant from Seattle and Tacoma -- March 30, 1942

(Construction on the original 907-acre tract began [January 2, 1943] first landing strips were completed [October 1944] at a cost of \$4 million it was named Seattle Tacoma Airport [the word "International" was added later] and a modern terminal opened [July 9, 1949])

WAR CREATES GREAT DEMAND FOR ALL RESOURCES

Strategic minerals such as copper, lead, zinc, and tungsten increased in demand

Tacoma smelter, one of the largest in the world, smelted one-tenth of the nation's copper as well as quantities of gold and silver

magnesium reduction plant in Spokane turned out about 18,000 tons of dolomite for construction each year between 1942 and [1945] -- (after the war the plant ceased to function)

Huge demands were generated for plywood, tannic acid from hemlock bark, and cork from fir bark

Food production increased the need for farms and farmers

wheat was the most valuable agricultural crop in Washington

but diversification of crops was wide spread green pea processing in Walla Walla and Dayton expanded enormously

California Packing Plant in Vancouver in one year

canned more than 650,000 cases of fruits and vegetables

dairy, poultry and meat-packing businesses developed at a tremendous rate

AMERICANS MAKE OTHER SACRIFICES FOR THE WAR EFFORT

Federal government encouraged Americans to conserve and recycle materials such as metal, paper and rubber which factories could then use for wartime production

household trash had value: kitchen fats, old metal shovels, even empty metal lipstick tubes
Necessities of war even influenced American fashion

War Production Board became the nation's premier clothing consultant -- spring 1942
styles for civilian apparel that would conserve cloth and metal for the war effort were dictated
menswear rid itself of vests, elbow patches on jackets and cuffs on pants
women's clothing relied on fewer materials and skirts became shorter and narrower
efficient, two-piece bathing suits created the biggest public stir since the Bloomer
Mr. Marcus of Nieman-Marcus fame called these suits "patriotic chic"

JAPANESE ONCE AGAIN ATTACK THE PHILIPPINES' BATAAN PENINSULA

During six days of intense fighting all along the battle front
commanders on Bataan lost all contact with their units except, in a few instances, by runner
During the last two days of fighting on Bataan the entire Allied defense
progressively disintegrated and collapsed, clogging all roads with refugees and fleeing troops
defending troops crumbled and straggled to the rear
supply lines to Corregidor had been severed
70,000 troops on Bataan surrendered -- April 9, 1942
more than 60,000 Filipino and 15,000 American prisoners of war
were forced into the infamous "Bataan Death March"

CLOTHING FASHIONS ARE ALTERED BY THE FEDERAL GOVERNMENT

As noted in a news story in the Des Moines Register -- April 20, 1942

"Uncle Sam last week assumed the role of fashion designer. Sweeping restrictions aim to save 15 percent of the yardage now used on women's and girls' apparel through such measures as restricting hems and belts to two inches, eliminating cuffs on sleeves. Exempt categories include bridal gowns, maternity dresses, vestments for religious orders." -- *Life Magazine*, April 20, 1942

U.S. War Production Board printed *An Emergency Statement to the People of the United States*:

"The steel industry has been rapidly stepping up its production..., but we need to get production up to the industry's full capacity of 90,000,000 tons - a total equal to the output of the rest of the world combined. This volume of production cannot be attained or increased unless an additional 6,000,000 tons of scrap iron and steel is obtained promptly. We are faced with the fact that some steel furnaces have been allowed to cool down and that many of them are operating from day to day and hand to mouth, due only to the lack of scrap.

"The rubber situation is also critical. In spite of the recent rubber drive, there is a continuing need for large quantities of scrap rubber. We are collecting every possible pound from the factories, arsenals and shipyards; we are speeding up the flow of material from automobile graveyards; we are tearing up abandoned railroad tracks and bridges, but unless we dig out an additional 6,000,000 tons of steel and great quantities of rubber, copper, brass, zinc and tin, our boys may not get all the fighting weapons they need in time... Even one old shovel will help make 4 hand grenades."

JAPANESE AMERICANS ARE ORDERED TO EVACUATE SEATTLE

Evacuation announcements addressed to Seattle's American Japanese
were posted on telephone poles and bulletin boards -- Tuesday April 21, 1942

12,892 community members were ordered to leave the city in three groups
on the following Tuesday, Thursday and Friday

Seattle's Japan Town, once the second largest in the nation was emptied in a few days
Seattle, the Kent, Green River and Puyallup Valley Japanese were to be sent
to an assembly center: Puyallup's "Camp Harmony"

this euphemism was coined by an Army public-relations officer during construction
As the Army's forced evacuation from the Puget Sound region approached
Issei (first generation) and Nisei (second generation) Nikkei (Japanese descendants)
immigrants and citizens alike prepared to leave their homes and occupations
advertisements appeared in Seattle and Tacoma area newspapers
readers soon learned there were bargains to be had:

**"JAPANESE evacuation necessitates immediate sale 55-room brick hotel. Best linens,
furnishings: steam heat, steady tenants"**

**"1936 DESOTO sedan. Attached overdrive, gas-saver transmission; four new tires.
Evacuation forces sale."**

Problems for Nikkei farmers in the White, Green and Puyallup River valleys and elsewhere
were extremely complex

long-term leases had to be transferred, expensive farm machinery disposed of or stored
until the last minute, the government pressured growers to plant for the 1942 season,
continued production was equated to national loyalty

crop neglect or damage was considered to be an act of sabotage

local grocers and the Pike Place Market lost the produce

of hundreds of American Japanese truck farms

including the fifty-five families who had produced Bellevue's famed strawberries

American Japanese suffered an estimated financial loss of \$400 million (in 1942 dollars)

and the federal government lost \$200 million lost revenue the first year -- \$70 million thereafter

EVICTON OF THE JAPANESE AMERICANS IS REMARKABLY CALM

Eviction operation went smoothly due at least in part to civil control stations

established by the Wartime Civil Control Administration in community halls,

school gymnasiums, and other public places near Japanese centers of population

six stations were set up throughout Seattle's central area with a seventh in Puyallup

Federal government personnel there registered families, provided pre-induction medical screenings
and helped arrange for storage or sale of valuables

Japanese families were given five-digit identification numbers assigned at the civil control stations

these relegated family units to anonymity -- family names became numbers

On each appointed evacuation day, families arrived at pre-arranged gathering points

dragging their most treasured personal belongings with them

Assembly area at 8th Avenue and Lane Street near the heart of Seattle's Japantown

was located in the city's red-light district

Shosuke Sasaki remembered baggage lined both sides of the street

Japanese, including his sister and her two infant children stood in a chilling spring drizzle

waiting for the order to board the buses

suddenly, the door of a brothel opened and the madam invited the three into her parlor

to wait out the rain -- an act of kindness recalled with emotion a half century later²⁷²

SUGAR IS RATIONED BY THE FEDERAL GOVERNMENT

Sugar was the first consumer commodity rationed as all sales ended -- April 27, 1942
(sale of sugar resumed [May 5] with a ration of one-half pound per person per week
about half of normal consumption
bakeries, ice cream makers and other commercial users received rations
of about 70% of normal usage)

“CAMP HARMONY” IS OPENED BY THE U.S. ARMY

“Camp Harmony” was the unofficial name of the Puyallup Assembly Center
this was one of several temporary internment camps set up to house the Nikkei people
approximately 7,390 Americans of Japanese descent in Washington state were sent to the camp
This internment camp was located on and around the Western Washington Fairgrounds in Puyallup
this center also included three adjoining parking lots,

it consisted of four distinct areas cut off from one another by city streets:
: “A” located northeast of the fairgrounds held a population of about 2,000;
“B” was just east of the fairgrounds in the vicinity of the current Blue parking lot
about 1,200 internees were housed there;
“C” was established northwest of the fairgrounds and held about 800 people;
“D” was the fairground itself east of the roller coaster
including the racetrack and grandstand -- it housed about 3,000 internees

Although this arrangement complicated the work of administering the camp
it was the only way 7,500 people from Seattle and the rural areas surrounding Tacoma
could be held at a single location in the state
(Construction on Camp Harmony would not be completed until [May 1942])

JAPANESE AMERICANS BEGIN TO ARRIVE AT “CAMP HARMONY”

Camp Harmony received its first inmates -- April 28, 1942
but because the camp was not yet completed ramshackle housing met the new arrivals
at the well-known fairground
built for temporary occupancy, the center offered few amenities and meager social services
inmates throughout their captivity would eat in mess halls
and sleep in noisy barracks while enjoying little privacy
In bringing about the forced eviction of so many people, U.S. Army organizers received assistance
from leaders in the Seattle American Japanese community
key among them was James Sakamoto [1903-1955]
Jimmie Sakamoto’s Emergency Defense Council of the Japanese American Citizens League
worked closely with the military authorities to register and transport evacuees to Puyallup
there was a military precision to the maneuver
complete with timetables, contingency plans and mandated routes
Emergency Defense Council formed an administrative body at the Puyallup Assembly Center

²⁷² Louis Fiset, *Camp Harmony (Puyallup Assembly Center), 1942*, HistoryLink.org, Essay 8748, October 07, 2008.

to help with day-to-day activities
and to serve as a link between the inmates and the camp administration

MANY IN WASHINGTON WERE OPPOSED TO THE JAPANESE RELOCATION DECISION

Washington State Congressman John Coffee spoke up in Congress
according to the *Congressional Record*: **“It is my fervent hope and prayer that the residents of the United States of Japanese extraction will not be made the victims of pogroms (organized discrimination and killing) directed by self-proclaimed patriots and by hysterical, self-appointed heroes. Let us not make a mockery of the Bill of Rights by mistreating these folks.”**²⁷³

BATTLESHIP USS WASHINGTON, BB-56, SERVES THE NORTH ATLANTIC OCEAN

USS *Washington* was reassigned to the North Atlantic and the Baltic Sea -- April 28, 1942
to protect convoys of allied cargo ships carrying supplies to the Soviet port of Murmansk
when she returned to Great Britain she hosted King George VI,
who visited the battleship [June 7]
After completing another patrol of the North Atlantic,
USS *Washington* headed for the New York Navy Yard
and an overhaul which began [July 23, 1942]

IMPERIAL JAPANESE LEADERS REFOCUS THEIR ATTENTION ON CORREGIDOR

Now that the Japanese had cut off Corregidor’s supply line from Bataan
they continued to hit Corregidor -- April 29, 1942
Every movement the Americans and Filipinos made was immediately spotted and heavily fired upon
heavy artillery and air bombardment rained down daily on the defensive positions

TERRITORY OF ALASKA IS OF INTEREST TO IMPERIAL JAPAN

Before Japan entered World War II, its navy had gathered extensive information about
the Aleutian Islands of the Territory of Alaska in the Bering Sea
but it had no up-to-date information regarding military developments on the islands
Empire of Japan assumed incorrectly the U.S. had made a major effort to increase defenses in the area
they expected to find several U.S. warships operating in Aleutian waters
including one or two small aircraft carriers as well as several cruisers and destroyers
operating on this assumption, Japanese Naval Marshal General Isoroku Yamamoto
dispatched his Northern Area Fleet a force of two small aircraft carriers, five cruisers,
twelve destroyers, six submarines and four troop transports
along with their supporting auxiliary ships
Japanese Northern Area Fleet was to launch an air attack against Dutch Harbor, Alaska
then follow with an amphibious attack on the island of Adak, 480 miles to the west
after destroying the American base on Adak Island (in fact, there was no military base there),
troops were to return to their ships and become a reserve for two additional landings:
•one on Kiska Island 240 miles west of Adak Island,
•second on the Aleutian’s westernmost island, Attu, 180 miles from Kiska Island

²⁷³ Cecil Dryden, Cecil, *History of Washington*. P.281.

UNITED STATES IS PREPARED TO MEET THE IMPERIAL JAPANESE THREAT

Because U.S. intelligence had broken the Japanese naval code, U.S. Admiral Chester Nimitz learned of Yamamoto's plans for a major sea battle and the invasion of the Aleutian Islands he knew the strength of Yamamoto's fleet off Australia and he knew the strength of the Japanese Northern Area Fleet bound for Alaska Nimitz also knew the Alaska operation would open [June 1, 1942] or shortly thereafter Admiral Nimitz decided to confront the enemy fleet -- May 1, 1942 he sent a third of his surface fleet (Task Force 8) under Rear Admiral Robert A. Theobald to defend Alaska but Nimitz kept three aircraft carriers to defend Australia and New Zealand Theobald was ordered to hold Dutch Harbor, a small naval facility in the eastern Aleutians, to prevent the Japanese from gaining a foothold in Alaska at all cost

MORE JAPANESE AMERICANS ARRIVE AT PUYALLUP'S CAMP HARMONY

Two hundred more Japanese people who lived in the vicinity of the Bremerton Naval Shipyard were removed from Bainbridge Island -- May 2, 1942 they were taken to Camp Harmony to await assignment to permanent camps (Within a week more than 2,500 American Japanese from Seattle and vicinity had been transported to Puyallup once bustling streets of Japan Town were filled with boarded up stores, hotels and businesses)

LIVING CONDITIONS AT CAMP HARMONY ARE VERY DIFFICULT

New arrivals to Camp Harmony faced strangers in unaccustomed close quarters they shared the communal realities of mess halls, latrines, shower rooms and barracks Rain fell on the tarpaper roofs at Puyallup during the drenching 1942 Pacific Northwest spring water trickled down low angled sloping roofs through cracks and onto blankets, clothes and faces King and Pierce county American Japanese endured this misery as they faced the shock of their sudden loss of freedom, property, possessions and pets Inmates lived in makeshift barracks divided into what was euphemistically called "apartments" "apartments" consisted of one room, approximately eighteen by twenty feet where a family lived "apartment" walls did not reach to the ceiling so that the noise of talking and crying infants drifted along the barracks through the four foot gap blankets were hung as makeshift dividers to provide some privacy for family members furnishings consisted of army cots -- one per person mattresses were available for the early arrivals while those who came later temporarily made do with straw-filled ticks heat was provided by a single stove light was supplied by a bare bulb hanging from the ceiling and from one window there was no running water special honeymoon rooms were reserved by newlywed couples group toilets and showers were a walk away as were the mess halls, canteen and laundry room privies constructed without any dividers were used until the inmates themselves built dividers group showers remained the standard during the four months Camp Harmony was in use

Late at night was no exception to the lack of privacy
as open spaces between walls and ceilings amplified sounds
which ricocheted through the entire darkened barrack
insomniacs endured snoring, coughing, whispering, arguing, crying and pacing

PLANNING FOR CAMP HARMONY IS INADEQUATE

Early incompetence by Army planners led to occupancy of the assembly centers
before the installation of refrigeration and other adequate food storage equipment
initially, inmates ate army rations designed for troops in the field
this canned meat, vegetable and fruit diet lacked any ethnic sensitivity
fortunately these soon gave way to fresh and more pleasant meals

Healthful sanitary conditions evolved more slowly, resulting in public health threats everywhere
because of the inexperience of kitchen workers and improper oversight of equipment
outbreaks of diarrhea plagued most assembly centers
spoiled Vienna sausages caused a severe flare-up among the Puyallup inmates -- early May
symptoms emerged after curfew and the commotion led to near panic by guard tower sentries
flashlights moved erratically in the darkness lighting the way
with all public stalls occupied, pinpoints of light illuminated awaiting huddled groups
fearing an insurrection, sentries manned the spotlights and called for reinforcements
but order was soon restored, tragedy was averted and the epidemic passed quickly
given crowded and unsanitary conditions at most assembly centers,
it is surprising that more frequent, if not serious, outbreaks of gastroenteritis
did not take place

American Japanese doctors, nurses, dentists, and pharmacists, themselves inmates
provided most of the health care at Camp Harmony
even though the center's temporary occupancy relegated medical facilities to infirmary status
Army statisticians recorded for the Puyallup Assembly Center a total of 37 births, 11 deaths
(in [August] alone, there were seven operating room surgeries
and 2,260 outpatient treatments)

CIVILIANS RECEIVE THEIR FIRST RATION BOOKS

Across the country 8,000 rationing boards were created to administer rationing restrictions
ration stamps were valid only for a set period of time to discourage hoarding
each household was limited to forty-eight points in a ration book
War Ration Book Number One, or the "Sugar Book" were distributed -- May 4, 1942
by more than 100,000 schoolteachers, PTA groups and other volunteers
To get a classification and a book of rationing stamps,
consumers had to appear before a local rationing board
each person in a household received a ration book including babies and small children
who qualified for canned milk not available to others

War Ration Book One - 1942 included the following is a set of instructions:

"Your first ration book has been issued to you, originally containing 28 war ration stamps. Other books may be issued at later dates. The following instructions apply to your first book and will apply to any later books, unless otherwise ordered by the Office of Price administration. In

order to obtain a later book, the first book must be turned in. You should preserve War Rations Books with the greatest possible care.

1 - From the time the Office of Price Administration may issue orders rationing certain products. After the dates indicated by such orders, these products can be purchased only through the use of War rations Books containing valid War Ration Stamps.

2 - The orders of the Office of Price Administration will designate the stamps to be used for the purchase of a particular rationed product, the period during which each of these stamps may be used, and the amounts which may be bought with each stamp.

3 - Stamps become valid for use only when and as directed by the Orders of the Office of Price Administration.

4 - Unless otherwise announced, the Ration Week is from Saturday midnight to the following Saturday midnight.

5 - War Ration stamps may be used in any retail store in the United States.

6 - War Ration Stamps may be used only by or for the person named and described in the War Ration Book.

7 - Every person must see that this War Ration Book is kept in a safe place and properly used. Parents are responsible for the safekeeping and use of their children's War Ration Book.

8 - When you buy any rationed product, the proper stamp must be detached in the presence of the storekeeper, his employee, or the person making the delivery on his behalf. If a stamp is torn out of the War Ration Book in any other way than above indicated, it becomes void. If a stamp is partly torn or mutilated and more than one half of it remains in the book, it is valid. Otherwise it becomes void.

9 - If your War Ration Book is lost, destroyed, stolen or mutilated, you should report that fact to the local Ration Board.

10 - If you enter a hospital, or other institution, and expect to be there for more than 10 days, you must turn your War Ration Book over to the person in charge. It will be returned to you upon your request when you leave.

11 - When a person dies, his War Ration Book must be returned to the local Ration Board, in accordance with the regulations.

12 - If you have any complaints, questions, or difficulties regarding your War Ration Book, consult your local Ration Board."

For the first time in years, consumers had money to spend, but there were few goods available to buy
frustration continued to mount until the end of the war

(when the war finally came to a close [1945], industries returned to consumer production
and Americans went on a buying spree of unprecedented proportions)

PACIFIC THEATER IS THE SCENE OF A MAJOR SEA BATTLE

Battle of the Coral Sea was the first major naval battle of the Pacific Theater -- May 4-[8], 1942

for the first time aircraft carriers engaged each other in battle

as the U.S. and Australia naval and air forces engaged the Imperial Japanese Navy

it was the first naval battle in history in which neither combatant's ships

sighted or fired directly on the other

Losses were heavy on both sides

U.S. scuttled one aircraft carrier, another carrier was damaged, a destroyer and oiler were sunk,

sixty-nine aircraft were destroyed and 656 men killed
Imperial Japan suffered the loss of a light carrier and a destroyer sunk,
three additional small warships were sunk,
another destroyer and two smaller warships and a transport ship all were damaged,
ninety-two aircraft were lost and 966 men killed
Four-day fight resulted in a tactical victory for the Japanese in terms of ships sunk
but a strategic victory for the Allies as Japanese expansion was turned back for the first time
more importantly, one Japanese aircraft carrier (*Shōkaku*) was damaged and another (*Zuikaku*)
was so depleted of aircraft that neither could continue to participate in the war

FIGHT FOR COOREGIDOR IS BRUTAL

General Jonathan M. Wainwright sent a message to General Douglas MacArthur in Australia:

“Situation here is fast becoming desperate.”²⁷⁴ [May 3, 1942]

Japanese began their invasion of Corregidor -- May 5, 1942

however, the invaders miscalculated which direction the wind and tide would take them
they ended up far from their intended landing area

When the Japanese closed in, Americans and Filipinos fought hard firing rifles, machine guns,
artillery was fired at point-blank range

However, that was only the first wave of Japanese attackers

many more men had been shipped in to attack the base

Allies tried desperately to form a counterattack

but when Japanese tanks entered the fray their fate became apparent

GENERAL WAINWRIGHT DECIDES TO SURRENDER COOEGIDOR

Because of the lack of supplies, mounting battle losses and in the interest of minimizing casualties

Lieutenant-General Jonathan M. Wainwright decided to surrender -- noon May 6, 1942

he conveyed his report to President Roosevelt:

“with head bowed in sadness but not in shame,”²⁷⁵ he would surrender Corregidor.

this surrender signaled the beginning of the end of organized resistance to the Japanese
in the Philippines

but only Corregidor was surrendered

other islands of the Philippines remained under Allied control

and the resistance would continue in the south

American flag was lowered and replaced with a white flag

General Wainwright was taken to Cabcaben, Bataan in the Philippine Islands

there he signed the surrender agreement -- May 7, 1942

next day he was taken to a radio station to inform all of the Allied troops in the area

captured troops taken to Manila where they were put on parade,

before being taken by train to Prison Camp Cabanatuan in the Philippines

they were not part of the Bataan Death March

General Wainwright was the highest-ranking American held in a prison camp

²⁷⁴ John Toland, *The Rising Sun: The Decline and Fall of the Japanese Empire, 1936-1945*, P. 311.

²⁷⁵ John Toland, *The Rising Sun: The Decline and Fall of the Japanese Empire, 1936-1945*, P. 313.

despite his rank, his treatment at the hands of the Japanese was very similar to that of his men

RATIONING IS EXPANDED TO INCLUDE GASOLINE

A national speed limit of 35 miles per hour was imposed to save fuel and rubber on tires
Volunteers again helped distribute gasoline cards in seventeen Atlantic and Pacific Northwest states
an appearance before a local War Price and Rationing Board was required
to get a classification and gasoline ration stamps
acquiring a gasoline ration card, required the person certify a need for gasoline
and ownership of no more than five tires.
all tires in excess of five per driver were confiscated by the government
an “A” sticker on a car was the lowest priority of gasoline rationing
it entitled the car owner to three to four gallons of gasoline per week;
“B” stickers were issued to workers in the military industry,
they were entitled to up to eight gallons of gasoline per week;
“C” stickers were granted to persons deemed very essential to the war effort such as doctors;
“T” rations were made available for truckers delivering supplies to the population
“T” sticker provided for unlimited amounts of fuel;
“X” stickers on cars entitled the holder to unlimited supplies
these were the highest priority in the system and included ministers, police, firemen,
and civil defense workers
when 200 Congressmen received “X” stickers a scandal erupted
(Rationing system was expanded to include new cars and typewriters [to April 1944]
bicycles were rationed [July]
rationing system did not apply to used goods like clothes or cars)

RECYCLING ALSO SERVES THE WAR EFFORT

One of the most important areas of civilian involvement during the war was recycling
many everyday commodities were vital to the war effort
drives were organized to recycle such things as rubber, tin, paper, lumber and steel
waste kitchen fats (the predominant raw material of explosives and many pharmaceuticals)
and many other household items were collected
War propaganda played a prominent role in many of these drives
slogans encouraging recycling became part of the language promoted by the government
“Get into the scrap!” and “Get some cash for your trash”
(a nominal sum was paid to the donor for many kinds of scrap items)
Commodities such as rubber and tin remained important until the end of the war
while items such as steel were critically needed at first
but only in lesser quantities as damaged war materials were returned from overseas for scrap
decreasing the need for civilian scrap metal drives

PROPAGANDA SUPPORTS THE WAR EFFORT

Media industry cooperated with the federal government in presenting the official view of the war
all movie scripts had to be pre-approved
posters helped to mobilize the nation during World War II

inexpensive, accessible, and ever-present, posters were an ideal agent
 for making the war the personal mission of every citizen
 government agencies, businesses, and private organizations
 issued an array of poster images linking the military front with the home front
 every American was encouraged to boost production at work and at home
 posters developed by commercial artists conveyed more than simple slogans
 most posters expressed the needs and goals of all patriotic Americans
 some, however, resorted to extreme racial and ethnic caricatures of the enemy
 sometimes as hopelessly bumbling cartoon characters
 sometimes as evil, half-human creatures

Cartoons and short subjects contributed to the war effort
 Warner Brothers Studios and Disney Studios gave unprecedented support
 by creating patriotic and humorous short films
 these reminded movie-goers of wartime activities such as rationing and scrap drives,
 war bond purchases, and the creation of victory gardens

Warner Studio shorts such as *Draftee Daffy* and *Daffy - The Commando*
 used humor to inflict a unflinching mockery of the enemy
 Warner Brothers also produced training films to remind many military men of the importance
 of following proper procedure during wartime for their own safety

Hanna Barbara contributed to the war effort with a slyly pro-America short cartoon
The Yankee Doodle Mouse with Lieutenant Jerry Mouse as hero and Tom Cat as the enemy

Walt Disney Studio helped the war effort
 almost every cartoon Disney produced at this time dealt with the war effort
 each Disney cartoon began with a headshot of Mickey Mouse, Donald Duck, or Goofy,
 each wore an Army or Navy cap (Donald Duck still does)

Disney produced promotional and comic short features on the importance of rationing,
 buying bonds and paying one's income tax (*Taxes Against the Axis*)
 Disney's famous Three Little Pigs song *Who's Afraid of the Big, Bad Wolf*
 became a rallying cry for civilians during the war
 Practical Pig's house was made of war bonds -- Big Bad Wolf wore a Nazi swastika

Military units used cartoon characters as their mascots
 Warner Brothers' Looney Tunes characters were used by a number of American military units
 and on individual fighting vehicles -- mostly tanks, jeeps and warplanes

- Bugs Bunny was the mascot of Kingman Army Air Field, Kingman, Arizona;
486th Bombardment squadron and 530th Bombardment Squadron;
- Daffy Duck represented the 600th Bombardment Squadron;
- Sylvester served as mascot for the 45th Reconnaissance Squadron;
- Yosemite Sam led the U.S. Army air Corps 20th Reconnaissance Squadron

Disney's cartoon characters also became mascots during the war:

- American Volunteer Group's "Flying Tiger" insignia was created by the Disney Company;
- Donald Duck served as mascot for the United States Coast Guard Auxiliary;
309th Fighter Squadron; 415th Fighter squadron; 438th Fighter Squadron;
479th Bombardment Squadron and 531st Bombardment Squadron;
- Goofy was the mascot of the 602nd Bombardment Squadron

and 756th Bombardment Squadron;
•Disney's Pete led the United States Merchant Marine and 603rd Bombardment Squadron

INFLATION IS A CONCERN TO ECONOMISTS

Although citizens were investing money into War Bonds as consumer goods were not unavailable in the crush to meet the demands of war there were more than enough jobs -- most were well paid Personal income was at an all-time high, and more dollars were chasing fewer goods to purchase this was a recipe for runaway inflation that was largely avoided because Americans were also saving money at an all-time high rate mostly in War Bonds but also in private savings accounts and insurance policies

FEDERAL PRICE CONTROLS GO INTO EFFECT

Fiscal and financial matters were also addressed by federal agencies
Office of Price Administration also known as "General Max"
used the *General Maximum Price Regulation Act* -- passed by Congress
to freeze the prices of more than half of the foodstuffs for sale
in an attempt to curtail inflation by maintaining prices at their [March 1942] levels
prices on practically all everyday goods, starting with sugar and coffee were frozen

WARTIME WAGES ARE FROZEN

National War Labor Board (NWLB) limited wartime wage increases to about 15 percent annually
neither "General Max" nor the wage-increase limit was entirely successful
although inflation was kept somewhat under control
(between [April 1942] and [June 1946], the most strident period federal inflation control,
inflation was just 3.5 percent annually
rate had been 10.3 percent in the six months before [April 1942]
and it soared to 28.0 percent in the six months after [June 1946])
cutting the rate of inflation meant that many American civilians
enjoyed a stable or even improving quality of life during the war

LABOR UNIONS CHANGE WITH THE DEMANDS OF WAR

War mobilization changed the relationship of the Congress of Industrial Organizations (CIO)
with both employers and the national government
both the CIO and the larger American Federation of Labor (AFL) grew rapidly in the war years
Nearly all the unions that belonged to the CIO were fully supportive of both the war effort
and of the Roosevelt administration
however the United Mine Workers, who had been driven from the AFL,
had taken an isolationist stand before the war,
and opposed Roosevelt's reelection in [1940] and left the CIO [1942]
Major unions supported a wartime no-strike pledge that aimed to eliminate
not only major strikes for new contracts but also the innumerable small strikes
called by shop stewards and local union leadership to protest local grievances
in return for labors' no-strike pledge, the federal government offered arbitration
to determine the wages and other terms of new contracts

those procedures produced modest wage increases during the first few years of the war but not enough to keep up with inflation, particularly when combined with the slowness of the arbitration machinery

Labor unions and their members however, did receive benefits

federal “maintenance-of-membership” rule that allowed unions to count all new employees as union members and to draw union dues from new employees’ paychecks so long as the unions themselves had already been recognized by the employer given that most of the new employment occurred in unionized workplaces, including war plants funded by the federal government through defense spending, **“the maintenance-of-membership ruling was a fabulous boon for organized labor,”**²⁷⁶

it required employers to accept unions and allowed unions to grow dramatically as organized labor expanded from 10.5 million members [1941] (to 14.75 million [1945] approximately 35.5 percent of the non-agricultural workforce was unionized [1945] this was a record high)

BATTLESHIP USS WASHINGTON, BB-56, SERVES THE ATLANTIC OCEAN

She was the third ship in U.S. Navy history to be named for the state of Washington although a number of other ships had been named in honor of General George Washington

USS *Washington* was the second and last of the South Carolina class battleships to be built:

- 728.8 feet long, 108.3 feet at the beam, with a draft of 33.0 feet
- she had a range of 17,450 nautical miles at 15 knots (17 miles per hour) with a top speed of 26.5 knots (30 mph)
- she was protected by a maximum of 16 inches of steel plate
- she carried a complement of 2,339 personnel (144 officers and 2,195 enlisted)
- she was armed with 9 × 16” (406 mm) guns, 20 × 53/8” (127 mm) dual-purpose guns, 16 × 1.1” machine guns;

these were replaced by 20 mm and 40 mm rapid-fire anti-aircraft heavy machine guns

USS *Washington*, BB-56, was ordered built [August 1, 1937]

her keel was laid in Philadelphia Navy Yard [June 14, 1938]

she was launched [June 1, 1940] and commissioned -- May 15, 1941 with Captain Howard H.J. Benson in command

USS *Washington* was on her shakedown and training cruise in the Atlantic Ocean when the Japanese Navy attacked Pearl Harbor [December 7, 1941]

Washington remained in Atlantic waters, serving as the flagship for Admiral John Wilcox, commander of the Atlantic Fleet’s battleships and Task Force 39

she set sail for Great Britain [March 26, 1942]

to reinforce the British fleet during the invasion of Madagascar in the Indian Ocean on the first day at sea Admiral John Wilcox vanished when he went overboard

Rear Admiral Robert C. Giffen succeeded Wilcox as commander of the task force

USS *Washington* was reassigned to the North Atlantic and the Baltic Sea [April 28]

to protect convoys of allied cargo ships carrying supplies to the Soviet port of Murmansk

when she returned to Great Britain she hosted King George VI,
who visited the battleship [June 7]
After completing another patrol of the North Atlantic, USS *Washington*
headed for the New York Navy Yard and an overhaul which began [July 23, 1942]

GORDON HIRABAYASHI CHALLENGES EXECUTIVE ORDER 9066

Throughout the Pacific coast only 360 American Japanese were allowed to transfer
from the assembly centers to go to college
opportunities in Washington State lagged even behind that
just three students from Camp Harmony attended classes at the University of Washington
Japanese University of Washington senior, Quaker and conscientious objector Gordon Hirabayashi
drove with his attorney to the Seattle FBI office -- May 16, 1942
there he challenged the Army's exclusion orders from the West Coast which he believed
were based on racial prejudice and violated the United States Constitution
in a four-page statement he wrote: **"I would be giving helpless consent to the denial of
practically all of the things which give me incentive to live."**²⁷⁷
Hirabayashi was subsequently charged with disobeying Public Law 503
which provided criminal penalties for violations of the exclusion orders
and for failure to comply with the Army's curfew order
Gordon Hirabayashi refused to post bail was placed in the King County jail to await trial
because one court requirement was to join other American Japanese
at the Camp Harmony Assembly Center

FARM WORKERS ARE NEEDED IN IDAHO

A few fortunate Camp Harmony inmates succeeded in leaving early
as the nation's farm labor crisis deepened with draft-age workers entering military service
or taking on higher paying jobs in the war industry,
sugar processors turned to the Japanese assembly centers as an untapped labor source
Recruitment at the Portland and Puyallup Assembly Centers began -- mid-May
soon seventy-two volunteers departed for eastern Oregon and Montana to plant sugar beets

JAPANESE IMPERIAL HIGH COMMAND DEVELOPS A NEW PACIFIC THEATER PLAN

After the Battle of the Coral Sea had stopped Japanese advances,
Japanese military high command sought to eliminate America as a strategic power in the Pacific
Japanese leaders hoped another demoralizing defeat like Pearl Harbor
would force the U.S. to yield in the Pacific War
Japanese military commanders' plan was to lure the United States' aircraft carriers into a trap
At the same time, Japanese plans were being carried out for an attack on the Aleutian Islands
between the Bering Sea and the Pacific Gulf of Alaska
perhaps in an effort to draw-off part of America's Pacific fleet from Australia

²⁷⁷ Dorothy M. Ehrlich, "Remembering Gordon Hirabayashi," ACLU, January 11, 2012. www.aclu.org/blog/racial-justice/remembering-gordon-hirabayashi

UNITED STATES ESTABLISHES A DEFENSE OF ALASKA

Rear Admiral Robert A. Theobald's Task Force 8 composed of five cruisers, fourteen destroyers and six submarines quietly left Pearl Harbor -- May 25, 1942
to take a position in the Alaskan Sea 400 miles off Kodiak Island
and wait for the arrival of the Japanese Northern Area Fleet
Admiral Theobald established his headquarters on Kodiak Island
there he met with Major General Simon B. Buckner, Jr.,
commander of the Army's Alaska Defense Command
Command authority in the North Pacific Area was divided and cumbersome
Admiral Theobald became commander of all Allied naval and air forces
he reported directly to Admiral Chester Nimitz
authority over the ground forces remained under General Buckner who answered to
Lt. Gen. John L. DeWitt, commander of the San Francisco-based Western Defense Command
responsible for the defense of the coast of Alaska and western Canada
differences between Admiral Nimitz and General DeWitt regarding the North Pacific Area
were referred to the Joint Chiefs of Staff in Washington. D.C. for resolution

LIFE AT CAMP HARMONY REMAINS BLEAK

Without distractions provided by employment and volunteerism, time passed slowly for most people
teenager Tamako Inouye remembered the summer of boredom (Inouye interview²⁷⁸)
she and friends experienced at Camp Harmony: **“There was this space between the barracks. When it was really hot everybody would go to one side of this lane, lean against the building, and just sit there. And later on in the day when the sun changed its course we'd go to the other side.”**

Some inmates remained bored while others faced hard work
odd jobs paid 30¢ an hour for a forty-four hour week
children attended a third rate school

LAKE ROOSEVELT BEHIND GRAND COULEE DAM FILLS WITH WATER

Water first ran over the spillway of Grand Coulee Dam -- June 1, 1942
jubilant crowd of ten thousand gathered to see the spectacle of millions and millions of gallons
of water from the clear, cold Columbia River flood over the spillway of the dam
and plummet into the river below in a stream twice as high as Niagara Falls
Grand Coulee Dam, like Bonneville Dam, was part of a vast hydroelectric generating project
(eight years after construction began a 151-mile-long reservoir covering 82,000 acres
backed up almost to the Canadian border
Franklin Delano Roosevelt Lake held water for hydroelectric generation
Gravity moved water from behind Grand Coulee Dam through generators creating electricity
eighteen turbines developed 2.7 million horse power
each turbine was rated at 150,000 horsepower and provided a total of 108,000 kilowatts
combined the Bonneville Dam the capacity reached 2,280,000 kilowatts

²⁷⁸ Louise Fiset, *Camp Harmony of Puyallup Assembly Center (1942)* Historylink. org, October 7, 2008.

however, lack of fish ladders blocked salmon migration to half the Columbia River drainage area
Many critics who had declared it to be a colossal waste of money
located in the near-wilderness of a remote state
its only customers, said on congressman, would be “sage brush and jackrabbits”
others called it a “white elephant” and wondered how the sparsely populated Pacific Northwest
would ever use all the power it generated
(United States entry into World War II only months after the completion of Grand Coulee Dam
silenced the critics as a host of war-related industries needed all the hydroelectric power
that Grand Coulee and Bonneville dams could generate)

BONNEVILLE POWER ADMINISTRATION (BPA) OVERSEES DELIVERY OF CHEAP POWER

Bonneville Power Administration (BPA) was concerned with delivering hydroelectric power
as cheaply and as uniformly as possible
BPA paid for and managed the complex multimillion-dollar transmission systems it erected
hydroelectric power was distributed throughout the region by an efficient central grid
that saved millions of barrels of oil and millions of tons of coal during the war
these fuels and the transportation facilities to handle them were in desperately short supply
World War II greatly accelerated both the manufacture and use of hydroelectric power:

- one-third of the nation’s reduction and rolling of aluminum during the war
was accomplished with electric power in plants at Vancouver, Spokane,
Tacoma, and Longview in Washington and Troutdale, Oregon;
- lumber mills, extensively driven by electricity, increased their use during the war;
- Boeing airplane factories were electrically powered;
- electrified shipyards at Seattle, Portland, Bremerton, Everett, Tacoma and other towns
turned out ships of war;
- other war industries used electric power:
 - magnesium plants in Spokane, Washington and Hoodport, Oregon),
 - cement plants at Bellingham and Concrete, Washington and Oswego, Oregon),
 - ferrosilicon located in Wenatchee, Washington,
 - ferrochrome, calcium, carbide, chlorates and steel in widely scattered areas
as hundreds of smaller companies produced war materials
- (in addition to these and ordinary prewar uses, electric power would service the highly secret
atomic bomb [Manhattan] project at Hanford, Washington)

PUBLIC UTILITY DISTRICTS (PUDs) REACH INTO THE RURAL REGIONS

War brought about a great need for more foodstuffs
Grand Coulee Dam and federal aid to farmers gave public power companies
an opportunity to provide electricity for homes, barns, milking machines,
refrigeration systems, sprinkling systems, and hundreds of other improvements
Thirteen PUDs were in operation in Washington State -- 1942
supporters of public power pointed out the benefits of electricity being extended
to remote villages and isolated farms without the usual incentive
(and added expense) of profits
opponents of public power declared that the law authorized permission

to loot private power companies at will
they also charged that PUD commissioners, three for each utility district,
had more power than the governor and were accountable to no one

U.S. DEVELOPS A PLAN OF ATTACK ON THE IMPERIAL JAPANESE NORTHERN FLEET

American military strength in all of Alaska stood at 45,000 men
with about 13,000 at Cold Bay (Fort Randall) on the southern tip of the Alaskan Peninsula
and at two other Aleutian bases
a naval station at Dutch Harbor on Unalaska Island, 200 miles west of Cold Bay,
and recently built Army air base (Fort Glenn) on Umnak Island
seventy miles west of the Dutch Harbor naval facility
army strength, less air force personnel, at those three bases totaled no more than 2,300
composed mainly of infantry, field and antiaircraft artillery troops,
and a large construction engineer contingent rushed in to construct the bases
Admiral Theobald assumed control of the U.S. Army Air Corps' Eleventh Air Force on Kodiak Island
formerly commanded by General William C. Butler
this force consisted of ten heavy bombers, thirty-four medium bombers and ninety-five fighters
divided between the main base, Elmendorf Airfield in Anchorage, Alaska
and at airfields at Cold Bay and on Umnak
Admiral Theobald's Task Force 8 operated in the Gulf of Alaska
400 miles southeast of Kodiak Island
this position was maintained to be able to intercept any attempt to land troops on the mainland
or otherwise challenge American shore defenses
Admiral Theobald ordered the Eleventh Air Force to find the Japanese Northern Area Fleet
steaming toward Dutch Harbor -- June 1, 1942
they were to attack the invading fleet with bombers
concentrating on sinking the two aircraft carriers
after enemy airplanes were removed from action Task Force 8 would engage and destroy the fleet

JAPANESE FLEET IS DISCOVERED

Approaching enemy fleet was spotted by a U.S. Naval patrol plane -- afternoon June 2, 1942
its location was reported to be 800 miles southwest of Dutch Harbor, Alaska
Admiral Robert A. Theobald placed his entire command on full alert
shortly thereafter bad weather set in -- no further sightings of the fleet were made that day

JAPANESE LAUNCH AN INEFFECTIVE ATTACK ON DUTCH HARBOR

Early in the morning, despite dense fog and rough seas, the Japanese launched three dozen aircraft
to attack Dutch Harbor -- June 3, 1942
in all seventeen planes, half of the flight, found the naval base, the first arriving -- 5:45 a.m.
Japanese pilots searching for targets came under intense antiaircraft fire
they soon found themselves confronted by U.S. fighter planes
sent from Fort Glenn on Umnak Island
startled by the American response, they quickly released their bombs,
made a cursory strafing run, and left to return to their carriers

little damage was done to Dutch Harbor
remainder of the attack planes became lost in the fog and darkness and crashed into the sea
or returned to their carriers without delivering their payload
During the attack Japan's fleet remained bound in fog out of sight
equally discouraging, because of a communication failure U.S. planes based at Cold Harbor
had received no word of the attack

SECOND MAJOR SEA BATTLE OCCURS IN THE PACIFIC THEATER

Imperial Japanese High Command planned to capture the Central Pacific island of Midway
to use as an advance base as well as to trap and destroy the U.S. Pacific Fleet
Battle of Midway was considered the decisive battle of the war in the Pacific -- June 4-[7], 1942
carrier-based Japanese planes clashed with U.S. planes from aircraft carriers and Midway Island
Because of communication intelligence successes, U.S. Pacific Fleet surprised the Japanese forces
four Japanese aircraft carriers that had attacked Pearl Harbor only six months before were sunk
United States lost one carrier, USS *Lexington*
Battle of Midway resulted in a U.S. victory that marked a turning point in the Pacific Theater
American losses of one aircraft carrier sunk, one destroyer sunk, 150 aircraft destroyed
and 307 men killed paled when compared to Japanese losses of four carriers sunk,
one cruiser sunk, 248 aircraft destroyed and 3,057 men killed
Battle of Midway marked the high-water mark of the Japanese Navy
before this battle the Japanese had been on the offensive
as they captured territory throughout Asia and the Pacific
Unsuccessful in his effort to lure U.S. surface ships into range of his battleships,
Japanese Naval Marshal General Isoroku Yamamoto ordered his crippled fleet to return to Japan
rather than have the Northern Area Fleet in Alaska join him, Yamamoto issued orders
to return to the Aleutians to execute his original mission of an attack on Adak Island
and thereby score a success to help compensate for the Midway disaster
After the battle of Midway, the Americans and their Allies took the offensive in the Pacific Theater

JAPANESE NORTHERN FLEET RETURNS TO ATTACK DUTCH HARBOR

This time the pilots were better organized and better prepared -- June 4, 1942
when the attack finally ended that afternoon, the base's oil storage tanks were ablaze,
part of the hospital was demolished and a beached barracks ship was damaged
eleven U.S. planes were downed while the Japanese lost ten aircraft
thirty-three G.I.s and ten civilians lost their lives in the attack
sixty-four more were wounded
American pilots finally re-located the Japanese carriers, but efforts to destroy them proved futile
bad weather again set in and all contact with the enemy fleet was lost

U.S. TASK FORCE 8 ENTERS THE FIGHT IN ALUTEAN WATERS

Admiral Theobald sent his task force to investigate a report of enemy warships in the Bering Sea
heading south toward Unalaska Island -- June 5, 1942
he believed this to be a landing force intent upon seizing Dutch Harbor
Admiral Theobald instructed the U.S. Army Air Corps' Eleventh Air Force on Kodiak Island

to attack the enemy ships with all available aircraft
but rapidly developing clouds in the area where the enemy ships were reported
this cloud cover prevented U.S. pilots from finding their targets
six recently newly-arrived B-17 Flying Fortress bombers equipped with radar
reported scoring several hits on enemy ships
but these later proved to be uninhabited islands
South of Kodiak Island Task Force 8 searched for the enemy fleet, the Japanese moved further south
to join Naval Marshal General Yamamoto who had just suffered the loss of four large carriers
in the major battle near Midway Island

JAPANESE INVADE THE WESTERN ALEUTIAN ISLANDS

Japanese fleet did not follow their orders to attack Adak Island
instead, the fleet turned to the western Aleutians where Kiska Island was occupied -- June 6, 1942
these were the first enemy forces to land on United States soil
since the British had done so during the War of 1812
Aleutian Islands' strategic value was their ability to control the Pacific's "Great Circle" air routes
Japanese High Command reasoned that control of the Aleutians
would prevent a possible U.S. attack across the Northern Pacific
United States feared that the islands would be used as airbases
from which to launch aerial assaults against the West Coast

ATTU ISLAND IN THE ALEUTIANS IS OCCUPIED BY JAPANESE TROOPS

In addition to Kiska Island, Japanese soldiers next waded ashore
at the western Aleutian Islands of Attu and Aggatuu -- June 7, 1942
Although no opposition was encountered, the Japanese public was told that this was a great victory
(news of the disaster at Midway was reported only after the war was over)
Japan originally intended to abandon the islands before winter set in
but the High Command instead decided to stay and build airfields on both islands
American plans to recapture the islands were begun almost immediately
General Simon B. Buckner, Jr. and General John L. DeWitt believed the Aleutian Islands
could serve as a bombing approach to Japan
Joint Chiefs of Staff agreed that the sooner a determined effort was made to oust the Japanese
the lower would be the price in men and materiel to do so
Joint Chiefs theorized the attack on the Aleutians and the occupation of its westernmost islands
might be a holding action designed to screen a northward thrust into the Soviet Union
that might also include the occupation of St. Lawrence Island in the Bering Sea
and nearby Nome, Alaska with its adjacent airfields on the Alaskan mainland
but the real motive for Americans' recapturing the islands was mainly psychological
to remove the only Japanese foothold on American soil in the Western Hemisphere
Military Joint Chiefs of Staff wanted to move quickly to regain Kiska, Attu and Aggatuu Islands
Admiral Theobald and General Buckner agreed to establish a series of airfields west of Umnak
where bombers could launch strikes against Kiska, the closest of the enemy-held islands

UNITED STATES STRIVES TO DEVELOP ATOMIC WEAPONS

As part of the United States' efforts to produce atomic weapons during World War II, President Franklin Roosevelt created the Manhattan Engineer District within the U.S. Army Corps of Engineers. Army Corps of Engineers was given the task of developing a new secret weapon -- June 1942. Manhattan Engineer District, unlike other government projects, had no geographic boundaries; it had only a mission: to develop an atomic bomb (like other Corps of Engineers projects this one was named for the location of its headquarters).

U.S. CONSTRUCTS DEFENSES ON THE ALEUTIAN ISLANDS

To make it easier to strike the Japanese army and navy, installations were built on Atka Island at Port Heiden on the north end of the Alaska Peninsula when the installation was garrisoned with 1,400 men -- June 17, 1942. It became the Army's Fort Morrow Army Airfield, although the airfield did not have any permanent assigned units during the war, it hosted numerous temporary USAAF and Naval Air units during the Aleutian Campaign. Regular bombing runs were made on Japanese installations at Kiska and Attu islands.

FEAR OF AN ALASKAN INVASION IS VERY REAL

Possibility of a Japanese invasion of the Alaskan mainland was increased when reports were received of a Japanese fleet operating in the Bering Sea. Three separate sightings placed the enemy fleet within striking distance -- June 20, 1942. This suggested an enemy raid on, or an outright invasion of, the Alaskan mainland was at hand. Nome, Alaska was the likely objective. Urgency bordering on panic set in. It triggered what was to become the first mass airlift in American history. Within thirty-six hours military as well as commandeered civilian aircraft flew nearly 2,300 troops to Nome along with artillery and anti-aircraft guns and several tons of other equipment and supplies.

CAMP HARMONY TAKES ON THE FEEL OF A COMMUNITY

More than 7,000 people were living in Puyallup's Camp Harmony -- end of June 1942. They had primarily come from Seattle and its surrounding communities, including approximately 1,200 people from the Tacoma area with a small contingent from Alaska. Camp Harmony inmates built a semblance of community. Jimmie Sakamoto's cadre of Nisei volunteers coordinated with the center manager's instructions to organize work, recreational, and educational activities. Many went to work -- most in the mess halls, others employed their specialized skills as clerks, organizers and medical aides. Nisei teachers and volunteers guided young charges through "vacation school." Volunteers set up a rotating camp library with books donated by the Seattle Public Library. Other workers organized recreational activities to help stave off boredom and boost morale: boxing, kendo, sumo, basketball and horseshoe pitching were popular. Softball leagues provoked instant inter-area rivalries,

women formed knitting, sewing and crochet groups,
older men set up *go* (board game) and *shogi* (something like chess) tournaments,
dance-crazy young people headed for the recreation hall

to dance to the recorded sounds of Glen Miller and other well-known band leaders
workers' payroll ranged from \$8 per month for unskilled labor to \$16 for professionals
however, Jimmie's undemocratic process of hand-picking his friends
as leaders for the Emergency Defense Council

combined with the perception within the Japanese community that he and his group
were "accommodationists" resulted in unresolved tensions with other inmates

In addition, the center produced the *Camp Harmony-Newsletter*
published by a Nikkei editorial and production staff

this mimeographed sheet was copies distributed free to the internees
editor Dick Takeuchi reported center-wide happenings, such as births and deaths,
ball scores, and Sunday church schedules

however, the content was censored, frustrating Takeuchi and his colleagues
assembly center's manager communicated his regulations and directives through the newsletter
Although physically isolated from their former communities with no freedom to move about
and lacking access to a telephone Camp Harmony inmates accessed news and world events
through AM band radio broadcasts and mail subscriptions to English language newspapers
letter writing provided their sole means of personal communication with the outside world
although the newsletter was heavily censored, first-class mail passed freely

Puyallup city post office provided civil service employees to sell stamps and money orders
and to handle registered mail, while inmates were put on the payroll at \$8 per month
to sort incoming mail and provide "home" delivery to the barracks

IMPERIAL JAPANESE NORTHERN AREA FLEET DEPARTS ALASKAN WATERS

Not until U.S. intelligence reported with some certainty the departure of Japan's Northern Area Fleet
steaming from the Bering Sea -- early July 1942

did the threat of invasion of the Alaskan mainland decline
troops that had hastily assembled at Nome, Alaska
were allowed to redeploy to other areas of need

CAMP HARMONY ADMINISTRATORS BECOME CONCERNED

As cooperative as Jimmie Sakamoto and his Emergency Defense Council
were in helping inmates to occupy their time and maintain morale,
the group's heavy-handedness in carrying out the center's regulations
such as a ban on Japanese language books and music
and setting up a self-government antagonized the inmates and alarmed administrators
as a result, to reduce the group's status members of Sakamoto's group were banished
to other centers by the Wartime Civil Control Administration -- July

Worse, self-government was banished at all of the assembly centers along the West Coast
for the most part, just getting through the day took on greater importance than self-governance

ADDITIONAL WORK IS COMPLETED ON THE BONNEVILLE POWER PROJECT

Both the Cascades rapids and the old Cascades lock were submerged by the new reservoir that formed behind Bonneville Dam -- 1942

this reservoir, known as Bonneville Reservoir or Lake Bonneville, reached forty-eight miles up the Columbia River

NEKKEI CONSTRUCTION WORKERS VOLUNTEER TO WORK AT CAMP MINIDOKA

American Japanese remained in Camp Harmony living in extremely crowded conditions until their transfer to permanent "relocation centers" (inland prison camps) could begin but first the relocation centers had to be constructed -- American Japanese labor was used with the promise that families of construction workers would be accepted into the camp

Transfer of 213 Nikkei volunteers from the Camp Harmony assembly center to the Minidoka, Idaho relocation center began -- August 9, 1942

these volunteers were to prepare the center for the new inhabitants scheduled to arrive in trainload units of 500 a day

when the first internees arrived for construction work at Minidoka -- August 10

they moved into the crude barracks even though much of the camp was unfinished there was no running water or sewage system

CONSTRUCTION OF A PERMANENT "RELOCATION CENTER" IS UNDERWAY

Minidoka Relocation Center would be situated on more than 33,000 acres of land

in south-central Idaho's Jerome County on the Snake River Plain at an elevation of 4,000 feet this federal reserve land was dotted with sagebrush and thin basaltic lava flows and cinder cones

Minidoka Relocation Center, also referred to as Hunt Camp, was located 150 miles southeast of Boise and fifteen miles north of Twin Falls and six miles north of Eden at Hunt, Idaho

Minidoka's central camp consisted of 600 buildings on 950 acres

located in the west-central portion of the federal reserve

Five miles of barbed wire fencing and eight watchtowers

surrounded the administrative and residential areas

camp's residential area was one mile wide and three miles long and comprised thirty-six blocks

each block included twelve tarpaper barracks, one dining hall and one laundry building communal showers, toilets and a recreation hall served each block

MOVE FROM "ASSEMBLY CENTER" TO "RELOCATION CENTER" BEGINS

U.S. Army insisted on having all American Japanese removed from the West Coast at once they did not halt the evacuation to assembly centers until no more internees could be held

Transfer to Minidoka Relocation Center required twenty-one especially requisitioned trains wartime demands to move troops on the nation's rail lines

forced the Wartime Civilian Control Administration to use re-commissioned passenger cars old hulks that generated universal complaints from Japanese passengers and officials alike and added to the humiliation of incarceration

dirty, with inadequate water pressure, faltering air conditioning

and sealed windows that prevented air circulation added to their misery

only the passing landscape provided temporary diversion from despair

in all, more than 13,000 American Japanese were evacuated from Washington State

most of the inmates, 7,150, came from Camp Harmony, Puyallup
6,098 were from King County and 1,051 from Pierce County
2,318 Portland American Japanese and 1,927 from Multnomah, Oregon were also there
another 150 arrived from Alaska
including children and grandchildren of Eskimo women and Japanese men
virtually none of the evacuees to Minidoka Relocation Center
could read the Japanese version of the order which had been printed for their information

PERMANENT INTERNMENT OF JAPANESE AMERICANS BEGINS

Immediately after their arrival internees were instructed to see the camp physician
next they received their apartment assignment
Living conditions were difficult and the quarters were cramped
although apartments were of three sizes
families of up to eight or nine lived in the one-room apartments
where possible, family groups or relatives were placed near each other
(efforts were later made to move people near their place of employment)
only furniture supplied were Army cots and a pot-bellied stove
so people made furniture from scrap lumber
Regardless of conditions, agriculture was an important part of the camp operations
even with their arrival so late in the 1942 growing season 350 acres were cleared and farmed

MINIDOKA VARIED FROM CAMP HARMONY MAINLY IN CLIMATE

When American Japanese internees first arrived at Camp Minidoka
they were shocked to see the bleak landscape that was to be their home
sagebrush was everywhere
Life at the Minidoka Japanese Internment Camp varied only by season
internees found the environment to be extremely harsh
temperatures ranged from a high of 115 degrees in summer to 30 degrees below zero in winter
[spring and fall] brought ankle-deep mud after the rains
scorching [summer] heat and billowing clouds of dust harassed detainees
when the dust storms hit people could not see more than a couple of feet around themselves
many suffered regularly from sore throats and nosebleeds
[winter's] freezing cold, snow and wind attacked the inmates
coal and water had to be hand carried
over 100 tons of coal a day were needed to heat the buildings
as Arthur Klienkopf, Superintendent of Education at the Minidoka Relocation Center,
noted in his diary: **"...These people are living in the midst of a desert where they see nothing except tar paper covered barracks, sagebrush, and rocks.... The impact of emotional disturbance as a result of the evacuation...plus this dull, dreary existence in a desert region surely must give these people a feeling of helplessness, hopelessness, and despair which we on the outside do not and will never fully understand."**

Many of the internees poured their feelings into a book: *The Minidoka Interlude*:

"To us who had faith in the Constitution of the United States, it was a profound shock that our citizenship did not matter and that the rights guaranteed under the Constitution would be so

easily taken away from us without due process of law.... But we were determined to accept the order with the full realization of the crisis which threatened the democracy of the world and with the deep sense of responsibility common to all free men.”

VANPORT, OREGON PROVIDES HOUSING FOR SHIPYARD WORKERS

Kaiser Company constructed three shipyards at Swan Island, St. Johns and Vancouver, Washington these shipyards accounted for 92,000 of the total 140,000 workers constructing ships in the area another 23,000 workers in the area were occupied with ship repair such a large influx of workers and their families put severe strain on housing supply it became difficult to secure and hold skilled workers Kaiser worked with the U.S. Maritime Commission to secure funding for a massive housing project commissioners formally approved the project -- August 18, 1942 site was 650 acres on the Columbia River flood plain in Multnomah County, Oregon between Portland and the Columbia River and east of the North Pacific railroad line (at the site of today's Delta Park and the Portland International Raceway) this was roughly equidistant between Kaiser facilities Leaders of the city of Portland had not been made aware of the negotiations they were surprised when contractors broke ground construction workforce that grew to 5,000 men and women swarmed over the site grading roads and setting foundations Board members of the new Housing Authority of Portland (HAP) grumbled about being left in the dark, but they agreed to take over management of the project Original plans called for 6,022 apartments, but when the project was only three days old commissioners expanded the number to 9,922 (twenty more were eventually added) Fourteen wooden apartment buildings built on wood foundations were a challenge in the swampy site these buildings were two-story boxes with one-story wings Each set of four buildings shared a common utility building with a coal furnace, hot water heater, laundry room and a bathtub standard apartments had a living room with kitchenette, bathroom with shower and one bedroom (In addition, HAP built 484 units in a separately developed but adjacent East Vanport this muddy, grey-painted community was even less appealing than Vanport itself)

UNITED STATES ARMY INVADES ADAK ISLAND IN THE ALASKA ALEUTIAN CHAIN

America landed 4,500 troops on Adak Island 400 miles from Umnak Island -- August 30, 1942 engineers completed an airfield two weeks later this remarkable feat was duplicated again and again throughout the campaign (U.S. B-24 heavy bombers took off from Adak to attack Kiska, 200 miles away [September 14, 1942] repeated bombings of Kiska Island during the [summer] and into the [fall] convinced the Japanese High Command that Americans intended to recapture the island Japanese forces were increased to 4,000 on Kiska and 1,000 on Attu they counted on darkness and habitually poor weather to protect them from serious attack)

MANHATTAN ENGINEER DISTRICT -- AMERICA'S SECRET WEAPON

Major General Leslie R. Groves had just finished construction of the Pentagon building

he met with Chief of Army Service Forces General Brehon B. Somervell who informed him that **“The Secretary of War has selected you for a very important assignment, and the President has approved the selection ... If you do the job right, it will win the war.”**

Groves, disappointed at not receiving a combat assignment replied, **“Oh, that thing.”**²⁷⁹

General Leslie R. Groves, Jr. was selected to head the Manhattan Engineer District -- September 1942
he was to construct two facilities to produce fuel sources for use in atomic weapons
one was to produce enriched Uranium-235 (to be located at Oak Ridge, Tennessee)
another was to produce Plutonium-239 (to be located at Hanford, Washington)
he was also to construct a site to build and test an atomic “device” (bomb)
(this would be located at Los Alamos, New Mexico)

JULIUS ROBERT OPPENHEIMER LEADS AMERICA’S SECRET LABORATORY

Born in New York City [April 22, 1904] to wealthy Jewish textile importer to Julius S. Oppenheimer, and Ella (Friedman) Oppenheimer, a painter

Robert was raised in New York City in an area known for luxurious mansions and town houses

He majored in chemistry at Harvard but as required by the university

also studied history, literature, and philosophy or mathematics

Robert graduated as a member of the Phi Beta Kappa honor society

he entered graduate school in chemistry but he was drawn to experimental physics

he earned his Doctor of Philosophy degree graduating *summa cum laude* at age 23 [March 1927]

this tall, thin, chain smoker was plagued throughout his life by periods of depression

he often neglected to eat during periods of intense thought and concentration

J. Robert Oppenheimer studied with several leading physicists in Europe

where he published more than a dozen papers in the new field of quantum mechanics

he accepted an associate professorship from the University of California, Berkeley

Like many young intellectuals [in the 1930s], he was a supporter of social reform

but he never openly joined the Communist Party, though he did pass money to liberal causes

by way of acquaintances who were alleged to be Party members

WHIDBEY ISLAND NAVAL AIR STATION (AULT FIELD) BEGINS OPERATIONS

Construction of Ault Field, a Navy land plane airfield as opposed to seaplanes, was completed

this base was named Ault Field, in memory of Commander William B. Ault

who was missing in action in the Battle of the Coral Sea

Ault Field received its first Commanding Officer,

Captain Cyril Thomas Simard -- September 21, 1942

in a ceremony attended BY 212 people, Captain Simard read orders and set the watch

Earliest squadrons of aircraft at Ault Field were 4F4 Wildcats [1942] followed by F6F Hellcats

later [in 1942] Lockheed PV-1 Venturas arrived for training

Ault Field also developed a rocket-firing training range and operated facilities to overhaul torpedoes

(An area 2½ miles southeast of Coupeville was approved as an auxiliary field

to serve Naval Air Station Seattle -- Outlying Field (OLF) was in use by [September 1943])

²⁷⁹ Leslie Grover, *Now It Can Be Told: The Story of the Manhattan Project*. P. 23.

BOEING TEST FLIES THE XB-29 “SUPERFORTRESS”

Boeing had been producing the B-17 “Flying Fortress” for the War in Europe
in the meantime Boeing engineers had been working on a special type of bomber
which was needed to fly long-range missions to reach Japan
Two prototype XB-29 experimental four-engine propeller-driven heavy bombers
were completed at Boeing’s Seattle Plant 1
they were nearly one hundred feet in length with a wing-span of 141 feet
tail section was three-stories high
powered by four twenty-two-hundred-horsepower
Wright eighteen-cylinder radial air-cooled magnesium alloy engines
each fitted with two General Electric exhaust-driven turbo-superchargers
XB-29 was able to fly at high altitudes
and had an operational ceiling of over thirty-four thousand feet
it carried a crew of eleven in its newly-developed pressurized cabin
“Superfortress” was armed with a gun-firing system which allowed for remote firing
from its five defensive gun turrets
These were the product of incredibly advanced engineering
it was a revolutionary plane with advanced radios, radars and computer-aided machine guns,
constructed by the “high-tech” workers of the day
Boeing’s XB-29 first took flight from Boeing Field
with veteran test Pilot Edmond T. “**Eddie**” Allen at the controls -- September 21, 1942
(Boeing will build 2,766 of these in all)

COMPARISON OF BOEING BOMBERS

	<u>B-17</u>	<u>B-29</u>
weight	70,000	120,000
range	2,000 mile	4,000 miles
payload	3 tons	5 tons
horsepower	4,800	8,800
maximum speed	287 miles per hour	365 miles per hour
cruising speed	187 miles per hour	200 miles per hour

PRESIDENT FRANKLIN D. ROOSEVELT'S SECRET VISIT TO WASHINGTON

Franklin Roosevelt’s whereabouts was unknown to the nation and the world
it was assumed he was in the White House
More than 1,800 workers in at the Puget Sound Naval Shipyard, Bremerton saw him
and heard him speak but he asked them to keep the secret -- September 22, 1942
President Roosevelt said he was pleased with the Puget Sound Naval Shipyard and with them: **“I will never forget how you people worked night and day to reclaim, repair and rebuild that sunken fleet after Pearl Harbor and send those battered ships out, better, stronger and more dangerous to the enemy to win victory out of that first temporary defeat”**²⁸⁰

²⁸⁰ *Kitsap Sun*, Josh Farley, “75 years Ago, the Speech that changed Bremerton, Roosevelt, August 11, 2019.

he paid special notice to the *USS Nevada*, which fought at Normandy on D-Day.
his speech was over in less than a half-hour then he vanished for nine more days
(his whereabouts still is not known)

BOEING PLANT 2 PRODUCES B-29 “SUPERFORTRESS” BOMBERS

Boeing Plant 2 produced some of the world’s most significant aircraft
thousands of people, at one point nearly half of them women, worked at the plant
they broke gender barriers and forced Boeing to adopt new ways of treating employees
Boeing Plant 2 switched from turning out B-17 Flying Fortresses to B-29 Superfortresses
innovations such as bombsights, radar, and high-performance engines
advances in aeronautical engineering, metallurgy and even factory organization
made the B-29 possible

BOEING PLANT NUMBER TWO IS COVERED WITH CAMOUFLAGE

Plant 2 was largest in the world -- it was the size of eight American football fields
it had some of the longest single-span trusses of its time
When the B-29 bomber began to be manufactured Boeing’s Plant 2 became so critical
that the U.S. Government was terrified Boeing and its factories would be bombed
it insisted that Boeing Plant 2 be covered in netting
Boeing took the orders a bit farther as engineers created an entire neighborhood on top of their plant
Plant 2 was so huge that it needed a whole suburb made of canvas, netting and camouflage paint
this twelve-square-block “suburb” displayed painted houses, streets, hydrants, sidewalks,
fences, footpaths, trees, lawns and shrubs nestled in gently rolling hills
this picturesque neighborhood was a clever combination of plywood, clapboard,
chicken wire, burlap, sawdust, cardboard, chicken feathers
and many, many gallons of paint
windows may have been painted on, and the houses may not have stood full-height,
but they did a very convincing job
from the air the bomber manufacturing center looked like a quiet suburb
Beneath the camouflage, tunnels led to cafeterias, restrooms and classrooms
these work-place innovations made life easier for workers and kept them close to their jobs
Boeing engineers won recognition for their ingenuity in hiding the immense production facility
spies in the sky saw only a well-laid out suburban area
although in the course of events this camouflage proved to be unnecessary
it was the largest and most intricate job of its kind on record

OAK RIDGE, TENNESSEE IS PART OF THE MANAHATTAN ENGINEER DISTRICT

United States Federal Government chose more than 60,000 acres around Oak Ridge, Tennessee
as the production site for developing enriched U-235 for Atomic testing
Central to the U-235 production process were the “separation facilities” necessary to manufacture
enriched Uranium-235 metal from Uranium-238 ore
U-235 is “radioactive” (emits radiation) and very dangerous
Major General Leslie Groves, military head of the project, liked the area for several reasons
its relatively low population made acquisition affordable,

yet the area was accessible by both highway and rail
utilities such as water and electricity were readily available
